41ST CONGRESS, 2d Session. } HOUSE OF REPRESENTATIVES. { Ex. DOC. No. 102.

ANNUAL REPORT

OF THE

COMMISSIONER OF PATENTS

FOR

THE YEAR 1869.

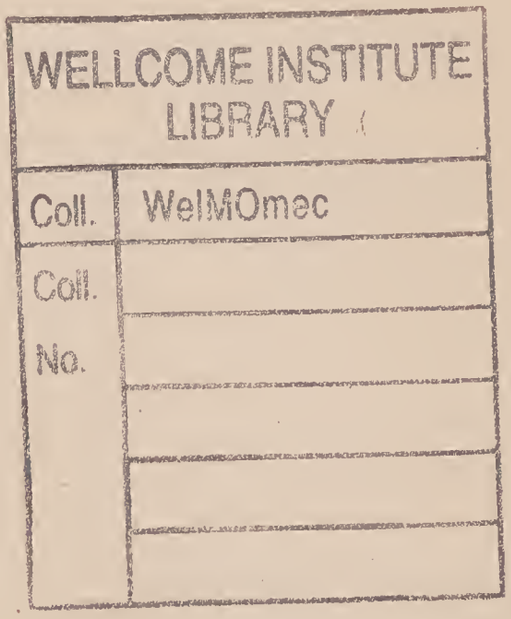
VOLUME II.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.
1871.

IN THE SENATE OF THE UNITED STATES,
April 10, 1869.

Resolved by the Senate, (the House of Representatives concurring,) That there be printed 4,000 extra copies of the annual report of the Commissioner of Patents for 1869, for the use of the Senate, 10,000 extra copies of the same for the use of the House, and 5,000 extra copies of the same for distribution by the Commissioner of Patents.

Attest:



GEO. C. GORHAM,
Secretary,
By W. J. McDONALD,
Chief Clerk.

IN THE HOUSE OF REPRESENTATIVES U. S.,
February 21, 1870.

Resolved, That the House concur in the foregoing resolution of the Senate to print 4,000 extra copies of the annual report of the Commissioner of Patents for 1869, for the use of the Senate, and 10,000 extra copies of the same for the use of the House, and 5,000 extra copies of the same for distribution by the Commissioner of Patents.

Attest:

EDWARD McPHERSON,
Clerk,
By CLINTON LLOYD,
Chief Clerk.

DESCRIPTIONS AND CLAIMS OF PATENTS

ISSUED IN THE YEAR 1869.

ILLUSTRATED WITH ENGRAVINGS.

VOLUME II.

87,317.—Nelson P. Akin, Philmont, N. Y.—*Machine for Drying and Finishing Tubular Knitted Fabrics.*—March 2, 1869.

Claim.—1. A hollow projecting close-surfaced core, with a closed end, heated internally, and over and from which the tubular fabric to be dried is drawn, substantially as set forth.

2. The combination of the holder B, for the long tubular web, with the closed hollow drying and smoothing-core A, supported and also provided with an inlet and outlet-passage or passages, D F, at one and the same end only, substantially as and for the purpose herein set forth.

3. The combination of the web-holder B, hollow drying and smoothing-core A, supported and provided with an inlet and outlet-passage or passages, at one end only, and drawing-off rollers H I, or their equivalents, substantially as and for the purpose described.

4. The combination of the web-holder, hollow drying and smoothing-core, supported and furnished with an inlet and outlet-passage or passages, at one end only, flat internal web-gauge J, or its equivalent, and drawing-off rollers, substantially as and for the purpose described.

5. The combination of the projecting web-holder B, with the drying and smoothing-core, of larger circumference than the said web-holder, as and for the purpose herein set forth.

6. The arrangement of the flexible or elastic rotary ring L, in combination with the combined web-holder and drying-core, substantially as and for the purpose described.

87,318.—Charles Ballinger, Pittsburg, Pa., assignor to McKee & Brothers, same place.—*Method of Securing Covers to Glass Pitchers.*—March 2, 1869.

Claim.—1. In combination with a glass pitcher or other article of glass, with recesses *a a* molded therein, the spring *i*, with its bent or hooked ends, for being united thereto, and forming a medium by which the cover may be attached and held, substantially as described.

2. In combination with the cover B, the hinge, strap, and shield, for the purpose of connecting it to and using said cover in connection with a pitcher or other glass-ware, substantially as described.

87,319.—W. P. Barker, Grand Rapids, Mich.—*Use of Nitrous Oxide as an Anæsthetic Agent.*—March 2, 1869; antedated February 20, 1869.

Claim.—Making and using nitrous oxide mixed with chloroform, or other anæsthetic, as and for the purpose specified.

87,320.—Joseph Barrett, Chicago, Ill.—*Medicated Cigar.*—March 2, 1869.

Claim.—A cigar, medicated with the compound herein named, as and for the purpose set forth.

87,321.—James Barrows, Hyde Park, Mass.—*Sprinkler for Watering-Pots.*—March 2, 1869.

Claim.—The within-described removable and reversible perforated cap for watering-pots, &c., operating substantially as and for the purpose set forth.

87,322.—Asahel G. Batchelder, Lowell Mass.—*Apple-Parer.*—March 2, 1869.

Claim.—The lever *n* and cam or projection *m*, when arranged to operate substantially as herein described and set forth.

87,323.—George S. Batcheller, Saratoga Springs, N. Y.—*Butter Tub.*—March 2, 1869.

Claim.—A pail, tub, firkin, or package, for butter, having the inner surface of its upper part rabbeted, to form a seat or chamber, to receive the lid, or cover B, flush, or otherwise, with the top of the body or main portion A, in connection with the rod D, of wood or metal, passing entirely through A, and the lid, or cover B, all arranged substantially in the manner as shown and described.

87,324.—Constant Baudoin and Alphonse Fteley, New York, N. Y.—*Apparatus for Destroying Insects on Trees.*—March 2, 1869.

Claim.—1. The fumigating apparatus, formed of the vessel *h*, frame *d*, funnel *e*, and pipe *f*, substantially as set forth.

2. The vessel *h*, formed with the overhanging sides 2, and the cap *k*, as and for the purposes set forth.

3. The fumigator: provided with a vessel to contain the material to be burnt, and a deflector for directing a current of air down upon the same, to insure proper combustion, as specified.

87,325.—John Frederick Bechmann, Abbot's Corners, N. Y.—*Process of Tanning.*—March 2, 1869.

Claim.—"Sweating" and tanning leather by the process herein described, viz: first, using oil of vitriol, in combination with red arsenic and warm water, for sweating, and subsequently using oil of vitriol, combined with water, for tanning, as herein specified.

87,326.—Bolivar Bisbee, Ames, Iowa.—*Concrete-Brick Machine.*—March 2, 1869.

Claim.—1. The combination of the jointed arm H I J, the lever N, the two cords *a b*, pulley X, and axle Y, arranged substantially as described, so that the continuous revolution of the said axle, in either direction, will give both the downward and upward movement to the plunger, in the manner and for the purposes specified.

2. In combination with the plunger, provided with the holes *l*, the movable perforated cap M, when connected to said plunger by means of pins *m*, passing through vertical slots in the sides of said cap, and operating in the manner set forth.

3. The combination of the sliding bottom P and plunger S, with the hopper R, when connected and operated by a lever T, substantially in the manner and for the purposes described.

4. The mold-box, composed of the bottom, *f*, with hinged sides, and the inner removable bottom *i*, with hinged ends, arranged to operate in the manner and for the purposes set forth.

87,327.—Smith W. Bullock, Elizabeth, N. J., assignor to Hamilton E. Towle, New York City.—*Furnace for Roasting Ores.*—March 2, 1869; antedated February 12, 1869.

Claim.—1. The application of two or more perforated walls in a roasting-furnaee, as and for the purposes set forth.

2. Setting the perforated walls at an inelination with the horizon, for the purposes stated.

3. The application of a pipe, or series of pipes, passing through a fire-chamber, or otherwise, and entering the openings of the perforated wall of a roasting-furnaee, as and for the purposes set forth.

4. The application of the gas-chambers I I, and the introdnction of the partition walls C C C C, in a gas-chamber, as and for the purposes set forth.

5. The construction and operation of a roasting-furnace, substantially as and for the purposes herein set forth.

87,328.—Albert H. Daniels, Manchester, N. H.—*Bale-Band Shears.*—March 2, 1869.

Claim.—The combination of the blades A D and handles B, E, and C, substantially as and for the purpose specified.

87,329.—Mark L. Deering, New York, N. Y.—*Sliding-Door Sheave.*—Mareh 2, 1869.

Claim.—The adjustable frame A A, attached to the frame E E, and operated by means of the inclined plane *a* and the serew B, together with the spiral spring *e*, or their eqnivalents, for the purposes hereinbefore set forth and described.

87,330.—Eben Eaton, Norwalk, Conn.—*Machine for Whipping Cloth.*—March 2, 1869.

Claim.—The combination, in a cloth-whipping maehine, of the whips *b* and *c*, shafts B and P, gears F and G, and beating-board N, arranged and constructed in the manner substantially as and for the purpose herein specified.

87,331.—George W. Eldridge, Cambridgeport, Mass.—*Scwing-Machine for Sewing Shoes.*—March 2, 1869.

Claim.—1. The combination of the grooved cam with its curved sides, the system of frietion-rollers *c c* and *b*, and spring S, with lever E, with its point *e*, the whole being so arranged as to give to the lever both a vertical and a horizontal motion, substantially as shown and described.

2. The arrangement of the lever H′, link H″, segment-gear K, and pinion K″, for operating the looper K′, substantially as described.

87,332.—James W. Evans, New York, N. Y.—*Machine for Packing Coiled Springs.*—March 2, 1869.

Claim.—1. The clamp F, tube *b*, and plnnger K, when combined and operating as and for the purposes specified.

2. The plnnger K K′, in the hollow shaft L, the pulleys H H′, the clutch I, the clutch-shifter *f*, the trip-levers *d d′*, and the cross-heads G′ G′, combined and operating substantially as and for the purposes specified.

3. The adjustable head-block D, with the clamp F, tube *b*, and plunger K, combined and operating snbstantially as and for the purpose specified.

87,333.—Benjamin C. Finfrock, Stephenson's Depot, Va.—*Boot-Crimp.*—March 2, 1869.

Claim.—1. Forming a boot-tree with the reduced leg, heel, and sole-parts *c c c c*, and providing the tree with a groove or channel, *d*, *e c*, substantially as described.

2. The construction and use of the peculiar flexible keying-levers *h i* J, or their equivalents, the jaw-gripes or clamps *s s t*, and the beveled slotted screw-nut O P, as shown and described.

3. The combination of said devices with the guide-rod and plate-appliance, the crank-like tension or tightening-rod K K, L L, *m m n*, all substantially in the manner set forth, shown, and described.

87,334.—Maurice Fitzgibbons, New York, N. Y.—*Fur-Box.*—March 2, 1869.

Claim.—The muff-box herein described, viz, when made of pasteboard, and lined with thin veneers of camphor or cedar wood, to preserve the furs from moths, all substantially as described.

87,335.—Charles H. Foster, San Francisco, Cal.—*Seat for Street-Cars.*—March 2, 1869.

Claim.—The movable seat B, when hinged at the edge or front of the fixed seat, and provided with a leg or support, S, which forms, when the seat is turned baek, an arm to divide the fixed seat, substantially as described.

87,336.—Eugene L. Fraker, Oshkosh, Wis.—*Fence.*—March 2, 1869.

Claim.—Securing the horizontal rails *a* to the post *b*, by means of the bolt *c*, when the said rails are splieed at their junction, snbstantially as shown, and for the purposes described.

87,337.—Robert Burns Goodyear, Elkton, Md., assignor to Barton H. Jenks, Bridesburg, Pa.—*Mechanism for Operating the Shuttle-Boxes in Looms.*—March 2, 1869.

Claim.—1. Two or more star-cams J J′, each provided with a ratehet-wheel, and placed upon a stud, so as to turn independently of each other, in combination with the bifurcated lever E, pawl-slide A, pawls *c c′* and B, lifting-levers G G′, and a studded pattern-cylinder, F, or its equivalent, substantially as deseribed.

2. The eombination of two or more independently acting cams, having their axes in line, and each provided with a ratchet and actuating pawl, with the shnttle-box lever and a pivoted lever or levers acted on at one end by the pattern-device, and attached at the other end to the actuating pawl or pawls, all constructed substantially as described and for the purpose set forth.

3. The slide A, provided with pawl B and pawls *c c′*, and arranged so as to operate the pattern-cylinder F, or its equivalent, and also the star-cams J J′, snbstantially as described.

87,338.—James A. House and Henry A. House, Bridgeport, Conn., assignors to the Wheeler & Wilson Manufacturing Company, New York City.—*Sewing-Machine for Working Button-Holes.*—March 2, 1869.

Claim.—1. The combination, substantially as set forth, of the vibrating cloth-plate with the vibrating take-up L.

2. The combination, in a sewing-machine, of the following instrumentalities, viz, an eye-pointed needle, a rotating hook, a take-up, L, and a laterally-vibrating cloth-plate, all substantially as and for the purpose set forth.

3. The combination, in a sewing-maehine, of an eye-pointed needle, a rotating hook, a take-up, L, a vibrating cloth-plate, and a revolvable stitching-plate, all substantially as and for the purpose set forth.

87,339.—Thomas J. House, Pittsburg, Pa.—*Printers' Furniture.*—March 2, 1869.

Claim.—A side-stick, consisting of two parallel bars, connected by spiral springs, or other equivalent device, with inclined bottomed grooves or slides in the inner faee of one or both the parallel bars, in which grooves or slides operate the qnoins, substantially as and for the purposes above set forth.

87,340.—Henry Janin, Virginia City, Nevada—*Process of Working Silver Ores.*—March 2, 1869.

Claim.—The nse and application of the dichloride of copper (Cu^2 C *l*) in the treatment of all classes of silver ores, tailings, or slimes, whether worked in pans, barrels, or amalgamating tubs, and whether the dichloride of copper be made ontside and apart from the ores, or whether it be made in the presence and during the treatment of the ores, tailings, and slimes, by the introduction into the pans, barrels, or amalgamating tubs of the appropriate and neeessary chemical ingredients.

87,341.—Barton H. Jenks, Bridesburg, Pa.—*Loom.*—March 2, 1869.

Claim.—1. The combination with treadles arranged at eaeh side of the loom of straps and rollers,

the straps being connected directly to the rollers from which the heddle-frames are suspended, and by which they are actuated, substantially as described.

2. The combination of laterally-sliding cams P, treadles E E, which are placed at both sides of the loom, and the suspension-rollers D, and straps connected directly to the rollers, substantially as described.

3. Drawing-down drums G, arranged beneath the heddles, and having the latter attached to them, substantially as described, in combination with treadles E E and straps c' c', arranged outside of the range of the heddle-frames, substantially as and for the purpose described.

4. Straps *d*, rollers D, heddles C, straps *e*, and drawing-down rollers G, combined and operating as and for the purpose described.

87,342.—Barton H. Jenks, Bridesburg, Pa.—*Carding-Engine.*—March 2, 1869.

Claim.—In combination with a poppet-head, the shaft C, the cylinder A, the flanged sleeved head A^1 B, set within the cylinder, and the sleeve D, with its end abutting against hub B, the cylinder, flanged sleeved head, and sleeve, being constructed and arranged as shown.

87,343.—Alexander Johnson, Brockport, N. Y.—*Medical Compound.*—March 2, 1869.

Claim.—A remedy for sore or inflamed eyes, composed of camphor-gum, one-quarter ounce; white vitriol, one ounce; alum, one ounce; calomel, one-eighth of an ounce; Tilden's extract of opium, one-eighth of an ounce; the whole to be dissolved in one quart of clean rain water, in the manner and for the purpose specified and described.

87,344.—Frederick W. Judd, New Britain, Conn.—*Toy-Bow.*—March 2, 1869.

Claim.—The combination of the cast-metal bow *a*, barrel *b*, hub *d*, tube *e*, and elastic cord *f*, the whole combined and arranged as herein set forth.

87,345.—Edmund E. Lauer and Henry W. Eisenhart, York, Pa.—*Horse-Rake.*—March 2, 1869.

Claim.—1. The arrangement of the driver's seat G upon thills which are hinged to the bottom edge of the eccentric oscillating axle-tree B and the teeth *b*, upon independent bearings located forward of the axle, on a shaft which is supported by said axle, and the slotted guides C, on the rear upper edge of said axle, all for joint operation, substantially in the manner and for the purpose described.

2. The arrangement of the eccentric oscillating axle-tree B, independently-pivoted teeth *b*, guides C, thills D, hinged at *n* to said axle, lever *h*, latch *j*, tripping or shifting-arm *g*, and the catches *a a*, upon the transporting-wheel A′, substantially in the manner and for the purpose herein described.

3. The arrangement of the adjusting arm *g*, thills D, joints *n*, and eccentric oscillating axle-tree B, substantially in the manner and for the purpose described.

4. The arrangement of the fork-teeth or rake-clearers *c*, thills D, joints *n*, and eccentric oscillating axle-tree B, substantially in the manner and for the purpose described.

5. The horse hay-rake, with its axle, its teeth, its thills, its seat, its guides, its clearers, and its discharging-devices, all constructed and combined substantially as described.

87,346.—Benjamin B. Lewis, Bristol, Conn.—*Prepared Coffee.*—March 2, 1869.

Claim.—A new article of manufacture and commerce, consisting of a preparation of coffee or its substitutes, in combination with a pulverized precipitant, substantially as described, and for the purpose herein set forth.

87,347.—Calvin Lobdell, Fort Hill, Ill.—*Horse-Hoe.*—March 2, 1869.

Claim.—The hiller S S, attached to the leveler, as and for the purpose set forth.

87,348.—Augustine L. McCrea, Chicago, Ill.—*Refrigerating-Car.*—March 2, 1869.

Claim.—The removable sections of horizontal tube C, each section supported centrally within the car by the frame *m*, and at the ends by the divided clamps *h*, through which the ends of the tubes pass, and which form tight joints around said tubes at their points of introduction to the air-chamber B, as herein described, for the purpose specified.

87,349.—Thomas McGrath, Albany, N. Y.—*Hoisting-Grapple.*—March 2, 1869.

Claim.—A grapple-iron, constructed with a long arm, *a*, furnished with recess *c* and the grasping-end *f*, in combination with the clevis *d* or chain B, as and for the purpose set forth as specified.

87,350.—David McKellar, Lowell, Mass.—*Composition for Printing Designs on Boots and Shoes.*—March 2, 1869.

Claim.—The composition, composed of coach-varnish, paint, and bronze-powders, in the proportions herein specified, or thereabouts, for printing designs on the toes and heels of boots and shoes, as herein set forth.

87,351.—John McLaughlin and Benjamin F. Dean, Columbia, Pa.—*Railway-Switch.*—March 2, 1969.

Claim.—The manner of confining the action of the tumbler or crank C in an open or closed slot, D, formed on or part of the switch-rod A, substantially in the manner shown, for the purpose specified.

87,352.—Joe V. Meigs, Washington, D. C.—*Metallic Cartridge.*—March 2, 1869.

Claim.—The method, herein described, of preventing accidental explosions in metallic cartridges, by placing the fulminate in such relation to the base, and to the anvil formed by the walls of the fulminate chamber, that it can only be exploded by a blow in a given direction, substantially as set forth,

87,353.—George R. Metten, Cleveland, Ohio.—*Mechanical Movement.*—March 2, 1869.

Claim.—1. The combination of drums B B′, applied loosely upon shaft A, and constructed with pulleys E E′ and internal friction-surfaces, arms C C^1, pitman F, dogs *g g′*, applied on arms G G, spring J, hub D, and shaft A, substantially as described.

2. The combination of the serrated dog or dogs *g*, pivoted to an arm, G, which has its fulcrum upon a hub, D, made fast to shaft A, and flanged drum, B, constructed with a pulley, E, and connected to a pitman by means of cords *a*, substantially as and for the purposes described.

87,354.—Joseph Miller, Olean, N. Y.—*Manner of Forming and Pressing Bricks.*—March 2, 1869.

Claim.—The sliding plates *h h h h*, fitted in and working up through an endless table, G, being operated by the inclined plate I and guiding-bars H H, in combination with the forming-spout F, in the receiver E, and the forcing-blades *b b*, all operating in the manner as herein described.

87,355.—Frederick Myers, New York, N. Y.—*Velocipede.*—March 2, 1869.

Claim.—1. The combination, with one wheel, A, having a double-cranked axle, of a frame supporting a treadle mechanism for operating the said axle, a seat and guiding-levers, when the said wheel is independent of any other wheel, as specified.

2. The combination with the wheel A and cranked axle of a frame supporting a seat and operating-mechanism, when the center of motion of the frame is below or eccentric to that of the said wheel, substantially as specified.

3. The combination of the wheel A, cranked axle-frame B, balancing-rim D, and wheels E, substantially as specified.

4. The combination with the cranked axle supporting the propelling-wheel of a reciprocating slide bar, connected thereto, and operating substantially as specified.

5. The combination with the plates B of the spring-seat supports H, seat-bar I, adjustable seat K, and guiding-levers O, substantially as specified.

87,356.—GEORGE NOTMAN, Deerfield, Ohio.—*Hilling-Plow.*—March 2, 1869.

Claim.—The shares E E, constructed and arranged as described, and connected with the handles D D and beam A by means of the braces F G G, substantially as herein set forth.

87,357.—ABRAM B. OVERBAUGH, Newark, N. J., assignor to OLIVER REEVES, same place.—*Ditching Machine.*—March 2, 1869.

Claim.—1. The loose vibratory sliding axles L and J, constructed and attached as shown, in combination with the frame A and scoop C, substantially as described.

2. The upright bar H and chain N, when combined with the pole M and frame A, in the manner and for the purpose herein above set forth.

87,358.—CALVIN H. PAINE, Providence, R. I., assignor to himself and WILLIAM E. BARRATT AND COMPANY, same place.—*Carriage-Jack.*—March 2, 1869.

Claim.—1. My improved jack, made as described; that is, with its toggle D and lever E arranged between, and so as to be covered by the standard A and the movable bar C, and to operate in chambers or recesses *g i*, arranged in the standard and bar, in manner substantially as specified.

2. The arrangement of the lower connection *e*, of the standard A, and the movable bar C, with the toggle D and the lever E, so as to constitute a stop, to arrest the latter, when in its lowest position, as described.

87,359.—HENRY L. PALMER, Stillwater, N.Y.—*Manufacture of Pasteboard.*—March 2, 1869.

Claim.—1. The method of uniting a continuous sheet of paper to sheets of pasteboard, as herein described.

2. Giving a convex form to the pasteboard at the line where the pasteboard and paper meet, by means of convex roller L and concave roller D, or their equivalents, for the purpose specified, substantially as described.

3. The combination of trough A, rollers B, C, D, and L, roller E or its equivalent, for holding the continuous sheet of paper, rollers G G′, and endless apron F, or its equivalent, for the purpose specified, substantially as described.

4. The combination of trough A, rollers B, C, D, and L, roller E, spring M, and endless apron F, or its equivalent, for the purpose specified, substantially as described.

5. The combination of trough A, rollers B, C, D, and L, apron F, and roller E, with a drying-cylinder, substantially as described.

87,360.—S. T. PEARCE, New York, N. Y.—*Centrifugal Ore-Separator.*—March 2, 1869.

Claim.—1. The combination of the annular receptacles C, provided with the openings E of the brushes D, and the distributing-disk B, or the equivalent of the latter, substantially as and for the purpose described.

2. The brushes D, supported upon the arms F, and connected to the sleeve G and the revolving rack H, substantially as and for the purpose specified.

3. The disk B, arranged for adjustment vertically, and for operation substantially as and for the purpose specified.

87,361.—S. T. PEARCE, New York, N. Y.—*Machine for Separating Ores and Other Granular Substances.*—March 2, 1869; antedated February 18, 1869.

Claim.—1. A rotating sieve, arranged to impel the substance to be sifted over its surface by centrifugal force, imparted by the rotation of the sieve, substantially as and for the purpose described.

2. The arrangement of a series of sieves, in the order herein described, substantially as and for the purpose set forth.

87,362.—LAWSON G. PEEL, Preston, Ga.—*Plow-Stock.*—March 2, 1869.

Claim.—1. Securing the plow-blade J by means of the forked foot E, shoulder-stop F, and rod G, all substantially as shown and described;

2. In combination with the plow-beam A, the forked foot E, rod G, band H, and wedge I, all constructed and operating substantially as shown and described.

87,363.—JOHN PERRY, Vernon, Ind., assignor to himself and BENJAMIN C. BAKER, same place.—*Horse-Rake.*—March 2, 1869.

Claim.—The adjustable thills G G and staples *h h*, arranged and combined to operate substantially in the manner and for the purposes as specified.

87,364.—THOMAS E. PHILLIPS, Coatesville, Ind.—*Fence.*—March 2, 1869.

Claim.—The combination and arrangement of the panels, composed of notched rails A B, rails C, post E, and vertical strips D, when constructed as described, with the braces F and stakes G, as set forth.

87,365.—ANTHONY PIRZ and MANUEL PIRZ, East New York, N. Y.—*Manufacture of Acetic Acid.*—March 2, 1869.

Claim.—The within-described method of extracting acetic acid from acetate of lime in a cold way, by means of pressure, as press, air, water, and steam-pressure, centrifugal power, or air-pump.

87,366.—THEODORE R. POWER, Arsenal Post Office, Pa.—*Car-Coupling.*—March 2, 1869.

Claim.—1. The hooks *d*, curving backward and upward from either or both edges of the upper or lower bars A A′ of a car-coupling, and so made that two adjacent draw-heads may be coupled by links passing over the hooks, or by a link inserted in a lug on one coupling passing over a hook on the other, substantially as described.

2. A car-coupling, having one or more hooks *d* on one side, and a curved arm, *d′*, on the other, the latter being so made as to have an upward curve just outside of its intersection with each bar A A′, substantially as and for the purposes above set forth.

87,367.—DANIEL C. RIPLEY, Pittsburg, Pa.—*Lamp.*—March 2, 1869.

Claim.—A footed hand-lamp, furnished with a detachable pedestal, substantially as and for the purposes hereinbefore set forth.

87,368.—A. M. ROSS, Ilion, N. Y.—*Garden-Hoe.*—March 2, 1869.

Claim.—The within described hoe, when constructed substantially as set forth, as an article of manufacture.

87,369.—JOSEPH RYALS, Terrysville, Conn.—*Construction of Shears.*—March 2, 1869.

Claim.—In the construction of shears, with malleable cast-iron handles, having steel cutting-surfaces welded thereto, the handles, with their stop and bearings cast so as to fit without grinding or filing, as set forth.

87,370.—WILLIAM SCHNEBLY, Hackensack, N. J.—*Truss.*—March 2, 1869.

Claim.—The capstan-arrangement, with adjustable pads, in combination with untempered sectional parts, forming a truss-hoop, or band entire, for the purposes substantially as described.

87,371.—TALIAFERRO P. SHAFFNER, Louisville, Ky.—*War and Signal Rocket.*—March 2, 1869,

Claim.—1. The construction of the walls of the priming-charge chamber *f f*, in Fig. 1, or *g g*, in Fig. 2, in or around the nitroleum, in such manner that the walls of the two apartments, as in Fig. 1, will be forced together on the explosion of the priming-charge, or, as in Fig. 2, by compressing the sides of the nitroleum-tube, by which, in both cases, the explosion of the nitroleum is effected by concussion.

2. The construction of the priming-charge chamber, as in Fig. 1, in such manner that the walls of the same will burst on the explosion of the priming-charge, and allow the flame to penetrate the confined nitroleum-charge, or, as in Fig. 2, the tube containing the nitroleum shall burst on the explosion of the priming-charge, and thus scatter the liquid in the flame of the said priming-charge, by which, in both cases, the explosion of the nitroleum is effected by the required 360° of heat, Fahrenheit.

87,372.—Taliaferro P. Shaffner, Louisville, Ky.—*Blasting in Oil-Wells, &c.*—March 2, 1869.

Claim.—1. As a method of blasting in oil-wells, artesian wells, &c., the arrangement of the "tamping," "blasting," and "resisting" charges within the strata to be acted upon, the former to be at or near the top thereof, the latter to be at the bottom of the strata, and the blasting-charge to be within the part desired to be disrupted. the whole to be exploded simultaneously, in the manner and for the purposes herein described.

2. The connection of the tamping and blasting-charges, by means of tubes, or pipes, and exploding the same at the same instant, in the manner and for the purposes described.

87,373.—David Slaughter, West Hempfield Township, Pa.—*Cultivator.*—March 2, 1869.

Claim.—The construction of the central shovel or scraper Q with its side wings R R′, hook-ends *r*, in combination with the connecting-straps P, the slide beams B B′, together with the wing-stay or guide Z, arranged and operating substantially in the manner and for the purpose set forth.

87,374.—Aaron W. Smith, Manchester, N. H.—*Flier for Spinning-Machine.*—March 2, 1869.

Claim.—1. The socket or open bands *g g′*, lug *a*, recess *i*, and catch *k*, employed in combination, substantially as herein described, to retain the foot-piece in position while at work, and permit its ready removal.

2. The leading notch *l* in the bar *f*, arranged directly under or in line with the tube or hollow arm A, substantially as and for the purposes specified.

87,375.—Cornelius T. Smith, Nyack, N. Y.—*Propelling Apparatus.*—March 2, 1869.

Claim.—1. In combination, the linear reciprocating-thrust propeller, the guard-frame, raising and lowering-guides, and means for adjusting to operate at different levels. all constructed and arranged for joint operation, as and for the purposes herein set forth.

2. The within-described specific construction of the linear reciprocating folding paddles F^1 f^1 and F^2 f^2, and their stops G^1 G^2, and cross-bar or back-stop H, all arranged relatively to each other and to the frame C, and means for reciprocating the same backward and forward in line, as and for the purposes herein set forth.

87,376.—Homer Smith, Kirksville, Mo.—*Corn Planter, Grain-Drill, and Harrow, Combined.*—March 2, 1869.

Claim.—1. The carrier G, with its apertures, and slides, and set-screws *h*, when constructed and operating substantially as and for the purposes specified.

2. In combination with the carrier G, the cross-pieces *m*, springs *n*, rods *o*, conduits *l*, and lever-valves, as described, when constructed and operating substantially as described.

3. The guides *a′*, in combination with a seed-sower, arranged and operating substantially as described.

4. The dog *s′*, in combination with a harrow, constructed and operating as specified.

5. The sliding frame P, when constructed, arranged, and operating substantially as and for the purposes described.

6. A combined corn-planter, seed-sower, and harrow, having carrier G, cross-bars *m*, spring *n*, rods *o*, flanches *r*, brake *s*, guides *a′*, levers *e′* and *g*, springs *y*, harrow W, with its slotted bar *j*, dog *s′*, and guide-wheels *a′*, constructed, arranged, and operating substantially as described.

87,377.—John Speight, Bradford, England.—*Spinning-Machine.*—March 2, 1869.

Claim.—1. Two sets of spindles or bobbin-studs F and H, arranged, respectively, upon parallel shafts, geared together and actuated substantially as described, so that, while one set is in position for spinning, the other set is in position for doffing.

2. The combination of the fliers C, suspended by their necks, and constructed substantially as set forth, with the means for lubricating the same, substantially as shown and described.

87,378.—Marietta Studley, South Yarmouth, Mass.—*Cradle-Chair.*—March 2, 1869.

Claim.—1. The combination, as described, of the permanent seat A, its legs D, single arm C, and back B, with the extension-slides *b b*, and legs F, and with the hinged guard G, and the separate seat I, and its two arms K K, the whole arranged and constructed substantially in manner and so as to operate together as explained.

2. The combination of the same and the auxiliary back H, the whole being as set forth.

87,379.—Retire C. Sturgis, Boston, Mass., assignor to "American Saddle Company."—*Sweat-Shield for Saddle-Pads.*—March 2, 1869.

Claim.—A sweat-shield for saddle-pads, composed of a bearing-surface of vulcanized rubber, which is combined with any suitable strengthening and protecting fibrous backing, and protected by an outer covering of leather or other suitable material, substantially as herein set forth.

87,380.—George Sugg and William Metz, Chicago, Ill.—*Bedstead-Fastening.*—March 2, 1869.

Claim.—We claim the curved semicircular bar C, its ends, projecting from the rail, being provided with lugs *b* connecting bar A, in combination with the female fastening adapted thereto, substantially as and for the purposes specified.

87,381.—William G. Tuttle, Geneva, N. Y.—*File for Gauging the Teeth of Crosscut Saws.*—March 2, 1869.

Claim.—1. The combination of the adjustable bars C C with the file-blade A, in the manner and for the purpose specified.

2. In combination with the above, the cross-pieces D D, and screws *b b c*, in the manner and for the purpose specified.

87,382.—P. H. Vander Weyde, New York, N. Y.—*Application of Grahamite in the manufacture of Gunpowder and Lamp-black.*—March 2, 1869; antedated February 13, 1869.

Claim.—1. The use of the mineral Grahamite as a superior material in the manufacture of gunpowder.

2. The use of the mineral Grahamite as a material for the manufacture of an improved lamp-black.

3. The introduction of chlorine-gas, in any quantity, into the furnace, when the imperfect combustion of the Grahamite, or other material, from which the lamp-black is manufactured, takes place.

87,383.—Moses N. Ward, Bangor, Me., assignor to himself, Benjamin S. Grant, and Thomas Hersey, same place.—*Hay-Spreader.*—March 2, 1869.

Claim.—1. The combination and arrangement of the two independent arms, the endless driving-chains, and their grooved supporting-wheels, with the rotary spreader and the thills or carriage-body, and the supporting wheels thereof.

2. The combination and arrangement of the springs I I, with the spreader, the two independent arms, the endless chains, and their supporting-wheels, and the carriage, as described.

87,384.—William Riekie Watson, Stockton, Cal.—*Horse-Shoe.*—March 2, 1869.

Claim.—The above-described shoe for horses, consisting of a toe-piece and two heel-pieces, adapted to fit together, but to be nailed on separately, substantially as described.

87,385.—Arthur S. Winchester, Boston, Mass., assignor to himself and James S. Parsons, same place.—*Metallic Screen for Paper-Pulp.*—March 2, 1869.

Claim.—1. The new or improved manufacture of paper-pulp screen, in which the sides of the slits are protected and the slits reduced in width, by means of layers of metal deposited on them, by means as set forth.

2. The process of making the slitted pulp-screen, viz., by sawing or making each of its slits by a tool or saw, and subsequently depositing on the opposite sides of such slit, or on the same, and the external

surface or surfaces of the metallic plate, a metallic plating, by means of an electro-plating bath, and its current and battery, as set forth.

87,386.—WILLIAM S. WOOTON, Richmond, Ind., assignor to himself and JOHN F. PIEHL, same place. —*School-Desk and Seat.*—March 2, 1869.

Claim.—The combination of the desk A and seat B, pivoted in the manner described, and provided with lugs $b\,b'$ and extension U U', operating together, to lock the desk, when the same is brought to its proper position, substantially as described.

87,387.—HORATIO ALLEN, New York, N. Y., assignor to the AMERICAN FIBER COMPANY.—*Valves of Steam-Guns for Separating and Disintegrating Fibers.*—March 2,1869.

Claim.—1. The employment, in connection with the discharge-valve of a fiber-gun, of an elastic or yielding buffer, to receive the impact or stroke of the valve, substantially as and for the purposes set forth.

2. The discharge-valve, and its vibratory supporting-arm, having a curved exterior surface, as described, in combination with a yielding buffer, upon which the curved surface of said arm, when the valve is thrown back, acts substantially in the manner specified.

3. The construction and arrangement, with relation to the hinged discharge-valve and its supporting-arm, of the hinged buffer, and the rubber, or other elastic body, upon which said buffer rests, as herein set forth and shown.

4. The employment, with the fiber-gun, of the conical lead valve, for closing the loading or the discharge aperture of the gun, in combination with the means herein described, or their equivalent, for forcing and holding said lead valve in its conical seat, substantially as and for the purposes set forth.

5. The combination with the valve-supporting arm or frame, of the double-catch lever and inclined plane, together with the means, substantially such as herein described, for actuating said lever and inclined plane, under the arrangement and for operation as set forth.

87,388.—ALBERT ANGELL, Newburgh, N. Y.—*Hulling-Machine.*—March 2, 1869.

Claim.—The arrangement of an endless belt and spring-strippers, constructed as described, with the elevator *d*, and a polishing-device, composed of the stationary brush S and endless serrated belt *m*, operating substantially as set forth.

87,389.—FREDERICK APP, Selin's Grove, Pa., assignor to himself and J. S. BURKHART, same place. —*Scaffold.*—March 2, 1869.

Claim.—1. The arrangement of the winch G, platforms H and I, and the rope and pulleys, with reference to the frame and the platform E, whereby the center of said platform is left unobstructed, both ends being raised and lowered simultaneously by the winch G, outside of one of the uprights, as herein shown and described.

2. The rest-plates K, and guard-plates L, arranged on the frame posts A, as described, in combination with the movable cross-bars J of the scaffold, and spring M, (or its equivalent,) all as and for the purpose set forth.

87,390.—JOHN Y. BETTS, Coventry, England, assignor to FREDERICK W. BETTS, New York City. —*Admission of Steam to Baking-Ovens.*—March 2, 1869; patented in England, April 20, 1865.

Claim.—The herein-described process for baking, consisting in the discharge into the oven, while containing the dough, of horizontal jets of steam above the dough, in the manner and for the purpose substantially as set forth.

87,391.—CHARLES D. BLINN, Port Huron, assignor to GEORGE CARY, Detroit, Mich.—*Preparation of Solder.*—March 2, 1869.

Claim.—1. Preventing the solder from oxidation by the process herein described, or its equivalent, so that the tinning-compound or flux, when added, will not change the nature of the solder.

2. Preparing solder with a flux, substantially as herein described, as a new article of commerce, by the use of zinc, muriatic acid, and sal-ammoniac, or their equivalents, so that the solder can be used in a dry state.

87,392.—NATHANIEL BRAND, Ilion, N. Y.—*Hay-Spreader.*—March 2, 1869.

Claim.—The combination and arrangement of pinion c', crank *e*, arm *g*, with the rock-shafts *d d*, operated separately or together, substantially as set forth and described.

87,393.—JOHN CARNRICK, New York, N. Y., assignor to REED, CARNRICK & ANDRUS, same place. —*Medical Compound.*—March 2, 1869.

Claim.—The improved medical compound, made by combining strychnia and ammonia, citrate of bismuth, or either of them, with pepsin, substantially as described.

87,394.—RILEY W. CARPENTER, Chicago, Ill.—*Attachment to Reed-Organs.*—March 2, 1869.

Claim.—1. A musical instrument constructed with reeds F, suspended in free air as described, and sounded by means of keys C, substantially as set forth.

2. The tracker-pin B, carrier D, provided with the tripper-pin G, or their equivalents, and reeds F, combined and arranged, substantially as described, in connection with the wind-reeds or pipes of a musical instrument, and operated simultaneously and by the same keys as said wind-reeds or pipes.

3. The combination of the tracker-pin B, and carrier D, secured together as and for the purpose set forth, with the stationary cams H and J, for the purpose described.

4. The combination and arrangement of the jack E with the tripper-pin G, spring K, and adjuster L, as and for the purpose described.

87,395.—RILEY W. CARPENTER, Chicago, Ill.—*Mode of Operating Tremolos in Organs.*—March 2, 1869.

Claim.—1. In combination with the wheel B, constructed and operating as set forth, the tremolo A of an organ or other musical instrument having a bellows.

2. In combination with the wheel B, or its equivalent, and the tremolo A, the flexible connection F, substantially as and for the purpose set forth.

87,396.—L. R. CHAPMAN, Grand Rapids, Mich., assignor to himself, GEORGE H. TRAXBURY and ELBERT WARD.—*Hinge.*—March 2, 1869; antedated February 26, 1869.

Claim.—The combination of the plate C, arm D, having an eye, or slot, formed in one end, and a bolt d^2, formed upon the other end, star-shaped catch-nut E, plate F, and arm G, having a catch I, formed upon one end, and having upon its other end an ear or pivoting-pin H, with an incline, h', formed upon its side, with each other, substantially as herein shown and described, and for the purpose set forth.

87,397.—JAMES CHRISTIE, Atlanta, Ill., and HENRY G. DAYTON, Maysville, Ky.—*Cattle-Food.*—March 2, 1869.

Claim.—The preparation of cattle-food in the manner substantially set forth.

87,398.—JOSEPH CLEES, Darbyville, Ohio.—*Plow-Truck.*—March 2, 1869.

Claim.—1. A plow-truck, having the axle constructed in two parts, and arranged to adjust either part vertically, without changing the other, substantially as specified.

2. The part D of the axle, carrying the guiding-wheel, arranged to be adjusted horizontally and vertically, independently of the other part of the said axle, substantially as specified.

3. The part C of the axle, carrying the small wheel, bent at right angles, and arranged for adjustment in the plate A, substantially as specified.

4. The combination, with the parts C and D of the axle, of the arm E, substantially as specified.

5. The combination, with the parts D and C, of the arms E and F, substantially as specified.

87,399.—Christopher C. Dow, Philadelphia, Pa., assignor to himself and Lionel Hylton, same place.—*Car-Jumper.*—March 2, 1869.

Claim.—1. The combination of the plates A A, having hinges *a* and a but-joint *b*, so as to form a solid arch over the hose, the said plates being provided with supplemental rails E, substantially in the manner and for the purpose above described.

2. The combination of the adjustable feet C with the plates A A, substantially in the manner and for the purpose specified.

3. The combination and arrangement of the supplemental plates A^1 and A^2 with the plates A, substantially in the manner above described, and for the purpose specified.

87,400.—Daniel S. Early, Hummelstown, Pa.—*Cultivator.*—March 2, 1869.

Claim.—The tongue *e*, in combination with the clevis *h*, as and for the purpose set forth.

2. The tooth A, in combination with the socket *d*, in the manner and for the purpose explained.

3. The tooth A, provided with the recesses *a a* and head *a'*, substantially as described.

4. The tooth A, provided with the recesses *a a* and head *a'*, in combination with the conjoined slots *b b'* and key *c*, substantially as described.

87,401.—Benjamin M. Ely, Perry, Mo., assignor to himself, L. T. Tulley, and William A. and Lyman P. Munger.—*Cultivator.*—March 2, 1869.

Claim.—1. A corn-cultivator, so constructed, of two equal and similar parts D D', which may be easily transposed, so that one may take the place of the other, that it can be used either as one implement or two distinct implements, substantially as and for the purposes described.

2 The adjustable bars A and B, when used in the construction of a double cultivator, constructed substantially as and for the purpose described.

3. The adjustable bar C, when used in the construction of a double corn-cultivator, constructed substantially as and for the purpose described.

4. The standards *m m'* and *n n'*, when so constructed as to be interchangeable, in a corn-cultivator, substantially as and for the purpose described.

5. The frame, composed of the bars A, B, and C, and the uprights G G', and beams E E, when used in the construction of a double corn-cultivator, substantially as and for the purposes described.

87,402.—William Fawcett, New York, N. Y., assignor to Fawcett Brothers and Richard Campbell, same place.—*Hames-Fastening.*—March 2, 1869.

Claim.—1. An improved hames-fastener, B, constructed substantially as herein shown and described, that is to say, formed with sockets or openings to receive the flat hooks a^1 of the hames A, whether provided with the loops b^1 b^2, either or both, or not, as and for the purpose set forth.

2. Forming flat hooks a^1 upon the lower ends of the hames A, to adapt them to the fastener B, substantially as herein shown and described.

87,403.—James A. Fegan, Brooklyn, N. Y.—*Spring-Bed Bottom.*—March 2, 1869.

Claim.—A hinge, made of four metal plates, united by three joints, in combination with the frames A C, springs B, and strips E F, substantially as described.

87,404.—Robert Fitts, Jr., Fitchburg, Mass., assignor to W. Haywood Chair Company, same place.—*Machine for Bending Wood.*—March 2, 1869.

Claim.—1. The revolving cam-gear H h^1, constructed substantially as herein shown and described, in combination with the stationary gear F, as and for the purpose set forth.

2. The former I, constructed substantially as herein shown and described, in combination with the former-seat J, stationary gear F, and revolving cam-gear H h^1, substantially as herein shown and described, and for the purpose set forth.

3. The former-seat J, and former-cap K, constructed and operating substantially as herein shown and described, in connection with the stationary gear F and revolving cam-gear H h^1, as and for the purpose set forth.

4. The adjustable and movable cam-tables U, constructed and operating substantially as herein shown and described, in combination with the revolving cam-gear H h^1, stationary gear F, former-seat J, and former-cap K, substantially as herein shown and described, and for the purpose set forth.

5. The extension crank wrench C', constructed substantially as herein shown and described, in combination with the cam-tables U, and caps $A' a^1 a^2$ of the strap Y, as and for the purpose set forth.

6. The sliding centering and clamping cam-bar Q R, in combination with the revolving cam-gear H h^1, revolving tables U, stationary gear F, former-seat J, former I, and former-cap K, substantially as herein shown and described, and for the purpose set forth.

87,405.—Jesse E. Folk, Brooklyn, N. Y.—*Match-Safe.*—March 2, 1869.

Claim.—In combination with the cover of a match-safe, the inverted box or receptacle D, arranged substantially as and for the purposes described.

87,406.—Edward H. Garrigues, St. Louis, Mo.—*Spark-Arrester.*—March 2, 1869.

Claim.—The jacket C, with wings F and rollers E, constructed and arranged, with reference to the perforated section B, as herein shown and described.

87,407.—William E. Hale, Chicago, Ill.—*Manufacture of Pasteboard.*—March 2, 1869; antedated October 6, 1868.

Claim.—1. Lining continuous strips of straw, or other thick paper, as it is made, with thin continuous strips of white or colored paper, substantially as described, for the purpose specified.

2. The combination of the paper-roll D, paste-roll E, and adjustable scraper H, with the box A B C, substantially as described, for the purpose specified.

87,408.—W. G. Hamilton, Milton, Wis.—*Water-Elevator.*—March 2, 1869.

Claim.—1. The combination of the crank-shaft G F, pulleys E, chains D, flange-plates S, and buckets C, with each other, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the cross-bar J, rod I, pivoted beam H, moving-weight N, rod K, and pivoted spout L, with each other, and with the endless chain of buckets, C D S, substantially as herein shown and described, and for the purposes set forth.

87,409.—Alexander Harroun, Jr., Onondaga, N. Y.—*Cloth-Guide for Sewing-Machine for Working Button-Holes.*—March 2, 1869.

Claim.—The slotted movable plate *g*, having sides, as described, and an opening in the center, the guides *c* and *d*, and the post *e*, when combined and operated substantially as set forth, and for the purpose mentioned.

87,410.—G. Hauschild, St. Louis, Mo.—*Roulette Apparatus.*—March 2, 1869.

Claim.—1. The revolving cone B, having compartments *b'*, and a base, B^2, with numbers marked thereon, substantially as set forth.

2. In combination with the foregoing, the cap-piece F, its orifice *e*, and the indicating-ball F, substantially as and for the purpose set forth.

87,411.—Francis Hayek, New York, N. Y.—*Lounge.*—March 2, 1869.

Claim.—The movable arm B, provided with a stop, and arranged near the foot-end of a lounge, so as to form an arm or foot-support, which can be moved out of the way, when not needed, substantially as herein shown and described.

87,412.—J. P. Hemmingsen, Marshalltown, Iowa.—*Smiths' Bellows.*—March 2, 1869.

Claim.—The arrangement of the bellows B, having a fixed top plate, which forms the bottom of the air-chamber C, the weighted flexible cover c^1, chamfered valve and seat H, nozzle I, valve-plate J, shaft

K, and lever L, with each other, as herein described, for the purpose specified.

87,413.—Birdsill Holly, Lockport, N. Y.—*Water-Supply Regulator for Water-Works.*—March 2, 1869.

Claim.—1. The combination of the piston-chamber G, piston H, weights L to L″, valve *a*, chamber M, and the pipes *c e* and D, substantially as described, for the purpose specified.

2. The belts P P′, shifter R, gate-operating mechanism S S′ S″, T T′ U T″, Q *p‴ p″* substantially as described, in combination with a piston-chamber, G, a piston, H, a valve, *a*, and a pipe, *c*, all as set forth.

3. The pipes A B C D, having check-valves, and a relief-valve, V, substantially as described, in combination with a piston-chamber, G, piston H, weights L to L″, valve *a*, and belts P P′, running on loose and fast pulleys, all as described, for the purpose of operating the gate-raising mechanism, all as set forth.

4. The gate-raising mechanism of water-works, operated by means of a piston-chamber and piston, or its equivalent, the weights L to L″, and gauge-valve *a*, operating substantially as described, for the purpose specified.

5. The hydrostatic relief-valve V, constructed and operating substantially as described, in combination with a pipe, B, piston H, and valve *a*, for the purpose of making its operation dependent upon the movement of the governing-piston, all as set forth.

6. The gate-operating mechanism, as shown at Fig. 5, all substantially as described, and for the purpose set forth, when in combination with the governing-piston and valve *a*, all as set forth.

7. The combination of a hydrostatic-valve, *a*, substantially as described, with a pressure-chamber and piston, H, substantially as described, when so connected that the valve and piston are dependent upon each other, and act, by the pressure of the water, to maintain an equable pressure against the said piston, all as set forth.

87,414.—John Jeffcoat, Onawa, Iowa.—*Hand Seed-Planter.*—March 2, 1869.

Claim.—1. The combination, in a hand seed-planter, of the box A, slide E, box F, plate C, slide H, and spring D, all arranged and operating substantially as herein shown and described.

2. The hand seed-planter, consisting of the box A, plate C, spring D, seed-slide H, slide E, box F, plunger M, spring J, and plate L, all arranged substantially as herein shown and described, with or without the combination with the spring I and lug *e*.

87,415.—J. I. Livingston, Pittsburg, Pa.—*Uncut Caps for Cans.*—March 2, 1869.

Claim.—The uncut cup A and cap C, constructed and arranged as described, and combined with the top of packing-cans, substantially as specified.

87,416.—Rembrandt Lockwood and Charles C. Schmitt, New York, N. Y.—*Brick-Machine.*—March 2, 1869.

Claim.—1. The arrangement of the followers L with the molds *a′*, the bar J, frame H′, and the adjustable stops K and P, all substantially as and for the purpose specified.

2. The combination with the reciprocating molds *a′*, followers L, and the grinding apparatus A, of the reciprocating carrier B, having a recess, *a*, substantially as and for the purpose specified.

3. The combination with the vertically-reciprocating mold *a′* of the carrier T and the endless chains, substantially as and for the purpose described.

4. The combination with the carrier T, provided with the swinging-catches K^2, of the reservoir R′ and carrying-boards R, substantially as and for the purpose described.

87,417.—J. E. Mansker, Clinton, La.—*Fan-Attachment for Tables.*—March 2, 1869.

Claim.—The combination of the tubular support A, reciprocating rod G, and fans B, when the latter are either pivoted to the support A and a hollow sleeve, D, or to a shaft secured to the said support, and a hollow tube, at right angles thereto and sliding thereon, all substantially as and for the purpose specified.

87,418.—Mahlon R. Margerum, Trenton, N. J.—*Sash-Fastener.*—March 2, 1869.

Claim.—The sash-lock A, with the cam-levers or arms B, spring E, in combination with key F and stud *g* and the slot *h* in the escutcheon I, all constructed and arranged as described.

87,419.—Horace Bartine Martin, San Francisco, Cal.—*Oscillating Engine.*—March 2, 1869.

Claim.—The arrangement of the tubular valve J, having its ports *g g′*, *f f′*, with relation to the ports *b b′*, *c c′*, and the semi-annular spaces *a a′*, as herein shown and described.

87,420.—E. G. Matthews, Newton, Mass.—*Plow.*—March 2, 1869.

Claim.—1. The combination with the under side of the plow-beam A of a slotted stock, D, for supporting the sward-cutter E, substantially as described.

2. The combination with the stock D and beam A of the intermediate guard-plate *e*, substantially as and for the purposes set forth.

3. The combination and relative arrangement of the parts marked A, C, D, E, and *e*, as shown and described.

87,421.—E. G. Matthews, Newton, Mass.—*Plow-Clevis.*—March 2, 1869.

Claim.—1. The combination of flanges *b d* with one or both of the side-pieces B of the clevis, substantially as and for the purposes set forth.

2. The combination with the front piece D of an eye or ring H, as and for the purposes stated.

3. The combination with the plow-beam A and front piece D of a side-draught rod, K, substantially as and for the purposes set forth.

4. The combination with the joint-bolt G of a catch-spring, *m*, substantially as shown and described.

87,422.—John McCloskey, New York, N. Y.—*Stench-Trap and Overflow for Basins.*—March 2, 1869.

Claim.—The plug-tube C, having orifices *a′* and strainer *e′*, in combination with the bowl A, provided with openings *a*, and the hollow metallic attachment B F, in which a partition, E, is placed, all constructed and arranged to operate substantially as and for the purpose specified.

87,423.—William McCully, Paterson, N. J.—*Lubricator.*—March 2, 1869.

Claim.—1. The cock D, in combination with the shell B and oil-reservoir A, arranged either with or without connections with the steam-boiler, substantially as and for the purposes described.

2. In combination with the cock D the valve O, in the oil-holder A, substantially as and for the purposes herein shown and described.

87,424.—Richard McGee, Martinsville, Ind.—*Mode of Fastening Trusses.*—March 2, 1869.

Claim.—The plates K and K, the knobs K′ K′, the knob *h*, and the button-holes A, H, and I, when the same are constructed, arranged, and used for the purpose and in the way substantially as herein set forth.

87,425.—Robert McLarn, Shirland, Pa.—*Thatching for Stacks of Hay and Grain.*—March 2, 1869.

Claim.—The thatched cover *a* a^1 a^2, when used in connection with the horizontal bands *c* c^1 c^2, the vertical cords *e e′*, the weights W W, pin *p*, and the cord *m*, all said parts being arranged and combined together as described and for the purpose specified.

87,426.—George Paddington, Springville, Iowa.—*Seeding-Machine.*—March 2, 1869.

Claim.—1. The arrangement of the arms L upon opposite sides of the axle D, with relation to the seed-slides I K, whereby the slides are operated directly from the axle, without intermediate gears or levers, as herein shown and described.

2. The brakes or plates P, attached to the shaft O, in the front part of the frame A, substantially as and for the purpose specified.

3. The truck F, supporting the rear of the frame beneath the seat E, and consisting of the frame G, the wheels, and the rods *a*, provided with springs *b*, inserted in the frame, all arranged as herein shown and described.

87,427.—Robert W. Pain, New York, N. Y., assignor to Brainard and Wing, same place.—*Tremolo for Wind-Instruments.*—March 2, 1869.

Claim.—A valve for the tremolo-attachment of a melodeon, or similar instrument, formed in the manner specified, so that when the valve opens the air can escape freely all around said valve, for the purposes specified.

87,428.—John F. Phelps, Havana, N. Y.—*Lamp-Shade.*—March 2, 1869.

Claim.—1. The combination with the shade A B of the spring-supports C, when arranged as specified.

2. The combination with the part A B of the detachable tubular extension G, substantially as specified.

87,429.—Henry Poth, Pittsburg, assignor to himself and G. A. Klages, Birmingham, Pa—*Fifth-Wheel for Carriages.*—March 2, 1869.

Claim.—A fifth-wheel for vehicles, comprising the several features of improvement referred to above by the letters *a*, *b b*, *d d*, *c e*, *f f*, substantially as and for the purpose herein shown and described, as a new article of manufacture.

87,430.—James H. Preston, Jefferson City, Mo.—*Carriage for Sawing Saddle-Tree Stuff.*—March 2, 1869.

Claim.—The arrangement, upon the bed A, of the beveled rests B B, adjustable hinges C D, beveled blocks E, and slotted adjusting plates G, when all the parts are constructed as described, for the purpose specified.

87,431.—N. L. Revere, Worcester, Mass.—*Centering-Deviee.*—March 2, 1869.

Claim.—The improved centering-device herein described, consisting of the several parts specified, all constructed, arranged, and operating substantially as shown and set forth.

87,432.—Louis S. Robbins, New York, N. Y., and John A. Southmayd, Elizabeth, N. J.—*Proeess of Preparing Bamboo-Fiber.*—March 2, 1869.

Claim.—1. The saturating of lignine, or the fiber of bamboo, with oleaginous substances and compounds, substantially as herein described.

2. The saturating of the lignine with oleaginous vapors, in combination with steam, substantially as described.

87,433.—Louis S. Robbins, New York, N. Y., and John A. Southmayd, Elizabeth, N. J.—*Manufacture of Floek from Bamboo or Cane-Fiber.*—March 2, 1869.

Claim.—1. The process for preparing flock from the fiber of cane or bamboo, the same consisting in first removing the joints, then splitting, grinding, boiling, and preparing the fiber of the cane, substantially as herein described.

2. Every use and application of said flock.

87,434.—Louis S. Robbins, New York, N. Y., and John A. Southmayd, Elizabeth, N. J.—*Manufacture of Oakum.*—March 2, 1869.

Claim.—1. The process of preparing oakum from bamboo, cane, or reed, substantially as herein described.

2. The use and application of the fibers of bamboo, cane, or reed, either separately or in combination with other materials, for the purpose of oakum, as a new article of manufacture.

87,435.—Joseph Ryan, St. Louis, Mo.—*Hydraulic Lifting-Jack.*—March 2, 1869.

Claim.—1. The base-block C, arranged with the sub-chamber *e*, and supporting the cylinder A, in such wise that the pressure of the ram A^1 shall be transmitted in the line of the axis of said ram, when combined with the reservoir B and pump D, substantially as set forth.

2. The pump D, having valves d^1, d^2, and d^{11}, and hollow plunger D^1, arranged and operated as and for the purpose described and set forth.

3. The vibrating arm D^2, when provided with a bushing, d^{13}, and elastic packing d^{14}, as described and shown.

4. The lever D^4, provided with an adjustable stop, d^{15}, in combination with the adjustable lever-rest *b*, when arranged as and for the purpose set forth.

5. The ground-rest A^2, when provided with a step, a^3, and a bearing-roller, a^4, all arranged as described and shown.

6. The plunger A^1, when provided with ground-rest A^2, and head-rest A^3, as described, and for the purpose set forth.

7. Stop-guard b^1, when arranged with the lever D^2, as and for the purpose set forth.

87,436.—D. B. Seeley, Portland, Ill.—*Pruning-Shears.*—March 2, 1869.

Claim.—The pruning-knife, constructed as described, of the hook-shaped blade A, on the handle B, provided at its center with the pin *b*, the short blade C, hung by its curved slot *e*, upon said pin, and the curved handle D, pivoted at *e* to the hook A, and at its end, *d*, to the inner end of the blade C, all arranged and operating as described, for the purpose specified.

87,437.—Franklin C. Sexton, Shelbyville, Ind.—*Tanner's Table.*—March 2, 1869.

Claim.—The sub-table A, or its equivalent, constructed substantially as described, or so that the hide will be raised and the liquid be allowed to pass therefrom, for the purposes set forth.

87,438.—Peter E. Shear, Sangerties, N. Y. assignor to himself and William Mulligan, same place.—*Door or Frame of Puddling-Furnaces.*—March 2, 1869.

Claim.—1. Providing the hollow metallic frame of a puddling-furnace door with an inclined back face, *b*, substantially as herein shown and described, for the purpose specified.

2. The sliding bit D, when fitted over the concave face of the sill C, for the purpose of not coming in contact with the metallic surface of the sill, as set forth.

3. The pin *d*, having the head *e* on one side, in combination with the sliding bit-plate D, all arranged substantially as herein shown and described.

87,439.—W. R. Smiley. New Lisbon, Ohio.—*Fire-Alarm Telegraph* —March 2, 1869.

Claim.—The combination and arrangement, in the said signal-apparatus, of the bell K, signal-key E, switch-key V, magnet M M, and its clapper-lever O P, with the several plates for turning the switch-key on, and the wires connecting the said plates with the accessory parts of the apparatus, all substantially as shown and described, and for the purpose set forth.

87,440.—George W. Spencer, South Grov e land, Mass.—*Shoe-Knife.*—March 2, 1869.

Claim.—1. The stock A, constructed as described, and adapted for holding the knife and gouge, and securing them to the machine, substantially as and for the purpose specified.

2. The combination, with the knife B, of the gouge E, substantially as and for the purpose specified.

87,441.—William P. Springer, Oswego, N. Y.—*Smut-Machine.*—March 2, 1869.

Claim.—The arrangement of the double fan D *d i*, scouring-cylinder A A′, connecting-pipe I, and surrounding air-chamber H, all constructed and operating substantially as herein set forth.

2. The shaft G, provided with the beaters B C, fan D *d i*, and scrapers *f*, and resting in the block N *n o*, removably fitted in the box M, and covered with a cap, *m*, in combination with the scouring-cylinder A A′, and chambers H F, all substantially as herein set forth.

87,442.—George J. Sturdy and Solomon W. Young, Providence, R. I—*Process of Cleaning Me-*

tallic Articles for Plating and Gilding.—March 2, 1869.

Claim.—1. For cleaning, burnishing, or polishing metallic articles, (as hooks and eyes, buttons, eyelets, and other articles of metal, in preparing them for gilding or plating,) revolving, shaking, or agitating such articles in a cylinder or other suitable vessel, when immersed in a solution of cyanide of potassium, substantially as described.

2. Preparing metalic articles for gilding or plating, by means of a mechanical and chemical process combined, substantially as described.

87,443.—Michael Sullivan and John Reedy, New York, N. Y.—*Paper-File.*—March 2, 1869.

Claim.—1. The back plate C, fastening-rod D, and fastening-strip I, in combination with the cover A B B, constructed, arranged, and operating substantially as herein shown and described, for the purpose set forth.

2. In combination with a paper-file, the fastening-strip I, or its equivalent, when used substantially as and for the purposes set forth and described.

87,444.—August Tappe, Johnstown, N. Y.—*Smoking-Pipe and Cigar-Holder.*—March 2, 1869.

Claim.—The hollow perforated cone C, perforated tube E, and diaphragm *a*, when arranged within the stem, or other part of a cigar-holder or smoking-pipe, substantially as herein shown and described, for the purpose specified.

87,445.—Theodore R. Timby, Saratoga, N. N.—*Railway-Car Wheel.*—March 2, 1869.

Claim.—A mortise-wheel, A B C, to be used upon street or other railways, constructed with the mortises D in the thread C, substantially as and for the purposes described.

87,446.—Theodore R. Timby, Saratoga, N. Y.—*Case for Preserving Butter, Cheese, and other Articles.*—March 2, 1869.

Claim.—1. The rack B, constructed and arranged substantially as and for the purposes set forth.

2. The combination of the rack B with the case A, for the purposes as described.

87,447.—Gustave Verplaetse, New York, N. Y.—*Barrel for Cooling Fluids.*—March 2, 1869.

Claim.—The open-work case N, encircling the ice-case B, and adapted to serve as a strengthener thereof, without materially retarding the transmission of caloric thereto, the ice-case B having a tightly-closable mouth, and all the parts being arranged relatively to each other and to the vessel A, substantially as and for the purposes herein set forth.

87,448.—Henry B. Verry, New York, N. Y., assignor to himself, G. Koonz, New York, and D. G. Whitman, North Kingston, R. I.—*Steam-Engine Valve-Gearing.*—March 2, 1869.

Claim.—The steam-chest C, and the valves *f f*, constructed and arranged in combination with a steam-engine cylinder, substantially as herein shown and described.

87,449.—Edgar Wakeman, Brooklyn, Cal.—*Boat-Detaching Apparatus.*—March 2, 1869.

Claim.—The slotted box-spout F, box D, and cam-lever E, having the arm *e'*, for the attachment of the rod G, with the recessed strap B, and headed bar C, all arranged and operating as described, for the purpose specified.

87,450.—Seth Wheeler, Albany, N. Y.—*Horse-Power.*—March 2, 1869.

Claim.—The series of independent rollers I, connected together by the rotating band *k*, on the outside thereof, in combination with the master-wheel and the track F, substantially as and for the purpose described.

87,451.—L. F. Whitman and O. P. Whitman, Macomb, Ill.—*Shoe-Fastening.*—March 2, 1869.

Claim.—1. A metallic spring shoe-fastener, when arranged as described, for the purpose set forth.

2. The shoe-fastener described, consisting of the spring *b* and rivets *a' a'*, when attached to a shoe, as and for the purpose described.

87,452.—Peter F. Whitney, Saugerties, N. Y.—*Apparatus for Loading Ice.*—March 2, 1869.

Claim.—The combination, with the frame A, roller D, carriage E, and chute B, of the friction-brake F, weight K, cords H and L, and the pulleys I I', arranged substantially as and for the purpose described.

87,453.—David Williamson, Elizabeth, Pa.—*Mining-Machine.*—March 2, 1869.

Claim.—1. The arms C C, pivoted upon a frame or carriage concentrically with the driving-axle of the machine, and carrying the saw-mandrel, in combination with the circular or segmental guides D D, as set forth.

2. The guide-rods *h h*, and spiral springs h^2 h^2, in combination with the cross-head H and saw-mandrel B, arranged and operating substantially as and for the purpose set forth.

3. The frame A, driving-shaft E, and driving-pulley E^1, in combination with the circular or segmental guides D, arms C, and saw-mandrel B, arranged and operating substantially as and for the purposes described.

4. A cylindrical saw, having teeth at its working-end, and spiral corrugations extending therefrom toward its opposite end, as well as openings in its periphery, for the escape of dust or chips, as set forth.

87,454.—Charles P. Winslow, Westborough, Mass.—*Safety Cattle-Tie.*—March 2, 1869.

Claim.—The arrangement, with reference to the cattle-stalls, of the sliding bar L, lever-pinion P, rods R, cross-piece J, rods *i i*, jointed tie-bolts C and the eyes *k k'*, as herein described, for the purpose specified.

87,455.—Henry Aiken, Pittsburgh, and Henry McAllister, Jr., and Henry G. Morris, Philadelphia, Pa.—*Burning-Kiln for Brick, Tiles, &c.*—March 2, 1869.

Claim.—The kiln A, with its double walls A' B, and system of induction-pipes C C' D, in combination with an independent gas-generator, F, and pipes N N', connected with a pressure-blast, for introducing the mingled gases and air into the kiln, for combustion under pressure, substantially as herein set forth.

87,456.—Henry Aland, London, England, assignor to Samuel and George Aland.—*Rotary Blowing-Fan for Furnaces, Gas-Works, &c.*—March 2, 1869.

Claim.—The directing a given pressure from the discharge of the fan-disk periphery, and injecting it into its center, as hereinbefore described.

87,457.—Daniel Arndt, Toledo, Ohio.—*Clothes-Mangle.*—March 2, 1869.

Claim.—The combination of the large roller F, mangle-board E, and roller *d*, levers G G and I I, rubber bands H H, and cams *e e*, all constructed and arranged substantially as and for the purposes herein set forth.

87,458.—John Ball, Canton, Ohio.—*Spring-Link for Plow-Clevis.*—March 2, 1869.

Claim.—A spring-link for plow-clevis, formed of one piece of metal, in the form substantially as shown, with a hook at one end and an eye at the other, substantially for the purposes specified.

87,459.—Joseph W. Bates, St. Paul, Minn.—*Stove-Pipe.*—March 2, 1862.

Claim.—1. Converting the horizontal draught of a stove-pipe into a perpendicular, or a perpendicular draught into a horizontal, substantially as and for the purposes herein set forth.

2. Constructing the end of a stove-pipe, where it joins the chimney-flue or main pipe, in such a manner that the current from said stove-pipe may be changed, and the two currents, at the time when they join each other, may be moving in the same direction, substantially as herein set forth.

87,460.—G. W. R. Bayley, Algiers, La.—*Lock-Nut Attachment for Railroad-Chairs.*—March 2, 1869.

Claim.—The method of locking the nut or nuts of railroad joint bolts, or of intermediate rail bolts, by means of the lip or lips of the railroad-chair, in the manner substantially as herein described and set forth.

87,461.—Samuel Boden, Louisville, Ky.—*Violin-Bridge.*—March 2, 1869.

Claim.—A bridge for stringed musical instruments, constructed substantially as shown and described, and for the purpose set forth.

87,462.—Benjamin Briscoe, Detroit, Mich.—*Locomotive Alarm-Bell.*—March 2, 1869.

Claim.—1. The lever G, vertical guides H, spiral spring I, springs J, rocking lever K, and connecting-rod M, when constructed and arranged to operate the hammer, F, on the bell C, substantially as and for the purposes set forth.

2. The arrangement of the hammer F, operated as described, in such a manner that each stroke of the same will tend to rotate the bell C, substantially as and for the purpose set forth.

87,463.—Smith S. Brown, Woonsocket, R. I.—*Invalid Bed and Bedstead.*—March 2, 1869.

Claim.—1. The base-plate A, legs B, standards C, rollers *a*, semicircular arms D, pin *e*, levers F and S, arbor *d*, spring *e*, and hangers *h*, substantially as and for the purposes specified.

2. The bed-frame E, bottom *s*, mattress I, ratchet H, jointed frame M, with its canvas elevator, as described, table R, straps *r*, hook *z*, and arm *v*, when constructed, arranged, and operating substantially as specified.

87,464.—Dennis C. Burdick, Milton, Wis.—*Punch, Shears, and Iron-Shrinker Combined.*—March 2, 1869.

Claim.—The arrangement upon the stand A of the centrally-bisected parts C D, supporting the bar F, cam L′, and lever G, gripes K L, part N, and gripes M N, punch and die H I, movable part P, and shear *c b*, the parts being adjusted, and all constructed to operate substantially as set forth.

87,465.—D. P. Butler, Boston, Mass.—*Lifting-Apparatus.*—March 2, 1869.

Claim.—1. For lifting in a vertical direction in the line of the spine the shoulder-strap harness, substantially as shown and described.

2. In combination with the vertical rod *b* the cross-bar *t* and the handles *u*, substantially as and for the purpose set forth.

3. The combination with the shoulder-strap harness of the handle *d*, substantially as described.

4. The arrangement of the handles, or of the handle, through which the effort of the gymnast is exerted, with screw-threads in connection with nut-threads, so that the height of the handles or handle above the platform can be adjusted without change in the position of the weight.

87,466.—Car Carpenter, Buffalo, N. Y.—*Manufacture of Illuminating Gas.*—March 2, 1869.

Claim.—In the manufacture of gas, the introduction of the vapor generated in a suitable vessel from crude petroleum, or other impure liquid hydrocarbon, into the retort containing the coal, and then passing the gaseous mixture therefrom, through one or more uncharged retorts, substantially as set forth.

2. The combination of the reservoir G, the tar-vaporizing boiler I, and retorts B C, substantially in the manner and for the purpose specified.

3. The arrangement within the retort B of the vaporizing-pan *k*, in combination with the reservoir G, substantially as set forth.

87,467.—John H. Cheever, New York, N.Y.—*Manufacture of India-Rubber Trunks, Valises, Boxes, &c.*—March 2, 1869.

Claim.—1. A trunk or valise, made of India-rubber, combined with fibrous matter, or with *papier-maché*, or the equivalent of the same, substantially in the manner herein described; that is to say, when the whole of the trunk, or the sections thereof, are shaped and vulcanized in molds.

2. As a new manufacture, the production of trunk-sections or parts, composed of India-rubber and fibrous matter, or *papier-maché*, or its equivalent, shaped and vulcanized in molds, in such manner that said parts may be readily united by any mechanical means to form a trunk or valise, substantially as set forth.

87,468.—Mirtillow R. Clapp, New York, assignor to himself and Edward D. Jones, Brooklyn, N. Y.—*Steam-Engine Mechanism.*—March 2, 1869.

Claim.—1. The arrangement of the bed-plate B, formed with induction and eduction passages in or through it, with reference to the cylinder D, valve-chest E, and boiler A, substantially as shown and described.

2. The arrangement of the stop-valve C with the bed-plate B, essentially as specified.

3. The arrangement of the exhaust pipe or pipes from the engine, substantially as described, whereby they are made to enter the boiler below the crown-sheet, and to pass up or establish connection through the latter, substantially as described and set forth.

87,469.—Edwin S. Collamer, Georgetown, D. C.—*Shutter-Fastener.*—March 2, 1869.

Claim.—The spring D, having the standard G, thumb-piece F, and notch *f*, constructed as described and shown, and arranged with the but, as and for the purpose described.

87,470.—S. W. Corbin, Bainbridge, N. Y.—*Post-Hole Auger.*—March 2, 1869.

Claim.—The combination of the handle A, flange B, lip C, and rim D, all constructed and arranged substantially as and for the purposes herein set forth.

87,471.—Joseph E. Coveney, Buchanan, Mich.—*Three-Horse Equalizer.*—March 2, 1869.

Claim.—The construction of a three-horse evener or equalizer, combining the bar A, straps B, pulleys C, C′, C″, C‴, and F, clevises G and J, and rope or chain K, when combined and arranged and operating substantially as herein described.

87,472.—Archibald C. Crary, Utica, N. Y.—*Railroad-Car Heater.*—March 2, 1869.

Claim.—1. The self-acting extension and flexible steam-conduit, and its equivalent, constructed substantially as hereinabove set forth, and its application to the transmission of steam from a steam-generator to a train of cars, or from the boiler of a locomotive to the cars, or as an intermediate between the steam-pipes of adjacent cars.

2. The steam-pipe E E and its equivalent, when located and used, substantially as herein set forth, in transmitting steam from the steam-chamber of a steam-generator longitudinally through the interior of the steam-generator, and longitudinally through the interior of the boiler, substantially as herein set forth.

3. Valve M, when used in connection with a steam-generator and steam-boiler as a safety-valve and regulator for the heating apparatus, substantially as set forth.

4. The self-acting or automatic valves V and R, and their equivalents, constructed and used substantially as herein set forth.

5. The self-connecting and self-disconnecting joint, formed by the pressure of the semispherical end of pipe P into socket Q with hood A, for the purpose of forming automatically a union between the steam-pipes of two adjacent cars, when used or applied substantially as hereinabove set forth.

6. The application and use of springs G and S, and their equivalents, in connection with valves, substantially as hereinabove set forth, in controlling and stopping the flow of steam to and from the railway-cars.

7. Pipe O′ is used in connection with pipes O and E E, substantially as herein set forth.

87,473.—J. B. Crosby, Boston, Mass.—*Nailing or Pegging Machine.*—March 2, 1869.

Claim.—The combination of the vertically-moving horn with the feeding-mechanism of the wire-like

material, so that the feed of said material shall be in proportion to the thickness of the stock at the points at which fastenings are to be inserted, substantially as described.

87,474.—Ferdinand Davison, Liberty, Va.—*Machine for Making Spikes.*—March 2, 1869.

Claim.—1. The form and construction of the holding and pointing dies on the rolls R and T, as and for the purpose specified.

2. The combination of the carrying and pointing rolls R and T, with the beveled cutter and holder-block P and reciprocating cutter and transferrer H, all arranged and operating together, substantially in the manner described.

3. In combination with subject-matter of second clause, the mechanism herein described, for feeding the blank-bar to the knives, as set forth.

87,475.—Jules George Dreyfus, New York, N. Y.—*Enameling Iron and Steel.*—March 2, 1869.

Claim.—The process herein described of enameling steel or iron, by first galvanizing the same, or coating it with copper, or its equivalent, substantially as specified, and afterward applying the enamel thereto, as herein set forth.

87,476.—Cyprien Marie Tessié du Motay, Paris, France, assignor to Edward Stern, New York.—*Apparatus for Burning Gases for Metallurgic and other Purposes.*—March 2, 1869.

Claim.—The apparatus for burning hydrogen, carbon, and other gases, constructed and applied either directly or indirectly to the apparatus which generates or supplies the gases, substantially in the manner herein shown and described.

87,477.—Cyprien Marie Tessié du Motay, Paris, France, assignor to Edward Stern, New York.—*Preparing Zirconia for Use in Producing Light, and for other Purposes.*—March 2, 1869.

Claim.—1. The employment of zirconia to develop and intensify the light of oxyhydrogen flame, substantially in the manner herein set forth.

2. The method of extracting and obtaining zirconia from its ores, substantially in the manner and by the means herein specified.

3. The manufacture of pencils, cylinders, &c., of zirconia, agglomerated and compressed, substantially as and for the purposes herein specified.

4. A compound pencil or cylinder, or its equivalent, for illuminating purposes, composed of zirconia and magnesia, clay, or like refractory substance, united substantially as and for the purposes herein set forth.

87,478.—Cyprien Marie Tessié du Motay, Paris, France, assignor to Edward Stern, New York.—*Process and Apparatus for Generating Combustible Gases.*—March 2, 1869.

Claim.—1. The method of generating or producing the gases herein specified, in the manner and by the means substantially such as shown and described.

2. An apparatus for generating, or producing, carbonic oxide, hydrogen, and carburetted hydrogens, the parts of which are combined and arranged for joint operation, substantially as shown and set forth

87,479.—Cyprien Marie Tessié du Motay, Paris, France, assignor to Edward Stern, New York.—*Manufacture of Iron and Steel.*—March 2, 1869.

Claim.—The method of effecting the transformation or conversion of iron and steel, substantially in the manner and by the means herein shown and set forth.

2. The apparatus for the manufacture or transformation of iron and steel, constructed and operating substantially as herein shown and described.

87,480.—Robert N. Eagle, Washington, D. C.—*Lamp-Burner.*—March 2, 1869.

Claim.—1. The body A of a lamp, when so constructed as to form a wick-chamber, B, and surrounding reservoir C, separated by a depression of the shell of the lamp, substantially as set forth.

2. The combination of the reservoir and wick-chamber, when both are formed from the continuous shell of the lamp, and so arranged that the top of the reservoir and the point of connection between the burner and wick-chamber shall be on the same, or nearly the same, level, substantially as described.

3. A lamp, constructed with an air-chamber, E, formed by a depression D D, of the shell of the lamp, substantially as and for the purpose set forth.

4. The depression a', formed in the top of the body of the lamp, to receive the head of the thumb-screw F′, substantially as and for the purpose set forth.

5. The combination of a lamp-body, having an annular air-chamber E, and the annular bridge o and o', substantially as and for the purpose set forth.

6. The combination of the wick, the porous capillary substance, and the mat; but this I claim only when the capillary substance is inclosed in a cage surrounded by the oil, and under and in contact with the wick, and when said mat is used to draw the oil from points outside of the cage to the capillary substance inclosed therein.

7. In combination with a lamp-burner, having a male screw on its lower end, and the neck of a lamp formed to receive and attach a burner by a catch, instead of a screw, an intermediate collar, G, which may be screwed to the burner, and also attached by a catch to the neck of the lamp, substantially as and for the purpose set forth.

87,481.—Hemon Eichler, New Lisbon, Wis.—*Leather-Cutting Machine.*—March 2, 1869.

Claim.—1. A leather-shaving machine, consisting of the stationary knife C, the adjustable roller D, and the roller E, mounted in a swinging frame, substantially as herein described.

2. In combination with the adjustable roller D, the wedge G, arranged to operate substantially as set forth.

87,482.—Charles J. Everett, New York, N. Y.—*Apparatus for Rendering Lard, Tallow, &c.*—March 2, 1869.

Claim.—1. Strengthening the digesters, and uniting the water-bottom under the same with the steam-space over the top thereof, to give circulation to the water, and uniformity of temperature in the jacket, by means of flues introduced therein, substantially as described.

2. Tying the bottom and top of the steam and water-jacket together, by means of bolts or rods passed through said flues in said digester, substantially as described.

3. The introduction of the noxious gases and vapors from the superheater into or under the furnace of the consumer, along with the current of hot air, created by the passage of said noxious gases and vapors from the superheater to the furnace, substantially as described.

4. Making the superheating-chamber between the plates composing the wall of the furnace, substantially as described.

5. Making the gas and air-jet orifices a part of the superheater, through which the gas and steam pass on their way to the fire, substantially as described.

87,483.—A. M. George, Nashua, N. H., assignor to himself and B. F. George, same place.—*Stone-Dressing Machine.*—March 2, 1869.

Claim.—Raising or lowering the frame of a stone-dressing machine by means of ratchets and pinions, substantially as set forth.

2. The bar s, clasp u, and lever L, constructed, arranged, and operating substantially as and for the purposes herein specified.

3. The trip-hammer herein described and shown, when working in combination with the bar s, clasp u, and lever L, substantially as specified.

87,484.—Edward C. Gero and James N. Cooley, Kalamazoo, Mich.—*Plow-Point.*—March 2, 1869.

Claim.—A steel socket plow-point, constructed in the manner described, the same being secured to and in combination with a cast-iron plow-point or share substantially as herein set forth.

87,485.—Samuel Gibbons, Freedom, Pa., assignor to Excelsior Oil-Manufacturing Com-

the lead ingot may be cast without contact with the tin, thus reducing the alloying of the two metals.

4. In the manufacture of the compound ingot, as herein described, the formation of the tin ingot of superposed inverted frusta of cones, the upper one being of larger diameter but proportionally shorter than the lower.

3,745.—HERMANN SCHMIDT, New York, N. Y.—*Hand-Screw Clamp.*—Patented August 14, 1866, No. 57,195; reissued November 23, 1869.

Claim.—A hand screw clamp, the nut or nuts of which are capable of being thrown in or out of gear with the clamping screw or screws, substantially in the manner and for the purpose herein set forth

3,746.—THE WOVEN-WIRE MATTRESS COMPANY, Hartford, Conn., assignees, by mesne assignments, of FRANZ RUDOLPH WEGMAN.—*Wire-Spring Mattress.*—Patented June 16, 1868, No. 79,040; patented in Saxony, March 6, 1865; reissued November 23, 1869.

Claim.—A fabric, formed of double-woven spiral springs, coiled and intertwined, in the manner described.

3,747.—WILLIAM WESTLAKE, JAMES F. DANE, and JOHN P. COVERT, Chicago, Ill., assignees of WILLIAM WESTLAKE.—*Lantern.*—Patented April 26, 1864, No. 42,520; reissued November 23, 1869.

Claim.—1. The lantern-guard *a*, constructed entire, without hinge or joints, so that, as a whole, it can be readily attached to or removed from the lantern, as set forth.

2. The disk *g*, in combination with the ring or band *b* of the guard, and fastenings *e*, substantially as and for the purposes specified.

3. The guard *a*, in combination with the disk *g*, fastenings *e*, and removable globe *d*, substantially as specified.

3,748.—CLEAVELAND F. DUNDERDALE, New York, N. Y.—*Apparatus for Generating and Carbureting Gas.*—Patented June 1, 1869, No. 90,644; reissued November 30, 1869.

Claim.—1. The manufacture of carbureted-hydrogen gas, by placing the hydrocarbon liquid and the diluted acid in different vessels or compartments, not in contact with each other, but in the same machine, and under the same cover, and near each other, for the purposes described.

2. The combination and arrangement of the cover B, containing the funnel-shaped cylinder D and annular chamber E, with pipes F and outlets M; the chamber D, as a regulator, conductor for the hydrogen-gas, and supporter for the hydrocarbon-chamber E, the tank A, water-chamber C, and feed-pipe H, the whole being combined in the manner and for the purpose substantially as herein set forth and described.

3,749.—JOHN F. FISHER, Greencastle, Pa., and DANIEL BREED, Washington, D. C., assignees of JOHN F. FISHER.—*Guano-Attachment for Seed-Drills.*—Patented June 1, 1869, No. 90,653; reissued November 30, 1869.

Claim.—1. The above-described screw bevel-gear, or its equivalent, for operating the stirrers of a guano-attachment to wheat-drills, or other fertilizer-machines, substantially as set forth.

2. The quarter pinion F and reciprocating rack-bar E, placed under the hopper, in combination with the swinging fingers, or stirrers, inside of the hopper, substantially as set forth.

3. In combination with the stirrers and quarter pinion, the reciprocating bar E, the rod D, crank C, pinion B, and gear-wheel A, substantially as set forth.

3,750.—THOMAS J. HALL, Bryan, Texas.—*Gang-Plow.*—Patented April 20, 1869, No. 89,144; reissued November 30, 1869.

Claim.—1. The combination of the up-and-down adjustable slotted cross-bar D, having the perforated plate *f*, with the plow-beams E, pins *e*, and pivoted levers G, all arranged and operating substantially as and for the purpose herein shown and described.

2. The levers G, pivoted to the up-and-down adjustable cross-bar D, connected at their front ends with the plow-beams, and adjusted with their rear ends on a cross-bar, *k*, all arranged and operating substantially as described, for the purpose of oscillating the plow-beams, as specified.

3. The brace or bridle P, when constructed and arranged with relation to the plow-beam and revolving cutter I, to support and strengthen the stock O, in the manner substantially as described.

3,751.—RICHMOND A. LEEDS, Stamford, Conn.—*Gate-Latch.*—Patented September 25, 1866, No. 58,268; reissued November 30, 1869.

Claim.—1. The arrangement, horizontally across the face of the front stile of a gate, of one or more eccentrically-hung dogs or plates, provided with a handle or handles, when used in combination with a stationary lug or projecting piece, secured to the fence-post, substantially as herein specified.

2. A latch for gates, consisting of two eccentrically-hung bolts or plates, D, provided with handles or arms, E, and arranged within an inclosing-case, F, in combination with a lug or projecting piece, H, substantially as herein specified.

3,752.—IRA WOOD, Woodstock, Vt.—*Composition of Liquids for Tanning.*—Patented September 14, 1869, No. 94,805; reissued November 30, 1869.

Claim.—1. A tanning-liquid, made of the leaves of the trees of the different varieties of alder, sycamore, elm, basswood, chestnut, walnut, hickory, apple, peach, poplar, and birch, hereinbefore described, used separately, or combined one with another, or two or more, or all, in equal or any proportions, for the purpose and in the manner above set forth.

2. A tanning-liquid made of the leaves of the different varieties of alder, sycamore, elm, basswood, chestnut, walnut, hickory, apple, peach, poplar, and birch trees, used separately, or two, or more, or all together, in combination with the leaves of the different varieties of oak, maple, willow, and beech trees, the leaves of the four last-mentioned varieties of trees being used separately, or two, or more, or all, in making the liquid, all the said varieties of leaves being mixed in equal or any proportions, for the purpose and in the manner above set forth,

3. A tanning-liquid, made of the different varieties of the alder, sycamore, elm, basswood, chestnut, walnut, hickory, apple, peach, poplar, and birch trees, used separately, or two, or more, or all of them together, in combination with alum, Glauber's salts, and nitric or sulphuric acid, in about the proportions above specified, and for the purpose and in the manner above set forth.

4. A tanning-liquid, made of the leaves of the different varieties of the alder, sycamore, elm, basswood, chestnut, walnut, hickory, apple, peach, poplar, birch, oak, maple, willow, and beech trees, in combination with alum, Glauber's salts, and nitric or sulphuric acid, in about the proportions above specified, and for the purpose and in the manner above set forth.

5. A tanning-liquid, made of the leaves of the different varieties of the oak, maple, willow, beech, alder, sycamore, elm, basswood, chestnut, walnut, hickory, apple, peach, poplar, and birch trees, used separately, or two, or more, or all of them together, in combination with a liquid made of hemlock bark, or oak bark, or catch, or other tanning-liquid used in the manufacture of leather, in equal or any proportions, for the purpose and in the manner above set forth.

6. The employment of my improved tanning-liquids, made of the leaves of the different varieties of the oak, maple, willow, beech, alder, sycamore, elm, basswood, chestnut, walnut, hickory, apple, peach, poplar, and birch trees, one, or more, or all together, in finishing leather tanned by the use of other liquids or processes.

3,753.—H. B. DURFEE, Decatur, Ill.—*Plow.*—Patented May 18, 1869, No. 90,246; reissued November 30, 1869.

Claim.—1. The construction and arrangement of the beam and short handle, for the purpose of leaving an open landside space and clearance, for the clogging material that drops over the mold-board, substantially as described.

2. In combination with the short handle D, a brace,

c, extending therefrom to the standard or beam, or both, substantially as and for the purpose described.

3,754.—LIVERUS HULL, Charlestown, Mass.—*Manufacture of Whip-Stocks.*—Patented January 8, 1867, No. 61,070; reissued November 30, 1869.

Claim.—1. In a whip-stock composed of a center-piece of one material, surrounded by several outside pieces or strips, the mode of producing the requisite shape or taper therein, by a turning-machine, the said process consisting of first butting each outside strip laterally against its contiguous strip, securing them together by glue, substantially as above described, and afterwards turning the same into proper shape by tools working transversely, without disarrangement of its several pieces or parts.

2. The improved whip-stock, when arranged and turned substantially as described.

3,755.—METROPOLITAN WASHING-MACHINE COMPANY, Middlefield, Conn., assignee of ALFRED M. BAILEY and JOHN O. COUCH.—*Clothes-Wringer.*—Patented January 14, 1862, No. 34,178; reissued November 30, 1869.

Claim.—1. In a clothes-wringer, of otherwise ordinary or suitable construction, elastic rolls so mounted in the frame and combined with springs that one end shall be free to play within the capacity of the springs, while the other is confined.

2. In combination with elastic rolls, mounted in the frame of a wringing-machine, as herein shown, so as to have a more limited play at the geared end than at the other, the employment of a spring or springs, having a central or common bearing at a point intermediate between the ends of the rolls.

3. The construction of wringing-machines in which the rolls are operated by gear-wheels in such manner as to allow play to the rolls at the end nearest the wheels, to an extent as will not permit them to be thrown out of gear, and at the other end allow a larger play against a spring or its equivalent, so as to operate upon masses of clothing of different thicknesses, as herein set forth.

3,756.—GEORGE W. LEE, Sandy, Ohio.—*Feed-Cutting Attachment to Thrashing-Machines.*—Patented May 4, 1869, No. 89,669; reissued December 7, 1869.

Claim.—1. The combination of a series of fixed saws with a spiked cylinder or its equivalent, for cutting feed, substantially as herein set forth.

2. The combination, with the toothed cylinder and toothed shell of a thrashing-machine, of the attachment D, provided with saws, and either permanently or detachably connected thereto, substantially as specified.

3. The aprons F G, combined with the attachment D and the casing H, and arranged substantially as specified.

4. The plate L, combined with the apron G, the casing H, and attachment D, when arranged substantially as specified.

3,757.—CHARLES GREEN, WILLIAM WILSON, Jr., HENRY DU PONT, E. I. DU PONT, L. DU PONT, and EUGENE DU PONT, Wilmington, Del., and CHARLES PRATT, New York, N. Y., assignees of JAMES WILSON, CHARLES GREEN, and WILLIAM WILSON, Jr.—*Powder-Keg.*—Patented July 12, 1859, No. 24,772; reissued January 6, 1863, No. 1,383; again reissued December 7, 1869.

Claim.—1. The method of closing the ends of sheet-metal cans by means of a countersunk head or cap fitting within the orifice to be closed, and provided with a flange, which rests upon the upright edges of the can around the orifice, and is formed, with said edges, into a lap-seam, against an external mandrel, as a support, substantially as shown and set forth.

2. The flaring lap-seam, formed by the union of the flange of the countersunk head with the upright edges of the can surrounding the orifice to which said head is applied, substantially as and for the purposes shown and set forth.

3. A sheet-metal can, composed of flanged and countersunk heads, in combination with corrugated or bulging sides, the two being united by a lap-seam, formed as specified, and brought within the compass of the bulging sides, so that the seam or seams may be protected from injury, as herein set forth.

4. The formation of a groove or recess in the body of the can, parallel with the lap-seam, and adjoining the edge of the turned-down flange of the countersunk head or cap, as and for the purposes set forth.

5. A sheet-metal can, one or both ends of which are closed by means of a flanged or countersunk head or cap, applied and secured to the can in the manner substantially as shown and set forth.

3,758.—SMITH, LATROBE AND COMPANY, Baltimore, Md., assignees of FREDERICK H. SMITH.—*Bridge.*—Patented October 26, 1869, No. 96,278; reissued December 7, 1869.

Claim.—1. The combination, in a beam-truss, of the strut or post with the adjusting-devices herein described, or their mechanical equivalent, applied directly to the foot or base of said post, for the purpose of contracting or elongating its working-length, substantially as set forth.

2. The herein-described construction and combination of the loops and pin constituting an adjusting-device applied to the foot of the post, in either beam or suspension-trusses, substantially as shown and set forth.

3. The arrangement of the chord-bars, provided, at their upper edge or edges, with flanges or stiffening-irons, for the purpose specified, and jointed to the pins upon which their ends are supported, substantially as shown and set forth.

4. The attachment of the lateral-bracing systems to the joint-pins, by means of the bolt which at once combines the pin, strut, loops, and adjustable ties into a hinged joint in the lateral plane of the truss, substantially as shown and specified.

5. The combination, with the feet of the struts or posts, of the adjustable loops and joint-pins, with which the lateral-bracing system is connected substantially as herein shown and set forth.

3,759.—REUBEN KIDEN HUNTOON, for himself and JOHN AUGUSTUS LYNCH, assignee, by mesne assignments, of REUBEN KIDEN HUNTOON, Boston, Mass.—*Steam-Engine Governor.*—Patented December 4, 1866, No. 60,192; reissued December 14, 1869.

Claim.—1. The combination of the bearing C, its passage *e* and stop-cock *d*, with the shaft B, the propeller D, and the cistern or vessel A, arranged as and for the purpose set forth.

2. The combination and arrangement of the deflector *e* with the cistern A, the shaft B, and the propeller D, arranged as and for the purpose set forth.

3. The combination and arrangement of the wings *a* with the cistern A, the shaft B, and propeller D, arranged as set forth.

4. The governor, as constructed of the propeller D, its shaft B, and case A, and with the long gear *g* applied to, so as to move endwise with the shaft B, and to operate with and be operated by the driving-gear of a shaft, *i*, as set forth.

3,760.—THEODORE MACE, New York, N. Y., assignee of GEORGE C. TAFT.—*Variable Crank for Boring-Machines.*—Patented December 10, 1867, No. 72,114; reissued December 14, 1869.

Claim.—1. Combining with the shaft *g* and gearing of the boring-machine, a crank-handle that is variable in its length, so that the leverage of the crank may be adapted to the work to be performed by the boring-tool, substantially as specified.

2. The arm *i*, attached at the end of the shaft *g*, and provided with the hub *k*, through which passes the rod *m*, to the handle *n*, substantially as set forth.

3,761.—H. OLDS, Syracuse, N. Y.—*Slide for Extension-Table.*—Patented September 10, 1867, No. 68,782; reissued December 14, 1869.

Claim.—The metal slides *a*, made in the form of a cross, as herein specifically set forth, and working in corresponding grooves in the slide-bars *b*, constructed, arranged, and combined as herein specified.

3,762.—CHARLES PRATT, New York, N. Y.—*Nozzle for Cans.*—Patented April 20, 1869, No. 89,167; reissued December 14, 1869.

Claim.—1. As a new article of manufacture, a combined nozzle and seal for cans, composed of a metallic nozzle, in combination with a cap of thin soft metal, applied and secured to the same, substantially as herein described.

2. The combination, with a nozzle for cans, of a soft-metal cap covering the mouth of the nozzle, and extending downward upon the sides of the same a sufficient distance to admit of the cap being soldered to the nozzle at a point removed from or below its mouth, substantially as and for the purposes set forth.

3. The formation, upon the soft-metal cap which covers the mouth of the nozzle, of a shoulder or ridge for the guidance of the cutting-instrument, as shown and set forth.

3,763.—CYRUS ROBERTS and JOHN A. THROP, Three Rivers, Mich.—*Horse-Power.*—Patented December 8, 1868, No. 84,766; reissued December 14, 1869.

Claim.—1. The combination of a V-shaped truck-frame, and its tranverse bolsters, with the bed-plate and gearing, the whole constructed for joint operation, substantially as set forth.

2. The combination, with the sweeps, of the diagonal braces, having their leading ends respectively connected with the sweeps, in advance thereof, at points outside of the sockets through which said sweeps pass, all constructed for joint operation substantially as set forth.

3. The combination of the line-shaft, the bed-plate, and the dished bevel-wheel, arranged below the bed-plate, all constructed for joint operation, substantially as set forth.

4. The combination of the bevel-wheel, united by the clutch to the pinion above it, the friction-roller rotating upon the upper surface of the wheel, above the pinion of the line-shaft, and the friction-roller at right angles thereto, all these parts being constructed to operate as set forth.

5. The combination of the annular master-wheel, the friction-rollers, the fixed bed-plates, and the guides, all these parts being constructed to operate as set forth.

6. The arrangement of the frame, the bed-plate, the line-shaft, and the hangers B^2, constructed as described.

3,764.—EDWARD SEELEY, Scranton, Pa.—*Composition for Concrete Pavements.*—Patented September 6, 1864, No. 44,117; reissued December 14, 1869.

Claim.—1. The combination of silica, gas-tar, and sulphur, substantially as and for the purposes described.

2. The within-described composition of silica and gas-tar, when prepared substantially in the manner and for the purposes set forth.

3. The herein-described process of preparing the composition, by heating the silica, and then mixing it with the heated gas-tar, substantially as and for the purposes described.

3,765.—BERNARD STEINMETZ, Paris, France.—*Carpet-Bag Lock.*—Patented August 1, 1865, No. 49,207; reissued December 14, 1869.

Claim.—1. The pivoted spring-lever D, with its catch-projection *m*, and the spring tumbling-block or bolt *v*, operated by a key, combined and arranged substantially as herein described, when applied to the jaws of a satchel, bag, or portmanteau, for the purpose specified.

2. The combination of the "eagle," or shield-knob T, constructed so as to cover the slot 2 in the lock-case C, the catch *m* of the spring-bar D, and the staple *h* of the jaw-frame B, as herein specified.

3,766.—A. J. WARREN and D. W. WILSON, West Eau Claire, Wis., assignors to themselves and NOAH SHAW, same place, and URIAH M. STONE, Augusta, Wis.—*Steam-Generator Furnaces.*—Patented June 22, 1869, No. 91,800; reissued December 14, 1869.

Claim.—1. The arrangement, upon the forward end of the boiler, of one or more inclined spouts, E E, which spouts are provided with self-acting valves, *y*, whereby the sawdust may be fed down from over the top of the boiler to the fire-box, and the valves close themselves to prevent the ascension of flame or other products of combustion, as set forth.

2. The combination of the boiler A, dome *d*, superheating-pipe C, inclined spouts E, and valves *y*, all substantially as set forth.

3,767.—PATRICK ADIE, of the Strand, London, England.—*Machine for Clipping Horses' Hair.*—Patented June 30, 1868, No. 97 293; patented in England April 24, 1867; reissued December 21, 1869.

Claim.—1. The arrangement and combination of the toothed plates A and B, screws I and I, and handle A H, with handle or lever L K D H, the whole constructed and operated substantially in the manner and for the purpose set forth and described.

2. The combination of the two teeth-plates of the clipping-machine, whereby the faces of the teeth are kept in proper contact, by reason of the elasticity of the teeth-cutting plates, all constructed substantially in the manner and for the purpose described.

3,768.—WILLIAM H. BLISS, Newport, R. I., assignee of himself and ROBERT B. LAWTON.—*Hose-Coupling.*—Patented February 22, 1859, No. 23,033; reissued December 21, 1869.

Claim.—1. The combination of the two thimbles C and D, by means of a pin, operating longitudinally through the outer thimble C, and against the inclined side of the groove in the thimble D, so that the two thimbles will be forced together by the inward movement of the pin, and be liberated by its outward movement, substantially as described.

2. The side of the groove in D nearest to the joint to be formed, or to the flanch, constructed with an incline, substantially as described.

3. The combination of the thimbles C and D, cap *i*, and pin *g*, when constructed and operated substantially as described.

3,769.—HENRY BUNDELL, Dayton, Ohio.—*Seeding-Machine.*—Patented January 23, 1866, No. 52,135; reissued December 21, 1869.

Claim.—1. Combining, with the shaft of seed-drills, the sets of zigzag channels *a a*, in the seed-delivery cylinder, with or without the interposed agitating-wheels E, when said channels are made substantially in the manner and for the purpose specified.

2. In combination with the zigzag channels and agitating wheel or wheels E, the sectional case and shield F, arranged substantially in the manner and for the purpose set forth.

3,770.—BETHEL BURTON, Brooklyn, and WILLIAM C. WARD, New York N. Y., assignees of BETHEL BURTON.—*Breech-Loading Fire-Arms.*—Patented December 20, 1859, No. 26,475; reissued December 21, 1869.

Claim.—1. The opening 13, arranged as described, in connection with the breech-piece and stock, for the purpose of allowing the escape of gas and smoke, preventing heating and clogging, and facilitating the lubrication of the parts, substantially as shown and described.

2. A breech-pin made in two or more pieces, with a broken joint or joints, when the front end has a reciprocating motion only, and the rear end a reciprocating and rotary motion, substantially as shown and described.

3. One or more projections on the forward end of the breech-pin, for guiding it and holding it in place, when made and operating as shown and described.

4. The L-shaped groove 11 in the breech-pin, in combination with the pin or projection 12 on the inside of the breech-piece, when arranged and operating as shown and described.

5. A concavity or depression on the front end of the reciprocating breech-pin receiving the conical rear end of the barrel, in combination with a sliding packing-ring in the rear end of the barrel, when made as shown and described.

6. The combination of the breech-piece, and the reciprocating breech-pin made to slide therein, when provided with sectional screws as shown and described.

3,771.—S. J. GENUNG, Waterloo, N. Y.—*Extension-Slide for Tables.*—Patented September 7, 1869, No. 94,486; reissued December 21, 1869.

Claim.—1. The combination, with the wooden bars of an extension-table, of separators at the ends, which receive the frictional contact at those points, without any intermediate connection of the bars, as herein described.

2. Forming the slides B with the dovetailed lugs *g* for attaching to the wood, in the manner and for the purpose specified.

3. In combination with the outside slides B B′, the central connection *a b*, substantially as described.

3,772.—THE KENNEDY ELECTRIC-CLOCK COMPANY, New York, N. Y., assignees of SAMUEL A. KENNEDY, S. W. HOLT, and JOSEPH GERLACH.—*Electric Clock.*—Patented December 3, 1867, No. 71,624; reissued December 21, 1869.

Claim.—1. Vibrating a pendulum having a magnet attached thereto, by means of two electric coils, arranged, one at each end of the magnet, the said maget and coils having their corresponding poles placed opposite to each other, as shown and described.

2. Actuating the driving-pawl of a clock-mechanism by a weight moved from a state of rest to a certain distance, and retracted by its own gravity.

3. Carrying the weighted pawl-driver intermittently to its point of limitation, and then leaving it to the action of gravity by means of an oscillating pendulum, in the manner set forth.

4. The combination of the ratchet-wheel E with the pendulum H, by means of the lever F, forked bar G, and pawl I, arranged and operating, in relation to each other, substantially as described and for the purposes specified.

3,773.—B. F. KOLLER, Shrewsbury, Pa., assignee of SAMUEL GIBSON.—*Scrubbing-Brush.*—Patented October 6, 1868, No. 82,705; reissued December 21, 1869.

Claim.—1. Attaching a strip of rubber to one side of a long-handle scrubbing-brush, so that it will be parallel with the rows of the bristles thereof, substantially as described.

2. In a long-handle scrubbing-brush, the arrangement of the strip of rubber D, so as to project from one and the same side of the brush with the bristles thereof, substantially as and for the purpose specified.

3. The arrangement of the shouldered plate A and flanged keeper E, inclosing the strips of rubber D upon the forward part of the bristle-brush G, all as herein shown and described.

3,774.—HENRY R. SENSENIG and MOSES W. MARTIN, Earl Township, Pa., assignees, by mesne assignments, of MARTIN W. ZIMMERMAN and JOHN ZIMMERMAN.—*Pump.*—Patented May 3, 1864, No. 42,617; reissued December 21, 1869.

Claim.—1. The rocker-heads B H, with their arms D C I J, and counterpoise L, when operated in unison by a single wire, W, by means of a crank, N, and wheel, M, substantially in the manner and for the purpose specified.

2. In combination with the foregoing arrangement, the adjusting-screw Y, with its burrs V V, when applied in the manner and for the purpose set forth.

3,775.—JOHN RALSTON, ABRAHAM L. THOMAS, and WILLIAM PARKINSON, for themselves and WILLIAM A. SHOEMAKER, Schuylkill County, and GEORGE E. BUCKLEY, Philadelphia, Pa., assignees of said RALSTON, THOMAS, and PARKINSON.—*Manufacture of Iron and Steel.*—Patented March 23, 1869, No. 88,208; reissued December 21, 1869.

Claim.—1. The manufacture of an improved article of wrought iron in the puddling-furnace, by using, in combination with molten cast iron therein, the micaceous, gray, magnetic iron-ore, substantially as described.

2. The manufacture of steel direct in the puddling-furnace, by using, in combination with molten cast iron therein, the micaceous, gray, magnetic iron-ore, substantially as herein described.

3,776.—P. J. CLEVER, Goliad, Texas.—*Sewing-Machine.*—Patented November 16, 1869, No. 96,866; reissued December 28, 1869.

Claim.—1. The combination of the treadle A and clamp A^2 with the machine-frame, whereby the treadle may be adjusted to either side or end of the frame, according to the direction of the feeding-movement, all substantially as specified.

2. The arrangement of the driving-wheel A^{11}, hinged supporting-frame B, eccentric plate B^3, adjustable hanger B^5, and spring D^4, substantially as specified.

3. The combination and arrangement of the vertically-adjustable driving friction-wheel A^{11}, loose friction-wheel B^7, ratchet-clutch B^{11}, spring B^{12}, fly-wheel B^{13}, and friction-lever B^{14}, all substantially as specified.

4. The combination, with the stand and table-plate, of the jointed brace B^{18} and sleeve B^{19}, when constructed and arranged as specified.

5. The crank-shaft B^3, adjustable connecting-rod C^1, oscillating plate C^3, rod C^4, connected by ball-joints with oscillating plate and needle-arm C^5, all constructed as described, and arranged as specified.

6. The combination, with the curved pivoted shuttle-carrying arm having spring-forks to retain the shuttle, of the crank-shaft B^8, when the shaft and shuttle-carrier are connected by the adjustable connecting-rod D^3, constructed as described, to compensate for the wear of parts, substantially as specified.

7. The combination, with the shuttle, of the tension-spring D^8, set-screw D^{10}, and guards D^{11}, when arranged, substantially as specified, to prevent the thread from catching on the adjusting-screw.

8. The combination of the feed-shoe E, vertically-sliding plate E^1, adjusting-spring E^5, set-screw E^8, carrier E^2, and cam E^7, all substantially as specified.

9. The combination, with the feed-carrier E^2 and notched bar F, of the inverted V-shaped frame F^2, stud-pins H, spring H^1, bar F^8, with stud F^9, vertical slide F^4, and cam F^7, all substantially as specified.

10. The combination, with the vertical slide F^4, and stud-pin F^6, of the bent arm H^3 H^4, and adjusting-screw, H^7, substantially as specified.

11. The combination, with tension-spring K, connected to the needle-arm support, as described, of the right-and-left threaded screw K^2, with movable nuts, the disk K^4, and friction-block K^5, all substantially as specified.

12. The spooling-device L, consisting of the vertical stock, arm L^4, grooved pulleys L^1 and L^2, and arranged relatively to the table and friction-wheel B^7, all substantially as specified.

3,777.—JOHN A. MCCLELLAND, Louisville, Ky.—(Division A.) *Preparing Compounds Containing Collodion.*—Patented April 28, 1868, No. 77,304; reissued December 28, 1869.

Claim.—1. The method of redissolving and working collodion and its compounds, prepared substantially as described.

2. Collodion and its compounds, dried and reduced to a granular or powdered state preparatory to being treated with the proper solvents, substantially as described.

3,778.—JOHN A. MCCLELLAND, Louisville, Ky.—(Division B.) *Material for Forming Dental Plates.*—Patented April 28, 1868, No. 77,304; reissued December 28, 1869.

Claim.—1. A base for artificial gums or dental plates, in which pyroxyline or collodion forms a component part, substantially as described.

2. A dental base, composed of a granulated compound of collodion and coloring-matter, substantially as described.

3. A dental base, composed of collodion and a resinous matter, substantially as described.

3,779.—BLAKEY PILKINGTON, Oakland, Cal., assignee, by mesne assignments, of JAMES D. JENKINS.—*Carbureting Air for the Production of Light and Heat.*—Patented January 28, 1868, No. 73,900; reissued December 28, 1869.

Claim.—1. The carbureting of air for lighting and heating purposes by driving a current of the same through a metallic chamber filled with absorbent material saturated with gasoline, or other carbon-oil, by means of a fan-blower, as is hereinbefore specified.

2. An apparatus for producing light or heat, consisting of a vessel or chamber filled with absorbent material saturated with gasoline or other carbon-fluid, and of a fan-blower for forcing air through said saturated material, substantially as herein shown and described.

3,780.—HENRY E. SHAFFER, Rochester, N. Y. —*Fruit Jar.*—Patented August 31, 1869, No. 94,248; reissued December 28, 1869.

Claim.—The arrangement of the clamp C, spring-bar E, and screw D, either connected or disconnected, when combined with the cover B, having the concavity *a*, whereby a natural spring of the bar is allowed, for giving elasticity to the cover, as herein described.

3,781.—THOMAS H. WHITNEY and S. A. WHITNEY, Glassborough, N. J., assignees of JOHN FOCER. —*Fruit-Jar.*—Patented June 12, 1866, No. 55,581; reissued December 28, 1869.

Claim.—1. The thin metal ring D, having screw-threads adapted to similar threads on the cover B and neck A of a preserving-jar, all substantially as and for the purpose herein set forth.

2. The combination, with a preserve-jar, the neck of which is constructed substantially as herein set forth, of the cover B, gasket C, and ring D, as and for the purpose specified.

3,782.—THOMAS J. HALL, Bryan, Texas, for himself, and HENRY P. STOCKTON and ROBERT P. LANE, Rockford, Ill., assignees of THOMAS J. HALL. —*Plow.*—Patented April 3, 1855, No. 12,627; extended seven years; reissued December 28, 1869.

Claim.—1. The cutter or colter-wheel B, freely revolving on its own axis, when attached to the beam A of a plow, so that it will swivel or turn in such attachment, and the wheel-colter be free to vibrate laterally, and follow the line of draught or direction given to the beam of the plow, in the manner described.

2. The combination of the slotted rod *b*, curved arms *c c*, and wheel-colter B, with the swiveling of the rod *b* in the beam A, in the manner and for the purpose substantially as herein described.

3,783.—J. M. JONES, HENRY JOHNSON and GEORGE M. BOWMAN, Palmyra, N. Y., assignees of J. M. JONES.—*Printing-Press.*—Patented August 11, 1868, No. 80,865; reissued December 28, 1869.

Claim.—1. The arm or arms N, or its or their equivalents, in combination with the platen Q, or its equivalent, when arranged to engage with the said platen or its yoke, and to draw it against the form, to which it has been previously raised, substantially as and for the purpose described.

2. The rocker-arm or arms Q^2, or its or their equivalents, arranged for operation upon the arm or arms N, or equivalent therefor, substantially as described, for the purpose specified.

3. The lever or levers M^3, or equivalent therefor, when arranged for operation upon the rocker-arm or arms Q^2, of the lifting device, to the impression-arms N, substantially as and for the purpose described.

4. A movable hook or clasp, for holding the chase to the bed of the press, when operated by lever *d*, and arranged for operation substantially as specified.

5. The lever G^3, or its equivalent, in combination with the frame carrying the ink-rollers to the press, when arranged for operation therewith, substantially as and for the purpose described.

6. A box or receptacle, in combination with the frame carrying the platen, when arranged thereon for operation, substantially as and for the purpose set forth.

7. As a means of distribution, and for other purposes, detaining the inking-rollers in contact with the distributing-cylinder, during the will or requirements of the operator, with or without stopping the other parts of the machine, such detention being produced by means of the lever G^3, or its equivalent, substantially as and for the purpose described.

PANY, of Pennsylvania.—*Manufacture of Lubricating-Oils from Petroleum.*—March 2, 1869.

Claim.—1. The within described process of preparing petroleum or hydrocarbon-oils, for lubricating purposes, as specified.

2. The preparing of petroleum or hydrocarbon-oils, for lubricating purposes, by reducing the gravity of the same by the direct action of steam, or superheated steam, upon the crude petroleum, while in a still, tank, or retort, substantially as set forth.

3. The reducing of petroleum in a still, or retort, with or without dependent chambers, and with one or more jet-pipes, by the direct action of steam, or superheated steam, substantially as and for the purposes specified.

4. The reducing of crude petroleum, for lubricating purposes, either in bulk or fractional quantities, by the direct action of steam, or superheated steam, substantially as set forth.

5. As a new manufacture, an oil-product, as above described, when produced from crude petroleum, by evaporation of the lighter oils, and removing of all earthy acids, grit, and sediment, by the direct action of steam, substantially as set forth.

6. The improved lubricating-oil, for machinery, as herein described, prepared from petroleum by the direct application of steam, or superheated steam, to the crude petroleum, as set forth.

7. Petroleum, for lubricating purposes, when the same has been prepared or reduced to the proper gravity, in the manner set forth.

8. The employment of steam or superheated steam-treated petroleum, holding water in suspension, for summer lubricating purposes, as described.

9. The employment of steam or superheated steam-treated petroleum, after the water has been removed, for winter lubricating purposes, as set forth.

87,486.—JOHN C. GOVE, Cleveland, Ohio.—*Street-Car Draw-Bar.*—March 2, 1869.

Claim.—The arrangement of the sliding frame D, rounded at its forward end, roller F, draw-iron H, rubber springs I I, and washer *a*, with the platform A and sill B of a street-car, substantially as and for the purposes herein set forth.

87,487.—WILLIAM H. GUILD, Brooklyn, (E. D.,) N. Y.—*Process of Purging and Draining Sugar.*—March 2, 1869.

Claim.—Subjecting sugar, while being purged or drained, to the action of steam or vapor, substantially as and for the purpose herein described.

87,488.—JOHN C. HALL, Monroe, Wis.—*Harvester.*—March 2, 1869; antedated February 20, 1869.

Claim.—1. The rock-shaft C, arranged radially to the driving-axle, and recessed or bent, for a portion of its length, so that its axis of rotation shall be at a distance from the side of the driving-wheel, on which the cams are placed, equal to one-half the depth of the cams.

2. The combination of the rock-arms C^1 C^1, either slotted, or having a number of holes therein, with the adjustable pallets c^1 c^1, and nuts c^3 c^3, substantially as described.

2. The slotted caster-wheel supports E^2, hinged rod *e*, and arms e^1 e^4, for raising and lowering the finger-beam and cutter-bar, as set forth.

4. The combination of the stationary cam J and pivoted guide K, when arranged and operating as and for the purpose set forth.

5. Connecting the reel shaft and rake-shaft by the ball-and-socket joint i^2 in the reel-shaft, and the jointed links, as set forth.

6. The combination and arrangement of the horizontal pieces *a a*, and diagonal pieces *a' a'* when the driver's seat is attached to the latter, whereby the seat can be elevated above the driving wheel, as set forth.

87,489.—J. JOHN HARRIS, Pewamo, Mich.—*Bed-Bottom.*—March 2, 1869.

Claim.—1. The cross-bars D, when formed in hinged sections, in combination with the bent springs B, substantially as set forth.

2. The combination of the cross-bars A, bent springs B, cross-bars D, hinged in sections, slats E, side-rails F, hooks G, pins H, head-board I, and stays J, when arranged and operating substantially as set forth

87,490.—ALEXANDER HATHAWAY, Independence, Iowa.—*Seed-Sower.*—March 2, 1869.

Claim.—1. Raising the teeth or cultivators of a seed-sower out of the ground, when the machine is turning around, by means of a swinging wheel, having suitable connections with said teeth or cultivators, and without the assistance of the operator, substantially as set forth.

2. The arrangement of the arms J J, forked lever K, wheel L, rope *e*, pulley *f*, and bar H, all substantially as and for the purposes herein set forth.

3. The arrangement of the shaft F, with agitators *d*, spring *a*, arm *b*, and cogs *c c*, all substantially as and for the purposes herein set forth.

87,491.—RANDOLPH HAYDEN, Middletown, Conn., assignor to FERREE & HAYDEN, same place.—*Ice-Tongs.*—March 2, 1869.

Claim.—Cast-metal ice-tongs, constructed substantially as shown and described, as an improved article of manufacture.

87,492.—GEORGE J. HAYES, Ionia, Mich.—*Cultivator.*—March 2, 1869.

Claim.—1. The combination of the tongue, axle-frame, and cultivator-frame, when united to each other, and the cultivator-frame is capable of being raised upward, and swung slightly backward, by a lever and its appliances, operating as herein described and represented.

2. In combination with a cultivator-frame, that is moved backward as it is raised upward, as herein described, a drag, or harrow, attached thereto, and moving therewith, but capable of being raised or lowered independently of the cultivator, substantially as and for the purpose described.

87,493.—F. A. HENCKELL, New York, N. Y.—*Machine for Bundling Cigars.*—March 2, 1869.

Claim.—1. The jaws B B′, provided with one or more recesses, to receive the tapes or ribbons, in combination with the platform A and lever C, substantially in the manner set forth.

2. The abutment F, in combination with the jaws B B′, platform A, and lever C, substantially as described.

3. The top bars E, (one or more,) in combination with the jaws B B′, lever C, and platform A, substantially in the manner specified.

87,494.—WILLIAM H. HENDERSON, Franklin, Ind.—*Device for Soldering Tin Cans.*—March 2, 1869; antedated February 20, 1869.

Claim.—The combination of the elongated cone A and its spring F with the interior cone C, its screw B, spring D, and the clamp G and cam-lever H, all constructed and operating substantially as herein set forth.

87,495.—JOSEPH W. HOPKINS, Brooklyn, N. Y., assignor to himself and CHARLES B. HARDICK, same place.—*Machine for Brushing and Napping Hats.*—March 2, 1869.

Claim.—A pair of brushing-cylinders, one of which is mounted so as to yield, in combination with the means, substantially as specified, for presenting the hat-body to the action of the brushing-cylinders, substantially as described.

87,496.—ROBERT B. HUGUNIN, Cleveland, Ohio.—*Car-Wheel.*—March 2, 1869.

Claim.—1. The car-wheel herein described, constructed by forcing the sections A and A′ over the axle F, and clamping the tire C, by means of the spring on said section, reacted on the tire, substantially as and for the purposes herein set forth.

2. The car-wheel, formed by forcing sections A and A′, with seats B and B′ and projections E and E′, onto the tire C, constructed in corresponding form on its under side, over the axle F, as and for the purposes herein set forth.

3. In combination with the above-claimed car-wheel, the interposed rubber packing, as and for the purposes herein set forth.

87,497.—THEODORE ITZSTEIN, New York, N. Y.—*Device for Checking Horses.*—March 2, 1869.

Claim.—1. The checking apparatus, consisting of the check-reins E F, combined with the winkers or blinds A, and spring B, substantially as described.

2. The combination of the winkers A, the spring B, the check-reins E F, and the lug or front-piece C, substantially as described and shown.

3. The combination of the throat-strap J, check-reins E F, winkers A, and spring B, substantially as described.

4. The safety-strap L, in combination with the winkers A and check-reins E F, substantially as set forth.

87,498.—R. H. JONES, San Francisco, Cal.—*Projectile.*—March 2, 1869; antedated February 21, 1869.

Claim.—The combination of the shells B C and cap F with the shell A, when said cap and shells B C are beveled at the top, and provided with circumferential shoulders *g g*, and when said shell C is provided with a screw-bottom, D, there being combustion-chambers between shells A and B, and B and C, all substantially as herein shown and described.

87,499.—SAMUEL B. KLINE, Mechanicsburg, Pa.—*Fly-Net for Horses.*—March 2, 1869; antedated February 27, 1869.

Claim.—1. The double loop or stitch, when used in constructing fly-nets, substantially as and for the purpose herein shown and described.

2. A fly-net, constructed in the manner substantially as shown.

87,500.—LE GRAND KNIFFEN, Rochester, Pa.—*Buckle for Grain-Bands, Bag-Ties, &c.*—March 2, 1869.

Claim.—1. The buckle, constructed as set forth, with an opening in the frame, for the insertion laterally of the cord.

2. The combination of the body and tongue with the binding-cord passing through both, substantially as set forth.

87,501.—E. LANE, Philadelphia, Pa.—*Thill-Coupling.*—March 2, 1869.

Claim.—The combination of the coupling A with its arms *a* and *a'*, packing-strip J, spring-plate I, and plate F, carrying a thumb-screw, H, the whole being arranged and operating substantially as and for the purpose herein set forth.

87,502.—ALEXANDER LEE, Scranton, Pa.—*Wash-Boiler.*—March 2, 1869.

Claim.—The metallic shell or case B, constructed and arranged within the wash-boiler, in the manner described, and provided with water and steam-discharge pipes, substantially as and for the purposes set forth.

87,503.—WILLIAM B. MASON, Boston, Mass.—*Flat-Iron Scraper, Polisher, and Stand.*—March 2, 1869.

Claim.—1. For the specified purpose, a bed or table, provided with one or more scraping-edges or angles, substantially as described.

2. For the specified purpose, a bed or table, surfaced with abrasive or polishing material, substantially as described.

3. A bed or table, having bars *b*, made removable and adjustable, to operate as clamps in holding sheets of abrasive or surfacing material, substantially as described.

87,504.—G. M. L. MCMILLEN, Dayton, Ohio.—*Horse-Rake.*—March 2, 1869.

Claim.—The device herein shown and described, consisting essentially of the right-angled lever M, having a spring, *s*, under its flange, at one end, and a snap-catch, *c*, at the other end, when constructed and applied to a rake in connection with the lever L, rod R, and teeth *t t*, as shown, and employed for the purpose herein set forth.

87,505.—J. J. MORRISON, Atlanta, assignor to himself and V. A. GASKELL, Fulton, Ga.—*Cotton-Press.*—March 2, 1869.

Claim.—1. The combination of the box and frame A B, sash E', vertically-acting follower C, horizontally-acting follower J, screw E, and hollow shaft N, with its drums H and M, all operating substantially as and for the purposes set forth.

2. The arrangement of the shaft *d*, turned by its crank F, with the drums G and K, connected by means of bands to the drums on the hollow shaft N, for operating the follower J, and a drum, O, for operating the crank D, which works the compresser C, all substantially as shown and described.

87,506.—THOMAS G. OTTERSON, Philadelphia, Pa., assignor to S. B. ROWLEY, same place.—*Glass-Mold.*—March 2, 1869.

Claim.—1. The stripper-plate C, adapted to the base D and cover-plate B, substantially as and for the purpose herein set forth.

2. The annular rib *b*, on a central piece, D', arranged to slide in the base D, as set forth, for the purpose specified.

87,507.—DAVID O. PAIGE, Detroit, Mich.—*Apparatus for Hardening Steel.*—March 2, 1869.

Claim.—1. The hardening of sheets of steel, by forcing thin sheets of cold water into contact with the center of said sheets of steel, substantially as herein described.

2. The plungers L, operated substantially as described, in combination with compartments B and H, valves G, space D, and aperture I, of vat A, when constructed, arranged, and operated substantially as and for the purpose set forth.

3. The frame J, provided with serrated racks K, when constructed and operating substantially as specified, in combination with the well H and the vat or box A, as herein described and shown.

87,508.—ROBERT PEBERDY, Philadelphia, Pa., assignor to JAMES CREIGHTON, same place.—*Knitting-Machine.*—March 2, 1869.

Claim.—1. The combination of two or more series of self-acting needles, arranged in a row, and adjustable laterally, independently of each other, and a series of guides, *b*, operating in connection with the needles, substantially as described.

2. The combination of the above, the two parallel knocking-over bars *c c'*, and a second series of needles and another series of guides, the whole being arranged and operating substantially as specified.

87,509.—DAVID T. PECK, New York, N. Y.—*Piano-Forte.*—March 2, 1869.

Claim.—The additional case D, hinged to the top of the main case A of a piano-forte, and provided with a secondary sounding-board, E, substantially in the manner and for the purpose set forth.

87,510.—FRANK P. PFLEGHAR, New Haven, Conn.—*Reversible Knob-Latch.*—March 2, 1869.

Claim.—The combination of the spiral spring L and its rods *g i* and *h l*, with the horse-shoe and slide G G, when constructed and fitted for use, substantially as herein described.

87,511.—JOHN PONS, Baltimore, Md., assignor to himself, JOHN S. RUSSELL, and HENRY VOGLER, same place.—*Lamp-Extinguisher.*—March 2, 1869.

Claim.—1. Constructing the cap of a lamp in two parts, *c c'*, each pivoted as at *t t'*, and the two parts having their edges meeting or overlapping in the line of the wick-tube, substantially as and for the purpose set forth.

2. In combination with the two parts *c c'* the springs *s s* and chimney G, constructed and arranged to operate in the manner and for the purposes described.

3. Providing the two pivoted parts, *c c'*, of the cap with the auxiliary blades *a a'*, substantially as and for the purpose specified.

4. A lamp-extinguisher, *c c'*, or *a a'*, so constructed and operating that the weight of the chimney resting upon it keeps its jaws open, and when that weight is removed, by the overturning of the lamp or otherwise, the jaws will close and put out the light.

87,512.—GEORGE REYNOLDS, Collinsville, Conn.—*Machine for Rolling Metals.*—March 2, 1869.

Claim.—1. Arranging the mechanism for raising and lowering the roll in a sliding frame, F, substantially in the manner herein described, so that it will move up and down with the roll.

2. The combination of the segmental gearing J, the wheels P and Q, the arbor L, the wheels O and O′, the arbor M, the sliding frame F, the screw S, and the frame H, for the purpose of raising and lowering a roll, substantially as herein specified.

3. The nippers *e e*, in combination with the rolls and with the raising and lowering mechanism, for the purpose of introducing any article between the rolls at the right time.

87,513.—IRA ROBBINS, Hughesville, Pa.—*Water-Meter.*—March 2, 1869.

Claim.—The spring-valve F, arranged within a channel, through which the water must pass, in combination with a cock or valve, controlled by the valve F, and with devices by which the water discharged from the said cock is caused to operate the registering-devices, substantially as set forth.

87,514.—IRA ROBBINS, Hughesville, Pa.—*Lock for Drawers, &c.*—March 2, 1869.

Claim.—The recessed tumblers *b* and lever D, with its cams *c c*, in combination with the bolt C, its cross-piece *d*, and inclined edges *x x*, the whole being constructed, arranged within a case A, in respect to openings *n*, and operating substantially as and for the purpose described.

87,515.—S. B. ROWLEY, Philadelphia, Pa.—*Screw-Fastening for the Covers of Fruit-Jars.*—March 6, 1869.

Claim.—A screw-bail or fastening for preserving vessels, consisting of a wire coil, rendered rigid by suitable strips, which extend across the coil, and are so bent, or otherwise arranged, that they can be brought to bear on the cover of a fruit-jar, substantially as described.

87,516.—THOMAS A. SEARLE, Providence, R. I.—*Liquid-Meter.*—March 2, 1869.

Claim.—The arrangement of the cylinder A and jacket B, with their intervening space C, relatively to the inlet F and outlet G, perforated diaphragms *a b*, and cylinder E, with its flutter or registering-wheel H, substantially as specified.

87,517.—JOHN Y. SMITH, Pittsburg, Pa.—*Wooden Railway.*—March 2, 1869.

Claim.—1. The construction of the cross-tie with the beveled surface to receive the corresponding surface of the wedge, and with the opposite surface of its recess beveled to correspond with the beveled surface of the rail, substantially as shown and described.

2. The combination of the above-described rail A, tie B, and wedge C, substantially as shown and described.

87,518.—F. W. SMITH jr., Bridgeport, Conn.—*Key for Locks.*—March 2, 1869.

Claim.—The arrangement in a key of one or more of several bits upon a pivot, so as to be turned thereon to different angles, to a bearing, to operate in the manner and for the purpose substantially as specified.

87,519.—EARL SPAULDING, Ionia, Mich.—*Furnace-Stove and Register.*—March 2, 1869.

Claim.—1. The arranging, within the furnace or fire-box of a stove, the air-heating pipes or passages B C E, in combination with the passing of the conducting-pipe, which conveys the hot air, through the smoke-pipe or passage, substantially as and for the purpose described.

2. In combination with the hot-air passages and pipe D, the head G and its register and disseminator, as and for the purpose described.

87,520.—GEORGE H. SPAULDING, Rockford, Ill.—*Rocking-Chair.*—March 2, 1869.

Claim.—A rocking-chair, constructed as herein specified, and having hinged joint *b*, elastic steel spring E, and foot-board D, arranged and operating substantially as described.

87,521.—EDWIN P. SPENCER, Scott, N. Y.—*Milk-Cooler.*—March 2, 1869.

Claim.—1. The combination of the pan B, provided with the distributing-trough S and the pan C, arranged to operate substantially as described.

2. The pan B, provided with the escape-pipe H, emptying-pipe G, and pipe L, the two latter being provided with cocks, substantially as and for the purpose set forth.

3. In combination with the pans B and C, constructed as set forth, the frame A, provided with shelf D, and the eccentrics O, arranged to operate as herein described.

4. In a milk-tempering apparatus, the distributing-pipe or trough S, so arranged as to deliver the inflowing water at points across the entire end, or nearly so, of the water-pan, substantially as herein described.

87,522.—MATTHIAS STRATTON, Philadelphia, Pa.—*Gas-Cock.*—March 2, 1869.

Claim.—A cock, having a passage through it, independently of that afforded by the usual plug, or valve, when the said passage can be opened or closed by a supplementary plug, or its equivalent, substantially as and for the purpose herein set forth.

87,523.—BENJAMIN F. STURTEVANT, Boston, Mass.—*Blower-Case.*—March 2, 1869.

Claim.—1. The arrangement of the side plates and the peripheral arched sections, connected together, so as to constitute a blower-case.

2. Each side plate, as made with a dovetailed concentric groove, *a*, extending about its opening, and arranged as set forth.

87,524.—ROBERT R. TAYLOR, Reading, Pa., assignor to himself, JEREMIAH H. BOONE, JONATHAN M. HELLER, and C. B. BERTOLETTE.—*Car-Starter.*—March 2, 1869.

Claim.—1. The clutch L, applied to the axle of a car, in combination with suitable springs, and with gearing substantially as herein described, by which, through the medium of the clutch, the power required to stop the car is transmitted to the spring with increased force, and the recoiling power of the spring is transmitted to the wheels, to start the car, with a force greater than that of the spring itself, all substantially as set forth.

2. In combination with the above, the brake-wheel T and brake-levers W W.

87,525.—GEORGE TEFFT, Salem, N. Y.—*Railway-Rail Chair.*—March 2, 1869.

Claim.—The railroad-chair, consisting of the pieces B and C, constructed and arranged for use in the manner herein shown and described.

87,526.—Canceled.

87,527.—JOHN J. WALDRON, East Durham, N. Y., assignor to himself, TIMOTHY G. PALMER, and HENRY BROWN.—*Shifting-Rail for Carriage-Tops.*—March 2, 1869.

Claim.—The shifting-frame *h*, fitting the seat, and from which the bars *g* rise and connect to the parts carrying the carriage-top, in combination with the hooks *i i* and *l*, and plates *k* and *n*, substantially as and for the purposes specified.

87,528.—HENRY WEBER, New York, N. Y.—*Stop-Motion Mechanism for Warping-Machine.*—March 2, 1869.

Claim.—1. The combination, with the yarn-weights D D, of the rocking board or beam F, latch I operated by a pitman, G, and spring or springs J, substantially as specified.

2. The combination, with the rocking-beam F and hinged latch I, operated as described, of the bars K L, eccentric rotating pin *e*, and catch-lever P, for operating the belt-shifter in both directions of the machine's travel, essentially as herein set forth.

3. The combination of the rising and falling weight S, set in motion by the reel, with the lever T and its spring *r*, rod V, spring U, and arm W, substantially as and for the purposes herein set forth.

87,529.—WILLIAM WHARTON, Jr., Philadelphia, Pa.—*Railway-Switch.*—March 2, 1869.

Claim.—1. The combination of the permanent rails A and A′ of the main track, the rails B and B′ of the turn-out, the switch-rails D and D′, and the permanent guard-rail H, the whole being arranged and operating substantially as and for the purpose described.

2. In combination with the above, the base-plate *c*, for the purpose specified.

3. In combination with the above, and with the base-plate *c*, the guard-rail G, arranged substantially as and for the purpose described.

4. The combination of the inclined switch-rail D, with the inclined pointed switch-rail D′, substantially as and for the purpose described.

87,530.—CORNELIUS WHITEHOUSE, Bridgtown, near Cannock, England.—*Pick for Dressing Mill-Stones.*—March 2, 1869.

Claim.—A mill-bill, or pick, for dressing stone, the head or frame of which is composed of two parts, the one fixed, the other movable, and sliding upon the handle, the said parts being notched and constructed to gripe and be in contact with that portion of the removable chisel, or acting-ends, placed between them, substantially as and for the purposes shown and set forth.

87,531.—DARIUS WILCOX, Ansonia, Conn., assignor to himself and EDWARD A. JOHNSON, same place.—*Wrench for Bit-Braces.*—March 2, 1869.

Claim.—The herein-described wrench, consisting of the spindle A and socket D, arranged in the head C, so that the said socket may be operated by turning the spindle, substantially in the manner herein set forth.

87,532.—WILLIAM H. BEAL, Philadelphia, Pa.—*Railroad-Car Heater.*—March 9, 1869; antedated November 16, 1868.

Claim.—1. The flanges *h h*, sockets *h′*, and springs I I, and general mode of attachment of the heater to the car, substantially as set forth.

2. The rod D, the horizontal doors or valves C″, and the wire rods or hooks *c*, constructed and combined with the car and the detachable fire-box, substantially as and for the purposes set forth.

87,533.—JAMES F. BENTON, Penn Yan, N. Y.—*Plow.*—March 9, 1869.

Claim.—The grooved or channeled landside B, in combination with the mold-board C, when made and arranged as specified, and used in connection with the beam A, substantially as and for the purpose herein set forth.

87,534.—LA FAYETTE BLAIR, Painesville, Ohio.—*Feather-Renovator.*—March 9, 1869.

Claim.—1. A cylinder or feather-receiver, with the hopper attachment B, the hook C, and the drop-doors D.

2. In combination with the coiled tube J the boiler I, whereby the air is heated before being conveyed to the feathers, as set forth.

3. The arrangement of devices herein shown, or equivalent means, for introducing among the feathers a current of air heated by boiling water, as and for the purpose set forth.

4. The arrangement, as herein shown and described, or in any equivalent manner, of a bellows, or other suitable device, for forcing a blast of heated air among the feathers, when said bellows or equivalent is situated outside of the heating chamber, as set forth.

5. The dome-shaped top H′ of the furnace, in combination with the water-boiler K, the whole arranged, constructed, and combined, and used in combination with and for the purpose specified.

87,535.—JOHN D. BRACKETT and WYMAN DEARBORN, Boston, Mass.—*Cotton-Gin.*—March 9, 1869; antedated March 2, 1869.

Claim.—1. The arrangement of knife-blade *n*, by screws *o* passing through slots in said knife-blade upon clearer-bar *m*, so as to be adjustable, substantially as described.

2. The pressure-bar C, as arranged with roll *d* and adjusting springs *g*, substantially as described.

87,536.—JOHN I. BRINKERHOFF, Auburn, N. Y.—*Potato-Digger.*—March 9, 1869.

Claim.—1. The semicircular bar G, or its equivalent, when attached and operated substantially in the manner and for the purpose herein set forth.

2. The combination of the bar G with handles F F, when constructed and operated in the manner described.

87,537.—CHARLES H. BUDD, Philadelphia, assignor to himself and GEORGE D. WOLFF, Norristown, Pa.—*Apparatus for Continuous Distillation.*—March 9, 1869; antedated February 26, 1869.

Claim.—1. The vaporizing of wash or other fluid, by causing it to pass through a casing in which revolves a steam-heated coil, or its equivalent, all substantially as herein set forth.

2. Causing the vapor of wash or other fluid to pass into and through a reservoir or casing, immersed, or partly immersed, in the spent wash or residuum of distillation, all substantially as and for the purpose herein set forth.

3. Causing the vapor arising from distillation to pass through tubes in a casing or vessel through which the wash passes prior to distillation, all substantially as and for the purpose specified.

4. The chamber W and its diaphragm *p*, arranged between the tubed casing G and reservoir E, substantially as set forth, for the purpose described.

5. The utilizing of the exhaust steam, by admitting it into the chamber W, where it rectifies the dilute alcohol, as set forth.

87,538.—A. R. BUFFINGTON, United States Army.—*Steam-Engine Rotary Valve.*—March 9, 1869.

Claim.—The improved revolving valve, for steam and other engines, consisting of devices herein described, embracing the valve-plate *a*, with the two concentric circular slots *d* and *e* and the groove *k*, for the reception of the annular packing *l*, the cut-off devices F and G, sleeve *h*, seat *m*, with its groove *k* and ports *y y* and *x x*, arranged to operate substantially as herein set forth.

87,539.—GEORGE E. BURT, Harvard, Mass.—*Mowing-Machine.*—March 9, 1869.

Claim.—1. The finger-bar E, when supported by mechanism so constructed and arranged that the finger-bar will yield to and pass over firm and abrupt obstacles without arresting the team or injuring the machine, substantially as described.

2. The seat S, when supported by mechanism so arranged that the operator's weight in the seat shall tend to hold the finger-bar in position while operating, substantially as described, and for the purpose set forth.

3. The finger-bar E, when connected with the foot-lever *r* and hand-lever *e*, in such a manner that the bar may be folded or unfolded by the operator while in the seat, substantially as described, for the purposes set forth.

4. The slipper *h*, when so arranged and connected with the finger-bar that the cutter-bar is thrown out of gear when the finger-bar is elevated, substantially as described.

5. The combination of the finger-beam, the foot-lever *r*, the crank *b*, and the elevating chain *o*, when said chain is so arranged as to pass over the turning center of the crank *b*, so that the chain shall at first raise the finger-bar, and then, by slackening, allow the points of the fingers to be lowered, substantially as described and set forth.

6. The combination of the finger-beam, the foot-lever *r*, crank *b*, and chain *o*, for the purpose of lifting the finger-bar over slight obstructions, while keeping it nearly parallel to the ground, substantially as shown and described.

7. The combination of the seat S, spring C, arm *j*, the connection *y*, and the arm *e′* with the axle R, pivoted and arranged substantially as described, and for the purpose set forth.

8. The seat-spring C, the projecting arm *g*, and the shipper *h*, in combination with the clutch 3′ and spring 2, arranged substantially as described, and for the purpose set forth.

9. The hanger D, the ring *x*, and the finger-bar E, in combination with the shaft R, connected and ar-

ranged substantially as described, and for the purpose set forth.

10. The combination of the projecting arm *s*, the connecting-arm *c*, and the lever *r*, substantially as described, for the purpose set forth.

11. The combination of the pitman *d*, the guide *v*, the standard M, and the cutter-bar E′, substantially as described.

87,540.—JOHN W. CARDWELL, Richmond, Va., assignor to himself and SAMUEL FREEDLEY.—*Thresher and Separator.*—March 9, 1869.

Claim.—1. The revolving cylinder E, constructed with the curved tangential arms *e*, and interposed between the threshing-cylinder C and the separator H H, in connection with the separate concave F, substantially as and for the purpose set forth.

2. The straw-carrier and separator, composed of the troughs, or sections, H, constructed with the perforated bottoms or floors *h′* and notched-edge flanges, or "sides," *h″*, and operating substantially in the manner described, for the purposes specified.

3. The double shoe J J′, constructed and operated substantially as and for the purpose described.

4. Operating the upper shoe J, by means of the notched cam L, on the cam-shaft, through the arm or lever *j*, as described.

5. Operating the lower shoe J′, by means of the crank-shaft M, connecting rod N, and crank O, on the carrier-crank shaft I, as specified.

87,541.—JOHN S. CARSON, Brook Haven, Miss. *Cotton-Bale Tie.*—March 9, 1869.

Claim.—The bale-tie, formed of a plate, X, of sheet-iron, having the loops A, B, C, D, F, *f*, and G, and latch H *h h′*, the whole being formed and arranged substantially as set forth.

87,542.—JOHN S. CASEMENT, Cleveland, Ohio, and JOHN ELLIOTT, Erie, Pa.—*Gravel-Spreader.*—March 9, 1869.

Claim.—1. The gravel-spreader E, when constructed, arranged, and adapted to be connected to a platform or other car, and to operate in the manner and by the means substantially as described.

2. Adjusting the spreader E to different widths of grade, by means of the braces *a a a* and bar *c*, having pin-holes, post *b*, and pin *d*, substantially as set forth.

3. Adjusting the spreader E to different heights of grade, by means of lever G, standard C, and hinges D D, substantially in the manner described.

87,543.—H. E. CHURCHILL, Portland, Me.—*Portable Head-Rest.*—March 9, 1869.

Claim.—The combination of the back, *a*, pivoted arms *b b′*, with the forks *c c′ c″ c‴*, so as to form a portable head-rest, constructed and operated substantially as and for the purpose shown and specified.

87,544.—GEORGE CLARK, jr., Boston, Mass.—*Fire-Extinguisher.*—March 9, 1869.

Claim.—1. The combination of the perforated charger B, hook *b*, eye *c*, and stopple C, the latter being made to fit the aperture *a*, in the receiver, and secured, when in its place, by hasp and button, or their equivalents, substantially as specified.

2. The charger B, provided with a hinged bottom, or valve, secured, when closed, by paste or cement, soluble in water, applied to a cloth, or other equivalent seal, made to unite the free end of the valve with the body of the receiver, essentially as herein set forth.

87,545.—AARON HARVEY CLAY, Pottsgrove Township, Pa.—*Apparatus for Pasting and Hanging Wall-Paper.*—March 9, 1869.

Claim.—A peculiar combination of rollers, revolving in a reservoir, whereby paste is uniformly applied to wall-paper, while being hung upon the wall, as shown in the accompanying drawings and specifications.

87,546.—JUDSON A. CLEAVELAND, Logansport, Ind.—*Machine for Threading Screws.*—March 9, 1869.

Claim.—The arrangement herein specified and shown, of the several parts of the mechanism on the supporting-frame, in the manner described, and for the purposes set forth.

87,547.—LORING COES, Worcester, Mass.—*Wrench.*—March 9, 1869.

Claim.—1. The combination of the ferrule of the screw-bearing of the wrench, with the shank of the fixed jaw thereof, by means of the projections formed respectively upon the interior of said ferrule and upon the shank, substantially as before set forth.

2. The combination of said ferrule of the screw-bearing, the shank, and the projections, with the handle of the wrench, in such manner that the handle, when in place, prevents the disengagement of the said ferrule, substantially as before set forth.

87,548.—HENRY H. COTTRILL, Vinton Station, Ohio.—*Animal-Trap.*—March 9, 1869.

Claim.—In an animal-trap of the described construction, the frame D, with its connecting-levers d^1 E, and doors F, when constructed as described, and combined with the resetting-devices C^1 C^3 C^5 and bait-trigger I, as and for the purpose set forth.

87,549.—GEORGE CROUCH, New York, N. Y.—*Catch for Carpet-Bags.*—March 9, 1869.

Claim.—The perforated plate of metal C, in combination with the tongue D, with its hook *d*, spring G, and eye E, when the same shall be constructed and operate substantially as and for the purposes set forth.

87,550.—GEORGE H. DEANE, CHARLES P. DEANE, and J. B. GARDINER, Springfield, Mass.—*Direct-Acting Steam-Engine.*—March 9, 1869; antedated December 21, 1868.

Claim.—1. The construction and arrangement of the spring *b*, as shown, forming a part of, or directly attached to, the valve-rod, substantially as shown and described.

2. The arrangement of the cams E and F, in combination with the valve-rod A and spring *b*, constructed substantially as described.

3. The arrangement of the spring *h* behind the cam F, the cam E being attached to the valve-rod, which is constructed substantially as shown.

4. The arrangement of the projection *d* on the valve-rod, pivoted cam M, and spring *g*, substantially in the manner described.

87,551.—THOMAS DICKINSON, jr., Buffalo, N. Y., assignor to himself and THOMAS DICKINSON, same place.—*Revolving Frame for Showing Goods.*—March 9, 1869.

Claim.—A revolving frame for show-goods, as a new article of manufacture, consisting of the horizontal shaft A, and radial arms B, the same being constructed and operating in the manner herein described, and for the purposes set forth.

87,552.—MORRIS DICKLE and E. P. COWAN, Ottumwa, Iowa.—*Machine for Marking Corn-Ground, with Rake-Attachment.*—March 9, 1869.

Claim.—The construction of a series of runners, A A, forming a sled, having movable shovels B B on each runner in front, and rake-cleaners J J, bracing the sled lengthwise, with a movable and adjustable rake, C, in the rear, when arranged and operated as herein described, and for the purposes set forth.

87,553.—HARRISON DOOLITTLE, East Cleveland, Ohio.—*Fingered Scoop.*—March 9, 1869.

Claim.—The perforated plate B, having the notched lugs D at the lower edge, near the holes, for securing the fingers C in position, as shown, and the fingers C, in combination, as a new mode of constructing a scoop, for the purposes described.

87,554.—JACOB EDSON, Boston, Mass., assignor to JOHN CLARK, same place.—*Hose-Coupling.*—March 9, 1869.

Claim.—1. My improved arrangement of the coupling-screws *c f*, chamber *g*, and frustum *d*, of the neck C, and clamping-collar D, of each portion, A B, of the hose-coupling.

2. The arrangement and combination of the groove *e*, with the coupling-screws *c f*, the tapering cham-

ber *g*, and frustum *d*, of the neck C, and clamping-collar D.

87,555.—WILLIAM A. FOSKETT, Meriden, Conn.—*Rotary Wire-Feed.*—March 9, 1869.

Claim.—The variable cam F, operating upon the smooth roll, or barrel D, or its equivalent, when used upon a rotary feed, in the manner and for the purpose substantially as set forth.

87,556.—WILLIAM FOSTER, jr., and GEORGE P. GANSTER, New York, N. Y.—*Gas Apparatus.*—March 9, 1869.

Claim.—1. Forming a tight connection between the interior of the dome A^1 and the external atmosphere, so as to safely discharge the gaseous contents of the dome, in case of a backward motion of vapor through the apparatus, as herein set forth.

2. The drain-pipe G, and pit A^3, arranged relatively to each other, and to the evaporating-chambers and their appurtenances, so as to allow of a constant drainage of the unevaporated liquid, substantially as and for the purposes herein set forth.

3. The squeezers E^1 E^2, and the right and left handed screw F, arranged to operate substantially as and for the purposes herein set forth.

4. In gas-apparatus, the measuring-wheel I I', turning in a chamber, A^4, kept filled to a uniform level, and supplying the gasoline or its equivalent to the evaporating-chambers, as and for the purposes herein set forth.

5. The within-described provision for varying the proportions of the liquid relatively to the air passed into the vaporizing-chambers, by mounting the mechanism, or independent shafts *i* and *b*, with a changeable communication of motion, all substantially as and for the purposes herein set forth.

87,557.—THADDEUS FOWLER, Seymour, Conn.—*Machine for Manufacture of Wire Strips.*—March 9, 1869.

Claim.—In combination with a pair of creasing-rollers and a guiding-table, a pair of compressing-rollers, for thickening up the edges of the strip, preparatory to its being creased, or cut into wires, substantially as and for the purpose described.

87,558.—MELVIN J. GASKILL, Pleasant Plain, Ohio.—*Fence.*—March 9, 1869.

Claim.—The arrangement of the dovetail notch, tongue, and throat, in connection with the key, cleats, and triangular braces, operating in such a manner as to permanently join and fasten the several panels and braces of a fence together, substantially as shown and for the purpose specified.

87,559.—EDWARD D. GIRD, Cedar Lake, N.Y.—*Sewing-Machine for Making Shirt-Bosoms.*—March 9, 1869.

Claim.—1. The gathering rollers V V, when constructed substantially as shown and described.

2. The adjustable folder X, constructed substantially as shown and described.

3. The combination and arrangement of the gathering-rollers V V, and the folder X, when constructed substantially as shown and described.

4. The combination of the reel *u*, gathering-rollers V V, folder X, final folder and feed-rollers S S', substantially as shown and described.

5. The combination of the presser-feet and fold-lifters, substantially as shown and described.

6. The arrangement of the levers, pins, springs, and cam-shaft, for raising and lowering the presser-feet, substantially as shown and described.

7. The combination of the slotted hemmer-plate and hemmers, the curved supports T^1, and the reel W, substantially as shown and described.

87,560.—BARTHOLOMEW GOMMENGINGER and CHARLES W. TROTTER, Rochester, N. Y.—*Register-Frame.*—March 9, 1869.

Claim.—A fire-proof and extension register-frame, made in two parts, *a* and *b*, forming, when put together, a hollow air-chamber, A A, with perforations *e e e* and *g g g*, in the manner and for the purpose herein described and set forth.

87,561.—ALVARO B. GRAHAM, Waukegan, Ill.—*Harvester.*—March 9, 1869.

Claim.—1. The combination of the ratchet-wheel and spring-pawl thereof with two pins, arranged substantially as before set forth, so as to hold the pawl out of and in gear.

2. The combination of the pillow-block, cap, spanner, and perforated lug, substantially as before set forth.

3. The combination of the shipping-lever, clutch, and skewed rim, substantially as before set forth.

4. The combination of the tongue, gearing-carriage, hinges, notched plate, and wedge, substantially as before set forth.

5. The combination of the finger-beam, vibratable link, lifting-lever, and forked chain, substantially as before set forth.

6. The combination of the gearing-carriage with a carrying-bar, for the finger-beam, supported upon the axle-arm, for a ground wheel, outside the hub of said wheel, substantially as set forth.

7. The combination of the finger-beam with a spring-hook, to hold the cutter, substantially as before set forth.

87,562.—J. H. HALL, New York, N. Y.—*Mode of Preserving Eggs.*—March 9, 1869; antedated March 3, 1869.

Claim.—1. The use of the charcoal-water in the process of preserving eggs, substantially as herein specified.

2. The process herein described, as a whole, substantially as set forth.

3. The immersion of the eggs in vinegar, or moistening them therewith, previous to boiling, for the purpose set forth.

87,563.—MARTIN HANELINE, Huntington, Ind.—*Buckle.*—March 9, 1869; antedated February 27, 1869.

Claim.—The construction of the within-described buckle, the same consisting of the frame A, having two rigidly-connected transverse bars, B C, on one of which are hinged the two tongues D E, so that one shall bear on one end of the frame, and the other on the other bar, and both on the upper side of the frame, as herein represented and described.

87,564.—MICHAEL HELBLING, Allegheny City, Pa., assignor to himself and JOHN F. MCKINNEY same place.—*Grate-Bar.*—March 9, 1869.

Claim.—A reticulated grate-bar, or grating for furnaces, consisting of side ribs *a* a', ends *b* b', and diagonal cross-ribs *e*, intersecting each other, substantially as and for the purposes hereinbefore set forth.

87,565.—JOHN A. HEYL, Boston, Mass., assignor to himself and JOHN H. WIGGINS, same place.—*Horseshoe.*—March 9, 1869.

Claim.—1. The arrangement of the flank dovetail connections, so as to run transversely across the flanks of the shoe, in combination with the arrangement of the keys within the dovetail sockets, and so as to complete the flank dovetail tenons, as set forth.

2. The combination and arrangement of the holding-screws with the dovetail keys, and sockets, and semi-tenons, arranged in or with the main and supporting parts A B of the shoe, in the manner as set forth.

87,566.—O. A. HILL, Westbrook, Me.—*Bridge for Playing Pool.*—March 9, 1869.

Claim.—The improved pool-bridge, as herein shown and described.

87,567.—HENRY S. HUIDEKOPER, Meadville, Pa.—*Apparatus for Heating Water by Steam.*—March 9, 1869.

Claim.—The construction described, whereby the cold water from a tank or stream may be let into the exhaust-pipe or steam-pipe A K, in two or more streams, by the means of the watering-can head C D', for the purposes set forth.

87,568.—GEORGE H. JOHNSON, Buffalo, N. Y.—*Fire-Proof Grain-Bin.*—March 9, 1869.

Claim.—The combination of a series of concentric, hollow partition-walls, of any suitable porous materials, with the interior of a cylindrical or polygonal grain-bin, substantially as and for the purpose herein set forth.

87,569.—GEORGE H. JOHNSON, Buffalo, N. Y.—*Bracing for Cylindrical Structures.*—March 9, 1869.

Claim.—1. A series of annular tension-bars, or rods, placed horizontally within the walls of cylindrical or polygonal elevator grain-bins, or other similar structures of masonry, and combined therewith, substantially in the manner herein set forth.

2. In combination with a series of horizontal annular tension-bars, or rods, inserted within the walls of a grain-bin or other cylindrical or polygonal structure of masonry, vertical bars or plates, framed and united or secured to said tension-bars, substantially as herein described.

87,570.—PATRICK JOYCE, Rochester, N. Y.—*Coffin-Bier.*—March 9, 1869.

Claim.—1. The platform B, provided with pivot or screw B^1, in combination with the bier A, having a nut or box, for reception of said pivot, or screw, substantially as specified.

2. In combination with the platform B, the arrangement of the screws D D, or supports E, substantially as and for the purpose set forth.

87,571.—H. R. LADD, Orwell, Ohio.—*Axle-Set.*—March 9, 1869.

Claim.—The combination of the several devices herein described, for holding and bending axles, all constructed, arranged, and operating as set forth.

87,572.—JACOB C. LANGE, Pittsburg, Pa.—*Substitute for Tobacco.*—March 9, 1869.

Claim.—1. The tobacco-substitute, compounded of the several ingredients specified.

2. The pressing into plugs, resembling plugs of tobacco, any and all kinds of preparations substituted for tobacco, or used as antidotes or medicines, to annul the effects of tobacco.

87,573.—JASON LUSK, Fredonia, Mich.—*Machine for Grating Fodder.*—March 9, 1869.

Claim.—The toothed concave D, eccentrically adjustable by means of the screws *i* and *j*, when so arranged, with relation to the toothed cylinder C, that said toothed surfaces are removed from contact with each other, and a clear space is formed gradually tapering, between them, whereby the fodder is not cut and crushed, but relieved of its hard covering and ends, as and for the purpose herein shown and described.

87,574.—ALFRED MCQUEEN, Philadelphia, Pa.—*Dinner-Pail.*—March 9, 1869.

Claim.—The lid D E, forming an entirely closed receptacle, and having spout F, and a central opening, in combination with the pail A and its chimney G, which extends through the body of the pail and the central opening of the receptacle-lid, substantially as and for the purpose described.

87,575.—EUGENE CHARLES MALDANT, Paris, France, assignor to MARIUS CAUNE, Crawford, N. J.—*Regulator for Gas, Steam, and other Fluids.*—March 9, 1869.

Claim.—The new and useful manufacture, consisting of a gas and steam regulator, constructed substantially in the manner described.

87,576.—F. H. MANNY, Rockford, Ill.—*Seed-Sower.*—March 9, 1869.

Claim.—1. The lever *i*, guide J with stop *j*, spring-bar K with socket K′, and clutch I, when combined and arranged as described, for the purpose set forth.

2. The slotted-iron N with cross piece *n*, when used in connection with cultivator tooth and drag-bar, substantially as described for the purpose set orth.

87,577.—NELSON B. MARSH, Marengo, Ill., assignor to himself and I. R. MILLER, same place.—*Harrow.*—March 9, 1869.

Claim.—1. The improved arrangement of the sections A B C D, in connection with each other, substantially as and for the purpose described.

2. The arrangement of the draught-rod E, in combination with the sections A, B, and C, substantially as and for the purpose described.

87,578.—HUGH MCDONALD, Pittsburg, Pa., assignor to himself and WILLIAM STUART, same place.—*Puddling and other Furnaces.*—March 9, 1869.

Claim.—The mode hereinbefore described, of making the several parts of a puddling or boiling-furnace, by casting such part or parts on or around one or more notched, grooved, serrated, or corrugated bars, iron or steel, substantially as described.

87,579.—WILLIAM MCKERAHAN, Pittsburg, Pa.—*Velocipede.*—March 9, 1869.

Claim.—Connecting with the hub S, of each wheel, a short shaft or axle, *e*, frame K, vertical rods T, cross-bar E, vibrating lever N, connecting-rods *b b*, crank *a*, pedals *c c*, curved bar B, projecting arms *d–h*, and handles *f*, the several parts being constructed, combined, arranged, and operating with relation to each other, substantially in the manner shown and for the purpose described.

87,580.—F. MCMANUS, Ellenburgh Centre, N. Y.—*Wagon-Axle.*—March 9, 1869; antedated February 27, 1869.

Claim.—The nut D, as formed, threaded, and flanged, and screwed upon the axle A within the metal box C′, in the manner and for the purposes herein set forth and described.

87,581.—NORMAN MILLINGTON, South Shaftsbury, Vt., assignor to EAGLE SQUARE COMPANY, same place.—*Machine for Figuring Carpenters' Squares, &c.*—March 9, 1869.

Claim.—1. The combination and arrangement of the stamping-chases and dies with the shaft C, for the purpose of being revolved and successively brought into position, to act on the square as herein set forth.

2. The combination of the frame B, and its revolving chases E, with the treadle J, and spring N, for moving the chases successively forward and backward, substantially as herein set forth.

3. In combination with the above, the revolving gauge or cam R, connected and operated substantially as and for the purposes herein shown and described.

4. The spring I, combined and arranged as represented, relatively to the chases E *e e*, eye-bolts H, and dies G, for the purposes herein set forth.

87,582.—HENRY T. MOODY, Newburyport, Mass.—*Car-Coupling.*—March 9, 1869.

Claim.—The combination of link E and tongue or arm H, (when acting auxiliary to each other,) with the draw-head A, having chamber B, and shoulder F, draw-head A′, and shackle-pins D and D′, all constructed and operating relatively to each other, substantially as described and specified.

87,583.—WILLIAM A. MORSE, Philadelphia, Pa.—*Combined Pen and Pencil-Holder and Knife.*—March 9, 1869.

Claim.—1. A knife-handle C, with cylindrical spring-clasp B, substantially as shown and described.

2. The above-described instrument, in combination with a pencil or pen-holder, substantially as shown, and for the purpose specified.

87,584.—HIRAM W. NEARY, Princeton, N. J., assignor to himself and NATHANIEL SCHENCK, same place.—*Work-Bench.*—March 9, 1869.

Claim.—1. A work-bench, having a recess adapted for the reception of the jaw H, and an adjustable block D, sliding in said recess, all substantially as and for the purpose described.

2. The jaw H, with its screw F, arranged upon a bench, substantially as described, in combination with a nut, J, having projections *h*, and with a lever, *i*, hung to the screw F, for operating the nut, substantially as specified.

3. The jaw H, its screw F, and guide K, the pawl *m*, weight *q*, straps *s*, and staples *t t*, all constructed and arranged as set forth.

87,585.—JESSE NEWLIN, Philadelphia, Pa.—*Turbine Water-Wheel.*—Mareh 9, 1869.

Claim.—The combination with the turbine of the pivoted buckets, adjusting-plate and lifting-rod, substantially as set forth.

87,586.—CHARLES OHLEMACHER and OTTO KROMER, Sandusky, Ohio.—*Dovetailing-Machine.*—Mareh 9, 1869.

Claim.—1. The adjustable eutters D D′ and eutter H, the upright reciproeating table or earriage S, arranged with relation to each other, and to operate in the manner substantially as deseribed.

2. The adjustable pivoted stays or yokes E E, earrying shafts F and adjusting-serews *b*, arranged with relation to and affecting the position of entters D D′, in the manner and for the purpose set forth.

3. The series of disks B′, eutting-blades C′, adjustable washers *c* on shaft A, the upright reciprocating and vibrating table D′, all constructed and arranged to operate in the manner and for the purpose deseribed.

87,587.—ANDREW OVEREND, Philadelphia, Pa., assignor to RICHARD M. HOE, New York, N. Y.—*Register-Point for Printing-Presses.*—March 9, 1869.

Claim.—1. The combination with the roeking-arm *j* of a series of points, *m m*, to puncture the paper upon the feed-board by a proper movement of the arm *j* and the springs *n n*, for stripping the paper from the points, substantially as deseribed, and for the purpose specified.

2. The eombination with the rocking-arm *j*, provided with points *m m* and strippers *n n*, of the disks *o o* on the feed-board, substantially as described, and for the purpose speeified.

87,588.—FRANK L. PENNEY, Boston, Mass.—*Branding-Iron.*—Mareh 9, 1869.

Claim.—In a branding-iron or stamp, eomposed of a fixed and a removable bloek, as deseribed, the arrangement within the fixed block, recessed and slotted as herein speeified, of a removable letter-block fitting in said reeess, and provided with a perforated tongue passing up through said slot, so as to receive the tightening-pin by whieh the two bloeks are held firmly together in the manner shown and set forth.

87,589.—JACOB B. PLATT, Augusta, Ga.—*Canopy or Mosquito-Bar.*—Mareh 9, 1869.

Claim.—A bed, tent, or mosquito-bar canopy, having one or more covered openings in or through it, and suitable applianees by whieh they can be opened or uneovered, so that any inseets inside of the bar may be driven out or allowed to eseape through sueh openings, substantially as and for the purpose described.

87,590.—MICAH H. POOL, East Abington, Mass.—*Last.*—March 9, 1869.

Claim.—1. An extension-last, eomposed of parts A and B, rods *a a′* and *a″*, and spring *b*, substantially as and for the purposes set forth.

2. An extension-last, eomposed of parts A′ and B′, tongue *c*, and groove *d*, as shown in Fig. 2, as equivalents of eonstruetion shown in Fig. 1.

87,591.—GEORGE RICE, Framingham, Mass.—*Portable Map-Holder.*—Mareh 9, 1869.

Claim.—1. The within-deseribed map holder, eonsisting of the box A, eover B, operated by quadrants *b b* and stops *a a*, with the eleats *a′*, upon which maps may be suspended in the manner shown, substantially as deseribed, and for the purpose speeified.

2. The slides F F, &e., placed upon or within the front and rear sides of the map-holder, and with their inner upper corners rabbeted out, so as to receive one end of the map-files, substantially as and for the purpose shown.

3. The strips G and G′, provided with the niehes *g*, and secured to the sides and eover, and pivoted within the front eorners of said map-holder, for the purpose of enabling the maps to be eonveniently suspended for examination, substantially as shown and described.

4. The sliding part K upon the cover B, substantially as shown, and for the purpose set forth.

5. In combination with said sliding part K the seetions of the portable desk L L, substantially as and for the purpose shown.

6. The portable desk, consisting of the sections L L and base M, eonstrueted and arranged to operate substantially as herein deseribed and for the purpose set forth.

87,592.—REUBEN RICH, Dorehester, Mass.—*Tube-Well.*—Mareh 9, 1869.

Claim.—1. The peculiar construction of the cleaning implement, shown in Figs. 3 and 4 of the aecompanying drawings, when used in conneetion with tubular wells, for the purpose substantially as before set forth and explained.

2. The employment within the well-tube of the short metallic-bloek or rod *d*, constructed and operated substantially in the manner and for the purposes shown and described.

87,593.—BENJAMIN S. ROBERTS, United States Army.—*Cartridge-Making Machine* —Mareh 9, 1869.

Claim.—Conjointly, the hereinbefore-described maehine for and method of tapering metallie cartridge-shells throughout their entire length, after the same shall have heen eharged with the fulminate, in the manner shown.

87,594.—GAIN ROBINSON, Plymouth, Ohio.—*Plow and Subsoiler.*—Mareh 9, 1869.

Claim.—1. The plow E, beam F, links J, and spring K, as arranged and operated by the lever I, in eombination with the plow A, substantially as and for the purpose set forth.

2. Attaehing the false landside A′ to the plow by means of the hooks B′, substantially as specified.

87,595.—DANIEL H. ROGAN, Hudson, Wis., assignor to himself and CYRUS L. HALL, same place.—*Sewing-Machine.*—Mareh 9, 1869.

Claim.—1. The combination of meehanism for operating the feeder H baek and forth horizontally, such consisting of the forked lever T, its stud *r′*, the slotted radial arm or lever I, the stud *v′*, the slider K and its stud *t′*, and the operative cam-wheel L, arranged as deseribed.

2. In eombination with the stud *v′*, the slotted radial arm I, the slider K, and the forked lever T, applied to the feeder, and provided with meehanism for operating the said slider, in manner as deseribed, the slider M, or its equivalent, the same being for effeeting the reversal of the feed of the eloth or material to be sowed.

3. In eombination with the parts so eombined, and for moving the feeder horizontally, and reversing the feed, as described, the groove *w′*, (arranged in the slider M,) the adjustable stud *x′* and its operative meehanism applied to the lever *y′*, and a slot, e^2, in the plate f^2, as set forth, and for the purpose of effecting the variation of the length of the stitch or distanee of movement of the feeder, as explained.

4. The eombination for fastening the needle to its carrier, the same consisting of the wedge *v*, serew *w*, and nut *x*, arranged in the said earrier, as speeified.

5. The eombination and arrangement of the stationary cam or groove *m′*, (of the plate *n′*,) the stud k^1, and bent lever *i′*, applied to the needle-earrier and its supporting-arm, the whole being eonstructed and operated as and for the purposes shown and set forth.

6. The combination for effeeting the reciproeating rectilinear movements of the needle-carrier, the same consisting of the groove *y*, the roeker-shaft a^1, the erank-arm *z* c^1, the connecting-rod d^1, the slider e^1, the stud f^1, and the groove *g′* of the wheel *h′*, fixed on the driving shaft of the shuttle rotator.

97,596.—M. B. STAFFORD, New York, N. Y.—*Velocipede.*—March 9, 1869.

Claim.—1. The eombination with the frame of a veloeipede of an adjustable body-rest, substantially as and for the purpose set forth.

2. The eombined foot-rest and brake B, eonstructed and arranged to operate substantially as set forth.

3. The eombination of adjustable rest D and the adjustable seat C with the frame of a veloeipede, substantially as set forth.

87,597.—John K. Staman, Mansfield, Ohio.—*Farm-Fence.*—March 9, 1869.

Claim.—1. The binding-iron *d*, with arms *e* and *f*, when used in combination with the main post D of a fence, having a hole, *g*, cut partially through the same, and provided with a small hole, *i*, the batten C having the hole *h* cut through the same, and the retaining-pin *c*, the several parts being arranged substantially as and for the purpose specified.

2. The suspended truss-post herein described, consisting of the main post E, provided with notches *n n*, and the batten F, secured to it by means of the binding-irons *d d* and retaining-pins *c c*, as is herein shown, the braces G G and cross-bar H, the several parts being constructed, combined, and arranged substantially as and for the purpose specified.

87,598.—Anson P. Stephens, Brooklyn, N. Y., assignor to himself and Benjamin F. Stephens, same place.—*Paper-File.*—March 9, 1869.

Claim.—1. The rectangular wire-clamp, formed in substantially the manner set forth, so that the torsional spring-pressure shall act upon both the side portions or arms 1 1, substantially as specified.

2. The extension *c* and cross-piece *d*, applied to the portions 1 1, as set forth, in combination with the body or board *a* of the paper-clamp, for the purposes and as set forth.

87,599.—George B. Stone, Chicago, Ill.—*Manufacture of Spirits.*—March 9, 1869.

Claim.—1. The use of glycerine in the manufacture of spirits, substantially as and for the purposes specified.

2. The use of barley-sugar and glycerine in the manufacture of spirits, when prepared substantially as described.

87,600.—John G. Talbot, Sloansville, N. Y.—*Farm-Gate.*—March 9, 1869.

Claim.—1. Connecting the hinged bracket C to the stand D, on the post, by means of two pivots and corresponding eyes, substantially as described.

2. In combination with the swinging bracket C, having two pivots *i i*, the reversible stand D, with two eyes or sockets *h h*, to receive said pivots, substantially as and for the purpose set forth,

3. In combination with the pulley-bracket C, hinged or pivoted upon the stand D, as described, the friction-roller *e*, arranged in the bracket-plate, substantially as shown and described.

4. And in combination with said pulley-bracket C, hinged in the manner described, the arm *d*, with its loose pin *c*, substantially as and for the purpose set forth.

87,601.—Alexis Thibault, Brooklyn, N. Y., assignor to Holmes, Booth, and Haydens, Waterbury, Conn.—*Lamp-Burner.*—March 9, 1869.

Claim.—1. The removable portion of the lamp, formed of a chimney-holder, a deflector, or cone, and an air-distributer, in combination with a slide or support, surrounding the wick-tube, substantially as set forth.

2. A chimney-holder, cone, or deflector, and an air-distributer, removable from the fixed portion of the burner, in combination with a support around the ratchet-cap, upon which the removable portion rests, substantially as specified.

3. The chimney-holder, cone, or deflector, and perforated air-distributer, substantially as specified, forming a base for sustaining the chimney in an upright position when removed from the burner.

87,602.—Edward R. Thompson, Lansing, Mich.—*Straw-Cutter.*—March 9, 1869.

Claim.—The combination and arrangement of the V-shaped box A, straight lever and straight knife, extended top bar, and guide-standard, substantially as shown and described, and for the purpose set forth.

87,603.—George Humphrey Tichenor, Canton, Miss.—*Inhaler and Remedy for Throat-Disease.* March 9, 1869.

Claim.—1. The flexible tube I, in combination with the metallic funnel-shaped tube F and drawer C, when the whole is combined, constructed, arranged, and operated substantially in the manner shown and described, for the purpose set forth.

2. The medicated compound, composed of iodine, (*Iodinium*,) and mullein, (*Verbascum thapsus*,) and oxygen, combined in the proportions as herein set forth.

87,604.—William H. Trissler, Cleveland, Ohio.—*Soldering-Iron.*—March 9, 1869.

Claim.—The herein-described reversible soldering-iron, when constructed in the manner substantially as and for the purpose set forth, as a new article of manufacture.

87,605.—Philip W. Vaughan, Columbia, Ky.—*Medical Compound.*—March 9, 1869.

Claim.—A medicine for the cure of neuralgia.

87,606.—John Waite, Palmer, Mass.—*Harness-Saddle.*—March 9, 1869.

Claim.—1. The combination, with the saddle-tree of a harness, of an adjustable pad or pads, substantially as and for the purposes set forth.

2. The combination, with the saddle-tree B and terrets C, of the metallic pad-plate E, substantially as and for the purposes set forth.

3. The combination, with the terret C and saddle-tree B, of the fork *c*, substantially as and for the purposes set forth.

4. The combination, with the metallic pad-plate E and shank D of the terret C, of the layers of cloth G, substantially as and for the purposes set forth.

5. The combination, with the pad-plate E, of the layers of cloth G, for the purposes stated.

87,607.—Peter W. Weida, Philadelphia, Pa.—*Starch or Gloss for Use in Laundries.*—March 9, 1869.

Claim.—A composition composed of the above-named ingredients, for the purpose of giving gloss and smoothness to ordinary starch, as aforesaid and described.

87,608.—Joseph Wells, Brooklyn, N. Y., assignor to Orlando A. Wilcox, same place.—*Paper-Bag Machinery*,—March 9, 1869.

Claim.—1. Regulating the tension or strain on the paper, as it is drawn into the machine, in the process of making paper bags, by means of a self-adjusting "compresser"-bar and wheel applied thereto, substantially as described.

2. Drawing the paper tube forward to the cutting and pasting devices, by means of a shaft, V, fitted with collars, in combination with the feed-blocks, drawn back by elastic cords, substantially as described.

3. The combination of the bar C with the feed-blocks, for the purpose of keeping them in their respective places in the gauge-plate, substantially as described.

4. Laying the paste upon the edge of the paper to be pasted, by means of a revolving and vibrating pasting-roller, operated substantially in the manner described.

87,609.—John T. Wilson, Pittsburg, Pa., assignor to himself and Coleman, Rahm & Co., same place.—*Carriage-Axle.*—March 9, 1869.

Claim.—1. An oil-reservoir, *c*, constructed in the axle A, and furnished with an accessible opening, through which it may be supplied with a lubricating material, and openings for its transmission to and between the journal and box, or sleeve, substantially as described.

2. In combination with the cap *c*, the oil-chamber *r*, its inlet-supply opening, and channels in the axle A, for furnishing the lubricating compound to the box and journal, at or near the points thereof, substantially as described.

87,610.—Isaac T. Winchester, Boston, Mass.—*Hot-Air Furnace.*—March 9, 1869.

Claim.—1. A series of independent tubes, B, passing through and forming the sides of the fire-pot of a furnace, as and for the purpose set forth.

2. The adjustable smoke-pipe G, in combination with the top, E, of a furnace, to the lowest portion

of which it is fitted, and upon which it turns as a center, substantially as and for the purpose described.

3. The box or trunk H, in combination with two or more tubes, B, as and for the purpose set forth.

87,611.—O. D. Woodruff, Southington, Conn.—*Meat-Cutter.*—March 9, 1869.

Claim.—The drivers *a* and knives *c*, when combined and arranged alternately on the same shaft, substantially as shown and described, and for the purposes set forth.

87,612.—George W. N. Yost, Corry, Pa.—*Equalizer.*—March 9, 1869.

Claim.—The combination of the whiffle-tree E, provided with a stay, G, and a V-form strap, D, pivoted to a slide, C, with a tongue, A, provided with a socket, B, and a buffer, F, as described, for draught-teams.

87,613.—Edson A. Abbott, Baltimore, Md.—*Grain-Drier.*—March 9, 1869.

Claim.—1. The combination and arrangement of the steam-chest Q, flues T, conveyers U, and suction-fan P, substantially in the manner and for the purpose described.

2. The apparatus, substantially as described, whereby damp grain is subjected to the combined and simultaneous action of heat derived from steam, and of hot or cold currents of air, for the purpose at once of expelling and carrying off the superabundant moisture, in the manner set forth.

3. The perforated conveyer-flights U, constructed as and for the purpose specified.

87,614.—Robert Adams, Cincinnati, Ohio.—*Blacking-Brush.*—March 9, 1869; antedated February 26, 1869.

Claim.—The clamp-iron D, having arms *b b*, and lever-arm *d*, the thumb-screw F, and pivot-screw E, or their equivalent, in combination with the spreading-brush C, polishing-brush A, and blacking-box B, when the same are constructed, arranged, and operate as and for the purpose shown and described.

87,615.—John C. Andrew, Seventy-Six, Ky.—*Feeding-Shoe for Grinding-Mills.*—March 9, 1869.

Claim.—The sieve B and spout C, when the former composes the bottom of the shoe A, and the latter is rigidly attached to the under side of the same, both being arranged to conduct the grain and foreign matter in the manner described for the purpose specified.

87,616.—John Ashworth, North Andover, Mass., assignor to George L. Davis, John A. Wiley, and Joseph M. Stone, same place.—*Loom for Operating Shuttle-Boxes.*—March 9, 1869.

Claim.—1. The combination of a series of shuttle-boxes, a cam to place the same in position, and a duplex series of hook-rods to work said cam, operating under the control of a pattern-chain when the hook-rods are arranged substantially as described, and controlled by the pattern, so as to maintain a constant rotation between each longitudinal series of projections on the pattern and its corresponding shuttle-box, substantially as set forth.

2. The employment, in combination with the cam or cams for working the shuttle-boxes, of two hook-rods, or their equivalents, working in opposite directions, and the pawl or driver, so arranged that by their joint operations the cam will be brought to a definite and fixed position from any distance in either direction, substantially as described.

3. The employment, in combination with the cam or cams for working the shuttle-boxes, of a single hook-rod and a fixed stop attached to the cam, by the joint operation of which the cam is placed in its extreme positions, substantially as described.

4. Connecting the hook-rods with the cams by adjustable joints, substantially in the manner and for the purpose described.

87,617.—T. Bailey and Virgil W. Blanchard, Bridport, Vt.—*Washing-Machine.*—March 9, 1869.

Claim.—In a washing-machine, the tub A, diaphragm E, shaft F, support B, ratchet-wheel G, pawl *g*, bar g^1, arm or bar g^2, lever C, uprights *c* and *d*, arm *f*, and spring clothes-pounder D, all constructed, arranged, and operated substantially as and for the purpose described.

87,618.—A. L. Baker, Newark, N. J.—*Compound for Renewing Hair.*—March 9, 1869.

Claim.—The compound herein described, substantially as specified.

87,619.—Seth W. Baker, Providence, R. I.—*Pad and Lining for Horse-Collars.*—March 9, 1869; antedated March 4, 1869.

Claim.—The pad, of thick double woven cotton fabric, in combination with the collar A A, substantially as described.

87,620.—Edwin Barton, Patterson, N. J.—*Machine for Twisting Bullion-Fringe.*—March 9, 1869.

Claim.—1. The arrangement of the sliding hook-spindle *m*, having a feather, *x*, and working through the pinion *n*, in fixed frame *h*, and connected, by means of arms *w*, with the slide *s*, all operating substantially as herein described.

2. The rock-shaft N, having a lever, Q, and arm, P, whereby the fringe is disengaged from the hook, said shaft being operated by a tappet on the wheel R, striking lever Q, as herein described.

3. The lever K, which engages with the notch *u*, when operated by means of a tappet on the wheel R, substantially as and for the purpose herein described.

4. The combination and arrangement of the sliding hook-spindle *m*, connected with slide *s*, the shaft *b*, gearing *n d*, pinion *a*, wheels H J, the latter having a recess *u*, the shaft N, provided with lever Q and arm P, and the wheel R, carrying tappets *y z*, all operating together substantially as herein described.

87,621.—E. S. Belton, New Orleans, La.—*Toy.* March 9, 1869.

Claim.—1. The combination of the cup A, handle B, and piston C, substantially as and for the purpose specified.

2. A toy ball-ejector, substantially such as herein described, as a new article of manufacture.

87,622.—Benjamin Bevelander, Boston, Mass.—*Car-Coupling.*—March 9, 1869.

Claim.—The coupling, as made with arms having pointed and barbed heads, pivoted and provided with weights, arranged to operate substantially as described.

87,623.—Virgil W. Blanchard, Bridport, Vt.—*Pinion.*—March 9, 1869.

Claim.—1. A pinion, composed of the cylindrical block A, bar, or stem, *c*, movable teeth *a a*, annular plate *b*, nut *d*, and screw-bolt *e*, constructed substantially as and for the purpose set forth.

2. A pinion with movable teeth, so constructed, that by means of a nut, or its equivalent, its teeth may be secured in their places, or removed when necessary, substantially as and in the manner set forth.

87,624.—Douglas Bly, Macon, Ga.—*Artificial Leg.*—March 9, 1869.

Claim.—1. The combination, with the ankle-joint, of the wooden pin *a* and open metallic hook *b*, arranged as described, and operating in the manner and for the purpose specified.

2. The combination, with the leg B, of the inclosed flexible socket H, of less diameter than the wooden socket, and otherwise arranged, in the manner and for the purpose specified.

3. The combination of hooks *i*, with cord *p*, and eyes and catches *g h*, or their equivalents, substantially as herein set forth.

4. The combination of the connecting-strap *m* with the loose hooks *i* and catches *h*, in the manner and for the purpose specified.

5. The sockets *n n*, with the edges of the leather, when combined with the cord *p*, in the manner and for the purpose specified.

87,625.—JOHN W. BOOKWALTER, Springfield, Ohio.—*Exterior Casing for Turbine Water-Wheels.*—March 9, 1869.

Claim.—1. A portable metallic forebay, or external casing, for a turbine of the class mentioned, having a tubular bearing, D′, projecting into the chamber for the support of the wheel case, substantially as described.

2. Such a casing, combining in its construction the following elements, viz, two pieces, which, when bolted together by their flanges, form an oblate spheroid, an induction-pipe, B, in the side, and an eduction-pipe, D, in the bottom, and an upper bearing for the wheel-shaft, substantially as described.

3. Such a casing, in combination with a stuffing-box, F, and elevated box or bearing for the wheel-shaft G, attached to the top-plate A, substantially as set forth.

87,626.—FRANKLIN BOWLY, Winchester, Va.—*Glass-Board and Apparatus for Cutting Glass.*—March 9, 1869.

Claim.—1. A glass-board, A, having marginal pins on each side, and pegs *b b*, or rather equivalent rests, for the straight-edge or diamond-rule C, in combination with a movable rest, B, fitting on or between the pins in the board, to enable the panes of glass to be cut in a rapid and convenient manner, substantially as described.

2. The two parallel and oblique rows of the holes 1, 2, 3, 4, &c., in the ends of the movable rest B, substantially as described, for the purpose of adjusting the said rest B, of the glass-board A, to fractions of one inch, all as set forth.

3. The sliding-plate D, substantially as described, in combination with the rest B and glass-board A, all as and for the purpose set forth.

4. The glass-board A, having movable rest B and straight-edge C, and its pegs, or stops *b b*, when the plane of the said board is crossed by two systems of numbered lines at right angles to each other, and an inch apart, substantially as and for the purpose shown and described.

87,627.—HORACE C. BRIGGS, West Auburn, Me.—*Hoeing-Machine.*—March 9, 1869.

Claim.—1. The combination of the axle O and wheels E′ with the frame A B C D E F of the cultivator, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the arms and supports Q, levers R *r*,′ and chains S, with the axle O and runners D, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the foot-lever Z, pivoted toothed plate Y, toothed bar T, arms V, standards W, and plows, or hoes X, with each other, and with the forward cross-bar A of the cultivator-frame, substantially as herein shown and described, and for the purpose set forth.

4. Forming the standards W with two separate and distinct seats, for the plows, or hoes, srbstantially as herein shown and described, and for the purpose set forth.

5. The draught-bar N, constructed in three parts, and operating in connection with the tongue K and draught-irons H, substantially as herein shown and described, and for the purpose set forth.

6. The combination of the roller D′ and detachable arms A′ with the rear cross-bars B and runners D of the cultivator-frame, substantially as herein shown and described, and for the purpose set forth.

7. The combination of the adjustable wedge-block L with the forward cross-bar A and inclined rear end of the tongue, substantially as herein shown and described, and for the purpose set forth.

87,628.—ADDISON P. BROWN, Syracuse, N. Y.—*Wind-Wheel.*—March 9, 1869.

Claim.—1. The combination of the governing weights C and bars K, with the sections of a rosette windmill, substantially as and for the purposes set forth.

2. The sliding head D and axes *a*, constructed as described, for the purpose of producing an increased resistance, as the sections are turned, by the increased force of the wind, substantially as above specified.

3. The radial arms B, and radial slats, so beveled or scarfed off as to cause them to present the greatest and most perfect propelling-surface to the wind with the least retarding-force consistent with practical construction, as hereinabove set forth.

4. The general combination of the governors C K, sections A, beveled arms B, regulating connection, and sliding head, constructed and operating substantially as and for the purposes specified.

87,629.—GEORGE BUCHANAN, Washington, Pa. *Grate-Fender.*—March 9, 1869.

Claim.—The arrangement of a grate-shaped fender, with handle *a*, inside feet *b b*, outside foot *c*, (or the two feet outside and the one in, when preferred,) and offsets *d d d*, to rest on upper bar of grate, substantially as and for the purpose set forth.

87,630.—JABEZ BURNS, New York, N. Y.—*Velocipede.*—March 9, 1869.

Claim.—In a velocipede, which is operated by power on the front wheel, has the steering-wheel at the rear, and the reach straddling said front wheel, the combination of the T-shaped slotted head, slide *g*, foot-rest *j*, and adjustable plate *i*, substantially as and for the purpose described,

87,631.—JOSEPH CANTNER, Millheim, Pa.—*Fly-Net for Horses.*—March 9, 1869; antedated February 27, 1869.

Claim.—The method of connecting the cross-lashes, or cords, B B, with the straps A A, by means of the looping-cords C C, when the said looping-cords pass through holes in the straps, around the cross-lashes, and then back through the same holes, as herein specified.

87,632.—JAMES M. CARPENTER, Florence, Mass.—*Cutting Threads on Pipes, &c.*—March 9, 1869.

Claim.—1. As my improvement of screw-threading dies, conjointly, the attachment of said dies, by pivots, to the die-stock, a series of longitudinally-concave cutting-threads, of equal height throughout their entire length, and terminated at any angle to the curvature of said threads, in the plane of the straight, beveled surface of the die-block, substantially as represented by Fig. 4, and mechanism for adjusting said dies, to give clearance, and to retain them firmly in position when so adjusted, substantially as set forth.

2. In combination with the dies, made and pivoted to the head-stock, as described, the oscillating ring and the adjusting set-screws, or their equivalent, the wedges, substantially as described.

3. The notched arm *m*, in combination with the shell *q*, ring *i*, and head *j*, substantially as and for the purpose described.

87,633.—WILLIAM CARPENTER, Fairbury, Ill.—*Embroidering-Attachment for Sewing-Machines.*—March 9, 1869.

Claim.—1. The reciprocating cam *j*, the swinging bar F, and spring *h*, or its equivalent, in combination with the swinging plate C, which is moved by the bar F, as set forth.

2. The arrangement and combination with each other of the presser A B, swinging plate C, arm *c*, pivoted thread-guides D E, swinging bar F, spring *h*, and sliding cam *j*, all made and operating substantially as and for the purpose herein shown and described.

87,634.—GEORGE CLARK, Buffalo, N. Y.—*Grain-Storehouse.*—March 9, 1869.

Claim.—1. Supporting grain-bins upon one central column, in the manner substantially as and for the purpose described.

2. The hollow cast-iron column A, with the discharge-spout B and hopper-plate C, constructed in the manner and for the purpose substantially as herein set forth.

3. The hopper D, constructed substantially as described, in combination with one central supporting-column, for the purposes herein set forth.

87,635.—ROBERT J. CLAY, Greenpoint, N. Y.—*Cotton-Gin.*—March 9, 1869.

Claim.—1. The combination, with the saw-cylin-

der D, of the reciprocating corrugated stripper, or clearer, G, substantially as specified.

2. The combination, with the saw-cylinder D, of the revolving clearer and spreader H, formed or provided on its periphery with reversely-inclined stripping-ribs, or edges, *m*, essentially as specified.

3. The combination, with the saw-cylinder D, of the reciprocating corrugated stripper, or clearer, G, and the revolving clearer and spreader H, formed or provided on its periphery with reversely-inclined stripping-ribs, substantially as described.

87,636.—Francis Clymer, Galion, Ohio.—*Clothes-Line Fastener.*—March 9, 1869; antedated March 5, 1869.

Claim.—The cam B, toothed plate *b'*, and flange *b*, when cast in one piece, and made readily adjustable by means of the wrench-screw C and grooved pivot D, inserted in the hole of the post.

87,637.—John F. Coddington, Newark, N. J.—*Harvester.*—March 9, 1869,

Claim.—The arrangement of the adjustable pulley I and the socketed piece, slotted or provided with a series of holes, and attached to the reel-post D, with reference to each other and to the reel E, the looped driving-chain or band L, and the system of pulleys A J K G, substantially as and for the purpose specified.

87,638.—Charles L. Cole, Bushnell, Ill.—*Churn-Dasher.*—March 9, 1869.

Claim.—1. The cylinder C, provided with the dashers or arms D D', constructed and arranged substantially as set forth.

2. The cylinder C, dashers D D', spring-catch *e*, thumb-screw *f*, rectangular slot *a*, and projection *d*, all combined and arranged substantially as described.

87,639.—Ebenezer Coleman, Woburn, Mass.—*Churn.*—March 9, 1869.

Claim.—1. The combination and arrangement of the movable arch or bail B, separate from the supporting-frame C, with such frame C, the dasher D, and the vibratory reservoir A, provided with mechanism for oscillating it, as set forth.

2. The combination and arrangement of the working lever F, with the vibratory reservoir A, and the cranked shaft *r*, and connecting-rod *p*, applied to such reservoir and the supporting-frame C, as set forth.

3. The combination and arrangement of the catch-lever E and the mortised movable arch or bail, with the notched dasher and the vibratory reservoir, to operate together as set forth.

87,640.—Alonzo W. Cram, St. Louis, Mo.—*Mash-Tub and Vapor-Cooler.*—March 9, 1869.

Claim.—1. The construction of the revolving tubes S, F, N N, W W, T T, E, and B, as above described, and for the purposes set forth.

2. The construction of the two cylinders D D and C, in combination with each other, and in combination with the tubes M, R, and A, as above described, and for the purpose set forth.

3. The combination of the cylinders C and D D, together with the series of tubes F, N N, W W, S, T T, E, and B, as above described, and for the purposes set forth.

87,641.—Hiram Culver, Dansville, N. Y.—*Plow.*—March 9, 1869.

Claim.—The combination and arrangement of the bar *c*, pendant *s*, chain B, and handle E, with a single or gang-plow, as herein described, for the uses and purposes specified.

87,642.—Hiram Culver, Dansville, N. Y.—*Combined Harrow and Cultivator.*—March 9, 1869.

Claim.—A series of cylindrical rotary harrows, adjusted upon a shaft, as described, separated by the arms *c*, and adapted for the removal of any number thereof, at will, in the manner represented, and for the purposes herein specified, substantially as described.

87,643.—Jeptha Cummins, Perry, Mich.—*Horse Hay-Fork.*—March 9, 1869.

Claim.—The combination of the slotted or forked handle A, fork B, trigger C, spring D, loop E, notch *a*, and catch *b*, all constructed and arranged substantially as and for the purposes herein set forth.

87,644.—Leo Daft, New York, N. Y., assignor to himself and John Wood, same place.—*Seat and Back for Chairs and Bottom for Beds.*—March 9, 1869; antedated November 20, 1868.

Claim.—Elastic seats, backs, and bed-bottoms, made of India-rubber strips, interwoven and arranged substantially as herein shown and described.

87,645.—William E. Dante, Washington, D.C.—*Portable Key-Hole Guard.*—March 9, 1869.

Claim.—The portable key-hole guard, consisting of arms D D and jaws *b b*, pivoted together at *a*, and screw E, or its equivalent, all substantially as herein described.

87,646.—G. W. Darby, New Vienna, Ohio.—*Wind-Wheel Water-Elevator.*—March 9, 1869.

Claim.—The float *u*, in combination with rod *s*, lever *i*, shafts G and P, and pinions *h* and *v*, constructed and operating substantially as and for the purposes herein specified.

87,647.—William J. Decker, Nyack, N. Y.—*Blind and Shutter Fastening.*—March 9, 1869.

Claim.—1. The lever G, when connected with a blind-fastener, E, substantially as described.

2. The spring F, when arranged as described, to hold at once the spring-catch E and the lever G in the requisite positions, as specified.

3. The combination with each other of the plate D, catch E, lever G, spring F, lever H, and rod *k*, all arranged, combined, and operating substantially as herein shown and described.

87,648.—E. L. Demorest and W. G. Cook, New York, N. Y.—*Brace and Suspender Combined.*—March 9, 1869; antedated March 5, 1869.

Claim.—The mode, substantially as described, of forming each arm-loop of the shoulder-brace into a suspender with two lobes, in combination with the cross-ties specified as connected with the supplementary suspender E, all substantially as and for the purposes set forth.

87,649.—Loyal M. Doddridge, Portland, Ind., assignor to himself and James N. Templar, same place.—*Railway-Car Coupling.*—March 9, 1869.

Claim.—1. The locking-disk or lever, with its cam-like projections, constructed substantially as shown and described.

2. The combination of the disk or lever C, locking-lever B, and buffer A, substantially as and for the purpose described.

3. The arrangement of the guide or spring F, with reference to the buffer A and lever B, substantially as shown and described.

4. The arrangement of the spring G, with reference to the disk or lever C, substantially as shown and described.

87,650.—Charles du Lin, Mans, France.—*Manufacture of Artificial Fuel.*—March 9, 1869.

Claim.—1. The method of agglomerating small coals, the dust of coals, charcoal, coke, wood, and other substances, as specified, by the employment of vegetable resins, and especially those proceeding from sea-pine, mixed with said substances, substantially as and for the purposes specified.

2. As a new article of manufacture, the agglomerated coals or fuel, produced substantially in the manner and by the employment of the ingredients as herein specified.

3. The employment in the manufacture of illuminating gas of free-burning or uninflammable coals, mingled with more or less vegetable resin, substantially as and for the purposes herein set forth.

87,651.—James W. Eardly, Cascade, Mich.—*Corn-Planter.*—March 9, 1869.

Claim.—The combination of the bar A A and its adjustable marker *b*, with the box B, adjustable slide *a*, and handles and handled rods *f f*, when constructed and used as and for the purposes set forth.

87,652.—M. Ehrgott, Pittsburgh, Pa., assignor to himself and James Parker, same place.— *Thimble-Skein for Axles.*—March 9, 1869.

Claim.—As a new article of manufacture, a thimble-skein, B, for axles, constructed out of sheets or plates of steel or wrought-iron, in the manner substantially as herein described, so as to be of uniform thickness, except at the point where the laps are welded, and provided with grooves *b*, for receiving lubricating-oil, as set forth.

87,653.—Hermann Endemann, New York, N. Y.—*Artificial Bone-Black.*—March 9, 1869.

Claim.—1. A substitute for bone-black, composed of clay (silicate of alumina) and carbon, separated from a carbonizing-substance, substantially in the manner herein described.

2. A substitute for bone-black, composed of clay, hydrated sesquioxide of iron, and carbon, mixed together, about in the proportion and substantially in the manner specified.

3. A substitute for bone-black, composed of clay, hydrated sesquioxide of iron, carbon, and salt, substantially as described.

87,654.—M. E. Ezell, Hatchechubbee, assignor to Walter S. Gordon, Russell County, Ala.—*Fire-Kindler.*—March 9, 1869.

Claim.—1. The rod C, provided with a match-holding device at its end, in combination with the rod D, provided with a roughened end or surface, substantially as and for the purpose specified.

2. The combination of said two rods, C and D, with a spring, E, a spring-catch, F, and a cord or wire, H, substantially as and for the purpose described.

87,655.—Philander S. Foster, Richmond, Me.—*Boot and Shoe Lacing.*—March 9, 1869.

Claim.—1. The arrangement and combination of the flaps B, staples *a* and *c*, and cords *s*, substantially as and for the purposes specified.

2. The combination and arrangement of the several parts above mentioned with the elastic straps *d*, and hooks, buttons, or studs *f*, substantially as described.

87,656.—A. Frederick, Toledo, Ohio.—*Millstone-Balance.*—March 9, 1869.

Claim.—1. The combination of adjusting balancing-weight D and rod C, provided with a permanent hook, *c*, and an adjustable sliding-hook, *a*, substantially as described.

2. The notched hook *c* on rod C, in combination with a T-shaped slot, in the balancing-weight D, whereby this weight can be readily removed from the rod C, without detaching the latter from the bands on a millstone, substantially as described.

87,657.—A. S. Gallihier, Bristol, Tenn.—*Churn.*—March 9, 1869.

Claim.—The arrangement of the horizontal triple gearing D D, and G, with the top braces E E, stationary beaters J J, and double-acting beaters B B, when constructed and operating as herein described, and for the purposes set forth.

87,658.—Samuel Gibbons, Freedom, Pa., assignor to Excelsior Oil-Manufacturing Company of Pennsylvania.—*Process of Preparing Petroleum to be Used in Lubricating Wool.*—March 9, 1869.

Claim.—1. The within-described process for preparing petroleum, so as to be adapted as a wool-grease, substantially as set forth.

2. Preparing petroleum so that it can be used as a wool-grease, substantially as herein set forth.

3. An oil, or grease, made of petroleum, for the purpose of greasing wool, substantially as herein set forth.

4. The within described petroleum as a wool-grease, when prepared substantially as herein set forth.

87,659.—John Glattner, Suspension-Bridge' N. Y.—*Churn.*—March 9, 1869.

Claim.—The combination and arrangement of the rock-lever H, connecting-bar I, standards A, and pivoted churn C, operating substantially as set forth.

87,660.—Jacob L. Good, Elizabethtown, Pa.—*Churn.*—March 9, 1869.

Claim.—1. The gathering-board *s*, constructed and operating substantially as and for the purposes mentioned.

2. A churn, having dashers E, standard C, dash-board F, gatherer *s*, and sectional lid, with removable gearing, as described, constructed, arranged, and operating substantially as herein specified.

87,661.—Henry S. Goodspeed, New York, N. Y.—*Pen.*—March 9, 1869.

Claim.—1. The reservoir-attachment *b*, applied to the back of the pen, by a shank or stem rigidly connected therewith, so as to maintain its pointed extremity in juxtaposition with the nib, for the purposes of first rendering capillary service in supplying the ink; second, of supporting the nib under moderate pressure; third, of protruding through the slit, and thereby forming a triple point under extreme pressure, said attachment forming a component part of the pen with which it is combined, but capable of being removed and applied to another, when the first becomes unserviceable, substantially as herein set forth.

2. A capillary reservoir, when applied to the back of the pen, and provided with an auxiliary point, arranged and operating substantially as and for the purposes set forth.

87,662.—W. B. Gould, New York, N. Y.—*Stair-Rod.*—March 9, 1869.

Claim.—The construction of the two parts, *a* and *b*, the former carrying the ring *e*, hinged together, and attached to the riser, in the manner described, in combination with the stair-rod, as herein set forth, or the purpose specified.

87,663.—William Hainsworth, Sharpsville, Pa.—*Method of Constructing Molds for Metallic Castings.*—March 9, 1869.

Claim.—The packing of sand, for a mold, in a flask, by raising the same, together with the pattern, and letting them all drop upon a hard bed, substantially as shown and described.

87,664.—A. W. Hall, New York, N. Y.—*Water-Meter.*—March 9, 1869.

Claim.—1. The compound taper-plug E *e*, constructed and applied, relatively to the service-pipe B, to operate substantially as and for the purpose herein set forth.

2. The combination, with the bucket F, of the stops *c' d*, springs *f g m*, and locking-lever I, substantially as and for the purposes herein set forth.

87,665.—William Hamilton and William Hamilton, jr., Toronto, Canada.—*Rotary Motor and Meter.*—March 9, 1869.

Claim.—1. The rotary piston C, provided with chambers E E E E, in combination with the ports E' E'' E' E'', abutments F F, and valves C' C' C' C', substantially as herein set forth.

2. The construction of the sides A' with the ingress-passages O and egress-passages P, as herein set forth.

3. The arrangement of the body A'', the sides A', and the outer sides A, as described.

4. In combination with the rotary piston or cam C C', the sides A A' O P, body A'' D D' D'', the segmental pieces or abutments F F, the entry-ports E' E', and exhaust-ports E'' B'' all constructed and arranged substantially as set forth.

5. The arrangement, relatively to the piston C C' E K, of the passages D D' O O and D D'' P P, the induction-ports E' E' E' E', eduction-ports E'' E'' E'' E'', and abutments F E, substantially as set forth.

87,666.—Henry J. Hancock, New York, N.Y.—*Step and Extension Ladder.*—March 9, 1869.

Claim.—1. The combination of the ladders A B, the braces C C, and the hooks and studs *b b* and *f f*, to form a step-ladder, substantially as herein described.

2. The combination of the ladders A B, the braces C C, and the hooked lid, or cover *h*, to form an extension-ladder, substantially as herein described.

3. The combination of the ladders A B, the braces

C C, hooks and staples *a a* and *j j*, and the hinged frame or legs D, to form a scaffold, substantially as described.

4. The combination of the ladders A B, braces C C, and legs *b b*, to form a bedstead, substantially as herein described.

87,667.—Benjamin Harnish and Robert J. King, Lancaster, Pa.—*Portable Mill.*—March 9, 1869.

Claim.—The combination of the cracking-mill C and grinding-burrs, as shown, within their case A, the two mills connected by the compound chute and separator W V, and driven together by means of the belt F and pulleys B D, all arranged and operated as and for the purpose herein set forth.

87,668.—George Hayes, New York, N. Y.—*Sky-Light and Ventilator.*—March 9, 1869.

Claim.—1. The metallic frame A and the sash or hinged frame C, constructed and arranged substantially as shown and described, for the purposes set forth.

2. The bar F, or its equivalent, whereby two or more ventilators or sky-lights may be raised and lowered, by means of connecting rods *i*, substantially as described.

3. In combination with a skylight the method of securing the glass in the frame or sash C, substantially as shown and described.

87,669.—Abram Heartsill, Louisville, Tenn.—*Blacking-Staff for Facing Millstones.*—March 9, 1869.

Claim.—The combination of the staff C, frame D, thumbscrew E, nave G, and thumbscrews F F, all constructed and arranged substantially as and for the purposes set forth.

87,670.—Peter C. Heinz, Pioneer, Pa.—*Packing for Artesian Wells.*—March 9, 1869.

Claim.—In a packing for the tube or outer casing of an oil-well the sustaining ring *d*, with an annular concave seat, the outer periphery of which is provided with a cutting edge, in combination with the leatheru cup *c* and convex annular follower *e*, all substantially as and for the purposes set forth.

87,671.—Horace L. Hervey, Philadelphia, Pa.—*Reflector for Head-Lights.*—March 9, 1869.

Claim.—1. The bull's-eye or lens, in combination with the reflex reflector, when used for head-lights and other similar lights, substantially as described and for the purposes set forth.

2. The reflex reflector E, pivoted or stationary, when used in combination with reflector B in head-lights, in the manner herein described, and operating as and for the purposes set forth.

87,672.—August Hertzog and John G. Roth, New York, N. Y., assignors to American Ornamental Wood Manufacturing Company, of the same place.—*Material for the Manufacture of Cabinet and other Work in Wood.*—March 9, 1869.

Claim.—The withiu-described article of wood, the same formed by the union of a series of veneers parallel to each other, and of diverse colors, in the manner and for the purpose set forth.

87,673.—D. Holdiman and S. Goodwin, Waterloo, Iowa.—*Water-Wheel.*—March 9, 1869.

Claim.—1. The arrangement of the ring D, arms *i*. oseillating arms *k*, sliding plates *h*, studs *l*, curved slots *g*, square projections *f*, and gates *d*, operating as described, for the purpose specified.

2. The wheel, constructed as described, of the outer horizontal surface *s*, the angular portion *t*, vertical portion *v*, and the horizontal disk *w*, connected with the hub, the buckets being secured in place at the points *s*, *t*, *u*, and *v*, as herein described, for the purpose specified.

87,674.—E. Holmes and H. C. Roome, New York, N. Y.—*Billiard-Game Register.*—March 9, 1869.

Claim.—A register for games of billiards, consisting of an index capable of being actuated by an electro-magnet, with whose poles the "string" of the marking apparatus is connected, a circuit-breaker in the said string, and a button, or its equivalent, which, by its passage along the string and over the circuit-breaker, completes the circuit through the string and magnet, the whole operating substantially as herein specified.

87,675.—Charles H. Hudson, New York, N. Y.—*Spring-Seat.*—March 9, 1869.

Claim.—1. The combination with the bars B of the centrally-located seat A, substantially as and for the purpose set forth.

2. Forming the outer surfaces of the bearings *c c*, against which the bars B bear, of a curved form in the spring, constructed substantially as set forth, as hereinabove described.

87,676.—Henry Jackson, Elmira, Ill.—*Corn-Stalk Cutter.*—March 9, 1869.

Claim.—An improved corn-stalk cutter, having levers *c* and *d*, each *o*, and hook *s*, cylinder H, with knives *h*, all combined with frames A and G, and constructed, arranged, and operating substantially as herein specified.

87,677.—John R. Jackson, Pelahatchee Depot Miss.—*Sulky-Plow.*—March 9, 1869.

Claim.—1. The beams C C, levers D D, tooth-plated uprights *a a*, in combination with the adjustable and reversible plows E^2 E^2, when the whole is constructed and arranged substantially as described, as and for the purpose specified.

2. The detachable center plow E^3, E, and E^1, with lever D′ and upright *b*′, as constructed, when the same is so arranged as to be used in combination with the two side-plows E^2 E^2, substantially as described, as and for the purpose specified.

87,678.—James C. Jay, Bear Creek Township, Ind.—*Band-Tightener for Shocks of Corn.*—March 9, 1869.

Claim.—The combination and arrangement of the arm C, the shaft A, hook D, and cord or wire E, substantially as shown and described.

87,679.—George H. Johnson, Buffalo, N. Y., assignor to himself and George Milsom, same place.—*Fire-Proof Granary.*—March 9, 1869.

Claim.—A granary, inclosed by a row of outer cylinders, or cylindrical compartments, and divided interiorly by transverse intersecting rows of contiguous cylinders, so as to form intermediate polygonal compartments, substantially as herein described and illustrated.

87,680.—Joshua Kidd, New York, N. Y.—*Vapor-Burner.*—March 9, 1869.

Claim.—1. An apparatus for vaporizing and burning creosote or other heavy fixed oils or hydrocarbons for illuminating purposes, wherein the said creosote, oils, or hydrocarbons are admitted sparingly from a reservoir, A, into a vaporizing vessel, C, the temperature of which latter is maintained by the heat of the illuminating flame obtained by the combination of the gas so formed, substantially as herein shown and described.

2. The combination of the reservoir A, tube B, cock D, tube-joint J, rod *a*, cap *f*, vaporizer C, tubes E G, burners *d*, disks H, or the equivalent of any one or all of these said parts, when combined to form an illuminating apparatus, substantially as set forth.

87,681.—Joshua Kidd, New York, N. Y.—*Carburetting Gas, and Oil for the same.*—March 9, 1869.

Claim.—The general arrangement and method of heating the carburetting vessel, together with the mode of preparing the oil, as described, for carburetting gas.

87,682.—Joshua Kidd, New York, N. Y.—*Apparatus for Carburetting Gas.*—March 9, 1869.

Claim.—As new, the heat-conductor S, together with the arrangement of apparatus for carburetting gas, as described and set forth.

87,683.—Daniel P. Lacey, Orfordville, Wis., assignor to Robert R. Ball, West Meriden, Conn.—*Sash-Holder.*—March 9, 1869.

Claim.—The latches *d f*, in conjunction with the lower and upper sashes of a window, as constructed and arranged, as and for the purpose set forth.

87,684.—CHRISTOPHER L. LARDER, Brooklyn, N. Y.—*Brush-Handle.*—March 9, 1869.

Claim.—The plates B F, constructed, the one with internal and the other with external radial teeth, fitting one within the other, and clamped together in such manner as to exclude the paint or other pigment from said teeth, substantially as set forth.

87,685.—THOMAS R. LEIGHTON, Cameron, Mo.—*Railway-Car Door.*—March 9, 1869.

Claim.—1. The combination, with the door A, of the door B, substantially as and for the purpose shown and described.

2. The detachable hinged door A of a box-car, substantially as and for the purpose shown and described.

87,686.—JOSIAH LETCHWORTH, Buffalo, N. Y., assignor to PRATT & LETCHWORTH, same place.—*Hames-Ring,*—March 9, 1869.

Claim.—The hames-ring or loop A, constructed with a cross-bar, *b*, and loop *e*, as an article of manufacture, substantially as set forth.

87,687.—E. T. LIGON, Demopolis, Ala.—*Railway-Car Axle.*—March 9, 1869.

Claim.—An improved car-axle, formed of an outer iron or steel tube or shell, an inner wire cable, and an interposed filling of softer metal, substantially in the manner herein shown and described, and for the purpose set forth.

87,688.—E. C. LITTLE, L. E. CLOW, and D. H. NATION, St. Louis, Mo.—*Cooking-Stove.*—March 9, 1869.

Claim.—The arrangement of the reservoir F, in front of and adjoining the exit-flue C, resting upon its horizontal portion, and with reference to the fire-box B, as herein described, for the purposes specified.

87,689.—HENRY C. LOCKWOOD, Baltimore, Md.—*Paper-Bag Machine.*—March 9, 1869.

Claim.—1. The arrangement of the spindle B, roller C, trough D, paste-wheel *c*, presser-roller *d*, and roller *c''*, with pulley *e'*, on its end, whereby the connection is made upon the pulleys *c'* by a band for operating the paste-wheel *c*, substantially as described.

2. The revolving ball D', in combination with the roller *c''* and former F, substantially as and for the purpose described.

3. The combination of the knife, or cut-off blade I', with the stationary knife I'', the shaft *h*, and its rods *l l*, slides *i' i'*, operated upon by the pins *i i*, with the hub *n'*, lever *n''*, and springs *m m* and spring *u*, all constructed to operate substantially as and for the purpose described.

4. The combination of the adjustable beveled gear-wheel g^2, upon the main shaft G', with the removable bevel-wheel g^1 upon the shaft K', so as to enable the knife I' to cut the paper tube, to produce a longer or shorter bag, substantially in the manner described.

5. The combination of the endless webs *o o*, rods *t t*, connected by bent levers *s' s'*, moving on pivots *t'' t''*, in standards *s s*, and slots *s'' s''*, and tightening-screws *t' t'*, all substantially as and for the purpose described.

6. The arrangement of the paste-bar P', revolving in sliding boxes, movable in slots horizontally, with crank-pin *r''* moving in a cam-shaped groove *v*, and connecting-bars L L, and bell-crank L', substantially as and for the purpose described.

87,690.—WILLIAM LOOKER, Graham, Mo.—*Cultivator-Plow.*—March 9, 1869.

Claim.—The combination of the axles A, frame C, arms H J, vertical shafts I, plow-beams F, and E, chains N, arms or levers M, short shafts K, and levers L, with each other, as herein shown and described, and for the purpose set forth.

87,691.—JOSEPH L. MARSH, Centreville, Ind.—*Churn.*—March 9, 1869.

Claim.—The construction of the removable portions B B and C C, as and for the purpose set forth.

87,692.—JOHN MAYS and ELIPHALET W. BLISS, Brooklyn, N. Y., assignors to DEVOE AND PRATT MANUFACTURING COMPANY, New York City.—*Sheet-Metal-Seaming Machine.*—March 9, 1869.

Claim.—1. The pivoted jaws C C and platen B, combined and arranged for operating substantially as and for the purposes herein set forth.

2. The combination with the jaws C C of the punches *c* and recesses *d*, substantially as and for the purpose herein set forth.

87,693.—JOHN MCADAMS, Brooklyn, N. Y.—*Machine for Paging Books.*—March 9, 1869.

Claim.—1. The revolving leaf-turner G, in combination with the chain of types for operation in connection with the impression-levers, or their equivalents, essentially as and for the purposes herein set forth.

2. The intermittently-revolving flattened portion *f*, of the shaft *k*, carrying the type-chain, and operating, in combination with the levers *g g'*, to print the even and odd numbers simultaneously, as specified.

3. The table H, adjustable to or from the impression-devices, also made capable of being lowered in a regular or graduated manner, as described, and having its forward edge, *s*, arranged to occupy an inclined or diagonal position relatively to its horizontal adjustment or action, as and for the purpose herein set forth.

4. The skeleton cylinder P, mounted as described, or otherwise equivalently carried, and adjustable, or moved endwise by screw or its equivalent, for operation in connection with the chain of types; as herein set forth.

5. The combination, with the leaf-turner G, of the leaf-sustaining finger M and sheet or leaf-detainer N, for operation together, essentially as described.

87,694.—THOMAS M. C. LUTES, New Mount-Pleasant, Ind.—*Covering for Blind Ditches.*—March 9, 1869.

Claim.—The within-described sections of roofing, in combination with the trough A and A', substantially as shown and described.

87,695.—THEODORE H. MEAD, Boston, Mass., assignor to R. HOE & COMPANY, New York, N. Y.—*Printing-Press Fly-Frame.*—March 9, 1869.

Claim.—1. A printing-press fly, having each of its series of paper-supporting fingers provided or formed with a series of blunt or rounded projections for the sheet of paper to rest on and be discharged from while the fly may be in use.

2. The combination of the paper-supporting fingers and the fly-frame with devices substantially as described, by which the lateral adjustment of each of the fingers, and its fixation in position, may be accomplished, as set forth.

3. The combination and arrangement of the metallic strip C, or electrical conductor, with the fly-frame, and its series of sheet-supporting bars, substantially as described.

87,696.—JOHN A. MILLER, Shippensburg, Pa.—*Horse Hay-Fork.*—March 9, 1869; antedated February 27, 1868.

Claim.—1. The handles G G, provided at their lower ends with semi-eliptical prongs H H, and pivoted in the bar A, by means of a rivet or screw *a*, substantially as and for the purposes herein set forth.

2. The cross-bar C, provided with catches D D, and suspended by the spring E, in the bar A, substantially as and for the purposes herein set forth.

87,697.—JOHN S. MILLIKAN, Thorntown, Ind.—*Truck for Moving Buildings.*—March 9, 1869.

Claim.—1. A truck, for moving buildings, when constructed with only three wheels, two in front and one in rear, the latter being placed, so to say, within the body of the truck, substantially as herein shown and described.

2. The arrangement of the bar H, lever I, and rods or bars J J, on the bottom of a truck for moving

buildings, for the purpose of turning the front wheels in either direction, substantially as herein set forth.

87,698.—JOHN MINOR, Peoria, and MILTON, W. NESMITH and GEORGE W. NESMITH, Metamora, Ill.—*Registering Apparatus for Stills.*—March 9, 1869.

Claim.—In a liquid-registering apparatus, the combination and arrangement of the tripping pawl-lever F, for moving the counting-register wheels *f f f*, operated by the sliding handle E, having a slotted connection with the valve-rod D, so that the said counting-register shall be actuated before the delivery-valve is opened, substantially as and for the purposes specified.

87,699.—JOHN B. MORSE and LOREN L. CARTER, Lafayette, Ind.—*Harvester-Rake.*—March 9, 1869.

Claim.—1. The groove shaft C, constructed substantially as shown and described.

2. The rake-carrier, consisting of the sleeve N, ring D, with its clamping-flanges, cup I, spring L, and ball, or sphere K, all constructed and combined substantially as shown and described.

3. The combination and arrangement of the screw F and groove shaft C, substantially as shown and described.

4. The combination of the screw F, grooved shaft C, and rake-carrier, substantially as shown and described.

5. The combination of the rake-carrier and the rake E, substantially as shown.

87,700.—A. W. PAGETT, Springfield, Ohio.—*Sawing-Machine Guard.*—March 9, 1869.

Claim.—The combination, with the post A, arranged to be adjustably attached to a table of the adjustable slide C and dog F, substantially as and for the purpose described.

87,701.—C. H. G. PEASE, Danbury, Conn.—*Marble-Sawing Machine.*—March 9, 1869.

Claim.—1. The devices herein described, for sawing marble in cylindrical or conical forms, constructed, arranged, and operating substantially as and for the purpose set forth and shown.

2. The rod or wire saw, having a triangular cross-section, combined with the machine herein described, for sawing marble in curves, substantially as and for the purpose specified.

87,702.—JOSEPH J. PIERCE, Emmett, Mich.—*Tuyere.*—March 9, 1869.

Claim.—The arrangement of the box A, with beveled slot G, tubes H L, fulcrum C, knee-lever D, with bevel I, rod E, pipe K, hollow plug R, and valve M, all constructed substantially as set forth.

87,703.—JOHN PONS, Baltimore, Md., assignor to himself, JOHN S. RUSSELL, and HENRY VOGLER, same place.—*Miter-Box.*—March 9, 1869.

Claim.—The adjustable miter-box, herein described, consisting of the base-board A, recessed at *a* a^1 a^2, and slotted at *s s'*, the side-board B being cut away at *b*, and two arms C C, pivoted in the slots *s s'*, working in the recesses, and each provided with an adjusting rod, D, fixed standard *c*, and an adjustable standard, *c'*, all said parts being constructed and arranged to operate together in the manner and for the purpose herein set forth.

87,704.—CHARLES PRATT, New York, and CONRAD SEIMEL, Green Point, N.Y., assignor to CHARLES PRATT.—*Soldering-Machine.*—March 9, 1869.

Claim.—The float B, with or without the guides C, in combination with the soldering-pan A, substantially as described for the purpose specified.

87,705.—ABNER QUINN, Wilmington, N. C., assignor to himself and A. E. WRIGHT.—*Pea-Picker.*—March 9, 1869.

Claim.—The combination of the toothed cylinder B, brush C, sieve F, incline I, fan G, incline A, teeth *a a*, and the necessary gearing, or belting, when constructed to operate in the manner described, and for the purpose specified.

87,706.—B. F. RANDELL, Des Moines, Iowa.—*Fanning-Mill.*—March 9, 1869.

Claim.—Providing a fanning-mill with a movable, or sliding screen under the gang of riddles, whereby an optional cut-off is obtained, for the purpose of separating seed-wheat from merchantable wheat, substantially as herein set forth.

87,707.—GEORGE P. REED, Boston, Mass.—*Chronometer-Escapement.*—March 9, 1869.

Claim.—1. The combination and relative positions of the spring *a'* and stop or post *j*, with the detent-lever and axis *b*, whereby the force required to operate said lever is diminished, substantially in the manner described.

2. The screw *l* or its equivalent, applied to detent-lever *a*, as herein shown and set forth, for the purpose of preventing displacement of the locking-portion *a'* of the spring *d*, when removed from the watch.

87,708.—AMOS C. RODGERS, Philadelphia, Pa., assignor to himself and J. and G. H. GIBSON, same place.—*Sash-Holder.*—March 9, 1869.

Claim.—The toothed catch F, sliding between diagonal guides *d d*, operated by the devices herein described or their equivalents, and arranged in respect to the ratchet D, secured to a window-frame or sash, substantially as and for the purpose herein set forth.

87,709.—ABNER ROLLO, Friendship, Wis.—*Shingling-Bracket.*—March 9, 1869.

Claim.—A bracket, constructed in the form shown, and having curved point A, spur B, feet C, and hinge D, arranged and operating substantially as specified.

87,710.—EDWARD A. G. ROULSTONE, Boston, Mass.—*Ice-Cream Receptacle.*—March 9, 1869.

Claim.—A portable receptacle, A, provided with one or more chambers, C, an inner and outer casing, *b c*, and a removable top, E, in combination with the mould D, and with or without the individual molds G, in which the cream, &c., is frozen, and served without being turned out, substantially as and for the purposes set forth.

87,711.—WILLIAM W. RUMRILL, Roanoke, Ind.—*Road-Scraper.*—March 9, 1869.

Claim.—The combination of the catches *f h*, springs *i*, pivoted top board *k*, guide-iron L, and operating-rod *m*, with the boards B B', cross-piece C, and the revolving scraper, all arranged as herein described, for the purpose specified.

87,712.—JOHN D. SATER and TURNER BARNS, Greensburg, Ind.—*Grain-Drill and Corn-Dropper.*—March 9, 1869.

Claim.—1. In combination with the side-beams A A, wheel C, connecting-rods *c c*, bars E and G G, and tubes F and I I, the seed-box D, having an auger-agitator *e*, with a crank, *d*, at each end, and the feed regulated by a lever, *f*, in rear of the box, substantially as shown and described.

2. In combination with the side-beams A A, wheel C, connecting-rods *c c*, bar E, and tube F, the corn-plow L and box M, constructed as described, and for the purposes set forth.

87,713.—LEMUEL W. SERRELL, Brooklyn, N. Y., assignor to ROBERT FOULDS, Passaic, N. J.—*Velocipede.*—March 9,1869.

Claim.—1. A pair of wheels mounted on an axle and bolt, substantially as specified, so that the swinging of the axle and the inclination of the vehicle are simultaneous, substantially as set forth.

2. The forwardly-inclined bolt *d*, axle *c*, and wheels *b b*, in combination with the wheel *a*, to which the propelling-power is applied, substantially as set forth.

3. The perch or frame *f*, connected with the inclined bearings for the bolt *d*, and extending to the axle of the wheel *a*, in combination with the axle *c* and wheels *b b*, substantially as set forth.

4. A single driving-wheel, fitted with an axle that is eccentric, and to which the frame or perch is connected, in combination with cranks and levers, ap-

plied substantially as set forth, for communicating to said wheel a rotary motion as specified.

5. The contractile ring, of round rubber, introduced into the rounded groove in the periphery of a wheel for velocipedes, as and for the purposes set forth.

87,714.—Edmond E. Shepardson, Providence, R. I.—*Key-Hole Guard.*—March 9, 1869.

Claim.—The key-hole guard, consisting of the slotted wire *d*, arm *c*, tube A, and guide C, in combination with the convex pin-tumblers in *d*, and concave pin-tumblers in B, when constructed and operating as herein described.

87,715.—William H. Sible, Harrisburg, Pa.—*Bit-Stock.*—March 9, 1869.

Claim.—The hinged gripe E, in combination with the spring *e* and socket A, constructed, arranged, and operating substantially as and for the purposes herein specified.

87,716.—Francis H. Smith, Baltimore, Md.—*Clay-Pulverizer and Stone-Separator.*—March 9, 1869.

Claim.—The clay-pulverizer and stone-separator, consisting of the revolving screen V, upon friction-rollers *p p p p*, with its rotary cutters T, upon shaft S, said screen and shaft being moved at different speeds by means of the gearing, as shown, the grating X, conductor U V, and discharge-spout O, all arranged together, and operated substantially as and for the purpose herein set forth.

87,717.—J. B. Smith, Milwaukee, Wis., assignor to himself and George R. Chittenden, Chicago, Ill.—*Screw-Bolt and Lock-Nut.*—March 9, 1869.

Claim.—1. A bolt, with a corrugated or serrated head, in combination with a nut, serrated on the faced side, substantially as described.

2. A bolt, with a serrated or corrugated head, so that it will not turn when the nut is screwed on to it, substantially as described.

87,718.—Silvester Skinner, Clayton, N. Y.—*Pea-Rake.*—March 9, 1869.

Claim.—1. The ferrules *b b*, for the handle C, connected together, and to the rake-head, by means of the curved braces *a a*, as herein shown and described, for the purpose specified.

2. The toothed cutter *f*, held to the rake-head by the split teeth *g*, as herein described, for the purpose specified.

87,719.—John Stark, Thomasville, Ga.—*Extension Pruning-Hook*—March 9, 1869; antedated February 27, 1869.

Claim.—The shear-blade *h*, and the movable cutter E, constructed, arranged, and operating substantially as shown and described, for the purposes set forth.

87,720.—Lewis Stark, Chelsea, assignor to himself and Frank L. Penney, Boston, Mass.—*Branding-Iron.*—March 9, 1869.

Claim.—The base B, cast with a flange, *b*, and central post D, formed in one homogeneous piece, substantially as and for the purpose set forth.

87,721.—Abraham J. Stevens, El Dorado, Wis.—*Revolving-Cultivator.*—March 9, 1869.

Claim.—The revolving cylinder E, adjustable standards *a*, casters *c*, bent rods *s*, teeth *u*, wedges *v*, cross-bar D, and drums *y*, combined and operating with the grooved wheel-hubs, and the bands or belts herein mentioned, substantially as specified.

87,722.—Horace P. Stewart, Bath, Mich.—*Shank.*—March 9, 1869.

Claim.—The improved metallic shank, having the instep portion *a* shaped to suit the finished form of the boot or shoe, when terminating at the heel-end, with the notch *d*, as and for the purpose herein specified.

87,723.—David U. Stoner, Mount Joy, Pa.—*Tympan-Frame for Printing-Presses.*—March 9, 1869.

Claim.—The circular rubber frame E D, made adjustable, and attached to the chase, substantially as and for the purpose set forth.

87,724.—D. C. Stover, Lanark, Ill.—*Cultivator*—March 9, 1869.

Claim.—The combination of the pivoted adjustable yoke D with the bent rod C, bracket B, and carriage A, arranged and operating as described, for the purpose specified.

87,725.—Charles H. Swain, Brooklyn, N. Y.—*Furnace for Smelting Ores.*—March 9, 1869.

Claim.—1. Smelting ores of gold, silver, and copper, by means of the vapors of petroleum, or other hydro-carbons, applied substantially as herein described.

2. The use of an exhaust, A, and connecting-pipes B B, by means of which I obtain a partial vacuum, and create a draught downward and through the ores to be smelted.

3. The construction of the oil-receiver E E and gas-receiver G G, around the feed F, and for the purposes as substantially set forth.

4. The protecting cover C over the pipes B B.

5. The arrangement of the feed F F and cover J, with the damper or slide N, by which means the furnace is made self-feeding, all as substantially set forth, and forming a continuous process for smelting gold, silver, and other ores.

87,726.—Henry R. Swank, West Jersey, Ill.—*Seed-Sower.*—March 9, 1869.

Claim.—A broadcast seed-sower, having cogged wheels *c*, *g*, and *h*, pawl *a*, shafts E and H, drums C and *p*, sowers G, conductors *s*, and slides *u*, constructed and arranged substantially as herein specified.

87,727.—Jerome L. Tarbox and H. L. Tarbox, New York, N. Y.—*Stencil-Plate.*—March 9, 1869.

Claim.—1. Stencil-letters, arranged to be readily connected or disconnected, by springs on one section taking into notches, or behind projections on the other sections, substantially as specified.

2. The arrangement of the springs A′, hoods C, and catches D, substantially as specified.

3. The plates A, arranged for lapping the edges thereof, substantially as specified.

4. Stencil-plates, arranged to be united to form rows, by means of the loops G, and rods or equivalent devices, substantially as specified.

87,728.—Lewis Taws, Philadelphia, Pa.—*Valve for Blowing-Engines.*—March 9, 1869.

Claim.—1. The combination, with a blowing-cylinder, of a plurality of independent detachable valve-seats and valves, all substantially as and for the purpose described.

2. The cylinder E, with its side openings *a*, grated seat F, and rubber valve, the whole being constructed for ready adjustment in, and as ready withdrawal from, the chamber of a blowing-cylinder, substantially as and for the purpose herein set forth.

87,729.—Joseph B. Tedrow, Chillicothe, Ohio.—*Fence.*—March 9, 1869.

Claim.—1. Fence-posts, made in sections A and B, and hinged together, substantially as and for the purpose described.

2. The hinged section A, formed with the supporting-rods *d* and the openings *b*, substantially as and for the purpose described.

87,730.—Nathan Thompson, Brooklyn, (E.D.,) N. Y.—*Preserve-Jar.*—March 9, 1869.

Claim.—1. The ring B, having a swell *b*, furnisher with hooks, and cemented to a glass or earthen jar, in combination with the cap furnished with inclines, all substantially as and for the purpose set forth.

2. The cap C, having fitted or secured to it reversely-sliding bars D D, essentially as and for the purpose or purposes herein set forth.

87,731.—H. B. Tibbits, Vineland, N. J.—*Washing-Machine.*—March 9, 1869.

Claim.—The combination of the horizontal rubber-

C and crank-shaft E, when connected together by the rigid connecting-rod D, all arranged and operating substantially as herein shown and described.

87,732.—HIRAM UNGER, Logansport, Ind.—*Bottle-Corking Apparatus.*—March 9, 1869.

Claim.—1. The combination and arrangement of the rod A, adjustable bracket B, and set-screws C, plunger F, spring G, and adjustable guide H, substantially as and for the purpose set forth.

2. The combination and arrangement of the vertical rod A, the adjustable bracket B, and plunger F, with the adjustable platform I for supporting the bottles, substantially in the manner and for the purpose set forth.

87,733.—A. VAN CAMP, Washington, D. C.—*Composition for Recutting Files and Rasps.*—March 9, 1869.

Claim.—1. The combination of processes herein described for recutting files.

2. Combination of acids and sulphates, and other ingredients herein mentioned, for recutting files.

87,734.—A. VAN CAMP, Washington, D. C.—*Composition for Fire-Kindling.*—March 9, 1869.

Claim.—1. An artificial fuel or "kindler," when pulverized corn-cob, coal-dust, and tan-bark are used as a basis, and are united with suitable inflammable ingredients, substantially as described, as and for the purpose specified.

2. An artificial fuel or "kindler," when the same is composed of the ingredients herein stated, and the whole is so combined and arranged as to operate substantially as described, as and for the purpose specified.

87,735.—JUNIUS R. VAN VECHTEN, New York, N. Y.—*Cartridge.*—March 9, 1869.

Claim.—The paper, or other thin, flexible material, *e n*, interposed between the fulminate and the but or head of the shell and the anvil-cup of the cartridge, substantially as and for the purpose herein described.

87,736.—ALBERT WARD, New Michigan, Ill.—*Machine for Scraping and Loading Earth.*—March 9, 1839.

Claim.—1. The arrangement of the independent scrapers B B, each carrying an inclined trough, a^1, and connected by the bars *a* to the brackets *d*, one of which furnishes the forward bearing for the shaft operating the endless carrier C, all operating as described, for the purpose specified.

2. The arrangement of the rollers e^1 e^2 and chains *e*, with reference to the scrapers B B, whereby said scrapers are operated together, or independently of each other, as herein shown and described.

3. The arrangement upon the wagon of the rollers e^1 e^2, supporting the scrapers B by the chains *e*, the bars *a*, inclined troughs a^1, bracket *d*, endless carrier C, and the gearing by which the latter is operated, as herein set forth and shown.

87,737.—SETH WARD, Princeton, Ind.—*Backband Hook.*—March 9, 1869; antedated March 4, 1869.

Claim.—Countersinking the rivet-holes of a plate, A, on its under side, so that the leather B is forced into said countersinks, all substantially as and for the purpose specified.

87,738.—J. C. WELCH and M. A. AMMEDEN, Edgerton, Ohio.—*Wheel.*—March 9, 1869; antedated March 5, 1869.

Claim.—The arrangement of the tire A, blocks B B, and screw C, in combination with the fellies D D and cap E, all constructed as described, and operating as and for the purposes herein set forth.

87,739.—WILLIAM WELLS, Ashtabula, Ohio.—*Hinge-Pintle,*—March 9, 1869.

Claim.—The split spring-pintle B, for hinges, when its split end is provided with the enlargements or shoulders I, as herein described, for the purpose specified.

87,740.—F. AUGUST WERDMÜLLER, New York, N. Y.—*Fishing-Net.*—March 9, 1869.

Claim.—A fishing-net, consisting of the sheet B, frame A, and annular sheet C, all made and operating substantially as herein shown and described.

87,741.—T. B. WHITE, New Brighton, Pa.—*Iron Bridge.*—March 9, 1869; antedated February 27, 1869.

Claim.—1. The wrought-iron beam or brace, consisting of the segmental or curved plates *a* united, with their convex sides inward, with the cross-plate *b*, secured at their edges by rivets, substantially as shown and described.

2. The wrought-iron brace-block and tie-bar combined, when constructed substantially as herein described.

87,742.—H. K. WHITNER, Philadelphia, Pa.—*Bedstead.*—March 9, 1869,

Claim.—1. The combination with the side-rails B of a piece, F, so hung to the rail that the bed-clothing may be passed and secured between the two, as set forth.

2. So hanging the piece F to the side-rail that the said piece may be turned down and beneath the rail, substantially as described.

87,743.—MANUEL WITMER, Cedar Rapids, Iowa.—*Churn.*—March 9, 1869.

Claim.—The combination of the vessel A with its support B, arms C, links D, and framing E, all substantially as and for the purpose specified.

87,744.—F. WOLFRAM, New York, N. Y.—*Machine for Pressing Hats.*—March 9, 1869.

Claim.—The dog *j* and lever *l*, in combination with the gate D, which carries the follower of a press, substantially as and for the purpose set forth.

87,745.—HERMAN J. WOLTERS, Salem, Mass.—*Measuring-Funnel.*—March 9, 1869.

Claim.—As a combined funnel and measure, the semi-spherical bowl *a*, with the discharging-faucet *m*, and the pendulous measuring-rod *e*, applied and suspended within the bowl, as explained, the whole operating in manner and for the purpose as herein shown and described.

87,746.—JAMES A. WOODBURY, Boston, Mass.—*Car-Wheel and Axle.*—March 9, 1869.

Claim.—1. In combination with a wheel in two or more parts, the diagonal or oblique joint and interposed packing, substantially as and for the purpose described.

2. The combination of an elastic wheel with a sleeve, so made that when used with an axle and wheel it will turn independently of the latter, substantially as described.

3. In combination with an axle and sleeve, each carrying and turning with its own wheel an elastic bearing, for cushioning the endwise strain or jar, constructed substantially as described.

4. The combination of an elastic wheel and axle, and an elastic wheel and sleeve, with a packing interposed between them, to take up lateral jar, substantially as described.

5. In combination with an axle and a sleeve, each carrying one of a pair of wheels, a revolving oil-box, for containing a lubricating material and supplying it to the bearing surfaces between said sleeve and axle, substantially as described.

6. In combination with the bearings on the sleeve the slot or slots 9, for admitting oil from the journal-box through the sleeve to the bearing surfaces between the sleeve and axle, substantially as described.

7. The covering of the exposed joints between the sleeve and axle by an overlapping joint at each end, to prevent the admission of dust, grit, &c., substantially as described.

87,747.—JOHN M. WOODS, Washington, Mo.—*Device for Heading-Bolts.*—March 9, 1869.

Claim.—The improved device herein described, consisting essentially of the two jaws, with the shank for entering a hole in the anvil or bench, and with the openings *v x*, for the removal of cinders, &c., and the foot-lever C, all constructed and arranged substantially as described.

87,748.—Leonard Wray, Ramsgate, England. —*Triturating and Amalgamating Apparatus for Treating Ores of Gold or Silver.*—March 9, 1869.

Claim.—1. Triturating or reducing the ores to an impalpable powder by means of balls or rollers, either spherical or cylindrical, and either plain, grooved, or serrated, and placed in suitable cylinders or barrels, which are to be rolled along a railway by any convenient power, in the manner and for the purpose herein set forth.

2. Particularly, causing the balls or rollers inside the cylinders or barrels to act on and triturate the ore by rolling the cylinders or barrels on a railway, as herein shown and described, in contradistinction to mounting such cylinders or barrels on shafts or centers, on which they may be made to rotate by any suitable gearing.

87,749.—A. B. Zellner, Monticello, Ark.—*Stirrup-Strap Loop.*—March 9, 1869.

Claim.—The whalebone spring B, in combination with the horizontal arm a^2 of the stirrup-loop A, substantially as herein shown and described, and for the purpose set forth.

87,750.—John L. Agnew and Charles E. Wright, Negaunee, Mich.—*Chilled Plate for Ore-Crushers.*—March 16, 1869; antedated February 27, 1869.

Claim.—The plate for ore-crushers, constructed of wrought and chilled iron, in the manner described and for the purpose set forth.

87,751.—Cyrus G. Bachelder, Camden, Me. —*Chock for Vessels.*—March 16, 1869; antedated March 9, 1869.

Claim.—The lining and its receiving-recess, as formed with dovetails, and with convexities and concavities, arranged in manner as specified.

87,752.—Joseph J. Baxter, Grand Rapids, Mich.—*Bed-Bottom.*—March 16, 1869.

Claim.—The combination of the oblique spring-braces with the bars and the coiled springs, substantially as set forth.

87,753.—J. H. Bean, Marietta, Ohio. — *Heel-Cutter.*—March 16, 1869.

Claim.—1. The bent arm E, provided with the spring f', and having the projection f, in combination with the catch F and weighted lever e', arranged and operating substantially as and for the purpose described.

2. The die D, in combination with the beveled frame C^2, when arranged as described, and held by the stop, for the purpose set forth.

3. In a heel-cutter, of substantially the described construction, the tap-removing device E, f, F, and e', in combination with the cutting-device D D^1 D^2, d d^1 d^4, as described, for the purpose set forth.

87,754.—Erastus S. Bennett, New York, N. Y., assignor to himself and Justus Smith, same place. —*Implement.* — March 16, 1869; antedated February 27, 1869.

Claim.—The implement, consisting of the tack-hammer a, pincers B, holder c, wire-cutter D, screw-driver E, and tack drawer F, when constructed and arranged as described.

87,755.—J. W. Bishop, New Haven, Conn.—*Water-Hook Bolt for Harness.*—March 16, 1869.

Claim.—The bolt herein described, having its head covered and finished as set forth, as an article of manufacture.

87,756.—John M. Cain, Lafayette, Wis., assignor to George Cain, same place.—*Hat-Holder for Pews and Seats.*—March 16, 1869.

Claim.—The U-shaped wire bracket A, provided with a wire holder, B, and with a pivot-eye, a, in combination with and pivoted to the bottom, D, of a church or hall seat as herein specified.

87,757.—H. Nelson Chapman, Washington, D. C.—*Curtain-Fixture.*—March 16, 1869.

Claim.—The bracket A, having a circular stem a, clamp-plate, D, and pulley, E, when the same are so combined and arranged as to operate substantially as described, as and for the purpose specified.

87,758.—William Clough, Cincinnati, Ohio. —*Defecating Saccharine Fluids.*—March 16, 1869; antedated February 27, 1869.

Claim.—The improvement in the process of defecating saccharine fluids, herein described.

87,759.—William Clough, Cincinnati, Ohio. —*Refining and Decolorizing Saccharine and other Liquids.*—March 16, 1869; antedated February 27, 1869.

Claim.—Refining and decolorizing saccharine and other similar fluids by the agents herein specified.

87,760.—John A. Cook, Owego, N. Y.—*Barrel-Head.*—March 16, 1869.

Claim. — A barrel-head, constructed, arranged, and operating as herein described, consisting of the parts A and D, circular flanges E, locking-bar C, and cross-bar B, as shown.

87,761.—John R. Cribbs, Gardner, Ill.—*Nut-Lock.*—March 16, 1869.

Claim.—1. The combination of the screw-bolt A, having screw-threads a b, nuts C C′, with the washer c, keeper D, and screw e, all constructed to operate substantially as described.

2. The combination of the screw-bolt A, nuts C C′, with keeper D, ears d, depressions d' d', and with or without washer c, and screw e, substantially as described.

87,762.—Henry Gassett Davis, New York, N. Y. — *Treadle for Sewing-Machines.*—March 16, 1869.

Claim.—1. The combination and arrangement of the treadle and treadle-shaft with the table of the treadle-motion, so that the operator may operate the treadle with the legs extended, substantially as before set forth.

2. The combination of the treadle-shaft with the table, by means of slides, so that the position of the treadle may be varied, substantially as before set forth.

87,763.—Rudolph Eickemeyer, Yonkers, N. Y., assignor to John T. Waring, same place.—*Felting-Machine.*—March 16, 1869.

Claim.—The combination and arrangement of the felting-cylinder, endless hardening-cloth, and vibrating concave jiggering-apparatus, constructed and operating substantially in the manner hereinbefore described.

87,764.—Rudolph Eickemeyer, Yonkers, N. Y., assignor to John T. Waring, same place.— *Machine for Preparing and Felting Tufted Fabrics.*—March 16, 1869.

Claim.—1. The cylindrical tuft-holder, in combination with the concave jiggering-apparatus, substantially as described.

2. The combination of the cylindrical tuft-holder, the concave jiggering-apparatus, and the endless feeding-apron or hardening-cloth, substantially as described.

3. The combination of the cylindrical tuft-holder, concave jiggering-apparatus, and the rotating cam, and intermediate series of weighted levers, or their equivalents, whereby the concave jiggering-apparatus is, at proper intervals, moved toward and held against the tuft-holder, by a regulated yielding pressure, substantially as and for the purposes described.

4. The combination of the intermittently-moving cylindrical tuft-holder with a reciprocating gang of tufting-punches, substantially as and for the purposes described.

5. The combination of the intermittently-moving cylindrical tuft-holder with a gang of reciprocating tufting-punches and a presser-plate, substantially as and for the purposes described.

6. The combination of the cylindrical tuft-holder, the gang of tufting-punches, the presser-plate, the plaiter, and feed-table, substantially as and for the purposes described.

7. The combination of the cylindrical tuft-holder, the gang of tufting-punches, the presser-plate, the

plaiter, and feed-table, and the feed-apron, which delivers the bat for the tufts upon the feed-table, substantially as and for the purposes described.

8. The combination of the intermittently-moving cylindrical tuft-holder with the gang of reciprocating tufting-needles and a presser-plate, with or without an additional gang of perforating-instruments, substantially as and for the purposes described.

9. The combination of the cylindrical tuft-holder, presser-plate, and gang of tufting-needles, with the creel of spools, yarn-guides, and clamping-mechanism, substantially as and for the purposes described.

10. The combination of the gang of tufting-punches or tufting-needles with the tuft-holder, by means of a plate which has a lateral motion, alternately, in opposite directions, communicated to it by the machine, for the purpose of bringing the gang of tufting-punches or tufting-needles over the tuft-holes of each row, when arranged diagonally upon the tuft-holder, substantially as described.

11. In combination with the vibrating rubbing-plate of the jiggering-apparatus of a felting-machine, a steam-box, provided with suitable induction and eduction pipes, the vibrating rubbing-plate being perforated with fine holes, and the construction being such that steam is supplied to the fabric, while being felted, from the vibrating jiggering-apparatus, substantially as described.

87,765.—SAMUEL F. ESTELL, Richmond, Ind.—*Safety-Barrel for Watches.*—March 16, 1869.

Claim.—Connecting the main-wheel with the main-spring barrel, by means of the groove and pins, when the main-barrel is allowed to turn loosely on the main-wheel, in the manner and for the purpose as set forth.

87,766.—CHARLES EVOTTE, Paris, France.—*Gear-Cutter.*—March 16, 1869.

Claim.—1. The shaft S, and cutting-devices T and U, mounted in adjustable positions thereon, the shaft being carried in the frame-work, and receiving motion, substantially in the manner and for the purposes herein set forth.

2. The employment of the non-elastic rack, or belt *o*, moved at intervals to an adjustable extent, and adapted to move the wheel to be cut to mathematically-determined extents, as and for the purposes herein set forth.

87,767.—R. H. FISHER, Beaver Falls, Pa., assignor to BEAVER FALLS CUTLERY COMPANY, same place.—*Handle for Table-Cutlery.*—March 16, 1869.

Claim.—Making the metallic handles of articles of table-cutlery with the opposite faces or sides concave, or hollowed out, substantially as described.

87,768.—ROBERT FITTS, jr., Fitchburgh, Mass., assignor to the W. HEYWOOD CHAIR COMPANY, same place.—*Construction of Chairs.*—March 16, 1869.

Claim.—The combination of the metallic screw-sockets E, and bow D, with the bottom and legs, or the bottom and back of a chair, substantially as herein shown and described, and for the purpose set forth.

87,769.—FRANKLIN B. GARDNER and JOHN TRAGESER, New York, N. Y.—*Velocipede.*—March 16, 1869.

Claim.—1. The hand-levers *h h'* on the shaft *g*, fitted with pawls, to take the ratchet-wheels 1 and 3, in combination with the ratchet-wheel 2, pawl *l*, and wheel *k*, gearing to the pinion *m*, the parts being arranged and applied in the manner and for the purposes set forth.

2. In combination with the foregoing, the brake-lever *o*, having the shaft *g* for its fulcrum, and arranged to operate upon the wheel *s*, as set forth.

87,770.—C. B. GRONBERG, Aurora, Ill.—*Harvester.*—March 16, 1869.

Claim.—1. The sliding device N, when arranged in a harvester, so as to carry the grain for each bundle to the binders' tables.

2. The combination of the sliding device with the cords O and spool Q, when arranged and operating substantially as and for the purposes specified.

3. The combination of the creased roller D, ribs E, and endless aprons B and H, when constructed and operating substantially as and for the purposes specified.

4. The wire guides I, attached to the grain-receiver, or hopper, and arranged substantially as described.

87,771.—SAMUEL Z. HALL, Sing Sing, N. Y.—*Cotton-Gin.*—March 16, 1869; antedated March 3, 1869.

Claim.—1. Hollowing out or grooving the tops or fronts of the ribs of a cotton-gin, substantially as described for the purposes set forth.

2. Making or arranging the sides of the box so near the end saws that there will not be room for the seed to enter between the sides of the box and the end saws, substantially as described.

87,772.—JAMES G. HAMILTON, Chicago, Ill.—*Steam-Generator.*—March 16, 1869.

Claim.—1. The chamber G, substantially as set forth.

2. The deflectors *a b*, constructed substantially as specified.

87,773.—FREDERICK HENDERSON, Marietta, Ohio.—*Shank-Laster.*—March 16, 1869.

Claim.—The jaws A B and spring C, in combination with the projection F, consisting of the concave faces *f* and projections H and I, arranged and operated substantially as and for the purpose set forth.

87,774.—HENRY WHEATON HEWET, New York, N. Y.—*Wrench.*—March 16, 1869; antedated February 27, 1869.

Claim.—The revolving socket F H, having at its forward end a section of male-screw thread, gearing in a female screw in the socket-extension E of the movable head, substantially as shown and described, for the purpose set forth.

87,775.—L. L. HIMES, New Haven, Conn.—*Well-Tube.*—March 16, 1869.

Claim.—An inverted perforated conical filter, contracted near its larger end, so as to receive the packing E, and provided with the bail D, so as to operate substantially in the manner herein set forth.

87,776.—MARK W. HOUSE, Cleveland, Ohio, assignor to himself and J. F. FORSYTH, same place.—*Mucilage-Brush.*—March 16, 1869.

Claim.—The brush D, in combination with the spring-wire stem C, or its equivalent, for the purpose shown.

87,777.—MARK C. HUBBARD, Philadelphia, Pa., assignor to ISAAC P. WENDELL, same place, and said WENDELL assigns one-half his right to THOMAS SAYLES, Chicago, Ill.—*Car Axle-Box Lubricator.*—March 16, 1869.

Claim.—The curved plate D, having a tight chamber, F, for holding the oil for lubricating the journal, in combination with a pad of fibrous material, which has connection with the oil-reservoir by means of a wick or wicks, all constructed and arranged to operate substantially in the manner and for the purpose set forth.

87,778.—H. T. HUNT, Titusville, Pa.—*Pump-Rod Coupling.*—March 16, 1869.

Claim.—The expander *c*, of the peculiar tapering sectional form shown, in combination with the ferrule *b*, and rod *a*, substantially as and for the purposes set forth.

87,779.—WILLIAM C. JOY and JOHN CAMPBELL, Penn Yan, N. Y.—*Preparing and Bleaching Paper-Pulp.*—March 16, 1869.

Claim.—1. The construction and application of the generator D, when used as and for the purpose set forth.

2. Producing the ozone modification of oxygen, by applying a powerful current of air, in combination with chlorine, to an aqueous solution containing the material to be bleached, while the mass is being agitated.

3. The arrangement of the fan B and engine G

when applied and used as and for the purpose specified.

4. The use of a current of air, for the purpose of removing chlorine from fibrous materials after the process of bleaching, in the manner substantially as set forth.

5. Preventing the formation of hydrochloric acid in the mass or solution, by accomplishing the bleaching, and removing the chlorine, also preventing the destruction of the fine particles of fiber, or the hardening of any portion thereof, by the means and in the manner specified.

6. Disintegrating fibrous materials by the use of a powerful current of air forced into or among the same, while the material is being operated upon by any bleaching-agent in an open vessel, as herein described.

7. The use of a current of air to assist in giving rapid circulation to the material while being bleached.

8. The free discharge of the air, gas, and vapor from the bleaching-engine, substantially as and for the purpose set forth.

87,780.—Joseph Kaylor, Pittsburg, Pa.—*Bolt-Heading Die.*—March 16, 1869.

Claim.—The construction of dies *d d'* for bolt-heading machines, having recesses *c e*, made and used substantially as above set forth.

87,781.—Charles Kimball, Chelsea, Mass.—*Ticket-Holder.*—March 16, 1869.

Claim.—The new article of manufacture, or ticket-holder, made substantially as described and represented.

87,782.—Joseph La Croix, Chicopee, Mass., assignor to himself and Edmond Richards, same place.—*Horse-Rake.*—March 16, 1869.

Claim.—The vibrating head *e*, provided with arms *f* f^5 f^3, in combination with rod *k*, teeth *g g'*, and lever *p*, the whole arranged and operating substantially as described.

87,783.—Peter Lear, Boston, Mass.—*Deviee for Steam and other Enginery.*—March 16, 1869.

Claim.—1. As a pump for forcing and elevating fluids, the combination and arrangement of the cylinders G G, and pistons J J, with the steam-chest, and valve, and ports, the said cylinders G G being provided with the valves I I and conduits L L, as hereinbefore explained.

2. In combination with the pistons J J and cylinders G G, provided as explained, and the steam-chest and valve before mentioned, the tank B, containing water, the whole being arranged as herein shown and described.

3. The combination of the cylinders G G and the steam chest and valve, with the water-wheel, or motor, M, substantially upon the principle and in the manner as set forth and explained.

87,784.—Thomas Lyons, Hartford, assignor to Russell and Erwin Manufacturing Company, New Britain, Conn.—*Reversible Door-Latch.*—March 16, 1869.

Claim.—The combination of the hub, or follower, C, the divided horseshoe plate B and B' provided with the pins *c* and *e*, or their mechanical equivalents, and the reversible latch D, substantially as described, for the purposes specified.

87,785.—Emmons Manley, Marion, N. Y.—*Door-Holder.*—March 16, 1869.

Claim.—The transverse lever D, provided with arms F F, in combination with the plate B, spiral spring H, bolt I, cross-piece J, and stop K, all being constructed substantially as herein represented, for the purpose set forth.

87,786.—Samuel Mason, Beaver Falls, Pa., assignor to Beaver Falls Cutlery Company, same place.—*Table-Cutlery.*—March 16, 1869.

Claim.—Making articles of table-cutlery, in which a flat part, *a*, of the tang shall enter a slit, or mortise, in the end of the handle, to a depth such that the two may be fastened securely together by a rivet, *e*, and in which a smaller or "round" part, *e*, of the tang shall enter, but not pass entirely through the body of the handle, substantially as and for the purposes set forth.

87,787.—Samuel Mason and Edward Binns, Beaver Falls, Pa., assignor to Beaver Falls Cutlery Company, same place.—*Table-Cutlery.*—March 16, 1869.

Claim.—In attaching articles of cutlery to their handles, the combination of a flat and round tang, *a a'*, recessed, bored, and shouldered handle *d*, with lips *o*, and the bolster *e*, the several parts being made, arranged, and combined, substantially as above set forth.

87,788.—Amos W. Merritt, Scituate, Mass.—*Last.*—March 16, 1869.

Claim.—The spring-catch C, and the last-hook E, constructed and operated as herein described, for securing the block B to its last A.

87,789.—Thomas R. Morgan, Pittsburg, Pa.—*Steam-Engine Piston-Packing.*—March 16, 1869.

Claim.—The annular ring B, surrounding an ordinary piston-head, or spider, outside the follower-bolts and their bearings, and provided with inclined projections B^1, acting directly upon the springs, which press out the packing, the whole constructed and arranged substantially as set forth.

87,790.—James Old, Pittsburg, Pa.—*Grate.*—March 16, 1869.

Claim.—1. A tilting damper-plate *e*, with agitator *c'* on its upper face, which extend up and operate between the bars *b*, in combination with a lever, *m*, and head *s*, so connected by a wrist and slot with such damper-plate, as to lock it open or shut, or vibrate it at pleasure, substantially as and for the purposes above set forth.

2. A lifting-bar, *e*, pivoted between the rear part of a fire-grate and the back wall of the fire-space, for regulating the combustion in the rear part of the fire, constructed and operated substantially as and for the purposes hereinbefore set forth.

87,791.—John W. Post, Castile, N. Y.—*Skate.*—March 16, 1869; antedated February 27, 1869.

Claim.—The clamps C C' D', constructed as described, and secured in position, and adapted for permanent adjustment, by means of the screws *e* e^2, in combination with the heel-clamp D, pivoted spring-lever E, and rack F, all arranged and operating as set forth.

87,792.—E. Freeman Prentiss and Thomas D. Prentiss, Philadelphia, Pa.—*Apparatus for Rectifying and Distilling Spirits and other Volatile Liquids.*—March 16, 1869.

Claim.—1. The combination of vessels *b*, *c*, *d*, and *e*, constructed and arranged in the manner and for the purpose substantially as set forth.

2. The arrangement of worm *g*, in vessel *b*, for heating the liquids in said vessel, substantially as set forth.

3. In combination with one or more vapor-generators, the primary condenser *e* and the secondary condenser *d*, to effect the gradual reduction of temperature of the vapors, and the removal of the fusel-oil, substantially as set forth.

87,793.—Charles M. Rowley, Chicago, Ill.—*Preparation for Polishing Metallic Surfaces.*—March 16, 1869.

Claim.—The combination of the acids above described with the polishing-powder above described, with or without the borax and fullers' earth, also above described, the same being used for the purposes specified.

87,794.—Cyrus W. Saladee, Circleville, Ohio.—*Door-Bell.*—March 16, 1869.

Claim.—1. Securing the bell A to the shaft or handle B, as described, on the inside of the door, as a revolving door-bell, and the same, in combination with wheel C, constructed as described, and for the purposes set forth.

2. The plate *p*, with wires *f* and hammers *g* affixed and attached to the inside of the door, and in combi-

nation with revolving wheel C and bell A, constructed as described, and operating as set forth.

87,795.—J. C. SCHAFFER, Rochester, N. Y.—*Glass-Mold.*—March 16, 1869.

Claim.—A glass-mold, having the bottom attached thereto by means of a dovetail groove and tongue, substantially as herein shown and described, and for the purpose set forth.

87,796.—HENRY L. SHAILER, Deep River, (Saybrook,) Conn.—*Auger-Bit.*—March 16, 1869.

Claim.—The vertical lips A A, when formed back from where they have heretofore been placed in their relation to the spurs B B and cutting edges C C, as and for the purposes herein set forth.

87,797.—DANIEL SHERWOOD and GEORGE D. DUDLEY, Lowell, Mass.—*Fruit-Basket.*—March 16, 1869.

Claim.—A basket, constructed of twisted wire, consisting of the parts A, B, C, D, and *e*, substantially as described and specified.

87,798.—WILLIAM J. SLOAN, Smith's Ferry, Pa.—*Poultry-Coop.*—March 16, 1869,

Claim.—A coop, cage, or box, with removable top or cover, and one or more upper floors, *b*, and so made as to be packed in small compass by placing the removable floors on the bottom of the coop, and folding the hinged sides successively thereon, and bolting the cover thereto, substantially as above set forth.

87,799.—PHINEAS SMITH, New York, N. Y.—*Skate.*—March 16, 1869; antedated February 27, 1869.

Claim.—The within described tapering form of the button E, when combined and arranged to operate relatively to a skate and to the receiving part on the boot or shoe, substantially as and for the purposes herein set forth.

87,800.—JOHN STEPHENSON, New York, N. Y.—*Signal-Light for Street-Cars.*—March 16, 1869.

Claim.—The combination of the colorless Fresnel lens B, tinted glass plate C, and box or case A, when the lens and plate are secured in the box or case, and the latter construeted so as to admit of its ready insertion in a lamp-box of a street-car, substantially as herein shown and described.

87,801.—JONATHAN E. STONE, Erving, Mass.—*Fly-Trap.*—March 16, 1869.

Claim.—The fly-trap, made substantially as described, viz, of the box open at top and front, and provided with a slider or cover, a flexile lip, a set of wheels, and a pole-socket, the whole being arranged as specified.

87,802.—PAUL OSCAR ROBERT STROINSKI, Boston, Mass.—*Medical Compound.*—March 16, 1869.

Claim.—The within-described composition, formed of the above-named ingredients, in about the proportions and for the purposes herein set forth.

87,803.—CYRUS W. STROUT, Hallowell, Me.—*Machine for Varnishing Floor Oil-Cloths.*—March 16, 1869.

Claim.—The mode of applying varnish to oil-cloths or other fabrics, by means of reciproeating brushes, substantially as described and set forth.

87,804.—J. F. TAPLEY, Springfield, Mass.—*Photographic Album.*—Mareh 16, 1869.

Claim.—The combination of the two sides F and G of the leaf A with the flap C, to form a photograph-album leaf, substantially in the manner and for the purpose as herein described.

87,805.—ROBERT C. TOTTEN, Pittsburg, Pa.—*Casting Rolls.*—March 16, 1869.

Claim.—Making the coupling-neck of cast rolls by means of a single eore, *g*, inserted into a suitable cavity in the mold, substantially as hereinbefore described.

87,806.—JAMES H. WAITE, Orange, Mass., assignor to himself, RODNEY HUNT, and DAVID B. FLINT, same place.—*Fulling-Mill.*—March 16, 1869.

Claim.—1. The combination and arrangement of crimping-gears or rollers F G, instead of plain rollers, with the main rollers A B, packing-conduit N, and the case E and its passages, of the fulling-machine.

2. The combination and arrangement of the set of crimping-rollers or gears *g g* with the jaws *f f* and the packing-conduit N of the fulling-machine.

3. The arrangement of the single packing-conduit N, the jaws *f f* thereof, the crimping-rollers *g g*, the passages K K, the two sets of crimping-rollers F G, and the main squeeze-rollers A B, the whole being arranged in a case, E, and so as to operate as specified.

87,807.—CHAUNCEY E. WARNER, Syracuse, N. Y.—*Horse Hay-Fork.*—March 16, 1869; antedated March 12, 1869.

Claim.—The circular tines A A′, handles C C, and rack B, all constructed and operating as herein shown, and for the purpose set forth.

87,808.—JOHN J. WATSON and WILLIAM S. PUGH, Coatesville, Pa.—*Stove-Pipe Shelf.*—March 16, 1869.

Claim.—1. The stove-pipe collar, made in four segments, C, combined with an upper and lower flange, *c e*, provided with thickened side-pieces for the reception of a headed screw-bolt and nut, D, for adjustment to any desired size or shape of pipe, in the manner and for the purpose specified and shown.

2. In combination with the collar C *c e*, the arrangement of the shelf A with its open loops or socket *b b*, in combination with the extra segment D, and catch-points *b*, and sockets F, all arranged and operating in the manner and for the purpose set forth.

87,809.—WILLIAM WESTLAKE, Chicago, Ill.—*Coffee and Tea-Pot Handle.*—March 16, 1869.

Claim.—As a new article of manufacture, the tea-pot handle herein described, and made from wire and sheet-metal, substantially as specified.

87,810.—GEORGE WHEELOCK, Washington, D. C.—*Thread-Guard for Spools in Sewing-Machines.*—March 16, 1869.

Claim.—1. The conical cups *d b*, in combination with thimbles *d b′*, substantially as and for the purpose set forth.

2. Thimbles *d* and *b*, in combination with cups *a* and *b*, springs *g g′*, and thimble *e*, as described and set forth.

87,811.—W. H. WHITEROW and WILLIAM DETRICK, New Albany, Ind.—*Corn-Sheller.*—March 16, 1869; antedated March 2, 1869.

Claim.—The combination of the frame A, wheel C, cog-wheel K, shellers F F, as constructed, with fender E and rollers G G, with rings *a a* lying horizontally between the vertieal boxes I I, with blocks H H, springs *b b*, and pins *i i*, all constructed and operating as herein described,

87,812.—DANIEL WINGENROTH, Ephratah, Pa.—*Manure-Drag.*—Mareh 16, 1869.

Claim.—A manure-drag so combined and arranged that the two lugs *a*, on the hook A, and ferrule C, which forms the fulcrum of the lever L, are all held and operated on a single stout screw-bolt, *s*, in side bearings *b*, on the end of a beam, B, in the manner and for the purpose specified.

87,813.—THOMAS WOSSER, San Francisco, Cal.—*Steam-Engine Valve-Gear.*—March 16, 1869.

Claim.—The combination and arrangement of the arms *a*, the stand *b*, with the journal-pin *f*, the connecting-rod *c*, the screws *d*, with their rubber cushion *g*, and thumb-screw *e*, substantially as set forth.

87,814.—GEORGE T. ABBEY, Chicago, Ill.—*Breech-Loading Fire-Arm.*—Mareh 16, 1869.

Claim.—1. The vertical bolt I, located in the breech-piece A, and arranged to engage with the

projection L of the barrels, for the purpose of locking the parts together, substantially as described.

2. The combination of the locking-bolts I and D, with the thumb-piece E, for operating the same, all constructed and arranged to operate substantially as set forth.

87,815.—Levi Adams, Amherst, Mass.—*Attaching Carriage-Hubs to Axles.*—March 16, 1869.

Claim.—1. The axle-box D, provided with a flange, *d*, and secured on the axle B, in connection with the collar *e*, and packing-ring *h*, by means of the hollow nut E, substantially as and for the purpose described.

2. The combination, with the hub, of the box D, arranged as described, for securing the wheel to the axle, substantially as and for the purpose specified.

3. The combination, in the running-gear of vehicles, of a box, D, closed at one end, and extending beyond the hub, and provided with a collar, or flange, *d*, with the hollow nut E, axle B, and collar G, substantially as and for the purpose herein shown and described.

4. The combination, in the wheels of vehicles, of the threaded box D, and nuts or washers *a* and *b*, let into the hub C, substantially as and for the purpose herein shown and described.

5. The combination of the elastic packing-ring *h* and metal ring *e*, with the hollow nut E, box D, and axle B, substantially as and for the purpose herein shown and described.

87,816.—Albert S. Alden, Chicopee, Mass.—*Bit-Stock.*—March 16, 1869.

Claim.—The bit-brace chuck herein described, consisting of the sleeve A, center-piece C, and nut I, when all the parts are constructed and arranged to operate as set forth.

87,817.—Ezra Ames, Austin, Minn.—*Harvester-Rake.*—March 16, 1869.

Claim.—1. The combination, in a self-rake attachment for harvesters, of the pivoted guide-rail *a*, with the rake-head and rod *b*, substantially as and for the purpose herein set forth.

2. Arm *h i*, rods *g* and *j*, cam-yoke *k k*, cam *l*, and coupling-clutch *m n*, substantially as and for the purpose herein shown and described, when forming part of a self-rake attachment for harvesters, all as set forth.

87,818.—John Armstrong, New Orleans, La.—*Railway-Car Axle.*—March 16, 1869.

Claim.—The arrangement of a sleeve, or coupling-block, C, at the point of division of a sectional car-axle, to hold the two sections together by means of the keys H and the grooves B, when these parts are severally combined, constructed, and operate as herein described, and the said keys H are held in place by covering-caps E, and are kept in close contact with the bottom of said grooves B, as they wear away by use, by means of backing, as herein set forth.

87,819.—A. Hamilton Ballagh, Westport, Mo.—*Harrow.*—March 16, 1869.

Claim.—1. The combination, in a harrow, of the frame A A B, beam D, oscillating toothed beams C, crank-irons *f*, and lever G, substantially as and for the purpose herein shown and described.

2. The combination, with the above-claimed parts, of the catch-bolt *e*, operating substantially as and for the purpose shown and described.

3. The combination, with the parts A, A, B, C, D, *f* and G, of the catch-bolt *e*, rod *b*, and lever H, substantially as and for the purpose herein shown and described.

87,820.—D. A. Bingaman, Jersey Shore, Pa., administrator of the estate of Joseph Bingaman, deceased. —*Compound for Destroying Worms on Plants.*—March 16, 1869.

Claim.—The compound of matter for destroying insects on trees and shrubs, and promoting the healthy growth of the latter, substantially as herein described.

87,821.—M. S. Bringier, Ascension Parish, La.—*Food for Domestic Animals.*—March 16, 1869.

Claim.—Converting bagasse into food for domestic animals, when the same is done in the manner and by the means substantially as herein described.

87,822.—John F. Cameron, Brooklyn, N. Y.—*Skate-Sharpener.*—March 16, 1869.

Claim.—The skate-sharpener, consisting of the plate A *a*, and the swinging side-plate C, when the former is adapted to receive the reversible tool B, and gimlet D, all arranged as described for the purpose specified.

87,823.—Jabez Coney, South Boston, Mass.—*Carriage-Wheel.*—March 16, 1869.

Claim.—Forming the rim of a carriage, or other wheel, of a strip or strips of wood, wound in successive folds, or layers, around a block, or arbor, of the required size, substantially as herein described, said folds being united by glue, cement, or like means, as they are laid upon each other, as set forth.

87,824.—William F. Coulter, Gideon Coulter, and John A. Lanery, Hardinsburg, Ind.—*Wheel-Cultivator.*—March 16, 1869.

Claim.—The spring-bar *a*, attached to the rear end of the draught-bar, in combination with the notch *b* in the upper slide of the axle, as and for the purpose described.

87,825.—W. H. Cox, Virden, Ill.—*Corn-Planter.*—March 16, 1869.

Claim.—1. The cutters and seed-spouts L, constructed as described, to conduct the seed obliquely backward under the thread of the covering-wheels, the cutting-edges being also extended backward, substantially as described for the purpose specified.

2. The combination and arrangement of the tongue H and arm K with the supports I, standard J, and frame A, substantially as herein shown and described for the purpose specified.

87,826.—C. O. Crosby, New Haven, Conn.—*Machine for Polishing Needles.*—March 16, 1869.

Claim.—1. The combination of the inclined feeding-device, guides, transversely-moving pressure-plates, polishing-cylinders, and discharging-conductor, all arranged and operating together, as set forth.

2. The arrangement of the transversely-moving pressure-plate, polishing-cylinders, and carrying-device, as and for the purpose specified.

3. The construction and arrangement, with reference to each other and to the polishing-cylinders, of the conductor S S^1, and guides *s s t*, with a carrying-device, in the manner shown and described.

4. The arms *s*, constructed and arranged as described, in combination with the revolving cylinders and band, or carrying-device, so as to guide the needles, substantially as described.

5. The improved machine herein described, the constituent parts of whose mechanism are constructed and arranged as described.

6. In combination with the carrying-device, pressure-plates, and polishing-cylinders, the discharge-conductor T, substantially as and for the purpose specified.

87,827.—Mitchell R. Dand, Philadelphia, Pa.—*Volute Spring.*—March 16, 1869.

Claim.—The corrugated volute spring, constructed substantially as and for the purpose described.

87,828.—Levis H. Davis, Newark, Del.—*Pump.*—March 16, 1869.

Claim.—1. In a double-acting, or lift-and-force pump, a piston consisting of the hollow case E F, with its respective fittings, or packings, *e''* and *f'' f'''*, around its smaller and larger outside diameters; the valve I, with its seat *i'*; and the screw-bolt 5, with the supporting cross-bar 6; the said parts being constructed, arranged, and combined together substantially as set forth and described.

2. In combination with the piston, as claimed in the preceding clause, the body of the pump, the same consisting of the two hollow cylinders A B, of different diameters, corresponding with the two respective outside diameters of the said piston, as described, and the side passage-way H, opening

into the upper end of the larger cylinder B, substantially as set forth and described.

3. In combination with the piston and the body of a pump, as claimed in the preceding clause, the hollow base, C D, communicating with the side passageway H, as described, the valve K, the plate L, and the foot-valve J, or its equivalent, the said parts, or devices, being constructed and arranged to operate together, as set forth and described, for the purposes specified.

87,829.—JACOB DOURSON, Columbus, Ohio.—*Fall-Leaf Extension-Table.*—March 16, 1869.

Claim.—1. The cast-metal slide *i*, in combination with the parts *k l*, substantially as and for the purpose described.

2. The grooved supporters *e*, pivoted to the movable strips *g*, in combination with the hinged leaves B and fixed top A, and the pins *h* in the latter, all operating substantially as herein set forth.

3. The fall-leaf extension-table, constructed substantially as herein specified.

87,830.—THOMAS ELLIS and WILLIAM A. ELLIS, Philadelphia, Pa.—*Brick-Mold.*—March 16, 1869.

Claim.—The plunger, formed of or faced with porous wood, presenting its end grain to the material to be compressed, and either with or without a partial or entire perforated or imperforated back, or casing of metal, in combination with a mold, or box, wholly or partially formed of or faced with porous wood, presenting its end grain to the material to be compressed, whether such wood is or is not backed with a casing of metal, and whether such casing is or is not perforated or imperforated, substantially as set forth.

87,831.—WILLIAM FARMER, New York, N. Y.—*Hand Dumping-Cart.*—March 16, 1869.

Claim.—1. The combination of the hinged bows F F and wheel C, with the wheels A and body D, substantially as described, for the purpose specified.

2. A three-wheeled cart, having its body hinged in front of the axle, in such a manner as to adapt it for dumping its contents in front of the central wheel substantially as herein shown and described.

87,832.—WILLIAM FERGUSON and JAMES ANDERSON, New York, N. Y.—*Molding Sash-Weights.*—March 16, 1869.

Claim.—The improved method, herein described, of molding sash-weights, by means of the metal mold A, and plain patterns B, arranged and operating in he manner set forth, for the purpose specified.

87,833.—JOHN B. FINK, Freeport, Ill.—*Spindle-Wrench.*—March 16, 1869.

Claim.—The lever E, when pivoted in the ears J of the plate H, and operating in the notch D of the nut C, substantially as described, and arranged with the spring L, recess S in the hub A, and the spindle B, as described, and for the purpose set forth.

87,834.—E. F. FRENCH, New York, N. Y.—*Lock for Pianos, &c.*—March 16, 1869.

Claim.—The combination of the curved and pivoted hook-bolt or arm F, with the sliding bolt B, and the slots of unequal length in the flange of the plate A, as herein described, for the purpose specified.

87,835.—CHARLES J. B. GAUME, New York, N. Y.—*Electro-Magnetic Engine.*—March 16, 1869.

Claim.—The construction and arrangement of the stationary magnets, fixed upon the hub G, the revolving armatures secured to the balance-wheel D, parallel to the axis thereof, and the distributing-wheel H, loosely attached to the frame B, and made adjustable, for the purpose of regulating the speed and changing the direction of the revolving armatures, by means of wires connecting its insulated keys nd rings with the several sets of magnets, in the manner herein shown and described.

87,836.—JAMES R. GILLETT, Westfield, Mass.—*Whip-Mounting.*—March 16, 1869.

Claim.—The combination of the cap A, and sleeve B, when arranged together, substantially in the manner herein shown, upon the butt of a whip, for the purpose of forming the head-mounting thereof.

87,837.—OTHNIEL GILMORE, Raynham, Mass.—*Liquid-Meter.*—March 16, 1869.

Claim.—A water-meter, in which flexible pipes and pinching-rolls operating thereon, and operated by the current passing through the pipes, are employed as described, when the pipes are so arranged as to have upon them the pressure of the water, both inside and outside.

87,838.—JACOB K. GOOD, Pequa Township, Pa.—*Brick-Kiln.*—March 16, 1869.

Claim.—The arrangement herein described, viz., of setting the charges of brick, one on top of the other, within the cupola H, having side-furnaces F, on an elevated base, A and B, in combination with the removable base, and hoisting-apparatus for elevating the platform G, with car C, substantially as set forth.

87,839.—DAVID G. GOODALL, Beloit, Wis.—*Device for Operating Gates.*—March 16, 1869.

Claim.—1. Broadly, the oscillating levers A *a*, weight E, connecting brace-rod A, and cheek-wire F, when constructed and arranged as shown at Fig. 1, substantially as set forth and described, when employed for the purpose of operating at gate or gates.

2. In combination with the foregoing, the arrangement and employment of the draught-wire L, double crank-lever C, crank-levers D D, supports I I, pulls H H, pull-wires G G, pull-posts S S, post R, and sill P.

3. Broadly, the suspension of a weight on an oscillating or vibrating lever or levers, to effectually close hand-gates, by either pushing or pulling them to, after being opened.

87,840.—W. J. GORDON, Philadelphia, Pa.—*Air-Tight Can.*—March 16, 1869.

Claim.—In combination with a can, when the top is formed with an inclined surface *c*, the cover D, constructed and applied substantially as described and for the purposes set forth.

87,841.—SOLOMON S. GRAY, Boston, Mass., assignor to AMERICAN MOLDED-COLLAR COMPANY.—*Machine for Molding Paper-Collars.*—March 16, 1869.

Claim.—1. In a machine for molding collars, the sectional blocks C, when constructed and arranged to operate substantially as and for the purpose set forth.

2. In combination with the expanding-blocks C, the elastic band D, as and for the purpose specified.

3. The clamp H, attached to one of the sectional blocks C, for the purpose described.

4. The combination of an expanding-block E, or its equivalent, with the sectional blocks C, substantially as and for the purpose set forth.

87,842.—WILLIAM H. GRISCOM, Salem, N. J.—*Gate.*—March 16, 1869.

Claim.—1. The panel or gate F, when supported by and moved upon the simple slides, or rests H and E, substantially as set forth.

2. A gate which, upon sliding to one side, always rests upon slides, and when moved to the other side may be balanced and swung round, as shown in dotted lines in Fig. 2.

87,843.—SELIM E. GROUT, West Concord, Vt.—*Towel-Drier.*—March 16, 1869.

Claim.—The combination and arrangement of the two series of levers C C C, their supporting rails B B, the two series of hooks D D D, and the sectional clamp A, made in two parts, *a a*, so as to to be clamped or applied to a stove-funnel, as described.

87,844.—O. B. HALE, Malone, N. Y.—*Device for Pulling Hop-Poles.*—March 16, 1889.

Claim.—A device for pulling hop-poles, constructed and operated in the manner substantially as herein shown and described.

87,845.—George Heffner, Homer, Iowa.—*Harrow.*—March 16, 1869.

Claim.—1. An improved harrow, formed by the combination of the triangular frames A B, draught and connecting hooks D, and teeth C, with each other, said frames and hooks being constructed and arranged substantially as herein shown and described, and for the purposes set forth.

2. The draught and connecting hooks D, constructed as described, when used in connection with the triangular frames of the harrow, substantially as herein shown and described, and for the purpose set forth.

87,846.—Edward Himrod, Dunmore, Pa.—*Car-Heater and Ventilator.*—March 16, 1869.

Claim.—The arrangement, with relation to the metallic fire-proof chamber A, of the casing B, funnel-shaped apertures C, separated by the partition D, the pipe E, and lateral pipes F, as herein described, for the purpose specified.

87,847.—J. Hoke, Cordova, Ill.—*Wagon-Brake.*—March 16, 1869.

Claim.—The combination of the grooved plate A, eccentric dog D, and brake-lever C, when applied to a wagon-brake, substantially as specified.

87,848.—John Taylor Holden, Elmwood, R. I.—*Harness-Connection for Looms.*—March 16, 1869.

Claim.—The combination, with the harness-frame C and treadles H, of the rods B, jack A, metallic plates E E, screw-rod D, sleeve F, swivel-rod G, nuts *a a*, *d*, *c*, and the strap *e*, all constructed and arranged as described for the purpose specified.

87,849.—J. Burt Holmes, Philadelphia, Pa.—*Mosquito-Net.*—March 16, 1869.

Claim.—Constructing the frame of a mosquito-net in two parts, and connecting them in the center by means of a bolt and button, substantially as and for the purpose herein described.

87,850.—Eben Norton Horsford, Cambridge, Mass.—*Preparing Farinaceous Food.*—March 16, 1869.

Claim.—The use of salts of potassa, when employed with phosphoric acid, or acid phosphates, in the preparation of farinaceous food, substantially as above set forth.

87,851.—Ira Houghtling, Houghton, Mich.—*Milk-Cooling Apparatus.*—March 16, 1869.

Claim.—The combination of the distributing-vessel A, tube D, and blowing-apparatus, when constructed and arranged as specified.

87,852.—F. Jonas, Freeport, Ill.—*Hub-Boring Machine.*—March 16, 1869.

Claim.—1. The mandrel A and sleeve B, with the adjustable cutter C, constructed, arranged, and operating substantially as specified.

2. In combination with the mandrel A, sleeve B, and cutter C, the frame K, and the adjustable plates J and L, arranged as described, for the purpose specified.

87,853.—J. George Kappes, New York, N. Y.—*Mosaic Floor.*—March 16, 1869.

Claim.—The combination of the parallel bars *b b*, cross-bars *c c*, and the upper layer *a*, connected together in the manner described, the whole forming squares for mosaic floors, as herein set forth and shown.

87,854.—Martin R. Kenyon, Providence, R. I.—*Button.*—March 16, 1869.

Claim.—The combination of the button-head A, shank B, elbows C and D, and arms H and H′, the whole constructed and arranged substantially as described, for the purposes specified.

87,855.—Stephen S. Kimball, Laconia, N. H., assignor to himself and J. F. Prescott, same place.—*Planter and Seeding-Machine.*—March 16, 1869.

Claim.—1. The adjustable wheels A′ A′ and adjustable hoppers C C′, when combined and operating substantially as described.

2. The adjustable wheels A′ A′, adjustable hoppers C′ C′, and adjustable slides F, combined and operating substantially as described.

3. The slides F, attached to and made capable of adjustment upon the rod G, in the manner and for the purpose set forth.

4. The disks E′, having a circular series of holes, for the wedge-blocks L, in order to increase or decrease their number on said disk, for the purpose set forth.

5. The combination and arrangement of the disk L′, blocks L, clutch *m*, levers K and *m′*, arm J, and spring O, rod G, and seed-slides F, as described and represented.

6. The slotted rock-shaft P, having the shanks of the shovels, or furrow-openers, adjustably attached thereto, as and for the purpose set forth.

7. The springs *n n′*, in combination with the shovels or furrow-openers N, and rock-shaft P, as and for the object set forth.

87,856.—H. J. Kintz, Greece, N. Y.—*Husking-Thimble.*—March 16, 1869.

Claim.—The elastic strap, in combination with the husking-thimble, formed from a single piece of sheet-metal, provided with overlapping spring-edges, *a a*, and having combined therewith the sharp cutting-edge *b*, substantially as and for the purpose described.

87,857.—Thomas Langston, Brooklyn, N. Y.—*Lantern.*—March 16, 1869.

Claim.—Providing the base A, with a right-angular flange *a c*, for supporting the glass B, the flange *c* being provided with a screw-thread, adapted to fit into the screw-threaded flange *e*, attached to the wires *b*, all arranged as described, whereby the glass is supported upon the horizontal flange *a*, and held against lateral play by the horizontal flange of the part *e*, as herein set forth.

87,858.—Horatio S. Lewis, Chicago, Ill., assignor to himself and O. H. Tobey, New York City.—*Process of Extracting Saccharine Juices from Canes.*—March 16, 1869.

Claim.—1. The process of extracting saccharine juices from canes by steam, substantially as herein shown and described,

2. Extracting saccharine juices from canes by steam, whether under or without pressure, substantially as herein shown and described, and for the purposes set forth.

87,859.—Charles Lucas, Brooklyn, N. Y.—*Sail-Cringle.*—March 16, 1869.

Claim.—A sail-cringle, formed of two parts, or pieces, D, and F, of iron, or other suitable metal, and attached to the bolt-rope and sail, substantially as and for the purposes specified.

87,860.—William R. Manley, New York, N. Y., assignor to himself and William H. Webb, same place.—*Feathering Paddle-Wheel.*—March 16, 1869.

Claim.—The pillow-block stock, constructed with arms, substantially as before described.

87,861.—William R. Manley, New York, N. Y., assignor to himself and William H. Webb, same place.—*Feathering Paddle-Wheel.*—March 16, 1869.

Claim.—The relative arrangement and combination of the movable paddles of the feathering paddle-wheel, the rigid controlling-frame, the eccentric, constructed with an opening, in which the paddle-wheel shaft revolves, and the flexible connection between said eccentric and the side of the ship, the whole being constructed to operate substantially as hereinbefore set forth.

87,862.—John McCloskey, New York, N. Y.—*Machine for Making Seamless Tubing.*—March 16, 1869.

Claim.—1. The construction and arrangement, with reference to each other, of the cylinder A, mold B, cooling-device E, and gate G, as and for the purpose specified.

2. With the above, the arrangement of the valve-

plunger Q and removable eylinder N, as shown and deseribed.

3. The improved apparatus, herein deseribed, its constituent parts being eonstrueted and arranged together in the manner set forth.

87,863.—Joel Miller, Swedesborough, N. J.—*Rivet-Tool.*—Mareh 16, 1869.

Claim.—The improved tool, herein deseribed, eonsisting of the die A, handle C, and diseharger D, all eonstrueted and arranged as and for the purpose speeified.

87,864.—J. Hout Minnich, Tusearawas, Ohio.—*Bridle-Bit.*—Mareh 16, 1869.

Claim.—The applieation, to a bridle-bit and reins, of the slotted plates B, whieh are provided with the pins or rollers *a*, substantially as deseribed, so that the bit will be drawn up in the slotted plates, when the reins are pulled, as set forth.

87,865.—S. R. Mix and Milo D. Wilder, La Porte, Ind.—*Grapple for Tubes.*—Mareh 16, 1869.

Claim.—The improved tube-grappling aad withdrawing implement, eomposed of the tapered stoek A and die B, arranged substantially as and for the purpose deseribed.

87,866.—John G. Moore, Kingston, Ohio.—*Truck for Plows.*—Mareh 16, 1869.

Claim.—1. The eombination, with a truek, of the shoulder-strap M, substantially as and for the purpose deseribed.

2. The eombination with the shafts B and the yoke D, of the hooks F I, and stirrups, substantially as and for the purpose deseribed.

3. The arrangement of the yoke D, axle A, and the elips E, all substantially as and for the purpose deseribed.

87,867.—Edmund L. Morse, St. Louis, Mo.—*Door-Spring.*—Mareh 16, 1869.

Claim.—1. The rubber spring B, having the bearings b^1 b^2, when eombined with the soekets C D, all eonstrueted and arranged as deseribed, for the purpose set forth.

2. The spring B, soekets C and D, and ways E, when eombined and operated as deseribed, for the purpose set forth.

87,868.—C. E. Murray, Loek Haven, Pa.—*Watchmakers' Tool.*—Mareh 16, 1869; antedated Mareh 12, 1869.

Claim.—The arrangement, herein deseribed, of the several parts of a eompound tool for holding wateh-wheels while their faees are being trued, or their pivots trimmed or finished, all eonstrueted, eombined, and operated as deseribed.

87,869.—Emile Nougaret, Newark, N. J.—*Gaiter-Boot.*—Mareh 16, 1869.

Claim.—A gaiter-boot, provided with elasties, B B, in front, separated by a narrow strip, C, all extending to the top of the boot, as herein shown and deseribed, and for the purpose speeified.

87,870.—Charles H. Nye, Elizabethport, N. J.—*Attaching Tugs to Whiffle-Trees.*—Mareh 16, 1869.

Claim.—1. The soeket A B C, eonstrueted substantially as herein shown and deseribed, for attaehment to a harness-tug, as and for the purpose set forth.

2. The soeket-knob D, eonstrueted with a flattened neek, for attaehment to a whiffle-tree, substantially as herein shown and deseribed, and for the purpose set forth.

3. The tug-soeket A B C and the soeket-knob D, when used in eonneetion with eaeh other, for attaehing tugs to whiffle-trees, substantially as herein shown and deseribed, and for the purpose set forth.

87,871.—B. Oliver and M. L. Oliver, Brooklyn, N. Y.—*Stump-Extractor.*—Mareh 16, 1869.

Claim.—1. The shaft B, provided with the ehain-wheel C, ratehet-wheels D, and arranged upon the framing A, eombined with the pawl-levers F and levers I, all arranged as and for the purpose speeified.

2. The eombination with the ehain-wheel and operating-apparatus of the ehain, frietion shaft M, and eye-bolts, when arranged substantially as and for the purpose speeified.

87,872.—George W. Pense and Christian Emil Lykke, Franklin Grove, Ill.—*Harrow.*—Mareh 16, 1869.

Claim.—An iron harrow, eonsisting of four separate harrows, hinged and eoupled together, substantially as deseribed, and provided with hiteh-ing-hooks, so arranged that it may be drawn in opposite direetions, for the purpose set forth.

87,873.—Perry Prettyman, Paradise Spring Farm, Oregon.—*Railway-Rail Splice.*—Mareh 16, 1869.

Claim.—The rails A B, eonstrueted as deseribed, one, A, being provided with a reeess, and adapted to reeeive the redueed end of the other, B, both being seeured together by the vertieal bolts C passing through their upper portions, as herein deseribed, for the purpose speeified.

87,874.—George M. Rhoades, Hamilton, N Y., and George B. Hamlin, Willimantie, Conn.—*Thrashing-Machine.*—Mareh 16, 1869.

Claim.—1. The eombination of pivoted teeth with the drum of the thrashing-eylinder of a thrashing-maehine, substantially as herein shown and deseribed, and for the purpose set forth.

2. The eombination of pivoted and weighted teeth with the eoneave of a thrashing-maehine, substantially as herein shown and deseribed, and for the purpose set forth.

3. An improved driving-gearing, formed by the eombination of the frietion-pully J, attaehed to the shaft to be driven, the wheels K and L, and belt M, with eaeh other, substantially as herein shown and deseribed, and for the purpose set forth.

87,875.—Azel T. Robinson and James Shepard, Bristol, Conn.—*Fruit-Box.*—Mareh 16, 1869; antedated Mareh 12, 1869.

Claim.—In a box eomposed of the eompleted sides *a a*, eonstrueted as deseribed, and seeured at the eorners by flexible loops *d*, forming the box into a rhombus, or rhomboid-shape, for eonvenienee of paeking, by means of the bottom, A, resting upon ledges *e* on said sides, substantially as deseribed, and for the purpose herein set forth.

87,876.—Daniel R. Russell, Carrollton, Miss.—*Fire-Tongs.*—Mareh 16, 1869.

Claim.—So eonstrueting fire-tongs as to provide, at the point at whieh the legs are joined together, and articulate, three distinet bearings—the first between the perimeter *c* of one part and the rim A of the other; the seeond, by means of a tongue C, and a groove, B; and the third, around a eentral pivot-pin, *a*, or its equivalent, substantially as herein deseribed for the purpose set forth.

87,877.—Albert L. Sayles, Paseoag, R. I., assignor to Edwin C. Cleveland and Joseph M. Bassett, Woreester, Mass.—*Spinning-Machine.*—Mareh 16, 1869.

Claim.—1. The eombination of the ring rails A and oseillating arms B, with shaft E, arm D, ratehet G, gear-wheels K L I, pawls O P, and segment M, substantially as herein deseribed, and for the pnrpose speeified.

2. The eombination with the arm D and shaft E, of the ratchet-wheel G, gear-wheels K L I, pawls O P, and segment M, substantially as and for the purpose speeified.

87,878.—Robert Schmid, Chieago, Ill.—*Cellar for Preserving Beer.*—Mareh 16, 1869.

Claim.—1. The division of the refrigerating and preserving apartment G S, eomposed of wood and metal, supported and inelined, substantially as and for the purposes deseribed.

2. The wooden flooring-planks E, and intermediate metallic seetion *a*, inclined as deseribed, and overlapping eaeh other at their joints, substantially as and for the purposes deseribed.

3. In eombination with the intermediate double-

inclined metallic section *a*, and inclined wooden sections E, the inclined trough *g*, for receiving the water of the condensed vapor in apartment S, and the two discharge pipes *c h*, for carrying off the water from the ice, and that from the condensed vapor, substantially as described.

4. The combination of metal and wood, in about the relative proportions specified, and arranged substantially in the manner and for the purpose described.

87,879.—HENRY SELICK, Lewistown, Pa., assignor to GEORGE S. MEYERS, same place.—*Mortising-Machine.*—March 16, 1869.

Claim.—1. The combination of the cutter-shaft G swiveled frame H, block *o*, lever *e'*, pitman *i'*, and rod *f'*, adjustably connected with crank-wheel *c'*, when arranged upon a sliding frame F, all operated substantially as herein shown and described.

2. The detachable cutter, perforated longitudinally and transversely, and constructed substantially as described, in combination with the block *o*, swiveled frame H, crank-wheel *c'*, adjustable connection *f'*, lever *e'*, and pitman *i'*, all arranged upon the sliding frame F, and operating substantially as herein set forth.

3. The described arrangement upon the sliding frame F, of the worm-shaft *l' m*, pinion *j'*, wheel *c'*, having tappets *k'*, pinions *p'* on shaft *o'*, operating in connection with the rack *r' q''* pivoted to the main frame, substantially as and for the purposes herein set forth.

4. The described arrangement of the carriage D, provided with devices for holding the timber upon the ways C C, said carriage being operated by means of the rack *e*, the pinion *g*, and hand-wheel *h*, on fixed pin *f*, and the spring *i*, all arranged and operating substantially as herein described.

5. The shaft J, gearing *a b x*, adjustable shaft *z*, wheel *y*, and pinion *b'*, the crank-wheel *c'*, with tappets *k'*, the lever *e'*, and connections *f' i'*, the worm-shaft *l'*, pinion *j'*, and shaft *o'*, with a pinion *p'*, at each end, in combination with the cutter-shaft G, swiveled frame H, and block *o*, all arranged upon the frame F, and operating in connection with the rack *r' q''*, pivoted to the main frame, to produce the rotary, lateral, and progressive motions of the cutter, substantially as herein set forth.

87,880.—JACOB F. SHARP, Wilmington, Del.—*Oil-Box for Car-Axles.*—March 16, 1869.

Claim.—A removable car axle-box cover, having an opening therein, closed at pleasure by a vertically-sliding lid, with projecting handle at top, fastened, when closed, by a centrally-located spring, and having a stop to prevent its entire withdrawal from the cover, all constructed and arranged substantially as and for the purpose set forth.

87,881.—J. H. SHIMMONS, Lawrence, Kansas, assignor to himself and S. R. MAYBERRY, same place.—*Sheet-Metal Roofing.*—March 16, 1869.

Claim.—The improved method of forming double seams in the flat portion, and single seams in the vertical portions, of sheet-metal roofing, by means of the sheets formed as represented at D, substantially as and for the purpose specified.

87,882.—THOMAS B. SMITH and ACANTHUS HINCHMAN, Pleasant Hill, Mo.—*Car-Coupling.*—March 16, 1869.

Claim.—The combination of the bar C, spring D, band E, block F, and guide-rod G, with each other, the slotted draw-head A, and the coupling-link B, as herein described, for the purpose specified.

87,883.—WILLIAM H. SMITH, La Crosse, Wis.—*Thrashing-Machine.*—March 16, 1869.

Claim.—1. The application, in a thrashing-machine, of the slatted apron E, with a chute underneath, to receive the shelled grain, when mounted behind, and independent of the shoe, substantially as and for the purpose described.

2. The combination of the pickers A and A', and the carriers B and B', constructed and arranged to operate substantially as shown and described.

87,884.—ALVAH J. SPRAGUE, Springfield, Mo.—*Portable Fire-Place.*—March 16, 1869.

Claim.—1. The plates F F and G, constructed with air-chambers *c c* and H and opening *e*, substantially as and for the purpose described.

2. The portable fire-place, constructed of plates B, C C, and D, with opening E, in combination with the mantel K, and with the plates F F and G, all arranged substantially as described.

87,885.—W. C. SWITZER, Nelsonville, Texas.—*Combined Planter and Cultivator.*—March 16, 1869.

Claim.—1. The dropping-device W, constructed and operating substantially as herein shown and described, in combination with the axle B, plows I N P O, and plow Q S U T, as and for the purpose set forth.

2. The dropping-device Y Z A' B' *b'* C', constructed and operating substantially as herein shown and described, in combination with the axle B, plows I N P O, and plow Q S U T, as and for the purpose set forth.

3. The combination and arrangement of the plow-beams I, two or more plow-standards N, brace-bars P, supports E, racks F, adjustable sliding bar G, and longitudinal bars D, with each other and with the frame C, substantially as herein shown and described, and for the purpose set forth.

4. The combination and arrangement of the foot-lever or levers I *l'*, connecting-rods or chains M, levers J, and connecting-chains K, with each other and with the plow-beams I and frame C, substantially as herein shown and described, and for the purpose set forth.

87,886.—WILLIAM H. TOWERS, Boston, Mass.—*Steam-Heating Apparatus.*—March 16, 1869.

Claim.—1. The combination of a water-supply reservoir F, connecting-pipe *b*, a vaporizing-device, E, or its equivalent, and a steam-chamber, D, all substantially as specified.

2. In combination with the heat-radiating chamber, or cylinder, the employment of a vaporizing-conduit, essentially in manner and to operate as explained.

3. In connection with the vaporizing-conduit E, arranged as described, the water-reservoir F and the supply-pipe *b*, substantially in manner and for the purpose as explained.

4. In combination with the cylinders A and B, and the conduit E, arranged and operating as described, the reservoir F, with its pipes *e* and *b*, and when operating both as a condenser and as a means of supplying steam to an apartment, the whole being as before set forth and explained.

5. The general combination and arrangement of the cylinders A and B, the vaporizing-conduit E, (supplied with heat, as described,) and the reservoir F, the latter being connected with the heating-chamber D by the pipe *e*, and with the conduit E by the pipe *b*, and the whole being organized and operating as hereinbefore set forth and explained.

87,887.—EDWARD TRASK, Fitchburgh, and CHARLES T. FORD, Salem, Mass.—*Toy-Gun.*—March 16, 1869; antedated March 5, 1869.

Claim.—1. The combination, as well as the arrangement, of the hitching-cylinder, or block, C, the spring or springs *b*, the heel-piece *d*, its studs *c*, with the parts A and B of the gun-barrel, and a trigger applied thereto, so as to operate the heel-piece, as specified.

2. The ball, or projectile, as made with a chamber to receive and hold the torpedo; also, as combined with the gun by means of a flexile wire, or its equivalent.

3. The ball, or projectile, as constructed with a torpedo-receiving chamber, and the wire for holding the ball to the gun, as made with a loop, or its equivalent, for the purpose of drawing the torpedo into the chamber, as set forth.

4. The arrangement and combination of the ball *i* with the gun and the plunger, arranged and provided with mechanism for operating such plunger, substantially as specified.

87,888.—A. TREW, Union City, Ind.—*Steam-Engine Oscillating Valve.*—March 16, 1869.

Claim.—In combination with the conical oscillating valve A, the supply-pipe U and plate E, when

arranged and constructed substantially as herein set forth.

87,889.—JONATHAN G. TROTTER, Newark, N. J.—*Furnace for Making Iron and Steel.*—March 16, 1869.

Claim.—1. The arms or hangers E, in combination with the grate-bars D, substantially as described.

2. The combination of the grate-bars D, having hangers E attached thereto, with the rock-shafts and levers in connection therewith, operating for the purposes hereinbefore described, and substantially in the mode of construction as set forth.

87,890.—ANDREW VAN HORN, Brooklyn, N.Y.—*Apparatus for Evaporating Salt.*—March 16, 1869.

Claim.—Evaporating or concentrating saline waters for making salt, by means of the combination of an evaporating-tank, C, with a circulating coil of pipe, E, and furnace F, when made and operating in the manner and for the purposes hereinbefore set forth.

87,891.—JACOB WEIBLE and HENRY S. ROBINSON, Detroit, Mich.—*Circular Saw.*—March 16, 1869.

Claim.—The improved mode of constructing circular saws, as herein shown and described and for the purpose set forth.

87,892.—WASHINGTON WEST, Pecksburg, Ind.—*Ditching-Plow.*—March 16, 1869.

Claim.—The improved ditching-plow herein described, when the same is constructed, in its said several parts, and used in the way and for the purpose substantially as herein set forth.

87,893.—WILLIAM WICKERSHAM, Boston, Mass.—*Railroad-Chair.*—March 16, 1869.

Claim.—1. In the rail-chair for railroads, a spring, *c*, formed and arranged as described, in combination with the key *d* and the chair, constructed and arranged substantially in the manner and for the purpose set forth.

2. The key *d*, in combination with the aperture *f*, formed substantially as described and for the purpose set forth.

3. The cup *e*, in combination with the slide *g* and the spring *c* or *k*, substantially as described, and for the purpose set forth.

4. The strip *i*, formed of two thin metallic strips, combined with and inclosing a non-metallic strip between them, as described and for the purpose set forth.

5. The strip *i*, combined with the two wedges *h* and *h'*, arranged and operating conjointly, in the manner described, and for the purpose set forth.

87,894.—CHESTER WILLIAMS, Jr., Alba, Pa.—*Method of Preparing Coon-Skins.*—March 16, 1869.

Claim.—As a new article of manufacture, raccoon-skins, prepared substantially as herein described and for the purpose set forth.

87,895.—N. BANGS WILLIAMS, New York, N. Y.—*Backgammon-Board.*—March 16, 1869.

Claim.—1. The combination of an automatic dice-thrower with a backgammon-board.

2. The lever C, with the feather-spring H.

3. This, in combination with the other parts of the mechanism described, all made and operating substantially as described, or their mechanical equivalents.

87,896.—LEVI C. WILSON, Albany, N. Y.—*Harness-Rosette.*—March 16, 1869.

Claim.—As an article of manufacture, the ornamental pendulous body, composed of the body C, fringe B, pin D, and disk A, substantially as described.

87,897.—J. DANA WYMAN, Fitchburg, Mass.—*Soldering-Iron.*—March 16, 1869.

Claim.—In combination with a soldering-iron, the non-conducting packing I, as shown and described.

87,898.—JOSEPH BELL ALEXANDER, Washington, D. C.—*Lamp-Burner.*—March 16, 1869.

Claim.—1. The use of a helical spring to hold the chimney on a lamp-burner, when the said spring has its ends united, so as to form a ring, and is attached to the burner by its elasticity only, and when its inner circle rests against an unyielding back, causing the convolutions of said spring to assume an oblique direction under pressure, the chimney being put on by a twisting motion, substantially as described, and for the purpose set forth.

2. The cylindrical ring R, with its groove G, its slots M M M, and its tongues L L L, substantially as described, and for the purpose set forth.

3. The helical spring S, in combination with the groove G, substantially as described, and for the purpose set forth.

4. The attachment of a circular helical spring to a lamp-burner, by the contraction of the spring only, its inner circle resting against an unyielding base, and grasping the chimney at or near its lower rim, substantially as described, and for the purpose set forth.

5. The combination of the cylindrical ring R, and its groove G and spring S, with the deflector C and draught-plate B, together with the wick-tube T, cap E, base D, and any of the wick-adjusters in use, when arranged together, substantially as described, and for the purpose set forth.

87,899.—WILLIAM S. APPLEGET, Cranberry, N. J.—*Thill-Coupling.*—March 16, 1869.

Claim.—The sand-guard *r*, in combination with the shackles *a b* and journals *c d*, constructed, arranged, and operating as and for the purpose herein shown and described.

87,900.—PHINEHAS BALL, Worcester, Mass.—*Branch-Joint for Wrought-Iron Water-Pipes.*—March 16, 1869.

Claim.—1. A branch and offset, D, for facilitating the attachment of branch-pipes, when said offset is formed from a solid plate of metal, substantially as shown and described, and for the purposes stated.

2. The combination, with the pipes A and B, of a plate, or cap, C, provided with an offset, or projection, D, substantially as and for the purposes set forth.

3. A branch for wrought-iron cement-lined water-pipes, the parts of which are constructed in the manner and form substantially as shown and described.

87,901.—WILLIAM BEATTY, Pontiac, Mich.—*Potato-Digger.*—March 16, 1869.

Claim.—1. The rollers H and teeth *h*, in combination with the driving-wheels B', all arranged and operating substantially as and for the purpose set forth.

2. The tines I', as and for the purpose specified.

3. In combination with the rollers H, the tines *i* and bar G, as described, and for the purpose set forth.

4. In combination with the rollers H, arranged as specified, the plow N, as and for the purpose described.

5. Providing an adjustable tongue, L, in combination with the parts above claimed, as described.

6. The combination of all the parts above claimed.

87,902.—WILSON H. BERDAN, York, Mich.—*Horse Hay-Fork.*—March 16, 1869.

Claim.—In combination with the tines A A and bail B, the slotted bar D, with its pulley *a* and flange *d*, the pivoted pallet E, arm F, with its flange *e*, and the hooks I I, all constructed and arranged to operate substantially as and for the purposes herein set forth.

87,903.—ALFRED BERNEY, Jersey City, N. J.—*Vessel for Making Coffee.*—March 16, 1869.

Claim.—The conical vessel A, having a finely perforated bottom, B, and the bucket *c*, with perforated bottom, C, arranged therein, substantially as shown and described, as a new article of manufacture.

87,904.—ALONZO A. BINGHAM, Cooperstown, N. Y., assignor to himself and GEORGE MCNAMEE, same place.—*Milk-Strainer.*—March 16, 1869.

Claim.—The detachable plate, or frame B, when combined with the fixed plate C, secured upon the end of the spout of a milk-pail, and fastened to said fixed plate C, substantially as herein described, for the purpose of retaining a piece of wire straining-cloth, D, over the mouth of the spout, as herein set forth.

87,905.—Frank Brewster, Cleveland, Ohio.—*Alarm-Lock.*—March 16, 1869.

Claim.—1. The combination of the ratchet-wheel, or disk A, the pin-wheel, with its projections B B, and the loose pins, with the lever D, for releasing the alarm-mechanism, substantially as shown and described.

2. The arrangement of the disk, or ratchet-wheel A, pin-wheel B, the rod to which they are secured, and index-knob, upon the opposite end of such rod.

3. The construction of the lever D, with its inclined surfaces, substantially as and for the purpose described.

87,906.—Franklin H. Brown, Chicago, Ill.—*Ventilator for Railroad Water-Closets.*—March 16, 1869.

Claim.—The arrangement and combination of pipe A, hopper B, with its perforations, and wind-gatherer D, substantially as shown, and for the purpose specified.

87,907.—Louis Brumbach, Reading, Pa.—*Door and Gate Latch.*—March 16, 1869.

Claim.—1. A metal case, containing a bolt, A, which bears and slides diagonally on pins, or lugs, without changing its horizontal position, all substantially as and for the purpose described.

2. The bolt A, having rods or pins *a* and notches *e*, with inclined edges, in combination with the pins *d d* of the case, and the inclined slots *b* of the latter, all being constructed and arranged substantially as specified.

87,908.—John Casson, Parish of Sheffield, England.—*Sawing-Machine.*—March 16, 1869.

Claim.—1. The revolving conical feed-roller, for feeding and guiding wood to circular and other saws, mounted and adjusted in the manner herein described, between which roller and the fence the wood is guided to the saw, as and for the purposes shown and set forth.

2. The toothed quadrant, and gearing connected therewith, in combination with the feed-roller, under the arrangement substantially as described, whereby said roller may be brought to and fixed at any required distance from the fence, as hereinbefore shown and set forth.

87,909.—John R. Champlin, Laconia, N. H.—*Ice-Cream Freezer.*—March 16, 1869.

Claim.—The combination and arrangement of the freely fitting beater-shaft C, projecting up through its pinion F, to receive the driving-crank, the gear-frame D, freely removable with the cross-bar to which it is attached, and the pinion H, with its coupling-projection *r*, fitting the socket *s* of the cream-cylinder, so as to readily lift therefrom with the gear-frame, all substantially as herein specified, the whole constituting a driving apparatus for the freezer of great convenience in applying to and detaching from the freezing-cylinder, as herein specified.

87,910.—William Clemson, Middletown, N.Y—*Saw.*—March 16, 1869.

Claim.—A crosscut-saw having the teeth arranged in pairs, and divided from the next pair by a dust-space, and having the teeth A B set to one side of the blade, and the teeth C D set to the opposite side of the blade, and constructed substantially in the manner and for the purpose described.

87,911.—James W. Colburn, Rose, N.Y.—*Device for Protecting Young Plants against Worms.*—March 16, 1869.

Claim.—1. The plate A, having an opening or aperture through the center, and provided on its under side with a number of teeth, D D, substantially as and for the purposes herein set forth.

2. The combination of the plate A with its teeth D D and stirrup B, all constructed and arranged to operate substantially as and for the purposes herein set forth.

87,912.—George Cowing, Seneca Falls, N. Y., assignor to himself, John P. Cowing, Philo Cowing, and Marshall Cowing.—*Pump.*—March 16, 1869.

Claim.—A pump-standard, having cast in it a nut or thimble, C, to attach the induction-pipe to, as above described and set forth.

87,913.—Charles Cummings, Providence, R. I.—*Carriage-Wheel.*—March 16, 1869.

Claim.—1. The crotched rods D D, &c., when connected to the rim of a wheel and to the truss-rods B, or their equivalent, substantially as shown and for the purpose described.

2. The application of rubber upon the joint between the truss and crotched rods, substantially as and for the purpose specified.

87,914.—John M. Davidson, Pulaski, Pa.—*Potato and Corn Cultivator.*—March 16, 1869.

Claim.—Frame A, bars *b b'*, plates C C, rods C' C', adjustable legs B B, and drag-bar G, all constructed, combined, and arranged to operate as herein set forth.

87,915.—Frederick W. Devoe, New York, N. Y.—*Screw-Nozzle for Cans.*—March 16, 1869.

Claim.—A sheet-metal can nozzle and cap, spun or rolled to form a screw, *b*, with a contracted cylindrical part, *a*, on the nozzle, and a corresponding screw and annular contraction, *e*, in the cap, substantially as shown and described, as a new article of manufacture.

87,916.—Alfred B. Ely, Newton, Mass.—*Heel-Stiffening.*—March 16, 1869.

Claim.—A leather heel-stiffener, when prepared, shaped in molds, and fitted for use, as herein described.

87,917.—William Ennis, Philadelphia, Pa.—*Steam-Boiler Furnace.*—March 16, 1869.

Claim.—The combination of a secondary grate, H, to which atmospheric air, for the purpose of promoting combustion, is supplied, with or relatively to an upper grate, A, of a furnace, supplied with steam or water introduced above its grate, for passage amongst or through the fuel resting thereon, as induced by the draught arranged below the upper grate, and made common to both grates or fire-places, substantially as and for the purpose or purposes herein set forth.

87,918.—James W. Evans and George F. Godley, New York, N. Y.—*Garbage-Box.*—March 16, 1869.

Claim.—The chamber A, provided with a drain-pipe, B, and inner lid, P, having apertures, E, therein, in combination with the perforated removable vessels, C, the whole inclosed by hinged covers, D, substantially as shown and described.

87,919.—John Fellows and James W. Lyon, Brooklyn, N. Y.—*Rod of Connected Hook-Blanks for Gas-Fitters' Use.*—March 16, 1869.

Claim.—The rolled wrought-iron rod of hook-blanks, consisting of a series of connected hook-blanks, each of the contour and disposition of metal, substantially as described.

87,920.—Philo Ferrier, Ypsilanti, Mich.—*Corn-Sheller.*—March 16, 1869.

Claim.—1. The construction of the cross-head F, in combination with the shaft D and frame A of a corn-sheller, substantially as shown and described.

2. The curved bearing E, as and for the purpose set forth.

3. The construction of the bearings C, substantially as shown and described.

4. The combination of the bearings C with the shafts of the shelling cylinders, and the shaft to which the driving-gears are attached, substantially as shown and described.

87,921.—Joseph R. Finney, Youngstown, Ohio.—*Whip-Socket and Rein-Holder Combined.*—March 16, 1869.

Claim.—1. The combined whip-socket and rein-holder, composed of the parts A, B, C, and D, spring *s*, and hinge *d*, substantially as and for the purpose specified.

2. The combination of a tubular whip-holder with a rein-holder, the whole being constructed in one instrument.

87,922.—Conrad Franz, Cincinnati, Ohio.—*Gas-Burner.*—March 16, 1869.

Claim.—In the described combination, the pipe A, constructed with the perforated diaphragm B *b* and internal screw-thread G, and the burner D, constructed with the conical point C, perforations *d d*, and external screw-thread F, substantially as and for the purpose set forth.

87,923.—James C. French, Monmouth, Ill.—*Cultivator.*—March 16, 1869.

Claim.—1. The construction of the joint-piece *a*, as and for the purpose described.

2. In combination with said joint-piece, the plow-beam D and the upright standard C, substantially as shown and described.

3. The standard C, substantially as shown and described.

4. The combination and arrangement of the standard C, cross-beams G, and axles B B.

5. The arrangement of the plow-beams D D, with reference to the joint-piece *a*, by which said beams may be carried nearer to or further from the wheels of the machine.

87,924.—John C. Gould, Oxford, N. J.—*Machine for Cutting Nails.*—March 16, 1869.

Claim.—1. The arrangement of the feed-mechanism, by which the simultaneous action of the knives and the nose-piece causes the latter to slip back upon the nail-plate while it is held by the knives, substantially as described.

2. Jointing the segmental rack to the hub of the arm that carries the nose-piece, in the manner substantially as described.

3. The arrangement, herein described, of the shaft that operates the segmental rack, in an angular position, relatively to the center line of the machine, so that it may lie in a horizontal plane.

87,925.—James Greer and Rufus I. King, Dayton, Ohio.—*Cooking-Stove.*—March 16, 1869.

Claim.—1. The fender B B′, constructed substantially as herein described, so as to admit of its being opened for the purpose of getting at the fire, for broiling and other purposes.

2. The combination of the imperforate inner doors or fenders B B′, forming the front wall of the fire-chamber, and affording access thereto, for the removal of its contents, and the outer doors C C′, provided with the registers D, and forming, in connection with said inner doors, a space or passage for heating the draught-air and directing it to the bottom of the fire-space, and also to keep said outer doors cool, substantially as described.

87,926.—David Grim, Pittsburgh, Pa.—*Carriage-Wheel.*—March 16, 1869.

Claim.—A wooden hub, A, in combination with a metallic band, B, supporting a series of radial sockets, C, so arranged upon the band as that each alternate socket shall stand about half its depth in advance of the one with which it is alternated, and so constructed, with relation to each other and the hub, as that the spokes, when inserted, will be on a line at their outer ends, where they terminate in the rim of the wheel.

87,927.—J. H. Hadley, Boston, Mass.—*Carriage-Jack.*—March 16, 1869; antedated March 12, 1869.

Claim.—1. Combining with a hollow wrought-iron sliding tube, *a*, the graduated cast-iron head D, when cast upon the wrought-iron, substantially in the manner as and for the purposes specified.

2. The actuating device, as constructed, with the straps *c c* and *d d* attached to the fixed and sliding parts C and *a*, respectively, the pivoted sliding T-straps *b b* and lever E, all constructed and arranged to operate substantially in the manner as and for the purpose specified.

87,928.—S. H. Hamilton, Bushnell, Ill.—*Rotary Steam-Engine.*—March 16, 1869.

Claim.—1. The construction of the conduit G, substantially as shown and described.

2. The construction of the piston-wheel C, substantially as shown and described.

3. The combination of the piston-wheel and the steam-conduit, when the conduit is constructed substantially in the manner shown and described.

4. The arrangement of the piston-wheel C, pistons D, and cam-wheel or disk F, substantially as shown and described.

5. The arrangement of the rollers which control the movement of the piston upon one side of such pistons, substantially as shown and described.

87,929.—John T. Hawkins, Annapolis, Md., assignor to Holt, Hawkins & Co., same place.—*Lathe for Turning Spools.*—March 16, 1869.

Claim.—1. The centrifugal chuck or holder D, with its centrifugal arms or levers L L, and jaws J J J J, sliding upon its inclined interior, or its equivalent, for the purpose set forth.

2. The combination of the cutter-head C and its cutters, with the guide G″, as specified.

3. A blank, from which to manufacture spools or other articles, when pointed at one end and operated in the manner described, and used in connection with the herein-described machine, for the purpose of reducing friction, as specified.

4. Feeding the rounded revolving stick or blank, by the pressure of the non-rotating stick or blank upon it, in the manner described.

5. Soaking one end of each stick or blank in water or other liquid, in the manner and for the purpose set forth.

6. The arrangement of the rod Z, connecting-rods Z′ Z′, the pawl-wheels *m m*, and the ratchet-wheels *e e*, for the purpose specified.

7. The use of the cutter or cutters K, in combination with the sliding drill-stock F, operating as described, for the purpose set forth.

8. The combination of the slide or cutter-holder E, movable cutter K, centrifugal chuck D, hollow mandrel A, with the cutter-head C and its cutters, and the guides G′ G″, for the purpose described.

87,930.—William Hebdon, New York, N.Y.—*Machine for Damping, &c., Cloth.*—March 16, 1869.

Claim.—1. The crate *b* and saturating bars *d* and *e*, in combination with the squeezing-rollers *f* and winder *g*, substantially as and for the purposes set forth.

2. In combination with the foregoing, the press-board *c*, platen *h*, and screw *i*, applied within the vat *a*, and arranged, in relation to the winder *g* and rollers *f*, in the manner and for the purposes specified.

87,931.—Louis Hillebrand, Philadelphia, Pa.—*Trunk-Lock.*—March 16, 1869.

Claim.—A single spring, so set that one of its ends bears solidly against a point of the bolt, so as to throw the bolt backward and forward after being started by the key, substantially as and for the purpose set forth.

87,932.—Ernst F. Hoffman, New York, N.Y.—*Supporting-Bandage.*—March 16, 1869.

Claim.—As an article of manufacture, the supporting-bandage, formed by the arrangement of the elastic ring A, straps C, hinged frame D, penis-bag E, and the scrotum-bag F, substantially as herein represented and described.

87,933.—Carl Holtz, New York, N. Y., assignor to himself and Charles Magnus, same place.—*Chair for Babies.*—March 16, 1869.

Claim.—1. The hinged rockers *d*, in combination with the plate *f*, stool A, and chair B′, constructed in the manner set forth.

2. The stop *p*, spring *o*, rod *m*, slotted guide *l*, and platform *n*, in combination with the stool A and chair B′, substantially as described.

3. The duplex chair B′, made in two parts, to fit to the plate *f*, in combination with the hinged or removable rockers *d* and stool A, substantially as set forth.

4. The stool A and chair B′, combined together and constructed to be converted into a rocking-chair, a baby-jumper, a walking-chair, a cradle, and carriage, at pleasure, substantially as set forth.

87,934.—Chace B. Horton, Sand Bank, N. Y.—*Flour-Sacker.*—March 16, 1869.

Claim.—1. The tube or funnel I, mounted in the vertically-sliding gate L, and raised automatically by the weights Q, or their equivalent, when released, substantially as and for the purpose described.

2. The combination of the frame D, weigh-beam G, sliding funnel L I, elevating devices O P Q, and spring-catch N *n*, all arranged to operate substantially in the manner described, for the purpose specified.

3. The slot I′, when employed in the vertically-sliding tube or funnel I of a machine for sacking flour, as and for the purpose set forth.

87,935.—John Hoyt, Davenport, Iowa, assignor to Charles French, same place.—*Truck for Moving Pianos.*—March 16, 1869.

Claim.—1. The trucks B B, board *a*, and angle-iron *c c*, or its equivalent, combined, when used in moving pianos.

2. The angle-iron *c*, board or table *a*, pin *h*, side-boards *g g*, or their equivalents, when forming a box or crib arrangement, for keeping the piano on the trucks.

87,936.—N. W. Hubbard, New York, N. Y.—*Velocipede.*—March 16, 1869.

Claim.—The arrangement of the endless belt C, having the cross-slats E, the drums F G, of unequal diameter, pulley H, band I, pulley J, steering-wheel N, arched frame O, semicircular plate V, frame P, steering-cord *a*, windlass T, windlass-wheel *u*, and the double-seated frame A, all constructed and operating as described, for the purpose specified.

87,937.—E. P. Hudson, New York, N. Y.—*Manufacture of Vegetable Parchment.*—March 16, 1869.

Claim.—1. The application of glycerine to the paper, after it has been subjected to the acid process, and while still wet, substantially as herein specified.

2. As a new article of manufacture, the material produced substantially as herein specified.

87,938.—Daniel K. Humphrey, Buffalo, N. Y.—*Head-Pad for Horses.*—March 16, 1869.

Claim.—The protecting head-pad for horses, as a new article of manufacture, substantially as set forth.

87,939.—Henry C. Ingraham, Tecumseh, Mich.—*Hand-Truck.*—March 16, 1869.

Claim.—1. The bent axle C, connecting-rod E, and lever F, in combination with the frame A.

2. The spring I, in combination with the axle-tree C and frame A, as shown and described.

87,940.—W. A. Ives, New Haven, Conn.—*Brace for Bits.*—March 16, 1869.

Claim.—The two jaws B and C, pivoted and arranged in a socket, A, and combined with a right-and-left-hand threaded screw, supported in the bearing *d*, so as to operate substantially as and for the purpose set forth.

87,941.—Charles F. Johnson, Jr., Owego, N. Y.—*Mechanical Typographer.*—March 16, 1869.

Claim.—1. The movable type-punches *a a*, in combination with the keys C, substantially as shown, for the purpose set forth.

2. The combination of the slide *m*, the rock-shaft *n*, the ratchet *g*, and the keys C, constituting the feed-motion of the machine, substantially as set forth.

3. Producing the variable feed of the upper bed-plate, adapted to successive letters of different widths, by modifications of the keys C, substantially as shown.

4. In combination with each other, the escapement and cam-movements, substantially as and for the purpose set forth.

87,942.—Charles P. Johnson, Jamaica Plain, and Freeman K. Sibley, Auburndale, Mass.—*Inner Sole for Boots.*—March 16, 1869.

Claim.—An inner sole, composed of horse-hair, and stiffened by a strip of metal, sewed on with wire, as shown and described, as a new article of manufacture.

87,943.—C. P. Kimball, Portland, Me.—*Sleigh.*—March 16, 1869.

Claim.—The sleigh-brace *e*, having the projection *m*, in combination with the clip *f*, as herein described, and for the purposes set forth.

87,944.—Abraham L. King, Farmersville, Ohio.—*Flood-Gate.*—March 16, 1869.

Claim.—The swing-gate H and its fastening, consisting of the bar *p*, pin *k*, and float M, arranged to operate, in combination with each other, within the frame, consisting of the posts A B, plate F, and sill E, substantially as and for the purpose described.

87,945.—George W. Kintz, Rochester, N. Y.—*Animal-Trap.*—March 16, 1869.

Claim.—1. The arrangement, within the leader G, of the platform H and stop-spring I, in combination with the hinged flap K, on the outside thereof, substantially as and for the purpose described.

2. The combination of the guard *s*, with the door B, for preventing the accidental raising of the door, as set forth.

87,946.—Adolphe Marie Albin Laforgue, Caen, France.—*Surgical Instrument for Conveying Medicated Powders, and Depositing Them on Interior Cavities.*—March 16, 1869.

Claim.—The new instrument, as a whole, constructed and operating substantially as shown and described, or its equivalent, for conveying powdered and other medicinal substances into and upon diseased interior cavities.

87,947.—James L. Linderman, Rockford, Ill.—*Seed-Sower.*—March 16, 1869.

Claim.—1. The metal flap B, in combination with rod *b* and lever b^1, as and for the purpose set forth.

2. In combination with the above, the guide-plate C, lever b^1, and set-screw *e*, when arranged as described, for the purpose set forth.

87,948.—R. O. Lowrey, Salem, N.Y.—*Bed-Bottom.*—March 16, 1869.

Claim.—1. The slats A, having the holes *e*, with recesses for the points of the hooks to rest in, substantially as shown and described.

2. Connecting the adjoining springs of the series by means of the blocks E, constructed and applied as shown and described.

87,949.—Jacob Lutz, John A. Eberly, and Henry Becker, East Cocalico Township, Pa.—*Thrashing-Machine.*—March 16, 1869.

Claim.—The construction and arrangement of a thrashing-machine, when made with cylinders F G, the one with its pinion B, and the other with its spur-wheel A, in combination with the pulleys C D E, all arranged and operating in the manner and for the purpose specified.

87,950.—Auguste Hippolyte Marinoni, Paris, France, assignor to Richard M. Hoe.—*Lithographic Printing-Press.*—March 16, 1869.

Claim.—1. The combination, with the reciprocating carriage of a cylinder lithographic press, of an adjustable bed, for adjusting the stone, both vertically and laterally, substantially as described and specified.

2. The T-shaped lifter, and its mechanism for lifting the inking-rollers from the stone and inking-table, substantially as described and specified.

3. The combination of the sheet-flier with an impression-cylinder without tapes, and a receiving-cylinder, provided with both gripers and cords or tapes, substantially as described and specified.

87,951.—T. J. MARINUS, Independence, Iowa.—*Cultivator.*—March 16, 1869.

Claim.—The arrangement of the seed-box with a recess, into which the pinion attached to the agitator-bar enters when thrown out of gear, foot-lever *a*, frame *b*, lever *e*, cultivator-bars E, provided with teeth E′, and catch *f*, the whole constructed and operated as set forth.

87,952.—WILLIAM MCARTHUR, Philadelphia, Pa.—*Carpet-Cleaning Machine.*—March 16, 1869.

Claim.—1. A series of flexible or elastic bands, B, in combination with devices whereby they may be drawn from and brought against a strip of carpet, or other material arranged beneath them.

2. The combination of the flexible beaters and springs *b*, arranged and operating substantially as described.

3. The combination of the beaters B, rock-shaft D, and cords connecting the shaft to the beaters, substantially as and for the purpose specified.

4. The fan K, so arranged as to expel the dust laterally from the machine, for the purpose described.

5. The arrangement, on one shaft, of the brushes *g* and strikers *j*, substantially as and for the purpose specified.

6. The ribs *h*′, arranged on a shaft between parallel brushes *g*′, for the purpose set forth.

7. The combination of the two opposite series of beaters, their respective beds *c c*, fan K, and rollers, and sweepers placed between the two beds, when the whole are arranged as and for the purpose specified.

87,953.—HARVEY MCCOWN, Enon Valley, Pa.—*Device for Locking Nuts.*—March 16, 1869.

Claim.—1. The washer E, in combination with the lock-clamp D, substantially as and for the purpose shown.

2. The washer F, constructed in the form of a double cross, with each of its ends slitted, or divided, substantially as shown and for the purpose set forth.

87,954.—S. F. MCGOWN, New York, N. Y.—*Twine-Cutter.*—March 16, 1869.

Claim.—The thread and twine-cutter herein described, consisting of the ring A, plate B, knife C, slotted spring E, and guard D, the two latter being removable, the whole combined and arranged in the manner and for the purpose specified.

87,955.—JOHN MCKEE and THOMAS W. FLETCHER, New York, N. Y.—*Machine for Making Cigars.*—March 16, 1869.

Claim.—1. The combination, with the arm A, of a spring, C, adjusted to position by set-screws *b d*, substantially as and for the purpose specified.

2. The combination of the fixed hub D with the vibrating arm E and spring *e*, adjustable by set-screws *f* and *g*, substantially as and for the purpose set forth.

87,956.—JOHN MERRILL, Freeport, Me.—*Saw Set.*—March 16, 1869.

Claim.—1. The gauge-arm B, substantially as described.

2. A saw-set, made by the combination and arrangement of the gauge-arm B and the part A, substantially as described.

87,957.—CHARLES H. MILLER, Buffalo, N. Y.—*Lamp-Bracket.*—March 16, 1869; antedated November 25, 1868.

Claim.—The hole *i i*′, and recess *m*, formed in the standard I, in combination with the axial pin *n*, vane *o*, and spiral-spring *s*, of the reflector-arm J, constructed and arranged as herein set forth.

87,958.—CHARLES H. MILLER, Buffalo, N. Y.—*Door-Plate and Alarm.*—March 16, 1869; antedated March 2, 1869.

Claim.—1. The cover C, hinged to the plate B by means of the ears *d d*, *d*′ *d*′, as described and shown.

2. The hammer H, spring *k*, pivoted fulcrum-plate *i*, and bell G, operated by the projecting arm *f* of cover C, substantially in the manner and for the purposes set forth.

87,959.—JOHN MINOR, Peoria, Ill., MILTON W. NESMITH and GEORGE W. NESMITH, Metamora, Ill.—*Liquid-Meter.*—March 16, 1869.

Claim.—1. A meter for spirits, or other liquids, consisting of a closed tub, A, provided with a recess, *r*, at its bottom, and the recess *w* at its top, for the reception of the perforated guide B, and its contained float, C, arranged and operating substantially as described.

2. The combination and arrangement of the float C and vertical toothed bar *a*, working with the loose pinion *b*, on the horizontal axle *i i*, engaging, by a pawl, *t*, with the fast wheel or ratchet *c*, the ratchet-wheel *d* and pawl *t* on the float, the worm or helix *e*, giving motion to the index-wheels *f g h*, all working together, substantially as described, and for the purposes specified.

3. In combination with the above devices, the four-way cock E and connecting pipes *m n* and *o p*, arranged as described, so that the supply and discharge may be alternate, but not simultaneous.

87,960.—PAIGE MORRISON, Starksborough, Vt.—*Sap-Spile.*—March 16, 1869.

Claim.—A sap-spile, constructed substantially as herein described and shown, namely, with that portion thereof which enters the apertures formed in the wood, of oval or oblong form in its cross-section.

87,961.—GARDNER MOSMAN, Boston, Mass.—*Meat-Cutter.*—March 16, 1869; antedated March 4, 1869.

Claim.—A meat-cutting machine, consisting of the case A, having the concave D, provided with the knives *i* and the horizontal cutter *j*, and the cylinder C, provided with the knives *e*, all constructed and arranged to operate substantially as shown and described.

87,962.—DAVID NEFF, Henry County, Ind.—*Soda-Fountain.*—March 16, 1869.

Claim.—The combination and arrangement of cooler, or reservoir, B, pipe *a*, fountain, or vessel *e*, plunger E *e*, rod F, connecting-pipe *f*, link *l*, and lever L, constructed and operated in the manner as shown and described, and for the purpose set forth.

87,963.—AARON PALMER and CHARLES W. PALMER, Brockport, N. Y.—*Harvester-Rake.*—March 16, 1869.

Claim.—1. The employment, in connection with the turning float-arms *b*, of the boxes *c*, having a free action upon the reel-shaft, in the manner and for the purpose set forth.

2. The combination, with the turning float-arms *b*, of the segment gears 2, cog-wheel 1, and springs *g*, arranged as described, and operating in the manner and for the purpose specified.

3. Arresting the motion of the arms *b*, to give the floats their sweeping-motion to act as a rake, by means of the sliding rod *t*, which retreats when the arms are in the proper position to allow said floats to be restored in place again, the whole arranged substantially as described.

4. The combination of the adjustable heads *i* and teeth *h* with the floats *a*, arranged and operating as specified.

5. In combination with the floats *a*, the auxiliary head *l*, and the restoring-spring *p*, the whole so arranged that when the said floats act as a reel, the auxiliary head stands upright out of the way, but when discharging the grain from the platform, the auxiliary head is depressed, and made to bear upon the cut grain, and thereby hold it compactly while being swept off, as herein set forth.

6. The arrangement, with the floats *a* and auxiliary heads *l*, of the stem *n* and cam-arm *o*, operating to depress said head, in the manner and for the purpose specified.

87,964.—ISAAC E. PALMER, Hackensack, N. J.—*Machine for Making Cordage.*—March 16, 1869.

Claim.—The rollers C C, supported on adjustable swinging jaws E E, in combination with the top A and head B, all constructed and arranged substantially as shown and described.

87,965.—Peter Pearson, Leeds, Great Britain.—*Preparation of Cocoa.*—March 16, 1869.

Claim.—The preparation of cocoa in a fluid or semi-fluid state, by combining a concentrated liquid extract of cocoa-nuts or nibs with cocoa from which the fatty matter has been wholly or in part previously expressed or extracted, and with the addition of flavoring or other matters, if desired.

87,966.—Alois Peteler, New Brighton, N. Y.—*Dumping-Car.*—March 16, 1869.

Claim.—1. The combination of the braces *d* and catches *h*, with the rock-shafts *e*, swinging-doors *f*, and box A, hung on pivots *a*, substantially in the manner set forth.

2. The V-shaped slots *k* in the brackets *b*, which form the bearings for the pivots *a* of the box A, as shown and described.

87,967.—Charles C. Plaisted, Hartford, Conn.—*Pencil-Sharpener.*—March 16, 1869.

Claim.—Constructing a pencil-sharpener of one solid piece of metal, by turning and boring, in such a manner that the part *d* fits and clasps the pencil, in the manner described, and the part between *c* and *e* has its bore enlarged, to give a better hold to the cutting-edge, when set in at the proper angle, substantially as herein specified.

87,968.—J. B. Rand, Concord, N. H.—*Composition for Welding Iron and Steel.*—March 16, 1869.

Claim.—A welding-composition, made of the ingredients and in the manner substantially as described, as set forth in the specification.

87,969.—William F. Redding, Saratoga Springs, N. Y.—*Stove-Door Handle.*—March 16, 1869.

Claim.—A stove-door handle, consisting of an eye, A, fender B, and handle C, or their equivalents, constructed and united substantially as herein described.

87,970.—William Reid, Granton, Scotland.—*Device for Feeding Cattle During Transportation.*—March 16, 1869.

Claim.—The use of troughs, or vessels, for supplying food and water to animals when in railway-trucks or wagons, such troughs or vessels being arranged at convenient places separate and distinct from the trucks, either in a fixed position, or movable, to suit the different sizes of animals requiring to be fed or watered, substantially as described.

87,971.—George W. Robson, Cincinnati, Ohio, and Melvin T. Hughes, Paris, Ky.—*Still.*—March 16, 1869.

Claim.—1. The described arrangement of pipes F and G, tubes H, and jacket E, either with or without the chamber D, for the purpose set forth.

2. In combination with the elements D E F G H, the heater-worm L and tank M, as and for the purposes set forth.

87,972.—Herrmann Richter, New York, N. Y.—*Gas-Plier.*—March 16, 1869.

Claim.—The sliding block E, carrying the pivoted or hinged hook F, and its spring *d*, in combination with the rotating nut D and screw-thread C, on the handle A, all constructed, arranged, and operating as shown and described.

87,973.—James M. Roe, Worcester, Mass., assignor to himself and J. R. Torrey, same place.—*Saddle-Loop for Harness.*—March 16, 1869.

Claim.—1. A loop for harness-saddles, made substantially as first above described, and shown in Figs. 1, 2, and 3, of the accompanying drawings.

2. The combination, with the back and face pieces C E of a harness-saddle loop, of a central-grooved pad-piece, D, substantially as and for the purposes set forth.

3. A loop for a harness-saddle, the groove, or creases 1 of which are formed all at once, or simultaneously, as set forth.

4. The creasing-devices, shown in Figs. 4, 5, 6, and 7, for the purposes set forth.

87,974.—Joshua Rose, New York, N. Y.—*Recessing-Tool.*—March 16, 1869.

Claim.—The foot-piece B, provided with slotted ears *c*, and spreader, or expansion-piece *d*, in combination with the drill-rod A, and hinged bits C, acted upon by the spring *e*, all as shown and described.

87,975.—Thomas Rowe, New York, N. Y.—*Cleaning Cotton and other Seeds.*—March 16, 1869.

Claim.—1. The within-described process of removing fibers and other impurities from the seeds of cotton and other plants, by the combined action of an agitator, and of heat or flame, applied substantially in the manner shown and described.

2. The agitator C and sieve D, in the seed-compartment B, in combination with the furnace, or fireplace E, substantially in the manner set forth.

87,976.—A. H. Scott, Concord, N. C.—*Portable Fence.*—March 16, 1869.

Claim.—The combination of two fence-panels, when constructed as herein described, and joined together by means of a clamp, F, passing through elongated slots on the end-boards, so that a kind of stair-step will be formed between the panels, to adapt the fence to a hill-side, said panels having also pins passing through their upper and lower ends, and provided with the posts E E D, the latter having the holes *a a* and pin, whereby a vertical adjustment of the fence can be made, adapting it to hilly or irregular ground, substantially as herein set forth.

87,977.—J. H. Shireman, York, Pa.—*Horse-Rake.*—March 16, 1869.

Claim.—1. The foot-treadle, having its rear end in an ogee-form, in combination with the rounded arm on the rocking rake-head, all arranged and operating substantially as set forth, whereby the attendant is enabled, by operating the one lever, to hold the teeth down to their work, to hold them up, or to lower them easily and slowly to the ground after they have been elevated.

2. The arrangement of the foot-pressure lever and the treadle, for throwing the rake into gear upon one side of the driver's seat, and the hand-lever for operating the rake upon the other side of said seat, as described.

3. The arrangement of the foot-piece on the pressure-treadle P, forward of and in the described relation to the shifting-treadle, for the purpose set forth.

4. The arrangement of the connecting-rod, or link, which connects the treadle-lever with the slide *h*, between the rocking-head and axle, and in line, or nearly in line with the hinge of said head, substantially as described.

5. The pivoted lever H and reciprocating bar *h*, arranged upon opposite sides of the rotating rake-head, and connected together by the bent arm h^1, substantially as and for the purpose set forth.

6. The metallic spindles, or axles of the carrying-wheels, arranged above the center of the main axle, or axle-bed, in combination with a rocking-head, hinged to said main axle, in line, or nearly in line with the center of rotation of said carrying-wheels, substantially as described.

7. The bar *h*, provided with the upright arm h^1 and pendent arm h^2, substantially as described.

8. The elastic, or spring-washer, or its equivalent, in combination with the shipping-lever, for the purpose set forth.

9. The metallic axles, or spindles *a*, provided with the shank a^1, shoulder a^2, and flanged collar, or band a^3, all cast in one piece, and combined with the main axle, or bed-piece A, substantially as described.

10. The combination of the hand-lever H, the friction-roller *i*, and inclined standard K, all arranged and operating substantially as set forth.

11. Adjusting the height of the shifting-post, or standard K, for regulating the degree of elevation of the rake-teeth, substantially as shown and described.

87,978.—A. M. Shurtleff, Boston, Mass.—*Atomizing Apparatus.*—March 16, 1869.

Claim.—1. An atomizing apparatus, having a base formed in one piece, for support of the boiler-stand, lamp, and shield-stand, such base being provided

with a lamp-receiving socket, or flange, and having the shield-stand so applied that it may be slid in and out, and adjusted in position, substantially as described.

2. In a steam atomizing apparatus, a base, having combined with it a flange, or flanged holder, or socket, for receiving the drip-cup, substantially as described.

3. In a steam atomizing apparatus, a base, having provision for attachment, or retention of the boiler-stand, substantially as described.

4. In combination with a steam atomizing apparatus, a shield-stand and drip-cup holder combined in one piece.

5. In combination with a steam atomizing apparatus, a shield-stand and drip-cup holder, made adjustable in position, substantially as described.

6. A steam atomizing apparatus, in which the shield-standard serves as a handle to grasp and hold the apparatus, all the parts of the apparatus being relatively fixed, or secured from displacement, substantially as described.

7. In combination with the boiler, an inclined outlet-tube, extending nearly to the atomizing point, and connected with a short atomizing tube by a steam-tight coupling, substantially as shown and described.

87,979.—EMANUEL HUONCKER, Bethel, Pa.—*Horse Hay-Fork.*—March 16, 1869.

Claim.—The arrangement of the tines A, provided with ledges and stay-pins *i i*, the rods D, provided with shoulders *g f* and springs *h k*, the tine C, the swivel B, and pulley *b*, operating substantially as herein specified.

87,980.—THOMAS SIM and ELIAS S. HUTCHINSON, Baltimore, Md.—*Mode of Preparing Grain for Distillation.*—March 16, 1869.

Claim.—1. The removal from grain, or other material, of oils, by a chemical agent, as a preliminary to fermentation and distilling.

2. As an improved process of producing distilled spirits, removing, by a chemical agent, the oil from the unfermented grain, or other material, and subsequently mashing, fermenting, and distilling the same, substantially as described.

87,981.—A. G. SNYDER, Ashtabula, Ohio.—*Wood-Bending Machine.*—March 16, 1869.

Claim.—The abutment-shoe D, strap G, jam-plate and hook G′, yoke J, plate J′ and wedge H′, all constructed and arranged to operate in combination with the loop H and bed C, for the purpose specified.

87,982.—JAMES M. SPANGLER, Canton, Ohio.—*Combined Horse-Rake and Hay-Spreader.*—March 16, 1869.

Claim.—In combination with a revolving rake-shaft and rake, the disk-wheel K, with its recesses and planes, and the spring-shipper, for throwing said rake into and out of gear with the drive-wheel, substantially as described.

87,983.—NELSON STAFFORD, Brooklyn, N. Y.—*Stencil-Cutting Gauge.*—March 16, 1869.

Claim.—The clamps *a* and *b*, to grasp the sheet of metal or other material, in combination with the rod *d* and movable gauge *f*, the parts being constructed and arranged substantially in the manner and for the purposes set forth.

87,984.—GEORGE A. STARKWEATHER, Waymart, Pa.—*Apparatus for Leaching Bark and other Materials.*—March 16, 1869.

Claim.—The combination and arrangement of the devices herein shown and described, consisting of the conducting pipe C, the distributing tubes B, with their apertures *s* and the joint *c*, constructed and operating substantially as and for the purposes specified.

87,985.—ANSON P. STEPHENS, Brooklyn, N. Y., assignor to himself, NATHAN STEPHENS, and MELVIN STEPHENS, same place.—*Rotary Metal-Cutter.*—March 16, 1869.

Claim.—The notched wheel *b*, formed with the ledges 2, for sustaining the cutter-plates *c*, and with openings for the introduction of a wedge or pin for removing the cutters, substantially as set forth.

87,986.—BENJAMIN F. STEPHENS, Brooklyn, N. Y.—*Putting up Codfish for Use.*—March 16, 1869.

Claim.—The mode of preparing fish and animal substances, by the use of glycerine, after the watery portions have been removed, substantially as set forth.

87,987.—THOMAS B. STOUT, Keyport, N. J.—*Head-Rest.*—March 16, 1869.

Claim.—The combination of the frame A A B, constructed substantially as described, for attachment to the person, and the head-rest C, adjustable in height upon said frame, for the purpose herein specified.

87,988.—ALVIN TAPLIN, Somerville, Mass.—*Lamp-Burner.*—March 16, 1869.

Claim.—The arrangement of the series of inclined top areal bearers *f*, and the stop projections *a g*, with the elevated foraminous deflector C, and the series of springs *e*, arranged and combined with the chimney-rest, as described.

87,989.—CHARLES W. TIERNEY, Altoona, Pa.—*Snow-Plow.*—March 16, 1869.

Claim.—The combination of the screw C and fan D, when arranged to operate together in case B, substantially in the manner and for the purpose described.

87,990.—GEORGE H. TODD, Montgomery, Ala.—*Cartridge-Shell.*—March 16, 1869.

Claim.—1. The sliding bar D, constructed, arranged, and operated substantially as described.

2. The combination of the slide-bar D, cylindrical tube *a*, and cap *b*, all constructed, arranged, and operated as and for the purpose described.

87,991.—TROILUS H. TYNDALE, Springfield, Ill.—*Carpet-Fastener.*—March 16, 1869.

Claim.—1. The socket A, its mortise a^1 and slot a^2, in combination with the fastener-bar B and screw a^3, substantially as and for the purpose set forth.

2. The bar B, arranged with recesses, and combined with the springs C, substantially as and for the purpose set forth.

87,992.—JAMES WATERS, Minneapolis, Minn.—*Steam-Generator Gauge-Cock.*—March 16, 1869.

Claim.—A gauge-cock, consisting of stock A, valve-case K, valve E, valve seat L, inlet C, and lever D, arranged substantially as described.

87,993.—C. H. WESTON, Lowell, Mass.—*Hose and Pipe Coupling.*—March 16, 1869; antedated November 18, 1868.

Claim.—The combination of the open wedge-shaped metal ring E, with an inner circumferential shoulder and flange, *a*, as shown, with the rings A B, tube C, and flexible hose D, all substantially as set forth.

87,994.—C. H. WESTON, Lowell, Mass.—*Steam Device for Cloth-Pressing.*—March 16, 1869; antedated February 2, 1869.

Claim.—1. The construction and arrangement of the steam-pipes of the steam-press with the hollow plates, whereby the least possible number of joints is required, and much expense of construction avoided, substantially as herein set forth.

2. The hollow plate A, provided with bars *e e*, so arranged that the steam or water admitted into said plate may pass around the outer edge first, and then around said bars toward the center, substantially as herein set forth.

87,995.—A. S. WHITTEMORE, Willimantic, Conn.—*Grain-Thrasher.*—March 16, 1869.

Claim.—1. The balance-wheels D, with flails *f*, arranged within the frame A, substantially as described, and for the purpose herein set forth.

2. The curved sieve G, with top *g*, in combination with a grain-thrasher, substantially as herein specified.

3. The thrashing-machine, constructed as described, and consisting of balance-wheels D, flails *f*, rest E, and curved sieve G, all arranged within a suitable frame, substantially as herein set forth.

87,996.—James W. Wilder and Asa B. Stow, Middletown, Conn.—*Process of Preparing Articles of Gold, Silver, Glass, &c., to enable the same to be Photographed.*—March 16, 1869.

Claim.—The method or process of preparing gold, silver, glass, and earthen and other wares, and burnished and polished surfaces, so as to obtain clear and sharp photographs of the same, substantially as herein specified.

87,997.—David Williamson, New York, N.Y., assignor to James Williamson, same place; and said James Williamson assigns his right to himself and David Williamson.—*Breech-Loading Arm.*—March 16, 1869.

Claim.—1. The breech-block *d*, provided with the ribs and grooves 3, and fitted to slide back when raised out of the recess *c*, in combination with the lever *g*, slot 5, and pin *o*, substantially as specified, so that the lever *g* communicates to the breech the motions specified.

2. The sliding retractor *i*, within an undercut groove at the bottom of the recess *c*, in combination with the breech-block *d*, for holding down the forward end of said breech-block, as well as withdrawing the cartridge-case, as specified.

87,998.—Swain Winkley, New York, N. Y.—*Spike.*—March 16, 1869.

Claim.—The projecting shoulders or rings on the sides of the body of the spike, in combination with the inclined or wedge-shaped head *a* and *b*, constructed substantially as described.

87,999.—Calvin Witty, Brooklyn, N. Y.—*Velocipede.*—March 16, 1869.

Claim.—A two-wheeled velocipede, formed by combining with the rear wheel-cranks *k*, connecting-rods *g* and links *h*, pivoted to the perch *e*, to be operated by the feet, for propelling the same, substantially as set forth.

88,000.—Alfred T. Perrine, Louisville, Ky.—*Boot-Heel.*—March 16, 1869.

Claim.—1. The base-plate A, with its raised and beveled rim and its boss *a*, raised from its center, when constructed substantially as and for the purpose described.

2. In combination with the above, the heel-shell B, in one piece, with its beveled and flared lower edge, and with its horizontal partition dividing it into two compartments, when constructed as and for the purpose described.

3. In combination with the base-plate A and heel-shell B the cap or top E, the soft-rubber pads D, C, and C′, the screw-bolt F, and the shank G, when constructed substantially as and for the purposes described.

88,001.—J. B. Park, Omaha, Nebraska.—*Water-Wheel.*—March 16, 1869.

Claim.—The arrangement eccentrically within the scroll D of the buckets B, and cycloidal-shaped top and bottom plates of the core A, whereby the buckets are opened by the direct action only of the water through the throat E, and commence to close by the side of the scroll at the near end of the bottom discharge H, and continue closing to the point *f*, from which point to the point *d* they remain closed, all as herein described, for the purpose specified.

88,002.—George Atkins, Sharon, Pa., assignor to George W. Westerman, Robert Fox, and Robert May, same place.—*Manufacture of Sheet-Iron.*—March 23, 1869.

Claim.—1. The process of forming what is known as Russia sheet-iron, or that which strongly resembles it, and possesses most, if not all of its properties, substantially in the manner hereinbefore described and set forth.

2. In the process of forming sheet-iron, the use of marble-dust and charcoal, for carbonizing the iron preparatory to its receiving the desired surface, substantially in the manner above shown.

3. In the process of forming sheet-iron, the mode of rolling the sheets singly, and afterward in "packs," in the manner above described, that is to say, by first heating the sheets, and then continuing the rolling till they become of a black heat and even afterward, substantially in the manner above described.

88,003.—Walter Baker, Ilion. N. Y.—*Manufacture of Breech-Plates for Guns.*—March 23, 1869.

Claim.—Combining with the rolls *b b* the series of dies specified, for forming breech-plates, all constructed and operating successively upon the blank, in the manner described.

88,004.—Edward Beanes, Cordwalles, (near Maidenhead,) Great Britain.—*Brewing.*—March 23, 1869.

Claim.—In the process of brewing, the treating the brewing-materials with sulphurous acid, or the salts of sulphurous acid, hereinbefore mentioned, before their entrance into the mash-tun, during the process of mashing or during the process of boiling the wort with the hops, and consequently before the fermentation of the liquor has taken place, and the production thereby of an improved quality of beer.

88,005.—Julius Boden, Columbia. Pa.—*Automatic Boiler-Feeder.*—March 23, 1869.

Claim.—The arrangement, in reference to the boiler, of the pipe D and branch U, the tube F, and the other devices for operating the valve in the cylinder L, with the pipes M and O, and safety-valve and lever Q, all as herein described.

88,006.—W. Leigh Burton, Richmond, Va.—*Electro-Heating Apparatus.*—March 23, 1869; antedated March 12, 1869.

Claim.—Evolving and accumulating heat from electricity, by means of a chain, or coil, made up of an alternate succession of reservoirs and obstructions, assembled and arranged in a compact space within a suitable casing, substantially as set forth.

88,007.—E. G. Cameron, Tiffin, Ohio.—*Fifth-Wheel for Vehicles.*—March 23, 1869.

Claim.—The grooved circle C, in combination with the under circle B, and lubricating-cups D D, substantially as and for the purposes herein set forth.

88,008.—Luther S. Chase, and Zebina H. Chase, New Bedford, Mass.; said L. S. Chase, assigns his right to Z. H. Chase.—*Valve for Bottoms of Vessels.*—March 23, 1869.

Claim.—The valve D, operating in recess R, in the side of a vessel, in combination with shaft F, indicator *i*, and pipe, or ventilator E, the whole constructed and arranged substantially as and for the purposes set forth and described.

88,009.—Robert Chesnut, Richmond, Ind. assignor to himself and George Kelly, same place—*Hay Raker and Loader.*—March 23, 1869.

Claim.—1. The series of convergent belts I I′, &c., in combination with the pulleys C, when the latter have unequal diameters, substantially as set forth.

2. In combination with the rake R, the toothed cylinder A, rods *d d′*, &c., pulleys C, and convergent belts I I′, &c., the whole operating substantially as and for the purpose set forth.

88,010.—Stephen Chester, New York, N. Y. and Charles T. Chester, Englewood, N. J.—*Tripping Mechanical Detents.*—March 23, 1869; antedated March 4, 1869.

Claim.—1. The adjustable spring-catches arresting the detent, by means of which the delicacy of the trip is adjusted, and the wear of the parts compensated for.

2. The combination of the lever Q, with its adjustable spring-hook, or hooks, the barbed detent, the lever J, the roller K, the crank-arm G, the cam L, which acting together, allow a small force to liberate machinery, and which restore themselves to their relative positions in rest, substantially as described and for the purposes set forth.

88,011.—Orson E. Clark, Waterford, Mich.—*Cooking-Stove.*—March 23, 1869.

Claim.—1. The stove, with base A, legs B, fire-box C, chamber F, and auxiliary fire-boxes O, when constructed, arranged and operating substantially as herein described, in connection with the water-tank M and its connecting-pipes L.

2. The rectangular box, or oven X″, in connection with said stove and water-tank, when arranged and operating substantially as set forth.

88,012.—William A. Cobb, Orange, Mass.—*Projectile.*—March 23, 1869.

Claim.—The rifled internal shot B, having a central longitudinal passage, the screw-rod I, nut *g*, can C of coarse powder, can F, of fine powder, and the cartridge, or cap H, in combination with the rifled external shell, or shot A, as herein described, for the purpose specified.

88,013.—Henry W. Connor, Troy, N. Y.—*Oar.*—March 23, 1869.

Claim.—The arm E, combined with the hinge F and the pin I, substantially as and for the purposes herein set forth.

88,014.—James Coyle, Boston, Mass.—*Flour-Sifter.*—March 23, 1869.

Claim.—The rectangular frame A, seive C, and rollers E, suspended therein, when combined substantially as specified.

88,015.—James Dampman, Lebanon, Pa.—*Lifting-Jack.*—March 23, 1869.

Claim.—The combination of the grooved and perforated standard A, yoke C, connecting-link D, lever E, fulcrum block F, and pins G H, with the lifting-block B and stud I, substantially as described, for the purpose specified.

88,016.—Frederick P. Deuel, Tecumseh, Mich.—*Apparatus for Butter-Making.*—March 23, 1869.

Claim.—The arrangement and combination of the bevel-geared wheel A, pinions F H, crank E, and frame C, with the shaft G, hollow shaft I, cylinder K, propeller-screws J M, arms L, air-tube N, and churn O, when constructed and operating substantially as herein described, set forth, and shown.

88,017.—L. R. Dexter, Whitefield, N. H.—*Wrench.*—March 23, 1869.

Claim.—The combination of the taper-socket A, handle B, and the spring-clamp D, all constructed and arranged substantially in the manner as and for the purpose set forth.

88,018.—E. L. Dorsey, Winslow, Ind.—*Road-Scraper.*—March 23, 1869.

Claim.—1. The arrangement of the sliding-frame C, scraper E, strap, or belt T, lever K, ring, or bail J, and lever G, all constructed and operating substantially as and for the purposes herein set forth.

2. In combination with the sliding frame C and scraper E, the sliding bar N, spring O, hook P, and lever R, for the purpose of steadying the scraper, preventing it from dumping, and assisting in loading, substantially as herein set forth.

3. The arrangement of the lever V, belt, or strap U, and pivoted scraper E, for the purpose of dumping the latter, substantially as herein set forth.

4. The arrangement on the sliding frame C of the spring X and step W, substantially as and for the purposes herein set forth.

88,019.—William G. Douglas, Warrenton, Va.—*Roller for Extracting Cockle from Wheat.*—March 23, 1869.

Claim.—In a grain-cleaning machine, cork rolls, to be arranged in pairs, or in juxtaposition with other suitable ones, as described and for the purpose set forth.

88,020.—Jacob Edson, Boston, Mass.—*Mold for Casting Pipe.*—March 23, 1869.

Claim.—1. The combination of the core-head K, the core-spindle L, and the flask A B, as specified.

2. The tapering-threaded cores F F F F, in combination with core-head K, as specified.

88,021.—Alfred B. Ely, Newton, Mass.—*Bridle-Bit.*—March 23, 1869.

Claim.—A bridle-bit, constructed as described.

88,022.—Freeman Emmons, Danvers, Mass.—*Book-Holder.*—March 23, 1869.

Claim.—A book-clasp, as constructed and arranged, substantially in the manner and for the purpose herein described.

88,023.—Samuel F. Estell, Richmond, Ind.—*Straw-Cutter.*—March 23, 1869.

Claim.—1. The cam-wheel N, pivoted bar G, and pawls I J, when combined and operated substantially in the manner and for the purpose set forth.

2. In combination with the cam-wheel N, and pivoted bar G, the set-screw R, for regulating the feed, substantially as set forth.

3. The crank Y, knife B, and swinging arm Q, when combined and operated substantially as described.

88,024.—Myron J. Ferren, Stoneham, Mass.—*Welt-Knife.*—March 23, 1869.

Claim.—The combination, with the jaw A, of the clamping-jaw B and cutter G, substantially as specified.

88,025.—Simeon B. Forbes, Steubenville, Ohio,—*Cultivator-Plow.*—March 23, 1869.

Claim.—1. In a cultivator-plow, a half shovel, *a*, with one or more side-cutters *s*, attached to a beam, or standard, *b*, along the line of its inner or vertical edge, substantially as hereinbefore set forth.

2. A cultivating apparatus, having two or more half shovels *a*, connected with adjustable beams and handles, and with one or more cultivator-teeth *e*, constructed substantially as above set forth.

88,026.—Charles S. H. Foster, Deer Isle, Me.—*Mackerel-Latch.*—March 23, 1869.

Claim.—A latch, as constructed, with stock D, the catches *a a*, and channels for the lines *c c*, substantially as and for the purposes specified.

88,027.—William Franz and William Pope, Crestline, Ohio.—*Knitting-Machine.*—March 23, 1869.

Claim.—The ring B, having the annular groove A in combination with the cam-cylinder C, provided with the vertical groove D, substantially as described, for the purpose specified.

88,028.—Lambert Freeman, New York, N. Y.—*Extension-Table.*—March 23, 1869.

Claim.—The extension-table, having the two long sides of its body A provided with the double grooves, for the passage of the long bars F, which are attached to the leaves D, the space between said double-grooved sides being filled with the deep box G, one of whose ends is closed by the vertically-sliding board a^2, all arranged and operating as described, for the purpose specified.

88,029.—Roscoe R. Frohock, Boston, Mass.—*Last-Machine*, March 23, 1869.

Claim.—1. The arrangement of the guide swinging-frame M and the cutter-wheel swinging-frame L, when operating in combination with each other, as described, and for the purpose set forth.

2. The grading-device, consisting of the arc L^5, attached to the swinging-frame L, in combination with the slide P, link P^4, and frame M, arranged to operate substantially as described and shown, and for the purpose set forth.

3. The combination of the sliding bars L^4 M^4, the links N N′, the slide N″, and the bar N‴, when constructed and arranged to operate substantially as described, and for the purpose set forth.

88,030.—Benjamin Geyler and Frederick Geyler, Cincinnati, Ohio.—*Bung-Cutter.*—March 23, 1869.

Claim.—The arrangement of the slotted head and shank A C, the sleeve L, keys I, slotted adjustable

cutters E, and slotted yielding center-pin N, all constructed to operate as herein shown and described.

88,031.—William H. Goodale, Colton, N. Y.—*Making Cone Springs.*—March 23, 1869.

Claim.—The improved apparatus for forming upholstering cone springs, consisting of a die, or holder C, frame A, vertical-sliding frame E, tube P, spirally-grooved cone F, cutters H and I, lever J, spring K, level L, connecting-rod M, treadle, or foot-lever N, and ratchet and pawl, all constructed and arranged upon the frame, substantially as herein shown and described, and for the purposes set forth.

88,032.—Daniel W. Green, Port Chester, N. Y., assignor to William Brundage, same place.—*Faucet.*—March 23, 1869.

Claim.—The faucet, constructed as described, of the chambered sleeve B, adapted to screw upon the end of the tube A, and carrying the slotted extension-tube C, whose top forms a valve, *a*, adapted to open or close the faucet, as the sleeve B is operated, as herein shown and described.

88,033.—Thomas Griffin, Roxbury, Mass.—*Cigar and Cigarette.*—March 23, 1869.

Claim.—A cigar or cigarette, having a permanently attached flexible month-piece upon one end, which is composed of ingredients mixed in the proportions substantially as described.

88,034.—Anthony Grohmann, South Saginaw, Mich.—*Cultivator.*—March 23, 1869.

Claim.—The implement described, having the sickle-back cutters J, in combination with the adjustable beams C and F, and center-beam A, as described, for the purpose set forth.

88,035.—Stuart Gwynn, New York, N. Y.—*Machine for Constructing Vegetable Membrane.*—March 23, 1869.

Claim.—1. Machinery and apparatus combined, containing the various members of an organization equivalent to that herein described, by the use of which like results can be obtained in the manufacture of "vegetable membrane," and any other analogous composition of matter.

2. The separate members of the organization of machinery and apparatus, if used for the purpose described, or when combined with any other machinery, if the combination is used for an equivalent manufacture.

88,036.—Stuart Gwynn, New York, N. Y.—*Vegetable Membrane, or Parchment.*—March 23, 1869.

Claim.—The new composition of matter, named "vegetable membrane," produced substantially as described, and its use in the arts for the purposes herein indicated, and for such others as it may be found desirable to employ it in, either alone or in combination with other substances.

88,037.—L. M. Ham, Boston, Mass.—*Slate Punching and Cutting Machine.*—March 23, 1869.

Claim.—1. In a slate-cutting machine, the revolving table K, in combination with the cutter-wheel H, arranged and working substantially as described and for the purpose set forth.

2. The punch-carrying lever L, arranged and working in combination with the table K, substantially as described and for the purpose set forth.

3. Combining with the table K, the semicircular adjusting-pieces O O′, &c., substantially as described and for the purpose set forth.

88,038.—James H. Harris, Vermont, Ill.—*Trace-Carrier.*—March 23, 1869.

Claim.—1. In combination with a wagon or carriage harness, the ring A, plate B, and hooks *c*, arranged and operating substantially as and for the purposes described.

2. The plate B′ and hook *c*, in combination with a harness, substantially as and for the purposes described.

88,039.—M. C. Hawkins, Edinborough, Pa., assignor to himself and A. Z. Waters, same place.—*Sewing-Machine.*—March 23, 1869.

Claim.—1. The combination of the feed-cams, and the disks M *m*, with the wrist-pin *n* and yoke K, all constructed substantially as shown and described.

2. The shuttle L, when provided with the rebate *k′*, for the reception of the looping-hook N, for the purpose of retaining the thread below the shuttle while the latter is passing through the loop, as herein set forth and shown.

3. Operating the looping-hook N and feed-bar P, through the media of the cams *a′ b′ c′*, lever *h′*, and the fixed arm *i′*, provided with a buffer, *j′*, all combined and arranged substantially as and for the purpose specified.

88,040.—Henry R. Huling, Boston, Mass., assignor to himself and John M. Marston, same place.—*Mechanical Movement.*—March 23, 1869; antedated March 10, 1869.

Claim.—The combination of the elliptical wheels A and B with other mechanism, substantially as and for the purpose specified.

88,041.—Edwin Hutchings, Hartford, Conn.—*Printers' Galley.*—March 23, 1869.

Claim.—Printers' galley, provided with rests C, to bear upon the tops of the tables when receiving the type, substantially as specified.

88,042.—S. Jennings, Patterson, N. Y.—*Thill-Shifter.*—March 23, 1869.

Claim.—The combination and arrangement of the draught-irons E, two bolts F, catch G, spring H, stationary catch I, and connecting-eyes, with each other, with the cross-bars *d′* and C, and forward beam, or knees of the sleigh, substantially as herein shown and described, and for the purpose set forth.

88,043.—J. R. Jones, Clarksville, Iowa.—*Harvester-Reel.*—March 23, 1869.

Claim.—1. The beaters A, supported on arms hinged to the hub, and combined with a movable guide-ring, capable of guiding them laterally in either direction, substantially as specified.

2. The beaters A, supported on arms hinged to the hub, and combined with a movable guide-ring and a mechanism for oscillating the said arms, substantially as specified.

3. The combination, with the inner set of arms B, connected to the outer set by rods D, and having the hooked fingers G, of the jointed guiding-ring *c*, substantially as specified.

88,044.—John H. Kiplinger and Joseph Kiplinger, North Manchester, Ind.—*Fly-Trap.*—March 23, 1869.

Claim.—1. The box A, constructed as described, with a slotted partition, D, dividing it into two chambers, said partition having an opening, *f*, and slide, or drop, *g*, which latter is operated, that is, raised and lowered, by the rapid transferring of the sliding cover G from one chamber to the other, substantially as herein set forth.

2. The box F, constructed as described, with a perforated bottom, *n*, glass or other transparent cover, *i*, opening *k*, and door *m*, at one end, corresponding with similar opening and door at the end of the box A, and at the other end with opening and slide *p*, all substantially as and for the purposes herein set forth.

3. The combination of the box A, divided into two chambers, B and C, elongated bottom, E, sliding box F, and sliding cover G, all constructed and operating substantially as and for the purposes herein set forth.

4. A fly-trap, constructed of a series of boxes, or chambers, having suitable passages and openings, to allow the flies to pass from one to the other, substantially as herein set forth.

88,045.—Henry Landes, Bath, Pa.—*Cultivator.*—March 23, 1869.

Claim.—1. The arrangement of the beam A, bars D D, standard G, bar H, handles F F, wheel C, bar E, levers *d*, plate *b*, and hoes I I, all constructed substantially as set forth.

2. The hoes I I, when constructed as described, and arranged, two on each side-beam, and one on the center-beam, substantially as set forth.

88,046.—CHARLES LANE and JESSE M. HEALY, Jamestown, N. Y.—*Harrow.*—March 23, 1869.

Claim.—A flexible harrow, consisting of the bars A A, that are connected by jointed bolts, as set forth

88,047.—BENJAMIN M. LAWRENCE, Galesburgh, Ill.—*Hygieometer.*—March 23, 1869.

Claim.—1. The lever D″, handles U, straps *s*, rods F and H, cord *p*, pulley *q*, index *n*, cord or chain *r*, and belt *t*″, all constructed, and arranged, and combined as described, and for the purpose set forth.

2. The frame A, with pulleys P, O, and R, cross-bar *z*, cords 8, 6, and 3, pulley V, handles U, foot-holds *s*″ *s*″, and lever D″, combined and arranged as described, and for the purpose set forth.

3. The hand-holes *x l k*, constructed as described, and when used in combination with the handles U, for the purpose described.

4. The hand-hold *d*‴, combined, as described, with the cord R″, for the purpose set forth.

5. The sack *a b c*, combined with the frame A, and constructed substantially as described, and for the purpose set forth.

88,048.—DANIEL P. LEACH, Franklin, Ind.—*Corn-Planter.*—March 23, 1869.

Claim.—The combination of the slide E *e*′, connecting-bar F, swinging lever G, adjustable connecting-bar I, arm J, rack-shaft K, bar L, adjustable standard M, and wheel N, with each other, and with the seed-box D *d*′, and body or frame A, substantially as herein shown and described, and for the purpose set forth.

88,049.—A. W. LIVINGSTONE, Bluffton, Ind.—*Sash Fastener and Hoisting Device.*—March 23, 1869.

Claim.—The T-shaped guide *c*, secured to the window-casing A, and the ratch-bars *b b*, on the sash B B, arranged in combination with the lever *i*, bolt *h*, arm *m*, movable collar *f*, and pinion *g*, all substantially as herein set forth.

88,050.—JOHN H. LIVINGSTON, Providence, R. I.—*Boot.*—March 23, 1869.

Claim.—The improvement in the manufacture of boots, which consists in making, independent of the leg, the counter and vamp of one piece of material, when constructed as herein described, for the purpose specified.

88,051.—JAMES F. LOWE, Louisville, Ky.—*Hoe.*—March 23, 1869.

Claim.—The bifurcated hoe F, when connected with the handle A by means of three prongs, B B B, rivcted to the blade, as described.

88,052.—WILLIAM R. MANLEY, New York, N. Y., assignor to himself and WILLIAM H. WEBB, same place.—*Paddle-Wheel.*—March 23, 1869.

Claim.—The arrangement and combination of the eccentric of the controlling-frame of the paddles of a feathering paddle-wheel with the paddle-shaft, and with the ship, in such manner that said eccentric is both supported upon the paddle-shaft and connected with the ship by means of a flexible connection, substantially as before set forth.

88,053.—BENJAMIN F. MATTOX and SIDNEY CORSON, West Ridge, Ill.—*Chamfering-Machine.*—March 23, 1869.

Claim.—The combination and arrangement herein described of the upright, B, adjustable right-angular arm C D, adjustable part E, the crank-head G, revolving adjustable arm I, plate J, and adjustable chamfering-tool K, all operating as described, for the purpose specified.

88,054.—ROBERT MCCULLEY, Philadelphia, Pa.—*Portable Bath-Tub.*—March 23, 1869.

Claim.—The combination, as herein described, of a single flexible water-proof inner lining, with an outer box or frame composed of detachable side and end-pieces, the whole constituting a portable bath-tub, specially adapted for invalids, as herein set forth as an article of manufacture.

88,055.—F. MCMANUS, Ellenburgh Centre, N. Y.—*Railroad-Car Heater.*—March 23, 1869.

Claim.—The chamber B, side-chambers A A, registers C C, and smoke-flue E, provided with partition I, all being constructed, combined, and arranged in the manner and for the purpose set forth.

88,056.—CHARLES MESSENGER, Cleveland, Ohio.—*Churn.*—March 23, 1869; antedated March 9, 1869.

Claim.—1. The spindle C, in combination with the thimble D, for the purpose specified.

2. The agitators E, as arranged, in combination with the churn B, for the purpose and in the manner set forth.

3. The churn B, lug I, and spring J, as arranged, and operated in the manner as and for the purpose described.

88,057.—WILLIAM A. MIDDLETON, Harrisburgh, Pa.—*Combined Coat-Hook and Line-Holder.*—March 23, 1869; antedated March 12, 1869.

Claim.—The coat-hook C, in combination with the lever D, constructed as described, or its equivalent, and acting as a line-holder, substantially as and for the purposes herein set forth.

88,058.—PETER MILLER, Jr., Fredonia, N.Y.—*Bee-Feeder.*—March 23, 1869.

Claim.—The box A, provided with the partitions *a* a^1, the chambers *b c*, the passages *d* a^2 a^3, and the float *h*, substantially as described.

88,059.—CHARLES W. MILLERD, Montieello, Ark.—*Cotton-Press.*—March 23, 1869.

Claim.—The combination of the grooved beam C, screw D, shoe *b*, toggle-beam E, and follow-block F, all constructed and operating together, substantially as and for the purpose herein shown and described.

88,060.—JAMES L. MOORE, Bridgeport, Conn.—*Pencil-Holder.*—March 23, 1869.

Claim.—A pencil-holder, constructed out of a single piece of wire, bent in the manner substantially as herein shown and described.

88,061.—SAMUEL RODMAN MORGAN, Philadelphia, Pa.—*Apparatus for Transmitting Rotary Motion.*—March 23, 1869; antedated March 8, 1869.

Claim.—Communicating rotary motion by means of spiral surfaces, arranged and operating together substantially in the manner set forth.

88,062.—JOHN NAUGLE, Mooresville, Ind.—*Automatic Fan.*—March 23, 1869.

Claim.—1. The sliding clutch F, in connection with the pinions *d d*′, clutches E^1 E^2, check G, stop-wheels c^4 c^5, rib e^2, lever I, pins i^2 i^3, and shaft D, constructed and operated in the manner and for the purpose set forth.

2. The connection of the adjustable socket l^2 with rod l^1, head L, and set-screw L′, supported and moved by shaft D, as and for the purpose described.

88,063.—ISAAC H. NEWTON, Grand Rapids Mich.—*Device for Turning Logs in Mills.*—March 23, 1869; antedated March 10, 1869.

Claim.—1. The reciprocating rod F, provided with shoulder G, operated by the hook-lever E, and actuating the canting-lever H, in combination with the cant I, when constructed and operating as described.

2. The combination of the cants I, canting levers H, shaft B, connecting-rods F, with shoulders G, shaft J, lever K, trippers L, and pins M, all arranged substantially as and for the purposes set forth.

88,064.—JOSEPH NICKERSON, Booth Bay, Me.—*Process of Preparing Fish for Food.*—March 23, 1869.

Claim.—The method above described of preparing fish.

88,065.—FRANCIS M. NIXON, Lena, Ill., assignor to himself, WILLIAM LEET, WILLIAM DIXON, and JACOB S. BEST, same place.—*Hand Spinning-Machine.*—March 23, 1869.

Claim.—1. The combination, with the frame A, of the internally-geared driving-wheel D, mounted on the adjustable arm *c*, and the counter-shaft *e*, carry-

ing the spur-pinion E and band-wheel F, mounted on the stem, all constructed and arranged as set forth, whereby the speed of the spindle may be varied, as described.

2. The combination, as set forth for joint operation, of the frame A, the adjustable driving-wheel D, the counter-shaft *e*, and the band-wheel F, with the adjustable arm I, carrying the spindle, all constructed and arranged as and for the purposes specified.

88,066.—Samuel Oakman, Boston, Mass.—*Glass-Furnace.*—March 23, 1869.

Claim.—Combining, with a glass-furnace, a vacuum-chamber, V, arranged with openings and flues, substantially as described, when the same is provided with mechanical exhaust-device, working substantially as described and for the purpose set forth.

88,067.—Oscar Paddock, Watertown, N. Y.—*Horse Hay-Fork.*—March 23, 1869.

Claim.—So combining the two tines of a horse hay-fork, that one shall serve as the handle of the other when the two are spread apart, by means of a shoulder upon one, and a correspondent face upon the other, without the use of any auxiliary device, substantially as described.

2. The combination of the lifting-attachment *e* with the locking-bar *c*, as and for the purpose set forth.

3. The arrangement of the locking-bar *e* with the tine B, in the manner and for the purpose set forth.

4. The arrangement of the tines A B with the locking-levers *c d*, in the manner and for the purpose set forth.

88,068.—Carlos L. Page, Cambridge, Mass.—*Money-Drawer.*—March 23, 1869.

Claim.—The combination and arrangement of the drawer D, cover E, plugs F O and F′ O′, or their mechanical equivalents, arranged and operating substantially as described and for the purpose set forth.

88,069.—C. D. Palmiter, Oswego, N. Y., assignor to himself and Lavinia P. Webb, same place.—*Water-Elevator.*—March 23, 1869.

Claim.—The combination of the friction-pieces *a* and *b*, the stud *j*, spiral recess or slot *k*, and spring *e*, arranged substantially as shown and described.

88,070.—Byron Partello, Detroit, Mich.—*Spring-Bed Bottom.*—March 23, 1869.

Claim.—The combination and arrangement of the frame A, transverse slats B, springs C, metallic frame D, transverse metallic strips *d*, studs E, posts F, and wires G, when constructed, arranged, and operating substantially as described, and for the purposes specified.

88,071.—Hiram Perry, Manlius, N. Y.—*Fruit-Gatherer.*—March 23, 1869.

Claim.—1. The table A, when arranged to slide vertically upon the standard B, substantially as and for the purpose herein set forth.

2. The table A *a* C, hinged arms D *d*, standard and winch B *b*, constructed and operated as herein shown, and for the purpose described.

88,072.—Edward R. Playle, Great Bend, Pa.—*Crucible for Melting Metals.*—March 23, 1869.

Claim.—A crucible, whose outer surface is corrugated as herein described.

88,073.—George Sanford Randall, Providence, R. I.—*Case for Melodeons, &c.*—March 23, 1869; antedated September 23, 1868.

Claim.—The case for musical instruments, constructed with closets on the sides of the bellows pedals, substantially as and for the purposes as described.

88,074.—Alvin Rathbun, Smith's Mills, N. Y.—*Grape-Trellis.*—March 23, 1869.

Claim.—The combination of the post A and the band B with the oblique bars C.

88,075.—Abraham Reed, Louisville, Ky.—*Composition for Kindling Fires.*—March 23, 1869.

Claim.—The linseed-oil, the coal-oil, the pulverized charcoal, the pulverized cannel-coal, the common tallow, the resin, and the sawdust, when compounded or prepared and used for the purpose and in the manner set forth.

88,076.—C. H. Reynolds and George Z. Clark, Croton Falls, N. Y.—*Teapot.*—March 23, 1869.

Claim.—In combination with a teapot, the scraper C, or its equivalent, arranged and operated substantially as and for the purposes herein shown and described.

88,077.—L. H. Rogers, Boston, Mass., assignor to himself and George A. Rogers, same place.—*Toilet-Mirror.*—March 23, 1869.

Claim.—The combination of the hinged bar C, sliding rod D, hinged plate E, and swivel-pin *b*, for connecting a reflecting mirror, F, with the main mirror A, all arranged and operating substantially as herein shown and described.

88,078.—William M. Rumrill, Roanoke, Ind.—*Churn.*—March 23, 1869.

Claim.—The arms B, arranged at right angles to each other, at different heights upon the dasher A, when provided with the butter-gatherers D and the floats C C, slotted at right angles to said arms, as herein described for the purpose specified.

88,079.—Silas C. Salisbury, New York, N. Y.—*Apparatus for Generating Gas and Heating Dwellings and other Buildings.*—March 23, 1869.

Claim.—1. In combination with apparatus or retorts for the manufacture of gas, the application and use of a heating-furnace, consisting of an inner fire-chamber and an outer combustion-chamber, constructed and combined substantially as described, with air-tubes and spaces between the walls of the fire-chamber to supply air, or air and steam, to both such chambers, and the inner chamber being covered with or separated from the combustion-chamber by a perforated arch or top, substantially as and for the purposes set forth.

2. The combination of a heating-furnace, constructed as described in the last claim, with the evaporating vessel G and retorts 1, 2, 3, constructed and operating substantially as and for the purposes set forth.

3. The form and arrangement of the closed or evaporating vessel G, substantially as described, for converting the oil and water into gases, for the purposes set forth.

4. The combination with the evaporating vessel G of the retorts 1, 2, 3, so arranged that the gas is compelled to travel through the entire circuit of each retort, for the purposes set forth.

5. Placing the evaporating vessel G and retorts 1, 2, 3, in the combustion-chamber, or away from immediate or close contact with the burning coal, for the purposes set forth.

6. The combination of the evaporating vessel G and retorts 1, 2, 3, constructed as described, with the gas-washer F and gas-holder I.

7. The method of cleaning the retorts 1, 2, 3, by passing steam through them, substantially as and for the purposes set forth.

8. In combination with the apparatus, substantially as described, for the manufacture of gas, the construction and arrangement of the inclosing hot-air chamber, for heating air or water, for the purposes set forth.

88,080.—Silas C. Salisbury, New York, N. Y.—*Furnace for Upright Steam-Generators.*—March 23, 1869.

Claim.—1. The construction of the sides of the fire or preparing chamber with double or outer and inner walls, and with tubes and air-passages between them for the supply and heating of the air, substantially as set forth.

2. The construction and arrangement of the perforated air-tubes *d*, for supplying air to the fire or preparing chamber, and in combination therewith the perforated inside lining or wall of such chamber, whereby the air is delivered to the fuel in numerous or divided jets on every side of such chamber, and on

the top of and at different points in the burning mass, substantially as set forth.

3. The construction of the fire or preparing chamber, with a continuous arch or top, perforated with numerous holes or openings, substantially as set forth.

4. The combination with the fire-chamber C constructed as described, of the outer combustion-chamber E, such outer chamber being also separately supplied with heated air and steam, substantially as herein set forth.

5. The construction and arrangement of the double walls of the preparing chamber, and the arrangement of the air-tubes and passages between such walls, whereby air or air and steam can be supplied at the same time to the fuel-chamber and to the outer or combustion-chamber, substantially as herein described.

6. The arrangement of the tubes or passages for supplying air to the fire and combustion chambers, with the perforated steam-pipe, for supplying commingled steam and air to such chambers, as herein set forth.

7. The construction and arrangement of the air and steam supplying tubes and pipes and the movable plate for governing and regulating the supply of air and steam, as set forth.

8. The combination with the vertical boiler of the fire or preparing chamber and combustion chamber, constructed and arranged substantially as described.

88,081.—Silas C. Salisbury, New York, N. Y.—*Furnace for Horizontal Steam-Generators.*—March 23, 1869.

Claim.—1. In combination with a horizontal boiler, or a steam-boiler having horizontal flues, the heating-furnace, consisting of an inner fire, or preparing chamber B, and the outer or combustion-chamber F, constructed and arranged substantially as described, whereby atmospheric air, or air and steam combined, can be furnished to both such chambers, and heated in passing thereto, such inner chamber B being also covered with or separated from the outer one by a perforated arch or top, D.

2. The arrangement of the additional combustion-chamber F′, at the rear end of the fire, or preparing-chamber B, or extension of the combustion-chamber F, behind the fire-chamber B, substantially as set forth.

88,082.—Silas C. Salisbury,, New York, N. Y.—*Reverberatory Furnace.*—March 23, 1869.

Claim.—1. In combination with reverberatory furnaces, the application and use of a heating-apparatus, or furnace, having an inner fire or preparing chamber, and an outer or combustion chamber, constructed and arranged substantially as described, and fitted with air-tubes and spaces between the wall of the fire-chamber, to supply heated air or air and steam to both such chambers, and having the inner separated from the outer chamber by means of a perforated arch or top, substantially as and for the purposes set forth.

2. In combination with a reverberatory furnace, having a fire or heating apparatus constructed and operating substantially as described, the arrangement of the steam-pipe *e*, substantially as and for the purposes set forth.

88,083.—Silas C. Salisbury, New York, N. Y.—*Blast, Smelting, and Cupola Furnaces.*—March 23, 1869.

Claim.—1. Constructing the lower part of the furnace of perforated or hollow brick, or brick having air passages, or pipes 1, 2, 3, extending through them, substantially as and for the purposes set forth.

2. In combination with the perforated brick, as described in the foregoing claim, the arrangement of the air-chamber D, substantially as and for the purposes set forth.

3. The combination, with the perforated brick, as and for the purposes described, of the steam-pipe *d*, substantially as and for the purposes set forth.

4. Supplying the hot-air blast by means of the passages 1, 2, 3, or any equivalent means, in numerous small currents or blasts, on every side of and at different points in the lower section of the furnace, for the purposes set forth.

5. A blast, or similar furnace, constructed and arranged substantially as and for the purposes set forth.

88,084.—Silas C. Salisbury, New York, N. Y.—*Furnace for Heating and Annealing Steel-Ingots, &c.*—March 23, 1869.

Claim.—1. A furnace for heating or annealing steel, glass, &c., having its heat-generator constructed in two chambers, substantially as described, and so arranged that heated currents of air, or air and steam, will be supplied to both such chambers, and the inner chamber being separated from the outer by a perforated arch or top, the entire furnace being constructed and operating substantially as and for the purposes set forth.

2. The arrangement of the several separate annealing-chambers, substantially as and for the purposes set forth.

88,085.—John E. Selden, Albany, N. Y.—*Telegraph-Apparatus.*—March 23, 1869.

Claim.—The connections *g* and *i*, or their equivalents, adapted to maintain the connection through one end of the lever C, and thus transmit the weak current to work the type-wheel, until the connection at the other end is established, so as to transmit the strong current to make the impression, all substantially as and for the purposes herein set forth.

88,086.—William F. Semple and R. W. Stephens, Mount Vernon, Ohio.—*Mode of Polishing Hard-Rubber and other Articles.*—March 23, 1869.

Claim.—The combination of the wheel and belt, so as to operate substantially as described.

88,087.—G. B. Shafer, Delta, Ohio.—*Grain-Binder.*—March 23, 1869.

Claim.—1. The winding-head B^3, constructed and arranged substantially as and for the purpose specified.

2. The combination with the same of the cutter *e*, arranged and operated substantially as and for the purpose specified.

3. The winding-head C, provided with the roller C^1, and otherwise arranged, substantially as and for the purpose specified.

4. The combination of the winding-heads B^3 and C, when arranged to operate together, substantially as and for the purpose specified.

5. The combination with the winding-head C of the cutter F, arranged and operated substantially as and for the purpose specified.

6. The loopers E adapted to receive the yarn upon their hooked ends, to form a loop, through which the pin E^4, upon the rod E^3, draws the yarn, as said rod is reeded by the spring E^5, all constructed and arranged as described, for the purpose specified.

7. The combination, with the loopers E, of the rod E^3, arranged as described, and provided with the hook E^4, substantially as and for the purpose specified.

8. The combination, with the loopers E and the hooked rod E^4, of the winding-head C, substantially as and for the purpose specified.

9. The combination of the winding-heads B^3 and C and the loopers E, and hooked shaft, substantially as and for the purpose specified.

10. The receiver A, constructed of two parts, and hinged together, as described, and provided with the balance-weight A^6 and plunger I, substantially as and for the purpose described.

11. The combination, with the winding-heads B^3 C and the looping-apparatus of the receiver, substantially as and for the purpose described.

12. The arrangement of the stop-levers G^1, disks G^2, and clutches G, and hand-cranks A^2 and A^3, substantially as and for the purpose specified.

88,088.—Isaiah Shaw, Four Corners, Md.—*Potato-Digger.*—March 23, 1869.

Claim.—1. A plow-beam *a a′ a″*, constructed substantially as described.

2. The combination of the plow-beam *a a′ a″*, constructed as described, with the shoe *b*.

3. The combination of the beam *a a′ a″*, brace *c*, pillars *d*, and shoe *b*.

4. The adjustable-wings *f f*, in combination with share S, substantially as described.

5. The projecting pieces *l l*, loosely attached to the shoe *b*, as and for the purpose set forth.

6. The combination of the share S, adjustable-wings *f f*, and projecting-pieces *l l*, substantially as described.

7. The combination of the beam *a a' a''*, shoe *b*, share S, adjustable-wings *f f*, and projecting-pieces *l l*, substantially as described.

88,089.—JOHN P. SIMMONS, Schoolcraft, Mich.—*Washing-Machine.*—March 23, 1869; antedated March 18, 1869.

Claim.—1. The movable frame E, wedge I, cams O, standards H, reciprocating-rod M, lever L, guide J, and pin K, substantially as herein described and for the purposes specified.

2. The combination and arrangement of the above-named parts with the frame A, tank B, perforated plates F, rollers G, and rub-board N, when constructed, arranged, and operating substantially as herein described and for the purposes specified.

88,090.—ALONZO SKINNER, Warren, assignor to LUCIUS A. SKINNER, West Novi, Mich.—*Suspended Portable Fence.*—March 23, 1869.

Claim.—The gallows-frame, composed of the parts D and E, in combination with board fence A, when constructed and arranged substantially as herein described.

88,091.—HENRY A. SOLIDAY, Doylestown, Ohio.—*Knife-Head for Harvesters.*—March 23, 1869.

Claim.—The above-described knife-head, made in two sections, with filling between them, and having a hole to fit a cylindrical end of the connecting-rod, one section of the head being adjustable, substantially as set forth.

88,092.—GEORGE B. STACY, Richmond, Va.—*Machine for Hackling Corn-Husks.*—March 23, 1869.

Claim.—1. The arrangement of two or more drums, or cylinders, so as to produce the results by their successive action set forth, substantially as herein described.

2. The arrangement of the series of cylinders in an inclined plane, or any other relation that will admit the tangential effect of the stroke of the cylinder-teeth upon the buts of the shucks, as they pass through the machine, substantially as and for the purposes explained.

3. The slats G and their arrangement relatively to the cylinders and concaves, substantially as herein described.

4. The relative size and arrangement of the teeth in both cylinders and concaves, substantially as herein represented and described.

88,093.—LORONZO J. STANNARD and MARTIN L. PERRY, Newark, N. Y.—*Apparatus for Turning Logs.*—March 23, 1869.

Claim.—The arrangement of the shafts A, C, and G, with their friction-wheels and pulleys, in combination with the levers K, L, and brake O, the whole constructed and operating substantially in the manner herein set forth.

88,094.—D. H. STEPHENS, Riverton, Conn.—*Rule-Clamp.*—March 23, 1869.

Claim.—As a new article of manufacture, the rule-clamp herein described, consisting of the forked piece B, having the stop C and beveled jaws *a*, the clamp-frame D, screw *b*, and nut *e*, all constructed, arranged, and operating as herein described, for the purpose specified.

88,095.—J. H. STEPHENS, Orange Court-House, Va.—*Churn.*—March 23, 1869.

Claim.—The arrangement of the stationary frame C D and rotating frames K L K L, when the latter are placed at right angles from each other, and one above the other, upon the shaft E, within the stationary frame C, and within the polygonal churn-box A, all constructed, arranged, and operating as herein shown and described.

88,096.—J. C. THAYER, Dunton, Ill.—*Milk-Cooler.*—March 23, 1869.

Claim.—1. The combination of the milk-tank C, spring G, valve S, discharge-pipe J, water-tank D, and cooler A B, as and for the purpose set forth.

2. The cooler A B, removable end-pieces K, rods L, eyes *m m*, standards H, spring G, discharge-pipe J, arm I, valve S, plate R, and tanks C D, as shown and specified.

88,097.—CHARLES N. TYLER, New York, N. Y.—*Clothes-Pin.*—March 23, 1869.

Claim.—So bending the wire spring of a clothes-pin as to produce the main tension at or near the middle of the clamping-rollers, and an equal or nearly equal pressure at the opposite ends of the rollers, substantially in the manner set forth.

88,098.—JUDSON VAN DUZER, Otisville, N. Y.—*Double Cooler.*—March 23, 1869.

Claim.—A cooler, in which at once two kinds of liquids can be cooled, as set forth, it consisting of the vessels E, D, and A, arranged, one within the other, in combination with the pipe F, substantially as described, all operating as specified.

88,099.—WILLIAM W. WADE, Medford, Mass.—*Button.*—March 23, 1869; antedated March 5, 1869.

Claim.—A back, A, and eye, or shank, *e*, made in one and the same piece of metal, by cutting and swaging up into proper form, substantially as described.

88,100.—WILLIAM B. WADSWORTH, Cleveland; Ohio.—*Manufacture of Chains.*—March 23, 1869 antedated March 8, 1869.

Claim.—1. The combination of the form A, die *d*, and hooked lever *l f*, constructed and arranged substantially as described.

2. The combination of the turning-iron, Fig. 4, with the form A and die *d*, substantially as described.

3. The combination, substantially as herein described, of the form A, die *d*, and levers H H and *l f*.

4. In combination with the devices set forth in the first clause of claim, the seat S, arranged substantially as described.

88,101.—Canceled.

88,102.—ZENAS CRANE WARREN, Brooklyn, N. Y., assignor to HENRY C. HULBERT, same place.—*Manufacture of Paper.*—March 23, 1869.

Claim.—1. The composite sizing for paper, hereinbefore described, containing starch-material and nitric acid, as constituent ingredients.

2. The combination of the said composite sizing (containing starch-material and nitric acid as constituent ingredients,) and paper, as described, the whole constituting a new article of sized paper.

88,103.—JOSEPH E. WATTS, Lawrence, Mass.—*Steam-Trap.*—March 23, 1869.

Claim.—The arrangement, with the outer case A, its inlet and outlet ports and valve-seat, of the valve-rod and valve within said case, and the gange and spring for actuating and controlling said valve-rod, substantially as shown and set forth.

88,104.—GEORGE WELLS, Bethel, Conn.—*Conduit for Invalid-Chairs.*—March 23, 1869; antedated March 11, 1869.

Claim.—The conduit A', in combination with the frame or seat A, constructed and operated substantially as described.

88,105.—HENRY WHITNEY, East Cambridge, Mass.—*Show-Bottle.*—March 23, 1869.

Claim.—As a new article of manufacture, an apothecary's show-bottle, made as hereinbefore described, with the body of a glass of one color, and the neck of uncolored or transparent glass, and their junction covered and strengthened as set forth.

88,106.—CHARLES WILEY, Hannibal Centre, N. Y.—*Alarm-Bell.*—March 23, 1869.

Claim.—The burglar-alarm, composed of the bell A, case B, hammers C C, spring E, shaft *d f*, and detents K *k g*, as herein shown and for the purpose described.

88,107.—DAVID WILCOX, Boston, Mass., assignor to himself, W. H. SLOCUM, and W. A. BROWN, same place.—*Hat.*—March 23, 1869.

Claim.—A hat, whose brim is formed of twice the required size, and folded upon itself, the parts being united by the stiffening material, or cement, applied to the inner surface of the folded parts, substantially as herein described, and for the purpose specified.

88,108.—E. J. WOLFGANG and J. M. KENREIGH, Salem, Ohio.—*Gate.*—March 23, 1869.

Claim.—The combination of the spring J, latch D, spring E, or equivalent spring, cords F, arms G, arms I, and the supporting-posts to which said arms I are attached, with each other, and with the gate A and post B, substantially as herein shown and described, and for the purposes set forth.

88,109.—JOHN WOODVILLE, Cincinnati, Ohio. *Plane-Guide.*—March 23, 1869.

Claim.—1. The combination of the clamping bolts E and the sliding bolts I, with the supporting-strip A and grooved strip C, whereby said strips are held together, for dressing a board with either parallel or tapering sides, substantially as herein shown and described.

2. The combination, with the strips A and C, of the adjustable buttons K and pivoted wedges M, substantially as and for the purpose set forth.

88,110.—JOHN YOUNG, Amsterdam, N. Y.—*Clothes-Wringer.*—March 23, 1869.

Claim.—Connecting the clamping-bar E to the wringer-post, by a metallic spring-fastening, in such a way that the spring throws the clamping-bar off from the post, when released from pressure.

88,111.—WILLIAM ZEIGER, Elmore, Ohio.—*Potato-Masher.*—March 23, 1869.

Claim.—1. A potato-masher, consisting of the cutting-apparatus B F G, and of the grinding-mill A E, all arranged and operating substantially as herein shown and described.

2. Attaching the fixed cutters G to a plate, H, which is fastened to the hopper B, so that the cutters are fitted through slots in the side of the same, substantially as herein shown and described.

88,112.—J. J. ANDERSON, Rochester, Pa.—*Cooking-Stove.*—March 23, 1869.

Claim.—1. The combination and arrangement of the elliptic oven B, double-arched diving and return-flues, and doubly-curved turn-plate C, substantially as and for the purposes herein specified.

2. The arched plate J, over the central return-flue, in combination with the concave depression under said flue, substantially as herein specified.

3. The removable doubly-curved turn-plate C, substantially as and for the purpose set forth.

4. The construction of the fire-back G, with smooth front, and ribs *a a*, on the concave side, crossing the same transversely, for the purpose set forth.

88,113.—WILLIAM H. ANDREWS, New Haven, Conn., assignor to BURTON MALLORY, same place.—*Door-Key.*—March 23, 1869.

Claim.—A door-key, consisting of the bit A, and spindle B, hinged thereto, the said spindle being grooved, so as to receive the extension C, the whole constructed so as to operate substantially as set forth.

88,114.—ISAIAH B. ARTHUR, Sidonsburg, Pa.—*Gig-Saw.*—March 23, 1869.

Claim.—The arrangement of the adjustable strap R, the saw S, attached to the levers by flexible straps *s s*, the levers L L′, having segment-heads *l l*, the working-beam M, provided with a counter-balance, *w*, arranged upon its end, the shaft D, the crank *j*, the pitman J, the weighted wheel G, the pitman C, the arm E, having an adjustable connection with pitman C, and rigidly affixed to lever L at its fulcrum, the belt I, the adjustable pitman K, the wheel K′, and the frame F, table T, post P, arm A, and brace B, all constructed, connected, arranged, and adapted to each other, to operate together in the manner and for the purposes set forth.

88,115.—IRA BARROWS, Hermon, N. Y.—*Milking-Stool.*—March 23, 1869.

Claim.—The combination and arrangement of the seat A, leg *c*, arm *b*, and disk *d*, substantially as shown and described.

88,116.—JOHN P. BEATTY, Norwalk, Conn.—*Hat.*—March 23, 1869; antedated February 2, 1869.

Claim.—As a new article of manufacture, a hat, having its sweat secured in place by a single wire, arranged and attached in a zigzag form, between its lower edge and the body of the hat, and so as to leave its upper edge loose, substantially as herein shown and described.

88,117.—E. U. BENEDICT, Chicago, Ill.—*Spring.*—March 23, 1869.

Claim.—The combination of the follower or spring-bar A, carrying a concave-curved plate *a*, and open guide D, the compound elliptic spring, formed of leaves, and the sill, or bolster B, with end-guides and supports, *g g*, substantially as described.

88,118.—SAMUEL S. BENT, Port Chester, N. Y.—*Coop for Poultry.*—March 23, 1869; antedated March 22, 1869.

Claim.—The feeding trough and stopper, combined with the open-work metallic plate, for closing the opening or openings in the lower part of said plate, for the purposes and substantially as set forth.

88,119.—DANIEL S. BIGLER and WILLIAM N. MCCRACKEN, Monaghan Township, Pa.—*Machine for Cleaning Stables.*—March 23, 1869.

Claim.—1. The combination of frames A and B, when constructed as and for the purpose specified.

2. The frame A, in combination with rake-head *m*, rods *n* and *k*, the whole constructed and operating in the manner substantially as described.

3. The shafts P P, when combined with cross-bar C, and operated in the manner described.

4. The guards *b b*, in combination with frame B and axle E, in the manner and for the purpose substantially as set forth.

5. The whiffletree F, when linked to the bar *h*, in the manner and for the purpose substantially as described.

88,120.—JOHN B. BLAIR, Philadelphia, Pa.—*Velocipede.*—March 23, 1869.

Claim.—1. In combination with the friction-bar *d* and disk H, the jam-nut which clamps the foot-pieces and disk, by means of which the friction-bar is converted into a rotating crank, substantially as and for the purpose described.

2. The springs attached to the collar, in combination with the spindle and head, substantially as and for the purpose described.

88,121.—JAMES BLAKE, Scranton, Pa., assignor to BLAKE AND COMPANY, same place.—*Auxiliary Table.*—March 23, 1869.

Claim.—1. The auxiliary table, or platform, united with the sewing-machine stand by a horizontal hinge-joint, in the manner herein described, so that, when raised, it will form a prolongation or continuation of the base-plate of the sewing-machine, and when lowered, it will be below the top and by the side of the stand, as and for the purposes set forth.

2. Forming the auxiliary table, when united with the stand, or other fixture or part to which it is applied, as herein set forth, of two sections hinged together in the manner and for the purposes described.

3. The combination, with the stand, or other fixture to which they are applied, of the arms or brackets for supporting the table or other auxiliary attachment, the same being slotted and jawed, and hinged to the said stand, or other fixture, in the manner described, whereby the table or other attachment carried by said brackets may, when raised, be clamped and held securely in position, as set forth.

4. Hinging the supporting-brackets or arms of the auxiliary table to the under side of the stand, or other fixture to which they are applied, substantially as and for the purposes shown and specified.

88,122.—Etienne Boileau and Charles Mesnier, St. Louis, Mo.—*Butt-Hinge.*—March 23, 1869.

Claim.—The ferrule or ring D, having the notches E E′, combined and arranged with the wings B and C of the hinge, the latter having the lugs G G′, whereby the hinge may be used either right or left, and the shutter fastened both open and closed, all as described and shown.

88,123.—Richard H. Boughner, East Germantown, Ind.—*Clothes-Drier.*—March 23, 1869.

Claim.—A clothes-drier, combining in its construction the following parts, viz, the crossed end-pieces, the pieces C C, and rounds B, B^1, B^2, B^3, and C′, the horizontal pieces D, with rounds D^2 and pins D^3, said parts being arranged, in relation to one another, substantially as described.

88,124.—James H. Brookmire, St. Louis, Mo.—*Elevating and Weighing Apparatus.*—March 23, 1869.

Claim.—The platform B^1 B^2 and side frame C, cross-bar D, and lifting-rope E, when combined with the scale-works, and lift-bar I, and scale-beam K, substantially as set forth.

88,125.—George W. Brown, Providence, R. I., assignor to himself and A. T. Gifford, same place.—*Blacksmiths' Swage.*—March 23, 1869.

Claim.—1. A revolving swage for blacksmiths' use, with an assortment of both curved and angular, or dissimilar grooves cut upon its surface, in the direction of its axis, substantially as described.

2. A revolving swage, for blacksmiths' use, as herein described, when furnished with a tapering trunnion, substantially as specified.

88,126.—Charles N. Brumm, Minersville, Pa.—*Meat-Chopper.*—March 23, 1869.

Claim.—1. The combination of the toothed cam R and sleeve S with the lever M, pivoted, as specified, for producing an oscillating as well as a revolving motion, by means of the worm-gearing, substantially as specified.

2. The combination of the slotted shaft D, oscillating beam M, with its knives O O, and guide P, with the cam R and sleeve S, all constructed and operating substantially as and for the purposes herein set forth.

3. The arrangement of the shaft J, miter-wheels V and T, with the three-pronged star I, notched wheel G, and worm F, for the purpose of producing the requisite oscillating and rotary motion of the beam M, substantially as herein set forth.

88,127.—Robert I. Burbank, Boston, Mass.—*Hay-Rake.*—March 23, 1869.

Claim.—The belt or band H, and pulleys C and G, the latter provided with handles *a* and *b*, in combination with the slotted tongue E and the axle A, whereby all the power or force employed in operating the rake may be exerted in a forward direction, and at the same time as a motive-power, or force, in moving forward the rake itself, for the purpose substantially as described.

88,128.—Richard Cadle, Shawneetown, Ill.—*Blacking-Box.*—March 23, 1869.

Claim.—1. A blacking-box, constructed with spurs *c* on its bottom, substantially as and for the purposes specified.

2. The combination and arrangement of the block E, with its spurs, as described, with the block D and standards C, when the same are constructed as specified, and operated by suitable power, for the purpose of forming the spurs *c*, on the bottom of the box.

88,129.—Lewis O. Cameron, Allegheny City, Pa.—*Sash Lock and Bolt.*—March 23, 1869.

Claim.—In the sash-bolt, as shown, the combination and arrangement of the part C with the lever D and bolt, or catch *f*, as constructed, arranged, and operating in the manner and for the purpose set forth.

88,130.—Richard Campion and James W. Thomson, jr., Camden, N. J.—*Car-Coupling.*—March 23, 1869.

Claim.—1. The combination, with the pawl and draw-head, of the oval-shaped ring, as and for the purpose described.

2. The combination, with the draw-head and coupling-link, of the pawl, constructed as described, and slotted eccentrically, as set forth, to prevent strain on its pivot.

3. Forming the two recesses in the draw-head by a pin, or stud-piece, of steel, or other suitable metal secured in the draw-head, as described.

88,131.—Moses F. Chandler, Boston, Mass.—*Boot.*—March 23, 1869.

Claim.—A boot, made of canvas, the entire foot of which is covered and combined with leather, in the manner and for the purpose set forth.

88,132.—Giacomo Chelini, Washington, D. C.—*Extension-Table.*—March 23, 1869.

Claim.—The movable frames I and I, and detents K K, resting in recesses cut in the sliding bars of an extension-table, substantially as and for the purpose set forth.

88,133.—A. B. Clemons, Ansonia, Conn.—*Knob-Latch.*—March 23, 1869.

Claim.—A knob-latch, consisting of the slotted cylinder A, face-plate B, and shoulders *d*, formed in one and the same piece, combined with the latch-bolt D, spindle E, yoke F, spiral spring, and the hub C, bearing in the concave end of the cylinder, all constructed and arranged as shown and described.

88,134.—William A. Cleveland, Waterville, N. Y.—*Medicine for Cure of Ring-Bone, Spavin, &c.*—March 23, 1869.

Claim.—The medical compounds above described, to be compounded and prepared substantially as above described, and for the purposes described.

88,135.—Jefferson L. Coburn, Mineral Point, Wis.—*Plastering-Machine.*—March 23, 1869.

Claim.—1. The combination of the carriage, or frame A, the hopper B, the vibratory bucket, or discharger *b*, the frame F, the endless carrier, or elevator C, and its series of trowels, the whole being arranged and provided with mechanism to enable them to operate, substantially as and for the purpose described.

2. In combination therewith, the chute and its gauge-tongue, provided with mechanism for operating them, substantially as described.

3. The combination of the smoother, the endless elevator C, and its series of trowels, the frame F, the hopper, the vibratory discharger *b*, and the carriage A, the whole being to operate as set forth.

4. The combination of the gauges S S with the frame F, the endless carrier C, and its series of trowels.

5. The combination of the springs P P with the frames F and N, the endless carrier C, its series of trowels, the carriage A, the hopper B, and the discharger *b* thereof, such springs being for the purpose specified.

88,136.—Alexander Connelly, Milan, Ind.—*Cultivator.*—March 23, 1869.

Claim.—The curved teeth G H I J K, secured to the rearwardly-curved head, or cross-bar F, the said teeth having an outwardly-diminishing length, as represented and described.

88,137.—Jacob Cornwell, Kalamazoo, Mich., assignor to himself, David B. Merrill, and William H. McCourtie, same place.—*Bolt-Feeder.*—March 23, 1869.

Claim.—1. The combination of the rake C, hoop F, cylinder H, with its bottom, L, revolving disk N, spout S, and bolt T, all arranged as and for the purposes set forth.

2. The combination of the hoop F, shaft M, revolving platform N, and the movable cross-bar P, supporting said shaft, arranged to operate in the manner shown and described.

3. In combination with the shaft M and revolving disk N, the adjustable supporting-bar P and lever R, arranged to operate in the manner and for the purposes specified.

88,138.—William Craine, South Brookfield, N. Y.—*Scoop.*—March 23, 1869.

Claim.—Providing the handle A with mortise-shoulders, B C, and so constructing the scoop that it may be attachable to and detachable from the handle, substantially as and for the purpose set forth.

88,139.—John P. Cranford, Brooklyn, N. Y.—*Composition-Pavement.*—March 23, 1869.

Claim.—The composition pavement, formed of layers, applied to and combined with a stone pavement, in substantially the manner specified.

88,140.—George C. Cranston, South Bend, Ind.—*Lamp for Destroying Insects.*—March 23, 1869.

Claim.—The vessel A, constructed with deep sides, and provided with grooves *b b*, in combination with the adjustable lamp B and bail D, all arranged as and for the purpose described.

88,141.—Samuel B. Cushing, Providence, R. I.—*Piles.*—March 23, 1869.

Claim.—The arrangement, application, and adaptation of timber, iron, or other casing, and concrete, or material, substantially as described, for the purpose mentioned.

88,142.—Joseph H. Deniger, Bridgeport, Conn.—*Tempering Steel Springs.*—March 23, 1869.

Claim.—The mode, method, or process herein described, of tempering steel springs for railroad-cars, carriages, &c.

88,143.—Dewitt C. Devall, New York, assignor to John B. Schenck, Matteawan, N. Y.—*Cutter for Tonguing and Grooving.*—March 23, 1869.

Claim.—The tonguing and grooving cutters when constructed and operating as herein shown and described, when adapted to vary the depth of the tongue and groove to be cut, in the manner specified.

88,144.—Paul Dismukes, Gallatin, Tenn.—*Clover-Harvester.*—March 23, 1869.

Claim.—1. The combination of the reel E, cutter D, and comb C, all secured to the adjustable frame F, and connected to the body of the machine, substantially as shown and described.

2. The combiuation of the comb C and the reciprocating sickle O, arranged to operate substantially as described.

88,145.—William Foster Dodge, Newark, N. J.—*Blind-Wiring Machine.*—March 23, 1869.

Claim.—The yielding guide F, supported by the spring *b*, on a central bearing, *c*, so as to have a rocking, or vibrating motion, in combination with the fixed rack C, substantially as shown and described, as an improvement on the patent of T. R. Crosby, dated December 13, 1859.

88,146.—Jacob Dourson, Columbus, Ohio.—*Sofa-Bedstead.*—March 23, 1869.

Claim.—1. The hinge of the mattress-frame, made in sections *h i j k*, jointed together, substantially as herein described, for the purposes set forth.

2. The combination of the mattress-frame, having jointed end-pieces, and the folding head and foot sections, constructed substantially as and for the purposes herein set forth.

88,147.—Zachariah Dowden and Charles T. Anderson, Clarksburgh, Md.—*Flood-Fence.*—March 23, 1869.

Claim.—1. In combination with the hinged flood-panel B^1, and the clips C^2, c^2, c^3, or their equivalent, the hinged float D, arms d^1 d^1, and sliding lock bolts d^2 d^2, arranged and adapted to operate substantially as represented and described, for the purpose specified.

2. The clips or connections C^1 C^3, constructed with the perforated ends c^1, as represented and described, in combination with one or more flood-panels B^1, substantially as and for the purposes set forth.

88,148.—Samuel D. Edgar, Dayton, Ohio.—*Churn.*—March 23, 1869.

Claim.—The arrangement of the perforated partition B, when extending above the box A, so as to form a fulcrum for the horizontal lever C, in combination with the dasher-shafts E E, and the slotted sliding lids G G, all substantially as herein specified

88,149.—H. F. Edwards, Worcester, Mass., assignor to himself and B. I. Peabody, same place.—*Adjustable Pole-Attachment for Carriages.*—March 23, 1869.

Claim.—1. The combination, with the rear cross-piece of a carriage-pole, of the horizontally-sliding eye-pieces E E, having their axis or line of motion at right angles to the pole, substantially as shown and described.

2. The combination, with the cross-piece B and ends *j j*, of the eye-pieces J J, substantially as and for the purposes set forth.

3. The combination, with the ends of the cross-piece B, and the ends G, of the braces F, of the clips H H and guide-pieces C, substantially as and for the purposes set forth.

4. The combination, with the slide-pieces E E, brace-ends G G, clips H H, and eye-pieces J J, of the thumb-screws *m* and *n*, substantially as shown and described.

88,150.—John Fahrney, Boonsborough, Md.—*Mop-Head.*—March 23, 1869.

Claim.—The mop-head above described, consisting of the hook *a*, shoulder *b*, handle *c*, and a spring-catch arrangement, *n d*, constructed to operate together, substantially as described, and for the purpose set forth.

88,151.—Henry J. Ferguson, Whiting, N. J.—*Velocipede.*—March 23, 1869.

Claim.—1. The saddled or seated lever, in the manner and for the purposes named.

2. The combination of the saddled, or seated lever, with the handled levers, in the manner and for the purposes named.

3. The combination of stirrup and strap, roller, shaft, and bevel-segments, in the manner and for the purposes named.

88,152.—William C. Fisher, Charlestown, Mass.—*Shutter-Fastening.*—March 23, 1869.

Claim.—The within-described fastening, consisting essentially of a bolt, D, provided with two or more notches and a weighted pawl, H, substantially as set forth.

88,153.—Mark Flanigan, Detroit, Mich.—*Spring-Bed Bottom.*—March 23, 1869.

Claim.—The rivet, or bolt C, passing through slot B, and covered by an elastic sleeve, D, in combination with the springs F, with hooks G, and round bars E, when arranged, constructed, and operating as herein shown and described.

88,154.—Addison C. Fletcher, New York, N. Y.—*Railway-Car Wheel.*—March 23, 1869.

Claim.—An elastic car-wheel, formed of an independent rim-portion, A, side, or body-plates B B, arranged to freely clamp an interior flange, *b*, of the rim, and carrying in between them independent springs C C, constructed to carry and divide the strain consequent on deflection of the rim in various directions, relatively to the ground, or rail-surfaces on which the wheel travels, substantially as specified.

88,155.—Addison C. Fletcher, New York, N. Y.—*Car-Spring.*—March 23, 1869.

Claim.—1. The combination, with the divided, hoop-like spring B, of the outside rubber strips, or springs *d d*, for action together, as specified.

2. In combination with the spring B, and outside rubber strips *d d*, the corrugatious *c e*, arranged in opposite sides of the recess in which the spring B lies, substantially as described.

3. The combination of the rubber filling, *f*, with the divided, hoop-like spring B, essentially as specified.

88,156.—James S. Fowler, Davenport, Iowa.—*Harvester-Rake.*—March 23, 1869.

Claim.—The devices herein described for operating the rake by hand and foot, consisting mainly of

the treadle *w*, levers *s* and *i*, shaft *m*, rods *u*, *v*, and *n*, arms *o* and *t*, jointed levers F, car E, with its track and arm, connected with the rake as described, when constructed, combined, and operating substantially as and for the purposes specified.

88,157.—J. J. FREY and A. J. FREY, Hook's Point, Iowa.—*Bee-Hive.*—March 23, 1869.

Claim.—1. The moth-chamber A, having the tubes a^4 and passages a^6, as and for the purpose described.

2. The bee-pipe a^1, with slide a^5, when combined with the case a^2, in the manner described, for the purpose set forth.

3. The honey frames B^1, constructed as described, when used in connection with the rods b^2 b^3, in the manner described, for the purpose set forth.

4. The sliding boxes B^4, covering ventilators B^3, when constructed and arranged substantially as described, for the purpose set forth.

5. The hive A B C, provided with the ventilators A^1, B^3, B^3, and D, when constructed and arranged substantially as described, for the purpose set forth.

88,158.—M. B. GOODELL, Worcester, Mass.—*Folding Bedstead.*—March 23, 1869.

Claim.—The combination and arrangement, with a stationary case and its movable front, of a sliding and unfolding bed-frame, the two parts of which are pivoted to and connected with said case and movable front, respectively, substantially in the manner and for the purposes set forth.

88,159.—D. A. GORHAM, Norway, Me.—*Hold-back.*—March 23, 1869.

Claim.—A self-releasing breeching-hook, formed by the combination and arrangement of the hook B with the cup A, substantially as herein described.

88,160.—CHAUNCEY O. GREENE, Troy, N. Y.—*Water-Reservoir for Cooking-Stoves.*—March 23, 1869.

Claim.—1. In combination with a cooking-stove, or range, the location and suspension of a hot-water reservoir, or tank B, from below or under the ash-pit C, and its side hearth-plates E E, and next to or adjoining the oven H thereof, in manner substantially as hereinbefore described and shown, for the purpose set forth.

2. In cooking-stoves, or ranges, the combination and attachment of the water-reservoir, or tank thereof, with and to the hearth-plates E E and ash-pit C, when extended outward from below the fire-grate, or fire-place, I, in manner so as to form, together, a covering for the top of said reservoir B, and also to hold and support the same in permanent suspended position from thereunder, substantially as herein set forth.

3. The combination of the hinged lifting, or removable cover or covers F, with the hearth-plates E E, opening G, ash-pit C, and water-reservoir, or tank B, of a cooking-stove, when arranged at the side, or sides of the ash-pit C, and so as to form a part of the hearth's surface, adjoining said ash-pit, when closed over said water-reservoir opening G, in manner substantially as set forth and shown.

4. Forming the end-wall, or side of a cooking-stove, or range, below the hearth-plates D E and ash-pit C, and next the oven H thereof, by means of a water-reservoir, or tank's side, J, when arranged in combination therewith, in manner substantially as described and shown.

5. As arranged with a diving-flue cooking-stove, or range, the combination of the hearth-plates E E, ash-pit C, and water-reservoir, or tank, B, when suspended therefrom, as described, with the heating-chamber *d*, oven H, and oven-bottom flue-space K, in manner substantially as herein shown, for the purpose set forth.

88,161.—J. DURELL GREENE, Cambridge, Mass.—*Breech-Loading Fire-Arm.*—March 23, 1869.

Claim.—1. A breech-loading gun, with its breech-piece mortised through, when provided with a breech-bolt arranged to move longitudinally in the axial line of the bore, and a mechanism adapted to operate on the cartridges, substantially as described.

2. The breech-bolt, in combination with the sleeve, breech-piece, and hammer, when arranged and constructed as described, so as to prevent, in all positions of the parts, access of dirt and moisture to the mechanism.

3. In combination with the breech-bolt and the breech-piece, the slotted sleeve *r*, bearing the hooks *o o* and tang *v*, and fitting on the breech-bolt and in the breech-piece, substantially as described.

4. The breech-bolt, as made, with the right-angular groove 5 6, and sere-embracing slot, operating on the cartridge-shell extractor, to start and draw back the shell by rotation of the breech-bolt, substantially as described.

5. The breech-bolt, as made, with the offset 3 in the sere-slot, and the spring-catch *u* in the groove 5 6, and combined with the sleeve, to permit the separate and conjoined movements of both the bolt and the sleeve at the rear of the mortise, substantially as described.

6. As a safety-device, the sere-piece *j*, with the cross-groove *s*, arranged to operate in the sere-groove, to prevent withdrawal of the sere till the breech-bolt is fully turned, in the act of locking the cartridge in its chamber, substantially as described.

7. The attachable cartridge-pannier, constructed and arranged to operate substantially as set forth.

88,162.—CHARLES F. HADLEY, Chicopee, Mass., assignor to CLIFFORD ARRICK, St. Clairsville, Ohio.—*Rotating-Oscillating Steam-Valve.*—March 23, 1869.

Claim.—1. The valve-spindle C, constructed with tapering arms D D, arranged with the valve B, in the manner herein set forth.

2. The cam E, with the lugs F F, in combination with the tappet G and spiral spring H, as herein set forth.

86,163.—CHARLES F. HADLEY, Chicopee, Mass., assignor to CLIFFORD ARRICK.—*Device for Converting Rotary into Reciprocating Rectilinear Motion.*—March 23, 1869.

Claim.—1. The arrangement of the rack C, pinion D, and clutch I, in combination with the drum E, cord F, and arms G G attached to the slider A, in the manner and for the purpose set forth.

2. The arrangement by which motion is obtained for the slider A from opposite sides of the pinion D and drum E, or equivalents, in combination with the rack C, or cord F and clutch I, in the manner and for the purpose above described.

88,164.—JOHN W. HANSEL, Peoria, Ill.—*Sash-Holder.*—March 23, 1869.

Claim.—The spring G, provided with the knob H, in combination with the arm B and suspension-bolt D, and dog L, all arranged and operating as herein shown and described, and for the purposes set forth.

88,165.—A. B. HENDRYX, Ansonia, Conn.—*Paper Box.*—March 23, 1869.

Claim.—A paper box, in which the angles are secured by means of the tails *d* on one side, turned into corresponding recesses on the other, substantially as set forth.

88,166.—ROBERT HILL, St. Louis, Mo.—*Clay-Molding Machine.*—March 23, 1869.

Claim.—1. The core B, supported upon the base-block A, when arranged and combined with the sliding piece D and bolt *b b'*, substantially as set forth.

2. The stationary mold C and core B, when combined with the rammers E, and ring L, and guides M, substantially as set forth.

3. The rammers E, ropes G, and cams H, substantially as set forth.

4. The ring L, pitman N, crank N', shaft O, worm-wheel *o*, and worm P, when operating substantially as set forth.

88,167.—DANIEL HODGKINS, Newburyport, Mass.—*Knife-Scourer and Sharpener.*—March 23, 1869.

Claim.—1. Holding the channeled rubbers by a

jaw, pivoted to the box, holding the seouring-material substantially as set forth,

2. So constructing the box F and its jaw. and hanging them to the standard E, that the spring G shall both hold the jaw and press the box and rubbers down, substantially as above described.

88,168.—John Holtz, Baltimore, Md.—*Automatic Boiler-Feeder.*—March 23, 1869.

Claim.—A device for percussing water of condensed steam to the boiler, substantially as shown and described.

88,169.—Joseph Eves Hover, Philadelphia, Pa.—*Paper-Sizing.*—March 23, 1869.

Claim.—A composition, consisting of the ingredients described, for the purpose specified.

88,170.—Peter H. Jackson, New York, N. Y.—*Steering-Apparatus.*—March 23, 1869.

Claim.—1. The combination, with the steering screw-shaft B and nuts F F, of the guide-rod G, arranged over said screw-shaft, and serving to guide both nuts, or screw-boxes, and prevent them from turning, substantially as specified.

2. The combination of the guide-rod G and vertically-sliding boxes D D, with the screw-shaft B and nuts F F, essentially as shown and described.

88,171.—William H. Jackson, Salem, Mass., assignor to George B. Upton, David D. Stackpole, and Samuel H. Gookin.—*Powder for Blasting and other Purposes.*—March 23, 1869.

Claim.—The combination of gunpowder or other explosive compound with vegetable fiber, prepared as above described, for the purpose specified.

88,172.—P. N. Jacobus, Flatbrookville, N. J.—*Shears.*—March 23, 1869.

Claim.—1. The slot *c*, formed in the part A of the shears, in combination with the curvilinear portion *b* of the part A′, substantially as and for the purpose set forth.

2. The arrangement of the bows or loops to the handles of a pair of scissors or shears, in such manner as that either bow or loop lies diagonally across the handle to which it belongs, and, where both loops are so twisted or set, the same made to occupy reverse positions relatively to each other, substantially as shown and described.

88,173.—Jacob Jameson, Philadelphia, Pa.—*Manufacture of Iron and Steel.*—March 23, 1869.

Claim.—1. The herein-described process of making iron or steel direct from the ore, with mineral coal, substantially as set forth.

2. The furnace for treating ores, and producing iron or steel direct therefrom, when constructed and arranged to operate substantially as herein described.

88,174.—Charles C. Johnson, Springfield, Vt.—*Toy-Hoop.*—March 23, 1869.

Claim.—1. The application, to a toy-hoop, of a series of bells, in such a manner as to be struck successively, or in unison, by the operation of spring-hammers, actuated by pins brought into juxtaposition by the revolution of the hoop, substantially as set forth.

2. In combination therewith, the retaining-stop *f*, for preventing the backward rotation of the hoop, substantially as described.

88,175.—Job Johnson, Samuel J. Smith, and Simon Ingersoll, Brooklyn, N. Y., assignors to Job Johnson and Samuel J. Smith.—*Clothes-Line Fastener.*—March 23, 1869.

Claim.—1. The fastening for lines and ropes, formed of tapering, rounded, stationary side-pieces, between which are open, tapering jaws, for wedging and clamping the line, or rope, as specified.

2. The finger *b*, in combination with the stationary, tapering jaws, to cause the line to wedge down into such jaws, by the pull on the same, substantially as set forth.

88,176.—Nelson Johnson, Jasper, N. Y.—*Saw-Gummer.*—March 23, 1869.

Claim.—1. The combination of the bail F F*, rotary cutter C, and lever A^2, employed substantially as and for the purpose set forth.

2. The bail E, when provided with a V or chisel-shaped bearing-surface, *f*, substantially as and for the purpose set forth.

3. The adjustable frame, or carriage B, when employed in combination with the gumming-roller or cutter C of a saw-gummer, in the manner and for the purpose specified.

4. The clamping-screws G G′, in combination with the perforated frame A *a′** and perforated bail F *f′*, substantially as described.

88,177.—Nelson Johnson, Jasper, N. Y.—*Saw-Swage.*—March 23, 1869.

Claim.—1. The adjustable punch, or swage-pin holder, consisting of the perforated arms C and roller D *d*, employed in combination with the stock A and punch E, substantially as described, for the purpose set forth.

2. In combination with the stock A, constructed in two parts, as represented and described, the set-screw *a* and clamping-screw a^1, arranged and employed in the manner described, for the purpose specified.

3. The dies F, arranged, relatively to the point-die B, in the manner set forth, and employed to form side-cutting flanges on the tooth, substantially as described.

4. The adjustable gauge or rest G, in combination with the stock A and adjustable bars C C, substantially as and for the purpose specified.

5. The eccentric-lever H, employed in combination with the die B, substantially as and for the purpose set forth.

88,178.—William J. Johnson, New Orleans, La.—*Locomotive Drive-Wheel.*—March 23, 1869.

Claim.—1. The arrangement of certain of the parts thereof, by which a portion or the whole of the weight of said engine is borne upon the axles of small car-wheels, which rest and run upon the inner periphery of the rims of the driving-wheels, substantially in the manner and for the respective purposes herein set forth.

2. When the principal portion, or the whole of the weight of a locomotive-engine, is made to bear upon the axles of car-weeels which rest and run upon the inner periphery of the rims of the driving-wheels thereof, the combination of the steam-cylinders O O with said driving-wheels, through the medium of the short cranks *q q*, the longer cranks *r r*, and the side coupling-bars S S, substantially in the manner herein set forth.

88,179.—Hubert L. Judd, Brooklyn, N. Y.—*Cord-Tightener for Curtain-Fixtures.*—March 23, 1869.

Claim.—The slide *a*, with rack-teeth 3, or projections in its bottom surface, in combination with the pulley *d*, blocks *b* and *c*, with their inclined surfaces provided with a tooth, or projection, 4, that is forced back against said bottom surface of the slide, as and for the purposes set forth.

88,180.—Ansel N. Kellogg, Chicago, Ill.—*Block for Holding Stereotype-Plates.*—March 23, 1869.

Claim.—The combination of a spring, *c*, with the block B, when constructed with a longitudinal dove-tailed groove, or bed, and the removable plate A, when provided with rebated sides *e e*, all arranged to operate substantially as and for the purposes herein shown and set forth.

88,181.—John J. Kelly, Slippery Rock, Pa.—*Bridge.*—March 23, 1869.

Claim.—1. The span, when constructed of plates C D E, the two latter provided with flanges *d d′* and *e e′*, which are arranged to form a support for the braces F G H, substantially as and for the purposes set forth.

2. The plates *g*, when bolted to the flanges *d′ e′*, and supporting between them the upper eyed ends of supports F and braces G H, substantially as and for the purposes set forth.

3. The clips *j*, when supporting the lower eyed ends of supports F and braces G H, and sliding

freely on rope I, substantially as and for the purposes set forth.

88,182.—T. K. Bolton, Cleveland, Ohio, executor of Samuel H. Kimball, deceased.—*Process of Manufacturing Sheet-Iron.*—March 23, 1869.

Claim.—The within-described process for the manufacture of sheet-iron.

88,183.—George S. Koontz, Washington, D. C., and Edward Potts and McLeod D. Lewis, Baltimore, Md.—*Railroad-Car Heater.*—March 23, 1869.

Claim.—1. The water-tank E, when made substantially as shown and described, and placed vertically over the stove, in combination with the ball I, chain H, and valve G, all as and for the purpose specified.

2. The combination of valve G, rod R, and valve M, all as and for the purpose specified.

3. The combination of the ball I, chain H, and valve G, all substantially as shown and described, with the ring J, supported on braces *a a*, substantially as and for the purpose specified.

88,184.—Hugh W. Lafferty and Robert Lafferty, Gloucester City, N. J.—*Centrifugal Draining-Machine.*—March 23, 1869.

Claim.—1. The combination of the loose band-division N of the cone friction-pulley M N, driving the spindle, or shaft A of a centrifugal machine, with a bearing and support separate and distinct from said shaft, or spindle, substantially as herein set forth.

2. A sleeve, or hollow shaft, G or Q, interposed between the loose band-division of the cone friction-pulley and the spindle, or shaft of a centrifugal machine driven thereby, substantially as herein set forth.

3. The combination of the loose, or band-division N of the cone friction-pulley M N, driving the spindle, or shaft A of a centrifugal machine, with the hanger supporting the spindle, by means of a sleeve, or hollow shaft interposed between the pulley and spindle, substantially as herein set forth.

4. An oil-cup, H, encircling the bearings of the loose, or band-division of the cone friction-pulley, substantially as herein set forth.

5. A wire draining-basket, O, in combination with the spindle A of a centrifugal machine.

88,185.—Hugh W. Lafferty and Robert Lafferty, Gloucester City, N. J.—*Centrifugal Sugar-Draining Machine.*—March 23, 1869.

Claim.—1. The annular oil-cup D, when so combined with the spindle A as to support and inclose the bearings thereof, substantially as herein set forth.

2. An enlarged waste-oil cup T, having a contracted rim, or neck, and combined with the spindle, or shaft, of a centrifugal machine, substantially as and for the purpose herein set forth.

3. A corrugated draining-basket, or cylinder, B, in combination with the spindle, or shaft, A, of a centrifugal machine, substantially as herein set forth.

4. India-rubber or other elastic packing, interposed between the supports of a centrifugal machine and the beams or base to which it is attached, or from which is supported, substantially as herein set forth.

5. The combination of a cone friction-pulley, M N, with the driving-spindle A of a suspended centrifugal machine, substantially as and for the purposes herein set forth.

6. The within-described combination and arrangement of the friction-pulley M N, of the spindle A, the driving-pulley S, and connecting-band O, for the purpose herein specified.

88,186.—Thomas Lincoln and George Hubbard, New Haven, Conn.—*Door-Button.*—March 23, 1869.

Claim.—The button B, provided with the recess C, and combined with the plate A constructed with the boss *a*, and fitted with one or more springs, *f*, so as to operate substantially in the manner specified.

88,187.—Marshal Long, New York, N. Y.—*Tellurium.*—March 23, 1869.

Claim.—1. The mechanical arrangement of the wire *r x y z*, the vertical belt *r s t*, and the horizontal semi-belt *u v*, with the revolving globle G, and stationary globe D, substantially as herein described, and for the purpose set forth.

2. The combination of the bracket *a b e d e* with the vertical pole B C, the horizontal shaft E F, the gear-wheels *f*, *g*, *h*, *i*, the spindle *m*, the arm *j k*, the pivot *l*, the mechanical arrangement of the wire *r x y z*, the vertical belt *r s t*, and the horizontal semi-belt *u v*, and the globes D and G, substantially as herein described, and for the purpose set forth.

3. The combination of the mechanical devices above mentioned with the wire *b′ e′ d′*, the dark globe K, the metal cap L, the elastic thread *o′ p′ q′*, and the weight *q′*, substantially as herein described, and for the purpose set forth.

88,188.—Theodor Lüke, St. Louis, Mo.—*Carpet-Cleaning Machine.*—March 23, 1869.

Claim.—1. In combination with the rollers of a carpet-beating machine, the apron-attachment, composed of the hooks and ropes, substantially as hereinbefore described.

2. Making the flexible beaters removable, by means of snap-hooks, or equivalent devices, substantially as set forth.

88,189.—Isaac V. Lynn and William J. Lynn, Pittsburgh, Pa., assignors to themselves, J. J. McCormick, and Willis D. Baker, same place.—*Car-Coupling.*—March 23, 1869.

Claim.—Providing the coupling-pin of car-buffers with a pivoted pedestal, constructed, arranged, and operating substantially as herein described and for the purpose set forth.

88,190.—Levi H. Mace and Frederick S. Gwyer, New York, N. Y.—*Construction of Refrigerators.*—March 23, 1869.

Claim.—The ice-bottom, constructed substantially as herein described, so as to compensate for expansion and contraction, and soldered to the adjacent parts, as and for the purposes herein set forth.

88,191.—Edwin Martin, Springfield, Mass., assignor to himself, S. W. Porter, and J. F. Cranston.—*Metallic Cartridge.*—March 23, 1869.

Claim.—1. An interior conical-shaped pocket, or receptacle, containing the fulminate and anvil, when the wall of said pocket is formed of two thicknesses of metal contiguous to each other, substantially as described.

2. Turning over the upper part of the perforated conical portion of the reënforcing-cup upon and into the pocket, or receptacle, for the fulminate and anvil, forming a gas-check, substantially as described.

88,192.—John H. Martin, Columbus, Ohio.—*Breast-Strap Slide.*—March 23, 1869.

Claim.—A breast-strap slide, having its ring-stops B B, constructed upon one edge, as shown and described.

88,193.—Alfred McDaniel, Dubuque, Iowa.—*Wash-Boiler.*—March 23, 1869.

Claim.—The series of projecting strips E, between the inner and outer boilers, forming passages *b*, and the ledge F, in combination with the internal and external boiler, as and for the purpose described.

88,194.—James W. McDonald, Chicago, Ill.—*Street-Sweeper.*—March 23, 1869.

Claim.—1. The sweeping-cylinder, when the brooms are arranged thereon in a spiral form, substantially as and for the purposes described.

2. The combination of the shaft R′ with the incline T, screw-conveyer Y, and trough U, in a street-sweeping machine, when constructed and arranged substantially as and for the purposes specified.

3. The combination of the trough U, screw-conveyer Y, and endless-chain conveyer A′, when constructed and arranged substantially as described.

4. The blocks L, when suspended on the chains O, in combination with the pinion J and cogs I of wheel C, all constructed and arranged substantially as herein specified.

5. The combination of the screw-rod H′ with the

adjustable bearings E′, when raised and lowered by means of nuts F′, all constructed and arranged in a street-sweeping machine, substantially as specified.

88,195.—SAMUEL MENDENHALL, Muncy Station, Pa.—*Harrow.*—March 23, 1869.

Claim.—The construction of the double-barred iron harrow with oblique ends, B, and elevated coupling D, when arranged and combined with teeth having diamond-shaped necks J and shoulders H, as herein described, and for the purpose set forth.

88,196.—WILLIAM MUNSON, Abington, Pa.—*Fifth-Wheel.*—March 23, 1869.

Claim.—1. The wheel or plate C, and its lugs *n n*, recesses *s*, pins *i*, and rollers *m*, when the said recesses are so formed to prevent the escape of the rollers, in case of the breaking of the pins, as set forth.

2. The combination of the wheel C, its rollers and hollow hub *b*, and the plate D, and its projection *p*, the whole being constructed and adapted to each other, substantially as described.

3. The arrangement of the bolts *e*, in respect to the pins *i*, of the friction-rollers, as and for the purpose specified.

88,197.—ANDREW W. NICHOLSON, Brooklyn, N. Y.—*Walking Doll.*—March 23, 1869.

Claim.—The wheels D D, axle C, pulley *g*, and belt *f*, in combination with the crank-shaft *c*, pulley *e*, and slotted connections of the legs with the body of the doll, substantially as and for the purpose specified.

88,198.—WILLIAM L. PAINE, Boston, Mass.—*Velocipede.*—March 23, 1869.

Claim.—The arm, or support E, hinged at *f*, in combination with catch *c*, as applied to a velocipede, substantially in the manner and for the purpose set forth.

88,199.—CHESTER PALMER, Willoughby, Ohio.—*Potato-Digger.*—March 23, 1869.

Claim.—1. In combination with the share B, the detachable separator E D, substantially as described, and for the purposes set forth.

2. The arrangement and combination of the share B and separator E D, with the frame A, substantially as described, and for the purposes set forth.

88,200.—I. E. PALMER, Hackensack, N. J.—*Roller-Stop for Window-Shades.*—March 23, 1869.

Claim.—The abutment or stop-shoulder *e*, on the inner periphery of the eccentric surface *j* of the rim or barrel *d*, in combination with the bolt or pin *b*, all arranged and operating substantially as shown and described.

88,201.—FRANK D. PARADIS, Chicago, Ill.—*Washing-Machine.*—March 23, 1869.

Claim.—The bars or pieces A, supporting-irons H, cylinder E, zinc sheet C, springs *c*, and gear-wheels F G, when combined, and arranged, and constructed, and operating substantially as and for the purposes specified.

88,202.—W. F. PARKER, Meriden, Conn.—*Cartridge.*—March 23, 1869.

Claim.—1. A cartridge-shell, the head of which is constructed with a recess, *a*, for the percussion-cap, its head recessed so as to expose the rim of the cap, substantially in the manner and for the purpose set forth.

2. The channels *f*, in the head of a cartridge, with or without the recess *a*, substantially in the manner and for the purpose set forth.

88,203.—DEXTER E. PEASE and GEORGE RICHARDS, Richland Centre, Wis.—*Self-Registering Lumber-Measure.*—March 23, 1869.

Claim.—The arrangement of the handle A, disk B, spring-arm D, friction-wheel E, and index-wheel F, all constructed as described, and operating substantially as and for the purposes herein set forth.

88,204.—HART F. PEASE, Brooklyn, N. Y.—*Operating Valves of Steam-Engines.*—March 23, 1869; antedated March 15, 1869.

Claim.—The free or independent valve F, ports or passages *c c* and *d d*, slots *e e*, and valve-stems H H, all arranged for operation of the valve by the piston, essentially as described.

88,205.—REUBEN H. PLASS, New York, N.Y.—*Velocipede.*—March 23, 1869.

Claim.—1. The laterally-oscillating seat or saddle, in combination with suitable gearing, whereby the rocking or lunging of the body is made to steer the vehicle, substantially as set forth.

2. The arrangement and combination of the driving-rollers I and friction-rollers K with the axle J of the driving-wheel, or rollers thereon, substantially as shown and described.

3. So connecting the gear-wheels E E′ with the bifurcated axle-supports, that the steering power may be applied to either one or both of said axles at pleasure, substantially as specified.

88,206.—JOSEPH T. POPE, New York, N. Y.—*Lamp-Shade Holder.*—March 23, 1869.

Claim.—The combination of the shade and mirror F and the mirror-holder B, constructed and arranged with its bent portions C D and curved portions E E, so as to attach to an ordinary lamp-burner, substantially as and for the purposes herein specified.

88,207.—JAMES RAE, London, England, and GEORGE MILLER, Glasgow, Scotland.—*Construction of Railway-Wheels.*—March 23, 1869.

Claim.—The combination of the hook rings *h h* with the tire *t* and disks *p p*, as shown and described.

88,208.—JOHN RALSTON, ABRAHAM L. THOMAS, and WILLIAM PARKINSON, Tamaqua, Pa.—*Manufacture of Iron and Steel.*—March 23, 1869.

Claim.—The using of the Leader Hill iron ore, or any other iron ore containing the same ingredients, as a flux for the removing of impurities from the iron, and so neutralizing it, during the process of melting, and combining the ore with the cast-iron in the furnace, that the person working the furnace can, out of the same material, and at the same heat, produce a superior quality of steel or malleable wrought-iron at his pleasure.

88,209.—AMOS RANK, Salem, Ohio.—*Harvester.*—March 23, 1869.

Claim.—1. The combination with the finger-beam of oscillating platform sections or rakes, having their bearings in supporting shoes or brackets attached to the finger-beam, for the purposes specified.

2. The combination, substantially as set forth, with oscillating platform sections or rakes of an automatically-operated reciprocating driving-bar, for alternately and successively oscillating the rakes, by a positive motion from the main axle without rigid connections.

3. The combination, substantially as set forth, of oscillating platforms or rakes carrying recoil springs and swinging wipers, with studs on a slide-bar moving parallel to the finger-beam.

4. The combination of the cam-guide, vibrating lever, and adjustable bracket, as set forth.

5. The reel-ribs, constructed in two pieces, as described, and adjustable at either end.

88,210.—J. V. REARDON, Elkton, Md.—*Nerving-Bridle.*—March 23, 1869; antedated March 11, 1869.

Claim.—The straps *a a* and straps *d*, connecting the ring on the neck, straps *f*, and rings *e*, with the check-lines *h*, lines *c c*, and bit A, all arranged as herein described, and dispensing with the headstall, as and for the purposes specified.

88,211.—SHELBY REED, Scottsville, N. Y.—*Sheep-Rack.*—March 23, 1869.

Claim.—1. Constructing a sheep-rack with three horizontal apartments, the two outer ones being for the reception of the animals, and the central one for the convenience of the person feeding the same, and two or more floors or stories, one above another, all of which are arranged for the reception of animals, substantially as shown and described.

2. The arrangement of the sliding racks or bars,

with reference to the partitions between the compartments and the feeding-troughs, substantially as shown and described.

88,212.—JOHN E. RICHARDSON, Lowell, Mich.—*Chalk-Line Spool.*—March 23, 1869; antedated March 18, 1869.

Claim.—The hinged box A, containing the line-spool B and chalk-chamber H, with packing, and having attached the cap F, inclosing spring G, and wheels E D, all arranged to operate substantially as herein set forth.

88,213.—JOHN H. ROELKER, Evansville, Ind.—*Grate for Cooking-Stoves.*—March 23, 1869.

Claim.—As an article of manufacture, the "fire-bottom" herein described, consisting essentially of the parts A and B, united by the flanges *a b* and screws or rivets *c*, and adapted to operate together, substantially as and for the purposes herein described.

88,214.—JOHN ROOT, New Haven, Conn., assignor to himself and MCLAGON and STEVENS, same place.—*Bolt-Heading Machine.*—March 23, 1869.

Claim.—The arrangement of the holding device, the open cam-wheel F, the upsetting die C, and the forming dies *a*, in the manner and for the purpose set forth.

88,215.—STEPHEN P. RUGGLES, Boston, assignor to J. HERBERT SHEDD, Walthan, Mass.—*Meter.*—March 23, 1869.

Claim.—The combination of the cylinder A, revolving shafts D H I, and radial pistons E F G, by means of which one piston serves alternately as an abutment, while the other revolves, all substantially as described.

88,216.—JAMES W. RUTTER, St. Louis, Mo.—*Crushing and Grinding Machine.*—March 23, 1869.

Claim.—1. The gange-ring C, arranged and operating in combination with the cylinder A and crusher or grinder B, substantially as and for the purposes herein set forth.

2. The combination, with the gange-ring C and cylinder A, of the stripper or clearer *j*, substantially as and for the purpose herein set forth.

88,217.—RICHARD SAVAGE, Chicago, Ill.—*Clutch for Slaughtering Purposes.*—March 23, 1869.

Claim.—1. The hook-shaped jaw C, of the clutch A, in combination with the jaw E, when constructed and arranged substantially as and for the purposes specified.

2. Constructing one of the handles of the clutch A with the slot F, substantially as and for the purposes specified.

3. The link J, in combination with the shoulder K, when constructed and operating substantially as described.

88,218.—EILERT O. SCHARTAU, Philadelphia, Pa.—*Apparatus for Evaporating Medicines in Treating Diseases.*—March 23, 1869.

Claim.—The calorific apparatus, as herein set forth, to be used as a heater only, or in connection with the box containing medicine, to generate some strong or aromatic vapors.

88,219.—WILLIAM SEAMAN and GEORGE A. BANTA, New York, N. Y., assignors to WILLIAM SEAMAN.—*Sink.*—March 23, 1869.

Claim.—1. The metallic sink, formed with the grooves 3 and channels 2, in the flange *d*, and the back flange *e*, upon the edge of the flange *d*, as and for the purposes set forth.

2. The metallic sink, formed with the cavity *i*, and dome-shaped strainer *k*, as and for the purposes set forth.

88,220.—J. H. SEYMOUR, Hagerstown, Md.—*Water-Closet.*—March 23, 1869.

Claim.—The connection of the valve *e* with the cover C, by means of the joint *d*, rod *b*, and arm *f*, in such manner that when the cover C is raised, the valve *e* shall be closed, and *vice versa*, essentially as shown and described, for the purpose set forth.

88,221.—GERARD SICKELS, Boston, Mass.—*Water-Meter.*—March 23, 1869.

Claim.—1. The reciprocating vertical hollow shaft C, provided with the partition *e*, extending through the entire shaft, and the wing *e'*, and openings and ports, substantially as and for the purposes set forth.

2. In combination with the reciprocating hollow shaft C, the moving sleeve J, constructed and operating as and for the purpose specified.

3. The combination of the rollers *l* and moving double incline *m m*, with the sleeve, or piston J, as and for the purpose set forth.

4. The stationary diaphragm I, in combination with the sleeve J, as specified.

5. In combination with the vertical-chambered reciprocating shaft C, extending through both cylinders, the openings *h h'*, and wing *e'*, substantially as and for the purpose described.

6. The combination of the vertical shaft C, constructed as described, wing *e'*, and partition *f*, as and for the purpose set forth.

7. The combination of the cylinders A B, the hollow, chambered shaft C, and sleeve J, substantially as and for the purpose specified.

88,222.—THOMAS SIM and ELIAS S. HUTCHINSON, Baltimore, Md.—*Apparatus and Process for Extracting Oil from Vegetable and other Matter.*—March 23, 1869.

Claim.—1. The process of separating bisulphide of carbon or other chemical from oil, by the aid of an exhaust, substantially as herein described.

2. The apparatus, constructed and arranged to operate substantially as herein set forth.

3. The combined process of extracting oil from vegetable matter, by means of bisulphide of carbon, or other suitable chemical, and afterward separating the chemical from the oil, by the aid of an exhaust, substantially as herein described.

88,223.—AMOR SMITH, Baltimore, Md.—*Fertilizer.*—March 23, 1869.

Claim.—1. The mode of preparing leather for use as a fertilizer, by simply steaming, drying, and pulverizing it, without the necessity for the employment of chemical agents, substantially as set forth.

2. As a new article of manufacture, a fertilizer, composed of a phosphate, and leather which has been steamed, dried, and pulverized, substantially as set forth.

88,224.—GIBSON SMITH, Croton Junction, Mass.—*Compound for Coloring the Hair.*—March 23, 1869.

Claim.—A new and improved mode of coloring and preserving the hair, by the use of hyposulphite of soda.

88,225.—JAMES SNOWDIN, Westford, and JOHN KENT, Beaver Dam, Wis.—*Harrow.*—March 23, 1869.

Claim.—The bands C, chains D, drums E, ratchet-wheels E', ratchet-springs *d*, and levers F, in combination with the frames A and harrows B, as arranged, substantially in the manner and for the purpose as described.

88,226.—ORVILLE SPERRY and JOHN W. HOPSON, Hartfield, N. Y.—*Churn-Dasher.*—March 23, 1869.

Claim.—The arrangement of the dasher in two clamp-heads, *a a*, *b b*, which clamp the sieve B between, the construction being such that said sieve may be applied and removed at pleasure, as herein set forth.

88,227.—MICHAEL J. STEIN, New York, N. Y.—*Last-Holder for the Manufacture of Boots and Shoes.*—March 23, 1869.

Claim.—1. The combination, with the movable base-plate A, of the swinging last-holding plate or frame C, provided with adjustable toe and heel-supports *i c*, for operation substantially as described.

2. The combination of a locking-dog, or dogs, and rack, with the adjustable or swinging last-holding plate, or frame, and base-plate, or portion of the jack, for locking or stopping the last-holding plate

at different angles, or elevations, essentially as described.

3. The combination with the base-plate A and adjustable or rocking last-holding plate C, of the rack G, the slotted slides F F, the springs H H, the levers I I, and the dogs *r r*, carried by said slides, and set, or arranged relatively to the teeth of the rack, for operation substantially as specified.

88,228.—LEANDER R. STREETER, Chelsea, assignor to himself and A. B. ELY, (trustees,) Newton, Mass.—*Method of Veneering Articles with Pyroxyle.*—March 23, 1869.

Claim.—1. The use of plastic pyroxyle or xyloidine, and its compounds, as a veneer or facing upon dental base-plates, or artificial gums, substantially as described.

2. The combination of pyroxyle, or its compounds, with dental plates, or gums, substantially as described.

3. The combination of artificial teeth with dental plates, or gums, veneered with pyroxyle, or its compounds, substantially as described.

4. Dental plates and gums, veneered with pyroxyle, or its compounds, substantially as described.

5. Veneering the surfaces of articles with plastic or flexible pyroxyle, or its compounds, when the same is attached as a veneer, substantially as described, with or without cement, and made to adhere and assume shape in presses, or molds, by compression, with heat, if need be, substantially as set forth.

88,229.—LEANDER R. STREETER, Chelsea, assignor to himself and A. B. ELY, (trustees,) Newton, Mass.—*Dentists' Flask.*—March 23, 1869.

Claim.—The removable cast of the back, or cornice part of artificial-teeth mountings, for flasking purposes, substantially as described.

88,230.—GEORGE C. TAFT, Worcester, Mass., assignor to LORING COES, same place.—*Wrench.*—March 23, 1869.

Claim.—1. The combination, with the reduced bar, as shown at C, of the sliding-jaw D, substantially as and for the purposes set forth.

2. The combination, with the ferrule F and shank H, of the holding-pin *a*, substantially as and for the purposes set forth.

3. A combined head and bar, cast in one piece, with the head cored out, as shown at *b*, for the purposes stated.

88,231.—ELMER TOWNSEND, Boston, Mass.—*Wire for Shoe-Pegs.*—March 23, 1869.

Claim.—1. A continuous wire, having a spiral thread raised upon it by pressure, without the removal of any portion of its substance, as described.

2. Giving to the thread of a continuous wire, formed as described, such an inclination to the line of the wire, as to adapt screws, or pins cut from it, to be driven by percussion in the direction of their length, instead of by turning, as screws are usually driven, substantially as set forth.

88,232.—ELMER TOWNSEND, Boston, Mass.—*Wire for Shoe-Pegs.*—March 23, 1869.

Claim.—Giving a concave form to the sides of a triangular wire for the manufacture of shoe-pegs, for the purpose set forth.

88,233.—A. J. TRAVER, Lisburn, Pa.—*Plow.*—March 23, 1869.

Claim.—The levers E E and spiral springs F F, as constructed and arranged forward of the shafts or standards D D, substantially in the manner and for the purpose as herein shown and described.

88,234.—GEORGE W. TUCKER, Eugene, Ill.—*Corn-Marker.*—March 23, 1869.

Claim.—1. The within-described gauge, consisting of the bar F, marker *f*, and brace G, secured to and in combination with the field-marker, and operated by means of the lever H, substantially as and for the purpose shown.

2. The combined field-marker and gauge, consisting of the axle A, frame B B, pole C, marking wheels D D D, bar F, marker *f*, brace G, and lever H, all constructed and arranged to operate substantially as described, and for the purpose set forth.

3. In combination with the gauge, as described, the reversible lever H, by means of which said gauge is raised or lowered, substantially as herein specified.

88,235.—GEORGE W. UMBAUGH, Lima, Ohio.—*Bee-Hive.*—March 23, 1869.

Claim.—The arrangement within a bee-hive, on the side thereof, of feeding-troughs, substantially as herein shown and described, and for the purpose set forth.

88,236.—CHARLES H. UNDERWOOD, Dorchester, assignor to JAMES A. DUPEE, Boston, Mass.—*Miter-Box.*—March 23, 1869; antedated March 18, 1869.

Claim.—The combination of the radial arms D D′ with a platform, and saw-guides attached to the platform, when so arranged that the saw will pass between the arms, through the center, from which they radiate, and the wood will have a bearing against the stroke of the saw, upon each arm, the opening between the arms being only sufficient to admit the free passage of the saw, all substantially as and for the purpose specified.

88,237.—OLIVER VALLANDIGHAM, St. Louis, Mo.—*Cigar-Drier.*—March 23, 1869.

Claim.—1. The combination of the box A, inner casing *b*, burner *v*, gauze cap *g*, ventilators *e*, *e′*, and *k*, all arranged, constructed, and operating substantially as and for the purpose shown and specified.

2. The combination of the box A, inner casing *b*, ventilators *e*, *e′*, and *k*, piping *s*, and elbow *p*, of a cigar-drying apparatus, with an ordinary coal-oil lamp, all constructed, arranged, and operating substantially as and for the purpose shown and specified.

3. A cigar-drying apparatus, combining the devices above set forth, when constructed, arranged, and operating substantially as and for the purpose shown and specified.

88,238.—WILLIAM VAN ANDEN, Poughkeepsie, N. Y.—*Velocipede.*—March 23, 1869.

Claim.—The ratchet-device *a* B, in combination with the pedal-cranks C, as described, for the purpose set forth.

88,239.—JAMES VARLEY, Hudson City, N. J.—*Neck-Tie Retainer.*—March 23, 1869; antedated March 15, 1869.

Claim.—1. A neck-tie retainer, formed of a shield or brooch-face piece A, and yielding neck-clip B, composed of curved arms *a a*, and body *b*, having a slot, *c*, in it, in combination with a catch or projection, *f*, in rear of the shield or brooch-face piece, for operation together, substantially as specified.

2. The slotted neck-clip B, formed with an elastic extension, or arm, *d*, for attachment to the shield, or brooch-face piece A, and for action in concert with the catch or projection *f*, constructed and arranged substantially as herein set forth.

88,240.—FREDERICK VOLKMANN and AUGUSTUS MILLER, Philadelphia, Pa.—*Carriage-Axle.*—March 23, 1869.

Claim.—The metallic washer D, flanged nut F, and notches *i i*, in combination with a locking-spring, *j*, the whole relatively arranged, and operating as and for the purpose described.

88,241.—W. W. WAIT, Richmond, Ind.—*Fanning-Mill.*—March 23, 1869.

Claim.—1. The lever *a*, operating on a fulcrum-pin, and so arranged that the latter may be changed to different points for the purpose of increasing or diminishing the action of said lever on the screen, without changing the lowest point in the lever's motion, substantially as set forth.

2. The eccentric *b* on the fan-shaft J, and rods *c* and *e*, for the purpose of giving an end-shake to the shoe, substantially as set forth.

3. The grain-board I, provided with the divergent partitions, and the board I′, as set forth, and for the purpose described.

88,242.—Lewis Wakefield, Minneapolis, Minn.—*Axle-Box.*—March 23, 1869.

Claim.—The axle-box A, provided at one end with a solid beveled flange B, and the other with screw-threads, which receive the beveled nut-flange D, substantially as and for the purposes herein set forth.

88,243.—Samuel Jacob Wallace, Keokuk, Iowa.—*Wash-Boiler.*—March 23, 1869.

Claim.—The steam, or automatic washer, made substantially as described, with a cone-shaped and imperforated roof-part, B, radiating ribs G G, or clothes-rack, tube D, from top of arch of roof B, and, at one side, provided with head K and scalloped part E, for the purpose set forth.

88,244.—John P. Ware, Montgomery City, Mo.—*Corn-Planter.*—March 23, 1869.

Claim.—The arrangement of the beam A, plow C, cutter D, seed-box E, and adjustable shovel, or shoe F, all constructed as described, and operating substantially as and for the purposes herein set forth.

88,245.—William Webb, Waterbury, Conn.—*Expanding-Chuck.*—March 23, 1869.

Claim.—1. The combination, with the rotary expanding-chuck, consisting of one or more expanding-slides, mounted in or upon the chuck-body, or stock, as set forth, of the vibratory or reciprocatory frame, arranged to move said slides back and forth upon the chuck, without interfering with its rotation, substantially as and for the purposes described.

2. The construction and arrangement of the vibratory adjusting-lever, or frame, in relation to the chuck-stock, or body, and slides mounted in or upon the said chuck-body, as and for the purposes specified.

88,246.—Thomas B. Webster, Sekaukus, N. J.—*Automatic Boiler-Feeder.*—March 23, 1869.

Claim.—The surplus-escape valve *k*, closed by pressure of steam on the piston *m*, in combination with the check-valve *f* and float E, and arranged between said check-valve and the feed-pump, substantially as specified.

88,247.—Horace Wells, Hopkinton, R. I.—*Roller-Cleaner in Spinning-Machines.*—March 23, 1869.

Claim.—1. The traveling cleaner D E, constructed as shown and described.

2. The traveling cleaner D E, in combination with the feed-rollers of a spinning-jack, or frame, substantially as shown and described.

3. The arrangement of the cleaner G, spring G′, and roller C, substantially as and for the purpose shown and described.

88,248.—C. Westbrook, Harrisburg, Pa.—*Automatic Transmitting Telegraph-Apparatus.*—March 23, 1869.

Claim.—In combination with a telegraph-instrument, adapted to receive and record messages upon the Morse plan, or system, a transmitting-apparatus, consisting essentially of the spring-finger D, acting as an automatic key, operated by the projections of the embossed fillet, as it passes from the recording-instrument, so as to make and break the circuit, and thereby automatically reproduce the message, substantially as described.

88,249.—Samuel P. Williams, Sheridan, N.Y.—*Gate.*—March 23, 1869.

Claim.—The gate, weighted as described, and hung at a point between both ends, but remote from its center, in combination with the short post, substantially as shown and described.

88,250.—William L. Williams, New York, N. Y.—*Machine for Splitting Wood.*—March 23, 1869; antedated March 18, 1869.

Claim.—1. The horizontal yielding and toothed feeding-wheels *q*, arranged at the sides of the feeding-trough, and actuated substantially as specified, to move the wood along when the knives are above said wood, as set forth.

2. The side-bars *p*, extending from end to end, or nearly so, of the trough *b*, and united by a bolt at the ends, where the wood is entered, and provided with springs near the other ends, for the purposes and as set forth.

3. The plate, or frame, adjusted by screws, as specified, in combination with the feeding-trough and reciprocating cutters, substantially as set forth.

88,251.—G. W. Williamson, Gouldsborough, Pa.—*Dish and Clothes Washer.*—March 23, 1869.

Claim.—1. The bottom, K, provided with the hollow conical perforated projections M, and the angular elevations O, or either separately, and combined with the vessel A, substantially as and for the purpose specified.

2. In combination with the above, the rack P, constructed as described for the purpose specified.

88,252.—John Q. A. Yonkey and Francis M. Rawson, Frankfort, Ind.—*Fence.*—March 23, 1869.

Claim.—A portable self-supporting fence, composed of posts A C, dovetail B, gains D D, and planks E E, when constructed and arranged substantially as and for the purpose set forth.

88,253.—Martin Woodard, Des Moines, Iowa.—*Combined Sower and Cultivator.*—March 23, 1869.

Claim.—The arrangement, on the frame A C D, of the removable seed-box G, having longitudinally-grooved agitators *h h*, operated by friction-wheels *f g*, and the bar *d*, under its bottom, with the hinged bars H H, slotted arms I I, pivoted shanks J J, teeth K K, levers L L, and railing M, all substantially as and for the purposes herein set forth.

88,254.—George W. N. Yost, Corry, Pa.—*Harvester.*—March 23, 1869.

Claim.—The combination of a bar S, projecting through and within a loop, R′, of the floating-bar, with a cylinder, R, of the body A and A′, provided with a groove, *g*, and having the end of the bar S′ within said cylinder R, in said groove *g*, when made and used as described for grass and grain-cutting-machines.

88,255.—William Zimmerman, Bloomington, Ill.—*Table-Attachment for Chairs.*—March 23, 1869.

Claim.—1. The construction and arrangement of the standard B, the clamp K, the table A, the metal plate E, the hinged forked brace C, combined to operate substantially as set forth.

2. The adjustable hinged clamp K, consisting of the parts J *h i o p l*, constructed and arranged substantially as and for the purpose described.

88,256.—Fred. Walton Bacon, New York, N. Y.—*Artists' Easel.*—March 23, 1869.

Claim.—1. The attachment and adjustment of the sketch-board D, by means of the groove *g g*, and set-screw and nut A, for the purpose set forth.

2. The attachment of the color-box B, or receptacle for colors, brushes, and other articles used for painting or drawing, either permanently, or adjustable by means of the pivot *p* and set-screw *t*, substantially as and for the purpose set forth.

3. The box F, a receptacle for sketches, drawings, canvas, paper, or other material, substantially as described.

4. The T-shaped slide and groove.

88,257.—G. F. Hargis, Decatur, Ill.—*Machine for Winding Cloth.*—March 23, 1869.

Claim.—1. The convexed boards *c* c^1, when they are convexed on both edges, and when the whole are so combined, in an independent frame, C, as to retain the same relative position in regard to their convexity, no matter at what width adjusted, substantially as described.

2. The combination of the tension-rollers B B^1 B^2, frame A A′, convexed boards *c* c^1, thumb-screws *a* a^1 a^2, clamping-jaws *e* e^1, and board D, when the whole is constructed and arranged substantially as described, as and for the purpose specified.

88,258.—Warren E. Johnson, Chicago, Ill.—*Process of Deriving Useful Products from Garbage, &c.*—March 23, 1869.

Claim.—The utilization of garbage, or refuse ma-

terial collected from hotels, boarding-houses, and private dwellings, and the production therefrom of valuable materials, substantially by the process detailed in the specification, as above.

88,259.—J. HERBERT SHEDD, Waltham, Mass.—*Liquid-Meter.*—March 23, 1869.

Claim.—1. The fans D E F, within a cylinder, so arranged that one of them shall operate as a plunger, another moving tardily as a diaphragm, and the third being measurably ineffective in its transition from the condition of a diaphragm to that of a plunger, or from the condition of a plunger to that of a diaphragm, all operated by means substantially as described.

2. The combination of eccentric-gearing, as described, with a system of fans of varying movement, upon a common center, in the manner and for the purpose herein shown.

3. The arrangement of the fan-chamber and the gearing-chamber, containing the parts hereinbefore recited, within a case, A, and cap C, whereby the whole shall be protected, with the occurrence of but one single joint, all as and for the purpose shown.

88,260.—LEANDER R. STREETER, Chelsea, Mass., assignor to himself and A. B. ELY, trustees.—*Composition for Dental Plates.*—March 23, 1869.

Claim.—1. The use of soluble pyroxyle, or xyloidine, or gun-cotton, prepared and combined with other substances, substantially as described, in such manner as will give the requisite toughness, durability, hardness, elasticity, and strength, for forming dental plates and artificial gums for teeth, substantially as set forth.

2. The method of preparing and manipulating the material, substantially as described, for the purposes set forth.

3. The attachment, or combination of artificial teeth to or with artificial bases, or gums, composed and prepared substantially as described.

4. Dental plates and gums for artificial teeth, &c., substantially as described, when composed of the material and made in the method substantially as set forth.

88,261.—ALONZO ASTON, New Britain, Conn., assignor to RUSSELL AND IRWIN MANUFACTURING COMPANY, same place.—*Reversible Knob-Latch.*—March 30, 1869.

Claim.—1. In combination with the latch D, and the ordinary devices for operating the same, the supplemental riding-plate H, arranged to connect the latch with its operating mechanism, substantially as described, for the purposes specified.

2. In combination with the supplemental riding-plate H, a sliding stop, *m*, arranged to operate in the manner substantially as described, for the purposes specified.

88,262.—E. A. BAGLEY, Worcester, Mass.—*Screw-Machine.*—March 30, 1869.

Claim.—1. The combination, with the spindle E and adjustable carriage C, of the notched holding-plate K and tongue H, substantially as and for the purposes set forth.

2. The combination, with the spindle E, and adjustable carriage C, of a holding-plate or device, tongue H, and lever F, arranged to be operated substantially as and for the purposes set forth.

88,263.—DANIEL BELCHER, Easton, assignor to himself and ALVIN COLBURN, Lynn, Mass.—*Mechanism for Connecting Horses to Vehicles:*—March 30, 1869.

Claim.—The combination of the slotted bar, or plate A, the catch-hook *a* and the clamp-screw *d*, or equivalent devices, with the spring-case B, the bolt-receiving bar C, and the spring D thereof, the said slotted bar, catch-hook, and clamp-screw enabling the case B to be adjusted to and fixed in different positions on the shaft of a carriage, as and for the purpose hereinbefore explained.

88,264.—CHARLES P. BIGELOW, Clinton, Mass.—*Edge-Plane.*—March 30, 1869.

Claim.—An edge-plane for shoemakers' use, having knife E, with lip *a*, body B, ear-shaped throat C, shield *b*, and plate F, with shoulder *e*, combined, arranged, and operating substantially as herein described.

88,265.—DOUGLAS BLY, late of Macon, Ga.—*Mucilage-Brush.*—March 30, 1869.

Claim.—1. An instrument for applying mucilage, consisting of a tubular section of elastic non-absorbent material, with a handle affixed, substantially as herein described.

2. Said instrument, when formed as above, and provided with an exterior covering of fibrous and absorbent material, to which the inner, or non-absorbent and elastic tube serves as a supporting and form-retaining structure, substantially as set forth.

3. The corrugated handle, in combination with the correspondingly-indented neck of the capsule, substantially as set forth.

88,266.—JACOB BRINKERHOFF, Auburn, N. Y.—*Washing-Machine.*—March 30, 1869.

Claim.—1. The clothes-box B, constructed in sections, and with perforated bottom, in combination with springs *g g g g*, and arranged to operate substantially as described.

2. The clothes-box B, in combination with press-board M, so to operate that while the box is ascending the board will descend, substantially as and for the purpose set forth.

88,267.—FREDERICK H. BRINKKOTTER, Callahan's Ranch, Cal.—*Machine for Fitting Fellies to Wheels.*—March 30, 1869.

Claim.—1. The bands B B, secured together on each end of the hub A, for retaining the clamping-frame, substantially as and for the purpose described.

2. The clamping-frame, consisting of the block C, having the longitudinal openings *d d d'* and cap D, together with the block G, yoke F, and screw E, the whole arranged substantially as above described.

3. The clamp K, with its arms *f f*, spring *h*, and rack *i*, for securing the spokes, substantially as herein described.

88,268.—WILLIAM M. BRISBEN, Philadelphia, Pa.—*Bobbin for Spinning-Machine.*—March 30, 1869.

Claim.—A sheet-metal bobbin, having an open seam the whole length of the tube A, and spring-tongues *b b'* in incision *a a'*, and bell-shaped, or flaring bottom B^2, constructed to operate substantially in the manner set forth.

88,269.—THOMAS BULLIVANT, Newark, N. J.—*Last.*—March 30, 1869.

Claim.—As a new article of manufacture, a last, having its sole, or bottom curved upwardly at the toe, so that the bottom, or sole of said last, at the toe shall project above the upper leather, in the manner and for the purpose set forth.

88,270.—HIRAM M. BURDICK, Ilion, N. Y.—*Hay-Spreader.*—March 30, 1869.

Claim.—Giving the tedding-forks, or teeth, a vibrating, or tumbling motion, to leave, or drop the hay, by means of the spider N and notched circle P, substantially as described.

88,271.—GUSTAV BURKHARDT, Homer, Ill.—"*Tinkers' Pot.*"—March 30, 1869.

Claim.—1. The removable funnel C, forming an automatic fuel-supply, supported on the ring *d*, so as to leave a space between it and the body A *a* of the pot, substantially as and for the purpose herein set forth.

2. The tinkers' pot composed of the removable funnel C, fuel-reservoir A *b*, with ring *d*, cover E, and pipe B, and the cast fire-pot *a* supported on perforated ring D, and provided with an opening, *e*, all combined and arranged substantially as herein described.

88,272.—T. M. BUSH, Hastings, Mich.—*Cistern-Top.*—March 30, 1869.

Claim.—A cistern-top, made of cement, laid on a removable covering of boards, around a central curb,

B, so as to form tight joints therewith and with the main walls, all constructed in the manner substantially as described.

88,273.—Calvin G. Cahoone and Bela E. Brown, Providence, R. I.—*Fastening for Breast-Pins.*—March 30, 1869; antedated March 15, 1869.

Claim.—The combination and arrangement of a "hinged guard," C, with the catch A of a pin-tongue, substantially as described, for the purpose specified.

88,274.—Cyrus Chambers, jr., Philadelphia, Pa.—*Car for Brick-Driers.*—March 30, 1869.

Claim.—1. The bottom of the car, constructed of the hinged slats S S, &c., capable of being turned over on to each other, in the manner and for the purpose described.

2. The slats S, constructed in the manner herein specified.

3. The swinging apron V, constructed and suspended substantially as and for the purpose described.

88,275.—James H. Chapman, Newton, Iowa.—*Garden-Cultivator.*—March 30, 1869.

Claim.—The combination of the curved arms C C, axle A, wheels B B and F, cross-bar G and its plates *a a*, supporting the shovels H I J K, or their substitutes, all substantially as herein specified.

88,276.—John H. Cole, North Bridgewater, Mass.—*Welted-Seam-Finishing or Reducing Machine.*—March 30, 1869.

Claim.—1. The combination as well as the arrangement of the peripheral-grooved feed-wheel D, the peripheral-grooved, or pressing-wheel C, the two slotted, or grooved guides F G, and the welt-cutter E, the whole being to operate together substantially as specified.

2. The combination and arrangement of the inside-edge trimming-knife H, with the peripheral-grooved feed-wheel, the peripheral-grooved, or pressing-wheel, the slotted guides, and the welt-cutter, arranged and applied so as to operate together, as specified.

3. The feed and smoothing-wheels, as made, not only with the welt-receiving grooves, extending around their peripheries, but with the arrangement, as described, of beveled surfaces on opposite sides of the said grooves, such being for stretching the leather laterally from the welt, as set forth.

4. The combination and arrangement of the gauge a^2, and the adjusting-screw b^2, with the gauge G and the knife H, combined with the guide F, the feeding and pressing wheels C D, and the knife E, arranged to operate as set forth.

5. The application of the guide G and the knife H to the frame, so as to be adjustable vertically with respect to the feed-wheel, as may be necessary to adapt the machine to operate on leather of any particular thickness.

88,277.—John Craig, San Francisco, Cal.—*Dumping-Wagon.*—March 30, 1869.

Claim.—1. The two longitudinal boards C C, hinged to the reaches, and swinging vertically to the center, for depositing the load beneath the wagon, substantially as described.

2. The longitudinal rods E E, angular metal plates *b b*, cranks *e e*, slotted bars F F, and staple I, the whole arranged substantially as and for the purpose described.

88,278.—Archibald C. Crary, Utica, N. Y.—*Steam-Engine.*—March 30, 1869.

Claim.—The arrangement, with reference to the steam-generator A and drum B, constructed as described, of the engine H, fan I, and tube N, with pipes G and E, the cylinder M, and its pipes R and M, as herein set forth.

88,279.—Munson C. Cronk, Auburn, N. Y.—*Clamp-Bar for Holding the Cutters of Mowing-Machines while being Ground.*—March 30, 1869; antedated March 19, 1869.

Claim.—The clamps B B, constructed as described, and provided with thumb-screws, in combination with the bar A, all arranged and operating substantially in manner and for the purpose set forth.

88,280.—Artemas Davison, San Leandro, Cal.—*Gang-Plow.*—March 30, 1869; antedated March 20, 1869.

Claim.—1. In combination with the arms D D′ and axes *a a′*, on the bar C, the clutch, consisting of the jaws F and G, on the wheel and axle, respectively, substantially as and for the purpose described.

2. The pin, or arm H, and the spring M, with the lever E, or equivalent device, for engaging and disengaging the clutch, substantially as described.

3. The rack J, constructed with the lip K, together with the holding-projection L, on the lever E, for retaining the jaws F and G in contact until the plows are raised, substantially as described.

4. The slotted arm D, with its set-screws *c c*, to raise and lower the axle *a*, and adjust the plows, substantially as and for the purpose herein described.

88,281.—Henry T. De Montigny, West Troy, N. Y.—*Ironing-Table.*—March 30, 1869.

Claim.—1. The folding skirt-table top E, formed of the sections *e e′ e″*, in combination with the standard C, and base, B, constructed and arranged as specified.

2. The brackets F F′ F″, in combination with the folding sections of a skirt-table top E, as and for the purpose set forth, as specified.

3. The base B, standard C, braces, or brackets *c c*, the table-top E, made with folding sections, *e e′ e″*, and the folding brackets F F′ F″, all in combination and constructed and arranged in the manner described, for the purpose specified.

88,282.—Charles F. Dunbar, Erie, Pa.—*Sewing-Machine.*—March 30, 1869.

Claim.—1. The revolving and reciprocating sleeve G, provided with a series of crossing-grooves, arranged on the shaft F, in combination with the swivel-toed stud *m n* and needle-carrying slide H I, as and for the purpose set forth.

2. The screw *f*, in combination with the sleeve G, provided with crossing-grooves *b b*, and with a groove, so that the needle-carrying box may be held stationary or be made to reciprocate, as and for the purpose set forth.

88,283.—George D. Edmands, Saugus, Mass.—*Channeling-Tool.*—March 30, 1869.

Claim.—1. The formation of slitting-knife A, with its edge on one side of the median line of its body, and its blade with a broad back to completely cover the upper part of hole D, when arranged in connection with the gouge-knife, having its lower end beveled upward and backward, as and for the purpose described.

2. The adjustment of the gouge, with its hole D not in the median line of the tool, but removed toward the interior side of the channel it is to cut, when said gouge has its sides hollowed and curved upward, outward, and backward, as and for the purpose described.

88,284.—Marmont B. Edson, New York, N. Y.—*Railway-Track.*—March 30, 1869; antedated March 18, 1869.

Claim.—1. The wire rope B B, either round or flat, in combination with the rails F F, substantially as and for the purpose set forth.

2. The stiffening-bar G, as constructed, in connection with the bow-clasps H H, wire rope B B, and rails F F, for the purposes herein specified.

88,285.—Moses G. Farmer, Salem, Mass.—*Application of an Electrical Current to Steam-Boilers.*—March 30, 1869.

Claim.—1. Passing a current, or series of currents, of positive electricity, from a conductor of the same electrical character as the boiler-shell, and suspended in the water of the boiler, through the water, to the boiler-shell, by connecting the suspended conductor with the positive pole of a battery, or other source of electricity exterior to the boiler, while the boiler-shell is connected with the negative pole of said battery, the purpose being to prevent the corrosion and incrustation of the boiler, as specified.

2. The combination and arrangement described of the boiler B, plate P, insulating-supports *h h*, and battery *p n*, for the purpose set forth.

88,286.—Alonzo Farrar, Boston, Mass.—*Velocipede.*—March 30, 1869.

Claim.—1. The combination and arrangement of the arm-rests or pitmen O O, and the cranks or crank pins N N, with the seat, and the steering-wheel band and wheels, applied to the perch and the steering-wheel carrier, substantially as set forth.

2. In the tricycle-velocipede, the arrangement of the two pedals F F and their hangers G G, the driving-shaft E, its cranks *a a*, and wheels A A, the perch D, the seat C, and the steering-wheel B, provided with mechanism as set forth, such arrangement being as represented in the accompanying drawings, and as heretofore described.

88,287.—Louis Fischer, Brooklyn, N. Y.—*Vapor-Burner.*—March 30, 1869.

Claim.—In combination with the burner-tube A, the shield I, passage H, and heating-chamber K, when constructed and arranged to operate substantially as described.

88,288.—Addison C. Fletcher, New York, N. Y.—*Steam-Generator.*—March 30, 1869.

Claim.—1. A steam-generator, constructed substantially as described, of a series of vertical slabs, A, arranged at suitable distances apart, side by side, and each being cast or formed with tubular steam and water passages *a*, arranged one above the other, and running in direction of the length of the slabs, with openings *b*, establishing communication between them at their ends, in combination with a vertical return fire-flue arrangement on the exterior of the slabs, essentially as specified.

2. The hollow slabs A, arranged as described, and formed with outside ribs *d*, made with tongues and grooves on their edges, for locking the slabs longitudinally, and keeping them at suitable distances apart, essentially as shown and described.

88,289.—John Geiger, Peoria County, Ill.—*Churn.*—March 30, 1869.

Claim.—In a churn, the combination of the cutters *a b d e* on the lower dashers, with the horizontal oblique dashers F G H I, set on a vertical shaft, each alternate dasher having its face at right angles to the face of and a little above the plane of the face of its forerunning dasher, as and for the purposes described.

88,290.—George F. Green, Kalamazoo, Mich.—*Pneumatic Tooth-Mallet.*—March 30, 1869.

Claim.—1. The reversing-valve E, arranged and operated as described, in combination with the independent double-headed valve T and partition S, substantially as and for the purpose set forth.

2. The point-holder H and jointed case J, in combination with the cylinder A, for the purpose described.

3. The swivel elbow-pipe F, for the purpose set forth.

88,291.—Eberhard Harrsch, New York, N.Y.—*Manufacture of Colors and Pigments.*—March 30, 1869.

Claim.—The extraction of colors or dyes from Franklinite-ores, the residue thereof, or any other ore containing oxide of zinc, manganese, and iron, substantially as described.

88,292.—Orrin L. Hart, Millville, Wis.—*Water-Wheel.*—March 30, 1869.

Claim.—A water-wheel, consisting of a shaft or hub, having the radial, plain-surfaced, extended buckets or floats C, with the spiral buckets D, inclosed by the rims E attached, all as herein shown and described.

88,293.—D. Healy, Dansville, N. Y.—*Wagon-Brake.*—March 30, 1869.

Claim.—1. A brake, constructed and arranged to work on an incline, *j*, in such a manner that the friction of the wheel thereon, in its forward movement, will hug it closer and wedge it in position, substantially as herein described.

2. In combination, the rocking slotted arm D, operated by the sliding tongue B, with the sliding brake, when constructed and arranged to operate substantially as herein described and for the purpose set forth.

3. The shoe L, with the cap K, in combination with the head J, when constructed and arranged to operate substantially as herein described and for the purpose set forth.

88,294.—Isaac V. Holmes, New York, N. Y.—*Metallic Studding for Fire-Proof Walls.*—March 30, 1869.

Claim.—1. A stud formed of corrugated sheet-metal, for supporting a lath surface, and constructed substantially as and for the purpose described.

2. An adjustable lug, in combination with a metal stud, used for supporting a lath surface, constructed substantially as and for the purpose set forth.

88,295.—John R. Hopper, Rochester, N. Y.—*Potato-Digger.*—March 30, 1869.

Claim.—The arrangement, in the auxiliary frame D D, of the endless apron G and shaking-riddle K, combined together as described, and operated in the manner and for the purpose herein set forth.

88,296.—Daniel Hughes, Henry E. Shaffer, and William S. Thompson, Rochester, N. Y., assignors to Henry E. Shaffer and William S. Thompson, same place.—*Fruit-Jar.*—March 30, 1869.

Claim.—The arrangement and combination, in a cover for fruit-jars, of the concavo-convex stopper B, when so constructed as to insure greater thickness of the periphery to occupy the space usually left vacant around the neck of the jar, and prevent the fruit from approaching the joint, said stopper being grooved and shouldered at the periphery, and provided with the elevated flange *k*, notch *d*, and extended horizontal-bearing plane for the inwardly-projecting flange of the clamp-ring C, substantially as and for the purposes set forth.

88,297.—George Hunzinger, New York, N.Y.—*Chair.*—March 30, 1869.

Claim.—1. The braces *e*, connected permanently at their upper ends to the back, and near their middle to the seat, in combination with the front legs *a*, to which the braces *e* are permanently connected, substantially as set forth.

2. The rail *f*, in combination with the braces *e* and legs *a*, as and for the purposes specified.

88,298.—George Inwood, San Francisco, Cal.—*Device for Securing Bed-Clothes.*—March 30, 1869.

Claim.—The clamping-bar D, when held and operated by rods *b*, sliding in or upon the fixed rail or rails of the bedstead, and secured at the proper point by the set-screws *e*, substantially as and for the purpose herein set forth.

88,299.—Jacob Jameson, Philadelphia, Pa.—*Process and Apparatus for Making Iron and Steel.*—March 30, 1869.

Claim.—1. The process of treating or deoxidizing ores, by means of a series of closed chambers, constructed and arranged to operate substantially as described.

2. A reducing frame, so constructed as to be also used for heating blooms, substantially as set forth.

88,300.—Charles E. Jaycox, San Francisco, Cal.—*Flea-Powder.*—March 30, 1869.

Claim.—The ingredients above enumerated, mixed and compounded in the manner and in about the proportions specified, substantially as and for the purpose herein described.

88,301.—Jacob D. Johnson, Tylersville, Pa.—*Portable Field-Harrow.*—March 30, 1869.

Claim.—A portable field-harrow, consisting of a rotary harrow and sled, constructed, arranged, and combined in the manner shown, and for the purposes herein set forth and described.

88,302.—Richard M. Johnson and Ezra Stiles, Bridgeport, Conn.—*Railway Safety-Switch.*—March 30, 1869.

Claim.—1. The combination of the mortised block C (which has a tenon, *c*, and an eccentric, *d*) with the wheels *e*, endless chain *p*, and rods *r*, when operated by the lever N, rack *l*, and pinion *i*, substantially as described.

2. In combination with the above, the arrangement of a bevel-gear wheel to the lower end of the arbor *h* of the spur-wheel *e*, (which is connected with other bevel-gear,) to operate the signal staff L, substantially as described, as and for the purposes set forth.

3. In combination with the device for vibrating the switch and operating the signal, the safety-track E E′, when constructed as and for the purpose specified.

88,303.—William R. Johnson, Binghamton, N. Y.—*Stump-Extractor.*—March 30, 1869.

Claim.—The combination of the longitudinal bar H with the inclined top of the frame, and the mode of holding the driving-pinion in gear by means of the detent K, and the wheel and pinion-gearing with the pulleys and blocks G G, all being constructed as herein described and represented, for the purpose set forth.

88,304.—James Jorey, Westville, Conn.—*Horseshoe.*—March 30, 1869.

Claim.—The plate B, provided with calk *c* and clip *d*, on the forward end, and clamp *b* on the rear end, all constructed in one piece, and fitted between the shoulder *f*, on the shoe, and secured to the latter by means of the screw *e*, as herein set forth and shown.

88,305.—James M. Keep, New York, N. Y.—*Dancing-Motion for Toys.*—March 30; 1869; antedated September 30, 1868.

Claim.—The within-named platform and disk, or their equivalents, so combined and so operating, by rotating the disk, as to give a vibrating motion to the platform, as and for the purpose herein described.

88,306.—Oscar R. Kendall and Lemuel C. Kendall, Groton, N. H.—*Clapboard-Machine.*—March 30, 1869.

Claim.—The arrangement of the lever H, rods I′, and springs *i*, as described, for the purpose set forth.

88,307.—Gebhard Koeb and Louis Houcke, Springfield, Ohio.—*Belt-Fastening.*—March 30, 1869.

Claim.—A belt-fastener, consisting of the metallic plate A, provided with the central ridge *c* and the studs *a*, constructed for use, substantially as herein described.

88,308.—John Lamb, Jeffersonville, N. Y.—*Washing and Wringing Machine.*—March 30, 1869.

Claim.—1. The eccentric *d′*, in combination with the crank *d*, and wringers B C, arranged to operate substantially as described.

2. The frame A, provided with wringers and washers B C D E, crank *d*, eccentric *d′*, pins *a a*, screw-plate *c′*, and springs *a′ a′*, all arranged to operate substantially in the manner and for the purpose described.

88,309.—John Lane, Chicago, Ill., assignor to himself, C. H. Hapgood, William B. Young, and G. H. Laughton, same place.—*Plow-Colter.*—March 30, 1869.

Claim.—1. Imparting to the colter A a lateral adjustment, by making that portion D of its bearing which comes in contact with the beam, rounded, substantially as described.

2. The combination of the holder C and slotted adjustable block D, for holding the colter in position, and adjusting the same vertically, as set forth.

3. The corrugated or grooved plate F, in combination with the holder C and staple E, for adjusting the colter, and adapting it to plows with different-sized beams, substantially as set forth.

4. The holder C, constructed as described, and having the diagonal groove for the staple, as set forth.

5. The combination of the holder C, adjustable slotted plate D, and standard B, with the pin *a*, all constructed and arranged to operate substantially as and for the purpose set forth.

88,310.—Rufus Lapham, Boston, Mass.—*Heel for Boots and Shoes.*—March 30, 1869; antedated March 11, 1869.

Claim.—1. The catch *h*, for the purpose specified.

2. The treading-part *g g d p*, constructed as described.

3. The serrated rim *a a*, for the purpose set forth.

4. A boot or shoe heel, consisting of the spring-case *c* and detachable tread-piece, substantially as described and set forth.

88,311.—James R. Little, Galesburgh, Ill.—*Cultivator.*—March 30, 1869.

Claim.—1. The journal-spindle C, upright *m*, wheel-spindle B, flange L, braces F, D, and E, arranged substantially as described, and combined with the axle A, hounds K, and draught-pole H, in the manner and for the purpose set forth.

2. The upper plate O, when provided with the elevations R *g*, and recess S, and operating in combination with the lower plate P, beam N, and bolts Q Q and Y, and clamping-plates W W, in the manner set forth, so as to secure the adjustments described.

88,312.—J. C. Mahaffey, Little York, Ill.—*Horse-Collar.*—March 30, 1869.

Claim.—In a horse-collar, the combination of the tongue B, and eyed flap A, arranged to operate with the staple D, as shown, and for the purposes described.

88,313.—John A. Marvin and Samuel E. Vose, Milwaukee, Wis.—*Cooking-Stove.*—March 30, 1869.

Claim.—1. The draught-opening A, in the top of the stove, when operating as described.

2. The perforations or slots Z Z Z, at the sides and front of the oven, for circulating the heated air, as set forth.

3. The combination of the plates N and O with the partition-plates P, making the bottom flues, and the corresponding plates, making the back flues, when suspended for the purposes and in the manner described.

4. The reservoir-flue, formed by plate W, with opening and damper X, as described.

88,314.—Nathan F. Mathewson, Barrington, R. I.—*Hay-Spreader.*—March 30, 1869.

Claim.—1. The combination of the hinged frame A, spring *a*, and strap *b*, the whole constructed and arranged substantially as described, for the purposes specified.

2. The combination of the hinged frame A, spring *a*, post C, and wheel D, for the purposes specified.

3. The combination of the head-piece M, tines K, bolt *n*, and hollow tube *t*, the whole constructed as described, for the purposes specified.

4. The hinging of the journal-box P to the frame A, for the purposes specified.

88,315.—T. F. McCafferty, Columbus, Ohio.—*Bee-Hive.*—March 30, 1869.

Claim.—1. The honey-board D, when provided with slides *e*, *e*, and *f*, and covering openings *c*, *c*, and *h*, substantially as described, and for the purpose specified.

2. The slide *f* and openings *h*, to admit of ventilation from the top, as set forth.

3. In combination with the slide *f* and openings *h*, the removable foot-blocks *i i*, as shown and described.

88,316.—J. M. McCarthy, Canal Dover, Ohio.—*Brick-Kiln.*—March 30, 1869.

Claim.—Providing the mouth of the arches of a brick-kiln with a metallic frame, A, having horizontal bars, *d d*, and suitable lugs, or projections, C C, D D, to place one or more adjustable doors, B, upon, said doors being so constructed that

they may be entirely closed, or partially opened, substantially as and for the purposes herein set forth.

88,317.—DAVID MCCARTY and J. F. BECK, Tiffin Township, Ohio.—*Tool for Shearing Sheep.*—March 30, 1869.

Claim.—The device for shearing sheep, composed of the the two plates A and B, having the whole and half teeth, of form shown, each plate being provided with cutting-edges, as described, the two parts being attached to each other, and provided with a handle, all being arranged substantially as and for the purpose set forth.

88,318.—GEORGE MCGREGOR and GEORGE VOLL, Cincinnati, Ohio.—*Sash-Lock.*—March 30, 1869.

Claim.—In a sash-bolt, the arrangement and combination of the base-plate C with the segment *c* thereon, case D, spring-bolt F, arm G, and catch H, as shown and described, for the purpose specified.

88,319.—JOHN C. MILLER, Danville, Ky.—*Gun-Lock.*—March 30, 1869.

Claim.—1. Constructing the butt of a fire-arm in such a manner, that by pressing the butt against the shoulder, the piece may be rapidly cocked, substantially as herein set forth.

2. The combination of the spring butt-plate B, springs E E, pitman F, and lifting-wheel G, from which a connection may be made with the gun-hammer, for operating the same, substantially as herein set forth.

88,320.—MORGAN B. MILLER, Peoria County, Ill.—*Churn.*—March 30, 1869.

Claim.—1. The use of either vertical or inclined dash-boards *a a*, tapering from their inner to their outer edges, with or without perforations, arranged around a pair of vertical shafts, E E, so placed that a dasher on either shaft alternately passes through the same space, and within the radius of the dasher on the other shaft, substantially as described, and for the purposes set forth.

2. In combination with the above, and working together, the interior cistern B, the outer or tempering cistern A, the covers C C, and the gearing *b d e*, all operating substantially as described, and for the purposes set forth.

88,321.—SARAH F. MILLS, San Francisco, Cal.—*Apparatus for Composing and Exhibiting Groups of Card-Pictures.*—March 30, 1869.

Claim.—1. Attaching to card-pictures a support, composed partly of wood or other non-metallic substance, glued or pasted on the back, and partly of a metal point, for entering the floor and sustaining it upright, substantially as herein described.

2. As an article of manufacture, a card-support, partly of wood or other light and stiff substance, which will adhere to glue or paste, and partly of a metal point for entering the floor.

88,322.—GEORGE E. MILROY, Lowell, Mass.—*Stop-Motion for Looms.*—March 30, 1869.

Claim.—The mechanism herein described for stopping a loom, on the occurrence of imperfections in the woven cloth, when constructed, combined, and operated substantially as set forth.

88,323.—ALMON T. MORRIS, Seal, Ohio.—*Farm-Gate.*—March 30, 1869.

Claim.—The arrangement, in connection with a gate that slides on a rail, and then swings around with said rail upon a pivot-pin, of a sliding panel in said gate, with its own fastening, so that a passage may be made for small or for large stock to go through, or for teams, as may be desired, and as set forth and described.

88,324.—WILLIAM MORROW, San Francisco, Cal.—*Aerial Car.*—March 30, 1869.

Claim.—The combination and arrangement of the supply-pipes E, blowers B, and discharge-pipes F, substantially as and for the purpose set forth.

88,325.—H. F. MORTON, West Sumner, Me.—*Drag-Rake.*—March 30, 1869.

Claim.—A drag-rake, the head and handle of which are connected or swiveled together substantially in the manner and by the means herein shown and described, whereby the angle at which the handle stands to the head may be varied at pleasure, for the purposes set forth.

88,326.—PETER MUNZINGER, Philadelphia, Pa.—*Gas-Purifier.*—March 30, 1869.

Claim.—The purifier A, when constructed as and for the purpose shown and described.

88,327.—ADDISON NORMAN, Rochester, N. Y.—*Extension-Basket.*—March 30, 1869.

Claim.—1. A basket, when provided with a removable bottom, as and for the purpose set forth.

2. A basket, when provided with an extension-case, B, for the purpose set forth.

3. Pin *x* and sustaining-rods *y*, in combination with the removable bottom *c*, as herein shown and described.

4. The lever D, pins *p*, lugs *d*, and guides *a*, in combination with the vertical moving case B, when arranged substantially as and for the purpose set set forth.

88,328.—ISAAC T. PACKARD, Chicago, Ill.—*Tremolo-Regulator for Reed Musical Instruments.*—March 30, 1869.

Claim.—The lever E, the friction-spring G, the valve *a*, and the tracker *e*, when they are made as herein described, or equivalent thereto, and operated and used for the purpose herein set forth.

88,329.—TURNER C. PURINGTON, Lincoln, Cal.—*Grape-Crusher and Stem-Separator.*—March 30, 1869.

Claim.—1. The half-oval crusher C, attached to the shaft D by the arms E E, and imparting to it a reciprocating, or to-and-fro movement, whereby the grapes are deprived of their stems, and crushed beneath upon the grated bottom of the machine, substantially as described.

2. The combination and arrangement of the grated bottom B B′ B′, with the crusher C, substantially as and for the purpose specified.

88,330.—JOHN R. RICH, Tremont, Me., assignor to W. J. STOCKBRIDGE, Gloucester, Mass.—*Securing Ships' Hatches.*—March 30, 1869.

Claim.—1. The combination and arrangement of the clamp-bars C, and their clamp-screws, and elastic water-proof strips, or linings, with the hatchway-frame, and so as to operate with the hatches thereof, as specified.

2. The application of the elastic strips, or linings to the lower and inner surfaces of the bars C, and arranging the clamp-screws in the oblique manner, with reference to the bars and hatchway-frame, as described.

3. The combination of either or both of the elastic water-proof strips, or linings *e g* with the two hatches and the bars C, and their water-proof elastic linings and clamp-screws, applied to the hatchway-frame, as and to operate as explained.

88,331.—JOHN RICHARDS, Cincinnati, assignor to himself and J. N. BRITTINGHAM, Columbus, Ohio.—*Machine for Making Joints in Table-Leaves.*—March 30, 1869.

Claim.—1. The beveled cutter-heads *g g*, in combination with the traveling carriage *b*, arranged to operate in the manner and for the purposes set forth.

2. The combination of the traveling carriage *b*, inclined supports *n*, and spindle *r*, operating as herein specified and for the purposes described.

88,332.—CYRUS LAWTON SABIN, Barnard, Vt.—*Milk-Cooler.*—March 30, 1869.

Claim.—The combination and arrangement of water-tank B, with pipe C and D, the milk-receptacle L, with pipe M, and the broad, flat water channels, above and below a similar channel for the milk, all substantially as and for the purpose set forth.

88,333.—E. W. SKINNER, Madison, Wis.—*Journal-Box.*—March 30, 1869.

Claim.—A journal-box, consisting of the cast-iron frame A, provided with the lips *b* and the flange *a*, in combination with the detachable brass plate B, all constructed and arranged for use substantially as and for the purpose set forth.

88,334.—WILLIAM D. SLACK, Lewisburg, Pa.—*Harvester.*—March 30, 1869.

Claim.—1. In combination with the drag-bar and brace, arranged as described, the neck and washer, so that the connection between the two may be made rigid, or flexible, as desired, by simply shifting said washer from one side to the other of said brace, as set forth.

2. In combination with the drag-bar and brace, and a lifting-lever, I, for raising them, a caster-wheel, *j*, on the brace, to take the strain from the drag-bar and brace, and facilitate the turning around of the machine, substantially as described.

3. In combination with a brace for bracing the heel of the drag-bar, that carries a cutting-apparatus, the link, or loop *e*, and adjustable plate *f*, into which it is hooked, for the purpose of drawing the drag-bar nearer to or moving it farther from the main frame, and thus adjust, without detaching or altering the pitman, substantially as described.

4. The use of two or more connecting-rods between the main driving-wheels, or axle, and the rake-gears, so as to transmit motion to the rake, or beater-arms across the flexible connection between the frame and the drag-bar, substantially as and for the purpose described.

5. In combination with the cast frame A, and the plate E attached thereto, the brace Q, extending from the rear of the main frame to said plate, as and for the purpose described.

88,335.—FRIEND W. SMITH, Jr., Bridgeport, Conn.—*Croquet-Wicket.*—March 30, 1869.

Claim.—1. The combination, substantially as set forth, with a croquet-wicket, of spiral springs, which allow the wicket to yield laterally.

2. The combination, substantially as set forth, of vertical supports, provided with eyes, and spring-wickets, for the purposes specified.

3. The combination, with the yielding spring-wicket, of the numbered hinged label, arranged and operating as and for the purpose described.

88,336.—HENRY SMITH, 3d, North Chili, N. Y.—*Stump-Extractor.*—March 30, 1869.

Claim.—The combination of bail G and connecting-chain H with base, A, the whole arranged as described, and operating in the manner and for the purpose specified.

88,337.—OLNEY L. SMITH, Providence, R. I.—*Railway-Car Coupling.*—March 30, 1869.

Claim.—The combination of the hunter A with the link E, piston D, spring J, and pin H, constructed and arranged to operate substantially as herein described.

88,338.—PETER C. SMITH, Providence, R. I., assignor to himself, EZRA S. DODGE, and LOUIS A. KOTZOW, same place.—*Safety-Toggle for Watch-Chains.*—March 30, 1869.

Claim.—The safety-toggle, consisting of the face-plate *a*, the standards B, the barrel C, the bar D, and spring E, constructed and operating substantially as herein described, for the purposes specified.

88,339.—RUFUS M. SMITH, Lafargeville, N. Y.—*Farm-Gate.*—March 30, 1869.

Claim.—1. The combination, with the hinged, or swinging extensible frame, or crane and rollers, of the gate, which, while mounted upon and moving with said frame, is also capable of an independent sliding movement back and forth upon the same, substantially as herein shown and set forth.

2. The combination, with the parts specified in the preceding clause, of an extension-post, connected with and supporting the hinged gate-frame, under the arrangement described, whereby said frame, together with the gate which it carries, may be raised or lowered, as set forth.

3. The employment, with a gate such as described, of an extension-post, constructed substantially as herein specified, so as to be adjusted to and receive the free end of the said gate, whether the same be raised or lowered, as set forth.

4. The construction of the gate-carrying frame, or crane with a hinged arm, which carries the forward roller, and a pivoted extensible brace, or bar, for raising and lowering, or effecting the adjustment of said arm, substantially as and for the purposes shown and set forth.

5. The combination of the sliding gate, its frame, or crane, and the extension-post to which said frame is hinged, the said parts being constructed and arranged for joint operation, as herein shown and specified.

88,340.—ROSWELL T. SMITH and JOSEPH K. PRIEST, Nashua, N. H., assignors to themselves, WILLIAM EARLE, Jr., and J. G. BLUNT, same place.—*Animal-Shearing Machine.*—March 30, 1869.

Claim.—1. In a shearing-machine, of the kind described, the combination of the presser *c'*, and its adjusting or presser-screw or screws, or the equivalent therefor, with the cutter-shaft *y*, the cutter H, and the cutter-plate G, as described.

2. The presser, as made with the oiling-passage arranged within its head, or point, substantially as set forth.

3. The combination of the gear-case, or box *w'*, with the carrier F, the same being to swivel, with respect to the handle of the carrier, and extend about, and entirely cover the gears contained in such case *w'*, as specified.

4. The combination and arrangement of the cap, or case *l*[1], with the bevel-gears therein, and the shaft-supporter, or swivel-arm D.

5. The application of the cutter-shaft to its bevel-gear, so as to be capable of being moved endwise through it, and of being revolved by it, as and for the purpose specified.

6. The combination and arrangement of the guard *p'* with the shaft bearing *m'*, and the cutter-head, or shield *b*[1].

88,341.—WILLIAM HENRY SNYDER, Phelps, N. Y.—*Turbine Water-Wheel.*—March 30, 1869.

Claim.—The wheels C and D, constructed and arranged substantially as herein shown and described, so as to run in opposite directions, propelled by a lateral horizontal stream, delivered through the chute J, and discharged centrally, at the base, in combination with the case B, all substantially as and for the purposes set forth.

88,342.—HENRY SOGGS, Columbus, Pa.—*Car-Coupling.*—March 30, 1869.

Claim.—The elliptic spring E, provided with the recessed jaws *s s*, when used in connection with the headed pin *c* and link *b*, as described, for the purpose set forth.

88,343.—GEORGE C. STEINHAUER, Indianapolis, Ind.—*Automatic Fan.*—March 30, 1869.

Claim.—The oscillating frame F G I K L M, in combination with the counterpoise P, screw H, and arm D E, for giving an oscillating motion to the fan, substantially as herein described, for the purpose specified.

88,344.—U. T. STEWART, Fayette County, Tenn.—*Shovel-Plow.*—March 30, 1869.

Claim.—The combination of four cutters, *c c c c*, attached to the center of the plow, so as to cut the turf, or roots in front of the plow, constructed as described and shown.

88,345.—JOEL TIFFANY, Albany, N. Y.—*Steam-Generator.*—March 30, 1869.

Claim.—1. The vessels H and G, two or more, constructed and combined substantially as herein set forth.

2. The force-pump F, in combination with the boiler H and vessel G, substantially in the manner described.

3. The pump F, in combination with the pump O and the cross-head Y, substantially in the manner and for the purpose above described.

4. The screw-rod L, in combination with the cross-head Y and pumps O and F, substantially as above described.

88,346.—ALFRED S. TRAFTON and TIMOTHY J. TRAFTON, Portsmouth, N. H.—*Grappling for Anchors.*—March 30, 1869.

Claim.—1. In combination with the stock A, of a grappling, the plate C, secured upon the same, and provided with holes G, for holding and strengthening the flukes, substantially as described.

2. In combination with the projection H upon the flukes, the shoulder I and ring, or ferrule B, for securing the flukes upon the stock, substantially as set forth.

88,347.—JOHANNES A. VAN DER WAAG, Brooklyn, N. Y., assignor to THEODORE VAN SKELLINE, for one-half of said invention.—*Veloeipede.*—March 30, 1869.

Claim.—In a velocipede, the arrangement of the body A, seat F, axle B, driving-wheels C C, standards I I, crank-shaft J, revolving in the bearings K K, cross-bar L, and connecting-rod M, the pulleys N and O and belt, with respect to the shaft J, all constructed as herein shown and described, and for the purpose set forth.

88,348.—PETER H. VANDER WEYDE and JOHN MATTHEWS, Jr., New York, N. Y.—*Preparation of Aerated Drinks for Medicinal Purposes.*—March 30, 1869; antedated March 18, 1869.

Claim.—1. The combination of a solution of sugar or its equivalent, in water with nitrous oxide, or laughing-gas, for medicinal purposes.

2. The combination of a solution of sugar, or its equivalent, in water with nitrous oxide, or laughing-gas, carbonic-acid gas, and any flavoring ingredient, forming an exhilarating substitute for the injurious, irritating alcoholic drinks.

88,349.—FRANCIS S. VOGEL and JOHN R. ALBRIGHT, Lancaster, Pa.—*Cabbage-Cutter.*—March 30, 1869.

Claim.—The arrangement of a cabbage-cutter, A, with the screw-shaft S, sliding nut N, and lid D, combined with a rotary bottom, *o*, armed with knives R, the arrangement of the step K, all operating in the manner and for the purpose substantially in the manner specified.

88,350.—DONALD G. WALKER, Oshkosh, assignor to himself and GEORGE H. BUCKSTAFF, Winnebago County, Wis.—*Weather-Strip.*—March 30, 1869.

Claim.—The arrangement of the pivoted weights W W, working in a semicircular recess in the door, for operating the strip *b*, as specified.

88,351.—FRANCIS H. WALKER, Boston, Mass.—*Hinge.*—March 30, 1869.

Claim.—1. The construction of the leaf C of the hinge, with a bearing, *a*, and perforated pintle, *b*, adapted for receiving the eye *e* of leaf B, and also the shank *g'* of a locking-pin, as shown and described.

2. The self-locking gravitating pin *g g' i*, constructed and adapted for use in combination with a notched eye, *e*, of leaf D, and the perforated pintle *b*, on the eye, or bearing of leaf C, substantially as described.

3. A handle, or finger-piece, D' formed on the leaf D, and adapted for use upon a shutter, or blind, substantially as described.

88,352.—RICHARD H. WALDRON, Portsmouth, N. H., assignor to himself and JOHN J. FLANDERS, same place.—*Portable Cooking-Furnace.*—March 30, 1869.

Claim.—1. In combination with a furnace constructed substantially as herein described, the interior dome, G, and the exterior pyramid, H, substantially as and for the purposes set forth.

2. In combination with such a furnace, the register F, under the grate, for letting the ashes down into the stove or range beneath, substantially as described.

3. The arrangement of the horizontal passage E and grate C above the top of the stove, or range, whereby the draught is admitted without descending, and the fire may be raked without removing the furnace from its place.

88,353.—WILLIAM G. WHITE, Bedford, Ohio.—*Method of Pressing Bricks.*—March 30, 1869.

Claim.—The cam L, sliding board H, friction-wheels *b* and *b'*, adjustable press-shaft M, and press-board O, when constructed, combined, and operating in the manner and for the purposes herein set forth and described.

88,354.—HENRY WHITNEY, East Cambridge, Mass.—*Method of Making Inkstands, &c.*—March 30, 1869.

Claim.—The combination and arrangement of the open space C, with such projection, and the surrounding base D, the purpose of such space being substantially as specified.

88,355.—JAMES YOCOM, Jr., Philadelphia, Pa.—*Grate-Bar.*—March 30, 1869.

Claim.—1. A sectional grate-bar, having the sections B connected to the bearer A by wrought-metal ear-pieces, *g*, substantially as described.

2. Grate-bar sections B, which are cast with wrought-metal pieces *g g*, substantially as described.

88,356.—AZRO B. ALLEN, Rutland, Vt., assignor to himself and J. D. ALLEN, same place.—*Axle-Box Bearing.*—March 30, 1869.

Claim.—The axle-box, of the construction described, with rounded transverse groove A, when held in place by the removable key, fitted and arranged substantially as and for the purpose set forth.

88,357.—S. R. BAILEY, Bath, Me.—*Cheese-Cutter.*—March 30, 1869.

Claim.—The combination of the bar, supplied at the top with a rigid or hinged knife, and at the bottom with a stirrup, to be worked by the foot, substantially as and for the purposes specified.

88,358.—CHARLES BARNS, Oskaloosa, Iowa.—*Harvester-Rake.*—March 30, 1869.

Claim.—1. The levers D and G, cam-plate E, arms F, connecting-bars *f'* and J, rigid frame H, sliding frame I, rake-bar, or head K, and connecting-bar L, combined with each other and with the shaft C, and inclined and horizontal platforms A and B, substantially as herein shown and described, and for the purpose set forth.

2. The slide X W, levers T U, and connecting-bars V and S, combined with each other, with the horizontal platform B, and crank R of the shaft P, substantially as herein shown and described, and for the purpose set forth.

88,359.—WALLACE H. BATE, Medford, and GEORGE F. PINKHAM, Cambridge, Mass.—*Fire-Extinguisher.*—March 30, 1869.

Claim.—1. An open or closed receptacle, for containing one of the gas-generating ingredients, when so arranged that it may be turned over, within the main reservoir, by means of suitable mechanism, operated from the outside of the apparatus, to bring the acid and alkali into contact with each other, to generate carbonic-acid gas, as set forth.

2. The receptacle E, so hung, or supported in a frame, C, attached to the cap B, that it may turn over, within the reservoir A, on the withdrawal of the stopper *g*, substantially in the manner and for the purpose described.

3. A frame, C, pivoted to the cap B, so as to allow the receptacle E to turn over within the reservoir A, substantially as and for the purpose set forth.

88,360.—JOHN A. BERRILL, Waterville, N. Y.—*Paint-Mill.*—March 30, 1869.

Claim.—The combination of two or more scrapers C with the hopper A and runner B of a paint-mill, said scrapers C being attached to the hopper A, and their inner edges being made to correspond in form with the form of the outer surface of the runner B, substantially as herein shown and described, and for the purpose set forth.

88,361.—Edward B. Black, Joseph Hinkle, Jr., and Thomas S. White, Columbia, Pa.—*Brick and Mortar Hod.*—March 30, 1869.

Claim.—An improved hod, A a^1 a^2, made of sheet-iron, strengthened with wire, and provided with a handle B C, and a shoulder cushion D, the whole being constructed as herein shown and described.

88,362.—John A. Bradshaw and William H. Brown, Lowell, Mass.—*Water-Meter.*—March 30, 1869.

Claim.—1. The combination of the meter-ease b', foothold f, with packing g and inclined plane g', when constructed and arranged to operate as herein described, and for the purposes set forth.

2. In combination with the arms o, o', and p, the semicircular projection m, when constructed and arranged to operate the floats j', k, and k', as herein described.

3. The arrangement and construction of the float-plate h, with recesses h', i and i', and elastic packing j j j, when used in connection with the floats j', k, and k', as and for the purposes described and set forth.

4. The combination and arrangement of the cap s, with semicircular projection m, float-plate h, with floats j', k, and k', shaft p', adjustable screws q and r, meter-ease b', with chamber d', foothold f', inclined plane g', and discharge-pipe f, stand b, with receiving-pipe c, all when constructed and arranged to operate substantially as and for the purposes herein described and set forth.

88,363.—George W. Bressler, Lafayette, Iowa.—*Combined Harrow and Cultivator.*—March 30, 1869.

Claim.—1. The standards F K, hung to the cross-bar E, by means of the V-shaped rods H N, substantially as and for the purpose herein shown and described.

2. The slotted plates M, hinged to the axle, and connected with the standards K, by means of the pin or screw e, in the manner described.

3. The slotted bars I, hung to the rear of the axle, to operate in the manner and for the purpose herein set forth and shown.

4. The harrow O, suspended from the pole C by the rod P, and raised and lowered by the lever Q and rod h, in combination with the adjustable standards F K, all operating as described, for the purpose specified.

88,364.—James Burson, Yates City, Ill., assignor to James and George B. Waterhouse, New York City.—*Railway Hose-Bridge.*—March 30, 1869.

Claim.—1. A sheet-metal arch, A, with sills of wood, a, and flanches A′ A′ A′ A′, substantially as shown and set forth.

2. In a hose-bridge, when combined with a supporting arch-piece, A, the hinge-joint of the inclined rails B B, for the purposes of transportation and stowage, substantially as shown and set forth.

3. Supporting the tracks of a hose-bridge by the combination of the undulating metallic plate D D and the intervening wooden supports C C′, substantially as and for the purposes shown and described.

88,365.—Hugo Carstaedt, New York, N.Y.—*Take-Up Mechanism for Looms for Weaving Irregular Fabrics.*—March 30, 1869.

Claim.—1. The two rolls, B and C, continuously rotating at a distance nearly equal to their diameters, and the series of sectional rollers or wheels D, mounted and operated so as to be pressed wedgewise between them, when the take-up is to act, all substantially as and for the purposes herein set forth.

2. The inclined needles or points k k, fixed on the stationary bar K, and arranged as specified, so that the fabric, in being drawn to the take-up proper, is continually drawn and pressed against the inclined points of the needles, so as to form an angle or deflection of the material along such line, and to receive the points and be arrested when a reverse movement of any part of the fabric is commenced, substantially as herein set forth.

3. A series of needles, k k, in combination with a take-up, containing sectional rollers or wheels D, arranged and operated to take up at intervals on parts of the work, and to liberate other parts, as and for the purposes herein specified.

4. Supporting the levers F by the holder I, and releasing them therefrom, as and for the purposes herein set forth.

88,366.—J. M. Case, Worthington, Ohio.—*Velocipede.*—March 30, 1869.

Claim.—1. The sliding knob d', so arranged, in connection with the lever d, that the leverage of the latter may be increased or decreased at pleasure.

2. The slotted sliding handle d'', so combined with the driving-lever d and the guide-lever e as to govern the direction of the steering-wheel, substantially as described.

88,367.—S. S. Cole, Henryville, Ind.—*Corn-Sheller.*—March 30, 1869.

Claim.—An improved corn-sheller, formed by the combination of the hollow cylinder B, made with one or more lateral openings, b^2, through its body, provided with internally projecting cogs or teeth b^1, and having a crank, C, attached to one of its ends, with the box A, substantially as herein shown and described, and for the purpose set forth.

88,368.—Francis C. Cone, San Francisco, Cal.—*Spading-Machine.*—March 30, 1869.

Claim.—1. The above described machine-spade, when provided with an adjustable arm, E, and a cutting-edge, F, projecting in front of the blade G, substantially as set forth.

2. The revolving flanges B, having the tangential slots D, for determining the angle of the spades, substantially as herein described.

3. The notches or shoulders a a, in the sides of the slots D, for holding the spades, substantially as herein described.

88,369.—Lewis B. Covert, Brooklyn, N. Y.—*Music-Binder.*—March 30, 1869.

Claim.—The binder formed of the covers a, strips e, and back b, united together, as shown, in combination with the metallic rivets d, that secure the sheets of paper within such binder, as specified.

88,370.—Arthur W. Cox, Malden, Mass.—*Combined Knife and Fork.*—March 30, 1869.

Claim.—The improved combined knife and fork, having the plane upper surface b, concave under surfaces e, and the slots between the outer tines and those adjacent thereto shortened, whereby they are strengthened, all substantially as specified.

88,371.—Robert Creuzbaur, Brooklyn, N.Y.—*Piston-Valve for Steam and other Enginery.*—March 30, 1869.

Claim.—1. One or more elastic rolls, arranged in relation to the ports of a piston-valve, substantially in the manner described.

2. The arrangement, consisting of the cylindrical open valve-casing G, rolls h h', flanges g, ports B C D E, and stem M, substantially as described.

88,372.—Lewis P. Dayton, North Buffalo, N. Y.—*Truss.*—March 30, 1869.

Claim.—The combination, with the two parts A A′, forming the truss, of the hinge C D and adjusting-screw a, arranged as described, and operating in the manner and for the purpose specified.

88,373.—R. d'Heureuse, New York, N. Y.—*Attachment for Adjusting Cords for Pictures, &c.*—March 30, 1869.

Claim.—An adjusting attachment for cords, made with one or two tubes, and provided with longitudinal and transverse notches or slots, either or both, and whether used with or without teeth, hooks, or pins, substantially as herein shown and described, and for the purpose set forth.

88,374.—Benjamin Dobson and William Slater, Bolton, England.—*Cotton-Gin.*—March 30, 1869.

Claim.—1. The application of the treadle-lever D, for agitating the hopper C and gird b, and for clearing the teeth of the saws of saw-gins, substantially as herein shown and described, for the purpose of liberating the hands of the operator, as specified.

2. The application of two perforated cylinders, F F, to a cotton-gin, which cylinders are connected with a fan, G, in such manner that a partial vacuum is produced in them, substantially as and for the purpose herein shown and described.

3. The arrangement of the stationary dampers K K within the rotating perforated cylinders F F, to operate substantially as and for the purpose herein shown and described.

88,375.—EDGAR EASTON, Ashland, Ill.—*Whip.*—March 30, 1869.

Claim.—1. Securing the lash and the handle together, by the means and in the manner substantially as herein shown and specified.

2. The whip herein described, when the handle and lash are connected, as specified, as an improved article of manufacture.

88,376.—T. H. ELDER, Chicago, Ill.—*Carriage-Axle.*—March 30, 1869.

Claim.—The combination of the box G, flanges T F D N R, cylinders S N, axle A B C, and packing L P, constructed and arranged as set forth.

88,377.—GEORGE B. FAIRMAN, Rochester, N.Y., assignor to JOHN TELFORD, same place.—*Chuck.*—March 30, 1869.

Claim.—The construction and relative arrangement of the rack A, grooves *c*, buttons G, or their equivalents, case B and B′, screw-pinions D, and jaws F, operating substantially in the manner and for the purposes herein shown and described.

88,378.—E. E. FISHER and WILLIAM H. MACK, Indianola, Ill.—*Horseshoe-Nail Clincher.*—March 30, 1869.

Claim.—As an improvement in horseshoe-nail clinchers, the adjustable and detachable toothed jaw C, substantially as herein shown and described and for the purpose set forth.

88,379.—EDWARD F. FLOOD, Chicago, Ill.—*Apparatus for Discharging Coal.*—March 30, 1869.

Claim.—1. The chute E and platform F, in combination with the supporting-frame *a*, all constructed and operating substantially as and for the purposes specified.

2. The apron *x*, in combination with the chute E, platform F, and adjustable supporting-frame, as described, all constructed and operating substantially as and for the purposes specified.

3. The supporting-frame *a*, when hinged to the movable blocks *c*.

4. The combination and arrangement of the chains *t* with the swinging frame *a* and track-frame C, substantially as specified.

5. The combination and arrangement of the swinging frame *a*, when provided with a coal-chute, with suitable carrying-tracks A B, substantially as and for the purpose specified.

88,380.—DAVID FORREST, Eastport, Me., assignor to himself and JAMES ELDRIDGE, same place.—*Metallic Boot-Strap.*—March 30, 1869.

Claim.—The metallic boot-strap, when constructed as described, of the elastic metal shank B, secured to the side of the boot-leg, and provided, at its top, with the curved handle C, recessed upon its under side, as herein described, for the purpose specified.

88,381.—WILLIAM F. GOODWIN, East New York, N. Y.—*Harvester.*—March 30, 1869.

Claim.—1. A main or cutter-frame, which vibrates about the worm-wheel shaft as a center, provided with bearings for a worm-screw shaft, arranged tangentially to the worm-wheel.

2. A worm-wheel on the main axle, in combination with a screw-crank shaft, whereby motion is communicated directly to the cutters, without the interposition of other gearing.

3. Mounting the rear end of the worm-screw shaft, or that end opposite the crank or crank-wheel, on an adjustable pivot-bearing, as set forth.

4. The screw on the forward or crank-end of the shaft F, operating in combination with the crank-wheel, as described.

5. The hinged coupling H, provided with the flanged annular head H′, for the purpose set forth.

6. The flanged rings H′ I′, or their equivalents, on the coupling and shoe or shoe-standard, for uniting the cutting-apparatus and main frame, substantially as described.

88,382.—ROBERT AMOS GREEN, Martinsville, Ohio.—*Combined Marker and Planter.*—March 30, 1869.

Claim.—1. The combinaton, substantially as described, of the central runner A, slotted beams B *b* *b′* C *c* *c′*, bolts D *d*, outer and adjustable runners E F, hoppers G *g*, sectional seed-slide H *h* I I′ *i* *i′* J K, channel L, and operating-mechanism M N O P *p* R, or their equivalents, for the purpose specified.

2. The combination of the runner A *a* *a′*, detachable share S *s* *s′*, removable rod T, and staple U, or their mechanical equivalents, for the object stated.

88,383.—ALONZO GRIFFIN, Meshoppen, Pa.—*Mode of Lettering Signs, &c.*—March 30, 1869; antedated March 25, 1869.

Claim.—1. The improved method herein described of lettering signs, or ornamenting carriages, or other articles.

2. As a new article of manufacture, letters or ornaments, constructed as herein described.

88,384.—TROUTMAN GROB, San Francisco, Cal.—*Acoustic Stage.*—March 30, 1869.

Claim.—1. The above-described floor, consisting of radiating timbers B B, diagonal timbers C C and D, and boards *d* *d*, when constructed substantially in the manner and for the purposes set forth.

2. In combination with the above-claimed floor, the posts *a* *a*. blocks *c* *c*, intervening glasses *b* *b*, and the sounding-post E, arranged to support said floor, substantially as described.

88,385.—JAMES W. HILTON, Bradford, Pa.—*Lock-Nut.*—March 30, 1869.

Claim.—The combination of a perforated bolt, a perforated nut, and a wire, bent and locked, substantially as and for the purpose shown and described.

88,386.—MORISON HOYT, Brooklyn, and G. VAN CLEEF, New York, N. Y., assignors to themselves and J. T. LOCKHART, New York City.—*Vault-Cover.*—March 30, 1869.

Claim.—1. The combination of the standard B and pivoted angular arms C with each other and with the cover A, said parts being constructed and operating substantially as herein shown and described and for the purpose set forth.

2. The combination of the weighted chain D, or equivalent, with the arms C and standard B of the cover A, substantially as herein shown and described, and for the purpose set forth.

88,387.—P. H. INMAN and CHARLES B. WITHINGTON, Janesville, Wis.—*Wash-Boiler.*—March 30, 1869; antedated March 27, 1869.

Claim.—1. The valve H, constructed and applied to the tube A, as herein described.

2. The tube A, combined with the valve H, and applied to the boiler *e*, as herein described.

88,388.—JACQUES JACQUET, Newark, N. J.—*Combined Footstool and Foot-Warmer.*—March 30, 1869.

Claim.—A combined footstool and foot-warmer, consisting of the box A, with the hinged cover B, said cover having the foot-receptacles *a*, and of the heating-box C, all made and operating substantially as herein shown and described.

88,389.—HENRY JAMES, Hudson, N. Y., assignor to himself and WILLIAM H. GIFFORD, same place.—*Adjustable Reamer.*—March 30, 1869.

Claim.—The stock A, having the flat-head C recessed, to receive the cutters E E, attached thereto by the bolts K, working in the inclined slots D, formed in the wings or recessed portions of said head, and adjusted by the nut H, on the shank I, all constructed as herein set forth, for the purpose specified.

88,390.—Peter Johnson, Wauconda, Ill.—*Clothes-Pin.*—March 30, 1869.

Claim.—1. The yoke B, connecting the jaws A A′, and pivoted to one or both of the same, substantially as and for the purposes set forth.

2. The spring C and legs *e c′*, in combination with the yoke B, pins *b b′*, and jaws A A′, the whole arranged and operating substantially as and for the purposes described.

88,391.—E. O. Jones, Brandon, Mich.—*Land-Roller.*—March 30, 1869.

Claim.—1. The arrangement of the roller-sections in such relation to each other that the lines of their circumferences cut each other, and thus free each other from clogging, substantially as set forth.

2. In combination with the central section of the roller, the pins or other supporting arrangements upon which it rests when raised, as and for the purpose described.

3. The rear or middle section of a sectional roller, when attached, by means of connections, as described, pivoted to any part of the main frame, substantially as described.

88,392.—Charles Karmrodt and Nicholas Thilmany, Bonn, Prussia.—*Preserving Wood.*—March 30, 1869.

Claim.—The herein described chemical compound, consisting of the chloride of barium, muriate of barytes, or baryta in any of its forms, in combination with sulphate of copper or blue vitriol, for the purpose specified.

88,393.—Moses Kinsey, Newark, N. J.—*Skate.*—March 30, 1869.

Claim.—1. The plates E E, pivoted to the front of the skate, and provided with the adjustable toe-clamps G and heel-clamps H, and adjusted by means of the transverse screw F, in combination with the toe-plate C and heel-plate D, all arranged and operating as described, for the purpose specified.

2. The application, to a skate-fastening, of the longitudinally and laterally-adjustable wedge-shaped heel-clamps H *h*, when the same are so arranged as to fit against the inner side of the heel, as set forth.

88,394.—C. Lidren, La Fayette, Ind., assignor to himself and R. Jackson.—*Harvester-Rake.*—March 30, 1869.

Claim.—1. The slotted-cams R R′, the bail L, and the hinged carriage I I′, arranged and operating substantially as and for the purposes herein shown and described.

2. The latch *t*, for holding the bail in position, substantially as and for the purposes set forth.

3. In combination with the automatic raker F, the gear-wheels *u u′* and coupling *a′ b′*, with the shafts, cranks, arms, and rods, by which motion is conveyed to the carriage, arranged substantially as shown and described, for the purposes specified.

88,395.—William Loofbourow, Fayette, Wis.—*Hop-Drier.*—March 30, 1869.

Claim.—1. The herein-described arrangement of a hop-house, having the cooling, drying, and store-rooms, and provided with openings *a* and gates *b*, in one partition, and with movable carriages G G, substantially as described, all operating as specified.

2. Providing the carriages G with perforated bottoms, and with one or more folding sides or ends, as set forth.

88,396.—Leonard Low, Peoria, Ill.—*Grain-Separator.*—March 30, 1869.

Claim.—1. The combination of the inclined sieves, or screens *a* and chutes *b*, in quadrate sets, with the center-spout A, in the manner and for the purpose substantially as described.

2. The combination of the inclined channels *q* with the screens, substantially as and for the purpose set forth.

88,397.—Abraham W. Lozier, New York, N. Y.—*Horse Hay-Fork.*—March 30, 1869.

Claim.—The arrangement and combination of the fork-tines C C, fork-head A, pivoted hoist-bar and handle B, plate F, and catch E, the whole constructed and operating substantially as described.

88,398.—Andrew Main, Delaware, Ohio.—*Flood-Gate.*—March 30, 1869.

Claim.—The gate A, in combination with the swiveling hooks *h*, bent plates and friction-rollers *d*, and swiveling guide-bars *e*, as and for the purpose described.

88,399.—Morgan A. McAfee, Talbotton, Ga.—*Churn.*—March 30, 1869.

Claim.—The self-adjusting head F, having the arms G, in combination with the dasher-shaft C, as herein described, for the purpose specified.

88,400.—B. W. McClure, Wyoming, Iowa.—*Horse-Collar.*—March 30, 1869.

Claim.—An improved horse-collar, the covering of the outer part, or side of which is made of raw hide, and which has the hames-tng ears attached directly to it, as herein shown and described, and for the purpose set forth.

88,401.—James W. McCormick, Youngstown, N. Y.—*Fence.*—March 30, 1869.

Claim.—The combination of the curved suspension-wire E, and binding-wire F, with the pickets C and posts A, substantially as herein shown and described, and for the purpose set forth.

88,402.—James W. McKee, Brooklyn, (E. D.,) N. Y., assignor to himself and John Gibbs, same place.—*Ventilating-Faucet for Discharging Liquids.*—March 30, 1869; antedated March 19, 1869.

Claim.—The combination, with a beer-cask, or barrel, or other liquid-vessel, of a rod, provided with a valve at or near each end, closing against respective rests, on opposite sides of the said cask or liquid-vessel, the said seats constituting respectively a discharge-orifice, and an air-vent, so arranged that the valves may be opened and closed simultaneously, substantially as and for the purposes herein specified.

88,403.—Achille F. Migeon, Wolcottville, Conn.—*Cattle-Tie.*—March 30, 1869.

Claim.—The cattle-tie, formed of the hinged clamps *c* and *d*, and screw *f*, for grasping the rope and the eye *g*, extending out from the clamp *c*, for receiving the snap-hook, as set forth.

88,404.—Giacomo Migliavacca, Napa, Cal.—*Bottle-Corking Apparatus.*—March 30, 1869; antedated March 19, 1869.

Claim.—1. The vertically-moving block C, with the inclined operating-gauge *b*, and the parallel retaining-bars *c c′*, the whole constructed and arranged substantially as herein described.

2. The block D, with its tapering passage *e*, with the plunger E, the bent arm *g*, and the hand-lever F, substantially as and for the purpose described.

88,405.—Monroe Morse and Charles H. Morse, Franklin, Mass.—*Boiler-Flue Cleaner.*—March 30, 1869.

Claim.—1. The elastic perforated boiler-scraper plate C, which is bent into a cylindrical form, so that its edges are spiral, as set forth, to form cutting-edges of the scraper, substantially as specified.

2. The construction of the cylindrical or spiral boiler-scraper C, with the perforation *d*, whereby to obtain additional cutting-edges, as set forth.

88,406.—D. F. Mosman, Chelsea, Mass.—*Governor for Steam and other Enginery.*—March 30, 1869.

Claim.—The combination of the reciprocator with the shaft of the prime mover, provided with the cam, for causing the movements of the reciprocator, substantially as herein specified.

88,407.—Cyrus W. Palmer, Riga, N. Y.—*Wind-Wheel.*—March 30, 1869.

Claim.—The rods B, and rear wheel B^2, movable upright D, self-acting regulator F, spring G, ratchet and cam H, movable lever I, double rack J, balls K K, and revolving platform M, when arranged and

operating as herein described, and for the purposes set forth.

88,408.—ADOLPH PHILIPP, Manchester, Great Britain.—*Cigar-Ash Holder, &c.*—March 30, 1869.

Claim.—The device described and shown, consisting of the box *a* with compartments *b* b^1 *c*, bars *d*, with cigar-cutter d^1, removable drawer d^2, band *e*, and marking devices, substantially as and for the purpose herein set forth.

88,409.—JOHN POWELL, Sullivan, Ill.—*Cultivator.*—March 30, 1869.

Claim.—1. The beams B, in combination with the chains E and F, adjustable bolts C, links D, and frame A, as herein described, for the purpose specified.

2. In combination with the above, the handles G, adjustable bars H, and chain I, as herein described, for the purpose specified.

88,410.—CHARLES PRATT, New York, and CONRAD SEIMEL, Greenpoint, N. Y.—*Soldering Apparatus.*—March 30, 1869.

Claim.—1. The combination of a retaining-frame with a base-piece and soldering-pot, constructed and operating substantially as and for the purpose described.

2. The arrangement of the retaining-frame, for sustaining the can, substantially as described.

88,411.—CHARLES H. RAYMOND, Southington, Conn.—*Tinman's Machine.*—March 30, 1869.

Claim.—1. The tapering shaft *c* or *k*, fitted into the correspondingly-shaped bearings, and carrying the roller *d* or *l* at one end, in combination with the set-nuts, applied to the shaft at the back bearing, substantially as and for the purposes specified.

2. The bearings *m n*, connected by the yoke *q*, in combination with the tapering shaft *k* and set-nuts *o p*, substantially as set forth.

3. The bearings *m n*, connected together, and carrying the upper shaft *k* of the tinman's machine, in combination with mechanism substantially as set forth, for adjusting said shaft endwise, and allowing of the swinging movement, substantially as specified.

4. The case, or frame, formed of the side pieces *e e* and top piece *f*, in combination with the shaft *k*, bearings *m n*, and wheel *w*, so that these parts can be introduced from the rear, and sustained in place, substantially as set forth.

88,412.—JOSEPH RICHARD, Columbiaville, Mich.—*Fence.*—March 30, 1869.

Claim.—1. An improved portable fence, formed by the combination of the pickets B and chains A with each other, substantially in the manner herein shown and described, a suitable number of said pickets being made long, to be driven into the ground, as and for the purpose set forth.

2. Strengthening the fence A B, at its angles or other parts, by brace and supporting-stakes C, substantially as herein described and set forth.

88,413.—JOHN G. ROBINSON, Springfield, Ill.—*Gang and Trench Plow.*—March 30, 1869; antedated March 23, 1869.

Claim.—1. The combination of the angular lever A, ratchet C, and spring B, with the pitman D and sliding axle-tree-arm E, in the manner described, and for the purposes forth.

2. The combination of the vertical coupling F, and pivot M, and horizontal bar H, with the vertical lever G, ratchet I, and spring K, in the manner described, and for the purposes set forth.

88,414.—JOHN G. ROBINSON, Springfield, Ill.—*Trench-Plow.*—March 30, 1869; antedated March 22, 1869.

Claim.—The attaching this stationary colter to the heel of the sod-plow, extended downward and sloping backward, for cutting the furrow-slice of the trench-plow, in the manner described.

88,415.—PETER ROGERS, Sharon, Ohio.—*Corn-Planter.*—March 30, 1869.

Claim.—1. The arrangement of the revolving crank-axle F, connecting-rods G, oscillating levers H, rock-shaft I, slotted and hinged rods J, and the seed-slides K, all operating as described, for the purpose specified.

2. The arrangement of the plow-standards Q V, rock-shafts R W, bar Z, bolster C, and independently adjustable rods T Y, all operating as described, for the purpose specified.

88,416.—MATTHEW SACKETT, Montiecllo, Iowa, assignor to himself and JOHN FILSON, same place.—*Broadcast-Seeder.*—March 30, 1869.

Claim.—The combination of the sliding board B, grooved transversely with the perforated bottom of the box A and eyelets *a'*, when the board is connected to the crank E F by the spring D, arranged as described for the purpose specified.

88,417.—AUGUST M. SCHILLING, Chicago, Ill.—*Scroll-Sawing Machine.*—March 30, 1869.

Claim.—1. The plates S S, recessed as described, to receive the adjustable plate T and the plates U^1 U^2, clamped by the front set-screws, as herein described, for the purpose specified.

2. The support N, carrying the extension plate Q and adjustable guide-blocks R, when jointed as described, for the purpose specified.

88,418.—ADOLPH SCHLINGMAN, West Alexandria, Ohio.—*Washing-Machine.*—March 30, 1869.

Claim.—The combined arrangement, substantially as herein described, of the main roller I, the rubber D E F G H, and the upper roller M, acting with variable pressure on the roller I, for the purposes set forth.

88,419.—CONRAD SEIMEL, Greenpoint, N. Y.—*Soldering-Furnace.*—March 30, 1869.

Claim.—1. Arranging a channel, *f*, around the solder-pan E, to receive the solder, substantially as set forth.

2. The combination of the furnace with a removabel trough and reservoir, when constructed and arranged in the manner substantially as described.

3. The solder-pan E, arranged as described, so that the furnace may be closed during the operation of soldering, and thereby prevent escape of heat, substantially as set forth.

4. The application of the treadle G, and of the levers *i j*, and spring *k*, as constructed and arranged, for operating the adjustable plunger F.

88,420.—JOHN P. SHERWOOD, Fort Edward, N. Y., assignor to himself and BENJAMIN S. BURNHAM, same place.—*Stove-Pipe Shelf.*—March 30, 1869.

Claim.—The collar B, constructed as described, in two parts, secured together, at one end, around the pipe, by the slot and hook, and at the opposite end by the open slot and bolt, and adapted to receive upon the hook *b'* and upward-projecting ends *d*, the flanged shelf C, as herein described, for the purpose specified.

88,421.—ALEXANDER G. SLAGLE, Memphis, Tenn.—*Game.*—March 30, 1869.

Claim.—A game, which is composed of a combination of letters and numbers disposed upon cards, balls, and a chart, or register, and played substantially as herein described.

88,422.—JAMES E. STEVENSON, New York, N. Y.—*Water-Wheel.*—March 30, 1869.

Claim.—1. The annular or cylindrical gate E, provided with a horizontal flange, *l*, at its lower end, notched to form projections *fx* to extend into the chutes *g*, in combination with the guides *f*, placed or arranged tangentially in the casing D, inclosing a turbine or horizontal water-wheel, A, constructed and arranged to operate substantially as set forth.

2. The arrangement of the annular water-chamber *h*, guides *f* in the casing D, centrally-discharging wheel A, and the annular or cylindrical gate E, provided with the projections *fx* at its lower flange *l*, with the outer ends or edges of said projections rounded, or beveled, substantially as and for the purpose set forth.

3. The packing *p* in the inner edge of the flange *fxx* of the cap, or cover G, and the guides, or ribs *q*

on the inner surface of the cap, or cover, all arranged substantially as and for the purpose specified.

4. The casing D, cap, or cover G, gate E, and wheel A, all constructed and arranged substantially as shown and described.

88,423.—Stephen Upson, New York, N. Y.—*Device for Violin Practice.*—March 30, 1869.

Claim.—1. A block, A, when provided with grooves, or their equivalent, to allow the motions for playing a violin to be practiced upon it, substantially as herein shown and described.

2. The groove *b*, having the beveled bottom, when arranged in the block A, substantially as and for the purpose herein shown and described.

3. The straight groove *a*, or its equivalent, when arranged in the block A, substantially as and for the purpose herein shown and described.

4. The sliding case, D, when arranged on the block A, to practice the shifting motion of the bow, as set forth.

5. Providing the block A with a scale for finger-practice, as set forth, and with one or more raised lines, *c*, as specified.

88,424.—Isaac L. Vansant, Glasgow, Del.—*Car-Coupling.*—March 30, 1869.

Claim.—1. The gravitating coupling pin G, pivoted to the draw-head at *g*, in combination with the lever I, arranged across the draw-head, and having an eccentric head, or disk, which projects down into the cavity thereof, substantially as shown and described, and for the purposes specified.

2. The pivoted block F, when constructed and applied to the draw-head in the manner described, and adapted to operate in connection with the stop *o* and the link D, as and for the purpose set forth.

3. The combination of the vertically-rocking draw-head with the supporting-plate B, and a stop for limiting the motion of the draw-head, substantially as described, and for the purpose set forth.

88,425.—George Walworth, Peckskill, N. Y.—*Flask for Molding Kettles.*—March 30, 1869.

Claim.—1. The flask A, constructed as shown and described, for casting sugar-kettles, substantially as set forth.

2. The combination of the flask B, having the projections E, with the flask A, substantially as and for the purpose described.

88,426.—Edward Whitehead, Cincinnati, Ohio.—*Velocipede.*—March 30, 1869.

Claim.—1. The combination, with the steering or guiding wheel C, of the spherical hub *c*, the curved socket *a' a''*, axle *c'*, and slot P, substantially as and for the purpose described.

2. The combined arrangement of the pedals I I' and L L' with the saddle J and seat M, substantially as described, for the purpose set forth.

3. The general arrangement and combination of the frame A, *a' a''*, P P', driving-wheels B B', *b b'*, guiding-wheel C, *c c'*, divided axle D D', belts F F', pulleys *g g'*, crank-shafts G G', H H', *h h'*, pedals I I', pitmen K K', bell-cranks L L', *l l'*, and tiller R, for the purpose of producing an improved three-wheeled velocipede.

88,427.—Henry C. Wilson, West Elkton, Ohio.—*Portable Fence.*—March 30, 1869.

Claim.—The divided posts *a a*, in combination with the bolts *d d'*, keys *e*, and forked wedge M, when the parts are constructed, arranged, and used for erecting portable fences, in the manner substantially as and for the purpose described.

88,428.—Charles F. Woodruff, Newbern, Tenn.—*Water-Elevator.*—March 30, 1869.

Claim.—The combination of the plate B, having the journals *b*, the ratchet-plate C, having the holes *c c* and the hollow journal *c*, the chambered cylinder A', the spring *s*, the crank E, and the sliding shaft F, having the arms G G, bent as described, the whole being constructed and arranged to operate together substantially in the manner and for the purpose specified.

88,429.—Sidney Alderman, Stafford Township, Ind.—*Road-Scraper.*—March 30, 1869.

Claim.—The bar F, in combination with the guides I I, and also in combination with the bent rod G, pivoted upon the roller H, and so constructed as to form a double lever, all arranged as and for the purpose specified.

88,430.—Joseph Bell Alexander, Washington, D. C.—*Lamp-Shade.*—March 30, 1869.

Claim.—The combination of the groove G, formed on the upper rim of a lamp-shade or reflector, with the spring N, or any other suitable spring, for the purpose of supporting adjustably the said lamp-shade or reflector on the glass chimney of a lamp, substantially as described and set forth.

88,431.—Jearum Atkins, Washington, D. C.—*Device for Controlling Fluids under Pressure.*—March 30, 1869.

Claim.—The combination of a movable valve-case, D, provided with ports E F, and a movable valve, H I, said valve and valve-case having a reciprocal movement, as described, so that the ports will be opened by a movement of the valve and closed by a movement of the valve-seats, substantially in the manner and upon the principle herein set forth.

88,432.—B. H. Aylworth, Oxford, N. Y.—*Manikin, with Fœtus, &c., for Illustrating the Practice of Obstetrics.*—March 30, 1869.

Claim.—1. A manikin, constructed to exhibit, in an operative manner, by providing, in the various organs illustrated, for movements representing their natural action, the science and practice of obstetrics, substantially as specified.

2. The covering L to the artificial uterus, operated from the exterior of the manikin by cords and pulleys, or other suitable mechanical devices, to assist in illustrating the expulsive action of said uterus, essentially as described.

3. An artificial fœtus, constructed substantially as described, with its joints *k* made capable of extension and flexion, to secure to it its natural position in the uterus, and so that said jointed portions extend automatically when withdrawn therefrom, substantially as specified.

4. An artificial fœtus, with its skull, constructed substantially as described, and made compressible, essentially as and for the purpose or purposes herein set forth.

88,433.—Henry Bachman, Philadelphia, Pa.—*Extension-Table.*—March 30, 1869.

Claim.—The extension-table herein described, provided with a frame, B, at each end, and with slides D D, which are arranged outside of the frame, and, when closed, lie in a receptacle formed by said frame B and the stationary bars D' D', all substantially as herein set forth.

88,434.—Eli D. Bannister, St. Louis, Mo.—*Apparatus for Distilling Spirits.*—March 30, 1869.

Claim.—1. The condenser A', when connected with the still, in the manner and for the purpose substantially as described.

2. The combination of the still A, condenser A', and heater B with the doubler C and worm-tub D, for the purpose substantially as described.

3. The distilling of spirits, by means of still A, heater B, doubler C, and worm-tub D, substantially as described.

4. The condenser A', containing water, the manner of conducting the vaporized impure spirits into A' and below the surface of the water, and the discharging the spirits into heater B, after receiving the water-bath, substantially in the manner and for the purpose described.

88,435.—Jabez Bayston, Chicago, and George W. Nicholson, Naperville, Ill.—*Iron Bedstead.*—March 30, 1869.

Claim.—The combination of the side-pieces A, grooved their entire lengths, as specified, and with rounded lugs, L, on each end, with the end-pieces B, with sockets and rests, P, for the lugs L to fit into and upon, cross-pieces H, slotted slats F, pins *f*, and springs S, all as herein shown and described.

88,436.—Hiram Berdan, New York, N. Y., assignor to the Berdan Fire-Arms Manufacturing Company, same place.—*Breech-Loading Fire-Arm.*—March 30, 1869.

Claim.—1. The attachment of the hinged breech-piece to the barrel of a breech-loading fire-arm by a sliding connection, operating substantially as and for the purpose herein specified.

2. Securing the strap-piece C, or its equivalent, to the barrel, by means of a spring-catch, which provides for its easy attachment and detachment, substantially as and for the purpose herein specified.

3. The strap-piece C, serving the two purposes of attaching the hinge-joint of the breech-piece to the barrel, and as a base for the sight, as herein described.

4. A spring, so constructed and applied as to serve the two purposes of securing the strap-piece or plate, which forms the attachment of the hinge-connection of the breech-piece with the barrel, and of a sight-spring, substantially as herein described.

5. Providing a passage for the escape of gas between the said strap-piece and the top of the barrel, substantially as and for the purpose herein specified.

6. The formation of one side of the breech-receiver, whereby the fulcrum-point, on which the swinging breech-piece works as a lever in closing, is brought nearly to a level with the center of the bore, substantially as illustrated at *j*, in Fig. 6, as herein described.

7. The direct-action or center-bolt hammer, with a comb at its rear end, in combination with a swinging breech-piece, which opens with an upward and forward movement over the barrel or breech-receiver, when the said hammer serves also as a means of locking the said breech-piece, substantially as herein described.

8. The combination of longitudinal slot 32, in the center-bolt hammer, the collar P, inserted into the rear end of the breech-pin, to serve as a bearing for the main-spring, and the stationary pin 31, passing through the said slot and collar, for the purpose of securing the said collar, and preventing the turning of the hammer, substantially as herein specified.

9. A spring, so applied in combination with the ejector of a breech-loading fire-arm that, by the act of opening the breech-piece, it is caused to act alternately above and below the center of motion of the ejector, and thereby to restrain the action of the ejector during the first part of the motion of the breech-piece, and afterward to produce its sudden action, substantially as herein described.

10. The arrangement of the ejector-spring between the barrel and the strap-piece, which attaches the breech-piece thereto, substantially as herein described.

11. A recess, 41, in the breech-piece, for the reception of the spur of the ejector, whereby the latter is rendered inoperative, when there is no cartridge or cartridge-shell in the fire-arm, substantially as herein described.

88,437.—Laurent Berenger, Paris, France.—*Ironing-Machine.*—March 30, 1869.

Claim.—1. A traveling-frame, *b*, provided with rollers *a a a a*, and guide-rollers *i i*, working upon said rails, or platform, carrying a screw, to which an iron, fixed or movable, is attached, and by which pressure, or not, as required, can be given to the material to be ironed or pressed, substantially as described.

2. A hollow screw, serving the double purpose of carrying off the products of combustion, and also of adjustment of the iron, substantially as described.

3. The platform *y*, capable of being turned upon its center, combined with the iron supporter, arranged to be raised and lowered, substantially as described.

4. The iron, constructed with means for internally heating it, with an outlet for the products of combustion, and adapted for attachment to its hollow support, substantially as shown and described.

88,438.—Albert A. Bliven, Jersey City, N. J.—*Car-Brake.*—March 30, 1869.

Claim.—The shaft C, ratchet D, pawls *d d*, and lever F, combined and applied to a railway-car, whereby the braking of the wheels of one or more cars may be effected by the lateral movements of the lever, and the releasement of the wheels by the forward movement of the same, substantially as described.

88,439.—Lewis R. Boyd, New York, N. Y.—*Mode of Preventing Corrosion in Metallic Caps.*—March 30, 1869.

Claim.—The new article of manufacture, consisting of a metallic cap or cover for fruit-jars, preserving-cans, and other analogous articles, when the same is provided with a plating, or partial lining of glass, or its equivalent, combined therewith, and operating substantially in the manner and for the purposes set forth.

88,440.—Warren L. Braddock, Boston, Mass., assignor to himself and C. H. Minor, same place.—*Car-Coupling.*—March 30, 1869.

Claim.—The coupling B, with lever *f e*, plate *a*, crank *c*, link F, axle D, cushions *r r'*, stirrup *h*, cam *g'*, chain-wheels *i i'*, *k k'*, and shaft *l*, in the manner and for the purpose above specified.

88,441.—Gershom W. Bradley, Weston, Conn.—*Spike for Over-Shoes.*—March 30, 1869.

Claim.—The form of the spike for the purpose, and the mode of attaching the same to the sole, substantially as and for the purpose herein set forth.

88,442.—Ira Buckman, Jr., Williamsburgh, N. Y.—*Refrigerator and Weighing Apparatus.*—March 30, 1869.

Claim.—1. A detached movable ice-box, within a refrigerator-case, in combination with a weighing-apparatus, substantially as and for the purposes described.

2. The funnel-shaped tube D, the flexible tube F, and trap G, constructed as described, for conducting off the water, substantially as and for the purposes herein set forth.

88,443.—Samuel Adam Burkholder and George W. Wilson, Bendersville, Pa.—*Fertilizer.*—March 30, 1869.

Claim.—The above-described fertilizing-compound, composed of the ingredients named, in about the proportions herein specified.

88,444.—J. K. Caldwell, Allegheny City, Pa.—*Drying Furnace and Oven.*—March 30, 1869.

Claim.—1. The furnace X, with its arched roof *b*, track-supporting ledges E, perforated arched sheets G, placed over said furnace, and above the radiating-pipes C, leading from the rear of the furnace through the hot-air chamber F to the cross-flues D, all arranged together substantially as and for the purposes herein set forth.

2. The arrangement of the perpendicular or concave car-supporting ledges or walls E E, in the drying-house A, for conducting the heat to the central portions of the chamber, constructed substantially as specified.

3. The arrangement, in combination with the furnace X, of the cold-air pipes *f*, with perforations *i i*, that face the exterior convex surface of the radiating-arch *b*, whereby jets of cold air may be transmitted by any exterior apparatus, substantially as specified.

4. The series of valves I I, with graduated openings connected and simultaneously operated by one and the same rod, substantially as herein described.

5. The arrangement of the movable arched plates G G, provided with graduated perforations, and placed over the chamber F, between the ledges E E, substantially as shown and described.

88,445.—S. N. Caldwell, Pilot Grove, Ind.—*Hedge-Fence.*—March 30, 1869.

Claim.—1. Preparing the earth, by cutting down into the same on each side of the plant, and elevating the center, between the cuts, at an angle of about eighteen degrees from the center, each way, to the base of each cut, substantially as shown and described.

2. Planting the hedge-sprouts in the center of earth formed as above, in a vertical manner, and

cultivating the same to form a dwarfed head, substantially as set forth.

3. Bending over the hedge-plant and its roots, with the adhering earth, to an inclination of about eighteen degrees, after having attained sufficient growth therefor, preserving the flow of sap through the stock, and the continuous development of the dwarfed head, substantially as shown and described.

4. A hedge-fence formed by preparing the earth as specified, then planting the young sprouts in a vertical manner, and bending the same and its roots over, at an angle of about eighteen degrees, and growing the same in said position, substantially as set forth.

88,446.— F. E. CANDA, Chicago, Ill. — *Iron Bridge.*—March 30, 1869.

Claim.—1. The peculiar construction of the posts P, when the same are applied to a bridge, either as posts or top members of each panel, their several parts being combined and arranged in the manner substantially as shown and described, and for the purpose set forth.

2. The combination of the top members of each panel in a bridge, provided with the posts above described, with the connecting-parts, constructed and operating in the manner as shown and described, forming the upper chord.

3. The combination of the posts P with the bottom chord A, in the manner as shown and described.

4. The combination of the top chord, angle-block E, rods O J, posts P, plate H, key G, angle-block F, and bottom chord A, constructed and arranged as shown and described.

88,447.—RALPH R. CARPENTER, Tippecanoe, Ohio.—*Railway-Car Brake and Starter.*—March 30, 1869.

Claim.—1. The pawls or bolts *h i*, actuated by the eccentric, in combination with the shells *a b*, and spring, constructed and operating substantially as set forth.

2. The forked shifting-plate h^2, in combination with the shells *a b*, and ratchet-disks *e f*, all constructed and operated in the manner and for the purposes set forth.

88,448.—WILLIAM H. CHANDLER, Winchester, Mass.—*Printing-Press.*—March 30, 1869.

Claim.—1. In combination with a cylinder printing-press, and its nippers, a leaf, or equivalent device for throwing off the edge of the printed sheet, when released from the nippers, into position to be guided to or seized by take-off mechanism, substantially as described.

2. In combination with the leaf *k*, the fingers *i*, and rolls *d f*, substantially as shown and described.

88,449.—JOHN C. CLIME, Philadelphia, Pa.—*Umbrella-Cover.*—March 30, 1869.

Claim.—The body *d*, of flexible material, and the devices *e* and *f*, combined and arranged with the flanged device *g*, and the devices *h* and *i*, substantially as and for the purpose set forth.

88,450.—B C. COLDWELL, Wyoming, Pa.—*Spinning-Mule.*—March 30, 1869.

Claim.—1. The mechanism for operating the faller, constructed in the manner substantially in the manner and for the purpose herein described and represented.

2. The combination, with the faller, of the racks F^6 F^8, pinion G^4, and rack G^5, all arranged and applied as herein described, and operating in the manner and for the purpose specified.

3. The combination of the cam G^2, elbow-lever G^1, rod G^2, cross-head G^3, and pinion G^4, all arranged and operating substantially as and for the purpose herein set forth.

4. The combination of the racks F^6 F^8, lever F^7, spring F^9, set-screw f^2, and pins f^3 f^4, arranged and operating substantially as described.

88,451.—ISAAC COLE, New York, N. Y.—*Button.*—March 30, 1869.

Claim.—The tubular shanks *c d*, fitting within each other, one of which is secured to the head *a*, and receives the spring-catches *e*, and the other is secured to the back *b*, and contains the ring *f* and button *g*, constructed and operating substantially as and for the purpose described.

88,452.—TERRENCE COLLINS and ASHER CASTIEL, St. Louis, Mo.—*Lathe.*—March 30, 1869.

Claim.—The cutters F I I^1 I^2, supports L, holders L^1, standard P, rack P′, and operated as described, in combination with the table K, cam *r*, and its connections with table K, and the devices for operating the same, in the manner and for the purpose substantially as described.

88,453.—GRANT T. COOLMAN and CHARLES M. YOUNG, Corry, Pa.—*Harvester.*—March 30, 1869.

Claim.—1. The combination, in a harvester, of two main wheels, a main frame, carrying the gearing, a coupling-frame, such as described, and a shoe, secured to the coupling-frame, with the finger-beam pivoted to but turning independently of the shoe, as set forth.

2. The combination with the three-sided coupling-frame and its fixed shoe, of the finger-beam, secured to the long rocking brace-bar, having one pivot in the shoe, and the other in the coupling-frame, but both on the same level, as set forth.

3. The combination, substantially as set forth, of the finger-beam, stud *u*, lifting-lever f^2, for the purpose specified.

4. The combination, substantially as set forth, of the coupling-frame, shoe, and hinged finger-beam, with locking lifting-devices inclosed within the shoe.

5. The combination of the main axle, the countershaft, the second shaft F′, and the long crank-shaft, with their respective gears, when arranged and operating as described, for driving the cutters.

6. The arrangement of the second shaft F′ below the main axle, and the crank-shaft below the shaft F′, as and for the purpose described.

88,454.—J. MASLIN COOPER, Philadelphia, Pa.—*Making Nails.*—March 30, 1869.

Claim.—As an improved method of making improved cut-nails, cutting the same of equal breadth from end to end, of a plate of equal thickness, but of which an edge is beveled on opposite sides, as described.

88,455.—JOHN R. CUSHER, New York, N. Y.—*Wooden Pavement.*—March 30, 1869.

Claim.—The double-dovetailed strips B C, formed with a rectangular central portion longitudinally, in combination with the blocks A, having dovetailed grooves *a b* on their sides, so arranged that said central portions of the strips B C are made to cross each other, holding the blocks a given distance apart, and forming bearings for cement, to fill the spaces between said blocks, substantially as shown and described.

88,456. — ANTHONY G. DAVIS, Watertown Conn.—*Mouse-Trap.*—March 30, 1869.

Claim.—The trap described, consisting of the grooved cover A, annular rim B, and partitions *c*, the whole being constructed, combined, and arranged as described, for the purpose set forth.

88,457.—CONSTANTINE DE BODISCO, St. Petersburgh, Russia.—*Sled.*—March 30, 1869.

Claim.—A sled for ice-hills, constructed entirely of metal, as herein shown, and provided with the guides *a a*, possessing the rubber feet *e e*, the whole constructed and arranged in the manner and for the purposes herein set forth and described.

88,458.—WILLIAM PENN DELAPLAIN, Peoria, Ill.—*Sign.*—March 30, 1869.

Claim.—A sign-board, having grooved rails B and C, grooved side rail D, slotted side rail L, transverse bar E, grooved, as described, together with the gates F and adjustable letter-blocks *a*, constructed, arranged, and operating as specified.

88,459.—PATRICK DOOLEY, Newark, N. J.—*Skate-Fastening.*—March 30, 1869.

Claim.—The detent-levers O O′, pivoted to the

same standard, but independent of each other, to one of which is connected, by link and slide, the movable cap S, and the other the heel-clamps K, in combination with the ratchet H, when the parts are arranged to operate as described.

88,460.—JOHN DOUGHERTY, San Francisco, Cal.—*Machine for Cutting Screws.*—March 30, 1869.

Claim.—1. Arranging together, in a screw-threading machine, in the manner described, the feed-screw P, carriage D, worm-wheel H, and worm-chuck G, each being constructed as shown and described.

2. The arrangement, on the two rotating shafts, of the loose gears X V, fast gears W, and head-stock S, as and for the purpose specified.

88,461.—WILLIAM T. DOWNS, St. Louis, Mo.—*Heel.*—March 30, 1869.

Claim.—The retaining-plate G, the nut F, screw E, mortises *d*, and pins D, when arranged with the heel-piece B, the plate C^2, and cap C, substantially as and for the purpose set forth.

88,462.—H. C. DREXEL, Baltimore, Md.—*Sad-Iron Heater.*—March 30, 1869.

Claim.—1. The telescopic tube B B^1 B^2, arranged and operating, with relation to a smoothing-iron, substantially as shown and described.

2. The combination of the flexible tubing C, telescopic tube B B^1 B^2, and tubes D and E, substantially as shown and described.

3. The perforated or gauze chimney-cap *g*, arranged as and for the purpose specified.

4. The iron F, provided with the perforations *f*, sliding-door H, and sliding bottom-plate I, substantially as shown and described.

5. The combination of the spring S, section B, and standard A, substantially as shown and described.

6. The platform K, arranged as shown and described, for the purpose specified.

88,463.—E. C. EDMONDS, Albany, N. Y.—*Toy-Gun.*—March 30, 1869; antedated March 25, 1869.

Claim.—1. A toy-gun, constructed as described, so that the ball returns to the barrel after being fired off, substantially as herein set forth.

2. The combination of the barrel B, stationary collar C, and hollow rod D, the latter provided with collars E F, and hammer G, and spring H, substantially as and for the purposes herein set forth.

3. The combination of the reel L, spring M, and cord *e*, for the purpose of returning the ball K into the barrel, substantially as herein set forth.

4. The combination of the stock A, barrel B, hollow rod D, spring H, hammer G, trigger I, and reel L, all arranged and operating substantially as and for the purposes herein set forth.

88,464.—HORACE L. EMERY, Albany, N. Y.—*Cotton-Gin.*—March 30, 1869.

Claim.—1. A receiving-chamber attachment, or extension, for the saw cotton-gin, with its lower side or bottom constructed of a slowly moving endless or cylindrical screen, having the ends of said screen open to the right and left of the gin, and its lower or returning portion unobstructed, to permit the free escape of wind, sand, dust, and other foreign matter.

2. So placing the receiving-chamber with its screen-bottom relatively toward the blast entering it from the gin, that this screen shall, in its movement, constantly present an unobstructed portion of its surface toward and nearest the blast as it comes from the brush-cylinder.

3. The solid doffing-cylinders, with or without flaps, in combination with a receiving-chamber of a cotton-gin, having its lower side or bottom constructed of a moving or revolving screen, for the purpose of stripping the bat or sliver from the said screen, and delivering it out from the chamber.

4. The distributing air-chamber over the brush-cylinder, with its openings *e e* and *d*, as and for the purpose specified.

5. The elastic adjustable false lining in the saw-chamber of a cotton-gin, opposite the ribs and breast, for the purpose of adjusting its form and varying the capacity of the saw-chamber to the different kinds and conditions of the seed-cotton, and to the size and density of the cotton-roll.

6. The arrangement and use of alternate saws and blanks upon the saw-cylinder of a cotton-gin, in combination with the picker-roll supporter mounted in the saw-chamber, over the saw-cylinder of a saw cotton-gin.

88,465.—JACOB J. ESLER, Belleville, Ill.—*Seeding-Machine.*—March 30, 1869.

Claim.—The shaft C, its feed-cylinder D^2, gauge-block G, and screw H, substantially as set forth.

88,466.—LEVI S. FALES, New York, N. Y.—*Fertilizer.*—March 30, 1869.

Claim.—The artificial fertilizer, composed of the materials herein set forth, compounded in the manner and proportions substantially as specified.

88,467.—JOHN H. FRENCH, Albany, N. Y.—*Slate-Frame.*—March 30, 1869.

Claim.—1. A metallic band, of such form as to fit the elastic cap and the two adjacent pieces of the frame, for the purposes of holding the elastic cap securely in its place, leaving the pads projecting beyond it, and of making a strong brace for the frame.

2. The combination of the elastic cap or cushion B, and a metallic band, C, forming a noiseless corner for school-slate frames, as herein described.

88,468.—ROBERT S. GODFREY, Philadelphia, Pa., assignor to himself, THOMAS BANER, and JAMES C. HIRES, same place.—*Refrigerator.*—March 30, 1869.

Claim.—One or more hollow shelves or partitions, communicating with the ice reservoir, and extending horizontally from the reservoir into the chamber of a refrigerator, substantially as herein described.

88,469.—WILLIAM P. GOFF, Yorkville, Wis.—*Portable Fence.*—March 30, 1869.

Claim.—1. Panels A, braces B, pin C, stakes D, and stays E, constructed and arranged substantially as described.

2. Panels A, clasp F, wedges G, and notched ends H of the panels, for turning a corner, substantially as described.

88,470.—WILLIAM GOLCHER, St. Paul, Minn.—*Breech-Loading Fire-Arm.*—March 30, 1869.

Claim.—The combination of the lever G, barrel A, cartridge-retractor J, spring M, and hammer C, with the lever I, pivoted, at its upper end, to the barrel, and, at its lower end, to the lever G, in front of the fulcrum of the latter, and with the arm H, pivoted, at its forward end, to the lever G, above said fulcrum, when the forward end of the lever G is bifurcated, so as to pass over lever I, in raising the barrels, and is provided with a point which strikes the retractor, and operates it; all said parts being constructed and operating together, in the manner and for the purpose described.

88,471.—LEWIS GOODWIN, Bangor, Me.—*Sash-Balance.*—March 30, 1869.

Claim.—1. A sash, provided with a strip, K, slide H, pin *l*, and screw E or E′, said screw serving the double purpose of holding the sash in position, and of retaining or releasing the slide, substantially as set forth.

2. The combination, with the devices embraced in the preceding claim, of a cord and pulley, connecting the upper and lower sashes.

3. The combination of the devices embraced in the last preceding claim, with a friction locking-device, applied to the lower sash, substantially as set forth.

88,472.—GORDON Y. GRAY, Niles, Mich.—*Oven.*—March 30, 1869.

Claim.—A mechanical bakery, consisting of an oven, O, inclosed within the walls B, with a continuous intervening flue, F, and having the endless apron A arranged to move through the oven O, substantially as shown and described.

88,473.—A. J. HARMON, Charlestown, Mass., assignor to himself, WILLIAM H. HOWLAND, and

JOHN E. HASSELTINE.—*Weather-Strip.*—March 30, 1869.

Claim.—The spring-hinge D D, composed of coils *a a*, arms *b b*, joint *e*, and arms *i i*, constructed and applied to strips A B, substantially as described and specified.

88,474.—JOHN HARPER, Hillsborough, Iowa.—*Churn.*—March 30, 1869.

Claim.—1. A churn, in which the air that is admitted to the contents thereof is caused to pass through a vessel containing hot or cold water, as circumstances may require, by which means said air is heated or cooled, as desired, substantially in the manner shown and described.

2. The construction of the vessel F, with its reservoir for water, and its air-passages, substantially as shown and described.

3. The combination and arrangement of vessels D and F, substantially as shown and described.

88,475.—JAMES HARRIS, Boston, Mass.—*Meter.*—March 30, 1869.

Claim.—A new arrangement, substantially as described, of the piston-chambers *b b'*, and the several ports, and the connecting oblique water-passages of the two pistons and their cylinders, the two end-ports, under such arrangement, being in a vertical plane passing through the axis of the cylinder, while the two inlet-ports are on one side of such plane, and the outlet-port is on the other side of it, and the connections of the inlet-ports with the end-ports are effected by the oblique passages N O P Q, leading through the body of the case, all as set forth.

88,476.—LEWIS T. HAWLEY, Salina, N. Y.—*Milk-Cooler.*—March 30, 1869.

Claim.—1. The vessel C, having the air-chamber D and cooling-tubes *a a* formed within it, substantially as and for the purpose set forth.

2. The combination of the vessel C with a clothed or covered can, or vessel, substantially as and for the purpose described.

88,477.—GEORGE W. HEATH, Burlington, Pa.—*Horse Hay-Fork.*—March 30, 1869.

Claim.—1. The arrangement of the bar A, bar D, point C, hooked bar E, cross-bar G, and its forks H H, when constructed and operating as specified.

2. The combination of the lever F, the latch *f*, and angular bar *d*, constructed and operating substantially as and for the purposes herein set forth.

88,478.—C. W. HERMANCE, Schuylerville, N.Y.—*Washing-Machine.*—March 30, 1869.

Claim.—The arrangement of the thin perforated metal disk E, with its radical hollow tubes *b b*, open at their outer ends, and perforated, all attached to the vertical shaft B, passing through the movable bar F, and within the wash-boiler A, as shown and described.

88,479.—CHARLES HEWITT, Hamilton Township, N. J.—*Puddling-Process for the Manufacture of Wrought Iron.*—March 30, 1869.

Claim.—The process of puddling iron, by mixing cast iron, divided into coarse granules or pieces, with oxide of iron, melting, and boiling them together, and balling the iron in a puddling-furnace, substantially as described.

88,480.—GEORGE JAMES HINDE, Wolverhampton, England, and THOMAS CALLENDER HINDE, Ynispenllwch, near Swansea, Wales.—*Manufacture of Iron and Steel, and Furnace and Apparatus therefor.*—March 30, 1869.

Claim.—1. The improvements in the manufacture of iron and steel hereinbefore described; that is to say, smelting iron-ores, and producing therefrom either malleable iron, steel, or cast iron, by subjecting a mixture of the iron-ores and flux, either with or without carbonaceous matter, to the action of a mixture of highly heated carbonic-oxide and nitrogen gases, such mixture of gases being produced by passing atmospheric air through a stratum of ignited fuel, the said fuel not being mingled with the ores to be smelted, substantially by the means and in the manner as above described.

2. The arrangements of furnaces and apparatus to be used in the manufacture of iron and steel, substantially as hereinbefore described, and illustrated in the accompanying drawings.

88,481.—EDGAR HITT, Poundridge, N. Y.—*Wagon-Seat.*—March 30, 1869.

Claim.—The button *a*, projecting from the arm C of the riser A, in combination with the spring-latch *c*, in the cleat D, substantially as and for the purpose set forth.

88,482.—CHARLES A. HODGMAN, Tuckahoe, N. Y.—*Picture-Frame.*—March 30, 1869.

Claim.—A cushion, one or more, on the back of a picture-frame, looking-glass, or other article to be suspended against a wall, substantially as and for the purpose described.

88,483.—GEORGE M. JACKSON, North Hector, N. Y.—*Harvester.*—March 30, 1869.

Claim.—1. The arrangement of the clutch I, rod K, spiral spring *i*, and lever M, substantially as and for the purpose shown.

2. The combination of the cylinder S, bearings T T, and crank-shaft O, together with the cutting-apparatus of a harvester, substantially as shown, and for the purpose set forth.

3. The arrangement of the lever *u*, pulley U, cord R, pulley W, shoe Q, and cylinder S, together with the ratchet-bar X and catch Y, substantially as shown and described.

88,484.—SAMUEL F. JACKSON and JEFFERSON A. DAVIS, Eureka, Ill.—*Apparatus for Heating and Separating Lime from Water.*—March 30, 1869.

Claim.—A spray-heater and lime-extractor, having perforated shelves *a b c*, apertures B and C, lid or door G, slats F F, and hinges and wedges, as described, constructed, arranged, and operating substantially as specified.

88,485.—HENRY JAMES and EDWARD DREWETT, Weybridge, England.—*Water-Closet.*—March 30, 1869; patented in England November, 21, 1867.

Claim.—1. The combination of the pan, the seat, and the cover, with a lining of India-rubber, arranged to make a tight joint around the pan when the cover is pressed down, substantially as before set forth.

2. The combination of the pan, the seat, the cover, and the trough for disinfecting material, the whole constructed to operate substantially as before set forth.

3. The combination of the pan and the trough with inlet and outlet air-passages, and a valve to control the passage of air, the whole constructed to operate substantially as before set forth.

88,486.—W. L. JEFFRIES, Lancaster, Ohio.—*Plow-Carriage.*—March 30, 1869.

Claim.—The ratchets *c* and *s*, when constructed, combined, and operating substantially as and for the purposes specified.

88,487.—THOMAS JONES, New York, N. Y.—*Device for Holding Plates of Glass.*—March 30, 1869.

Claim.—The device for handling plates of glass, consisting of beam A, adjustable weight E, swivel C, hook G, and clasps H, combined and operating as described.

88,488.—ROBERT J. JORDAN, New York, N. Y. *Piano-Lock.*—March 30, 1869.

Claim.—1. The arrangement of the guard-plate D, spring F, and revolving bolt C, the latter being operated by a key, and provided with a cross-head, which, after entering the catch-plate, is turned, so that it cannot be withdrawn, except by the key, substantially as herein described.

2. The bolt C, sliding-plate B *b'*, and guard-plate D, in combination with each other, and with the lock-plate A, all operating substantially as herein shown and described, and for the purpose set forth.

88,489.—ERASTUS M. KINNE, Cuba, N. Y.—*Trace-Buckle.*—March 30, 1869.

Claim.—The combination of the aperture A, the chambers C, the boxes D, the shoulder-brace bar E,

with the shoulder-braces G, as above described, for the purpose specified.

88,490.—H. S. LELAND, Mount Union, Ohio.—*Combination-Lock.*—March 30, 1869.

Claim.—1. The slide-bar Q, when used to produce a rotary motion of the arbor N, which connects the outer with the inner portion of the lock, substantially in the manner and for the purpose herein specified.

2. The tumbler *a*, with slot a^1, and tumbler-collar *b*, with slot b^2, and groove b^1, when arranged and combined on the arbor K, by pin a^2 and holes b^4, or their equivalents, substantially in the manner and for the purpose specified.

3. The ratchet-wheel *c*, with face-teeth c^1 and end-teeth c^2, when used in combination with the pawl *p* on the arbor N, and the spring-pawl *g*, substantially in the manner and for the purpose specified.

4. The upright X, with stop *w*, tumbler-arbor K, with stop *v*, and pins h^3 and b^3, ratchet-wheel collar *h*, ratchet-wheel *c*, tumbler-collar *b*, and tumbler *a*, the several parts being arranged and combined substantially as and for the purpose herein specified.

5. The combination of the spring *e*, ratchet-wheel collar *h*, arbor K, and upright X, when said spring *e* is subjected to both a compressive and torsional strain, the several parts being arranged in the manner herein specified.

6. The shifter-plate H, with the tongue *m* attached thereto, when used in combination with the ratchet-wheel collars *h h*, substantially as and for the purpose herein specified.

7. The lock-plate I I′ I′, with stop-bars *j j*, when used in combination with the bolt G and tumblers *a a*, substantially as and for the purpose specified.

8. The retaining-plate J, with knob T and block r^2, when used in combination with the shifter-plate H and bolt G, substantially as and for the purpose specified.

9. The change-bar R, with thin plate *n* and screw r^1, or its equivalent, when used in combination with the tumbler-collars *b b*, substantially as and for the purpose specified.

10. The spindle M and throw-shaft L, with arm L′, when used in combination with the shifter-plate H and lock-plate I, substantially as and for the purpose herein specified.

11. The slide-bar Q, lever-wheel P, arbor N, pawl-wheel O, pawl *p*, ratchet-wheel *c*, arbor K, ratchet-wheel collar *h*, tumbler-collar *b*, tumbler *a*, lock-plate I I′ I′, and bolt G, the several parts being constructed, connected, and arranged substantially as and for the purpose herein specified.

88,491.—JOSÉ RUIZ LEON, Havana, Cuba.—*Tide-Power.*—March 30, 1869.

Claim.—1. The dike, provided with the conduits or passages set forth, in combination with the receiving cistern or receptacle D, provided with a suitable channel or passage, adapted to permit water to fall from said cistern, the whole operating substantially as described.

2. The combination of the dike, containing the conduits or passages, as set forth, with the cisterns D and E, substantially as and for the purposes described.

3. The dike, provided with the conduits or passages set forth, in combination with the cistern D and the canal *g g*, substantially as and for the purposes described.

4, The arrangement, in the cistern E, of the hydraulic wheel V, and the pontoon N, operating as shown and described.

88,492.—H. W. LIBBEY, Cleveland, Ohio.—*Velocipede.*—March 30, 1869.

Claim.—1. The combination of rubber-lined rest N, with rod M, segmental gear J, chain O, crank and crank-shaft, wheels Q P, rollers S, and wheels B, the whole forming the running-gear and steering-apparatus of a velocipede, substantially as described.

2. The rubber-lined rest N, in combination with the rod M, for the purpose set forth.

88,493.—EDWIN B. LOCKE, Exeter, N. H.—*Machine for Making Bolts.*—March 30, 1869.

Claim.—1. The arrangement and combination of the sliding-bars *i j* with the carriage *g*, the former being provided with the differential cam-grades *k* and *l*, and the latter with the inclines *m* and *n*, the whole operating in manner and for the purpose as before explained.

2. As a means of operating the cutter-carrier H, the combination and arrangement of the bars *b′* and c^2, such bars being inclined upon their forward ends, and operating in connection with the said carrier, provided, as before explained, in such manner as to effect the reciprocating movements of such carriage, substantially as hereinbefore set forth.

88,494.—ROBERT O. LOWREY, Salem, N. Y.—*Insole.*—March 30, 1869.

Claim.—A water-proof insole slipper, constructed substantially as herein described, to be worn inside of a boot or shoe, as set forth.

88,495.—JEREMIAH A. MARDEN, Boston, Mass., assignor to JOHN H. and CHARLES E. ABBOTT, same place.—*Steam-Engine Governor.*—March 30, 1869.

Claim.—The within-described stop-motion, consisting of the friction-disk K, with its recess *x*, the pulley D, and the spring *s*, in combination with the arm *w*, connected with the valve, all operating substantially as set forth.

88,496.—JEREMIAH A. MARDEN, Boston, Mass., assignor to CHARLES E. and JOHN H. ABBOTT, same place.—*Steam-Engine Governor.*—March 30, 1869.

Claim.—1. The device for closing a valve by means of cords or wires, substantially on the principle and in the manner herein set forth.

2. The arrangement with the above of the pin *d′* and arm *f*, with its inclined end *i*, for automatically closing the valve on the breakage of the governor-belt, substantially as described.

88,497.—JEREMIAH A. MARDEN, Boston, Mass., assignor to CHARLES E. and JOHN H. ABBOTT, same place.—*Steam-Engine Governor.*—March 30, 1869.

Claim.—1. The sliding adjustable paddle N and rod *h*, substantially as set forth.

2. In combination with the above paddle-blade N, the rocker-shaft *g*, sliding-rod *f*, and weighted lever, for operating the valve, substantially as set forth.

88,498.—JEREMIAH A. MARDEN and CHARLES E. ABBOTT, Boston, Mass., assignors to JOHN H. and CHARLES E. ABBOTT, same place.—*Steam-Engine Governor.*—March 30, 1869.

Claim.—A screw-propeller, C, revolving within the receptacle A, in combination with a float, and the lever K, connected with the steam-valve, substantially as set forth.

88,499.—JOHN N. MCLEAN, Philadelphia, Pa., assignor to himself and B. W. LACY, same place.—*Sewing-Machine.*—March 30, 1869.

Claim.—1. The swiveling block *a″*, in combination with a needle-bar, C, which is articulated to and actuated in its vibratory motion by a vibrating bar, G, operated substantially as and for the purpose described.

2. The vibrating-bar G, in combination with a needle-bar, C, articulated thereto as described, when the said bar G has its center of vibration made adjustable therein for the purpose of varying the length of the stitches in the cloth, as occasion may require, substantially as described.

3. The vibrating-bar G, in combination with a needle-bar, C, articulated thereto as described, when the center of vibration of the said bar G is made adjustable for varying the length of the stitch by means of the slot *g′* and screw *h′*, substantially as set forth and described.

4. The vibrating-bar G, in combination with a needle-bar, C, articulated thereto substantially as described, when the slot *g′* is made in the bar so as to come parallel, in the direction of its length, with the direction of the length of the slot *a′*, in which the thumb-block *h* slides, when the said needle-bar C has reached half the length of its downward motion, substantially as described, for the purpose specified.

5. The slotted vibrating-bar G, in combination

with the needle-bar C, the disk f', and wrist-pin f'', or their equivalents, the sliding thumb-block h, and screw h', or their equivalents, and slotted upright A, the said parts being arranged to operate substantially as and for the purposes described.

6. The obliquely slotted looper-lever D, in combination with the stationary fulerum-pin b^4, for the purpose of allowing the said looper-lever to be moved longitudinally forward and backward on its said fulerum-pin, substantially as and for the purposes described.

7. The obliquely slotted looper-lever D, the stationary fulerum-pin b^4, and the actuating lever K, or its equivalent, operating together in combination with the adjustable stop U, or its equivalent, for the purpose of compelling the said looper-lever to move longitudinally forward at the proper time, substantially as and for the purpose described.

88,500.—William A. McDonald, Alna, Me., assignor to F. G. Cooker, for one-half his right.—*Cheese-Cutter.*—March 30, 1869.

Claim.—1. In cheese-cutters, the pivoted blade, cast or formed with a weighted handle, substantially as and for the purpose described.

2. The knife E, with weighted handle F, in combination with the standard D, frame G, and revolving table C, with pins b c, substantially as and for the purpose described.

3. The metallic frame G, constructed as described, in combination with the knife E and standard D, as and for the purpose set forth.

4. The combination of the knife E, frame G, standard D, bed-piece B, table C, with pins b b, all constructed, arranged, and operating substantially as and for the purpose herein described.

88,501.—Purches Miles, New York, N. Y.—*Fastening for Curtains and Carpets.*—March 30, 1869.

Claim.—The tack and binder, as a new article of manufacture, formed of the penetrating points and flattened bar, as and for the purposes specified.

88,502.—John H. Morris, Philadelphia, Pa.—*Adjustable Door-Sill.*—March 30, 1869.

Claim.—A self-adjusting door-sill, having a metallic covering, B, with oval top c, slotted flange or flanges, and supported by springs C, constructed and operated for the purpose, and in a manner substantially as set forth.

88,503.—Benjamin Oldfield and Edwin Oldfield, Norwich, Conn.—*Loom.*—March 30, 1869.

Claim.—1. The reciprocating head e, hooks h h^1, and toothed slide-rods i i^1, in combination with cog-wheels m k and shuttle-rack n, of a batten, E, combined and operating substantially as and for the purpose set forth.

2. The toothed slide-rods l^2, in combination with the toothed bell-crank levers o p q and gear-wheels k^2, substantially as and for the purpose described.

3. The stop p^2, on the cog-wheel k^2, to act in combination with the bell-crank levers o p q, substantially as and for the purpose described.

4. The slide-rods, provided with oblique cam-slots j^*, in combination with the heddle-frames F and their connecting mechanism, substantially as and for the purpose set forth.

5. The combination with bell-crank levers o, p, q, r, s, t, u, v, w, of rods e^2 f^2 g^2, provided with slots h^2, to catch over studs i^2, which project from the arms of the bell-crank levers, or with studs which catch in suitable slots in the arms of said bell-crank levers, substantially as and for the purpose set forth.

6. The vibrating hooks m^2, pivoted to the slide-rods l^2, and acting, in combination with the pattern-chain and knife, or knives, substantially as and for the purpose described.

7. The combination, with the reciprocating knives G G′, and one or more treadles, I, of racks g^2, and pinions r^2, arranged and operating substantially as and for the purpose set forth.

8. The cog-wheel J, having adjustable roller-studs t^2, in combination with the treadles I I′, knives G G′, their connecting devices, and the pattern-chain, substantially as and for the purpose described.

88,504.—George H. Palmer, New York, N. Y., assignor to William Dale, New York City.—*Vault-Cover.*—March 30, 1869.

Claim.—A cover for the openings in walks, pavements, &c., composed of a dish, A, filled with stone, brick, concrete, artificial stone, wood, or other like material, substantially as shown and described.

88,505.—Isaac E. Palmer, Hackensack, N. J.—*Machine for Stretching Fabrics.*—March 30, 1869.

Claim.—1. The combination of traveling selvage feeding and carrying devices with a stationary intermediate friction-frame or surface, operating as a drag to the center or body of the fabric, and acting, in unison with the selvage-carrying device, to effect the stretch of the fabric, substantially as specified.

2. The combination of independently hung, or traveling selvage carrying and stretching devices, with friction-wheels or appliances for driving the same, when said drivers are so hung and operated as to admit of either or both of the selvage-carrying devices, at opposite ends of the intermediate friction-frame, having feed given them, or otherwise allowed to freely move with and by the passage of the fabric over them, essentially as herein set forth.

3. The combination, with the divided expanding and contracting stretching-frame A, and the independently revolving selvage-carrying rolls C, of the stationary hubs F F, having reversely tapering passages, c, through them, and adjustable in relation to the fixed shaft E, substantially as and for the purpose or purposes herein set forth.

4. The fabric-carrier or receptacle L, hung so as to be capable of being raised or lowered, and adjustable from opposite ends, for operation in concert with and in relation to the fabric-stretching devices or surfaces, essentially as specified.

5. The roughened points m, scattered over the surface of the body of the drying-cylinder, substantially as and for the purpose herein described.

88,506.—William M. Palmer, Middlebush, N. J.—*Water-Elevator.*—March 30, 1869.

Claim.—1. The combination and arrangement of the sheaves, or pulleys H I, spring K, and rope or belt G, substantially as and for the purpose described.

2. The parts enumerated in the above clause, in combination with the friction-pulleys F and F′, substantially as shown and described.

3. The arrangement of the pulleys F F′, drums E E′, rope G, pulleys H and I, and spring K, for the purpose of regulating the position of the buckets with reference to the surface of the water in the well, substantially as shown and described,

4. The arrangement of the levers L N, double clutch-coupling O O′, and clutches P P′, substantially as and for the purpose described.

5. The bucket I, having a weighted bail attached thereto, substantially as shown and described.

88,507.—Thomas R. Pickering, New York, N. Y.—*Velocipede.*—March 30, 1869.

Claim.—1. The reach, or back-bone, constructed of a central or main tube, A, and lateral rear tubes A′ A′, arranged substantially as described, and welded or united together, in combination with the socket B, at the forward end of the reach, essentially as specified.

2. The combination of the sockets B and D D with the reach, constructed of tubes A A′ A′, arranged as described.

3. In combination with the socket B, the fork C, composed of tubes, constructed to form oil-boxes, b b, at their base, and provided with sockets or bearers, a a, for the support of the running-axle, essentially as specified.

4. The stirrups H, made of polygonal shape in their transverse section, and hung to freely turn on the wrist-pins of the cranks which carry them, substantially as described.

88,508.—Nathan M. Powers, Kirksville, Mo.—*Corn-Planter.*—March 30, 1869.

Claim.—The marking-wheels A A, markers B B, shaft F, cog-wheels D and N, dropper-bar S, rods I I, valves J J and R R, and drills M M, when combined, arranged, and operating substantially in the

manner and for the purposes herein shown and described.

88,509.—CHARLES S. RANKIN, Cincinnati, Ohio.—*Fire-Place.*—March 30, 1869.

Claim.—1. The described arrangement of convex recessed grate A, oblique jambs B B′, and front plate C, for the purposes set forth.

2. As a new article of manufacture, the grate A, jambs B B′, and front plate C, cast in one piece, as set forth.

88,510.—ALFRED G. REED, Philadelphia, Pa.—*Corpse-Preserver.*—March 30, 1869.

Claim.—The arrangement described of the partitions D D′ and vessels B B′, in respect to a case and cover of non-conducting material, for the purpose described.

88,511.—MOSES H. RIPLEY and WILLIAM N. TEMPLE, Minneapolis, Minn.—*Harvester.*—March 30, 1869; antedated March 25, 1869.

Claim.—1. The arrangement of the seat D, spring K, slotted bar H, and screw *e*, with the standards, all as shown and described.

2. The arrangement of the lever E, block F, lever I, and wheel C, with lugs *a a*, all as herein shown and described.

88,512.—WILLIAM H. ROBERTS, Mauch Chunk, Pa.—*Steam-Pump.*—March 30, 1869.

Claim.—1. The rocker L, arranged and operated substantially as herein described.

2. The combination of the rocker L with the friction roller O, substantially as herein described.

3. The arrangement of the rocker L, arm *m*, roller O, valve K, rod N, levers P, and tappet-stems S, with reference to each other and the cylinders G and A, substantially as set forth.

4. The piston I, when constructed as described, and arranged in relation to the steam-ports *e e*, valve K, rocker L, roller O, rods N F, and slide-valve E, substantially as specified.

5. The combination and arrangement of the rocker L, arm *m*, valve K, ports *e e*, piston I, rods N and F, levers P P, tappet-stems S S, slide-valve E, dash-pot T, and pipe *d*, containing the choke-valve C, as set forth.

88,513.—A. M. RODGERS, Brooklyn, N. Y.—*Folding-Chair.*—March 30, 1869.

Claim.—A folding-chair, consisting of the pivoted seat A, the pivoted and slotted legs B and B′, and the slotted back-pieces C, combined and arranged for operation, substantially as herein described.

18,514.—SAMUEL ROEBUCK and JOHN ROEBUCK, New York, N. Y.—*Mosquito-Canopy.*—March 30, 1869.

Claim—The upright rod or cord A, forming a support for the top of a mosquito-canopy, when combined with a series of rods or bars, *b b b*, the outer ends of which can be raised vertically, and toward the center rod or cord, for the purpose of closing the canopy-frame.

88,515.—ROBERT W. RUSSELL, New York, N. Y.—*Paper-Stock, Box-Board, Roofing-Paper, &c.*—March 30, 1869.

Claim—1. The above-described methods or processes of making paper-stock, paper box-board, roofing-paper, and other kinds of paper and fibrous articles, as aforesaid, made from cane, or reeds, or similar fibrous vegetable substances, disintegrated by the explosive force of steam.

2. The above-described manufactures, the products of the said processes.

88,516.—ROBERT W. RUSSELL, New York, N. Y.—*Fibrous-Composition Slabs and Panels for Roofs, Floors, Walls, Tanks, and for other Purposes.*—March 30, 1869.

Claim.—1. The making and using of the said fibrous-composition slabs and panels for roofs, walls, pavements, &c., and for other suitable purposes, as and by the means aforesaid, and especially by the employment, in combination with other ingredients, as aforesaid, of the disintegrated cane-fiber, in the condition in which it is expelled from the said steam-gun, without the use of any chemicals to further disintegrate the same, and without reducing it to pulp, or making it into sheets of felt or paper, such process and new manufacture being substantially as hereinbefore specified.

2. The manufacture of said fibrous silicate composition panels or boards, for ceilings and inner walls of houses, in lieu of lath and plaster, and for fireproof floors and linings of railway-carriages, and cabins, floors, and decks of vessels, and for other purposes, substantially as above described.

3. The new articles of manufacture, the said fibrous-composition slabs and panels, made by the said processes, and for the purposes hereinbefore described.

88,517.—ROBERT W. RUSSELL, New York, N. Y.—*Valve of Steam Fiber-Guns.*—March 30, 1869.

Claim.—1. The working of the discharge-valve of the steam-gun used for disintegrating fibrous materials, so as to prevent or diminish concussion, substantially in the manner above described.

2. The combination, with the hinged discharge-valve and its projecting arm, whether provided or not with a friction-roller, of the elastic or yielding curved and divided buffer or cushion, under the arrangement and operation substantially as set forth.

88,518.—ROBERT W. RUSSELL, New York, N. Y.—*Fibrous-Composition Tube.*—March 30, 1869.

Claim.—1. The above-described manufacture of fibrous-composition casings or tubes, for receiving or inclosing wires of telegraph-lines, such tubes or casings being composed of webs or sheets of fiber, disintegrated by the explosive force of steam, in combination with bituminous or other composition, as aforesaid.

2. The method of making the said fibrous-composition tubes, for the conveyence of gas and water, and laying down and protecting the same, substantially as hereinbefore described.

3. As new articles of manufacture, the fibrous-composition casings, pipes, and tubes made by the processes aforesaid, and for the purposes described

88,519.—ROBERT W. RUSSELL, New York, N. Y.—*Manufacture of Paper for Protecting Goods from being Injured by Moths, &c.*—March 30, 1869.

Claim.—1. The above-described process for the manufacture of paper and paper-board from cane disintegrated by the explosive force of steam, or other similar fiber, mixed or charged with tobacco, or a decoction of tobacco, or both, as aforesaid.

2. The new articles of manufacture, viz, the different kinds of paper aforesaid, made by the said processes, and for the purposes above described.

3. The above-described improvements in the manufacture of carpet-linings, or protectors, or carpet-pads.

4. The new articles of manufacture, the different kinds of carpet-linings, carpet-protectors, or carpet-pads, made by the improved methods and processes, substantially as above described.

88,520.—RICHARD SALTER, Cincinnati, Ohio, assignor to himself and JOSEPH B. DAVIS, same place.—*Gas Cooler and Washer.*—March 30, 1869.

Claim.—1. The surfaces of boulders, kept constantly wet, in the manner described, for the purpose described.

2. The pipe B, reverberating plate C, and the wet boulders, for the purpose described.

88,521.—BENJAMIN SHERWOOD and DANIEL FITZGERALD, New York, N. Y.—*Construction of Safes.*—March 30, 1869.

Claim.—A safe, constructed as described, of a block of metal, having an opening on one side, with a chamber or cavity in the center, leaving the walls or sides of the safe of great thickness, so as to be able to resist any attempts to break the same open, substantially as herein set forth.

88,522.—DANIEL H. SHIRLEY, Boston, Mass.—*Piano-Forte Action.*—March 30, 1869.

Claim.—1. The back-catch arm G, hinged to key-

lever, and provided with an upright frame, J, consisting of post K and fly L, with adjusting-screws M, substantially as described, for the purpose specified.

2. An arm, hinged to key-lever, and carrying back-catch, and an upright frame, J, or its equivalent, in combination with a hammer-stem, having but R, or its equivalent, when all arranged together for operation, in a manner substantially as described, and for the purpose specified.

3. The screw-rod Z, with washer or head A^2, in combination with the fly L of upright frame J, substantially as described.

4. The screw M, with washers N and O, in combination with the fly L, or its equivalent, substantially as and for the purpose specified.

5. The cushion D^2, or its equivalent, applied to the back-catch arm, whether arranged for adjustment thereon or not, substantially as and for the purpose described.

88,523.—SANFORD C. H. SMITH, Belpre, Ohio.—*Portable Fence.*—March 30, 1869.

Claim.—1. The combination of post B, braces C C, bolt H, and notched bars D D, as and for the purpose described, when these several parts are arranged as set forth.

2. In combination with the above, the key K, inserted in the dovetailed mortise in the base A, as and for the purpose specified.

88,524.—ROBERT S. STENTON, Brooklyn, N. Y.—*Manufacture of Steel Direct from the Ore.*—March 30, 1869; antedated March 25, 1869.

Claim.—The process, or method, herein described and illustrated, of making steel, by heating the iron-ore with fuel and charcoal, arranged in alternate layers, thus producing steel sponge, and by reducing said sponge, substantially in the manner hereinbefore set forth.

88,525.—HENRY SPRINGER, Brady, Mich.—*Machine for Sowing Grass-Seed.*—March 30, 1869.

Claim.—1. The position of the seed-box F, it being situated between the belt H, connecting pulley A with pulley B, in the manner and for the purpose specified.

2. The combination of the bell-crank E and lever I, in connection with the pulleys A and B, substantially in the manner and for the purpose set forth and described.

88,526.—J. J. ST. LEDGER, Philadelphia, Pa.—*Animal-Trap.*—March 30, 1869; antedated March 25, 1869.

Claim.—1. A box-shaped trap, with its top consisting of two parts, D, connected to two of its sides, B, and with its sides B hinged to its bottom A, and arranged to be held open by the hooks *j*, cross G, and trigger *h*, constructed and arranged to operate substantially as herein described.

2. The cross G, in combination with the trigger *h*, hooks *j*, and spring C, all constructed and arranged to operate substantially as herein described.

3. In combination with the sides B, and projections *e*, the loosely moving bolts *c*, for locking the trap when sprung, substantially as herein described.

88,527.—CONRAD C. STREMME, Austin, Texas.—*Hat-Ventilator.*—March 30, 1869.

Claim.—The elastic ventilating device, consisting of a spirally-wound flat wire, or similarly shaped strip of whalebone, rattan, &c., adapted to be attached to head-coverings, substantially as herein described.

88,528.—SAMUEL STRONG, Washington City, D. C.—*Street Letter-Box.*—March 30, 1869.

Claim.—The flanged lid F with its inclined plate F′, in combination with the aperture C, and surrounding flange D, all constructed to operate substantially as within described.

88,529.—JOSIAH A. TICE, Windsor, sssignor to THOMAS C. SOUTH, Mattoon, Ill.—*Churn.*—March 30, 1869.

Claim.—The arrangement and combination of the jointed journal-box *c*, the piston-rod and clasp *d*, with the cam and cog-wheels *e*, and churn and dasher *a b*, for the purpose and in the manner above set forth.

88,530.—A. L. VARNEY, Watertown, assignor to ALFRED B. ELY, Newton, Mass.—*Breech-Loading Fire-Arm.*—March 30, 1869.

Claim.—The toggle-joint spring ejector, substantially as described.

88,531.—A. L. VARNEY, Watertown, assignor to ALFRED B. ELY, Newton, Mass.—*Breech-Loading Fire-Arm.*—March 30, 1869.

Claim.—1. A spring-sere and ejector, constructed and arranged to operate in combination, substantially as described.

2. The locking-bolt and spring, substantially as described, constructed, and arranged, in relation to and in combination with the swinging breech-block, substantially as set forth.

3. The movable guard, with its lip, constructed and arranged in relation to and in combination with the breech-block and firing-pin, substantially as described.

4. The combination of breech-block, sere, and ejector, when constructed and arranged to operate substantially as described.

88,532.—CHARLES E. WILSON, New York, N. Y.—*Renewing Rolls for Printing, Calendering, and like Purposes.*—March 30, 1869.

Claim.—1. The within-described process for the preservation and utilization of metallic rollers, substantially as herein set forth.

2. Utilizing the old roller, by turning the same round, and tapering it from end to end, with a square groove on its outer surface, and covering said roller with an interior tapering shell, with an interior projection for fitting into said groove and connecting the parts together, substantially in the manner described.

3. Casting the shell with a core, and planing the same out on its inner side, with a taper and square projection, substantially as specified.

88,533.—GEORGE W. N. YOST, Corry, Pa.—*Harvester.*—March 30, 1869.

Claim.—Combining or providing a body, or main frame, or cases A and A′, with flanges, or webs, or web I and I′, having a hole, N′, through said flanges, or webs, or web for a gudgeon-box for an inner end of a pinion and crank shaft, or other gudgeon, as described, for grass and grain cutting machines.

88,534.—JOSEPH ADKINS, Warrenton, Ga.—*Tire-Shrinker.*—March 30, 1869.

Claim.—The construction and the arrangement, relative to each other, and to the jaws F and C, of the tongue B and lever A, each being made separate from the other, and from the jaws, and made adjustable relative to each other, and to said jaws, as described.

88,535.—ASHBEL P. BARLOW, Kalamazoo, Mich.—*Rock-Shaft for Gang-Saws.*—April 6, 1869.

Claim.—1. Making the oscillation of the saw greater or less, by means of the adjustable rock-shaft device, consisting of the removable arm C and pin D, when attached to the shaft, or bar C′, in the manner and for the purpose set forth.

2. Regulating the side-motion of the bar C′, with relation to face-plate E and guide-blocks A A′, by means of nuts B B, substantially as set forth.

3. The guide-blocks A A′, when constructed and arranged to operate in the manner, and with face-plate E, pin D, and arm C, substantially as described.

88,536.—F. G. BEACH, Hartford, Conn.—*Can-Opener.*—April 6, 1869.

Claim.—1. The circular cutter D, pivoted upon the frame A, and operating in connection with an axial pivot, or other guide, for the purpose of dividing the tin, substantially as shown and described, and for the purpose set forth.

2. The notched pin C, in combination with the frame A and cutting-edge *a*, substantially as and for the purpose shown.

3. The axial pivot E, when constructed in the

manner and for the purpose herein shown and described.

4. The within-described can-opener, consisting of the frame A, cutting-edge *a*, pin C, circular-cutter D, axial pivot E, and holes *x x x*, &c., or their equivalent, in said frame, all constructed and arranged substantially as and for the purpose herein specified.

88,537. — ROBERT BLACKLIDGE, Bridgeport, Conn., assignor to himself and CHARLES GERDENIER. —*Tonic Bitters.*—April 6, 1869.

Claim.—The bitters produced by the combination of the ingredients, substantially in the manner herein described.

88,538.—ALONZO C. BLETHEN, Lynn, Mass.—*Submerged Pump.*—April 6, 1869.

Claim.—The combination of valve-plate *g*, perforated diaphragms *f f'*, piston G, tubular piston-rod H, pump-barrel A, valves *a* and *b*, chamber D, legs D' D' D', box E, arms *d d'*, soeket-flanges *e e'*, link *l*, and arm *i*, socket *h*, and handle *k*, all arranged and operating, relatively to each other, substantially as described.

88,539.—CARL BOCKING, Philadelphia, Pa., assignor to himself and COATES WALTON, same place. —*Screw.*—April 6, 1869.

Claim.—The angular point C, with its cutting-edges *c'* in combination with a wood-screw, substantially as described.

85,540.—FRANCIS E. BOYD and P. SHELTON TYLER, Boston, Mass.—*Breech-Loading Fire-Arm.*—April 6, 1869.

Claim.—1. The barrels, with metal plates at their rear ends, in combination with the clamps, when the latter are inserted and suitably secured in grooves in the former.

2. The flanged tubular retractor *i*, containing a spring, when arranged to operate substantially as shown and described.

3. The combination of a breeeh-piece, through which the hammer acts, substantially as above described, with a barrel or barrels, arranged to turn upon a spindle, substantially as above described, and a spring-catch, all so arranged that the spring-catch will hold the barrel or barrels in their eorrect relation to the hammer, so that the latter may act, through the breech-piece, to explode the cartridge, substantially as and for the purpose specified.

88,541.—LEVI BROWN, Baltimore, Md.—*Banjo.* —April 6, 1869.

Claim.—1. The arrangement of a groove on the upper side of the slide-ring C, to whieh the parchment is attaehed, when such is used in eonnection with a corresponding tongue, formed on the under-side of the driver E, or its equivalent, (the slide-ring D,) whereby the parehment is firmly grasped between the two, and the strain of the parehment upon the tacks eonsequently materially reduced.

2. The arrangement of the bead *a* on the inside of the rim A, in combination with the head B, in the manner and for the purpose set forth.

88,542.—SAMUEL G. CABELL, Quincy, Ill., assignor to himself and ABBOTT Q. ROSS.—*Hydrant.* —April 6, 1869.

Claim.—1. In a hydrant, the drain-chamber B, placed below the water-way C, as shown, and for the purposes herein set forth.

2. In combination with a hydrant, as described, the water-tight sliding-bottom D, of the chamber B, arranged as shown, and operating in the manner and for the purposes herein set forth.

3. The arrangement of the drain-chamber B and extension-chamber *c*, so as to form, in combination with the sliding-bottom, or piston-head D, a continuation of the water-way, as herein set forth.

4. The wing-valve *a*, when constructed, arranged, and operating in connection with the chamber B and sliding-bottom, or piston-head D, in the manner and for the purposes herein set forth and described.

88,543.—ROBERT CHAMBERS, Detroit, Mich.—*Reefing Fore-and-Aft Sails.*—April 6, 1869.

Claim.—1. The guide I, cross-head K, and slides L, or their equivalents, when operating substantially for the purpose herein specified.

2. In connection with the above, the boom A, stationary shaft D, sleeved tube E, geared wheel F, and crank and worm-screw G or their equivalents, when arranged, construeted, and operating substantially as and for the purposes herein described.

88,544.—NATHAN S. CLEMENT, New Britain, Conn.—*Casting Handles of Table-Cutlery.*—April 6, 1869.

Claim.—Casting the handles of table-cutlery hollow by the process herein specified.

88,545.—FRANÇOIS COIGNET, Paris, France, assignor to L. MANGEON, New York City.—*Manufacture of Artificial Stone.*—April 6, 1869.

Claim.—1. The herein-described plastic, pulverulent, artificial stone paste, composed of sand, hydraulic lime, and, in some cases, hydraulic cement, prepared substantially in the manner and for the purpose set forth.

2. In the manufacture of artificial stones, or monolithic masonry, the herein-described mode of bringing the moleeules of the mass in close proximity, one to the other, and obtaining a hard stone, by means and with the use of a heavy and hard pounder, exerting its action in a systematic manner upon sucessive layers of artificial stone paste of the character and under the circumstances substantially as herein set forth.

3. As a new article of manufacture, the stones or monolithic masonry, when made from the substances herein set forth, treated substantially in the manner speeified.

88,546.—FRANÇOIS COIGNET, Paris, France, assignor to L. MANGEON, New York City.—*Artificial Monolithic Structure.*—April 6, 1869.

Claim.—1. In monolithic buildings, made of agglomerated artificial stone paste, the production of flues, pipes, or openings, for the purpose of heating, ventilating, conveying water, gas, or smoke, &c., by means and with the use of proper cores introduced in the thickness of the walls, and the agglomerating around said cores of a speeial composition of artifieial stone paste, in the manner and for the purpose herein set forth.

2. In monolithic structures, such as wharves, dams, abutment walls, &c., making the walls hollow, or honey-combed, and filling the said hollows or cells with pounded earth, as herein set forth, for obtaining greater inertia strength, or bulk of masonry, at a reduced expense.

88,547.—FRANÇOIS COIGNET, Paris, France, assignor to L. MANGEON, New York City.—*Making Artificial Stone and Monolithic Structures.*—April 6, 1869.

Claim.—1. The combination of agglomerated artifieial stone paste with iron seraps of irregular shape, such as nails, double-headed nails, or bolts, rings, hooks, clamps, wires, &e., substantially in the manner and for the purpose set forth.

2. The introduction, in the body of artifieial stones, or in the body of artifieial stone monolithic structures, made of agglomerated artifieial stone paste, of skeletons, or metallic frame-work, linked or arranged so as to strengthen the same, substantially as speeified.

3. The application of agglomerated artificial stone paste to the protection and isolating of telegraphic wires.

88,548.—FRANÇOIS COIGNET, Paris, France, assignor to L. MANGEON, New York City.—*Mode of Treating and Manipulating Cements in the Manufacture of Artificial Stone.*—April 6, 1869.

Claim.—1. The use of hydraulic cement, ground with a relatively small quantity of water into a thick, plastic paste, for cementing sand in the manufacture of agglomerated artifieial stones.

2. The herein-described process of retarding the erystallization or setting of hydraulic cements, by repeated and prolonged triturations, whereby the proper amount of sand may be incorporated therewith.

3. As a new article of manufacture, the artificial stones or monolithic structures, made of hydraulic cement and sand, prepared and agglomerated substantially in the manner herein specified.

88,549.—François Coignet, Paris, France, assignor to L. Mangeon, New York City.—*Process of Forming Artificial Stone.*—April 6, 1869.

Claim.—1. The application of heat in the preparation of artificial stone paste, either to the materials employed, before being mixed, or to the mixture of the same, during the process of trituration, substantially in the manner and for the purpose set forth.

2. The manufacture of artificial stones or monolithic structures, by means and with the use of hot agglomerated artificial stone paste, substantially prepared as herein set forth.

88,550.—Gage M. Cooper, Port Huron, Mich.—*Seal-Lock.*—April 6, 1869.

Claim.—The open ring A, made of one piece of metal, and having the ends D curved outward, as shown, when said ring is used in connection with rivets of soft metal, as and for the purpose described.

88,551.—Charles Coti, Marlborough, Mass., assignor to himself and John Baptiste Bebo, same place.—*Edge-Plane for Boot-Soles.*—April 6, 1869.

Claim.—1. The arrangement and combination of the parts shown in Fig. I, with the slots and screws, as described.

2. The side-guard, as constructed, with the application of the rubber strip, for the purpose substantially as described.

88,552.—John C. Crawford, Clintonville, Ill.—*Pump.*—April 6, 1869.

Claim.—The plunger K, having a water-chamber, L, in its lower end, in combination with the cylinders A B, the cylinder A being provided with a side opening, H, for conveying water into a pump-stock, I, and having a packing, N J, as and for the purpose herein set forth.

88,553.—Eliza N. Cutter, Chicago, Ill.—*Cradle or Crib.*—April 6, 1869; antedated April 2, 1869.

Claim.—1. The combination and arrangement of the hinged ends B with the sides A, side-rails F, and bottom-cloth E, substantially as specified.

2. The combination and arrangement of the rocker D, provided with the catches *d* and *f*, with the cross-legs C and C′, side-rails F, and bottom E, substantially as described.

3. The combination and arrangement of the sides A, hinged ends B, bottom E, and side-rails F with the cross-legs C and C′ and rocker D, all constructed and operating substantially as specified.

88,554.—Benjamin W. Deal, New Market, Md.—*Medicine for Cure of the Gravel.*—April 6, 1869.

Claim.—A medicine for curing the gravel, made substantially as described.

88,555.—Frank P. Dobson, New York, N. Y.—*Banjo.*—April 6, 1869.

Claim.—1. The combination, with a double-headed banjo, of a reversible handle, substantially as herein specified.

2. The combination, with such reversible handle, of a rim, provided with apertures *c*, for the escape of the sound, substantially as herein specified.

88,556.—George Draper, Hopedale, Mass.—*Spindle-Step for Spinning-Machines.*—April 6, 1869.

Claim.—The cap C, as formed, with the insulating-chamber, *c*, and extended up into the conical shoulder *e* of the spindle, and down within the step, (by means of the flange *g*,) the whole being substantially as explained.

88,557.—Mathias Eichholtz, Troy, Ohio.—*Equalizing Cultivator.*—April 6, 1869.

Claim.—The frame A and the cross-beams E, connected together at their ends, and by the brace F; the pole C, and adjustable swivel-bolt D, and the clevises H, in connection with a pair of single plow-cultivators, each drawn by one animal, and both animals guided by the pole C, substantially as described, and operating for the purposes specified.

88,558.—William P. Elliott, Cincinnati, Ohio.—*Caster.*—April 6, 1869.

Claim.—1. The catch-lever D′, in combination with the piece H′ and caster B, with its movable stem, as shown and described.

2. The jaws A′ A′, in combination with the clamps S S, screw F, and a caster, as shown and described.

88,559.—William Evans and Richard E. Hayden, Seymour, Conn.—*Mold for Casting Augers.*—April 6, 1869.

Claim.—The molds, constructed substantially as herein described, for casting twist-augers.

88,560.—Orlando V. Flora, Madison, Ind., assignor to himself and Charles Alling.—*Wrench.*—April 6, 1869; antedated March 23, 1869.

Claim.—The bar A, jaw E, jaw B, with its hollow handle, and covering *m*, screw *k*, nut C, and milled head D, constructed and arranged to operate substantially as and for the purpose herein specified.

88,561.—G. W. Fox, H. H. Coe, and I. M. Kelley, Ravenna, Ohio.—*Compound for Welding and Restoring Steel.*—April 6, 1869.

Claim.—The compound, consisting of the ingredients herein named, and prepared in about the proportions stated, for welding or restoring steel, in the manner and for the purpose set forth.

88,562.—Hiram E. Goble, Lake Mill, Mich.—*Neck-Yoke.*—April 6, 1869.

Claim.—The arrangement of the coiled springs B, or their equivalents, and yoke B, with sliding thimbles C, when constructed and operating substantially as and for the purposes herein set forth.

88,563.—George Huntress Grant, Richmond, Ind.—*School Desk and Seat.*—April 6, 1869.

Claim.—1. In combination with the leaf A, the hinged connections H H, battens W W, and stops Z Z, when constructed and arranged substantially as herein described.

2. Pivoting the seat B, near its front edge, to the hinged arms C C, for the purpose and in the manner specified.

88,564.—Eugene Grosjean, Pittsburgh, Pa., assignor to himself, Jacob Weaver, jr., and Alfred H. Jones.—*Barrel-Truck.*—April 6, 1869.

Claim.—The attached strap E, combined with the cam-clasp D, in their action with the levers A, bolt B, and flanges or jaws C C, as shown, for the purposes set forth, substantially as described.

88,565.—George A. Harris and John B. Harris, Salem County, N. J.—*Shutter Operator and Fastener.*—April 6, 1869.

Claim.—The operating lever D, boss d''', thumb-screw d^4, and the catches E and E′, the said devices being constructed and arranged to operate in combination with the frame A B and shutter C or C′ of a window, substantially as and for the purposes described.

88,566.—Elmer Hause, Tecumseh, Mich.—*Clothes-Drier.*—April 6, 1869.

Claim.—The spool C E, with gear-wheels A D, when operated as described, by means of the slide G and spring H, and used in connection with the cords M N, as and for the purpose described.

88,567.—V. S. Herzog, Baltimore, Md.—*Spring-Hinge.*—April 6, 1869.

Claim.—The combination and arrangement of the casing A and shoulders B B′, the caps C C′ and arcs D D′, with the pintle E, and spring F, when constructed and operating as herein shown and described.

88,568.—Charles Hess, Lyons, Iowa.—*Churn.*—April 6, 1869.

Claim.—The combination and arrangement of pit-

man B, arm D, curved-shaped top Z Z, dasher M, with its beveled-shaped fingers K K, gathering-bars J and N N, when constructed and arranged substantially as and for the purposes herein set forth.

88,569.—EDWARD HILL, CHARLES OSTRANDER, and HORATIO A. SPINK, Bainbridge, Mich.—*Farm-Gate.*—April 6, 1869.

Claim.—1. The vibrating panel P, chain O, and latch I, or their equivalents, when constructed and operating substantially as and for the purposes specified.

2. In combination with the above-named parts, the gate E, secured to the post A by the bail B and eye-bolt C, or their equivalents, when arranged and operating substantially as and for the purposes set forth.

88,570.—JAMES W. HOBBS, Boston, Mass., assignor to HOBBS, POPE & CO., same place.—*Process of Preparing Blue Peroxide of Manganese.*—April 6, 1869.

Claim.—1. The process for converting protoxide of iron and manganese, combined, to peroxide of manganese, herein described.

2. As a new article of manufacture, peroxide of manganese, produced from protoxide of iron and manganese, combined.

88,571.—JAMES B. HOPKINS, Dennis Port, Mass.—*Anchor-Tripper.*—April 6, 1869; antedated March 23, 1869.

Claim.—An arrangement of the catch-hook and its stop, with the tripper A and the bulwark or rail of the vessel, the stop, under such arrangement, being in and movable with the tripper, and the catch-hook being arranged in a mortise in the rail or bulwark, the whole being substantially in manner and so as to operate as set forth.

88,572.—JOSEPH JOHNSTON, Chicago, Ill.—*Weather-Strip.*—April 6, 1869.

Claim.—The construction of an adjustable threshold, in the manner and form and for the purpose substantially as herein described.

88,573.—MORTON JUDD, New Haven, Conn.—*Sash-Holder.*—April 6, 1869.

Claim.—The turning-button *g*, provided with the hooked ends, and attached to the plate *e*, so as to be let into the parting-strip, and act as a fastening to the upper and lower sashes, as specified.

88,574.—WILLIAM LINDON, New Haven, Conn.—*Velocipede.*—April 6, 1869.

Claim.—The two pawl-levers *a* and *d*, with their respective pawls combined with the toothed and ratchet-wheel D, so as to operate in the manner herein set forth.

88,575.—SAMUEL L. MARSDEN, New Haven, Conn.—*Gate.*—April 6, 1869.

Claim.—1. The employment of the screw-threaded spindle E, in combination with the shaft A or its equivalent, provided with a corresponding internal screw, when so arranged and applied that the spindle forms the axis on which the gate or door revolves, and the threads support the weight thereof, substantially in the manner and for the purposes set forth.

2. The adjustable sleeve H and thumb-screw I, in combination with the spindle E and shaft A, arranged and operating substantially as and for the purposes described.

88,576.—GEORGE MASON, Providence, R. I.—*Braiding-Machine.*—April 6, 1869.

Claim.—1. The gear B, provided with slots, as shown at *b b b b b*, and having the horns *c c c c c* extended back to and adjoining the hub C of the gear, substantially as described.

2. The combination of the reversed bobbin *f*, the pin *g*, in base of spindle, and the pin *i*, in the top of the weight E, as herein described, and for the purposes specified.

88,577.—R. MCDOWELL, Lambertville, N. J.—*Door-Lock.*—April 6, 1869.

Claim.—The two separate key-holes *a'' b''*, in the plates *a' b'*, respectively, with the corresponding projections *c'' c''* and *c' c'*, on the bolt C, and the ring *d''* of the tumbler D, the said parts being constructed and arranged to be operated and secured by the legitimate key E, substantially as and for the purpose described.

88,578.—ISAAC S. MILLER, New York, N. Y.—*Mode of Constructing Building-Fronts.*—April 6, 1869; antedated March 23, 1869.

Claim.—The use and application of brick, composition, or other stone, to the facings of buildings or dwellings, substantially as herein described.

88,579.—DANIEL MURPHY, Dubuque, Iowa.—*Hub-Boring Machine.*—April 6, 1869.

Claim.—1. The combination of the stationary shaft, or mandrel B, with the pivoted expansible tool *s* upon one end, and sliding-rod *t* arranged upon its side, substantially as and for the purpose described.

2. The stationary shaft or mandrel B, expansible cutting-tool *s*, rod *t*, pattern-bar L, guide N, and rotary wheel-holding device, combined, substantially as shown and described.

3. The slotted pattern-bar L, lever N, slide-rod *t*, pivoted cutting-tool *s*, mandrel B' rotary wheel-holder G H R, or its equivalent, and feeding-device F and *a a*, combined, substantially as described.

4. The combination of the toothed hub J and worm-screw *k*, radially-sliding clamping-blocks R, applied to arms H, and rods K, all arranged substantially as and for the purpose described.

5. The arrangement of the sliding-yokes E D, fixed mandrel, or cutter-carrying shaft B, yoking pattern-bar L, cutter *s*, rod *t*, feed-screw F, and adjustable devices R, for boring, centering, and holding wheels of different sizes, substantially as described.

6. The slotted pivoted plate *b* b^3, arranged with the half nuts *a a* and spring *a'*, substantially in the manner described.

7. The spur-wheel *j*, applied around the fixed cutter-carrying mandrel B, and connected to the hub of the wheel-holder, in combination with the spur-wheel *i*, upon the feed-screw F, sliding yokes D E, pattern-bar L, rod *t*, and expansible cutter *s*, all substantially as and for the purposes described.

8. The pivoted segmental cutter *s*, applied to a plate, B', of the mandrel B, as described, and so that it may be adjusted and set for boring holes of different diameters, and also expanded and contracted, or *vice versa*, after being thus set, all substantially as described.

9. The construction and arrangement of mechanism as herein described, for the purpose of boring a hub.

88,580.—CHARLES G. NYE, Onondaga, N. Y.—*Teasel-Trimmer.*—April 6, 1869.

Claim.—The hollow shaft A, and cutter-head *b c* D *d*, substantially as and for the purpose set forth.

88,581.—DAVID O. PAIGE, Detroit, Mich.—*Lock for Safe-Doors, &c.*—April 6, 1869.

Claim.—1. The cross-bar C', provided with the slots M, Y, and O, and the slide N, provided with stop *n'* and groove *n''*, substantially as and for the purposes set forth.

2. The double-armed tumbler G, provided with cams H, and head *g*, with an elliptic slot, J, and recess *j*, formed therein, and the crank L, with its wrist-pin *l*, in connection with a pair of lock-bolts D, or their equivalents, and operating substantially as described, and for the purposes specified.

3. The tumbler Q, provided with cam S, pin W, and slot U, when constructed and operating substantially as and for the purposes set forth,

4. In combination with the above-named parts, the crank X, having a slot, T, in the outer end of its spindle, and the lock-bolt D', the outer end of whose spindle has a slot, or recess, P, or their equivalents, when constructed, arranged, and operating substantially as described, and for the purpose specified.

88,582.—HENRY M. PAINE, Newark, N. J.—*Comb.*—April 6, 1869.

Claim.—A comb, whose teeth are composed of sil-

ver and zinc, or equivalent metal, for producing galvanic effects, substantially as herein set forth.

88,583.—William M. Parker, Boston, Mass.—*Fire-Extinguisher.*—April 6, 1869.

Claim.—1. So introducing, managing, and controlling the acid employed in charging a portable chemical fire-extinguisher, that any required portion of the carbonic-acid gas due to the union of the ingredients used may be eliminated at or about the time of charging, and the remaining portion at any time thereafter, in the manner and by the means herein described, substantially as and for the purpose set forth.

2. Introducing the acid employed in charging a portable chemical fire-extinguisher, in two separate portions, by means of two acid-vessels, or compartments, so that one portion shall be brought into chemical union with the alkaline solution contained in the main receptacle at the time of charging, automatically, or by reason of the peculiar construction of the apparatus, and the other portion brought into such union at any time thereafter, by the voluntary agency of the operator, substantially as herein described, and for the purposes set forth.

3. In a portable chemical fire-extinguisher, the use of the socket *g g*, Fig. 2, or its mechanical equivalent, to aid in sustaining in position the acid-vessel or vessels employed in the construction and use of the apparatus, and regardless of its use, as herein described, in liberating the contents of a smaller acid-vessel.

4. Controlling the pressure of gas in a portable chemical fire-extinguisher, by the means herein described, substantially as and for the purposes set forth.

88,584.—Herman Pietsch and Moritz Walter, Milwaukee, Wis.—*Beer-Cooler.*—April 6, 1869.

Claim.—Pan D, with filtering-sponges F and spouts E, all in combination, substantially as described.

88,585.—George H. Porter, of Bristol, Conn., assignor to Porter Saw Company, same place.—*Process of Hardening Steel Plates, &c.*—April 6, 1869.

Claim.—The process herein set forth, of straightening a hardened steel plate, while in the hardening-bath, after the hardening effect has been produced, and before the flexibility imparted by heat is lost by cooling.

88,586.—John Rice, Bloomington, Ind.—*Felly-Sawing Machine.*—April 6, 1869.

Claim.—The sawing-machine described, consisting of the frame A, standards B, shaft C, pitman D, saw-gate E, saws E′, levers H and I, bar J, ratchet-wheel K, shaft L, gear-wheels L^1 M, and extension-table N, the whole being combined and operated in the manner and for the purpose set forth.

88,587.—Julius Schlichting, New York, N. Y.—*Book-Binders' Head-Band.*—April 6, 1869.

Claim.—The herein-described head-band for book-binding, arranged and constructed in the manner set forth, as a new article of manufacture.

88,588.—William H. Sellers, Keokuk, Iowa.—*Peg-Cutter for Boots and Shoes.*—April 6, 1869.

Claim.—1. Crank K, bar L, and cutter R, combined as and for the purpose specified.

2. The reciprocating cutter R and the rotating cutter H, combined as and for the purpose specified.

3. The combination of a rotary cutter H, and an additional cutter, to operate in the toe of the boot or shoe, and driven from the same driving-shaft, substantially as set forth.

88,589.—John W. Slocum, Philadelphia, Pa.—*Anti-Freezing Hydrant.*—April 6, 1869.

Claim.—A hydrant, having its delivery-spout, or nozzle, protected by a bisected case, and the slot for the valve-arm, supplied with a hinged segment, the closing of which will cut off the flow, all substantially as shown and described.

88,590.—George Terry, Providence, R. I.—*Method of Making Yeast.*—April 6, 1869.

Claim.—The method of mixing yeast by using a lactic-acid solution, either wholly or in part, as the menstruum in which the other ingredients are mixed and fermented, substantially as described.

88,591.—Benjamin L. Tibbetts, South China, Me.—*Combined Hoe and Fork.*—April 6, 1869.

Claim.—A combined fork and rake, when constructed and operating as above described; that is to say, the head A being pivoted to the handle B by means of a plate C′, working on a pin, *c*, in the lower end of the handle, the plate being provided with the notches *m o r* and point *n*, while the handle is provided with the points *e e*, the recess *i*, the shoulder *v*, and the button *s*, all arranged and operating in connection with each other, substantially as and for the purposes described.

88,592.—Peter Joseph Tillmann, Trenton, N. J., assignor to himself and John Reiser, same place.—*Door-Pulley.*—April 6, 1869.

Claim.—The weight A, slide-bar C, and swivel pulley B, when constructed, arranged, and combined, substantially as and for the purposes herein set orth.

88,593.—Jacob F. Troxel, Bloomville, Ohio.—*Horse Hay-Fork.*—April 6, 1869.

Claim.—The lock-lever F, constructed as described, in combination with the tine A′, lever D, rod C, and block P, the whole constructed, arranged, and operating as set forth.

88,594.—Isaac W. Valance, Troy, N. Y.—*Quilting-Frame.*—April 6, 1869.

Claim.—A quilting-frame coupling, composed essentially of a stock, A, to slide on the fixed bar of the frame, a ratchet, D, journaled in the stock, and having a socket for holding the rolling-up bar, and a dog, G, pivoted to the stock, and having catches, *h* and *i*, for engaging with the ratchet and with the fixed bar, all constructed and arranged so as to operate substantially as herein set forth.

88,595.—Charles Ward, Detroit, Mich., assignor to himself and Corydon B. Palmer, same place.—*Propeller.*—April 6, 1869.

Claim.—The arrangement of the cradles I, on bars J, provided with rollers K, which rollers form the pivot of the cradles on shaft B, substantially as and for the purposes herein described.

88,596.—Jasper A. Woodworth, Hickory Corners, Mich.—*Stump-Extractor.*—April 6, 1869.

Claim.—1. The wheel A, with rack B, and pawl C, adjustable brace D, frame E, and anchor-chain F, the whole being combined as described, for the purpose set forth.

2. The combination of the above-named parts with the vertical rollers G and H, the pivoted lever I, and runners J, when constructed, arranged, and operating substantially as and for the purposes herein shown.

88,597.—R. H. Wright, New Bloomfield, Pa.—*Carriage-Top.*—April 6, 1869.

Claim.—The arrangement of the wires *a* and *b* upon the bows A, B, C, and D, substantially as and for the purpose specified.

88,598.—Henry B. Adams, New York, N. Y.—*Fluting-Machine.*—April 6, 1869.

Claim.—The lower movable roller *c*, hung in a sliding frame, *d*, and the double-ended lever *g* and strap *k*, arranged and operated substantially as described.

88,599.—Charles Doughty Allen, New York, N. Y.—*Throttle-Valve for Steam-Engines.*—April 6, 1869.

Claim.—The construction of the throttle-valve A and its seat B, with reference to the ingress-steam pipe D, as herein shown and described.

88,600.—Peter Allen and Benjamin Valiquette, Rutland, Vt.—*Railroad-Car Buffer.*—April 6, 1869.

Claim.—1. A draw-bar, C, which is suspended so

as to receive a vertical bodily movement at the same time it receives an endwise movement, substantially as described.

2. A vertically-swinging draw-bar, in combination with a spring, *a*, arranged to operate substantially as described.

3. A rear elastic abutment, *b*, a vertically and endwise-movable draw-rod, C, and a vertically-yielding spring, *a*, combined and operating substantially as described.

88,601.—BENNY AUERBACH, New York, N. Y.—*Attaching Sleigh-Runners to Street-Cars.*—April 6, 1869.

Claim.—1. The combination with the wheels B B, of the runners C, hanger-frame D, swiveled on the axial rod E, and adjustable thereto by means of the set-bolt F, arranged and operating substantially as and for the purposes set forth.

2. In combination with the axial rod E, connecting the boxes of the wheels B B, the sleeves *f f* of the frame-portions *d d*, operating in the manner and for the purposes shown and described.

88,602.—JOSEPH S. BARNUM, Topeka, Kans.—*Fastener for Securing Springs to Bed-Bottoms and Mattresses.*—April 6, 1869.

Claim.—The "fastener" A, with its receptacles *i i i i*, and shoulders, *a a a a*, and clamp, *b c*, and orifice *d*, in its center, as and for the purposes herein described.

88,603.—CHARLES E. BILLINGS, Hartford, Conn.—*Sewing-Machine.*—April 6, 1869.

Claim.—1. The combination with the needle-bar, of the splined or feathered slide or plug H, and screws L and I, the parts being constructed, arranged, and operating as and for the purpose shown and described.

2. The combination with the shuttle, of the headed and screw-threaded bushing, or socket, and its inclosed and headed spring-plug, substantially as shown and described.

3. The combination with the rocker-shaft lever and coiled spring, of the notched surface on said shaft, and a corresponding notched surface on the nut, upon said lever, substantially as and for the purpose set forth.

4. The combination with the presser-bar and its spline, or projection 3, of a presser-foot, constructed with its socket open at one side, and provided with ears, having holes therein, to receive a tightening-screw, substantially as shown and described.

88,604.—NATHAN BREED, Jeffersonville, Ind.—*Corn-Planter.*—April 6, 1869.

Claim.—1. The adjustable frame G, in combination with the pinion-shaft F and frame C, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the lever I, clutch H, adjustable connecting-rod K, arm L, rock-shaft M, and adjustable slotted-arms Q, with the pinion-shaft F, frame C, and sliding dropping-sliders P, substantially as herein shown and described, and for the purposes set forth.

3. Constructing the conductor-spout S in two parts, hinged to each other substantially in the manner herein shown and described, and for the purpose set forth.

4. Adjustably connecting the hoppers N, adjustable bed-plates O, and hinged conductor-spouts S, to the frame and axle of the machine, substantially in the manner herein shown and described, and for the purpose set forth.

5. The adjustable support V W, constructed substantially in the manner herein shown and described, in combination with the roller U and frame C, as and for the purpose set forth.

88,605.—WILLIAM BRIGGS, Norristown, Pa.—*Breech-Loading Fire-Arm.*—April 6, 1869.

Claim.—The arm F, hinged to the breech-piece, and the operating-lever G, jointed, near its center, to the said arm, and at its end to the barrels, the several parts being arranged so that the barrels shall be moved forward on the backward movement of the operating-lever, as set forth.

88,606.—JOHN BRYANT, Akron, Ind., assignor to himself and ALLEN L. BAILEY, same place.—*Line-Holder.*—April 6, 1869.

Claim.—The jaws A B, bars C D, cord H, plumb-lines E E, drum K, and ratchet and pawl L M, combined and arranged substantially as and for the purpose herein shown and described.

88,607.—GEORGE BURSON, East Palestine, Ohio. *Hand Corn-Planter.*—April 6, 1869.

Claim.—1. The metal strip or partition M, placed immediately beneath the opening *a'*, at the bottom of the hopper, for the purpose of relieving the slide H from the weight of the grain, substantially as shown and described.

2. In combination with said strip M, the gate N, constructed and arranged to operate substantially as shown, and for the purpose set forth.

3. The slide H, with the cavities *h h h*, and the horizontal partition F, with the vertical partition G, and passages K and L L, by means of which an equal quantity of grain is caused to pass into each of the chutes, at every operation of the device, substantially as herein specified; and I hereby disclaim all parts of the aforesaid device, except those enumerated in the above claim.

88,608.—ASA L. CARRIER, Washington, D. C.—*Toy-Pistol.*—April 6, 1869.

Claim.—The mode of constructing toy-guns, or pistols, of cast-metal, or other suitable material, by securing all of the parts together, by elastic-rubber bands, substantially in the manner herein described.

88,609.—AARON CHANDLER, Davenport, Iowa. *Folding-Desk.*—April 6, 1869.

Claim.—The combination and arrangement of the changeable desk-cover, with its receptacle G, the slots B B', in the standards A, and pins C, substantially as and for the purpose specified.

88,610.—CHARLES J. CONVERSE, Boston, assignor to himself and JAMES W. TUFTS, Medford, Mass.—*Siphon-Bottle.*—April 6, 1869.

Claim.—1. In combination with a bottle, having its neck formed substantially as shown, the elastic ring *l*, of corresponding formation, the flanged nut-threaded cup *c*, the screw-threaded piece *g*, and the tube *d*.

2. In combination with a valve-chamber, made in two parts, *g* and *i*, a valve supported by a spring resting on one part and forcing the valve against its seat, made in the other part, substantially as described.

3. The tube *m*, curved at one end, and notched at the other, so as to act upon the valve and direct the escaping current, substantially as described.

88,611.—ROBERT AVIS COPELAND, Brooklyn, N. Y.—*Ferrule for Boiler-Tubes.*—April 6, 1869.

Claim.—1. The wedging slides B B and the grooves A A A, substantially as specified.

2. The wedging slides B B and grooves A A A, in combination with the plug, or ferrule, and flange *d*, as set forth.

88,612.—LYMAN B. CRITTENDEN, Pittsburgh, Pa.—*Coffee-Roaster.*—April 6, 1869.

Claim.—A coffee-roaster, consisting of a dish or kettle *a*, close-fitting cover *e*, and oscillating stirrer *d*, one of the bearings, *d'*, of which is prolonged, so as to carry a segmental wheel, *f*, through which, by means of a rod, *g*, or equivalent devices, the stirrer is operated, the whole being constructed substantially as and for the purposes hereinbefore set forth.

88,613.—IRA CURTIS, Des Moines, Iowa.—*Potato-Digger.*—April 6, 1869.

Claim.—The whole machine herein described, in its novel arrangement of frames F C, partitions P P' P'', wheels W W, *w w*, N N, shaft B, carrying drums *b b*, riddles *r r'*, endless aprons E E', plow H, lever L, axle A, and inclines J J', all constructed and adapted to each other to operate together in the manner and for the purpose substantially as described.

88,614.—Z. Dixon, Bristol, Ill.—*Tea-Kettle Breast.*—April 6, 1869.

Claim.—1. Binding the edges of the opening through the breast of a tin tea-kettle with copper, or other non-corrosive metal binding, B, as herein described, for the purpose specified.

2. Attaching the dome C, having perforations in its outer side, to the breast of a tea-kettle, for the purpose of directing the steam away from the hand, as herein shown and described.

88,615.—Thomas J. Dobbs, Weehawken, N. J.—*Apparatus for Unspiking Guns.*—April 6, 1869.

Claim.—1. The use of a chamber charged with powder, or other explosive compound, introduced into the bore of cannon, and discharged therein, substantially as described, for the purpose specified.

2. The combination of the powder-chamber G, pulley *i*, adjustable bar K, hammer *n*, adjustable and reversible fulcrum-block E, with each other, and with the lever D, substantially as described, for the purpose specified.

88,616.—Rodolph L. Dodge, Portland, Me.—*Ladder.*—April 6, 1869.

Claim.—The ladder, composed of the parts A′ B, capable of being made straight, as described, when used in combination with the platform D, constructed and supported as described.

88,617.—Justus Doering, Philadelphia, Pa.—*Bedstead-Fastener.*—April 6, 1869; antedated March 25, 1869.

Claim.—1. A bedstead-fastener consisting of a screw, C, and a hollow cylindrical block, F′, having screw-threads on the outside, and within it a slot, *b*, and inclined shoulders *e* adapted to the head of the screw C, all substantially as and for the purpose described.

2. The combination of a side-strip, B, a detachable block *a*, passing through the side-strip, and a screw, C, passing into the end of the side-strip and into the block *a*, as and for the purpose described.

88,618.—James D. Field, Wataga, Ill.—*Rain-Water Conductor.*—April 6, 1869.

Claim.—The sliding cover D, carrying the short pipe E, in combination with the pivoted pipes G H, and the box A, divided by the partition I, and provided with the discharge-pipes B C, all arranged and operating as described, whereby the pipe flowing into the house is always protected, as herein set forth and shown.

88,619.—Louis Fliedner, Cleveland, Ohio.—*Elastic Link for Clevis.*—April 6, 1869.

Claim.—The spring D, as arranged in combination with the adjustable cross-bar E, yoke or frame C, and hook F, in the manner substantially as and for the purpose set forth.

88,620.—Alexander Friedmann, Vienna, Austria.—*Steam-Pump.*—April 6, 1869.

Claim.—1. The intermediate pipes *a b*, constructed as described, with the wings *e*, and arranged with relation to each other, and the pipe I, as herein set forth.

2. The mouth-piece *a*, formed on the steam-pipe, when arranged in combination with the intermediate pipe *b*, all substantially as herein shown and described.

3. The safety-cock *o*, applied to the end of the pump, substantially as herein shown and specified.

4. The cylinder L, suction-rose *i*, valve *l*, and pipe *m*, as specified.

5. The safety-cock *o*, connected with the suction-cock *l*, substantially as set forth.

88,621.—Edwin Froggatt, Central City, Colorado Territory.—*Wrench and Pincers.*—April 6, 1869.

Claim.—1. The combination-tool, consisting of the wrench, hammer, and pincers, with or without the screw-driver, all operating and arranged substantially as specified.

2. Connecting the movable jaw B of a wrench, by means of a bar or tube, *b*, with a parallel arm, *c*, the jaw and arm being bifurcated, so as to straddle the slotted shank A, through which screws *d* are fitted into the parts B *c*, substantially as herein shown and described, for the purpose specified.

88,622.—Edward Gallier, St. Louis, Mo.—*Marine Furniture.*—April 6, 1869.

Claim.—1. The table, or furniture, A, the jointed pedestal B B′ the cords D, and the weight W, when combined and arranged substantially as and for the purpose herein described and set forth.

2. The universal sheave *c*, when constructed with the bushing c^1 and balls c^2, as and for the purpose herein described and shown.

88,623.—George P. Ganster, New York, N. Y.—*Wrench.*—April 6, 1869.

Claim.—1. In a wrench, the construction and combination of the parts A, B, and C, arranged as shown and described, and for the purpose described.

2. The combination of shank D, sleeve-jaw B, and stop *i*, arranged as shown and described.

3. The combination of shank D, stop *l*, and handle A, arranged as shown and described.

88,624.—Joseph Gatchell, Rahway, N. J.—*Templet for Bending Springs.*—April 6, 1869.

Claim.—1. The templet described, consisting of the bed-piece M, the base N, upper templet R, the loose piece used on upper templet R, (shown in Fig. 1,) removable at pleasure, flanges O and P, and screw S, or its equivalent, for moving the base N upon the bed-piece M, as required to receive and pinch the springs when bending and cooling.

2. The blocks, or loose pieces K, in combination with and applied at the ends of the templet R, to extend its use to springs of various lengths and widths.

88,625.—William Gilfillan, Syracuse, assignor to himself and Martin T. Van Horn, New York, N. Y.—*Door-Spring.*—April 6, 1869.

Claim.—The plate C, with eccentric, D, and arm E; the chains or cords *b c*, the spring *l*, and adjustable hook *a*, and nut H; all combined and arranged to operate substantially as herein described.

88,626.—Joseph W. Gillespie, Alliance, Ohio.—*Eaves-Trough Bracket.*—April 6, 1869.

Claim.—The bracket A, provided with a recess *a*, the hook *a′*, and the screw *c*, cast solid with it, substantially as described.

88,627.—A. J. Going, Clinton, La.—*Cotton-Cultivator.*—April 6, 1869.

Claim.—1. The scrapers E, when adapted to be adjusted vertically and laterally upon the standards B and horizontal bars C, by means of the vertical slats *c*, parallel curved slots *d d*, opening *e*, bolts *b f*, and levers F, arranged and operating as herein described, for the purpose specified.

2. The cutter P, adjustably connected to the arm I, by means of the slots *s u*, in the stock O, the screw *r*, and the projection *t*, upon the bar I, as herein described, for the purpose specified.

3. The combination of the gearing L M, cam J, vibrating bar I, with its cutter-stock O, the scrapers E E, and truck-wheels *g g*, all arranged to operate in the manner substantially as and for the purpose specified.

88,628.—Thomas F. Goodwin, Edward Comted Goodwin, and Charles E. Goin, New York, N. Y.—*Ship's Rudder.*—April 6, 1869.

Claim.—The sectional blades E E, which constitute a rudder, provided with pivoted pins *e*, and with clasps *g*, and locking-devices *h*, substantially as and for the purpose herein shown and described.

88,629.—Isaac S. Goolman, Monrovia, Ind.—*Churn-Power.*—April 6, 1869.

Claim.—The arrangement of the slotted lever D, adjustable wrist-pin I, swivel-socket F, set-screw G, in combination with the clamps C C′, substantially as set forth.

88,630.—H. M. Hall, Danby, Vt.—*Attachment for Sewing-Machine.*—April 6, 1869.

Claim.—1. The combination, in a sewing-machine attachment, of a plate, A E, having a fixed standard,

C, and a movable standard, D, with a series of fingers passing through the said standards, substantially as and for the purpose herein shown and described.

2. The hollow standards, filled with cork, rubber, or other elastic matter, in combination with the guide-wires, substantially as and for the purpose herein set forth.

3. The part H, having a tongue, G, in combination with the plate A, and fixed and movable standards, C and D, substantially as and for the purpose herein shown and described.

4. The combination, in a sewing-machine attachment, of the two head and disk fingers *e f*, *e f*, as shown at Fig. 10, substantially as and for the purpose set forth.

5. The combination, in a sewing-machine, of the pencil-holder finger *j i*, and two plain fingers, as shown at Fig. 13, substantially as and for the purpose set forth.

88,631.—ASA P. HAWSE and G. R. SHIPPY, Wolcott, Vt.—*Clothes-Drier.*—April 6, 1869.

Claim.—The notched and grooved bracket or bar A, the slider B, the spring-catch C, the segmental ratchet D, the spring-latch F, and the clothes-frame E, as arranged and combined, substantially in manner and so as to operate as specified.

88,632.—JAMES HOOPER, Pittsburgh, Pa.—*Collar-Attachment for Screws.*—April 6, 1869.

Claim.—The herein-described device, included in the parts A, B, C, D, E, thus referred to in the drawings, and by which it is adapted to and made applicable as an attachment to a wood or metal base.

88,633.—JOHN W. HYATT, Jr., Albany, N. Y., assignor to the HYATT MANUFACTURING COMPANY, same place.—*Molding-Composition to Imitate Ivory and other Substances.*—April 6, 1869; antedated March 25, 1869.

Claim.—Making a dry compound, such as described, and subjecting it to heat and pressure simultaneously within a mold, which shapes or forms the billiard ball, or other article, substantially as described.

88,634.—JOHN W. HYATT, Jr., Albany, N. Y., assignor to the HYATT MANUFACTURING COMPANY, same place.—*Method of Coating Billiard-Balls, &c.*—April 6, 1869.

Claim.—A billiard, or other ball, which is coated substantially as described.

88,635.—WARREN B. INGRAM, Manchester, Conn., assignor to himself and KEENEY BROTHERS, same place.—*Grinding and Cleaning Card-Cylinders.*—April 6, 1869.

Claim.—A grinding-cylinder, arranged, in relation to the card-clothed cylinder to be ground and cleaned, to operate as set forth, and so as to be brought into action, at will, whilst the carding-machine is in the act of carding.

88,636.—THOMAS IRELAND, Negaunee, Mich.—*Combined Sink and Dish-Washer.*—April 6, 1869.

Claim.—An improved dish-washing machine, formed by the combination of the frame C, center D, spring E, lever F, disk H, shaft G, crank I, float J, and cleaners K L M, with each other, and with the sink B, or equivalent vessel, substantially as herein shown and described, and for the purpose set forth.

88,637.—SAMUEL JACKSON, Newark, N. J.—*Carriage.*—April 6, 1869.

Claim.—Connecting the movable axles F to the frame-work of the vehicle by means of crank-arms or bars G, formed solidly upon or rigidly attached to the said axles, substantially as herein shown and described, and for the purpose set forth.

88,638.—J. B. JAY, Arlington, Ill.—*Cultivator.*—April 6, 1869.

Claim.—1. The arrangement of the inner beams E, by means of the enlarged eyes *c* and pin *a*, in front, and the strap *d*, connecting the outer beams, so that they are capable of vertical adjustment, and of being rocked laterally, as set forth.

2. The combination, with the outer beams D and inner beams E, of the strap *b*, hinged straps *d*, upright bar *f*, and adjustable link *g*, arranged as described, for the purpose specified.

88,639.—JOHN JOHNSON, Brooklyn, N. Y.—*Rubber Compound.*—April 6, 1869.

Claim.—A compound, composed of the ingredients, and prepared in substantially the manner herein specified.

88,640.—JOSEPH JOHNSTON, Chicago, Ill.—*Weather-Strip for Windows.*—April 6, 1869.

Claim.—The combination of the parting-stop A A′ and lip B B′, in the manner and form substantially as herein described.

88,641.—PHILIP P. JOSEF, Buffalo, N. Y.—*Egg-Carrier.*—April 6, 1869; antedated January 11, 1869.

Claim.—Inclosing and sustaining eggs for transportation between a series of upper and lower depressions, a^1 a^2 b^1 b^2, constructed and arranged substantially as and for the purpose set forth.

88,642.—F. E. JOSEL, Freeport, Ill.—*Apparatus for the Manufacture of Vinegar.*—April 6, 1869.

Claim.—1. The sieve L L, with its slanting surfaces.

2. The pumps in each corner of the compartments.

3. The air-channel *f f*, and the application of the centrifugal ventilator G, to produce a draught through the compartment.

4. The condenser *h h*, with the two flues *o o*, to precipitate the alcohol-containing vapors.

5. The combination of compartments, to work together, as ten, twenty, or more, in one complete apparatus or machine.

88,643.—J. GEORGE JUNG, Newark, N. J.—*Chain.*—April 6, 1869.

Claim.—The herein-described double wire-link mail chain, each link of the chain consisting of two double loops, and interlooped with the succeeding pair of members, substantially as described.

88,644.—A. W. KIDDER, South Norridgewock, Me.—*Medical Compound.*—April 6, 1869.

Claim.—The medical compound, composed substantially as herein described.

88,645.—RICHARD S. LAWRENCE, Hartford, Conn., assignor to the SHARP'S RIFLE MANUFACTURING COMPANY, same place.—*Breech-Loading Fire-Arm.*—April 6, 1869.

Claim.—1. Operating the retractor, by means of the projection *o*, and the shoulder *m*, formed in the channel *j* of the breech-block, as herein shown and described.

2. The detonator H with its cam *r*, connected with the breech-block, and operating therewith, and with the receiver, substantially as and for the purpose shown and described.

88,646.—JAMES LICK, San Francisco, Cal.—*Machine for Gilding.*—April 6, 1869.

Claim.—1. The three pivoted holder-arms B, two stationary and one adjustable, provided with catches G, pivoted levers H, and set-screws I, the connecting-rod E, and pivoting-rod C, in combination with each other, and with the rack L, substantially as herein shown and described and for the purpose set forth.

2. The combination of the long adjusting-screw J with the pivoted holder-arms B, substantially as herein shown and described and for the purpose set forth.

3. The book-holder block K and spring-catches M, in combination with the grooved rack L and plate-holder B C E, substantially as herein shown and described and for the purpose set forth.

4. The combination of the arms P and springs Q with the grooved rack L, book-block K, and plate-holder B C E, substantially as herein shown and described and for the purpose set forth.

5. The combination of the pivoted board R, springs V, catches S and spring-catch bar T U, with

the spring-arms P Q, substantially as herein shown and described and for the purpose set forth.

6. The combination of the two pivoted adjustable arms W, provided with catches X, pivoted levers Y, and set-screws Z, the connecting-rod B′, and pivoting-rod C′, with each other, substantially as herein shown and described and for the purpose set forth.

88,647.—L. A. LINDSEY and J. F. O'SULLIVAN, Jackson, Miss.—*Fruit-Crate.*—April 6, 1869.

Claim.—1. The covers *e* and *d*, hinged to the same rods *a*, and arranged to fit between the side and end rails, and thereby maintain the crate in the condition for packing, substantially as and for the purpose specified.

2. The arrangement of the several parts, whereby the top and bottom may be folded and secured to the sides, and the whole folded into the form represented in Fig. 2, substantially as and for the purpose set forth.

88,648.—ROBERT H. LONG, Philadelphia, Pa.—*Fare-Box for Railroad-Cars.*—April 6, 1869; antedated March 22, 1869.

Claim.—A hollow cylinder D, having transparent ends and a single slot, *x*, when the said cylinder is weighted, and arranged to turn in a box A, having a slot, *a*, all substantially as and for the purpose described.

88,649.—J. B. MACHAMER, New Baltimore, Ohio.—*Index for Filing Circular Saws.*—April 6, 1869.

Claim.—As a new article of manufacture, a circular saw, provided with a circular index, when said index is constructed and applied to the finished saw-plate, as shown, and whether the radical index be or be not used in combination with said circular index, substantially as is herein specified.

88,650.—CHARLES D. MANSFIELD, Lynn, Mass.—*Mowing-Machine.*—April 6, 1869.

Claim.—1. The combination of the gear-wheels D and E, shaft F, gear-wheels H, K, and L, vertical shaft I, and vertical hollow shaft J, with each other and with the radial knives M and N, frame G, and wheel C, substantially as herein shown and described, and for the purpose set forth.

2. The toothed plate O, constructed and connected with the frame G, substantially as herein shown and described, in combination with the radial knives M and N, and shafts I and J, as and for the purpose set forth.

88,651.—DANIEL W. MARSHALL, Pawtucket, R. I.—*Constructing Picture-Frames.*—April 6, 1869.

Claim.—The picture-frame blank A, with the slot *b*, and edge shoulder *c*, arranged relatively to each other, as herein described.

88,652.—HENRY W. MATHER, Deep River, Conn.—*Machine for Forging Wrought-Nails.*—April 6, 1869.

Claim.—1. The arrangement of the reciproeating anvils C C and hammers D D with a device for feeding and supporting the nail-rod, substantially as shown and described.

2. The combination of the cam E, friction-rolls *f f*, toggle *g*, and springs *h h*, with the chisel F, and reciprocating anvil C, whereby the chisel is moved against the rod, and held while the nail is severed by the advancing movement of the anvil, substantially as described.

3. The falling-bar N, actuated by the cam P, in combination with the pawl arm *z*, ratchet-wheel *y*, or equivalent, and feed-rollers L L, arranged and operating substantially as and for the purpose set forth.

88,653.—NATHAN F. MATHEWSON, Barrington, assignor to himself and HENRY ARMINGTON, Providence, R. I.—*Mowing-Machine.*—April 6, 1869.

Claim.—1. The arrangement of the brace-lever *u* and the stud *v′*, with the cross H, the cutter-bar and the frame of the machine, the same being as and for the purpose or objects set forth.

2. The arrangement and combination of the pedal-catch R, with the seat, stand, and rack, the same being so as to enable a person while occupying the seat to move the pedal-catch by one of his feet.

88,654.—J. MAXHEIMER, New York, N. Y.—*Bird-Cage.*—April 6, 1869.

Claim.—Securing the bottom. A, to the top, B, of the bird-cage, by means of the eyes, or loops *a*, upon opposite sides of the bottom, and the bar C, whose ends fit within said eyes, resting upon the band *b*, and which passes transversely through the cage to form a perch for the bird, as herein shown and described.

88,655.—JOHN MAXSON and WARREN KINYON, Scott, N. Y.—*Sled-Brake.*—April 6, 1869,

Claim.—1. The combination of the dogs D, chain F, spring E, jointed bars H, or equivalent, and cross-bar, or evener I, with each other, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the hand-wheel P, shaft O, gear-wheels N and M, drum, or pulley L, chain K, and bar J, or equivalent, with each other, and with the evener I, bars H, dogs D, chains F, and spring E, substantially as herein shown and described, and for the purpose set forth.

3. The sliding lever Q and coiled spring R, in combination with the hand-wheel P and shaft O, substantially as herein shown and described, and for the purpose set forth.

88,656.—FRANZIS A. ODERMATT and FRANK ETTLIN, San Francisco, Cal.—*Fountain-Pen.*—April 6, 1869.

Claim.—The pen described, consisting of the hollow handle *a*, pivoted with the flexible parts *b b*, and guard-pieces *e e*, with tube *c*, with cock *d*, and head *f*, with cock *g′*, the whole being combined and arranged as described, for the purpose set forth.

88,657.—WILLIAM R. MEARS, Grafton, Ill.—*Portable House.*—April 6, 1869.

Claim.—1. The slats A, with hook *a*, slats A′, with hooks a^1, combined with the poles BB′, substantially as and for the purposes set forth.

2. The brace E, rest-bar E′, rest-hooks *e* and slats A, all combined and arranged substantially as and for the purpose set forth.

3. The slats A A′, and their hooks, when combined with the rods C and socket-rest *e*, for attaching to the floor of the structure, substantially as set forth.

88,658.—ADOLPH MILLOCHAU, New York, N. Y.—*Mode of Deodorizing the Spent Lime of Gas-Works.*—April 6, 1869.

Claim.—The method, herein specified, of preventing chemical reaction and decomposition in the spent lime of gas-works, as specified.

88,659.—JEROME S. MUNGER, Olean, N. Y.—*Weeding-Hoe.*—April 6, 1869.

Claim.—A weeding-hoe, constructed in the manner herein described, as a new article of manufacture.

88,660.—ANDREW O'NEILL, Portsmouth, Ohio.—*Mode of Preparing Sheet-Copper for Boilers and other Vessels.*—April 6, 1869.

Claim.—1. A bright cold-rolled tinned sheet of copper, as explained.

2. A transparent enameled, bright-tinned cold-rolled sheet of copper.

3. As a new article of manufacture, the polished and enameled tinned copper sheet, produced by the process substantially as herein described, for the manufacture of wash-boilers and other culinary vessels.

88,661.—ADOLPH OTT, New York, N. Y.—*Composition for Covering Steam-Boilers and Lining Safes.*—April 6, 1869.

Claim.—The compound, consisting of the above materials in any desirable proportion, substantially as herein described, and for the uses and purposes set forth.

88,662.—J. E. OVERACKER, Redwood, N. Y.—*Churn.*—April 6, 1869.

Claim.—The described arrangement of the air-

pipe F, with reference to the horizontal dasher, the bellows D, and churn-body A, whereby the air is conducted to the cream, independently of the dasher, as herein described, for the purpose specified.

88,663. — GEORGE N. PALMER, Green, N. Y., assignor to HEMAN CARTER, same place.—*Washing-Machine.*—April 6, 1869.

Claim.—The smooth surface roller G, covered with vulcanized India-rubber sheet, or cloth *b b*, the same being so secured at intervals to the roller as to form corrugations, and leave openings *e e e* between it and the cylinder, substantially in the manner as described, for the purposes herein set forth.

88,664.—L. E. PALMER, Le Roy, Pa.—*Device for Mowing away Hay.*—April 6, 1869.

Claim.—The arrangement and construction of the handles B B, half circle D, arms T and A, circle C, spring E, and bands H H, as shown, substantially as described.

88,665. — CHARLES PARHAM and GEORGE A. SMITH, Philadelphia, Pa.—*Needle-Holder for Sewing-Machines.*—April 6, 1869.

Claim.—1. The combination of the clamp or band B and needle-holder C, constructed, arranged, and operating as and for the purposes set forth.

2. The combination of clamp or band B, needle-holder C, and needle-bar or shaft A, constructed and arranged as and for the purposes set forth.

3. The combination of the needle-bar, having a slot, *a*, and hole C, with the needle-holder and clamp B, constructed and arranged for the purposes set forth.

4. The combination of the eyelet *b*, needle-holder C, and clamp B, arranged as and for the purposes set forth.

88,666. — JOHN G. PERRY, Kingston, R. I.—*Meat-Cutter.*—April 6, 1869.

Claim.—The combination and arrangement of the knives *a a a*, cast solid in the block S, the shafts or cylinders A A′, each having one or more rows of studs thereon, the gear-wheels *o o′*, with the double cylinder-case, substantially as and for the purpose specified.

88,667. — JOHN G. PERRY, Kingston, R. I.—*Meat-Cutter.*—April 6, 1869.

Claim.—The combination and arrangement of the knives, feed-screws, gear-wheels, studs, and case, all constructed and operating as herein set forth, and for the purpose specified.

88,668. — P. PHILIPPI, Beardstown, Ill.—*Nut-Locking Device.*—April 6, 1869.

Claim.—The notched plate A, when secured to the fish-plate by means of the bolt C, the spring-key, and the dowel-pins *d*, as herein described, for the purpose specified.

88,669.—J. R. ROSS and W. D. MITCHELL, Centralia, Ill.—*Combined Harrow and Cultivator.*—April 6, 1869.

Claim. —1. The alternate arrangement of the fluke-shaped teeth, with the faces in opposite directions.

2. The curved arms C, in which are screwed, or otherwise secured, the teeth G.

3. The curved section, Fig. 2, for the purpose of enlarging the implement.

4. The beam D, substantially as shown and described.

5. A harrow and cultivator combined, when constructed substantially as herein set forth and described.

88,670.—D. H. A. SANDERS, Senatobia, Miss.—*Cotton-Seed Planter.*—April 6, 1869.

Claim.—The cylinder A, constructed as described, having seed-discharge openings C at its angles, between the raised rims E, when mounted upon the runners and journaled in the vertical slots B, as herein described, for the purpose specified.

88,671.—HERMANN SCHULTE, Milwaukee, Wis.—*Window-Shade Fixture.*—April 6, 1869.

Claim.—A window-shade fixture, consisting o, crank A, lever-latch B, spring C, reel D E, cord H and reel K, with frame G and shaft L, combined and arranged substantially as described.

88,672.—C. F. AUGUSTUS SEITZ, Philadelphia, Pa., assignor to himself and LOUIS WAGNER, same place.—*Egg-Beater.*—April 6, 1869.

Claim.—The horizontal and inclined shafts A B, frames or housings C D, gear-wheels E F, fly-wheel K, screw-end *a*, beater or whip I, and the movable pan G, when constructed and arranged substantially as shown and described.

88,673.—SAMUEL B. SHOUP, Dayton, Ohio.—*Flood-Gate.*—April 6, 1869.

Claim.—The combination of the pieces A, hung on rod C, which have pieces B bolted to them, with the posts F, and base D, when strengthened by the brace E, all constructed and arranged as described, as and for the purpose specified.

88,674.—WILLIAM SILVER, Bloomsburgh, Pa.—*Machine for Making Blasting and other Powder.*—April 6, 1869.

Claim.—The combination, with the barrel A, of the valves C, arranged to be opened at each revolution of the barrel, substantially as specified.

88,675.—JOSEPH F. STOKES, Philadelphia, Pa.—*Car-Starter.*—April 6, 1869.

Claim.—1. The arrangement of the axle A, pinion P, tubes T and T′, spur-wheels S and S^1, pawls *l* and *l′*, coiled springs C and C′, barrels, or disks B and B′, straps I and I′, on the front and rear of the car, and constructed to be operated by devices, substantially in the manner and for the purpose specified.

2. In combination with the above, the arrangement of the shaft H, spur-wheel S^2, shifting-pinions N and N′, levers L and L′, lever R, and crank K, substantially as and for the purpose set forth.

3. The within-described self-propelling railway-car, arranged and operating in the manner as herein shown and described.

88,676.—Z. T. SWEET, Eugene City, Oregon.—*Clip for Neck-Yoke and Whiffle-Tree.*—April 6, 1869.

Claim.—The clip A, formed by the combination of the arm a^1, lock-bar a^2, and catch-spring a^3, with the perforated body of said clip, substantially as herein shown and described, and for the purposes set forth.

88,677.—JOHN L. TALLMAN and JAMES V. DE PUY, Tecumseh, Mich.—*Apparatus for Cooling Milk.*—April 6, 1869.

Claim.—A machine for cooling milk or other liquids, by the combination of a vessel or vessels causing a current of milk to run in one direction immersed in a vessel or vessels filled with water or other fluid, the water coming in contact with the milk-vessel on the bottom and sides, and causing the current of water or other fluid to run in a direction opposite to the milk-current, both vessels being placed in a horizontal position, with the milk and water currents running in a horizontal direction, and with the upper surface of the milk-vessel open, so as to expose the milk to the action of the atmosphere, by means of the particular combination and devices fully set forth in the specifications and drawings.

88,678.—N. SPENCER THOMAS, Painted Post, N. Y.—*Preparing Tan-Bark.*—April 6, 1869.

Claim.—1. Separating the dust from ground tan-bark by screening, substantially as and for the purposes described.

2. Sizing or granulating ground tan-bark by screening, substantially as described.

3. The revolving screen A, when used for granulating ground tan-bark, or removing the dust therefrom, substantially as shown and described.

88,679.—H. K. TRASK, Beaver Dam, Wis.—*Device for Grinding Edged Tools.*—April 6, 1869.

Claim.—The combination of the swinging-bars B, having the adjustable pins, with the pieces E and frame A, arranged and applied to a grindstone, in the manner described for the purposes specified.

88,680.—Thomas S. Tuggle, Columbus, Ga.—*Medical Compound.*—April 6, 1869.

Claim.—The compound sirup globe-flower, substantially as herein described.

88,681.—Thomas S. Tuggle, Columbus, Ga.—*Medical Compound.*—April 6 1869.

Claim.—A compound extract. *Xanthox. frax.*, as a new article of trade and use, prepared and put up in bottles, for the purposes herein set forth.

88,682.—Henry Twitchell, Pulaski, N. Y.—*Dental Plate.*—April 6, 1869.

Claim.—Dental plates, whether constructed of hard rubber or other material, provided with soft rubber lining, extending wholly or partly over the entire interior surface of the same, substantially as and for the purpose described.

88,683.—Thomas W. Ward, New York, N. Y.—*Velocipede.*—April 6, 1869.

Claim.—The weights E E, suspended from the lower ends of the frame C of a one-wheeled velocipede, for the purpose of balancing the frame, substantially as herein shown and described.

88,684.—W. C. Wendell, Albany, N.Y.—*Book-Cover.*—April 6, 1869.

Claim.—As an improved new article of manufacture, the within-described book-cover, made of one piece of paper, shaped, folded, and stayed with cloth or leather strips *c c'*, all in the manner shown and described.

88,685.—G. W. Williamson, Goldsborough, Pa.—*Railway-Car Coach.*—April 6, 1869.

Claim.—The stretcher A, applied as described, to the seats of railway-cars, whereby a longer or shorter bed is formed, substantially as herein set forth and shown.

88,686.—Jacob W. Wilson, Somerford, Ohio.—*Rotary Road-Scraper.*—April 6, 1869.

Claim.—1. The peculiar arrangement and combination of the scraper A, standards E E, tongue-pieces I I, and handles F F, the several parts being arranged substantially in the manner and for the purpose specified.

2. The ⌊-shaped irons K K, when used in combination with the handles F F and the pins L L, on the scraper A, substantially as and for the purpose specified.

3. The pins M M, when used in combination with the handles F F, pivoted to the tongue-pieces I I, and pins L L, and the scraper A, substantially as and for the purpose herein specified.

4. The peculiar arrangement and combination of the scraper A with standards E E and pins L L, the tongue-pieces I I and handles F F, with pins M M, and ⌊-shaped irons K K, the several parts being arranged substantially in the manner and for the purpose herein specified.

5. The rotary road-scraper, herein described, composed essentially of the scraper A, with standards E E, pins L L, and spikes H H, screwed thereto, the tongue-pieces I I, with tongue J, the pivot-bolts *c c*, with separating washers *b b*; handles F F, with pins M M, and ⌊-shaped irons K K, and cross-bar G, with braces *f f*, the several parts being constructed and arranged substantially in the manner and for the purposes herein specified.

88,687.—John C. Wilson, Coalburg, W. Va.—*Tuyere.*—April 6, 1869.

Claim.—The improved apparatus herein described, consisting of the water-chambers I and M, blast-pipes B and E, in chamber G, fire-grate H, and three-way cock F, all substantially as described.

88,688.—Thomas H. Withers and Jacob Dolfinger, Louisville, Ky.—*Churn-Dasher.*—April 6, 1869; antedated April 1, 1869.

Claim.—1. The single perforated screw B, revolving loosely upon and detachably secured to the dasher-handle A, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the detachable ferrules C with the dasher-handle A, and with the hub of the screw B, substantially as herein shown and described, and for the purpose set forth.

88,689.—John Absterdam, New York, N.Y.—*Projectile.*—April 6, 1869.

Claim.—The cup *x*, having sides parallel to the major axis of the projectile, and immovably secured and retained thereon by the interlocking dovetail B, substantially as herein described and shown.

88,690.—Peleg Barker, Battle Creek, Mich., assignor to himself and the Joliet Manufacturing Company, Joliet, Ill.—*Grain-Separator.*—April 6, 1869.

Claim.—1. The two open raddles *c* and *i* and the grain-floor or trunk, combined together, and arranged in relation to the thrasher and cleaner, as set forth and shown.

2. The elevator A, Fig. 3, for the purpose of elevating unthrashed heads of grain, &c., back to the thrasher, substantially as described.

3. The agitator *r*, when constructed and operating as described, for the purposes set forth.

88,691.—George S. Barton, Worcester, Mass., assignor to Rice, Barton, and Fales Machine and Iron Company, same place.—*Device for Adjusting Gearing.*—April 6, 1869.

Claim.—1. The combination, with the double gear B C, of cam H and shaft I, substantially as and for the purposes set forth.

2. The combination, with the double gear B C, of cam H, shaft I, with its head J, and holding-bolts K K, substantially as and for the purposes set forth.

3. The combination, with sleeve A and double or "split" gear B C, of nut G, hub D, with its teeth *a*, shaft E, with its worm *b*, adjusting-cam H, with its operating-shaft I J, and holding-bolts K K, substantially as and for the purposes set forth.

88,692.—James Bond, Norfolk, Va.—*Life-Preserving Apparatus.*—April 6, 1869.

Claim.—1. A float, adapted to be attached to the person, in combination with a screw-propeller, substantially as and for the purpose specified.

2. The combination and arrangement of the float A, bevel gear-wheels F *f*, cranks G G, shaft D, propeller E, and rudder I H, substantially as and for the purpose specified.

3. In connection with said parts A D E H F *f*, the arrangement of the floats J B B, and cords C C, as and for the purposes shown and described.

88,693.—Nicholas H. Borgfeldt, New York, N. Y.—*Apparatus for Melting Snow.*—April 6, 1869.

Claim.—1. The combination of a sieve with a heated surface, substantially as described, so that the mass of snow, before being permitted to come in contact with the heated surface, is subdivided into flakes, and the melting process is thereby facilitated.

2. The movable heated surfaee D, in combination with the oscillating sieve C, substantially as and for the purpose described.

3. The combination of the hopper B, sieve C, heated surface D, and tank G, substantially as and for the purpose set forth.

88,694.—Henry J. Brunner, Nazareth, Pa.—*Steam-Generator.*—April 6, 1869.

Claim.—The arrangement of the two series of boxes A A and B B, and the series of connecting-tubes C C, so that the boxes A A, at one end of the boiler, are vertical, or upright, and the boxes B B, at the other end, horizontal, substantially as herein specified.

88,695.—William J. Davidson, Staunton, Va.—*Syringe.*—April 6, 1869.

Claim.—1. The tip of a syringe-nozzle, constructed with a transverse slit, substantially as and for the purpose set forth.

2. The slotted tube *b b'*, in combination with the tube *a* and its tip *a'*, when so constructed that its ribs *b'* are capable of expansion and contraction, in the manner substantially as described.

3. The concavo-convex hollow eye-tip E, perfor-

ated, or slit around its upper edge, substantially as and for the purpose set forth.

4. The nozzle, Fig. 4, curved to correspond with the channel through the nares to the pharynx, and provided with a suitably-formed tip, G, for its guidance and discharge of the fluid, substantially as and for the purpose specified.

5. The nozzle, Fig. 5, adapted for injecting the ear, male urethra, and anus of infants, substantially as shown and described.

88,696.—CHARLES H. DAVIS, Troy, N. Y.—*Rock-Drill.*—April 6, 1869.

Claim.—1. In combination with the drill-shaft G and spring *h*, when arranged to operate in horizontal position at the under side of the carriage B B, as set forth, the arrangement, respectively, of said drill-shaft's draw-back arm *b* and pawl-arm *a*, in such relative position to each other, and to the hollow or grooved cam E, in manner as described, that the said cam, in its rotations, actuates, respectively and alternately, the said arms *b* and *a*, and thereby successively draws back and then rotates said drill-shaft G, in manner as set forth.

2. In combination with the supporting-frame A A, and its horizontally-movable carriage B B, with the drill's actuating-machinery, the arrangement of the endwise-reciprocating and rotating drill-shaft G, at the under or bottom side thereof, so as to be operated thereat in a horizontal position or close to the rock, in the manner substantially as herein shown and set forth.

3. The combination and arrangement of the driving-wheel H, pinion N, hollow or grooved cam E, draw-back arm *b*, pawl-arm *a*, ratchet-wheel *e*, driving-spring *h*, with the movable carriage B B, frame A A, and the rock-drill shaft G, as arranged in horizontal position thereunder, in manner substantially as described and shown, so as to operate or rotate and move reciprocally the said rock-drill, in manner as and for the purposes set forth.

88,697.—HUGH DAWSON, Baltimore, Md.—*Pole for Stretching Leather.*—April 6, 1869.

Claim.—The blocks B, provided with the hooks C, in combination with the pole A, when constructed and arranged as described, for the purpose of stretching, holding, and suspending hides of leather, as set forth.

88,698.—CHARLES DION, New York, N. Y.—*Fire-Alarm.*—April 6, 1869.

Claim.—The combination, with the dial, index, and bell, or its equivalent, of any desired number of separate weights, F, made to operate the index and bell-hammer, or either of them, through the lever-frame E, in the manner substantially as and for the purpose set forth.

88,699.—H. WILLIAM DOPP, Buffalo, N. Y.—*Needle-Threader for Sewing-Machines.*—April 6, 1869.

Claim.—The combination with the blocks A A′, or equivalent, having a conical opening, B, of the grooved holding-plate D and pointed plate E *e*, substantially as and for the purpose set forth.

88,700.—EDWARD P. EASTWICK, Baltimore, Md.—*Bone-Black Kiln.*—April 6, 1869.

Claim.—The method of supporting upper and lower retorts in the bone-black kiln, or kiln for similar purposes, so that both upper and lower retorts are sustained on a central support, and at the same time allowing the lower retort to be suspended over and enter into the mouth-piece of the cooler below, which cooler is independently supported, as herein substantially set forth and described.

88,701.—EDWARD P. EASTWICK, Baltimore, Md.—*Kiln for Burning Bone-Black.*—April 6, 1869.

Claim.—The method of supporting one, two, or more vertical retorts, which, with the cooler below, form, on the inside, the continuous chamber in the bone-black kiln, or kiln for similar purposes, so that the retort above, being independently supported, shall hang over and enter into or overlap the mouth of the retort, or cooler immediately below it, where it is allowed a separate and independent expansion, as herein substantially set forth and described.

88,702.—EDWARD P. EASTWICK, Baltimore, Md.—*Kiln for Bone-Black.*—April 6, 1869.

Claim.—The mode of supporting two or more vertical retorts, which, with the cooler below, form, on the inside, a continuous chamber in the bone-black kiln, or kiln for similar purposes, in such manner that each retort in the continuous chamber is independently supported from below, and is allowed a separate and independent expansion, as is herein substantially described and set forth.

88,703.—HENRY J. FERGUSON, Whiting, N. J.—*Velocipede.*—April 6, 1869.

Claim.—1. The frictional button *b*, frictional helical cup C′, and helical and axled cap Cp, for the purposes and in the manner described.

2. The crank C, shaft S, and button *b*, in combination as and for the purposes named.

3. The helical friction-clutch, formed by the button *b*, helical friction-cup C′, and the helical and axled cap Cp.

4. The combination of the spring Sp′ with the coordinate helical ends of cup C′ and cap Cp.

88,704.—JAMES B. FOOTE, Hamden, assignor to ANDREW BUCKHAM, Delhi, N. Y.—*Sled-Way Attachment for Covered Roadways.*—April 6, 1869.

Claim.—In combination with the floors of covered bridges and other covered structures, rollers arranged as shown, and for the purposes set forth in the above specification.

88,705.—CHARLES M. FOULKE, Philadelphia, Pa.—*Carriage-Wheel.*—April 6, 1869.

Claim.—The arrangement of the mortises *a′ a″ a‴* in the spiral groups around the hub A, for the insertion of the spokes B–B, substantially as described and set forth, for the purpose specified.

88,706.—J. ASHTON GREENE, Brooklyn, N. Y., assignor to himself and JOHN H. YOUNG, Beverly, Mass.—*Manufacture of Vulcanized Rubber Boots and Shoes.*—April 6, 1869.

Claim.—1. As a new article of manufacture, a molded vulcanized rubber boot or shoe.

2. The method herein described, of making boots or shoes of a vulcanizable composition, by the process, and substantially in the manner above described.

88,707.—ALFRED GUTHRIE, and CARLILE MASON, Chicago, Ill.—*Steam-Generator.*—April 6, 1869.

Claim.—The arrangement of the furnace N in connection with the tank H and its connecting-pipe M, for the passage of the heat and gases to the water in H, together with the air-feed pipe E, substantially as set forth, and described.

88,708.—HENRY L. HALL, Woodbridge, Iowa.—*Corn-Husker.*—April 6, 1869.

Claim.—The protecting-glove and cot herein described, in combination with the claws *s*, when the same are constructed in the form, and combined and arranged in the manner herein specified.

88,709.—ABRAM HEATON, Bridgeport, Conn., assignor to himself and BRADBURY & GOODSELL, same place.—*Fluid-Meter.*—April 6, 1869.

Claim.—The inner, fixed, divided shaft B, combined with the outer shaft E, arranged within the cylinder A, and combined with one or more pistons, and arranged with corresponding openings through the two shafts, so as to operate substantially in the manner herein set forth.

88,710.—P. F. HODGES, St. Paul, Minn.—*Grain-Drill.*—April 6, 1869.

Claim.—1. The agitator B, constructed and to operate substantially in the manner described.

2. In combination with the described agitator B, the within-described arrangement of slides E and F, substantially as shown and described.

3. The slides E, F, and G, when constructed as shown, and arranged to operate in connection with screw D, substantially in the manner set forth.

88,711.—Isaac Hodgson, Indianapolis, Ind.—*Roller-Skate.*—April 6, 1869.

Claim—1. The wheel frame B, provided with the forward projecting arm, and furnished with the friction-rollers E, interposed between the frame and the sole, and attached by the arm to the forward part, or toe of the sole, in the manner and for the purpose substantially as set forth.

2. The spring J, in combination with the wheel-frame B, constructed and arranged substantially as and for the purpose set forth.

88,712.—Patrick J. Hogan, Cincinnati, Ohio.—*Plastering-Trowel.*—April 6, 1869.

Claim.—The combination of the blade A, when riveted to the rib B, with the dovetailed foot C, secured to and adjustable upon said rib by means of the set-screw *b*, substantially as described, as and for the purpose specified.

88,713.—Thomas Houghton, Philadelphia, Pa.—*Lantern.*—April 6, 1869.

Claim.—1. The cage *i i, j k c'*, when so constructed as to contain the lamp, globe, and mountings, without being in any manner attached to them; also permitting the vertical movement of the globe and upper mounting, to allow the insertion of a match, all substantially as herein described.

2. A lantern in which the upper and lower mountings, the lamp, and globe, are entirely separate from each other, and contained in an open wire cage, so constructed as to hold all the parts together without being attached thereto; as well as to allow the vertical movement of the globe, as and for the purpose herein set forth.

3. The lantern composed of the upper and lower mountings, E C, the lamp A, the wire guard, holder, or cage, and a globe, when the mountings or globe are provided with channels for the admission of air, and all the parts are constructed and arranged as and for the purposes herein set forth.

88,714.—John Howe, Jr., Boston, Mass.—*Steam-Enginery for Steam-Vessels.*—April 6, 1869.

Claim.—The disposition and arrangement of the steam-conduits *c* c^1 c^2 c^3, with respect to the hull of the vessel and the steam-generator, substantially as before explained.

88,715.—William H. Hubbard, West Meriden, Conn., assignor to himself and John Hill, same place.—*Material for Paint.*—April 6, 1869.

Claim.—The herein-described paint, prepared by the process, substantially as set forth, as a new article of manufacture.

88,716.—S. D. Huffman, New Germantown, N. J.—*Thrashing-Machine.*—April 6, 1869.

Claim.—1. Providing the mouth or chimney of a "duster" with a partition, so as to form an inner and an outer channel, substantially as and for the purposes herein set forth.

2. The arrangement of the shell A, partition E, channels F and F', perforated plate H, and hinged door G, all substantially as shown and described.

88,717.—Alexander Hunter, Buffalo, N. Y.—*Needle-Threader.*—April 6, 1869.

Claim.—A needle-threading apparatus, for attachment to thimbles, made of sheet-metal, constructed and operated in the manner as shown and described

88,718.—Charles Kallmann, Newburgh, N Y.—*Combined Clock and Fly-Trap.*—April 6, 1869.

Claim.—The combination of the clock and the fly-trap, driven by the same moving-power, spring or weight, and by the same gearing, substantially, and the whole arranged as specified.

88,719.—Caleb P. Kelly, Phelps, N. Y.—*Horse-Rake.*—April 6, 1869.

Claim.—The standard F, lever H, the connecting-rod E, and horizontal arm I, in combination with the rake-head D, and the standard G, in connection with the cross-bar C.

88,720.—George Kenny, Nashua, N. H.—*Carriage-Hub.*—April 6, 1869.

Claim.—The taper-bored metallic ring A, provided with sockets *a a b b*, around the periphery of the ring, in alternate parallel order, corresponding with the mortises in the wood part of the hub, the spokes fitting into the sockets and tenoned into the wood, substantially as and for the purposes herein set forth.

88,721.—August Kessberger, Springfield, Ill.—*Wagon-Brake.*—April 6, 1869.

Claim.—1. The self-acting brake D, constructed and arranged substantially as herein described, and for the purposes set forth.

2. The combination of the self-acting brake D, pin *d*, and slotted flanges F, substantially as herein described, and for the purposes set forth.

88,722.—Alexander A. C. Klaucke, Washington, D. C., and Jefferson Fraser, New York, N. Y.—*Envelope.*—April 6, 1869.

Claim.—1. An envelope, provided with a space, B, punched, or otherwise made detachable, whether gummed on the inside or not, substantially as and for the purpose set forth.

2. An envelope, with the address of the sender printed or inscribed on a portion thereof, the boundary of which is perforated, or otherwise prepared, so as to be readily detachable, whether made adhesive or not, substantially as and for the purpose set forth.

88,723.—Eli Knepper, Columbus, Ohio.—*Shovel-Plow.*—April 6, 1869.

Claim.—1. The two slit bars I I, and rollers K K K, in combination with the beams B B and C, constructed and arranged as described.

2. The two springs H H fastened between the middle beam C, and outer beams B B, which bring the outer shovels always back to their normal distance from the middle shovel, when contracted as herein described.

88,724.—William H. Locke, Canton, Pa.—*Grain-Cradle.*—April 6, 1869.

Claim.—1. The semicircular bar B, employed substantially in the manner and for the purpose described.

2. The semicircular bar B, rods *g g g g* and *e*, in combination with fingers *h h h h*, all arranged substantially as and for the purpose set forth.

88,725.—Clark Marsh, Bridgeport, Conn., assignor to the New York Belting and Packing Company.—*Mode of Finishing and Truing Emery-Wheels, &c.*—April 6, 1869.

Claim.—The method of finishing and truing emery vulcanite-wheels, or other wheels and grindstones of artificial composition, substantially as and by the means aforesaid.

88,726.—Henry Matthes, Cambridge, Mass.—*Pie Cutter and Crimper.*—April 6, 1869.

Claim.—As a new article of manufacture, the tool herein described, consisting of a cutting-blade, crimping-roller, and prongs for puncturing, when constructed substantially as described, and for the purpose specified.

88,727.—William M. Morris, Washington County, Miss.—*Cotton-Bale Tie.*—April 6, 1869.

Claim.—The buckle A, when provided with the slot B, the triangular lug D, and the projections *i* and *j*, and otherwise constructed, substantially as herein described.

88,728.—George Nearstheimer, Cincinnati, Ohio.—*Metallic Coffin.*—April 6, 1869.

Claim.—1. The arrangement of the bottom A *a*, sides B, hollow rim C, angular and screw-threaded plugs D E, and frame C', for the purpose set forth.

2. In combination with the elements A *a*, B, C, D E, and C', the short plugs F.

3. The described combination of the parts A *a*, B, C, D E, F, and C', with the ribs I and nuts J, formed and secured as set forth.

4. The screw-threaded stem O, the nut P, spiral spring Q, the tongue R, slot *s*, in the chamber S, and the graduated scale T, constructed and arranged to act as and for the purposes set forth.

88,729.—GEORGE W. NEILL, Boston, Mass., assignor to CHICKERING & SONS, same place.—*Piano-Forte Frame.*—April 6, 1869.

Claim.—1. The combination and arrangement of the projections *b b*, the arch-bar F, the auxiliary brace-bar, and its abutments on the same, and the central post G, with each of the oblique brace-bars *e*, of the metallic string-frame, the whole being united by screw-bolts and nuts, as set forth.

2. Fastening each of the auxiliary brace-bars to the back frame, when such bar is provided with abutments, and combined with the two projections *b b*, an arch-bar, F, and the string-frame brace-bar *c*, connected together, and arranged as specified.

88,730.—J. D. S. NEWELL, Tensas Parish, assignor to himself, N. G. BRICE, E. TOMATIS, and THOMAS PICKLE, New Orleans, La.—*Breech-Loading Fire-Arm.*—April 6, 1869.

Claim.—1. The breech-piece A, in combination with the needle bar D, when these parts are constructed as herein described, and are united and operate conjointly, by means of the vertical face, or section *f*, in the longitudinal recess in the former, and the spring *h*, secured over the front end of said recess, substantially as herein specified.

2. The above combination, in combination with the projecting knob or pin *b*, for throwing out the cartridge-case, substantially as herein set forth.

3. The breech-piece A and bar D, in combination with the hammer C, when these several parts are constructed, joined together, and conjointly operate, substantially as set forth.

88,731.—GEORGE HARDING PALMER, Lewisham Parish, England, assignor to himself and SAMUEL NICHOLS, New Haven, Conn.—*Suspender.*—April 6, 1869.

Claim.—The attachment for suspenders, consisting of a spring support, for the button-hole tags, or ends, formed from a single piece of wire, bent so as to form loops D and E, and so that the two ends B and C will play within the said loops, substantially as described, and for the purpose specified.

88,732.—WILBUR F. PARKER, Meriden, Conn.—*Power-Press.*—April 6, 1869.

Claim.—The combination of the many-sided pin D, placed eccentrically on the end of the shaft B, the disk E, with recess F and wrist-pin L, and pitman P, as and for the purpose set forth.

88,733.—RUSSELL B. PERKINS, Meriden, Conn., assignor to CHARLES PARKER, same place.—*Mechanical Adjustment.*—April 6, 1869.

Claim.—The plate C, arranged so as to have a reciprocating movement imparted thereto, combined with the eccentric D, arranged so as to adjust the plate C to vary the point of starting and stopping of the said reciprocating movement.

88,734.—RUSSELL B. PERKINS, Meriden, Conn., assignor to CHARLES PARKER, same place.—*Mechanical Adjustment.*—April 6, 1869.

Claim.—The two parts, A and B, of a connecting-rod, combined with the eccentric D, so that by the turning of the said eccentric the said two parts may be adjusted to lengthen or shorten their extremes, substantially as and for the purpose herein set forth.

88,735.—JOHN E. PLUMMER, Binghamton, N.Y.—*Shoe-Jack for Finishing Shoes.*—April 6, 1869.

Claim.—The vise, or clamp B, ratchet N, double pawl P, in combination with the spiral spring G, in the thumb-nut F, curved arm J, toe-piece K, stop R, and projection from the hub S, all being constructed as herein described and represented, for the purpose set forth.

88,736.—A. RAY, Granville, Mo.—*Car-Coupling.*—April 6, 1869.

Claim.—The combination and arrangement of the spring-jaws *c c* with the stop, or cheek-block *m*, the lever *h*, the arrow-head tongue L, the regulating screw-rod *f*, and the springs D D′, all arranged and operated substantially as and for the purposes hereinbefore described.

88,737.—FRANÇOIS RAYMOND, Woodhaven, N. Y.—*Combined Knob-Latch and Lock.*—April 6, 1869.

Claim.—The combination, with the knob-shank and bolt of a lock, of the cogged sector F, double rack D, shooting-tumbler C, and slotted lifting-tumblers E, arranged for operation substantially as herein described.

88,738.—J. B. READ, Tusealoosa, Ala.—*Velocipede.*—April 6, 1869.

Claim.—1. The attachment, to two-wheeled velocipedes, of levers, to be fastened to the frame, or to projections inclosing the driving-wheel, and to the axle of the same, and connected by a cord and pulley beneath the driver's seat, to extend from one lever to the other, substantially as described.

2. A disk or hoop, attached to the steering-shaft, to be operated by the knees, when the hands are used for propulsion.

88,739.—WILLIAM REICHENBACH, Chicago, Ill., assignor to himself and HENRY NASS, same place.—*Combined Clothes-Drier and Ironing-Table.*—April 6, 1869.

Claim.—The combined ironing-table and clothes-rack, all constructed and arranged to operate as herein shown and described.

88,740.—E. S. RICE, Paw Paw, Mich.—*Harrow and Cultivator.*—April 6, 1869.

Claim.—1. The lever F, the rods G, the frame A, and draught-chain E, arranged and combined substantially as and for the purposes specified.

2. The guide-bars H, in combination with the axle B, pole D, and bars 1 and 1, substantially as and to operate for the purpose set forth.

3. The rods I and J, in combination with the frame A, and the axle B, and pole D, and arranged in relation to the operator's or driver's seat, substantially as illustrated and described.

88,741.—JAMES M. ROHRER, Pine Grove, Pa.—*Apparatus for Desulphurizing and Oxidizing Ores.*—April 6, 1869.

Claim.—1. The application of air and water, or air and steam, separately or combined, to the hot stock of a blast-furnace above the smelting point, during the smelting operation, substantially as herein described.

2. The vertically-arranged tube *a*, applied to a blast-furnace, substantially as and for the purpose herein set forth.

3. The arrangement in the upper part of a blast-furnace, of air-tuyeres *b*, substantially as and for the purpose herein set forth.

4. The arrangement, relatively to the air-tuyeres *b*, of the pipes *c*, *d*, and *e*, substantially as and for the purpose specified.

5. The combination and arrangement of the sprinkler *h* and perforated pipe *m*, as applied to a blast-furnace, substantially as and for the purpose herein set forth.

88,742.—CHARLES G. SARGENT, Westford, Mass.—*Burring-Cylinder for Wool, &c.*—April 6, 1869.

Claim.—A cylinder, for opening and cleaning fibrous materials, &c., having a surface composed of alternate rows of hard teeth and soft packing-wire, the teeth being constructed substantially as shown, and the surface of the soft wire lying above the bases of the teeth and packing closely against the sides of the teeth, all substantially as and for the purposes described.

88,743.—JOHN K. SAX and GEORGE W. KEAR, Kingston, Pa.—*Railway-Car Wheel.*—April 6, 1869.

Claim.—The circumferential steel band *a*, dovetailed and welded into a groove in the cast-iron wheel A, substantially as set forth.

88,744.—H. J. SAYERS, Salina, Pa.—*Stove-Pipe Damper.*—April 6, 1869.

Claim.—The combination of the sleeve H, with its handle *h* and aperture, as described, with a stove-pipe having flanches *d* and aperture C, arranged in such manner that the flanches of the stove-pipe shall form guides to regulate the movements of said sleeve in the manner and for the purposes herein specified.

88,745.—Samuel R. Scharf, Baltimore, assignor to himself, James Spicer, and James N. Burnham, Baltimore County, Md.—*Fire and Water Proof Cement.*—April 6, 1869.

Claim.—The above-described composition or roofing-cement, made and used substantially in the manner and for the purposes set forth.

88,746.—Samuel R. Scharf, Baltimore, assignor to himself, James Spicer, and James N. Burnham, Baltimore County, Md.—*Asphaltic Pavement.*—April 6, 1869.

Claim.—The above-described pavement, made with the composition, substantially in the manner set forth.

88,747.—John J. Schillinger, New York, N. Y.—*Manufacture of Artificial Stone.*—April 6, 1869.

Claim.—The manufacture of artificial stones of two different compositions, a coarser, and a finer, or facing-material, when the latter consists of very fine sand, cement, and pulverized metallic paint, with or without coloring-matter, mixed with lime-water, and applied to the coarser mass, in the manner and for the purpose substantially as herein set forth and described.

88,748.—Caleb S. Stearns, Marlborough, Mass.—*Carriage-Wheel.*—April 6, 1869.

Claim.—The ring A, with its abutments *a*, bearing *f*, with its abutments *g*, elastic material *h*, and covering-plates B C, in combination with the axle D, provided with the groove *i*, key E, and screw-nut G, substantially as and for the purpose described.

88,749.—C. F. Th. Steinway, New York, N. Y.—*Sound-Board for Piano-Fortes.*—April 6, 1869.

Claim.—The dowels or posts E, arranged to connect the suspended portions of the bridge and sounding-board at one or more points, substantially as described.

88,750.—Charles W. Stickney, Albany, N. Y.—*Velocipede.*—April 6, 1869.

Claim.—In a three-wheeled velocipede, the combination of the cranks *b*, pivoted to the rods *n*, having foot-rests *o* attached thereto, pendent rods *m*, pivoted to the bifurcated reach *k*, and to the cranks *b*, in connection with the wheel *a*, running in the forked bar *c*.

88,751.—Thomas B. Stout, Keyport, N. J.—*Wood-Pulley Bush.*—April 6, 1869.

Claim.—A bush, *a*, for a wooden pulley, formed of sheet-metal, or a strip of metal, of uniform thickness, and held in place by a flange, *b*, formed by bending one edge of the strip, substantially as herein specified.

88,752.—Ferdinand Strauss, New York, N. Y.—*Corset-Clasp.*—April 6, 1869.

Claim.—The clasps *a a*, constructed with open ends, in combination with the springs A B, said springs being secured together at or near their centers, so as to allow the ends of the outside spring to slide freely in the clasps, thus avoiding the danger of breaking, substantially as described.

88,753.—John Taggart, Boston, assignor to David Whiton, Boston, and Benjamin F. Wing, West Roxbury, Mass.—*Machine for Making Wrought-Nails.*—April 6, 1869.

Claim.—1. The combination of the vibrator F, as described, with the die-plate E, its cutters *d d*, and the cutter-wheel C, and its cutters, arranged as explained.

2. The combination of each or both the spring-rests G H, and the operative cam or cams *k* thereof, with the cutter-wheel C, and the reciprocating die-plate E, provided with cutters and operative mechanism, as set forth.

3. The combination and arrangement of the cutter-wheel C, the die-plate E, the elastic or spring-rests G H, the cams *k k*, the pairs of griping-rollers I I′, K K′, and the duplex header R.

4. The combination and arrangement of the carriers N N′, the pairs of griping-rollers I I′, K K′, the spring-rests G H, the die-plate E, and the cutter-wheel C, the whole being provided with operative mechanism, substantially as described.

5. The combination applied to the driving-shaft and the carriers, and employed for operating the latter, such consisting of the eccentric *w*, its yoke *v* and arms *u u*, the links *t t*, the concentric shafts P Q, and their arms O O′, *r s*.

88,754.—Alban G. Thomas, Sandy Spring, Md.—*Horse Hay-Fork.*—April 6, 1869.

Claim.—1. The combination of the tines A A and toggle-braces C D, when constructed, arranged, and operating substantially as shown and described.

2. In combination with the tines A A and toggle-braces C D, the adjustable stop J and lip K, as shown and described.

88,755.—Nathaniel Thomas, Dixfield, Me.—*Apple Slicer and Corer.*—April 6, 1869.

Claim.—An apple slicer and corer, having frames A, E, and G, bar C, wheel and crank D, pinion *c*, spindle *d*, apple-holder *i*, and knives *u*, constructed and arranged substantially as specified.

88,756.—Eugene Trump, Cincinnati, Ohio, assignor to himself and Leander Detwiler.—*Parlor Game.*—April 6, 1869.

Claim.—The arm D, faced with rubber *d″″*, and provided with spring *d‴*, in the described combination with the hub *c* of the revolving plate C, operating in the manner and for the purpose described.

88,757.—William H. Watson, Brooklyn, N.Y., assignor to A. Sidney Doane, New York City.—*Machine for Sheeting and Pressing Tobacco.*—April 6, 1869.

Claim.—1. Giving to the chain or feeding surface N a period of rest during the operation of the cutting mechanism, substantially as shown, for the purposes indicated.

2. The combination of the cam D, rod I, spiral spring K, and toggles P^2 and P^3 with the movable knife-frame Q, for the purpose set forth.

3. The combination with either of the chains N and N^2 of the friction-rollers *a*, for the purposes fully described.

88,758.—H. J. Wattles, Rockford, Ill.—*Cultivator.*—April 6, 1869.

Claim.—The construction, arrangement, and combination of the frame B B B′, J′ D′ D′, swinging plow-supports C C *c*, plows *a a*, driver's seat F, foot-rests I I, levers H H, and draught devices J K L *o o′*, the whole constructed and operating substantially as and for the purpose specified.

88,759.—James W. Weston, New York, N. Y.—*Velocipede.*—April 6, 1869.

Claim.—1. The endless chain or belt applied to the chain-wheel of the driving-wheels, in combination with the slider *o*, levers *q*, clamping-pawls *s t*, and spring-seat *u*, substantially as and for the purposes set forth.

2. The clamping-pawls *s t* and slider *o*, in combination with the endless chain and wheels of a velocipede, substantially as and for the purposes set forth.

88,760.—Cornelius Whitehouse, Bridgtown-near-Cannock, England.—*Bit and Auger.*—April 6, 1869.

Claim.—1. A boring-bit or auger, having a hollow or open barrel, formed of a forked frame, or rectilinear limbs, united at the tang, and provided with a helical blade or blades, or other cutting edge or edges, either with or without a central worm or leading-point, substantially as herein set forth.

2. A boring-bit or auger, formed, as within described, when the barrel thereof consists of a single bar or member, *b*, of the frame, and is provided with a square or helical blade or cutting-edge at the nose, and either with or without a central worm or point, substantially as shown and described.

88,761.—Cornelius L. Willis, Washington, D. C., assignor to himself and George P. Goff, same place.—*Capstan.*—April 6, 1869.

Claim.—The collar or collars, having a helical

flange or flanges, as applied to the drum A, for the purpose described.

88,762.—Benjamin O. Woods, Boston, Mass.—*Type-Case.*—April 6, 1869.

Claim.—Forming in one and the same piece of stock a series of grooves, having both angles or sides curved, and traversing or intersecting the said grooves with partitions, substantially as described.

88,763.—A. F. Hines, Washington, D. C.—*Sash-Pulley.*—April 6, 1869.

Claim.—The combination of the single-grooved pulleys *a b e*, applied to the window-frame, and having the cord applied upon them, and attached to the window-sash, substantially in the manner shown and described.

88,764.—Edward Lynch, Georgetown, D. C.—*Process and Apparatus for Tanning.*—April 6, 1869.

Claim.—1. Extracting the liquor from bark by grinding it to a powder, and subjecting it, when so ground and mixed with water, to the action of steam while it is being violently agitated, substantially as and for the purposes herein set forth.

2. The tub A, constructed as described, with a screen, *a*, made in sections, and provided with a revolving rake, C D, and steam-pipe *b*, all substantially as and for the purposes herein set forth.

3. Passing the liquor, extracted from bark, through a filter, for the purpose of removing all dirt and sediment from the same, substantially as herein set forth.

4. The filter E, constructed as described, of a box, having inlet-pipe *e*, outlet-pipe *e*, and steam inlet and outlet, and inclosing a series of filtering frames, substantially as and for the purposes herein set forth.

5. The frames *d d*, constructed as described, with grooves and apertures in their bottom bars, and each frame inclosed or covered with cloth or other suitable filtering material, said frames being so arranged that, when placed close together, the apertures in their bottom bars will form a continuous tube, through which the filtered liquor may pass, substantially as herein set forth.

6. Fermenting the liquor extracted from bark, preparatory to using it, for the purpose of tanning hides, substantially as herein set forth.

7. The vat F, constructed as described, with outlet pipe, *i*, steam or hot-air pipe *m*, and cold air or water-pipe *n*, substantially as and for the purposes herein set forth.

8. Regulating the temperature of the tanning-liquor by means of steam or water, hot or cold air, admitted into pipes running through the tanning-vat, substantially as herein set forth.

9. The double-revolving frame G, constructed as described, and provided with lattices H H, between which the hides are placed, substantially as and for the purposes herein set forth.

10. Placing hides between lattices, or their equivalents, in a revolving frame, submerged in tanning-fluid, substantially as and for the purposes herein set forth.

11. Tanning hides by placing them in a frame, submerged in liquor extracted from bark, and revolving said frame and hides in the liquor, substantially as herein set forth.

12. Spreading tanned hides between lattices, or their equivalents, in a revolving frame, exposed to the air, for the purpose of drying them, substantially as herein set forth.

13. The above-described process for tanning hides, substantially as set forth.

88,765.—David L. De Golyer, Chicago, Ill.—*Laying Wooden-Block Pavement.*—April 6, 1869.

Claim.—The method herein described of constructing a wooden pavement, consisting of wooden blocks set in rows, with spaces or channels between, filled with gravel, broken stone, or other suitable material, and tar, which method consists in the use of an auxiliary removable strip or board, to determine the parallelism of the rows and the width of the channels, but forming no part of the completed pavement, substantially as herein described.

88,766.—John H. Morris, Philadelphia, Pa.—*Weather-Strip.*—April 6, 1869.

Claim.—A weather-strip, formed of a dovetailed groove, holding in place a rubber strip, or equivalent, with or without glue or cement, as and for the purposes specified.

88,767.—John B. Atwater, Chicago, Ill.—*Motive-Power.*—April 13, 1869.

Claim.—1. The application of the force generated by the explosion of gases through mechanism, substantially as described.

2. A vacuum-chest, S′, communicating with the cylinder H of an air-compressing piston, through mechanism which is operated substantially as described.

3. A pipe, or pipes, C, leading from cylinder H to cylinder A, and provided with valves, which will allow air from the said cylinder H to enter the combustion-chamber during the descent of the piston G, combined and arranged substantially as described.

4. The combination of chambers A, H, and P, the connected pistons D G and their auxiliaries, adapted to operate substantially as described.

5. The arrangement of the slide-valve E, and perforated hollow piston-rod D′, substantially as described.

6. The combination of an air-compresser with a vacuum-chest, J, and the ignition engine, operating substantially as described and set forth.

7. The manner, substantially as described, of expelling the products of combustion from the explosion-chamber, after every explosion therein, substantially as specified.

8. The combination of independent air and gas-inlet pipes with the cylinder A, an electrical igniter, *c*, and an air-compresser, substantially as described.

88,768.—Addison D. Barrett, Cambridgeport, Mass.—*Feeding-Trough for Horses.*—April 13, 1869.

Claim.—1. The combination of the hopper D, the toggles G H, their shaft F, the arm I, and the latch K, the same being for application to and use with an alarm apparatus, or clock, and with a conduit leading to a manger, or feeding-trough, as set forth.

2. The combination of the tub L, its valve *e*, valve-rod *d*, and operative arm *e*, with the shaft B, the hopper D, or a weight, the toggles G H, their shaft F, the arm I, and the latch K, the said latch being to operate with an alarm-clock applied to it, as and for the purpose as specified.

88,769.—W. K. Baylor and Conrad Rapp, Batesville, Ind.—*Krout-Cutting Machine.*—April 13, 1869.

Claim.—The arrangement of the wheels B D with cogs *c* and *c′*, rack C, board E, and knife F, with the frame A, and pressing-box G, in combination with each other, all substantially as set forth.

88,770.—Jacob Behel, Rockford, Ill.—*Gate.*—April 13, 1869.

Claim.—1. The brace-rod *f* and truss-rod *c*, when constructed and applied as and for the purpose set forth.

2. Hinge *j j*, lever-hinge D, studs *l l′*, and *m*, or their equivalents, when applied as and for the purpose set forth, and operated by means of wires *n n′* and pulls *o*, or their equivalents, substantially in the manner and for the purpose set forth.

88,771.—Riley Bowers, Chillicothe, Ohio.—*Steam-Engine Valve-Gear.*—April 13, 1869.

Claim.—1. The single eccentric, fixed stationary upon the driving-shaft, in combination with a link-bar, oscillating on a fixed center, and connecting-mechanism, substantially as herein described, to work and reverse the steam-valve, all constructed to operate substantially as set forth.

2. The link-bar A, oscillating upon a fixed center, in combination with the eccentric and eccentric-rod, connecting-rod K, and sliding-sleeve P, arranged to operate substantially as set forth.

3. The link-bar A, oscillating upon a fixed center, in combination with the eccentric and eccentric-rod, and the sliding sleeve P, all arranged to operate substantially as herein set forth.

4. In combination with the sliding sleeve P the link-bar A, made in two detachable sections, substantially as and for the purpose set forth.

88,772.—Charles A. Brigham, Cleveland, Ohio.—*Bed-Bottom.*—April 13, 1869.

Claim.—The sectional slats A, jointed together so as to form alternate joints and slat-sections transversely, in combination with the springs C and slots *a*, as and for the purpose substantially as set forth.

88,773.—Lorenzo D. Brooks, Syene, Wis.—*Gate.*—April 13, 1869.

Claim.—1. The parts C, D, F, G, 10, J, P, 12, K, and 13, when combined and arranged as set forth.

2. In combination with the elements of the first clause of claim, the levers T and W, and spring X.

3. In combination with the features of said first claim, the cord S, for the purpose specified.

88,774.—Daniel L. F. Chase, Boston, Mass.—*Automatic Boiler-Feeder.*—April 13, 1869.

Claim.—1. The combination of the vessel A, and its lever B and weight C, with the pitman F, the slotted and double-racked sector K, the vibratory shaft I, and pinion *d*, and the gears for revolving such shaft.

2. The combination and arrangement of the flange *n* and tongue *c'* with the duplex-rack sector K, vibratory pinion *d*, its shaft I, shaft-supporter and gears *e* and *f*, substantially as specified.

88,775.—Peter K. Dederick, Greenbush, N. Y.—*Baling-Press.*—April 13, 1869; antedated April 8, 1869.

Claim.—The arrangement herein described, of the levers L L, rods R R, follower F, and rope B, constructed and arranged substantially as shown.

88,776.—Carl Dieterich, Roslindale, (West Roxbury,) Mass.—*Folding-Chair.*—April 13, 1869.

Claim.—The arrangement and combination of the ears *b b*, and the connection-bars G G, with the seat and the two sets of levers, the said bars and ears being connected with the said seat and levers in manner substantially as described.

88,777.—Lindley M. Doudna, Washington, D. C.—*Holder for Stove-Lids.*—April 13, 1869.

Claim.—The frame A, with its removable bottom B, cross-bars *a a*, plate *c*, and bolt *m*, all constructed and arranged substantially as and for the purpose set forth.

88,778.—Josiah W. Ells, Pittsburgh, Pa.—*Animal-Trap.*—April 13 1869.

Claim.—A trap for catching animals, so constructed as that the outside or shell of the trap will resemble in appearance the animal it is designed to catch, and providing the interior of said shell with a spring and trigger, or other setting and releasing mechanism that will operate to catch the animal that may attempt to take the bait.

88,779.—Arthur Field, Upper Marsh, Lambeth, and William Bryer Nation, No. 394 Old Kent Road, England; (said Nation assigns his right to said Field.)—*Mode of Ornamenting Candles.*—April 13, 1869.

Claim.—1. Ornamenting candles, by first forming grooves, or recesses, of any desired form, upon the surfaces of candles, and then filling in such grooves with wax, stearine, paraffine, or other suitable substance, of a different color from that of the candle.

2. Forming grooves, or recessed designs upon candles, substantially as hereinbefore set forth.

88,780.—H. W. Fuller, Brooklyn, N. Y.—*Tuck-Creasing Attachment for Sewing-Machines.*—April 13, 1869.

Claim.—1. The combination of the nipping-finger and the inclined thrust-plate.

2. The combination of the nipping and presser-fingers, and the shoe H, or their equivalents.

3. The combination of the nipping-finger, presser-finger, shoe, and thrust-plate.

4. The base-plate, having the fixed scale of divisions in combination with a tucking-device and gauge, that are adjustable respectively from opposite ends of said scale, substantially as specified.

5. The combination with the post 1, of the lever and yielding-arm, and as made adjustable thereto, for the purposes set forth.

6. The combination with the arm K, of the slotted tie-piece O, as and for the purpose described.

88,781.—J. Durell Greene, Cambridge, assignor to himself and Charles H. P. Plympton, Boston, Mass.—*Anchor.*—April 13, 1869.

Claim.—The anchor, substantially as made, with the palms and arms of the flukes in the same plane, united by the yoke, as shown, with the shank extending through the yoke, and pivoted thereunto, as set forth.

88,782.—Frank W. Groff, Indianapolis, Ind.—*Portable Fence.*—April 13, 1869.

Claim.—1. The combination of the key C D and the mortise F G, when constructed and used substantially as herein set forth.

2. The base K, when constructed with the mortise L, and combined with the tenon L, and otherwise made and used substantially as herein set forth.

88,783.—Moore Hardaway, St. Louis, Mo.—*Bolt-Machine.*—April 13, 1869.

Claim.—The combination of the divided die *c*, divided die-box *b*, inclined surfaces *p r*, and header *k*, arranged and operating substantially as described, with the clamp dies *d d'*, for the purposes set forth.

88,784.—Mary E. Hatch, Beloit, Wis.—*Lamp for Cooking Purposes.*—April 13, 1869; antedated March 1, 1869.

Claim.—1. The radiator or non-conducting shield B, substantially as and for the purpose described.

2. The ventilating-tubes C C, substantially as and for the purpose set forth.

3. The combination of the shield B, ventilators C C, cones D, and lamp, of non-conducting metal, all arranged, constructed, and operating substantially as described.

88,785.—John Y. Herston, Warrick County, Ind.—*Earth-Scraper.*—April 13, 1869.

Claim.—The bent axle H, with its arm C and the catch B, provided with the foot-lever or trigger D, when these parts are constructed and arranged to operate substantially as and for the purposes described.

88,786.—Charles Hewitt, Hamilton Township, N. J.—*Manufacture of Rails for Railroads.*—April 13, 1869.

Claim.—The formation and use for and in the manufacture of railroad-bars, with steel heads, of a pile, having, on one of its sides, a bar of combined iron and steel, said bar having been made by welding steel and iron together, prior to placing the same in the rail-pile, the whole being done as herein described, or otherwise substantially the same.

88,787.—E. W. Hewitt and George Gorham, Pecatonica, Ill.—*Seeder and Cultivator.*—April 13, 1869.

Claim.—1. A seeder, G, composed of a cylinder, I, outer case D E, slide I', arranged to operate as and for the purpose set forth.

2. The combination of the seeder with the standards V, and frame C, as described.

3. The combination of the seeder with standards V, frames C and S, beams *n*, rods *m*, and shovel-standards *f*, as and for the purpose set forth.

88,788.—William M. Johnston, Pittsburgh, Pa., assignor to himself and David P. Este, same place.—*Casting Tuyeres.*—April 13, 1869.

Claim.—A cast-metal shell tuyere, having two or more pipes or air passages through it from end to end, when such pipes, or air-passages, and the tuyere-shell are cast at a single casting, substantially as described.

88,789.—A. W. Keeler, and Jacob Eckert, Lafayette, N. Y.—*Carriage-Jack.*—April 13, 1869.

Claim.—The double guide *c c*, standard B A, loop-pawl F, and serrated lever D, all constructed and operating as herein shown and described, and for the purpose set forth.

88,790.—Elisha Kelley, Locust Grove, Ohio.—*Corn-Sheller.*—April 13, 1869.

Claim.—The elastic rollers A A and D D, in combination with the fingers or shellers K K, substantially in the manner and for the purpose as described.

88,791.—J. B. Kelley, Brandon, Vt.—*Combined Knob-Latch and Lock.*—April 13, 1869.

Claim.—The combination and arrangement of the latch-bolt A, lever L, tumblers *t t′ t″*, pins *a b c*, and box C, substantially as and for the purposes set forth.

88,792.—Ira B. Ketchum, Rochester, Minn.—*Flour-Bolt.*—April 13, 1869.

Claim.—The combination of the blocks E E, rods F F, balls G G, and elastic rings I I, when constructed and arranged as described, and placed on the outside of a mill-bolt, substantially as and for the purposes herein set forth.

88,793.—Joseph Lory, Memphis, Tenn.—*Hair-Dye.*—April 13, 1869.

Claim.—The compound and mode of preparing, for dyeing hair, as herein described, using for that purpose the aforesaid chemical compound and mode of preparing, as described above for the purposes as are herein set forth.

88,794.—Benjamin F. Masters, Middleport, Ill.—*Plow.*—April 13, 1869.

Claim.—The arrangement and combination of the cutter M, key W, colter C, brace B, and clamps *h h′*, substantially as shown and described.

88,795.—Charles Messenger, Cleveland, Ohio.—*Machine for Manufacturing Roofing-Tile.*—April 13, 1869.

Claim.—The pivoted molds E* and carrier D, in combination with the press G, lever L, and rag-wheel J, constructed and arranged substantially as and for the purpose herein set forth.

88,796.—C. H. Mills, Ravenna, Ohio.—*Wagon-Brake.*—April 13, 1869.

Claim.—The cams K, and cross-bar I, in combination with the sliding link E and pivoted axle-tree C, arranged in relation to each other, substantially as and for the purpose set forth.

88,797.—S. A. Mitchell, Alstead Center, N. H.—*Sled-Brake.*—April 13, 1869.

Claim.—In combination with the slide E and guides H, the bar F, link I′, and pivoted lever I, when applied to a sled substantially as shown and herein described.

88,798.—George Morrison, Lockport, Ill.—*Plate for Artificial Teeth.*—April 13, 1869.

Claim.—1. The annular projection, or wall *a* surrounding the air-chamber *c*, constructed and arranged as and for the purposes set forth.

2. Preventing the air from without from entering the air-chamber *c*, by means of an elevated projection, or wall surrounding the same, substantially as described.

88,799.—John Murdock, Jersey City, N. J., assignor to John Savery's Sons, New York City.—*Metal Bird-House.*—April 13, 1869.

Claim.—The flange *f* and movable shield *g*, constructed as specified, and applied to the opening of the bird-house, for the purposes set forth.

88,800.—Francis W. Murray, Cincinnati, Ohio.—*Composing-Stick.*—April 13, 1869.

Claim.—The slide D, provided with the parts *d d′ d″*, E F, substantially as described, for the purpose stated.

88,801.—John W. Newton, Geneva, Wis.—*Bog-Cutter and Drag.*—April 13, 1869.

Claim.—1. The L-shaped hangers, B B, provided with sharpened edges, substantially as and for the purpose herein described.

2. The cutters E E, converging from the rear of the plate C, in V-shape, substantially as and for the purpose set forth.

3. The steadying-teeth *f f*, in combination with the V-shaped cutters E E, as and for the purpose herein described.

4. The braces F F, provided with sharpened edges, and connecting the V-shaped cutters E E with the stock A, substantially as and for the purpose herein described.

5. The combination of the toothed plate C, cutters E E, hangers B B, braces F F, and stock A, with a tongue, D, all constructed and arranged substantially as herein shown and described.

88,802.—James O'Connor, Jackson, Mo.—*Wheelwright-Machine.*—April 13, 1869.

Claim.—1. The frame Q, having the top R *f*, and the adjustable bottom, and moved by means of the screw W, all constructed, arranged, and operating as herein set forth, for holding the hub.

2. The described arrangement upon the frame A B B′ C of the carriage E, with the boring and tenoning-machinery, the ways F, springs L, treadle-lever H, connecting-cord I, and pulley J, the removable adjustable platform, with the holding-devices *c d*, and the frame Q, with its top R *f*, adjustable bottom T and swiveled screw W, all operating substantially as herein set forth for the purpose specified.

88,803.—Charles Page and George W. Miller, Meriden, Conn.—*Stilt.*—April 13, 1869.

Claim.—An adjustable stilt, upon which the step is secured at any desired height upon the staff, by means of a portion of said step having its bearing between said staff and a band, said band having a projection thereon, all constructed and operating substantially as herein described, and in the manner herein set forth.

88,804.—James A. Park, Lansing, Mich., assignor to himself and William Woodhouse, same place.—*Horse Hay-Fork.*—April 13, 1869.

Claim.—1. The piece H, having hole L, and an opening in which the elevating-rope is secured, substantially as and for the purpose herein specified.

2. The prong B, in combination with the prong A, when the latter has secured thereto the parts D and 2 and the piece H, so as to be centrally attached to the top of the fork, all made to operate substantially as and for the purpose set forth.

88,805.—E. G. Paull, Fair Haven, Mass., assignor to American Tool Company, same place.—*Furnace for Annealing Tacks, Nails, &c.*—April 13, 1869.

Claim.—1. Constructing a furnace, with a bottom so adjusted that it may be turned down, for the purpose of removing articles from the same, substantially as herein set forth.

2. The arrangement of the furnace A, with a bridge, D, dividing the fire-box B, from the pan C, and said pan provided with an adjustable bottom, substantially as and for the purposes herein set forth.

88,806.—Spencer B. Peugh, Salem, Ind.—*Washing-Machine.*—April 13, 1869.

Claim.—1. The arrangement of the vertical rubbers F and F′, pivoted on the vibrating arms or links G, so as to allow them to be traversed horizontally edgewise, substantially as described.

2. In combination with the rubbers, arranged as described, the platforms I and I′, for holding and guiding the links G, substantially as described.

3. The combination, with the rubber F′ and platform I′, of the crank-shaft K, links J, spring L, rag-wheel N, and pawl O, for maintaining an adjustable pressure upon the wash between the rubbers, substantially as set forth.

4. In combination with the crank-shaft K, arranged as described, the arm P, cord Q, pulley R, and foot-piece S, substantially as described.

88,807.—John Pickles, Wigan, England.—*Process and Apparatus for the Manufacture of Extract of Bark, &c.*—April 13, 1869.

Claim.—1. The rotary and self-discharging leach, constructed and operating substantially as described.

2. The vat or receptacle *p*, made and employed.

substantially as described, in connection with the rotary self-discharging leach, as set forth.

3. The roller 2 and scraper 3, in the tank 1, substantially as described.

4. The rotary heated cylinder 4, in conjunction with roller 2, scraper 3, scraper 8, and the two tanks or receptacles 1 and 9, substantially as described.

5. The process of washing or leaching the bark, prepared as herein described, and taking from it the liquid extract, and then converting the liquid or semi-liquid into a solid or powdered form, or dry state, substantially as herein described.

6. The preparation of the extract of bark, &c., for the purposes of transportation, substantially as described.

7. Protecting the liquid or semi-liquid extract from the effect of exposure to the atmosphere, substantially as described.

8. The ring-heated drum, with its tubes, and inner and outer circulating-casings, or without one or both of them, or the various forms of annular heaters, whole or in segments, with or without circulating-casings, or their substitutes of flat heaters and plates, for the purposes of evaporation or concentration of liquid tannin-extracts, cane or saccharine juices, or other products, as herein described.

88,808. — HEINRICH POLLACK and EDWIN SCHMIDT, Hamburg, Germany.—*Sewing-Machine.*—April 13, 1869.

Claim.—1. The bobbin-filling apparatus Q R, constructed as described, and arranged within and in combination with the flanged driving-wheel B *b*.

2. Further, the arrangement of the driving-wheel B, flange *b*, and rim T, to inclose and protect the gearing A E F, as herein represented and described.

88,809.—I. R. RICHARDSON, New Castle, Pa.—*Nail-Plate Feeder.*—April 13, 1869.

Claim.—1. The combination of the adjustable frame B′, hollow cylinder C′, nipper-rod D′, cross-head E′, and bar F′, all constructed as described, and operating substantially as and for the purposes herein set forth.

2. The nipper-rod D′, constructed as described, with a portion of its length of elliptical shape, in combination with the cross-head E′, swivel *f*, slotted bent bar *e* and hollow cylinder C′, substantially as and for the purposes herein set forth.

3. The combination of the cam N, lever M, and rod *o*, with gauge *p* and spring *r*, as and for the purposes herein set forth.

4. The combination of the hollow cylinder C′, belts *g g*, levers G′ G′, and cams H′ H′, for the purpose of turning the nipper-rod D′, substantially as herein set forth.

5. The arrangement of the belt *g*, spiral springs *k*, stirrups *i*, and notched spring *m*, with the cylinder C′ and levers G G, all substantially as and for the purposes herein set forth.

6. The combination of the two-armed lever P, rod *s*, cam-shaped lever R, reciprocating rod F, sleeve S, spring *v*, and lever U, all constructed as described, and operating substantially as and for the purposes herein set forth.

88,810.—CHARLES L. ROBERTSON, Providence, R. I.—*Table-Cutlery.*—April 13, 1869.

Claim.—Handles for table-cutlery and other articles made wholly or principally of paper or paper-stock as a foundation, and surfaced, for a protection and finish, with a japanning, an enameling, or equivalent composition, the same being a new manufacture, substantially of the character described.

88,811.— CHARLES L. ROBERTSON, Providence, R. I.—*Comb.*—April 13, 1869.

Claim.—A comb, made by applying and developing a japanning or enameling composition upon a foundation made principally from paper or paper-stock, the whole article being substantially as specified.

88,812.—ANDREW RUNSTETLER, Peoria, Ill.—*Corn-Planter.*—April 13, 1869.

Claim.—1. The adjustable slide D, combined with movable or reciprocating cut-off, the latter made in two parts, one A above, with teeth *a a*, the other below the slide D, and having the holes for dropping corn into runner opposite and under the teeth, substantially as described.

2. The valve G, as arranged in combination with the oblique slot *i i*, substantially in the manner and for the purpose as herein set forth.

88,813.—ERASTUS W. SCOTT, Wauregan, Conn.—*Milking-Stool.*—April 13, 1869.

Claim.—1. The combination of a milker's stool, and mechanism applied to it for supporting a milk-pail with reference to it, substantially as described.

2. The combination and arrangement of the lever D, and its wedge *b*, with the two curved levers C C, such levers being provided with the projections *a a*, or their equivalents, to operate with the wedge.

3. The combination and arrangement of the spring *b′* with the bolt or standard B, and their levers D C C, applied and arranged together, substantially as and for the purpose specified.

88,814.—WILLIAM FRANK SEAVEY, Portland, Me.—*Blind-Catch.*—April 13, 1869.

Claim.—A blind-catch, constructed and arranged as herein set forth and described.

88,815.—SAMUEL M. SKIDMORE, Brooklyn, N. Y.—*Velocipede.*—April 13, 1869.

Claim.—1. The arrangement and combination of the hand-driving rods *g*, the two crank-axles *e e′*, rods *a a*, levers *b b′*, for operating the velocipede by both the hands and feet, substantially in the manner and for the purposes set forth.

2. The combination of the friction-rollers *d*, in the studs *f f*, with the crank or driving-axle, substantially as set forth.

88,816.—HAMILTON E. SMITH, New York, N.Y.—*Washing-Machine.*—April 13, 1869.

Claim.—In a washing-machine, the coil springs *a a*, in combination with the box A suspended thereon, arranged and operating substantially as and for the purpose herein described.

88,817.—JOHN SMITH, Brockport, N. Y.—*Handle for Drawers.*—April 13, 1869.

Claim.—As a new article of manufacture, a handle, constructed as herein described.

88,818.—W. WILLARD SOWLES, Manlius, N.Y., assignor to himself and A. D. WILCOX, same place.—*Gate.*—April 13, 1869; antedated January 18, 1869.

Claim.—The combination of the hinge B, link F *f*, and connection D *e* with gate A, constructed and operating substantially as herein set forth.

88,819.—THOMAS STANFORD, Noblesville, Ind.—*Fence.*—April 13, 1869.

Claim.—1. The combination of the fence panels A A with the cap C and clamp D, substantially as specified.

2. The metal cap C, constructed as described, for the purpose of securing the upper ends of the fence-posts B B together, substantially as herein set forth.

3. The metal clamp D, constructed as described, for the purpose of fastening the lower ends of the fence-posts B B together, substantially as herein set forth.

88,820.—F. STITH, Memphis, Tenn.—*Fire-Tongs.*—April 13, 1869.

Claim.—The combination of the handle B, the prolongation A, and its slotted arms C C′, with the legs pivoted in the cross-arms F, when all these parts are constructed and arranged as described for joint operation.

88,821.—MILES SWEET, Troy, N. Y.—*Boring-Machine.*—April 13, 1869.

Claim.—The arrangement of the base C, inverted arches B, and graduated index-plate L, in connection with index M and adjustable frame A, carrying the auger-carriage F, with boring apparatus, all constructed and operated as shown and described, for the purpose set forth.

88,822.—Benjamin F. Taft, Groton Junction, Mass., assignor to himself and David Needham, same place.—*Hay-Spreader.*—April 13, 1869.

Claim.—The cams D and L, the revolving fork-bar holders E E, the stationary bars F F, or equivalents, the revolving fork-bars G G, the forks I I, as attached by the fork-holders J J, and the tilting-arms K K, constructed and operating in the manner and for the purposes herein described.

88,823.—William Thompson, No. 85 Lower Gardiner Street, Dublin, Ireland.—*Machine for Mixing Tea.*—April 13, 1869.

Claim.—Constructing apparatus for mixing teas and other granular substances, in which a series of sieves or gratings, G, is caused to travel upward, one above the other, inside a casing, A, so that the tea, in being raised thereby, falls through the meshes or spaces of the one sieve or grating on to the next one below, and so on in succession, substantially as and for the purposes hereinbefore set forth.

88,824.—William H. Towers, Boston, Mass.—*Boot and Shoe.*—April 13, 1869.

Claim.—1. Providing a boot or shoe with an entire water-proof or impervious lining, applied so as to underlap between the inner and outer soles and avoid a seam at or near the joining of the sole and upper of the boot or shoe, substantially as set forth.

2. A boot or shoe made with a continuous lining, so as to envelop the body of the foot, substantially as described.

88,825.—William B. Watkins, Jersey City, N. J.—*Tooth-Brush.*—April 13, 1869.

Claim.—The combination of the India-rubber brush with the handle, by means of the rib C, having a stiffener, D, in it, and dovetail channel E, in the lower side of the handle, as hereinbefore set forth.

88,826.—William W. Wells, Freehold, N. J.—*Liniment.*—April 13, 1869.

Claim.—The improved liniment herein described.

88,827.—Seth Wheeler and Edgar Jerome, Albany, N. Y.—*Manufacture of Paper Boxes from Pulp.*—April 13, 1869.

Claim.—A seamless paper box, colored or dyed, and polished, substantially as described.

88,828.—A. D. Wilcox, Manlius, N. Y.—*Gate.*—April 13, 1869.

Claim.—The hinges D *d*, F *f*, and C *c* E F, constructed as shown in Fig. 2, and in connection therewith the balancing roller H, as and for the purpose set forth.

88,829.—Homer Wright, Pittsburgh, Pa., assignor to himself, Henry H. Collins, and Benjamin F. Collins, same place.—*Jug-Top.*—April 13, 1869.

Claim.—The yielding-flange B, when used as and for the purpose described.

88,830.—J. W. Andrews and N. J. Ogden, Dryden, N. Y.—*Manufacture of Cheese.*—April 13, 1869.

Claim.—The combination of the wood hoop B, circumferential-flanged metal hoop E, bandage D, and press-cloth C, all as and for the purposes set forth.

88,831.—Edwin R. Austin, Elmira, N. Y.—*Step-Ladder.*—April 13, 1869.

Claim.—A step-ladder, constructed with a detachable joint, B, and socket A, combined with extension-legs J J, and secured by the eccentrics H H, all constructed, arranged, and operating in the manner described, and for the purpose set forth.

88,832.—Samuel W. Barber, Heath, Mass.—*Sled-Brake.*—April 13, 1869.

Claim.—1. The combination and arrangement of the roller E, tongue F, hounds G, guide-loop H, and arms, or prongs I, with each other, and with the runners, or frame of the sled, substantially as herein shown and described, and for the purpose set forth.

2. Pivoting the tongue to the forward parts of the hounds, and leaving its rear end free to move upward, substantially as herein shown and described, and for the purpose set forth.

88,833.—T. E. Barrow, Mansfield, Ohio.—*Carpenters' Gauge.*—April 13, 1869.

Claim.—The gauge, consisting of the cylinder C, screw-shaft D, head B, plate E, set-screw *d*, screws *f*, nuts *h*, and slotted bar A, when all the parts are constructed and arranged substantially as herein described, and for the purpose set forth.

88,834.—J. D. Beck, Liberty, Pa.—*Vise.*—April 13, 1869.

Claim.—1. The construction and arrangement together, in the manner specified, of the vertically-adjustable plate M, pin m^1, bar O, screw Q, pin P, and stationary jaw C, as and for the purpose set forth.

2. The construction and arrangement together, in the manner specified, of plate R, slides S, levers T, spring-plate U, pin r^2, and movable jaw H, as and for the purpose specified.

3. The arrangement, on the jaws, of the face-plates L L, pins r^2, m^1, and rubber blocks N N, all constructed as described, to hold the plates R and M in position.

88,835.—Henry Betts, Norwalk, Conn., assignor to himself and Hart Z. Norton, same place.—*Printing-Press.*—April 13, 1869; antedated April 3, 1869.

Claim.—1. The application of a series of forms to the roller D, and a series of stands E, carrying the paper and pressure-rollers, whereby impressions of different matter are taken from one cylinder in regular succession and delivered to separate stands, as herein described, for the purpose specified.

2. The heads F, adjustable upon the radial rods E, and provided with the guides *b*, having spring bearings *c* for the pressure-roller G, as herein shown and described.

3. The described arrangement of the radial shafts E, yielding pressure-roller G, arms H, paper-rollers I J, and guide-roller K, with relation to the form-cylinder D and perforated portion B, as herein described, for the purpose specified.

88,836.—John S. Birch, New York, N. Y.—*Self-Adjusting Watch-Key.*—April 13, 1869.

Claim.—The self-adjusting jaws B B, formed or hinged upon the outer end of the shank C and adapted to be distended by the pin D, when the tube E is slid back upon the shank C and spring F, substantially as herein set forth.

88,837.—James P. Blake, Rockville, Mass.—*Die for Making Awls.*—April 13, 1869.

Claim.—The dies A and A′, constructed as shown, and for the purpose set forth.

88,838.—George W. Blaksley, Rockford, Ill.—*Breast-Collar.*—April 13, 1869.

Claim.—The metallic tree C, when constructed as described, jointed, at *c*, to the straps A^2, and working through the loops C′, upon the pads A^1, whereby the collar is adapted to conform to the motion of the horse's shoulders, as herein set forth and shown.

88,839.—Charles A. Bogert, Bay City, Mich.—*Knife-Sharpener.*—April 13, 1869.

Claim.—The knife-sharpener, constructed as herein described, and for the purpose specified.

88,840.—John Booth, Smithfield, R. I., assignor to Orville Peckham, trustee, and said trustee assigns to John Booth, and Fales, Jenks & Sons, same place.—*Ring for Spinning-Machines.*—April 13, 1869.

Claim.—A spinning-ring, constructed substantially as herein described.

88,841.—William Brocklesby, Jr., Caledonia, Ohio.—*Hand-Truck for Sacking Grain, and Moving the Same.*—April 13, 1869.

Claim.—The adjustable hopper A, adjustable braces C, and foot-board E, in combination with a hand-truck, substantially as shown and described.

88,842.—Moses T. Burbank, Lawrence, Mass.—*Extension-Ladder.*—April 13, 1869.

Claim.—The ladder A, composed of parts *b c*, framed and connected, as described, and supported by braces *g g*, of similar construction.

88,843.—John Butterworth and William H. Butterworth, Trenton, N. J.—*Grain-Fan Blast.*—April 13, 1869.

Claim.—1. Providing the fan-box of a grain-separator, near its throat, with a hinged door, connected with a wind-indicator, for the purpose of regulating the blast of the fan, substantially as herein set forth.

2. In combination with the fan-box A, the hinged door D, inside arm E, rod F, wind-indicator G H, outside arm I, and movable weight J, all constructed and arranged to operate substantially as and for the purposes herein set forth.

88,844.—Dawson Miles, Cambridge, Mass., administrator of Philippe François Carlier, deceased, and Alphonse A. C. Vignon, Paris, France.—*Process and Apparatus for Extinguishing Fire by Means of Water Charged with Carbonic Acid.*—April 13, 1869.

Claim.—1. The employment of a solution of carbonic-acid gas in water, either at a high or at a low pressure, for extinguishing fires on land, or on board vessels.

2. The construction and employment of apparatus either portable or fixed, for extinguishing fires, in which a solution of carbonic-acid gas in water is prepared and stored up, and whence such solution is ejected with the requisite force, without the aid of pumps.

88,845.—A. H. Carroll, Baltimore, Md.—*Picker for Looms*—April 13, 1869.

Claim.—The picker herein described, composed of layers of raw hide and cloth, felt, or equivalent material, and having an oil-hole, C, substantially as set forth.

88,846.—Nathan Chapman, Milford, Mass.—*Baling-Press.*—April 13, 1869.

Claim.—1. The combination and arrangement of the straps *b*, stands *a*, hooks *g*, and pawls *c*, held by the links *d*, substantially as described.

2. In combination with the racks *e*, the traversing-bars *l*, provided with projections or perforated lugs *n*, for the racks to traverse in, and with depending ends or journals to fit the seats *k k'*, in the working-levers *i'*, substantially as described.

3. In combination with the racks *e* and traversing-bars *l*, the locking-pawls *m*, hung or hinged upon said bars, substantially as described.

4. In combination with the racks *e*, and traversing-bars *l*, the levers *i* and *i'* hinged together and connected to the stand *a* by the links *h h'*, substantially as and for the purpose set forth.

6. In combination with the slides J, for closing the openings in the press-box, the inclined planes *t*, on the follower beam, for pressing back said slides as the beam rises, substantially as described.

88,847.—Nathan Chapman, Milford, Mass.—*Churn.*—April 13, 1869.

Claim.—1. Making the hole or opening in the shaft to extend entirely through the journal, at the end where the gear, pulley, or crank is applied, so as to supply the paddles, or a part of them, with air through the journal at the end where the motive power is applied, substantially as described.

2. Making the driving-wheel with a flange across the spaces at the ends of the teeth, with an opening to admit the teeth of the pinion driven by the wheel, substantially as described.

88,848.—John Charlton, Newark, N. J.—*Wrench.*—April 13, 1869.

Claim.—The longitudinally-grooved plate A, enlarged at its center, and forming one half of a jaw, B, at each end, in combination with the inner-moving plate C, with its half-jaw B, at each end, and diagonal grooves near said ends, acting as guides for the inner tongues on the plate A, when operated by the screw D, substantially as herein shown and described.

88,849.—Daniel C. Chester, Ogdensburg, N. Y.—*Grain-Conveyer for Elevators.*—April 13, 1889.

Claim.—1. A screw-conveyer, for grain-elevators, having its spiral flange set at a forward inclination, or angle, whereby grain or other granulated material may be conveyed without the aid of a trough, substantially as herein described.

2. The combination, with the screw-conveyer C, of the universal joint *a* and the movable bearing-hub H, substantially as and for the purpose herein set forth.

3. The combination, with the movale hub, of the radial arms *h*, serving as supports for the hub while below it, and as levers for moving the same while above it, substantially as specified.

88,850.—R. M. Cole, Burlington, Vt.—*Cigar-Machine.*—April 13, 1869.

Claim.—1. So shaping the stationary or revolving formers of a cigar-machine that cigars pointed at both ends may be formed therein, to allow the use of right and left handed wrappers, substantially as herein shown and described.

2. The combination of the mold H and cap I with the roller C and endless apron M, substantially as described, for the purpose specified.

3. The combination of the roller G with the endless apron M, whereby the proper tension of the latter is preserved during its operation, as herein shown and described.

4. The combination of the non-revolving cap I with the sliding spring-frame J, substantially as described, for the purpose specified.

5. The cross-bar or roller L, when so arranged, close above the roller C, as to keep the apron closed in rear of the forming apparatus, substantially as set forth, to prevent the loss of tobacco from the mold, as specified.

6. A cigar-machine, consisting of the mold H, sliding cap I, roller C, apron M, and rollers B, D, E, F, G, and K, all combined, arranged, and operating substantially as herein shown and described.

88,851.—William S. Colwell, Allegheny City, Pa.—*Plow.*—April 13, 1869.

Claim.—Providing a plow with a mold-board, the surface of which is, from its point A to its heel B, convexed, and also convexed on the lines X, and straight on the lines Z, and curved from point A to heel B, as herein described, and for the purpose set forth.

88,852.—Archibald C. Crary, Utica, N. Y.—*Mode of Warming Railway-Cars.*—April 13, 1869.

Claim.—1. The application of the drip, or water condensed from steam, for the purpose of supplying pure water to the boiler or steam-generator, and of warming railway-cars, when the locomotive is temporarily detached from a train of cars, substantially as herein shown.

2. The float-valve, in connection with the return-pipe E, when used for the purpose set forth.

3. The foot-rest B, made as shown, when used as a register and foot-rest.

4. The combination of the double floor, constructed as set forth, the induction and eduction pipes, and valve, and foot-rest, substantially as described.

88,853.—Thomas Cullen, San Francisco, Cal.—*Magazine Fire-Arm.*—April 13, 1869.

Claim.—1. The revolving magazine B, in combination with the outer cylinder A, all constructed and operating substantially as and for the purpose set forth.

2. The slide E, with the cap *r*, slots *s s*, *g*, and finger *t*, in combination with the pin *d*, and the extractor-arm *e f*, when constructed substantially as and operating in the manner and for the purposes described.

88,854.—Joseph R. de Mahy and James P. Cross, New Orleans, La.—*Vapor-Burner.*—April 13, 1869.

Claim.—The improved burner, herein described, consisting of the two tube-sections, A and B, when the latter is provided with the reduced heat-conductors C and C', and an aperture, *e*, that is increased or diminished by means of the sliding sleeve E, and

all these enumerated parts are constructed and combined substantially in the manner herein described.

88,855.—DANIEL M. DONEHOO, Beaver Court-House, Pa.—*Sash-Holder.*—April 13, 1869.

Claim.—The segmental catch D, provided with a downward-projecting point at its outer end, and pivoted in the window-sash, under the slotted plate F, in combination with the stationary rack-bar upon the frame B, all as herein shown and described.

88,856.—PATRICK V. DUNN, Calamus, Wis.—*Device for Holding Edge-Tools while being Ground.*—April 13, 1869; antedated April 5, 1869.

Claim.—The combination and arrangement of the frame *a a a a*, the handles *b b*, the adjustable standard *c c*, the thumb-screws *d d d*, the adjustable head and arms *e e e e*, the rollers F F, substantially as described, for the purposes specified.

88,857.—CHARLES N. EARL, Elk River, Minn.—*Mode of Hanging and Fastening Doors.*—April 13, 1869.

Claim.—The arrangement, upon a sliding-door, of two or more levers, with rollers, latch, and connections, all operating in such a manner that the door is unlatched, raised, and slid back by the same movement of the longer lever, substantially as set forth

88,858.—WILLIAM EMMONS, Sandwich, Ill.—*Horse-Rake.*—April 13, 1869.

Claim.—1. The arrangement of the rake-head E, dogs or pawls *c c*, and springs *d d*, with the notched plates or bars *b b* on the axle A, for the purpose of holding the rake in any position desired, substantially as herein set forth.

2. The arrangement of the rake-head E, handle F, thumb-piece *h*, rod *g*, three-armed lever *f*, and connecting-rods *e e*, for the purpose of withdrawing the dogs or pawls *c c* from the notched bars *b b*, substantially as herein set forth.

88,859.—O. F. EVANS, Guilford, N. Y.—*Wagon-Brake.*—April 13, 1869.

Claim.—1. The combination of the frame A, brakes *b b*, and friction-rollers *a*, as applied to the running-gear of vehicles, substantially as and for the purpose herein set forth.

2. The inclined planes *c*, on the upper side of the bolsters F F, in combination with the rollers *a*, for operating, substantially as herein set forth.

3. The sliding reach B, swinging bar *d*, and levers *e e*, in combination with the frame A, for relieving the brakes when the draught is applied, substantially as herein described.

4. The tongue C, and hounds D, constructed and arranged as described, in combination with the sliding reach B and levers *e*, for operating the frame A, substantially as specified.

88,860.—REESE EVANS, Milltown, N. J.—*Felt-Shoe.*—April 13, 1869.

Claim.—The mode of fastening together the quarter and vamp of shoes composed of felt and rubber, by cementing parts D, as shown in Fig. 1 and Fig. 2, to the vamp A, the whole being arranged as and for the purpose set forth.

88,861.—WILLIAM EVANS, Pittsburgh, assignor to JOHN EVANS, Philadelphia, Pa.—*Ear-Blank for Elliptic Springs.*—April 13, 1869.

Claim.—1. Forming the ears from a bar of metal, having a rib on one or both sides thereof, substantially as and for the purpose set forth.

2. Forming the studs *f* on the spring, and the perforations *d* in the ear, as and for the purpose described.

88,862.—FRANCIS FALLS and JOHN P. HAYES, Philadelphia, Pa., assignors to FRANCIS FALLS.—*Cooking-Range.*—April 13, 1869; antedated October 13, 1868.

Claim.—The combination of the converging plates E with the spaces C and C′, the said plates being arranged and operating in relation to the fire-chamber A, vertical spaces C and C′, and hot-air space B, substantially in the manner above described and for the purpose specified.

88,863.—J. R. FINLEY, Delphi, Ind.—*Harvester-Pitman.*—April 13, 1869.

Claim.—1. The spring-pawl E, attached to the gib D, in combination with the ratchet-cotter F, substantially as described.

2. The pitman-end L and axis-plug *m*, when fitted together as herein described, in combination with the sickle-head H, substantially as described.

88,864.—LORENZO FULTON, Cincinnati, Ohio.—*Smoke-Stack for Locomotive-Engines.*—April 13, 1869.

Claim.—1. The combination of the elbow-pipe D with the smoke-stack of a locomotive-engine, whereby to conduct steam in and through chambers E, thereby extinguishing the fire connected with the draught, as herein described.

2. The combination of the water-circulating pipes K with the condensing chambers E, for extinguishing fire and heating the feed-water, as herein described.

3. The construction and arrangement of the partition J, whereby to separate an artificial draught from a natural draught, as herein described.

88,865.—GEORGE W. GALLAGIERE and ELI W. RUBY, New Milford, Conn.—*Machine for Shaping Hats.*—April 13, 1869.

Claim.—1. The springs D, and holders E, for holding the collar F, in combination with the revolving table B, substantially as herein shown and described.

2. The adjustable collar F, made in two parts, and provided with springs G and plates H, substantially as herein shown and described, and for the purposes set forth.

3. The adjustable flange, or collar-band J, made in two parts, and provided with springs K, and plates L, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the bail M, spring O, and feet Q^1, with the adjustable collar-band J, and rod N, substantially as herein shown and described, and for the purposes set forth.

5. The combination of the followers Q^2, adjustable screws R, with their adjusting nuts and blocks, rod N, followers P, sliding-beam a^2, connecting-bar S, crank or crank-wheel T, shaft U, cross-bar W, and sliding pulley V, with the adjustable collar-band J, collar F, and block I, substantially as herein shown and described, and for the purpose set forth.

6. The arrangement of the fans G′, with the revolving table B, adjustable collar-band J, and collar F, substantially as herein shown and described, and for the purpose set forth.

7. The knife H, constructed as described, and whether used with or without the socket I′, in combination with the revolving table B, adjustable collar F, and adjustable collar-band J, substantially as herein shown and described, and for the purpose set forth.

88,866.—EZEKIEL S. GOODRICH, Oakland, Wis.—*Fence-Post.*—April 13, 1869.

Claim.—The combination of the stone base A, wooden post B, wire base C, and wooden base-braces D, as herein described, for the purpose specified.

88,867.—WILLIAM P. HALL, Piqua, Ohio.—*Stove and Furnace.*—April 13, 1869.

Claim.—1. In combination with a double stove, having a combustion and a hot-air chamber, an exterior fuel-chamber, or feeder, to automatically feed the fuel, and prepare the same for combustion, substantially as specified.

2. In combination with the cylinder D, of a double stove, supplying its interior with a fire-brick, or equivalent lining, from the grate to the top, and forming a contracted throat under an elevated hot-air chimney, J, which is encased in a surrounding cap K, all substantially for the purposes set forth.

3. The bottom plate A, provided with apertures *b b*, regulated by a slide *c*, on the under side, and provided with flanges *a a′* on its upper side to receive and secure the cylinders C D, substantially as specified.

4. In combination with the base plate A, as constructed, and the brick-lined cylinder D, as speci-

fied, the vertical pipes *e e*, with openings *i i*, substantially as specified.

5. The arrangement of the grate *f*, flange *g*, plate *h*, and supports *k k*, all substantially as described.

6. The conducting-chamber L, constructed as described, with damper *x*, so that the heat, &c., may be conducted at will, either into the chimney-flue or into a heating-drum, substantially as shown and described.

7. In combination with the cylinder D, chimney J, cap K, and conducting-chamber L, the pipe M, cap K′, and drum C, or their equivalents, all constructed and operating substantially as specified.

88,868.—John R. Hand, Billingsville, Ind.—*Cultivator.*—April 13, 1869.

Claim.—1. The provision, in a cultivator, of the slotted side-beams C C′, *c c′*, adjustable pivots *s s′*, swinging arms S S′, support T, and seat U, for the object explained.

2. The combination, as herein described, of the cross-beam E, hangers F F′, coupling-devices I I′, *k k′*, beams K K′, standards L L′, handles N N′, bar O, and spring R, for permitting of the elevation of the shares *l l′*, for the purpose set forth.

3. The general combination and arrangement of the slotted cross-beam E *e e′*, hangers F F′, *f f′*, screw-threaded tie-rods G G′, *g g′*, slotted plates H H′, *h h′*, I I′, shiftable braces J J′, beams K K′, *k k′*, standards L L′, shares *l l′*, rods M, handles N N′, perforated bars, O O′, *o o′*, and set-screws P P′, for the purpose of producing an improved adjustable cultivator.

88,869.—Adolph Henkel, New York, N. Y.—*Carving-Machine.*—April 13, 1869.

Claim.—The combination, with the horizontally and vertically adjustable, or swinging arm E, carrying the tracer and carving-tool, of the head-stocks J J′, the screw L, the rod M, the graduated lever N, the rod O, and the graduated plate P, essentially as described.

88,870.—I. F. Herrin, San Antonio, Texas.—*Seed-Planter.*—April 13, 1869.

Claim.—The combination of the lock-lever Q, bars O, and set-screw R, with each other, the tongue P and frame A, arranged substantially as described, for the purpose specified.

88,871.—William Cleveland Hicks, New York, N. Y.—*Steam-Engine.*—April 13, 1869; antedated April 1, 1869.

Claim.—1. The arrangement of the two pitmen E E′, cranks F *d* and F′ *d′*, shaft G, and drum H relatively to each other, and to the two cylinders A A′, wrists *a a′*, slides C C′, and guides D D′, substantially as herein described.

2. The arrangement of the valve, rock-shafts *r r′*, and their valve-connections, and the pitmen *n n′*, connecting said rock-shafts with the slides of the pistons, substantially as herein described, whereby the main valve is operated by the piston of the other cylinder.

3. In combination with two adjacent main valves, controlling separate cylinders, as specified, the cut-off valves operated, each cut-off to the one cylinder, by the main valve of the adjacent cylinder, essentially as described.

88,872.—W. S. Hill, Manchester, N. H.—*Velocipede.*—April 13, 1869.

Claim.—1. The combination of the cross-bar L and spring *l*, with the axle A and swiveled reach C, substantially as described for the purpose specified.

2. The cross-bar L, formed on the swinging reach C, and acted upon by springs *l*, as set forth for the purpose specified.

3. The combination of the slides I, foot-supports K, connecting-rods *j*, and slotted vertical frames J, with the cranks *i* of the front axle D, all arranged and operating as described, for the purpose specified.

88,873.—Jacob Hinds, Hindsburg, N. Y.—*Compound for Destroying Insects.*—April 13, 1869.

Claim.—A compound for destroying insects, composed of the above-mentioned ingredients, used in about the proportions named, substantially as described.

88,874.—Lysander Holmes, Newton, Mass.—*Adjusting Feed-Rollers for Carding-Engines.*—April 13, 1869.

Claim.—The combination, with the series of adjustable rolls *c c e e* and their guides *b b d d*, of the plate *f* and sliding bar *g*, having inclined planes *i i h h*, all arranged substantially in the manner and for the purpose set forth.

88,875.—Stephen Hughes, Hamilton, Ohio.—*Bran-Duster.*—April 13, 1869.

Claim.—The combination of the concave adjustable burr C, on shaft K, with the adjustable brushes D, bolt B, and adjustable oil-cup *m*, for regulating the machine while in motion, substantially as described, and operating as and for the purposes set forth.

88,876.—Charles Cornelius Hull, Williamsburgh, N. Y.—*Mechanism for Transmitting Motion.*—April 13, 1869.

Claim.—The combination of the pendulums A and O with the working-beam S, and the gear-wheels, cranks, and rods connected therewith, substantially as herein shown and described, and for the purpose set forth.

88,877.—Carleton B. Hutchins, Ann Arbor, Mich.—*Composition for Artificial Stone.*—April 13, 1869.

Claim.—The compounding of ingredients before named, to make a water-proof rock, to be used in the various arts before named.

88,878.—Benjamin F. Jewett, North Bangor, N. Y.—*Milk-Pan.*—April 13, 1869.

Claim.—1. A milk-pan, constructed with double top, sides, and bottom, and having an open space, or chamber between said double portions, for reception of a cooling or a warming medium, substantially as herein described.

2. The combination, with the above, of the compartments, or channels *b*, communicating with each other, as described, and with inlet and outlet passages, whereby air, water, or steam admitted therein, is caused to traverse consecutively each compartment or channel, before reaching the outlet.

3. The combination, with the double sides of the pan, of the partition *g*, arranged relatively to the lower and the upper discharge pipes *d′* and *f f′*, substantially as and for the purpose herein set forth.

88,879.—Vincent E. Keegan, Boston, (Southern District,) Mass.—*Treating Wood for the Manufacture of Paper-Pulp.*—April 13, 1869.

Claim.—The process for reducing wood and woody fibers for the manufacture of paper-pulp by the oxidizing action of hypochlorite of lime in the manner substantially as set forth.

88,880.—J. W. M. Kirkpatrick, Hamburg, Ark.—*Threshing and Separating Machine.*—April 13, 1869.

Claim.—1. The horse-power B, when its arms *b* are provided with a series of adjustable pins, *c*, whereby the tension of the belt D is regulated, while the latter is in motion, as herein shown and described.

2. The threshing-machine, consisting of the box *g*, having the metal bars *h*, the beater arms *d* upon the shaft *e*, and the feed-board Gx, in combination with the pinion *f*, gear-wheel F, pulley *i*, and tension-pulleys *j*, all arranged and operating as described, for the purpose specified.

88,881.—Jeremiah Larkin, Unionville, S. C.—*Nursing-Table.*—April 13, 1869.

Claim.—The nursing-table A, provided with the drawers B, bottle-caster D, suction-tube E, discharge-tube F, and opening G, all constructed and arranged substantially as herein shown and described.

88,882.—William J. Lewis, Pittsburgh, Pa.—*Screw-Threading Machine.*—April 13, 1869.

Claim.—1. The arrangement of the rod *n*, screw

o, cone 4, and the hollow shaft *f*, with the die-holders *g*, as herein described.

2. The improved feed-head consisting of the rotating and notched disk *i*, adjustable gauge *m*, and sliding head *k*, all constructed, arranged and operating substantially as herein described, and for the purpose set forth.

3. The arrangement of rod *x* with ring, or rings *s*, and connecting-piece *x'*, the rod *n* with screw *o*, and cone 4, and the guide l^1 of the feed-head, as herein described, and for the purpose set forth.

88,883.—WALLACE R. MARIE, Boston, Mass., assignor to THOMAS A. MITCHELL, Washington, D. C.—*Pastry Cutter and Crimper.*—April 13, 1869.

Claim.—The rods A *c* and cutter B, in combination with the rolling-crimper E, handle *f*, and holder *g*, the whole arranged substantially as and for the purposes herein specified.

88,884.—JAMES A. MARINE, Mooresville, Ind., assignor to himself and ALLEN T. MANKER, same place.—*Attaching Hoes to their Handles.*—April 13, 1869.

Claim.—1. The combination of the screw-bolt *a*, washer *c*, nut *b*, loose ferrule B, having lugs *d' d'* and handle C, with the hoe-blade A, when constructed and arranged in the manner substantially as described.

2. The nut, or block D, when constructed to operate in the manner and for the purpose described.

3. The combination of the screw-bolt *a*, washer *c*, loose ferrule B, without *d' d'* and handle C, with the blade A, all constructed and arranged in the manner substantially as described.

88,885.—JOHN L. MASON, New York, N. Y.—*Machine for Making Sheet-Metal Screw-Caps.*—April 13, 1869.

Claim.—1. The face-plate G, with an opening entirely through it, in combination with the devices which hold the finished caps, form the thread thereon, release the caps from the threading-devices, and then discharge them, free from the machine, on the side of the face-plate opposite to that which they had entered, substantially as and for the purpose described.

2. The arrangement, on one side of the perforated face-plate G, of a clamp or stripper, R', operated by a wedged-rod, P, and spring R', substantially as and for the purposes described.

3. The trough H, in combination with the machine herein described.

4. In combination with the sheet-metal cap-threading-devices, the use of the gauge *s t t*, for receiving, holding, and centering the cap blanks preparatory to being threaded, substantially as described.

5. The dies or chasers *g*, or their equivalents, applied within recesses formed in the face-plate G, and made radially adjustable therein, as described, in combination with the mandrel-chuck D, as and for the purposes described.

88,886.—JOHN L. MASON, New York, N. Y.—*Manufacture of Sheet-Metal Screw-Caps.*—April 13, 1869.

Claim.—1. A machine-made sheet-metal screw-swaged cap *g*, having its closed end circularly scored or cut, substantially as described.

2. In combination with devices adapted for swaging or pressing screw-threads in sheet-metal caps, the cutting-tool *s*, applied, substantially as described, to partially cut through the ends of said caps during the threading-operation, substantially as described.

88,887.—THOMAS J. MAYALL, Roxbury, Mass.—*Rubber Hose or Tubing.*—April 13, 1869.

Claim.—1. A hose or tubing, in which longitudinal binders of thread, wire, twine, &c., or their equivalents, are inserted between the different layers or plies composing the same, substantially as described, for the purpose of preventing strains upon the hose or tubing, in a lengthwise direction, as set forth.

2. Hose or tubing in which longitudinal binders of thread, wire, twine, &c., or their equivalents, are inserted between the different layers or plies composing the same, and strands of the said materials wound, twisted, or braided around the said longitudinal binders and layer or layers of the hose or tubing, as set forth.

88,888.—THOMAS J. MAYALL, Roxbury, Mass.—*Manufacture of Rubber Hose or Tubing.*—April 13, 1869.

Claim.—1. Forming a hose or tube by the combination of such devices as will first cause a sheet or sheets of rubber, gutta-percha, &c., or of cloth coated with either or both, to be fed to and lapped, or partially lapped, around a mandrel, and one or more sets of braiding or weaving devices, so operating as to braid or weave cords, threads, wire, &c., around said sheet or sheets, as set forth.

2. In combination with the above arrangement of devices for feeding to and placing upon the different plies of the hose or tube a series of longitudinal-binding threads, wires, &c., substantially as described.

3. The arrangement of devices for winding upon the hose or tube, when finished, strips of cloth, tinfoil, or suitable flexible material, the same consisting of the spool *h'* and arm *k'*, attached to gear-wheel *m'*, receiving motion from the driving-shaft of the machine through intermediate gearing, substantially as herein above described.

88,889.—FREDERICK WILLIAM MCCLEAVE, New Bedford, Mass.—*Velocipede.*—April 13, 1869.

Claim.—1. The frame A, in combination with steering-stem B, spring C, nuts D and J, and double crank-shaft E, constructed in the manner and for the purpose as above described.

2. The detachable handle M, in combination with detachable link O and single crank on rear shaft.

3. The two-seated frame A, in combination with the steering and adjusting apparatus and the hand-lever and link, applied to a four-wheeled velocipede, to be propelled in the manner as set forth.

88,890.—JOHN MCGOVEREN, New York, N. Y.—*Breech-Loading Fire-Arm.*—April 13, 1869.

Claim.—The combination, with the barrel and the stock, of the spring C, when arranged to act upon the lip B of the lug A, all substantially as and for the purpose described.

88,891.—A. A. MCMAHEN, Oxford, Miss.—*Well-Auger.*—April 13, 1869.

Claim.—1. The employment, in connection with a well-auger, of the squaring-box A, operating substantially as and for the purpose herein shown and described.

2. Forming the helical part of a well-auger in separate sections, H I, substantially as and for the purpose herein shown and described.

3. The combination, in a well-auger, of the squaring-box A, with the helix, made in separable sections, H I, substantially as and for the purpose herein shown and described.

88,892.—E. MEARS, Battle Ground, Ind.—*Weather-Strip.*—April 13, 1869.

Claim.—1. The application of the S-shaped plate E, between the bar C and the pivoted weather-strip, substantially as described, so that it will always form a tight joint, substantially as herein shown and described.

2. The spring F, fastened to the weather-strip, and held with its upper end against the face of the door by an eye or loop *c*, as set forth, so that it can slide in said loop, as specified.

3. A weather-strip attachment to doors, when composed of the bar C, S-shaped plate E, hinged strip D, and sliding spring F, all combined, arranged, and operating substantially as herein shown and described.

88,893.—C. G. MILLER, Brattleborough, Vt.—*Saw-Filing Machine.*—April 13, 1869.

Claim.—1. The extension arm *o*, fitted on the sliding-bar G, which has the fixed arm *n*, in combination with the tube-sockets *r* on the arms *n o*, and with the swivel-pins H, for holding the file, all arranged so that a file of suitable length can be secured, and that the same can be turned on the axis of the

pins H and locked by the screw *w*, substantially as specified.

2. The spring E, when arranged as described, to keep the frame D elevated, so that it will hold the file against the tooth to be sharpened, as specified.

3. Providing a slot in the spring E, so that it may, by a screw, *i*, or its equivalent, be locked to the pivoted frame D, substantially as and for the purpose herein shown and described.

4. The jointed sliding frame B, carrying the arms *d* and clamping devices *e*, when arranged longitudinally-adjustable on the fixed bed A, to be adapted to hold saws of all sizes and in suitable positions, as set forth.

5. The sliding-frame C, carrying the pivoted frame D, that supports the sliding file-holder, when arranged so that it can be longitudinally adjusted on the bed-plate A, substantially as and for the purpose herein shown and described.

6. The screw *j*, fitted through the slotted extension *k* of the carriage C, to lock the file-frame D in any desired position, as specified, for the purpose set forth.

7. The file I, secured by the swivel-pins H to the sliding bar G, which works on the swiveled bar F, that is pivoted to the swinging frame D, all arranged as described, to allow the file to be adjusted in every direction, as set forth.

8. The swiveled file-holders H H, when arranged on the arms *n o*, as described, so that the file can be swung on one fastening-pin, *s*, while the other, *t*, travels in the slot of the arm *n*, as specified.

88,894.—THOMAS H. MOTT, New York, N. Y.—*Velocipede.*—April 13, 1869.

Claim.—1. The tube C, fitted loosely around the crank-axle A of a velocipede, to support the seat and the driving mechanism of the same, substantially as herein shown and described.

2. The oscillating propelling-lever D, pivoted to a pendent rod, *b*, of the tube C, and connected by the pitmen E E with the cranks of the axle, upon which the tube C is placed, substantially as herein shown and described.

3. The spring-rods F F, projecting from the tube C, that is fitted loosely upon the axle A, substantially as herein shown and described.

4. The cross-bar H, connected by a tubular socket with one of the supporting-rods F, and resting with a hook-shaped end upon the other rod F, it being longitudinally adjustable on said rods, substantially as herein shown and described.

5. The seat G, when provided with a shank that carries a tube, *d*, and pivoted to a pin, *e*, of the cross-bar H, so that it can be locked by ears *g*, as described, to be reversible, as specified.

6. The arm-support *i*, connected by rods *h h* with the tube C, which is fitted loose upon the axle A, substantially as herein shown and described.

7. A velocipede, consisting of the crank-axle A, wheels B B, tube C, rod *b*, lever D, pitmen E E, spring-rods F F, reversible seat G, sliding cross-bar H, and arm-support *i*, all combined and operating substantially as herein shown and described.

88,895.—ALBERT MURDOCK, North Bridgewater, Mass., assignor to himself and HERBERT E. SNOW, same place.—*Scissors.*—April 13, 1869.

Claim.—As a new article of manufacture, spring-scissors, provided with one shank, having one ring, *a*, and with the spring D, substantially as described, to operate as specified.

88,896.—HORACE W. PALMER, Kingsville, Ohio.—*Double-Tree.*—April 13, 1869.

Claim.—The caps or thimbles B, in combination with the brace-rod D, tension-nuts E, and sway-bar A, in the manner and for the purpose substantially as specified.

88,897.—CHARLES H. PARMENTER, Lowell, Mass., assignor to GEORGE W. RAYNES and AMOS S. GEORGE, same place. *Shuttle-Holder.*—April 13, 1869; antedated April 3, 1869.

Claim.—1. The self-adjusting front-piece *d*, with catch-hook *g*, for the purpose substantially as described and set forth.

2. A shuttle-holder, composed of three pieces, *b*, *c*, and *d*, when arranged substantially as and for the purpose described.

88,898.—F. P. PERDUE, Atlanta, Ga.—*Railway-Switch.*—April 13, 1869.

Claim.—The arrangement of the lever E, hinged rod F, bent levers O and M, and rods G and N, with the rails C C′, and pivoted rail J, in combination with the rod H, and signal I, all substantially as and for the purposes set forth.

88,899.—JOHN G. PERRY, Kingston, R. I.—*Combined Mowing-Machine and Hay-Spreader.*—April 13, 1869.

Claim.—1. Running the open wheel C on gear-rolls, substantially as and for the purpose set forth.

2. Running-wheel B on pivoted gear-wheels, substantially as and for the purpose set forth.

3. Combining a hay-tedder with a mowing-machine.

88,900.—ELIJAH S. PIERCE, Hartford, Conn., assignor to NATIONAL SCREW COMPANY, same place.—*Apparatus for Arranging and Conveying Screw-Blanks.*—April 13, 1869.

Claim.—1. The arrangement of the revolving drum A, with its slot *b*, arms *d*, and the shield B, substantially as described.

2. The revolving drum A, with its slot *b*, arms *d*, and shield B, in combination with the conducting-ways D, substantially as described.

88,901.—ELIJAH S. PIERCE, Hartford, Conn. assignor to NATIONAL SCREW COMPANY, same place—*Apparatus for Arranging and Conveying Screw-Blanks.*—April 13, 1869.

Claim.—1. An improved mechanism for arranging and conveying screw-blanks, or other similar articles, consisting of a hopper having a groove in its bottom, through which pass one or more arms or sweeps, to push forward the arranged blanks along the groove to the conveying ways, and also to cause them to fall into the groove, substantially as herein described.

2. The combination of the hopper A, the arm C, the conducting-ways E, and the shield F, arranged substantially as herein described.

88,902.—ELIJAH S. PIERCE, Hartford, Conn., assignor to NATIONAL SCREW COMPANY, same place—*Device for Connecting the Parts of Machinery*—April 13, 1869.

Claim.—The device substantially as described, for preventing the breaking of moving or stationary parts of machinery.

88,903.—WILLIAM POLYBLANK, Cleveland, Ohio.—*Oil-Can.*—April 13, 1869.

Claim.—1. The perforated bung-tube or thimble D′, in combination with the can A, substantially as and for the purpose described.

2. The combination of the discharging-tube F and supplementary thimble E, in the manner as and for the purpose set forth.

88,904.—HENRY J. PRINGLE and WILLIAM PRINGLE, Columbus, Ohio.—*Carriage-Coupling,*—April 23, 1869.

Claim.—The combination of the socket H and king-bolt G, with the reach E, reach-plate F, and axle A, substantially as herein shown and described, and for the purpose set forth.

88,905.—H. O. REDDISH, Linden, N. Y.—*Washing and Wringing Machine.*—April 13, 1869.

Claim.—The arrangement of the frame C, longitudinally-corrugated roller B, hung in yielding bearings, the spirally-corrugated rubbing-rollers E, the wringing-roll G, also hung in yielding bearings, the rubber wringing-roll F, and the board M, all operating as herein described, for the purpose specified.

88,906.—RENSSELAER REYNOLDS, Stockport, N. Y.—*Let-Off Mechanism for Looms.*—April 13, 1869.

Claim.—1. The let-off mechanism arranged to wind on the surplus yarn let-off, and to govern the tension of the warp by the winding-on devices, con-

structed substantially as and for the purpose described.

2. The combination, with the vibrating shaft actuating the yarn-beam, of the disks G and G′, or their equivalent, arranged to actuate it alternately in either direction, substantially as and for the purpose set forth.

3. The combination of the curved adjustable arm I^1 and friction-roll I^2 with the arm I of the whip-roll and the arm I^3 of the let-off mechanism, whereby relief is afforded the warp under an undue tension of the same, substantially as and for the purpose described.

4. The combination, with the whip-roll and the oscillating frame E, of the arm I, adjustable arms I^1 and I^3, and weighted bell-crank I^4, substantially as and for the purpose set forth.

5. The combination, with the bell-crank I^4 and the arm K, of the oscillating frame E of the spring L, substantially as and for the purpose set forth.

88,907.—Rensselaer Reynolds, Stockport, N. Y.—*Sash Stop and Lock.*—April 13, 1869.

Claim.—The wedge-shaped sash-stop C, constructed with a projection, *d*, on the inner edge of its butt end, whereby it is made to lock automatically when the sash is closed, substantially as shown and described.

88,908.—Almon Roff, Southport, Conn.—*Lock-Nut.*—April 13, 1869.

Claim.—1. Providing a shaft C, with double thread, *a* and *b*, crossing each other, as shown in Fig. 1, to allow a right-hand nut to pass over a thread adapted to a left-hand nut, and *vice versa*, as specified.

2. The combination of the screws *c*, with the nuts A B and screw-shaft C, substantially as described, for the purpose specified.

88,909.—Hilborne L. Roosevelt, New York, N. Y.—*Electric Organ-Action.*—April 13, 1869.

Claim.—1. The application of a separate battery to each separate octave of an organ, substantially as described, for the purpose specified.

2. Covering the mercury in the cups B and K, or in either, with glycerine, substantially as and for the purpose herein shown and described.

3. The wire S and the sliding-wedge T, or its equivalent, when arranged substantially as described, for the purpose of connecting the mercury-cups of key and pedal, to allow the pallets of both to be worked by the pedal alone, as specified.

4. The pallet C, constructed as described, in combination with the armature D, as herein set forth for the purpose specified.

5. The sliding pallet Q, when arranged and operating substantially as and for the purpose herein shown and described.

88,910.—Warren H. Sadler, and James M. Drysdale, Baltimore, Md.—*Advertising-Frame.*—April 13, 1869.

Claim.—The picture and advertising-frame herein described, consisting of the border A, the back-board D, having the detachable and removable part D′, the flanges *d* d^1, the raised parts d^2, and the depressions d^3 d^3, with their outer edges open, and the sliding-strip *s*, working in grooves in the back-board and borders, when the several parts are constructed and arranged in the manner and for the purpose set forth.

88,911.—Andrew B. Searles, Providence, R. I.—*Table-Caster.*—April 13, 1869.

Claim.—A table-caster, constructed of twisted wire, consisting of the handles, braces, legs, and feet A, rings B, and ornamented braces C, bound together with fine wire, and constructed as and for the purposes described and specified.

88,912.—Andrew B. Searles, Providence, R. I.—*Table-Caster.*—April 13, 1869.

Claim.—The combination of the handles A B, with the revolving spindle D, and as frame-braces *a* and A′, with the rings E, and ornamental braces H, the standard C′, with the tube *d′*, constructed as and for the purpose specified.

88,913.—Harvey F. Seibert, Brady's Bend, Pa.—*Fanning-Mill.*—April 13, 1869.

Claim.—1. The combination of the slotted and pivoted upright, J, rock-shaft K, adjustable shaft H, short cylinder L, long interior screen O, tube R, partition Q, and inner bearing I, all arranged as described, for the purpose specified.

2. The combination of the standard J, and rock-shaft K, with the shaft H, and case, or frame, of the mill, substantially as herein shown and described, and for the purpose set forth.

3. The arrangement of the pulleys U W, band V, shaft X, and beveled gear-wheels Y Z, with relation to the cylinder-shaft H and fan-shaft C, as herein described, for the purpose specified.

88,914.—William G. Semple, Cincinnati, Ohio.—*Cooking-Stove.*—April 13, 1869.

Claim.—1. The ash-chute F, ash-pan G, hearth-plate H, and gate I, arranged and adapted to operate as set forth.

2. The fender J, upon the front plate D, as and for the purposes stated.

88,915.—James B. Sexton, Pella, Iowa, assignor to himself and J. L. Andrew, same place.—*Cultivator.*—April 13, 1869.

Claim.—1. The slotted draught-bars M, constructed and operating in connection with the frame D E, plow-beams I, and draught-device N O P Q, substantially as herein shown and described, and for the purpose set forth.

2. The bars N, having one or more holes formed in them, hooks Q, and loops O, in combination with the draught-bars M, and double-tree P, substantially as herein shown and described, and for the purpose set forth.

88,916.—Isaiah Shaw, Four Corners, Md.—*Potato-Digger.*—April 13, 1869; antedated March 15, 1869.

Claim.—1. The combination of the two sets of rollers, operating in opposite directions, the upper set being armed with brushes, as and for the purpose set forth.

2. The dished wheel *a″*, constructed and operated substantially as set forth.

3. The combination of the plow A, endless apron *d*, rollers, moving in opposite directions, and dished wheel, substantially as described.

88,917.—Emile Sirret and Emile George Sirret, Buffalo, N. Y.—*Mop-Head.*—April 13, 1869.

Claim.—1. Operating the movable jaw or cross-head by means of screw on projecting part of frame, in combination with a thumb-screw nut working on said screw, and connected with the movable jaw for the purpose as set forth.

2. The bridle G and arms F F, as a means to connect and operate the movable jaw to and by screw B and thumb-screw nut L, substantially in the manner described.

88,918.—Thomas J. Sloan, New York, N. Y.—*Securing Knobs to their Shanks.*—April 13, 1869.

Claim.—Forming the cavity in the knob with lateral grooves or recesses, to receive and hold the ends of the locking-plate, in combination with the said locking-plate, screw held by the locking-plate and the hollow shank, substantially as and for the purpose described.

88,919.—Thomas J. Sloan, New York, N. Y.—*Securing Knobs to their Shanks.*—April 13, 1869.

Claim.—In combination with the knob having a cavity substantially such as described, the metal shank, with projecting spurs, and the anchor-pieces, held in place by soft metal, run in, in the molten state, substantially as and for the purpose specified.

88,920.—Thomas Smiley, Albia, Iowa.—*Tool for Shaving the Edges of the Soles of Boots and Shoes.*—April 13, 1869.

Claim.—The front section D, constructed as described, and slotted, to receive the adjustable right-angular gauge E, and its adjusting-screw, and adapted to be applied to the shaving-knife stock, in the manner herein described, for the purpose specified.

88,921.—Selden Snow, Somers, Conn.—*Folding Milking-Seat.*—April 13, 1869.

Claim.—A milking-seat, provided with a shelf, arranged in combination with the stand, or support, so as to fold up, substantially as shown and described.

88,922.—W. C. Spellman, Baltimore, Md.—*Broom-Head.*—April 13, 1869.

Claim.—The head C, pierced with holes D D, arranged in rows, as described, in combination with pins, which pass through the heads of the corn, in the manner and for the purpose specified.

88,923.—Timothy Stebins, San Francisco, Cal.—*Lifting-Jack.*—April 13, 1869.

Claim.—In a lifting-jack, the weighted arm E, on the lever C, and the spring *c*, together with the pawl, having the curved end *h*, substantially as herein described.

88,924.—Robert W. Stough, Griffin, Ga.—*Cotton-Gin.*—April 13, 1869.

Claim.—The bar C, carrying the rigid arms A, and operated by the arm F, cam D, and spring E, in combination with the inclined seed-board B, and the saws, as herein described, for the purpose specified.

88,925.—A. L. Swan, Cherry Valley, N. Y.—*Valve and Valve-Spring for Melodeons, &c.*—April 13, 1869.

Claim.—1. Packing the valves for organs, melodeons, &c., with the cloth strips *a*, India rubber, oiled silk, or other substance, *c*, impervious to air, and the thin leather layer *b*, all arranged as specified.

2. The springs G, constructed and combined with the valves, substantially as specified.

88,926.—Horace Thayer, Johnsonsburgh, N. Y.—*Compound for Filling the Pores and Coating Wood.*—April 13, 1869.

Claim.—The compound, consisting of the ingredients herein set forth, substantially as specified.

88,927.—J. L. Treat, New York, N. Y.—*Apparatus for Raising Beer.*—April 13, 1869.

Claim.—1. The combination of the two-way cock H, provided with a supply and discharge-pipe, rod L, coiled spring M, adjusting-nut O, float R, air-pipe E, stop-cock F, and air-chamber B, provided with a valve, C, and pipes D, with each other, and with the air and water-reservoir A, substantially as herein shown and described, and for the purpose set forth.

2. Forming an air-passage, *l'*, through the lower part of the rod L, substantially as herein shown and described, in connection with the spring M and adjusting-nut O, as and for the purpose set forth.

88,928.—J. Weimar, New York, N. Y.—*Construction of Burglar-Proof Safes.*—April 13, 1869.

Claim.—1. Making the body of the case of a series of drill-proof rings, shrunk into an inner cylinder, substantially as and for the purpose specified.

2. The cover, composed of a series of drill-proof rings, shrunk upon one another, substantially as and for the purpose specified.

3. The combination of the cover, constructed as described, with the body, constructed as described, when the outer ring of the cover and the upper ring of the body of the safe are both formed, substantially as described, to prevent wedging.

4. In combination, the inner case, the body of the safe, the cover, and the center screw, and its socket, substantially as and for the purpose described.

88,929.—George Westinghouse, Jr., Schenectady, N. Y.—*Steam-Power Brake-Device.*—April 13, 1869.

Claim.—1. The auxiliary engine with connections to and in combination with the air-pump, air-reservoir, and brake-cylinder, substantially as hereinbefore set forth.

2. The auxiliary engine, arranged to operate in connection with a railroad locomotive, feed and water-pumps, substantially in the manner hereinbefore set forth.

3. The reservoir *d*, with pipes *i* leading to one or more brake-cylinders on or attached to each car, with a valve or cock in each pipe, for turning on or off the supply of air, arranged substantially as above set forth.

4. The brake-cylinder *m*, in combination with the pipe *i'* and piston-stem, connecting with the brake-lever, substantially as hereinbefore set forth.

5. The adjustable head *n*, on the piston-stem *m'*, in connection with the brake-lever *n'*, substantially as hereinbefore set forth.

6. The valves *p*, arranged in the adjacent ends of the couplings *f*, and so guided by stems and guides, or diaphragms, as to operate to open each other when the couplings *f* are united, and automatically to close, when forcibly uncoupled, substantially as above set forth.

88,930.—John J. White, Philadelphia, Pa.—*Velocipede.*—April 13, 1869.

Claim.—1. The arrangement of the frame C, which connects the two axles B of the wheels A, said frame consisting of the upright bars *a a*, horizontal bar *b*, and frame D, all arranged substantially as set forth, the parts *b* and D being up and down adjustable, as set forth.

2. In a two-wheeled velocipede, the hinged seat E, in the frame D, as set forth, all arranged so that the seat can be swung out of the way, as set forth.

3. The hand-levers G, pivoted to the frame C, and connected with the cranks *c*, as specified.

4. The wheels *f*, mounted on the axles B, when combined with the levers *g*, in the manner specified.

88,931.—B. B. Williams, Laclede, Mo.—*Harrow.*—April 13, 1869.

Claim.—The harrow herein described, consisting of the hinged parts A and C, in combination with the rod G, hinged standards E, and chain F, substantially as and for the purpose set forth.

88,932.—Benjamin F. Wilson, Geddes, N. Y—*Sash-Holder.*—April 13, 1869.

Claim.—The retaining notch E and semicircular notch F, in combination with the knob D, shank C, wheel B, double inclines A A, and inclined slots G G, all arranged to operate substantially as herein shown and described.

88,933.—Benjamin F. Wilson, Geddes, N. Y.—*Stop-Valve for Steam and other Enginery.*—April 13, 1869.

Claim.—The adjusting-screw B, when combined and arranged with reference to the valve-plates and seats, substantially as herein set forth.

88,934.—Benjamin F. Wilson, Syracuse, N. Y.—*Stop-Valve for Steam and other Enginery.*—April 13, 1869.

Claim.—The stop-valve, composed of the parts D D, constructed as herein described.

88,935.—William W. Wilson, Geneva, Wis.—*Washing-Machine.*—April 13, 1869.

Claim.—1. The combination, in a washing-machine, of the semicircular tub A, shafts H, eccentric-pulley M, working-beams I, rods J, squeezing-frames C D, each working in a separate compartment, substantially as and for the purpose herein shown and described.

2. The combination, with the above-claimed parts, of the jointed rods J J', and pin-spring *e*, substantially as and for the purpose herein shown and described.

3. The hand-lever O L N, segment pieces *b*, and belt or band K, in combination with the pulley M, for imparting a vibrating motion to the squeezing-frames C D, as herein shown and described.

4. The combination, in a machine for household use, of the churn P, having double-dasher staves *g g*, connected by means of rods *h h* with the eccentric-pulley M of the washing-mechanism, substantially as and for the purpose herein shown and described.

5. The churn-mechanism Q Q, R, *l l*, *o*, S, *q*, *p*, *n n*, substantially as described, in combination with the double churn-staves *g g* and churn P, substantially as and for the purpose herein shown and described.

88,936.—WILLIAM WINTER, Leeds, England.—*Sewing-Machine.*—April 13, 1869.

Claim.—The combination of the needle-working arm D, needle-bar E, shuttle-lever G, and shuttle-carrier I, operating together, and when the said needle-arm D and shuttle-lever G are constructed so as to connect, respectively, with the needle-bar and shuttle-carrier by a divided end, such division being made so as to form a spring upon the end of the respective levers, substantially in the manner and for the purpose herein set forth.

88,937.—LOUIS WINTERHALDER and DAVID WILSON, New York, N. Y.—*Clothes-Drier.*—April 13, 1869.

Claim.—1. The application of the rods E to the bars D of a clothes-drier, when secured in the slots *k*, and by the eyes *i*, to secure the clothes to the bars, in place of clothes-pins, as set forth.

2. The springs *g h*, arranged on the plate A, to lock the bars D to the desired side, by means of the pins *f*, substantially as described.

3. The bars D, when provided with the grooves *d* and pins *e*, substantially as described, so that they can swing to both sides, and be arrested when swung far enough to either side, as specified.

4. A clothes-drier, consisting of the plate A, pivot C, bars D, rods E, springs *g h*, and pins *e* and *f*, all combined and operating substantially as herein shown and described.

88,938.—WALTER A. WOOD, Hoosick Falls, N. Y.—*Drive-Wheel for Harvesters.*—April 13, 1869.

Claim.—A main drive-wheel, for harvesting and other similar machines, composed of the three parts A B C, united and held together, as and for the purpose herein described and represented.

88,939.—HENRY AITKEN, Falkirk, Scotland.—*Mode of Roasting Iron-Ores.*—April 13, 1869.

Claim.—1. The treatment of iron-ores, or iron-stones, by coking or carbonizing, in closed or air-tight heaps, or in closed retorts, kilns, ovens, or chambers, so as to retain in them the fixed carbon, and prevent them absorbing too much oxygen, in contradistinction to calcining, or roasting the iron-ores, or iron-stones, in heaps in the open air, or in chambers to which the air has free access.

2. The collecting and utilizing of the volatile matter contained in the iron-ores, or iron-stones, thrown or drawn off in the process of coking or carbonizing, as above described, and which have hitherto been lost.

3. The purification of the coked or carbonized iron-stones by means of salt.

4. The application, in the process above described, directly to the iron-ores, or iron-stones, of a neutral flame, to effect their coking or carbonizing.

5. The coking or carbonizing of iron-ores, or iron-stones, by passing the gases evolved from iron-ores, or iron-stones, being coked or carbonized, in a retort, kiln, chamber, or oven, or set of such, through the iron-ores, or iron-stones, in others.

88,940.—JAMES ARMSTRONG, Jr., Elmira, Ill.—*Guard-Attachment for Cultivators.*—April 13, 1869.

Claim.—1. The vertically-movable standard J of the plant-fender, attached to the cross-beam C^1 by means of a sliding joint formed by the slot *n*, pivot-pin *s*, and adjustable bearing-pin *t*, substantially as described.

2. The vertically self-adjustable fender-standard J, pivoted to the shovel-carrying frame of a cultivator, and connected to laterally-vibrating shovel-standards, L L, substantially as described.

3. The slotted extension *k* on the rear end of a plant-fender, K, which is connected by rod K^1 to the shovel-carrying frame, in combination with the lower extension *k'* of the standard J, passed loosely through said extension *k*, and adapted for allowing the fender to rise and descend, but keeping it in place centrally between the laterally-movable shovel-standards L L, substantially as described.

4. The laterally-vibrating and laterally-adjustable standards L L, in combination with the centrally-arranged fender-carrying standard J, the extensible brace P P', and the adjustable connecting-rod R, substantially as and for the purpose described.

5. A plant-fender K, attached to a cultivator-frame by means of a front laterally and vertically vibrating suspension-rod K', and a rear laterally and vertically vibrating connection, in such manner that while the fender will swing laterally with the shovels L' L', it is at the same time allowed to rise freely over obstructions in its path, substantially as described.

88,941.—EDWARD BRADY, Philadelphia, Pa.—*Mode of Purifying Iron.*—April 13, 1869.

Claim.—Mingling and manipulating, by common mechanical processes, sulphurous acid, at a high degree of temperature, and roasted pulverized lime, with iron, in a heated or molten state, at a similar temperature, as nearly as may be; and also mixing and manipulating crude iron-ore, ground or reduced to a powder, with sulphate of lime, sulphate of soda, sulphate of alumina, or with any alkaline sulphate, pulverized, and both having been roasted or otherwise assimilated to about equal degrees of temperature, and then a fusion or melting of the metal to be made by the usual methods, in an ordinary furnace, the chemical changes, or results consequent thereupon, separating, dissipating, and combining, and depositing the impurities of silica, sulphur, &c., and leaving the molten iron pure, and converting it into steel or malleable iron, substantially as set forth.

88,942.—CHARLES N. BRAINERD, Hartford, Conn.—*Finger-Shield for Pennen.*—April 13, 1869.

Claim.—The finger-pad, constructed with the plate *a* and elevation *c*, substantially as and for the purpose described.

88,943.—MERRILL CHASE, Jr., and HORACE J. MORTON, South Paris, Me., assignors to themselves and FREEMAN C. MERRILL, same place.—*Shingle-Machine.*—April 13, 1869.

Claim.—1. The combination of the fixed and movable block-clamping arms G G and I I with the feed-rollers M N, and the polygonal block-carrier *g*, substantially as herein specified.

2. The arrangement of the feed-rollers M M with the saw and planer, all operating as described, for the purpose set forth.

3. The combination of the double cam-lever K, standards H H, and movable clamping-arms I I, with their cam-projections *n n* and springs *p p*, substantially as and for the purpose herein specified.

4. The stationary circular cam V, in combination with the revolving block-carrier and the vibratory pawl-levers T T, substantially as set forth.

5. The finger-guard plates W W, in combination with the feed-rollers M M, substantially as and for the purposes herein specified.

88,944.—JOHN D. COLE, Phelps, N. Y.—*Device for Adjusting and Hanging Carriage-Bodies.*—April 13, 1869.

Claim.—The instrument for hanging carriage-bodies, constructed and operating substantially as herein specified.

88,945.—EMMETT COOPER, Theresa, N. Y.—*Hay-Loader.*—April 13, 1869.

Claim.—1. The derrick, having the rigid arms *i* and *i'*, with the pulleys *h* and *h'*, and removable stop *s* attached, and the swinging-arm C, with the pulley *g*, and having the cords *a* and *l*, with weight O, all constructed and arranged to operate substantially as described.

2. The combination of the shaft G with the wheels T and R, with clutch Q and shaft F, with the wheels *f e* and S and drum E, arranged to operate as herein set forth.

3. The reversing-device, consisting of the shaft M, operated by the wheel J, engaging with the pinion *d*, on shaft G, and the cam K, rod L, and lever N, connected to clutch Q, all constructed and arranged to operate substantially as and for the purpose described.

88,946.—DAVID B. COX, Troy, N. Y.—*Base-Burning Stove.*—April 13, 1869.

Claim.—The annular flue H, surrounding or outside of the fire-pot, and separated therefrom by an open space, through which the air circulates, substantially as and for the purpose herein specified.

88,947.—Henry V. Edmond, Norwich, Conn.—*Apparatus for Exhibiting Hymns, &c.*—April 13, 1869.

Claim.—1. The combination, with the primary apron B, of one or more detachable aprons, C, adapted to be readily connected to or disconnected from the former, substantially as and for the objects stated.

2. In combination with the above, the bracket E E^1, inclined slots *e*, and pivoted catch E^2, for the purpose of applying new rolls, in the manner described.

88,948.—Alfred B. Ely, Newton, Mass.—*Material for Cartridge-Cases.*—April 13, 1869.

Claim.—1. The use of pyroxyline, and its compounds, substantially as described, in the manufacture of cartridge-cases.

2. As articles of manufacture, cartridge-cases, made of pyroxyline, and its compounds, substantially as described.

88,949.—James E. Emerson, Trenton, N. J.—*Circular Saw.*—April 13, 1869.

Claim.—A circular saw, when provided with apertures C C C and insertible teeth B, constructed and arranged to operate in the manner and for the purposes substantially as described.

88,950.—Peter Faber and Henry Martin, Canandaigua, N. Y.—*Fastening for Wagon-Seats.*—April 13, 1869.

Claim.—The seat-fastening herein described, consisting of the weighted lever C, provided with the curved hook-end *k*, when the same is employed with the right-angled plate B, provided with the headed bolt *d f*, the whole arranged as described, and operating in the manner and for the purpose specified.

88,951.—Amasa Foot, Earlville, Ill., assignor to Charles R. Cook, Buffalo, N. Y.—*Harvester.*—April 13, 1869.

Claim.—1. Two driving-gears, of unequal size, in combination with two pinions for varying the speed of vibration of the cutters.

2. Rotating the crank-shaft, by either one of two independent concentric bevel driving-gears, of unequal size.

3. Two bevel pinions, on the crank-shaft, arranged outside of the journal-bearing of said shaft.

88,952.—Kasson Frazer, Syracuse, N. Y.—*Trace-Buckle.*—April 13, 1869.

Claim.—1. The frame A, formed with inclined surfaces *f f*, *f' f'*, and adapted to receive the slide D, having projections *i i*, all operating substantially as herein described.

2. The tongue E, made substantially as herein set forth, hung in the slide D, and pressed down by the flat spring F, substantially as set forth.

3. The frame A, with loops *a a b d*, top C, with recess *e*, and inclined sides *f f*, *f' f'*, adapted to receive a slide, D, having projections *i i*, and carrying the tongue E, substantially as specified.

4. The slide D, having projections *i i*, and provided with a tongue, E, and the spring F, when fitted in a frame, A, having inclined surfaces *f f'*, substantially as set forth.

5. A trace-buckle, composed of a slide, D, carrying a tongue, E, and a spring, F, and a frame, A, the slide D moving in the frame on inclined surfaces *i i*, substantially as herein described.

6. The mode of locking and unlocking the tongue, by means of two sets of inclined guides, which support both ends of the tongue-slide in the operation of locking and unlocking, substantially as described.

88,953.—William J. Fryer, Jr., New York, N. Y.—*Building.*—April 13, 1869.

Claim.—The within-described system of constructing buildings, consisting of a combination of iron columns, iron girders, and iron bars and sheathing-plates, substantially as shown in the drawings, and for the purpose specified.

88,954.—Gustav Fuchs, Milwaukee, Wis., assignor to himself and J. E. Weir, same place.—*Buggy and Wagon Top.*—April 13, 1869.

Claim.—A frame for tops of buggies, wagons, and similar vehicles, consisting of the uprights *b* and *c*, shaped so as to form the entire sides of the frame, or jointed, in combination with the supports D, so as to be adjustable and removable, all constructed and arranged substantially as shown and described.

88,955.—Thomas H. Gary, Bristol, Md.—*Dumping-Wagon.*—April 13, 1869.

Claim.—The combination and arrangement of the frame A, having the slots *a' a'*, with the body C, the rollers B B', the pin D, the rod E and the catch or pin *m*, all constructed to operate together in the manner and for the purposes described.

88,956.—Thomas Greenhalgh, Raritan, N. J., assignor to himself and Alexander L. Holgaté, same place.—*Let-Off Mechanism for Carriers for Braiding-Machine.*—April 13, 1869; antedated April 5, 1869.

Claim.—The arm *g*, with an inclined side and an eye at one end sliding upon the bar *d*, and the other end resting against the side of the spindle *b*, in combination with the weight *e* and spool-ratchet *f*, as and for the purposes specified.

88,957.—William J. Hale, Ashley, Ill.—*Churn-Dasher.*—April 13, 1869.

Claim.—A churn, having jar A, dasher-staff B, dasher C, and removable perforated cylinder H, constructed and arranged substantially as specified.

88,958.—Frederick Henderson, Marietta, Ohio, assignor to himself and Isaac Atkinson.—*Lasting-Tool.*—April 13, 1869,

Claim.—The tool described, consisting, essentially, of the handles A B, and jaws C D, when constructed and combined as described, for the purpose set forth.

88,959.—Charles H. Hopkins, Lyndonville, Vt., assignor by mesne assignments to himself and H. A. Alden, same place.—*Bolt.*—April 13, 1869.

Claim.—The lock-bolt A, having the locking-pins *a* (one or more) arranged therein, with a transverse mortise, for the insertion of the keys B, C, or D, all constructed and arranged to operate substantially as and for the purpose set forth.

88,960.—John Houpt, Springfield, Pa.—*Surface-Condenser.*—April 13, 1869.

Claim.—1. The arrangement, in a surface-condenser, of vertical tubes F, open at their lower ends, but closed at the top, substantially as herein described.

2. The vertical tubes F, closed at the top, in combination with chambers B, B^1, B^2, and B^3, arranged in respect to each other and to the tubes, and communicating as set forth.

88,961.—William G. Hull, Sing Sing, N. Y.—*Harness-Saddle.*—April 13, 1869.

Claim.—The loop E, constructed and arranged upon a harness-saddle in conjunction with the terret B, substantially as described.

88,962.—Abram C. Jaques, Leavenworth, Kansas.—*Wagon-Brake and Tongue-Support.*—April 13, 1869.

Claim.—The supporting-plate A and brake-bar B, so constructed and arranged as to allow the brake-bar to be shifted laterally, for the purpose herein shown and described.

88,963.—Solomon Johnson, San Francisco, Cal.—*Amalgamator.*—April 13, 1869.

Claim.—Making slotted openings D D', with dovetailing ends, to receive a crank-connection, or segmental rack, substantially as described.

88,964.—Joseph C. Kent, Phillipsburg, N. J.—*Blast-Heating Apparatus for Smelting-Furnaces.*—April 13, 1869.

Claim.—1. Dividing the bed-pipe A into cells or divisions by transverse partitions or diaphragms, substantially as and for the purpose shown and described.

2. The cellular bed-pipe A, in combination with

the siphon-pipes B, placed longitudinally on the said bed-pipe, substantially as and for the purpose specified and described.

88,965.—Emmaus Knowlton, Stockbridge, and Stillman F. Smith, Royalton, Vt.—*Ox-Yoke.*—April 13, 1869.

Claim.—1. The arrangement and combination of the cramps *c c*, bolts *h h*, vibratory lever E, shifting pivot-bolt H, and connecting-rods G G, substantially as and for the purpose herein specified.

2. The stop-block or blocks L, for the purpose set forth.

3. The construction of the draught-staple I, with its inwardly-turned flanches *l l* secured to the yoke-beam by bolts *m m m m*, for the purpose herein specified.

88,966.—Moritz Krickl, New York, N. Y., assignor to H. Uhry, same place.—*Stair-Rod.*—April 13, 1869.

Claim.—The slotted sleeves or caps B, in combination with the slotted stair-rod A, and the screw *b*, constructed and arranged as shown and described.

88,967.—La Fayette Louis, New York, N. Y.—*Melodeon Attachment for Piano-Fortes.*—April 13, 1869.

Claim.—1. The combiuation, with a piano-forte, of an adjustable and removable musical wind-instrument, provided with melodeon-reeds, key-board, and bellows, complete in itself, when placed in front of the piano-keys in such position as to enable one and the same performer to play upon both instruments either separately, alternately, or simultaneously, substantially as set forth.

2. A separate and distinct musical instrument, complete in itself, when so constructed as to admit of its being attached to any style of piano-forte without the necessity of cutting or altering either instrument.

3. The adjustable standard for supporting the pedal H, arranged substantially as and for the purpose set forth.

4. The attaching of a wind-instrument, provided with melodeon-reeds and separate key-board and bellows, to a piano-forte, by inserting or fitting the melodeon and its bellows between suitable cleats attached to the under side or bottom of the body of the piano-forte, substantially as shown and described.

5. The flat tubes F, when applied to the melodeon and arranged substantially as shown and described, to admit of the melodeon being firmly secured to the piano-forte, and also admit of a communication being formed between the bellows G and the melodeon D, substantially as shown and described.

88,968.—Louis Mangeon, New York, N. Y.—*Lamp.*—April 13, 1869.

Claim.—1. The safety-chamber N, around and below the reservoir D, constructed substantially as described, and for the purposes set forth.

2. The head, P, of the conductor H, so arranged as to prevent the fluid from flowing into the chamber N while the lamp is filling, substantially as described.

3. The arrangement of the filling-tube E, on the side of the reservoir, in combination with the supplying-tube H, substantially as described.

4. The tubes *g* and *g′*, for holding and furnishing a supply of wick, substantially as described.

5. In combination with the wick-tubes *g* and *g′*, the plate *h*, with a curved or rounded end, for holding the wick in the cistern, substantially as described.

6. A weight, arranged in the foot or base of the lamp, on the opposite side from the filling-tube, through which the lamp is filled, so that if the lamp falls over, the weight will roll the lamp, and hold the filling-tube upward, substantially as described.

88,969.—William J. Manker and Allen T. Manker, Indianapolis, Ind.—*Sash-Stop.*—April 13, 1869.

Claim.—The combination and arrangement of the spring G, drum F, and cord D, with the spring-lever cam L, all constructed and arranged as and for the purposes set forth.

88,970.—Theodore Marschall, New York, N. Y.—*Piano-Forte.*—April 13, 1869.

Claim.—The radial flange *a* on the metal frame B of a piano-forte, forming the support for and combined with the plate *c*, and provided with holes *b* for the strings, substantially as herein shown and described.

88,971.—E. G. Matthews, Newton, assignor to F. F. Holbrook, Dorchester, Mass.—*Seed Sower and Planter.*—April 13, 1869.

Claim.—1. The metal frame, for supporting the wheel B, hopper or seed-box D, and hand-bars C, substantially as and for the purposes set forth.

2. The combination, with the seed-box or hopper D and cam M, of the connecting-rod or arm L and stirrer or agitator I, substantially as and for the purposes set forth.

3. The combination, with the forward ends of the side-pieces A, of the peculiarly constructed eye-bolt bearings *a*, substantially as shown and described.

4. The combination, with the sides of the frame or hand-bars C, of the holding-pins or hooks *p*, substantially as and for the purposes set forth.

5. The combination of the enameled open conductor and the frame, the whole being constructed and arranged substantially as and for the purposes set forth.

6. The combination, with the bottom of the hopper D, of the peculiarly constructed dial-holding plate E, having the projections *y* and *x*, substantially as shown and described.

7. The arrangement of the dial-plate E and dial F, and the device for holding the latter in place, substantially as described, whereby the dial can be adjusted without tipping or turning over the machine, as set forth.

8. The combination and arrangement, with the dial F, of the gate or cut-off G, pivoted or mounted upon the axis of the said rotating-dial, and applied to the under side of the same, substantially as shown and set forth.

88,972.—Edwin May, Indianapolis, Ind.—*Sheet-Metal-Lath Machine.*—April 13, 1869.

Claim.—1. The jaws A B, furnished with the molding projections and recesses C D, for giving the laths, substantially, the form shown, and arranged to operate substantially as herein set forth.

2. In combination with the jaws furnished with the molding projections and recesses C D, the piercing and setting punch G, for attaching the furring-studs to the laths, substantially as set forth.

3. The combination of the puuch G with the recess F, arranged to operate in the manner substantially as set forth.

88,973.—John McDowell, Buffalo Township, Pa.—*Salve for Cure of Foot-Rot in Sheep.*—April 13, 1869.

Claim.—The ointment, or salve compound, as hereiu described, aud for the purposes set forth.

88,974.—John McLeod, San Francisco, Cal.—*Combined Knob-Latch and Lock.*—April 13, 1869.

Claim.—The bar K and tumbler M, when arranged in relation to each other and to the key O, and the lug C, on the bolt B, substantially as hereiu set forth.

88,975.—George V. Metzel, Baltimore, Md.—*Stencil Impress.*—April 13, 1869.

Claim.—A stencil impress, consisting of a roller, covered with plush velvet, carpeting, or other similar material, constructed in the manner described and shown, aud applied to the purpose specified.

88,976.—Thomas Moore and Patrick H. Day, Bloomington, Ill.—*Inking-Apparatus for Color-Printing.*—April 13, 1869.

Claim.—1. The construction of a distributing-strip, cut to type-standard, a lifting-spring, and color-box, as herein described.

2. Securing the strips in the table as herein specified, by means of the clamp C and flange P.

88,977.—John Müller, Philadelphia, Pa.—*Folding-Bedstead.*—April 13, 1869.

Claim.—The combination of the detachable head and foot-boards, the legs C, and the folding-frame A A′, braced by a removable cross-bar, B, hung in pivoted eyes *c*, and provided with slats for supporting the mattress, all substantially as herein described.

88,978.—Charles C. Parsons, New York, N. Y.—*Process of Purifying Petroleum.*—April 13, 1869.

Claim.—The process of purifying hydrocarbons, by passing their vapors through purifying materials, arranged and composed substantially as described, while the said hydrocarbons are being distilled in a vacuum, and by superheated steam.

88,979.—E. C. Penfield, Philadelphia, Pa.—*Truss-Pad.*—April 13, 1869.

Claim.—The combination, hereinabove described, consisting of a ball-and-socket (or universal) joint, and the lever-tongue, (or bar,) having an acute angular edge, for the purpose of securely binding and holding, substantially as and for the purpose herein set forth.

88,980.—Treat T. Prosser, Chicago, Ill.—*Power-Hammer.*—April 13, 1869.

Claim.—1. The combination and arrangement of the two pairs of arms, I I′, springs J, and hammer W, with the fulcrum D, or its equivalent, substantially as shown and described, as a consequence of which arrangement the hammer is carried from the anvil by one pair of the springs, and returned thereto by means of the other pair.

2. In combination with the vibrating arms of a power-hammer, the eccentric O, with its connecting-straps and rods, the friction-wheels S S, and levers *q q*, for the purpose of regulating the blows of the hammer W, substantially in the manner described and shown.

88,981.—Treat T. Prosser, Chicago, Ill.—*Machine for Heading Bolts.*—April 13, 1869.

Claim.—1. As an improvement in bolt-heading machines, the hammer H, the pressing-dies P, and the rotating anvil or table T, when said parts are constructed and arranged to operate substantially as and for the purpose set forth.

2. The rotating-table T, with the clamping-jaws *i* and *i′*, arranged to operate in connection with the adjustable eccentric *g*, substantially as and for the purpose described.

3. The curved dies P, in combination with the rotating-table T, when said parts are constructed and arranged as described, to permit the blanks to be carried around under the dies, and brought to the required position for being operated upon, and then moved to the point of discharge, as set forth.

4. The combination of the table T, ring Q, and the spring-arm *u*, with the bolts *s*, *r*, and *e* attached thereto, with the gear-wheels *d*, *c*, *h*, and *b*, all arranged to operate substantially as described.

5. The arrangement of the spring-arm W with its pin *n′*, operating in connection with the inclined grooves *v* in the under side of the table T, for ejecting the finished bolts, substantially as described.

6. The arrangement of the shaft J with its crank and bevel-gear *p*, the shafts I, with the wheels *l* and I′, and the shafts *b*, with the wheels L and eccentrics M, all substantially as herein described, for the purpose of operating the hammer H and the dies P, as and for the purpose set forth.

88,982.—Alonzo C. Rand, New York, N. Y.—*Manufacture of Illuminating-Gas.*—April 13, 1869.

Claim.—The automatic method of regulating the fire under the still, substantially as set forth.

88,983.—Edward Reynolds, Winneconne, Wis.—*Churn-Lid Screen.*—April 13, 1869.

Claim.—The ring C, constructed and arranged in relation to the lid and dasher of a churn, substantially as herein described.

88,984.—Joseph A. Robbins, Boston, Mass.—*Stocking-Supporter.*—April 13, 1869.

Claim.—As an improved article of manufacture, a stocking-fastener, composed of an elastic band extending partly around the leg, and provided at its end with a series of claws, or hooked teeth, adapted to penetrate and catch in the fabric of which the stocking is formed, as and for the purposes specified.

88,985.—William Ross, Baltimore, Md.—*Door-Spring.*—April 13, 1869.

Claim.—The notched wheel D, and two-part stem D′, cast together, in combination with the pin *g*, socket-plate E, and spring A, said stem having a rounded part for entering the socket-plate, and an angular part protruding therethrough, all as and for the purpose described.

88,986.—Elihu Smith, Albany, N. Y.—*Base-Burning Stove.*—April 13, 1869.

Claim.—1. The annular horizontal flues *a a* and E E, and their connecting flue (perpendicular) *d*, in combination with a coal-supply heating-stove, or furnace, having a reservoir, *h h*, substantially in the manner and for the purpose above described.

2. The perpendicular flue *o* and lateral flue *c*, in combination with the valve or damper *s*, for the purposes herein set forth.

88,987.—Elihu Smith, Albany, N. Y.—*Base-Burning Stove.*—April 13, 1869.

Claim.—1. The flues *r r r* and *o o o*, in combination, constructed substantially in the manner and for the purposes above described.

2. The said flues, in combination with the damper *p*, as above set forth and described.

3. Said flues, in combination with the chamber K K, constructed in the manner substantially and for the purpose above described.

4. The combination of the flues *r r r* and *o o o*, with the flues H H, constructed substantially in the manner and for the purpose above described.

88,988.—James W. Smith, Charlestown, Mass.—*Folding-Table.*—April 13, 1869.

Claim.—The combination, with the cross-legs *a b*, jointed together, of the leaves *e f*, jointed together and to the legs *a b*, and a fastening-device, substantially as shown and described.

88,989.—Thomas G. Smith, Canton, Miss.—*Seed-Planter.*—April 13, 1869.

Claim.—The hopper, constructed with the inclined front side and a nearly vertical rear side, and arranged with the seed-raising wheel G, as described, and combined with the supporting-wheel B and shares I D, as and for the purpose set forth.

88,990.—Joseph Steger, New York, N. Y.—*Method of Transmitting Motion in Car-Brakes and other Machinery.*—April 13, 1869.

Claim.—The arrangement of two hinged jaws, C D, each carrying one or more rollers, which, when the jaws are closed, bear on the shaft A from opposite sides, and are capable of accommodating themselves to any eccentricity or unevenness in said shaft, the roller or rollers in one of the jaws being made to actuate a shaft or drum, B, substantially in the manner herein shown and described.

88,991.—J. B. Sweetland, Pontiac, Mich.—*Horse Hay-Fork.*—April 13, 1869.

Claim.—1. The combination of a fork, having two stationary upwardly-turned tines, two movable tines, turned in an opposite direction, and a stop, *d*, to prevent the fork from swinging back too far, substantially as herein set forth.

2. The trigger F, constructed as described, and placed relatively to the bar A, substantially as and for the purpose set forth.

3. The lever C, provided with one or more adjustable or hinged tines, substantially as shown and described.

4. The arrangement of the hinged or pivoted trigger F, the dog or pawl *e*, and spring *i*, substantially as and for the purpose set forth.

88,992.—Charles A. Taylor, Chicago, Ill.—*Trunk.*—April 13, 1869.

Claim.—1. A trunk-tray, having an inner tray hinged therein, so as to form a lower stationary and an upper movable compartment, and having both

compartments subdivided by partitions, substantially as herein described.

2. The metallic stays *f*, when constructed and arranged to operate substantially as herein described and for the purpose set forth.

3. So constructing and arranging a tray within a trunk, that it may be attached to or detached from the top or cover of the same, from the outside, at will, by a sliding bolt, or by the hasp of the lock operating a spring, substantially as herein described, or by any equivalent devices.

4. The device for supporting the top of the trunk, when raised, and locking it in position, so that it can be released only by design, consisting of the mechanical contrivances constructed substantially as herein described, and arranged to operate as set forth.

5. The combination of the trunk with the device consisting of the frame K, having pivoted therein a tongue, *q*, provided with a pin, S, for securing the straps, constructed substantially as herein described.

6. The device for locking the ends of trunks, consisting of the metallic plate N, provided with tongue Q and shoulder *t*, and the socket-plate R, provided with the sliding bolt S, constructed and arranged to operate substantially as herein described.

7. In combination, the plate L and frame K of the buckle, when constructed substantially as described, for the purpose of preventing any lateral motion of the parts of the trunk.

8. In combination, the metallic plate O, in which the hasp is pivoted, with the metallic plate P, when constructed and arranged substantially as herein described, and for the purpose set forth.

88,993.—H. Uhry, New York, N. Y.—*Stair-Rod.*—April 13, 1869.

Claim.—The combination of the rod A with the screw V and the pin P, placed eccentrically to the plug or end-piece F, as shown and described, and for the purpose set forth.

88,994.—H. Uhry, New York, N. Y.—*Stair-Rod.*—April 13, 1869.

Claim.—The end-caps C, or rings C′, slipping freely over the ends of the slotted rod A, and in combination with the hooks T, all constructed as shown and described, and for the purpose set forth.

88,995.—H. Uhry, New York, N. Y.—*Stair-Rod.*—April 13, 1869.

Claim.—The improved stair-rod A, having its end-caps B fastened thereto, and yet capable of being turned freely thereon, as described, in combination with the screw-eyes T, and pins P, constructed and arranged as shown and described, and for the purpose herein set forth.

88,996.—Thomas Welham, Philadelphia, Pa.—*Ring and Traveler for Spinning.*—April 13, 1869.

Claim.—1. The combination of the slotted rings *f f*, the adjustable arms *k k*, and the pulleys *g*, with the springs *m*, substantially as described.

2. The box-ring and pulley-travelers, constructed as herein described, and for the purpose set forth.

3. The combination of the box-rings and pulley-travelers with drawing and paying-out rollers of a spinning-machine.

88,997.—Thomas Welham, Philadelphia, Pa.—*Mechanism for Mixing Soapstone with Cotton being Carded.*—April 13, 1869.

Claim.—1. The combination of the sieve with a carding-machine, for the purpose set forth.

2. The driving-rod C, and its connections, in combination with a sieve and a carding-machine, as shown and described.

88,998.—George Wharton, Jerseyville, Ill.—*Gang-Plow.*—April 13, 1869.

Claim.—The parts described, consisting substantially of the lever *c′*, arm C, link D, and catch E, when arranged and operating substantially as described and for the purpose set forth.

88,999.—John P. Whipple, Woonsocket, R. I.—*Sirup-Pitcher.*—April 13, 1869.

Claim. — A sirup-pot, constructed with a cup-shaped head, C, and neck B, and the hollow elastic sphere or bellows D, with the stopper *d* and the vent E, substantially as described.

89,000.—John Young, Amsterdam, N. Y.—*Washing-Machine.*—April 13, 1869.

Claim.—1. The levers C C, when provided with the pin *c* or projection *c′*, and arranged so as to be folded within the tub.

2. The bulk-head F, provided with the openings F′ at its ends, as and for the purpose described.

3. The combination of the wash-board B, having levers C and foot-piece B′, with the bulk-head F′, when constructed with perforations F situated at its end, as and for the purpose described.

89,001.—Joseph C. Curryer, Thorntown, Ind.—*Hand Corn-Sheller.*—April 13, 1869.

Claim.—1. The serrated bars B, constructed in the manner and for the purposes set forth.

2. The serrated longitudinal bar D, constructed substantially as and for the purpose specified.

3. The box, or chute, as shown, when used in combination with serrated bars B D, and curved cross-bars C.

89,002.—John F. Adams, Worcester, Mass.—*Gold-Leaf Condenser.*—April 20, 1869.

Claim.—As a new article of manufacture, a leaf-condenser, consisting of the two plates A and B, combined with the apron D, operated substantially as described, and for the purpose set forth.

89,003.—John P. Allen, Manchester, Mass.—*Railway-Carriage Wheel.*—April 20, 1869.

Claim.—In a wheel provided with an inelastic body and tire, and an elastic annulus disposed between and eccentric with the two, as set forth, the combination and arrangement of the annular pockets or grooves *a a* with the cap D and flange *f*, and with a tire, B, separate from the flange *f* and cap D, and made so as to encompass and fit directly to the elastic annulus C, and with the elastic annulus C extended into such pockets or grooves, in manner as specified.

89,004.—Joseph Arbeiter, East Hartford, Conn.—*Lawn-Mower.*—April 20, 1869.

Claim.—1. The sliding adjustable journal-boxes R, moving in curved slots, as described, when used in combination with the frame of a lawn-mower, resting on shoes at its forward end, and movable about the axle of the wheel A, and with a revolving cutter, substantially as described.

2. The revolving cutter, adjusted as described, in combination with the train of wheels A B C D, the whole arranged and operating substantially as specified.

89,005.—J. S. Atterbury and T. B. Atterbury, Pittsburgh, Pa.—*Manufacture of Glass-Ware.*—April 20, 1869.

Claim.—1. A mold for blowing ewer-mouthed glass vessels, so constructed that the axis of the neck or mouth of the mold shall be situate forward of the center or axial line of the main cavity, and over that part of the mold in which the ewer-mouth is formed.

2. A mold for forming ewer-mouthed glass vessels, furnished with a shoulder, *i*, and flaring blow-over recess, substantially as described, for the purposes set forth.

3. Blowing ewer-mouthed glass vessels in a mold, constructed substantially as hereinbefore described, and for the purposes set forth.

4. The movable points *n′*, entering the cavity of the mold, and operated substantially as described, and for the purposes set forth.

89,006.—Austin Bartlett, Chester, Mass.—*Saw-Sharpener.*—April 20, 1869.

Claim.—The arrangement of the slide-table B, moving on a plane inclined below the center of the grindstone-shaft, in combination with the grindstone A, the parts being constructed in the manner shown and for the purpose specified.

89,007.—Isaac N. Beals, North Bridgewater, Mass.—*Lasting Boot and Shoe.*—April 20, 1869.

Claim.—1. In combination with a lasting-strap, a flexible tongue, operating with the strap, to draw the edge of the vamp over the shank of the boot, substantially as described.

2. In combination with the strap and tongue, the spring *d*, substantially as and for the purpose set forth.

89,008.—Jacob H. Beam, Woodside, Ill.—*Corn-Marker.*—April 20, 1869.

Claim.—1. A corn-marker, constructed with the frame-work A, tongue B, revolving jointed axle C, markers F, standards E, stirrups D, uprights G, braces H H, scraper-arm L, scrapers M, and treadle N, all arranged substantially in the manner herein described, and for the purposes set forth.

2. The arrangement and combination of the uprights G G, braces H H, and metal collar and band I, substantially in the manner herein described, and for the purposes set forth.

89,009.—Hugh R. Bean, Marlborough, Mass., assignor to himself and Samuel N. Aldrich, same place.—*Shoe-Last.*—April 20, 1869.

Claim.—The dovetail grooved metallic last, as made, with the grooves to extend across and be covered by the metallic toe-plate, and to open through the toe of the last, in manner as set forth.

89,010.—E. Bigelow, Springfield, Mass.—*Ice-Chest for Soda-Apparatus and Refrigerators.*—April 20, 1869.

Claim.—Providing the metallic water-tight lining of ice-chests with an inner lining of sheet gutta-percha, or other equivalent gum, as herein described, and for the purposes set forth.

89,011.—Erastus B. Bigelow, Boston, Mass.—*Loom.*—April 20, 1869.

Claim.—1. The combination of mechanism, herein described, for elevating and depressing the jacquard machine, and retaining it in position, consisting of two loom-girths, which support the elevating and depressing mechanism, four cams, arranged in pairs on two shafts, on which the four feet of the jacquard machine rest, and a connecting-shaft and two sets of worms and gears, by which the cams are simultaneously operated, the two sets of cams, worms, and gears being opposite-handed, substantially as and for the purpose specified.

2. The combination of mechanism, herein described, for operating the trap-boards and pattern-cylinder of the jacquard machine, consisting of a cam-shaft, placed transversely to the trap-boards, and receiving its motion from a loom-shaft, as herein specified, the cams on said cam-shaft, by which the trap-boards and pattern-cylinder are actuated, (the number of the trap-board cams varying according to the number of the trap-boards employed,) and the upright levers, and the connecting-straps, or their equivalents, arranged horizontally, or nearly so, as described, by which the action of the cams is imparted to the trap-boards and pattern-cylinder, as described.

3. In combination with the cam-shaft, for operating the trap-boards of the jacquard machine, placed transversely thereto, as herein described, the cams for operating the journals, (the number of the cams varying according to the number of journals employed,) and the levers and oscillating shafts by which the action of the cams is imparted to the journals, substantially as specified; and

4. In looms, having their shuttle-boxes detached from the lay, the combination of mechanism herein described, for operating a series of shuttle-boxes, or holders, on one or both sides of the loom, consisting of a shaft, from which the shuttle-boxes, or holders, are suspended, two ratchet-wheels, with teeth of opposite faces, affixed thereto, two vibrating lever-arms and pawls, which vibrate in opposite directions, and the cords and balance-levers, which convey the governing-action of the jacquard machine to the pawls, substantially as specified.

89,012.—Erastus B. Bigelow, Boston, Mass.—*Stopping-Mechanism for Power-Looms.*—April 20, 1869.

Claim.—1. The combination of mechanism, herein described, for arresting the movement of the loom, when the shuttle fails to enter its box, consisting of a protecting-rod, disconnected from the lay, but connected with the loom-shipper, and operated by a cam, as herein described, and a stop-lever, which is caused to engage with a fixed stop on a moving part of the loom, substantially as described.

2. The stop-lever for arresting the movement of the loom, in combination with a reversing-shipper, by which the reversing-mechanism is brought into action to reverse the motion of the loom, when the reversing-shipper is employed to release the stop-lever, substantially as described.

3. An elastic cushion, or spring, in combination with the stop-lever, as herein described, when said stop-lever is brought into action by a protecting-rod and withdrawn by a reversing-shipper, substantially as specified.

89,013.—Robert Blake, Scranton, Pa.—*Box-Opener.*—April 20, 1869.

Claim.—A tool for opening boxes, and for other purposes, constructed substantially as herein described.

89,014.—John T. Blois, Jonesville, Mich.—*Railway-Car Brake.*—April 20, 1869.

Claim.—1. The device for connecting the brakes of the different cars of a railroad-train to each other, consisting of paws *j k*, dogs *i h*, rods *g*, chains *g'*, *m*, *n*, and *e*, drum G, ratchet-wheel *l*, and brake-staff F, substantially as and for the purposes set forth.

2. In combination with the above, the rod and chain *f*, lever *b*, rod *a*, and spring *c*, substantially as and for the purposes described.

3. The device for removing the brakes from the wheels of the cars upon a railroad-train, from the locomotive, consisting of the jointed rack-bars H I, connected to each other by hinged bars K, toothed wheels J and *d*, racks *p* and *q*, springs *w*, and pins *v*, substantially as described.

4. The device for disconnecting the bars K from the toothed wheel *d*, on the brake-staves, consisting of grooves *r r'*, partition *s*, springs *t t'*, and pin *u*, substantially as described.

5. The additional iron staff Z, provided with spring *x*, substantially as and for the purposes set forth.

89,015.—Alonzo T. Boon, Galesburg, Ill.—*Steering-Apparatus.*—April 20, 1869; antedated April 5, 1869.

Claim.—1. The combination of the two half-wheel plates C' C, and pin G, substantially in the manner and for the purpose as herein set forth.

2. The combination of the spring F with the plates C' C, and pin, substantially in the manner and or the purpose as herein set forth.

89,016.—Andrew J. Braley, Berlin, Vt.—*Sled-Brake.*—April 20, 1869.

Claim.—The combination of the movable roll A, with the slots B B, the brakes C C, the brake-bars K K, and the hooks I I, when constructed and operated substantially as herein described, and for the purposes specified.

89,017.—H. Beaumont Briggs, Clarksburg, assignor to James Hunter and James E. Hunter, Adams, Mass., for one-half of said invention.—*Spinning-Frame.*—April 20, 1869.

Claim.—1. In combination with the movable yarn-delivering rollers and the continuously-revolving spindle, the lifting-bar, for lifting the yarn from the point of the spindle prior to winding the same on to the spindle, substantially as described.

2. The lifting-bar, in combination with the continuously-revolving spindle, for the purpose of lifting the yarn off from the point of the spindle, and holding it up while it is receiving the twist and being wound on to the spindle, without reducing the speed thereof.

89,018.—J. W. Brooks, Boston, Mass.—*Fastening for Stays of Corsets.*—April 20, 1869.

Claim.—The device, herein described and represented, for fastening the whalebone, or stiffener in

corsets, and other garments, viz, a metallic clip, having two or more points, which pass into or through two or more openings in the stiffener, and clinched therein or thereto, as herein described and represented.

89,019.—ADDISON P. BROWN, Worcester, Mass.—*File-Holder.*—April 20, 1869; antedated April 10, 1869.

Claim.—A file-holder, consisting of the jaws B and B′, screws D and E, and shank A, constructed and arranged substantially as described.

89,020.—JOHN H. BROWN, Pittsgrove, N. J., assignor to himself and JOHN B. HARRIS, same place.—*Pump-Valve.*—April 20, 1869.

Claim.—In combination with a well-pump, A B, and the platform C D, of the well, the lever e', together with its pawl-catch e''', the same being applied, arranged, and operated as and for the purpose shown and described.

89,021.—GEORGE BUCHANAN, Washington, Pa.—*Device for Steering Sleds.*—April 20, 1869.

Claim.—The combination and arrangement of the cutter, a T-shaped lever, *b*, and rein *e*, substantially as and for the purpose set forth.

89,022.—EBENEZER BUEL, Silver Creek, N. Y.—*Press for Baling Hay and Cotton.*—April 20, 1869.

Claim.—1. The angular shaft K and the chain L, when constructed and combined in the manner specified.

2. The levers F, with their hooks G and H, which form the device for locking the doors, or lids, when made and used substantially as described.

3. In combination with the box A and follower B, and the friction-rollers *e e* and *d d*, and the ratchets *e*, and the pawl *f*, and the lever M, the double-fusee wheel N.

89,023.—HENRY C. BULKLEY and AMOS SHEPARD, New Britain, Conn., assignors to the UNION MANUFACTURING COMPANY, same place.—*Pump-Valve.*—April 20, 1869.

Claim.—A pump-valve, C, and valve-seat D, secured in their places, by means of the end of the cylinder B, resting on and in direct contact with both the valve C and valve-seat D, all as and for the purpose substantially as required.

89,024.—LEGRAND S. CARPENTER, East Hampton, Conn.—*Gong-Bell.*—April 20, 1869.

Claim.—The combination and arrangement of the lever C D, the hammer-wire F, and the bridge H, to form a double-striking mechanism, substantially as herein described, and in combination with the lever, the hammer-wire, and bridge, the regulating stop-wire I, and the aperture *h*, for the purpose of regulating the position of the hammer, substantially as herein described.

89,025.—WILLIAM T. CARROLL, Medway, Mass.—*Ring for Spinning-Frame.*—April 20, 1869.

Claim.—The combination of the ring made with two races, as described, the socketed ring-rail and the clamp-screws for holding said ring to the rail, the whole being constructed and arranged as and for the purposes shown and specified.

89,026.—HENRY J. CASE, Auburn, N. Y.—*Mechanical Movement.*—April 20, 1869.

Claim.—1. The combination of the pedals, the rock-shafts, the vibrating arms, the links, and the cranks, all arranged and operating as described, with the driving-wheel.

2. The combination, as set forth, with the oscillating pendulum pedal of the rocking foot-rest.

89,027.—LEVI R. COMSTOCK, Keokuk, Iowa.—*Railroad-Car Stove.*—April 20, 1869.

Claim.—The construction of the oval-shaped stove A, with the draught-box D, cold-air chamber H, cold-air pipes J, hot-air chamber K, heated-air pipes L, N, and R, when arranged and combined, as herein described, and for the purpose set forth.

89,028.—CATHARINE F. CORBETT, Boston, Mass.—*Fluting-Machine.*—April 20, 1869.

Claim.—In a fluting-machine, the combination and arrangement of the hinged rods H H H, &c., the arms C′ D′, and the pressure-bar E F, substantially as described, and for the purpose set forth.

89,029.—EDWARD CRANDAL, Northville, Mich.—*Horse-Rake.*—April 20, 1869.

Claim.—The hay-rake described, having the main frame, to which are attached the rake-frame *h*, as described, head *h*, rods *x*, and lever *w*, the whole being arranged and operated as described.

89,030.—J. W. CULBERTSON, Richmond, Ind.—*Catarrhal Syringe.*—April 20, 1869.

Claim.—The enlarged oval nozzle A, having a central perforation for the jet, and provided with a concavity at the end, as and for the purpose set forth.

89,031.—JOHN DANNER, Canton, Ohio.—*Shelf, Coat-Rack, and Clothes-Frame.*—April 20, 1869.

Claim.—The arms C, and their metallic end-pieces *e*, with the bar B, made square or with ribs *a* and spaces *b*, in combination with a shelf, and with brackets for sustaining them, substantially as herein described and represented.

89,032.—JAMES DEMPSEY, Geneva, N. Y., assignor to himself and NATHAN LEVY, same place.—*Thill-Coupling.*—April 20, 1869.

Claim.—The combination of the thill-iron D, having the rubber bearings *g g*, with the socket C, provided with the heads *a a* and narrow slots *b b*, the whole arranged as described, and operating in the manner and for the purpose specified.

89,033.—ARNOLD DOLL, Cleveland, Ohio.—*Sad-Iron Heater.*—April 20, 1869.

Claim.—1. The combination of the perforated cover H and standards B′, in the manner as set forth.

2. The ribs P, in combination with the standards B′ and handle C′, substantially as and for the purpose specified.

89,034.—JOSIAH FOSTER, Sandwich, Mass.—*Safety-Pocket.*—April 20, 1869.

Claim.—1. In combination with the lid *d*, the spring-catch *f*, lip *h*, and locking-ring *k*, substantially as described.

2. In combination with the case *b* and its lid *d*, the hinged front flaps, or a flap, *l*, substantially as described.

89,035.—GEORGE C. GAGE, Waterford, N. Y.—*Copying-Press.*—April 20, 1869; antedated April 9, 1869.

Claim.—The combination and arrangement of the nut D and screw E, together with the platen-holding device *g h i j*, all constructed substantially as shown, and operating as set forth.

89,036.—ALFRED C. GARRATT, Boston, Mass.—*Voltaic Battery.*—April 20, 1869.

Claim.—In a voltaic pile, constructed substantially as described, slotted bars, constructed as and for the purposes set forth.

89,037.—GEORGE S. GRANT, Providence, R. I., assignor to ALBERT O. BAKER, same place.—*Snap for Bracelets, &c.*—April 20, 1869.

Claim.—The application of mortises or slots, or their equivalents, to the post of the snap, for the purpose of locking the snap, substantially as herein described.

89,038.—OLIVER E. GREENE, Lawrence, Mass.—*Lubricating Sleeve for Loose Pulleys.*—April 20, 1869.

Claim.—1. A lubricating cylinder or sleeve, arranged between the shaft or axle and the hub of the pulley or wheel, and fitted to turn freely on the shaft and in the hub, substantially as described.

2. Perforating the cylinder or sleeve, arranged to turn freely between the shaft or axle and the hub of the wheel or pulley, substantially as described, for the purpose set forth.

89,039.—Richard Guinn, Baltimore, Md.—*Medicine for Purifying the Blood.*—April 20, 1869.

Claim.—The combination of the ingredients in the quantities or proportions and for the purposes substantially as set forth.

89,040.—William Stuart Guinness, London, England, assignor to himself and Augustus Gardiner Seaman, same place.—*Sewing-Machine.*—April 20, 1869.

Claim.—1. The combination in a sewing-machine of a vertically reciprocating needle, a horizontally vibrating shuttle, and a vibrating take-up, all constructed substantially as described, and driven by a pitman from a common center, *c'*, as and for the purposes set forth.

2. The combination with the driving-shaft of the pitman *c*, driving the needle-bar, the link-rod *f*, the bell crank lever A, the pitman *h*, and the shuttle-slide, all arranged and operating as set forth.

3. The combination, substantially as set forth, of the feed-bar, supported by the throat-plate, with the inclines on the shuttle-holder, for the purposes specified.

4. The combination of the take-up and tension-spring with the links *f h*, the bell-crank lever A, and the shuttle-carrier, the combination being and operating substantially as set forth.

5. A reciprocating shuttle, the shell of which is provided with longitudinal ribs, to prevent the thread from coming in contact with the body of the shuttle.

89,041.—William Hall, North Adams, Mass.—*Mop-Wringer.*—April 20, 1869.

Claim.—In combination with the segmental press-plate B, the bent lever D, pivoted arm C', rod C, slotted guides E, draw-rods *b*, all arranged and operating substantially as and for the purposes set forth.

89,042.—Jamison H. Harrison, Boston, Mass.—*Saw-Sharpening Device.*—April 20, 1869.

Claim.—The saw-sharpening wheels C and C', arranged to operate as described, and for the purpose set forth.

89,043.—Myron E. Haskell, Lowell, Mass.—*Shuttle-Binder for Looms.*—April 20, 1869.

Claim.—The finger *h* and spring *i*, in combination with the binder *g*, substantially as and for the purposes herein described.

89,044.—Nehemiah L. Hatch, Cape Elizabeth, Me.—*Stove-Tongs.*—April 20, 1869.

Claim.—The improved stove-tongs, as herein described, combining the different parts, their form and arrangement, as herein set forth, to be operated by a single hand, as and for the purposes specified.

89,045.—John Hilts, Detroit, Mich.—*Table-Leaf Support.*—April 20, 1869.

Claim.—The circular bar C, hinged or otherwise secured to the plate K, or to the under side of the leaf of a table, as herein set forth, in combination with the loop D and latch F, substantially in the manner and for the purposes herein set forth and described.

89,046.—Stoughton B. Holden, Woburn, assignor to himself and Luther L. Holden, Boston, Mass.—*Churn.*—April 20, 1869.

Claim.—The cone-shaped bottom C, with corresponding form of dasher B', perforated as shown at S', in combination with valve E and tube *d*, substantially as shown and described.

89,047.—James A. House and William B. Snyder, Bridgeport, Conn.—*Velocipede.*—April 20, 1869.

Claim.—1. The combination, in a velocipede, of the steering-wheel, the steering-handle, and the brake, all constructed, arranged, and operating as set forth.

2. The combination, with the velocipede, of the sectional wheels, adjustable at equal distances from the center of the axle, by studs inserted in the axle, as set forth.

89,048.—Daniel Hussey, Nashua, N. H.—*Machine for Finishing Cloth.*—April 20, 1869.

Claim.—The combination and arrangement of two supporting-rollers G J, with the dampening-roller C, and trough D, the pressure-roller K, provided with journals, arranged in grooves *d'*, and with the cloth-roller I, unprovided with journals, the whole being operated substantially as specified, so that the cloth shall travel faster than the surface of the said dampening-roll on which it runs.

89,049.—A. B. Jones, Wilmington, N. C.—*Material for Journals and Bearings, and for Lubricating.*—April 20, 1869.

Claim.—The employment, for lubricating purposes, of vegetable fiber, disintegrated by the explosive force of steam, in combination with oil, or other suitable lubricant, substantially as herein specified.

89,050.—John Jordan, East Windsor, assignor to himself and C. N. Harlow, West Cummingtou, Mass.—*Turbine Water-Wheel.*—April 20, 1869; antedated April 15, 1869.

Claim.—1. The combination of the frame E, having the adjustable racks F, with the water-gates C, whereby the latter may be opened or closed simultaneously, substantially as described and shown.

2. The combination of the shafts I, having gear H and pinions K, with the circular racks J upon the water-gates C, substantially as shown.

89,051.—Robert W. Lamb, Wilmington, N. C., assignor to himself and A. Paul Repiton, Jr., same place.—*Still for Turpentine and other Substances.*—April 20, 1869.

Claim.—1. The application of superheated steam to the distillation of spirits of turpentine, as herein described.

2. The perforated pipe G, in combination with the coil I I, for the purpose of diffusing the superheated steam through the charge, as set forth.

3. The coil of pipe, arranged around the sides of the still, substantially as described and for the purpose set forth.

4. The steam-jacket, in combination with the still, as and for the purpose described.

89,052.—William St. George Little, Boston, Mass.—*Ladies' Work-Table.*—April 20, 1869.

Claim.—The combination and arrangement of the divided rotary drum D, the drawers *f f*, and the writing-tablet C, with the case A, and its cover, made in two parts, *a b*, hinged together, as set forth, the said case being applied to a stand, B, as described.

89,053.—Robert O. Lowrey, Salem, N. Y.—*Mode of Rendering Brick, Stone, Clay, Plaster, &c., Water-Repellent.*—April 20, 1869; antedated March 23, 1869.

Claim.—The method of rendering brick, artificial stone, mortar, plaster, cement, concrete, and similar articles, water-repellent, by the addition or use of a lime and grease compound, substantially as herein described.

89,054.—Robert O. Lowrey, Salem, N. Y.—*Mode of Rendering Fibrous Fabrics Water-Repellent.*—April 20, 1869; antedated March 23, 1869.

Claim.—The method of rendering fibrous fabrics, and similar articles, water-repellent, by the addition or use of a lime and grease compound, substantially as herein described.

89,055.—R. O. Lowrey, Salem, N. Y.—*Manufacture of Water-Proof and Water-Repellent.*—April 20, 1869; antedated March 23, 1869.

Claim.—A water-proof repellent fluid, consisting of an artificial gum, made as herein described, in combination with benzole, benzine, or similar volatile liquids, substantially as herein set forth.

89,056.—R. O. Lowrey, Salem, N. Y.—*Water-Proof Compound.*—April 20, 1869; antedated March 23, 1869.

Claim.—A water-proof compound, made of lime, grease, oil, or fatty substances, when combined substantially as herein described.

89,057.—A. C. LUTHER, Canton, Ohio.—*Harness-Buckle.* April 20, 1869.

Claim.—1. A push-bar or knob, B, when used in combination with the pivoted tongue A, substantially as and for the purpose specified.

2. The peculiar goose-necked form of the end *b*, of the tongue A, when said tongue is used in combination with a push-bar or knob, B, substantially as and for the purpose specified.

3. The tongue-blank A B, constructed of a single piece of metal, having the flattened end or push-bar B formed thereon, and with or without the goose-necked form of the end *b*, substantially as and for the purpose specified.

4. The harness-buckle herein described, composed of the frame D C D F, cross-bar E, and tongue A, with push-bar B, the several parts being constructed, combined, and arranged substantially as and for the purpose herein described.

89,058.—CHARLES LYNE, Padstow, England.—*Folding Perambulator.*—April 20, 1869; antedated Arril 6, 1869.

Claim.—The within-described folding perambulator, arranged, constructed, and operating substantially as specified.

89,059.—SAMUEL MASON and EDWARD BINNS, Beaver Falls, Pa.—*Attaching Handles to Cutlery.*—April 20, 1869.

Claim.—Attaching articles of cutlery, having flat and round tangs, to recessed, bored, and shouldered handles, by passing a rivet through the lips of the handle and the flat part of the tang, and covering the ends of the rivet, whether headed or headless, as well as the lips and tang, by casting a bolster thereon, substantially in the manner hereinbefore set forth.

89,060.—SYLVESTER G. MASON, Rochester, N. Y.—*Pump-Piston.*—April 20, 1869; antedated April 15, 1869.

Claim.—The arrangement of the segmental rings *g g*, with holes *i i*, the pins, or bearings *h h*, and spaces *o o*, in combination with a piston having openings *d d*, and valves C C, substantially as and for the purpose herein set forth.

89,061.—ALPINE MCLEAN, Boston, Mass.—*Car-Coupling.*—April 20, 1869.

Claim.—A car-coupling, having a draught-bar, *d*, in which there is a shackle-pin, *g*, operated by a spring, as described, arranged with the incline *f*, and provided with the spring-follower *i*, and the spring-jaws *c*, substantially as described.

89,062.—WILLIAM MOREHOUSE, Buffalo, N. Y.—*Machine for Punching, Shearing, and Straightening Fish-Bars.*—April 20, 1869.

Claim.—1. The frame B, constructed with lugs *a*, and offsets *a'*, for receiving screw-rods D, and confining-nuts *b b'*, and provided with bearings, for an eccentric carrying-shaft P, and with a reciprocating punch-carrying-block R, which has a chambered punch-head J' attached to it, in combination with the chambered section C, furnished with fish-bar-forming die-blocks *e e*, all being constructed and adapted to operate substantially as and for the purposes described.

2. The arrangement herein described and shown, of the punch-carrying head J J', furnished with a series of chambers, which are in communication with one another, and which separately conduct liquid to the heated parts of the punches and dies, the follower-block R, the flexible pipe V, and the dies *e e*, all constructed substantially as described.

3. The arrangement of shear or cutter *n*, stationary cutter 2, straightener W, grooved block *e'* and die-blocks *e*, and punches *c*, substantially as and for the purposes described.

4. In combination with the arrangement of the devices in the foregoing clause, the adjustable gauge-plate F, substantially as described.

5. The improved machine, herein described, for punching, straightening, ganging, and shearing concavo-convex fish-bars, having its parts constructed, combined, arranged, and operated substantially as described.

89,063.—ISAAC MORSE, Henniker, assignor to himself and CHARLES H. THORNDIKE, Weare, N. H.—*Water-Wheel.*—April 20, 1869.

Claim.—The water-wheel, having the guide *b* projecting forward into the mouth of the bucket, toward the guide *c*, at the back of the bucket, substantially as set forth.

89,064.—WILLIAM MUIR, Montreal, Canada.—*Sewing-Machine.*—April 20, 1869.

Claim.—1. The cams C C, constructed as described, in combination with the shaft J, and the needle-bar D, and shuttle-frame F, arranged respectively with tension devices and shuttle-guides, all operating as described for the purpose specified.

2. The shuttle-frame F, with the rollers *e*, in combination with the ways *f f*, for the purpose of facilitating the movement of the shuttle-frames, as set forth.

3. The feed-rollers L L', in combination with the pinion *ux*, keyed on the shaft V, the drum W, and ratchet-wheel X, placed loosely on said shaft, and the multiple pawl *xx*, operated from the driving-shaft B, through the media of the cam Z, yoke Y, all arranged substantially as shown and described.

4. The combination, with the yoke Y, of the bar B', of taper-form at its upper end, and operated by the pattern-cam R, for the purpose of regulating the feed-movement of the rollers L L', substantially as set forth.

5. The cam Q, arm S, bar T, and rod U, operated from the driving-shaft B, through the media of the cam O, yoke P, pawl *m*x, on radius bar *k*x, substantially as shown and described, for giving lateral movement to framing G.

89,065.—ANDREW MURRAY, Lowell, Mass., assignor to LOWELL MANUFACTURING COMPANY, same place.—*Power-Loom for Weaving Ingrain-Carpets.*—April 20, 1869.

Claim.—1. The combination of the vibrating connecting-bars with the pendulous frames, herein described, when said vibrating connecting-bars are pivoted or hinge-jointed to the pendulous frames, and communicate thereto the vibratory action of a cam or cams, substantially as specified.

2. In combination with each of the pendulous frames, a cam, by which said pendulous frames are severally operated, substantially as described.

3. The combination of mechanism herein described, for uniting and vibrating the two pendulous frames, consisting of a revolving shaft, extending across the loom from side to side, two cams, carried by said shaft, and vibrating connecting-bars, which severally communicate the vibratory action of said cams to the pendulous frames, substantially as specified.

89,066.—BYRON W. NICHOLS, Canton, Ohio, assignor to himself and WILLIAM R. RAYNOLDS, Jr., same place.—*Jam-Nut.*—April 20, 1869.

Claim.—The improved jam-nut herein described, composed of the nut B, with the conical hole E, and the conical washer C, with slots D D, the several parts being constructed and arranged substantially as and for the purpose herein described.

89,067.—OLE OSMUNDSON, Mission, Ill.—*Bee-Hive.*—April 20, 1869.

Claim.—The combination of hopper A, aperture B, sieve *c*, alighting-board D, and apertures *f g h i*, when constructed and arranged substantially in the manner and for the purpose herein set forth.

89,068.—THOMAS F. PALM, Toledo, Ohio, assignor to himself and L. J. BLIVEN, same place.—*Eaves-Trough Suspender.*—April 20, 1869.

Claim.—The arrangement of the metal strap or loop B, and the metal clamp or clasp A, applied to the trough, or roof, in the manner and for the purposes herein specified.

89,069.—GEORGE T. PARRY, Philadelphia, Pa.—*Velocipede.*—April 20, 1869.

Claim.—1. The steering apparatus, composed of the projection C, terminating in the horizontal cross-piece D, the cog-system *a*, *b b*, the horizontal arms *c c*, the vibrating-levers E E, the slides F F, and the

tiller M, or the equivalent of any of the foregoing constituent parts, arranged, constructed, and operating in the manner and for the purpose substantially as described.

2. The combination of the steering apparatus, the central frame, and the running-gear, arranged, constructed, and operated in the manner and for the purposes substantially as described, and forming a locomotive-machine, propelled, guided, and controlled by pedal or manual power.

89,070.—Denison Chauncy Pierce, Clayton, N. Y.—*Railway-Rail.*—April 20, 1869.

Claim.—As an improvement upon my patent, granted March 27, 1866, No. 53,479, the construction of the main or base rail, when the same is provided with broad lateral flanges and a lower vertical flange, and when the central upper portion of the rail and lower vertical flange, either or both, are made hollow, and the rail is combined with a suitable cap and interposed strips, substantially as and for the purposes set forth.

89,071.—Robert Pilling, Waterford, N. Y.—*Stop-Valve for Steam and other Enginery.*—April 20, 1869.

Claim.—The arrangement of the toggle-joint levers D D, between and with reference to the valves C and C′, fulcrum-stops I, and actuating screw-stem or spindle E, substantially as shown and set forth.

89,072.—Archibald Putnam, Owego, N. Y.—*Seeding-Machine.*—April 20, 1869.

Claim.—1. The face-plate E, provided with lugs or ears *m m m*, for the purpose of fastening to the outside of the grain-box, when used in combination with a vertical distributing-wheel, substantially as described.

2. The manner of constructing the distributing-wheel D, with a flange on its periphery, and indentations in or irregularities upon the bottom of its circular channel or recess, in combination with a round, grooved rod, for giving it motion, substantially as herein set forth.

3. The employment of a clutch, *n*, grooved sliding-rod O, (or their equivalent,) and incline lever *d*, divided at the clutch *n*, for the purpose of stopping and starting the feed-runs simultaneous with the lifting or lowering of the hoes or teeth, substantially as described.

89,073.—David Quinn, Chicago, Ill.—*Submarine Pump-Dredge.*—April 20, 1869.

Claim.—The guides E, in combination with the quadrant F, pipe C, and pump B, when the same are used in the manner and for the purposes herein specified.

89,074.—Tryon Reakirt, Philadelphia, Pa.—*Manufacture of White Lead.*—April 20, 1869.

Claim.—1. Subjecting metallic lead, in a closed chamber, heated to a proper temperature by confined steam, or other heating apparatus, simultaneously to the action of free steam, or its equivalent, to start the oxidation of the lead, and then to the action of acetic acid, in the form of a spray, or shower, and of carbonic-acid gas, diffused through the chamber, substantially as described.

2. The use of chlorine gas and solution of caustic soda, substantially as described as and for the purpose specified.

3. The peculiar application of the carbonic-acid gas, by injecting it into the chamber, through pipes passing through either the top or bottom thereof, or through both, and thus securing a more perfect diffusion of the gas throughout the chamber, and bringing it into more perfect contact with the lead, substantially as described.

4. The use of carbonic acid and chlorine gases, or chloride of soda, or their equivalents, in and during the process of washing the lead, substantially as described, as and for the purpose specified.

5. Purifying carbonic acid gas arising from the combustion of fuel, by passing the same through water, holding in solution hypochlorous or chloric acid, or the other substances previously named, substantially as described, as and for the purpose specified.

88,075.—William G. Reed, Chelsea, Mass.—*Chimney.*—April 20, 1869.

Claim.—A chimney-building block, provided with smoke and ventilating-flues, substantially as and for the purpose described.

89,076.—John Reichenbach, Allegheny City, Pa., assignor to himself, John Heath, and William R. Fitzsimons, same place.—*Composition for Making Chilled Castings.*—April 20, 1869.

Claim.—As a coating for the chill in making chilled castings, a mixture of gum-shellac, alcohol, and lamp-black, in the proportions and used substantially as stated.

89,077.—Hiram A. Reid, Beaver Dam, Wis.—*Bag-Holder and Truck Combined.*—April 20, 1869.

Claim.—In combination with the handles E E, spreaders F F, supported in place by a single or double rod K, and held apart by a coiled spring, I, or its equivalent, a curved ratch, G, pivoted or hinged in the handles E E, to engage on pin M, all arranged to operate with the truck, substantially as herein set forth.

89,078.—Elisha B. Rich, South Boston, Mass.—*Automatic Feed-Crib for Stable-Stalls, &c.*—April 20. 1869.

Claim.—1. The combination and arrangement, with a feed-crib for stalls, of an arrangement of mechanism susceptible of automatic operation, substantially as described, for the purpose specified.

2. The extended shaft F, with cam N, in combination with the devices of the first clause of claim, substantially as and for the purpose specified.

89,079.—Thomas C. Robinson, Boston, Mass., assignor to himself and George H. Sanborn.—*Railroad-Chair.*—April 20, 1869.

Claim.—1. The combination of the plate P, clamps C C′, braces B B′, and wedge W, all constructed and operating substantially in the manner and for the purpose set forth.

2. In combination with the slotted wedge W and plate P, the lock L, arranged and operating as described.

3. A railroad-chair, constructed substantially as described, by which the rails are held most immovably, and most directly in line with each other, when subjected to the greatest superincumbent weight, as specified.

89,080.—George W. Rogers, Philadelphia, Pa.—*Rotary Pump.*—April 20, 1869; antedated April 3, 1869.

Claim.—The segmental piston S P, in combination with the receiving-valves C C^1, partition P T, circular flanges C F, and delivery-valves C^2 C^3, the whole arranged and operating substantially in the manner described.

89,081.—Mark M. Rowell, Brandon, Wis.—*Automatic Seed-Separator.*—April 20, 1869.

Claim.—1. The combination of the shoe G, trough F, and wheel J, constructed and arranged as and for the purpose set forth.

2. The shoe G, screens H H, and stretcher-rod M, the latter being arranged to strain the screens, as and for the purpose set forth.

3. The trough F, hinged to the cross-piece B, in combination with the shoe G, frame D C, straps E E, legs A, wheel J, depending supports *b*, set-screw R, and cross-piece B, as and for the purpose set forth.

89,082.—Alonzo Saltsman and Clark H. Charlesworth, Avoca, and R. F. Osgood, Rochester, N. Y.; said Osgood assigns his right to said Saltsman and Charlesworth.—*Harvester.*—April 20, 1869.

Claim.—1. The arrangement of the rectangular lever-frame, G H, I I, pivoted at *c h*, and inclosing the cam-wheel C, in such a manner as to divide the strain on both sides of the center of motion of said frame, as herein set forth.

2. In combination with the rectangular lever-frame G H, I I, and the cam-wheel C, the adjustable teeth *d d*, for gauging the stroke of the sickle, the

whole arranged as described, and operating in the manner and for the purpose specified.

89,083.—CHARLES G. SARGENT, Westford, Mass.—*Cotton-Gin.*—April 20, 1869.

Claim.—1. The guard-plate and guard-roller, arranged substantially as described, in combination with the cleaning-cylinder, when constructed as to its surface, substantially in the manner set forth.

2. The ginning or cleaning cylinder, having its surface constructed substantially as described, in combination with a guard-plate or roller for retarding or knocking off seeds or burrs for ginning purposes.

3. A raw-hide or partially elastic surfaced guard-roller, arranged to operate in combination with a cleaning-cylinder in a machine for cleaning fiber, when the surfaces of the two revolve one with and the other against the feeding-direction of the fiber, substantially as described.

89,084.—ARTHUR SCHÄFFER, Dubuque, Iowa.—*Music-Rack.*—April 20, 1869.

Claim.—1. The construction of the base of a portable rack, of right-angle strips A A, united by pivots to a central standard, in combination with hinged pieces C C and pins *i i*, arranged substantially as described.

2. The slotted standard B, having pivoted in its slot the perforated piece D and prop E, and having pivoted to its ends the pieces C C and A A, substantially as described.

89,085.—CARL SCHARFFE, Cleveland, Ohio, assignor to WILLIAM G. WILSON, same place.—*Gathering-Attachment for Sewing-Machine.*—April 20, 1869.

Claim.—The combination of the rod B, adjusting-screw D, feeder C, lever E, connecting-rod or arm F, and plate A, the same being constructed and arranged to operate substantially as described, and for the purpose set forth.

89,086.—PHILANDER SHAW, Boston, Mass.—*Street-Car.*—April 20, 1869.

Claim.—In a car or other vehicle, a series of suspended seats, arranged to operate substantially as described, and for the purpose set forth.

89,087.—JOSEPH SHIRK and ISAAC W. MARTIN, East Earl Township, Pa.—*Boiler-Feeder.*—April 20, 1869.

Claim.—The flanged stuffing-plates G, in combination with the plunger, or piston F, cylinder A B, and shoulders *s*, constructed and arranged as described.

89,088.—DEXTER SMITH and J. W. STORRS, Springfield, Mass., assignors to the WESSON FIRE-ARMS COMPANY, same place.—*Cartridge.*—April 20, 1869.

Claim.—1. The construction of the paper shell with a solid butt of paper, C, forming the nut for the screw A of the metallic head B, substantially in the manner herein described.

2. The combination and arrangement of the head B and paper shell C, the parts being constructed substantially as herein described.

89,089.—JOHN F. SPAULDING, Rutland, Vt.—*Car-Coupling.*—April 20, 1869.

Claim.—The combination and arrangement of the ear E with the draw-bar, its sliding bunter B, and the operative spring, C, thereof, the whole being substantially as described.

89,090.—CHARLES A. STEBBINS, Springfield, Mass.—*Gas-Holder.*—April 20, 1869.

Claim.—1. The construction of a gasometer in such a manner that an inner body of water serves for purifying the gas before reaching the receiver, said inner body of water being kept from contact with the outer body of water forming the filling for the main tank, which filling remains pure, substantially as shown.

2. The arrangement of the tank C, pipes *a* and *b*, tank B, and cover A, substantially in the manner and for the purpose herein set forth.

89,091.—GEORGE P. SWEEZY, Riverhead, N. Y.—*Device for Measuring, Laying Out, and Cutting Garments.*—April 20, 1869.

Claim.—1. In combination with the two arms *n' n*, adjustable with the horizontal piece *g*, and capable of being moved toward or from each other simultaneously, and by gearing the fixed or central measuring-tape V, as and for the purpose described and represented.

2. In combination with the arms *n' n*, adjustable vertically and horizontally, the arms *p* and *t*, operating in connection with them, as and for the purpose set forth.

3. In combination with the shifting-arms and the centrally-fixed measuring-tape V the movable tape Z, for measuring from the three points, A, B, and D, as shown and represented.

89,092.—CHARLES A. S. TEMPLE, Greenwood Village, assignor to himself and STEPHEN E. TEMPLE, Boston, Mass.—*Safety-Switch.*—April 20, 1869.

Claim.—The combination and arrangement of the two switch-rails M M, and their locking-lever latching mechanisms, with the two switch-plates P P′, provided with a spring or springs, and the tongues R S R′ S′, as described, the whole being constructed and arranged with and so as to operate with the main and turn-out tracks of a railway, substantially in manner specified.

89,093.—ALEXANDER TITTMAN, Indianapolis, Ind., assignor to himself, WILLIAM H. TURNER, and DUNCAN HENDERSON.—*Sewing-Machine.*—April 20, 1869.

Claim.—1. So constructing a sewing-machine that it may be made to sew with two threads, forming either a shuttle or lock-stitch, or a double-loop stitch, at the pleasure of the operator, without taking from it any of its parts or adding to it other parts, substantially as described.

2. A sewing-machine for making the different stitches herein described, wherein are employed a circular bobbin, a turning hook, and a lower thread-carrying looper, the said elements being permanent fixtures to the machine at all times, substantially as and for the purpose described.

3. Providing for turning the hook 2 on arm N^2, out of the way of the looper, substantially as described, in order to admit of making a double-looped stitch.

4. The connecting-rod K, or its equivalent, for putting the looper out of motion and out of the way of the revolving hook, substantially as described.

5. The application of a latch-bolt, M, or its equivalent, to the connecting-rod K of the looper, substantially as and for the purpose described.

6. The self-acting tension device, shown in Fig. 6, consisting of a perforated lever spring, b^1, and pivoted block *y'*, combined with the devices *m' n'*, and operating substantially as described.

7. The double-crank arm N^2, provided with a hook, 2, or its equivalent, on one end, and also means for attaching a connecting-rod, L, to either end, substantially as and for the purposes described.

8. The organization of a sewing-machine for making the different stitches herein described, in such manner that both systems of mechanism provided for making these stitches are operated from the same driving-shaft without altering the cam which operates these devices for making both stitches, or the prime motors of the machine, the parts composing the machine being permanent attachments at all times, substantially as and for the purposes set forth.

9. Operating a hook which turns on an axis, and a vibrating or reciprocating thread-carrying looper in one and the same machine, but at different times, accordingly as one or the other of the aforementioned stitches is being formed from the same driving-shaft, these elements of the machine being permanent attachments thereof at all times, substantially as and for the purpose set forth.

10. The use of a turning-hook and a lower-thread-carrying looper in one sewing-machine, but at different times, accordingly as one or the other of the aforementioned stitches is being formed, these elements of the machine being at all times permanent parts thereof, substantially as and for the purpose described.

89,094.—Charles Toppan, Wakefield, Mass.—*Mode of Treating Paper and Other Fabrics to Render them Water-Proof.*—April 20, 1869.

Claim.—The treatment of paper, cloth, cork, sponge, leather, and other similar felted or textile fabrics and porous substances, or articles made therefrom, by the application thereto of paraffine in solution, substantially as herein described, for the purpose set forth.

89,095.—Charles Toppan, Wakefield, Mass.—*Water-Repellent Material.*—April 20, 1869.

Claim.—A repellent material, consisting of a paper, felted, or textile fabric or article, or porous substance, treated with paraffine in solution, substantially as herein described.

89,096.—J. H. Tyler, Martin, N. C.—*Horseshoe.*—April 20, 1869.

Claim.—The band C, with socket *c*, in combination with projection *a'*, of the toe-piece *a*, when secured substantially as described, and arranged in connection with a horseshoe of the described construction, as set forth.

89,097.—Calvin Wardwell, Painesville, Ohio.—*Auger.*—April 20, 1869.

Claim.—A boring-bit, having the small part A and large part B constructed together in one and the same tool, to operate in the manner and for the purpose described.

89,098.—George W. Warren, Alma, N. Y.—*Churn.*—April 20, 1869.

Claim.—1. The combination, with the stationary dasher C and rotating barrel B, of the vertically-sliding key *k*, the same being independent of the dasher, but preventing its rotation, and forming, with the dasher-shaft, the axis of the barrel, substantially as described.

2. The rotating barrel B, having the operating and steadying cog-rim 4 encircling its middle, in combination with the gearing 1 2 3, cord *c*, and weight *f*, when arranged and operating as described.

89,099.—Hiram Webster and Cyrus Powers, East Pembroke, N. Y.—*Potato-Digger.*—April 20, 1869.

Claim.—1. The arrangement, with the intermatching rake E and digger C, of the bolts and slots *g h*, and the bars and braces F G, said devices serving to adjust the said rake and digger relatively with each other, in the manner and for the purpose specified.

2. In combination with the above, the arrangement of the cog-bars *i i*, pinions I I', slots *j j*, connecting-piece J, and lever K, the whole operating in the manner and for the purpose specified.

3. The construction of the revolving rake, forming four teeth, *e e e e*, on one piece, each tooth projecting from the square, and not the center, and having square eye *l*, for the reception of the square shaft, with washers *m m* between each series of teeth, arranged and constructed as herein set forth.

4. The machine, as a whole, consisting of the digger C, adjustable by bolts and slots *g h*, the rake E, adjustable by bars and braces F G, the cog-bars *i i*, pinions I, slots *j j*, connecting piece J, and lever K, the whole operating as described, and for the purpose set forth.

89,100.—William M. Welling, New York, N. Y.—*Elastic Composition to Imitate Ivory and Similar Materials.*—April 20, 1869; antedated April 9, 1869.

Claim.—The elastic compound, formed by a mixture of the ingredients Nos. 1 and 2, in a heated state.

89,101.—J. Spencer White, Prescott, Wis.—*Door-Holder.*—April 20, 1869; antedated February 1, 1869.

Claim.—The cone A, the lock, B, with the bowl *d*, latch *c*, spring *f*, and thumb-key *g*, constructed and arranged for the purposes as herein set forth and described.

89,102.—Thomas E. M. White, New Bedford, Mass.—*Velocipede.*—April 20, 1869.

Claim.—Conveying motion to the driving-wheels of a velocipede or other machine by means of the combination of loose pulley C^2, lever-cam M^2, band D^2, and spring E', with the hub or shaft of the wheel.

89,103.—Amos Whittemore, Cambridgeport, Mass.—*Steam-Engine Valve-Gearing.*—April 20, 1869.

Claim.—1. The variable eccentric C *c*, and expander *g*, controlled by a governor, and operating to regulate the movements of the slide valve, substantially as described.

2. The expansible eccentric C *c*, in combination with a hub, J, carrying a wedge, *g*, said parts being applied upon the driving-shaft D, and controlled by a governor, substantially as described.

3. Shaft D, arranged at right angles to the piston P, and receiving motion directly from the piston, in combination with slide valve V, rod H, stuffing-box G, rod F', yoke F, rollers E, and an expansible eccentric C *c*, all being arranged to operate substantially as described.

4. The valve-chest B, and rectangular piston-chest A, constructed as herein described, and having a shaft D, arranged at right angles to them, and receiving motion directly from the piston P, substantially as described.

5. The construction of the rectangular piston P, with a slot in one side of it, for receiving the swivel block T, on the crank of the driving-shaft D, in combination with the adjustable piece T', substantially as described.

89,104.—Amos Whittemore, Cambridgeport, Mass.—*Mechanism for Operating Sewing-Machines.*—April 20, 1869.

Claim.—1. The arrangement and combination of the seat-frame K K, pawl G, ratchet, or other equivalent toothed wheel J, an intermediate train of gearing, and the driving-shaft B' of a machine which is to be operated by force of gravitation, all substantially as described.

2. The combination of the friction-brake *d* d^4, or its equivalent, with the seat-frame K, pawl G, ratchet J, or other equivalent wheel, an intermediate train of gearing, and the driving-shaft B', of a machine which is to be driven by force of gravitation, substantially as described.

3. The combination of the speed-equalizer *g' g*, or its equivalent, with the shaft B', and with the seat-frame K K, pawl G, ratchet J, or its equivalent, and an intermediate train of gearing, substantially as described.

4. The combination of the pawl K and ratchet J of the seat-frame, and the ratchets J J and pawls U U of the movable foot-stands R^2 R^2, or their equivalents, an intermediate train of gearing, and the shaft B', substantially as described.

5. The combination of the lever V, vertically-moving foot-stands R^2 R^2, pawls U U, and ratchets J J, all substantially as and for the purpose described.

6. In a mechanical movement, for operating small machines by the weight of the operator, locating the axis of the seat-frame K K below and in line, or nearly so, with the shaft I, in combination with the arranging of the pawl G, near the upper end of the seat-frame, substantially as described.

7. The combination of the foot-rest M *m* with the seat-frame K K, substantially as and for the purpose described.

8. The combination of the stop S, pawl G, and curvilinear-moving seat-frame, substantially as and for the purpose described.

89,105.—William Williams, Rochester, N. Y.—*Insole for Boots and Shoes.*—April 20, 1869.

Claim.—1. The arrangement of the felt next to the cloth *f*, which forms the foot-lining, and between it and the porous paper, in combination with the oiled or water-proof paper at the bottom, the edges of the cloth being turned in and interposed between the layers, substantially as set forth.

2. For the purpose of an insole-stiffener, the non-elastic but flexible shank, applied substantially as described.

89,106.—Benjamin F. Wilson, Geddes, N. Y.—*Filtering Feed-Water Heater for Steam-Generators.*—April 20, 1869.

Claim.—1. The air-chamber *c*, when arranged, with reference to the chambers M and I and tube *a*, substantially in the manner shown and described.

2. The arrangement of the air-space *b b*, pipes A, B, C, D, and E, filter G, plates K^1 K^2, catcher J, and chambers H and I, in the manner substantially as set forth.

3. The arrangement of parts making the continuous passage *a a a*, whereby to heat and filter the feed-water or other liquid, substantially in the manner specified.

89,107.—Thomas Wilson and John W. Appleyard, Chicago, Ill.—*Carpet-Stretcher.*—April 20, 1869.

Claim.—The combination and arrangement of the board A, the claws *c c*, the pawl *g*, the ratchet-wheels *r r*, the windlass *w*, the lever *l*, the cord *b*, and the hook *h*, as and for the purpose specified.

89,108.—Louis C. Woehning, New York, assignor to Pauline L. Ruthenburg, Brooklyn, N. Y.—*Size-Mark for Hats.*—April 20, 1869.

Claim.—The hatters' size-mark, formed of a metal frame, with points to secure the number in the frame, and points to attach the frame to the hat, as set forth.

89,109.—Shepherd S. Woodcock, Somerville Mass.—*Pencil-Sharpener.*—April 20, 1869.

Claim.—The within-described pencil-sharpener, consisting, essentially, of the wheel C, with its shaft B, the belt D, guides or holders *c f*, and guide-rest *g*, all combined and operating substantially as set forth.

89,110.—Charles E. Woodman, Boston, Mass.—*Buckle.*—April 20, 1869.

Claim.—The improved buckle, as constructed, with the stationary lip or lips, arranged with the receiving-mouth, and to operate with the auxiliary mouth, or slot of the body, in the manner substantially as explained.

89,111.—Jasper A. Woodworth, Hickory Corners, Mich.—*Device for Moving Heavy Bodies.*—April 20, 1869.

Claim.—The arrangement of the frame A, runners B, hinged brace C, rope or chain D, wheel E, pawl F, pinion G, shafts H and I, drums J and K, line L, grooved wheel M, posts N, crank O, line P, lugs Q, vertical rollers R, rope or chain S, lever T, drag-ropes U, and catches V, or their equivalents, when combined and operating substantially as and for the purposes herein set forth and described.

89,112.—Wilson Silas Wright, Ithaca, N. Y.—*Lathing-Machine.*—April 20, 1869.

Claim.—The combination and arrangement of the ends A with spaces and projections C D, connecting-bar B, and handle G, with the spike or rod J, through and loose in the handle, the same making the hand-tool or lath-machine, as set forth.

89,113.—Benjamin Anyan, Fitchville, Ohio.—*Combined Cultivator and Planter.*—April 20, 1869.

Claim.—1. The combination of the stationary cross-bar Q, foot-levers S, and cords or chains R, with the central beam K and movable side beams O of the cultivator, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the pivoted lock-lever U with the central beam K and movable side beams O of a cultivator, substantially as herein shown and described and for the purpose set forth.

3. The combination of the cross-bar L′, lever M′, cross-bar N′, and guards P′, with the spouts I′, plows J′, slide H′, hopper G′, beam or frame F′, and beams K, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the cross-bar V, chains W, cross-bar X, lever Y, rack-bar A′, and seat-board B, with the beams K and forward part of the running-gear of a wagon, substantially as herein shown and described, and for the purpose set forth.

5. The combination of the brace-bars E′ with the forward part of the tongue G, substantially as and for the purpose herein set forth and described.

89,114.—Alfred Arnold, Tenafly, N. J.—*Jacket, or Case for Teapots.*—April 20, 1869.

Claim.—The "article of table-furniture," herein described, as a new article of manufacture.

89,115.—G. M. Atherton, Friendsville, Ill.—*Plow.*—April 20, 1869.

Claim.—1. The detachable, adjustable, and reversible cutter J, constructed and operating substantially as herein shown and described, and for the purpose set forth.

2. The bent support K, carrying the cutter J, perforated at the angle L^1 L^2, and adjusted upon the plow-beam, by means of the curved slot and the set-screw, as herein described, for the purpose specified.

3. The casting E, secured to the beam B by the rod *c′*, and adapted to be adjusted to regulate the pitch of the plow, by means of the wedge-shaped block F, arranged as herein shown and described.

4. The slotted bar O, adjusting-cap P, and notched arm N, combined and arranged with the draught-rod M, and plow-beam A, for the purpose of adjusting said rod laterally, so that the line of draught shall be parallel to the beam, as herein shown and described.

89,116.—Jackson Barnes, Burlington, Vt.—*Bedstead-Fastening.*—April 20, 1869.

Claim.—The plate A, provided with the operating thumb-piece I, and having the double eccentric slots C D, engaging with the pins F H in the pieces E G, all the parts being constructed, arranged, and operating as herein described, for the purpose specified.

89,117.—Frederick Bauschtliker, Washington, D. C., assignor to himself and Frederick Gentner, same place.—*Hydrant.*—April 20, 1869.

Claim.—The arrangement of the plunger B and valve J, in the cylinder C, lever H, and arms G and D, with the supply and discharge-pipes, when combined and operating as herein described, and for the purpose set forth.

89,118.—Samuel S. Bent, Portchester, N. Y.—*Hook for Supporting Carriage-Poles.*—April 20, 1869.

Claim.—A hook for carriage-poles or harness, formed with an elastic tubular surface, as and for the purposes set forth.

89,119.—Jakob Böhmer, St. Louis, Mo.—*Spring-Bedstead.*—April 20 1869.

Claim.—The post A, clasp-links *b*, bars B, scrolls F, and side rails E, combined with the end rods C, and hangers D, substantially as and for the purposes set forth.

89,120.—R. O. Brackett and D. W. Brackett, Vineland, N. J.—*Shaft-Support.*—April 20, 1869.

Claim.—The shaft-support, consisting of the rigid parts A B, extended at *a b*, to clasp the strap C, recessed at *f* for the buckle D, and secured firmly together by the screws *d d*, as herein shown and described for the purpose specified.

89,121.—Samuel Brock, New Orleans, La.—*Composition for Preventing the Incrustation of Steam-Boilers.*—April 20, 1869.

Claim.—1. The composition above described, composed of the ingredients above described, compounded and used in the manner, proportions, and for the purposes substantially as above set forth.

2. The use of said composition for the removal and prevention of scale and incrustation in steam-boilers, or other vessels used for heating and evaporating water, substantially as above set forth.

89,122.—Benoni S. Brown, Buffalo, N. Y., assignor to himself and Lewis B. Joy, same place.—*Machine for Compounding and Applying Roofing-Compositions to Felt, Paper, and other Fabrics.*—April 20, 1869.

Claim.—1. The mixing-reservoir, consisting of a vessel A, provided with the rotating arms and steam-jacket, for preparing and maintaining plastic compo-

sitions for roofs in a state required for application to the felt or other material, substantially as set forth.

2. The combination of the mixing-vessel A, feeding-hopper D, sand-box K, endless apron *g'* moving over the table G, arranged and operating substantially as and for the purposes set forth.

89,123.—John G. Bryan, Philadelphia, Pa.—*Hydrant.*—April 20, 1869.

Claim.—A hydrant, consisting of the box F, screw-plug I, revolving plug *g*, delivery pipe H, combined handle and nozzle *h*, post B, and box C, all as and for the purposes specified.

89,124.—Robert Burchell and Robert T. Burchell, Trenton, N. J.—*Miter-Box.*—April 20, 1869.

Claim.—The combination, in a mitering apparatus, of the guide-plates M N and J K with the plate L and clamp-screws *d e*, substantially as and for the purpose shown and described.

89,125.—Jonathan Carl, Grenada, Miss., assignor to himself and J. A. Carl, same place.—*Churn-Dasher.*—April 20, 1869.

Claim.—1. The combination of the breakers E and movable dashers D, constructed and arranged as described.

2. The movable dashers D and breakers E, operating within the churn-box A, as set forth in combination with the driving apparatus H, F, and M, and the pulley G.

3. The removable breakers E, in combination with horizontal bars *a*, for securing them in position, as represented.

89,126.—Alonzo M. Cheney, Charlotte, Mich.—*Curtain-Fixture.*—April 20, 1869; antedated October 29, 1868.

Claim.—The application of a flanged roller, substantially in the manner shown, to curtain-fixtures in which the shade is elevated or lowered by means of a weighted tassel and cords, arranged as above described.

89,127.—Benjamin F. Cloud, Philadelphia, Pa.—*Glass-Blowing Apparatus.*—April 20, 1869.

Claim.—1. The combination with a glass-blowing furnace, of a fan-blower, C, air-supply pipe B, and lateral or pendent flexible tubes D, or their equivalent devices, for supplying air to the glass-blowers' tubes, substantially as and for the purpose specified.

2. The flexible tubes D, provided with valve-mechanism for regulating the blast, and arranged for attachment to the glass-blowers' tubes, substantially as and for the purpose described.

3. The method of raising the valves E by the levers G, operated by the flexible and elastic bulb F, and either connected to the valve by the levers I, or supporting the projecting foot K of the same on the right-angled projections of the said arms, or any equivalent thereof, substantially as and for the purpose specified.

89,128.—Henry S. Cohu, New York, N. Y.—*Velocipede.*—April 20, 1869.

Claim.—In combination with a one-wheeled velocipede, the balance-wheels E E, crank *a*, and pendent seat D, all constructed and operating substantially as herein shown and described.

89,129.—James H. Crandell, Upper Marlborough, Md.—*Bee-Hive.*—April 20, 1869.

Claim.—1. The moth-trap screen *d*, arranged upon a partition, H, in relation to the bee-entrance *b*, and to the moth-entrance, substantially in the manner and for the purpose described.

2. The partition H, when arranged in the angular lower section of the hive, substantially as and for the purpose described.

3. The double-screened moth-trap *d f*, made of less width than the bee-chamber of the hive and applied and confined in its place, substantially in the manner described.

4. The combination of the angular section F, partition H, drawer G, moth-trap screen *f*, and honey-section S, substantially in the manner shown and described.

5. The removable screen *f*, confined in place by cleat *g* and fastening *h*, substantially as described.

89,130.—D. C. Cumings, Fulton, N. Y.—*Vise.*—April 20, 1869.

Claim.—1. The spring F, when arranged upon and to move with the block E, for the purposes specified.

2. The yoke or block E, when provided with the screw *g* and wheel *h*, or their equivalents, when arranged and combined with the base of the two jaws A and A', as described.

89,131.—William A. Daggett, South Vineland, N. J.—*Clothes-Frame.*—April 20, 1869.

Claim.—1. The combination of the horizontal bars A, when made in sets of different lengths, vertical bars B, the single bars G, and pivoting, or hinge-bar C D E F, with each other, substantially as herein shown and described, and for the purpose set forth.

2. Securing the clothes-frame, when closed, by means of a button, H, pivoted to the central one of the longest set of horizontal bars A, and buttoning into the vertical bar B, attached to the ends of the shortest set of horizontal bars A, substantially as herein shown and described.

89,132.—Adna T. Denison, Poland, Me.—*Manufacture of Corded-Edge Paper Goods.*—April 20, 1869.

Claim.—As an improvement upon the said corded-edge paper-machine, before alluded to, the process of passing the strips of paper to be corded and folded, through a steam-box, previous to the process of cording and folding, as therein described, substantially as and for the purpose described.

89,133.—George Dorn and John Shibley, Albany, N. Y.—*Egg-Carrier.*—April 20, 1869.

Claim.—1. A tray, A, constructed of pasteboard or light panel, as described, furnished with the holding-cords *e e'*, arranged as described through the apartments *a a*, for the purposes set forth.

2. The canvas *d*, in combination with a tray, A, furnished with the apartments *a a* and the meshes described, as and for the purpose set forth and described.

3. The separator B, constructed with the apartments *f f* and canvas *g*, as and for the purpose set forth, as specified.

89,134.—Charles H. Duncan, Pithole City, Pa.—*Tubular Pump for Deep Wells.*—April 20, 1869.

Claim.—1. The movable tube *d*, extending above and below the range of the upper valve, and carrying with it the lower valve, in combination with the outer barrel *a*, and seats or shoulders *e* and *f*, the whole operating substantially in the manner and for the purposes set forth.

2. The lower valve of a pump, attached or suspended to or within a movable inner barrel or tube, under such an arrangement of parts that the friction of the upper valve upon said inner movable barrel or tube shall effect the opening and closing of said lower valve, substantially as set forth.

89,135.—F. B. Dunton, Centre Lincolnville, Me.—*Mast-Hoop.*—April 20, 1869.

Claim.—The adjusting-hoop D *d*, in two parts, having a riding-block, *a*, embraced between the two projections *d*, and the lower ends of the said projections formed with holes, for a pivot-bolt, substantially as and for the purpose herein shown and described, the whole constituting an improved hoop-adjusting attachment for fore-and-aft sails, all as set forth.

89,136.—B. W. Field, Ferrisburgh, Vt.—*Band-Drawer.*—April 20, 1869.

Claim.—The arrangement of the handle A a^1, pivoted lever B, and the notched and forked claws b' a^2, as herein described, for the purpose specified.

89,137.—E. L. FREEMAN, Williamstown, N. Y.—*Cultivator-Tooth.*—April 20, 1869.

Claim.—The harrow or cultivator tooth herein described, when constructed as set forth.

89,138.—F. H. FURNISS, Waterloo, N. Y.—*Vise.*—April 20, 1869.

Claim.—1. The combination of the spindle C, spring D, and bracket F, with the vise B, and bed-plate A, provided with teeth, arranged to operate in the manner described, for the purpose specified.

2. In combination with the foregoing, the lever G, and treadle H, as herein described, for the purpose specified.

89,139.—O. L. GARDNER, New York, N. Y.—*Adjustable Cornice for Window-Curtains.*—April 20, 1869.

Claim.—Making the cornices of windows adjustable, substantially as and for the purposes herein shown and described.

89,140.—WILLIAM B. GARDNER, Almond, N. Y.—*Washing-Machine.*—April 20, 1869.

Claim.—The combination with the cylinder B, of the toothed brake-wheel and brake, when arranged to be operated by the hand or foot, and provided with the spring E, all substantially as specified.

89,141.—JOHN H. GOODFELLOW, Troy, N. Y.—*Base-Burning Stove.*—April 20, 1869.

Claim.—1. The combination of the interior pipe B, extending down through the fire-box a', body A, smoke-flues E F, and cold-air flue I, with each other, substantially in the manner herein shown and described, and for the purpose set forth.

2. Interposing the cold-air flue I between the smoke-flues E and F, substantially as herein shown and described, and for the purpose set forth.

3. Perforating the lower part of the brick lining and the side wall of the fire-chamber, for the passage of the products of combustion into the flue E, substantially as herein shown and described.

4. The annular fire-chamber a', formed by the combination of the central air-pipe B, ring-grate D, and perforated side-walls M, with each other, substantially as herein shown and described, and for the purpose set forth.

89,142.—PETER GORSLINE, Elizabeth, N. J.—*Blotting-Pad.*—April 20, 1869.

Claim.—As a new article of manufacture, a combined blotting-pad and hand-rest, made substantially as herein shown and described.

89,143.—JOSEPH GREGG, Manchester, N. H.—*Water-Cock.*—April 20, 1869.

Claim.—A water-cock, operated by means of the concentric tubes I and G, and the diaphragm K, as and for the purposes specified.

89,144.—THOMAS J. HALL, Bryan, Texas.—*Gang-Plow.*—April 20, 1869.

Claim.—1. The combination of the up-and-down adjustable slotted cross-bar D, having the perforated plate *f*, with the plow-beams E, pins *e*, and pivoted levers G, all arranged and operating substantially as and for the purpose herein shown and described.

2. The levers G, pivoted to the up-and-down adjustable cross-bar D, connected at their front ends with the plow-beams, and adjusted with their rear ends on a cross-bar, *k*, all arranged and operating substantially as described, for the purpose of oscillating the plow-beams, as specified.

89,145.—GEORGE HARRIS, Ipswich, Mass.—*Railway-Car Coupling.*—April 20, 1869.

Claim.—1. The arrangement and combination of the tripping-car or projection, *c*, with the tumbler applied to the draw-bar, in manner and so as to operate substantially as specified.

2. The combination and arrangement of the stop or projection *b* with the tripping-ear or projection *c*, and with the tumbler applied to the draw-bar, in manner and so as to operate substantially as explained.

3. The combination and arrangement of the pin-passage *e* with the draw-bar and the tumbler, the whole being substantially as set forth.

89,146.—E. D. W. HATCH, Chicago, Ill.—*Table-Attachment for Bedsteads.*—April 20, 1869.

Claim.—The adjustable table B C D, and sockets and notches a^1 a^2, either or both, when constructed substantially as herein shown and described, and used in connection with a bedstead, or similar support, as and for the purpose set forth.

89,147.—E. W. HAVEN, Brandon, Vt.—*Sash-Holder.*—April 20, 1869.

Claim.—The plate *a*, cam *b*, and its connection with lever *g*, as constructed and shown, in combination with the other devices.

89,148.—CORNELIUS S. HURLBUT, Springfield, Mass.—*Burial-Casket.*—April 20, 1869.

Claim.—1. A burial-casket, made from caoutchouc, or India rubber, and having the sides, ends, and bottom cast or molded in one piece.

2. The use of a metallic lining, or foundation, and metallic braces, in the construction of rubber burial-caskets.

3. A burial-casket made from caoutchouc, or India rubber, as described, and made air-tight and water-tight, by placing the top, or covering of glass or other suitable material, upon packing of rubber, gutta-percha, or other suitable material, laid in a shoulder prepared for the purpose, in the upper edge of the sides and ends of the casket, as described.

89,149.—JOSEPH IRVING, New York, N. Y., assignor to A. T. DEMEREST AND COMPANY, same place.—*Velocipede.*—April 20, 1869.

Claim.—1. The brake-lever C, suspended from the crotch B, and arranged to act upon and oscillate with the front wheel, substantially as specified.

2. The combination of the brake-lever C, suspended from the crotch and arranged to oscillate therewith, and guiding-lever G, when the latter is capable of rotation, and connected to the said brake-lever by a cord, F, substantially as specified.

3. The leg-rests D, supported upon the arm A, projecting from the oscillating crotch, substantially as specified.

89,150.—SEWELL E. JEWETT, Haverhill, Mass., assignor to himself and OSGOOD G. BOYNTON, same place.—*Shutter-Worker.*—April 20, 1869.

Claim.—1. The application of the bar E to the window-frame, so that while capable of being moved longitudinally, so as to effect the opening or closing of the blind, such bar may be moved downward on a fulcrum, and used as a lever, to effect the elevation of the blind or shutter, for the purpose specified, preparatory to its being opened or closed by means of such bar, slotted head, and pin, as set forth.

2. The combination and arrangement of the wind-guard plate *h* with the escutcheon-plate *d*, the lever E, and its passage *c*, when such lever is applied to the blind by means as explained.

3. The combination of the movable stop *t*, or its equivalent, with the cammed lever E, the pin *i*, and the latching-mechanism of the blind, the purpose of such stop being as explained.

89,151.—JOHN KEANE, New York, N. Y., assignor to himself and G. H. BROWN.—*Slowly-Closing Valve.*—April 20, 1869; antedated April 15, 1869.

Claim.—The pipe A, having one or more holes, or openings, in the lower parts of its sides, and a packing, C, attached to, and a valve, B, placed in the upper end, and the pipe or chamber D, having one or more openings formed in the lower part of its sides, and a small hole formed through its top, or upper end, in combination with each other and with the pipe E, substantially as herein shown and described, and for the purpose set forth.

89,152.—JOHN L. KENDALL, Foxborough, Mass.—*Garment-Supporter.*—April 20, 1869.

Claim.—1. The new manufacture of coat or garment supporter, or metallic ring A, and perforated metal disk B, applied or hinged together as and for the purpose specified.

2. The combination of the flat guard-annulus D

with the perforated disk B, the hinge C, and the ring A, applied together as set forth.

3. The arrangement of the flat guard-annulus D, so as to project beyond and around the periphery of the perforated disk, in manner and for the purpose set forth, when the disk is hinged or applied to the ring A, as and for the object described.

89,153.—JOHN G. LETTELIER and F. WHITE, Bloomington, Ill.—*Automatic Weighing-Machine.*—April 20, 1869.

Claim.—1. The weighted lever I, provided with the wipers i' and i'', and the segmental arm L, provided with the lugs l and l', or their equivalents, in combination with the arm K, substantially as and for the purpose set forth.

2. The combination of the weighted lever I, the segmental arm L, and the vertical rock-shaft M, for actuating the gates N and O, with the hoppers C and D, (or with either separately,) substantially as shown and described.

3. The within-described automatic weighing-machine, consisting of the hoppers C and D, suspended by trunnions upon the arms $e\ e$ and $f\ f$, of the shafts E and F, and provided with gates N and O, wiper e', curved lever G, rack g, and weight g', segmental gear H and arm h', weighted lever I, and wipers i' and i'', arm K, segmental arm L, and lugs l and l', vertical shaft M, with its arms m, m', and m'', and scale-beam P, all arranged to operate substantially as and for the purpose herein shown and described.

89,154.—J. G. LETTELIER and F. WHITE, Bloomington, Ill.—*Automatic Weighing-Machine.*—April 20, 1869.

Claim.—1. The swinging-gates F and H, suspended by means of the links $f\ f$ and $h\ h$ and operated by the arm K, on the shaft I, substantially as described, and for the purpose set forth.

2. The employment of the bristles $z\ z$, arranged vertically around the openings of the receiving and discharge-spouts G and E, substantially as and for the purpose shown.

3. The means employed for operating the weighted arm N, consisting of the short arm O, bar P, and lugs $p\ p$, against the latter of which the weighing-beam X is caused to strike as it is raised or lowered, by the reception into or discharge from the hopper D of the grain.

4. The V-shaped guides $x'\ x'$, upon the weighing-beam X, for the purpose of receiving the lugs $p\ p$, substantially as and for the purpose shown.

5. The pinion R, and racks S S, the latter being provided with the lugs $s\ s$, by means of which the weighted arm N is secured in a vertical position, and the automatic action of the mechanism arrested, when it is desired to use the device as an ordinary platform-scale.

6. The within-described automatic grain-scale, consisting of the hopper D, spouts E and G, gates F and H, shaft I, double arm K, forked connections k and k', segmental arm L, forked standard M, weighted arm N, short arm O, bar P, lugs $p\ p$, pinion R, and racks S S, provided with lugs $s\ s$, in combination with a platform-scale of the usual construction.

89,155.—P. F. LEWIS, Columbus, Pa.—*Churn.*—April 20, 1869.

Claim.—The construction of the cup B, provided with the circular rim E and the concave centrally-perforated bottom C, and having the three sector-shaped openings D, extending between the said rim and bottom round alternately with the ribs H, provided with the air-openings I, as set forth.

89,156.—WILLIAM A. LIGHTHALL, New York, N. Y.—*Steam-Enginery for Surface-Condensers.*—April 20, 1869.

Claim.—The arrangement of the driving-engine A, circulating-pump B, and air-pump C, when all coöperate together, to perform the functions herein set forth.

89,157.—RICHARD M. LIVINGSTON, Menteno, Ill.—*Cheese-Vat.*—April 20, 1869.

Claim.—The described arrangement of the perforated pipes D, hot-water supply-pipe C, support F, for the milk-vat, and the removable false bottom, having central perforations, for the passage of the supports F, as herein set forth, for the purpose specified.

89,158.—JOHN MCCLOSKEY, New York, N. Y.—*Steam-Pump.*—April 20, 1869.

Claim.—1. The cylinder A, provided with the partition B and the pistons C C′, connected by the hollow piston-rod D, all arranged as herein shown and described.

2. The hollow piston D, having orifices F and F′, as described, the tubular extensions E and E′, in combination with the pistons C C′ and cylinder A, substantially as and for the purpose specified.

3. The arrangement of the cylinder A, having the partition B and the pistons C C′, with the pump-valve mechanism, arranged substantially as specified.

4. The construction and arrangement of the valve G and projections a with reference to the pistons C C′ and partition B, substantially as herein set forth.

89,159.—C. MCELROY, New Baltimore, Mich.—*Device for Detaching Horses from Carriages.*—April 20, 1869.

Claim.—1. The hooks C D, arm E, and spring G, or their or either of their equivalents, in combination with each other and with the thills A, substantially as herein shown and described, and for the purpose set forth.

2. The strap B, constructed as described, in combination with the hooks C D, or equivalent support, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the cord or wire H with the arms E, springs G, and hooks C D, substantially as herein shown and described, and for the purpose set forth.

89,160.—G. W. MIDDLECOFF, Atlanta, Ill., assignor to himself and A. MCR. BLAIN, same place.—*Horse-Rake.*—April 20, 1869.

Claim.—A hay-gatherer, consisting of the teeth h, cross-pieces A B, braces S D, standards f, and cap C, in combination with ropes M L, chains E, and loops K, as set forth.

89,161.—DARWIN V. MILLER, Weedsport, N. Y., assignor to himself and JAMES KEHNAN, same place.—*Door-Lock.*—April 20, 1869.

Claim.—1. The combination of the notched sliding bolt C, lever H, spring I, bar J, arm K, rod M, and knob L, with each other, substantially as herein shown and described, and for the purpose set forth.

2. The notched sliding guard-bar D, in combination with the key G, and notched sliding bolt C, as and for the purpose herein shown and described.

3. The notched sliding guard-bar D, in combination with the notched sliding bolt C, substantially as herein shown and described, for the purpose specified.

4. The bar R, constructed as described, in combination with the bolt N, stop a^5, and spring lever H, arranged and operating as described, for the purpose specified.

89,162.—JOSEPH C. MILLER, Lancaster, Ohio.—*Ironing-Board.*—April 20, 1869.

Claim.—An improved ironing-board formed by the combination of the covered board A, bar or stop B, bracket C, set or clamping screw D, hinged frame E, swiveled block G, and hinged bosom-board H, said parts being constructed and arranged substantially as herein shown and described, and for the purposes set forth.

89,163.—B. F. MOHR, Mifflinburgh, Pa.—*Wood-Boring Machine.*—April 20, 1869.

Claim.—The spring-pawl P, having the inclined lug W, and the spring-top Q, having the lateral pin R, arranged to operate with relation to the notched carriage B, as herein described, for the purpose specified.

89,164.—S. R. NILES, Rawsonville, Mich.—*Machine for Pulling Beans.*—April 20, 1869.

Claim.—1. The combination with the frame A, of

the arms L, supporting the truck-wheels and the bent rods N, substantially as specified.

2. The combination with the plows G of the gathering-forks I, substantially as specified.

89,165.—R. H. PARKS, Columbus, Ohio.—*Horse-shoe.*—April 20, 1869.

Claim.—A horseshoe, extended to form the support B B′, for the frog, and beveled in the parts D, substantially as specified.

89,166.—JOHN PINTER, St. Louis, Mo.—*Washing and Wringing Machine.*—April 20, 1869.

Claim.—1. The shaft *c*, wheel c^1, and parts d^1, d^2, d^3, d^4, and d^5, combined and arranged with the parts f^3, f^2, f^1, and *f*, and the roller B, substantially as and for the purposes set forth.

2. The arrangement of the belt G, conveyer H, compresser I, and wringer K, substantially as and for the purposes set forth.

89,167.—CHARLES PRATT, New York, N. Y.—*Nozzle for Cans.*—April 20, 1869.

Claim.—As a new article of manufacture, a nozzle for sheet-metal cans, provided with a struck cap C, of soft metal, having a curved flange, *a*, and cutting-shoulder *b*, substantially as described, for the purpose specified.

89,168.—A. C. RAND, Westfield, Mass.—*Whip.*—April 20, 1869.

Claim.—As a new article of manufacture, a whip, having the threads of its covering laid spirally, and intertwined relatively to each other, as herein described, and for the purpose set forth.

89,169.—GEORGE M. RICHARDSON and CHARLES C. RICHARDSON, Dana, Mass.—*Horse-Rake.*—April 20, 1869.

Claim.—The combination of the band, or flange G, lever H h^1 h^2, and slotted arm I, with each other, and with the axle *B* and wheel F, substantially as herein shown and described, and for the purpose set forth.

89,170.—CHARLES ROBERTS, Lake Village, N. H.—*Twisting Tube for Spinning-Machines.*—April 20, 1869.

Claim.—The hollow cone-points *f f*, held together by elastic pressure, arranged and operating substantially as and for the purpose herein specified.

89,171.—FREDERICK W. ROTH, Washington, D. C.—*Safety Hat and Coat Rack.*—April 20, 1869; antedated April 17, 1869.

Claim.—The lock, and the several parts thereof, including the chamber, in combination with the ring H, the double hook, the board A, the rod G, the swivel *i*, and the key of the lock, substantially as and for the purpose specified.

89,172.—EBENEZER B. ROWE, Chicago, Ill., assignor to the SOUTH BRANCH PLANING-MILL COMPANY, same place.—*Manufacture of Lumber.*—April 20, 1869.

Claim.—The method of forming tongued and grooved ceilings, by forming two or more grooves and two or more tongues on opposite edges of pieces of lumber, and then sawing such plank, or piece of lumber, longitudinally into two or more strips of uniform thickness, each having a tongue upon one edge, and a groove upon the other, as herein described.

89,173.—ENNO SAUDER, St. Louis, Mo.—*Medicine-Chest.*—April 20, 1869.

Claim.—1. The chest A, arranged with sub-chests, and interior compartments, to contain the cans G, in such proportions and sizes as hereinbefore set forth and described.

2. The chest A, its lid A′, mortised hasp a^1, and supporting-bar B, substantially as set forth.

3. The chest A, lid A′, its sub-chest C, lid C^1, and direction-card C^2, substantially as set forth.

89,174.—ALEXANDER SELKIRK, Albany, N. Y.—*Egg-Carrier.*—April 20, 1869.

Claim.—1. The application of pasteboard or cardboard, or their equivalents, as named, when perforated and arranged in the manner as described, and used in combination with the slats S S′ S″ S‴, substantially as and for the purpose set forth, as specified.

2. The detachable frame, with its pasteboard or equivalent material, as named, perforated as described, and supported by the slats S″, substantially as and for the purpose set forth and described.

3. The lower side slats S′ of a tray, T, in combination with a tray, T′, furnished with permanent tiers, Nos. 1 or 2, or both, and a detachable tier, No. 3, as and for the purpose set forth and specified.

89,175.—ALEXANDER SHAFER, Wellsville, N.Y. assignor to L. SWEET AND COMPANY, same place.—*Lubricator.*—April 20, 1869.

Claim.—An improved rotary oiling-pump, formed by the combination of the body A a^1 a^2, plug B *b′*, and oil-reservoir D, with each other, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

89,176.—CHARLES F. SHOURDS, New York, N. Y.—*Manufacture of Feather Dusters.*—April 20, 1869.

Claim.—1. The method, herein described, of utilizing the "short waste" in the manufacture of feather brushes, by braiding the same together to extend the length, substantially as set forth.

2. A feather dusting-brush, formed wholly or in part of short feathers united to form the requisite length, substantially as and for the purposes set forth.

89,177.—DWIGHT SLATE, Hartford, Conn., assignor to PRATT, WHITNEY AND COMPANY, same place.—*Shipping-Apparatus for Metal-Planers.*—April 20, 1869.

Claim.—The cam E, sliding-block A, in their relation to the reciprocating planer-bed B, through the stops A′, and in combination with the rock-shaft F, arms or segment-gear J, transverse sliding-shaft K, and shipper-arms I, substantially as and for the purpose described.

89,178.—CHARLES SOMMER, Chicago, Ill.—*Saw-Mill.*—April 20, 1869.

Claim.—1. The mode herein described of sawing stuff with parallel sides from round logs.

2. The arrangement of the two laterally and vertically adjustable centers with the circular saw, substantially as described.

3. The combination of the slotted portions E *e* of head-blocks, centers G G′, slides F F′, and clamping-nuts *c c*, the said parts being constructed and arranged and operated substantially as described.

4. The combination of the center G′, screw *s*, and clamping-devices F′ *d c*, with the slotted head-block D E, substantially as described.

89,179.—JAMES SPEAR, Philadelphia, Pa.—*Stove-Collar and Damper.*—April 20, 1869.

Claim.—The construction and combination of the three cast-iron pieces A B C, so as to form a stove-pipe collar and damper, as herein described.

89,180.—JAMES SPEAR, Philadelphia, Pa.—*Base-Burning Stove.*—April 20, 1869.

Claim.—The construction of the crown-top V with an outlet, X, and central opening, N^3, in combination with the urn M, arranged in combination, substantially as shown and described.

89,181.—EDWARD C. STODDARD and JOHN R. HOYT, Woodbury, Conn.—*Stove-Pipe Attachment.*—April 20, 1869.

Claim.—As a new article of manufacture, the single or double stove-shield B, provided with pins or hooks *d*, and adapted to be applied to stove-pipes, for the purpose of protecting mantel-pieces, &c., from danger of fire, as herein shown and described.

89,182.—MILES SWEET, Troy, N. Y.—*Curry-Comb.*—April 20, 1869.

Claim.—1. A malleable cast-metal end-piece for curry-combs, having lugs *b b* formed thereon, and

rivet-holes or rivet-blanks *a a a* cast or formed thereon, so that said piece shall not only facilitate the putting together of the parts, but serve as the means of holding them together when clinched or hammered down, as described.

2. In a curry-comb, a series of sheet-metal comb-bars, B, riveted to malleable cast-metal end-pieces A A, which end-pieces have lugs *b b*, &c., bent tight upon or around the wire frame, which is a continuation of the shank for the handle, as and for the purpose set forth.

3. Terminating the outer ends of the wire frame in knocking-lugs, or fenders D D, as and for the purpose set forth.

89,183.—Stephen D. Tucker, New York, N. Y.—*Machine for Making Printers' Rules.*—April 20, 1869.

Claim.—1. The combination with the segment-bed B and rule-holder D of the reciprocating and vibrating head C, the whole constructed, arranged, and operating substantially as described.

2. The mechanism for operating the cutter-head, consisting of the reciprocating and vibrating lever F, with its swivel-fulcrum H and universal joint *f f* on the cutter-head, the whole constructed and operating substantially as described.

3. Making the segment-bed B adjustable laterally, in combination with a reciprocating vibrating cutter, so that by adjusting the bed the whole width of the knife may be used, substantially as described.

89,184.—William Tweedle, Providence, R. I.—*Tool for Making Plugs for Gas and Water Cocks.*—April 20, 1869.

Claim.—The improved device herein described, consisting of the body A, cutters B and C, and drill F, combined substantially as set forth.

89,185.—J. S. Van Buren, Norwich, Conn.—*Coal-Stove.*—April 20, 1869.

Claim.—1. Constructing the heater with two domes, placed the one directly above the other, substantially as herein shown and described, and for the purpose set forth.

2. Forming the rear pipes E smaller than the front pipes D, substantially as herein shown and described, and for the purpose set forth.

3. An improved heater, formed by the combination of the close chamber a^1 of the base A, body B, domes b' and C, larger pipes D, smaller pipes E, and egress flue F, with each other, said parts being constructed and arranged substantially as herein shown and described, and for the purpose set forth.

89,186.—Charles G. Von Tagen, Philadelphia, Pa.—*Cement Roofing.*—April 20, 1869.

Claim.—The compound, prepared and applied substantially as described.

89,187.—John I. Vinton, Altoona, Pa.—*Compound for Forming Cores for Molding Iron, &c.*—April 20, 1869.

Claim.—A core compound, for foundery purposes, composed of the ingredients above named, substantially as described.

89,188.—J. S. Wachsmuth, Highland, Ill.—*Method of Transferring Oil Paintings from one Surface to Another.*—April 20, 1869.

Claim.—The herein described process of treating paintings, so that they may be transferred from the canvas or paper support to any other suitable surface, as specified.

89,189.—Fenn Wilcox, Newark, N. J.—*Culinary Boiler.*—April 20, 1869.

Claim.—The vessels A D, arranged one within the other, when the annular space E is formed between the outer wall of the vessel A and the flange B, to receive the water of condensation and prevent its escape to the fire, as herein shown and described.

89,190.—William Zeiger, Elmore, Ohio.—*Potato-Peeler.*—April 20, 1869.

Claim.—The combination of the hollow perforated cylinders B and C with the movable grater-box D and aperture *e*, as and for the purpose set forth.

89,191.—Wilber F. Arnold and Ogden L. Steele, New Britain, Conn.—*Bolt for Doors, &c.*—April 20, 1869.

Claim.—The hollow bottom, D, *c*, *e*, fitted to slide on the pin *b*, and inclosing the spring *d*, when arranged as shown, with relation to the bolt A, casing B, and slot *a*, to be operated as set forth.

89,192.—A. M. Bakewell, Normal, Ill.—*Harrow with Cultivator-Attachment.*—April 20, 1869.

Claim.—1. The combination of the cultivator and harrow, substantially in the manner and for the purpose set forth.

2. The arrangement of the bars E E, cross-bar F, and eye-bolts D D, D′ D′, as a consequence of which I am enabled to change the position of the bars of the cultivator, substantially as and for the purpose set forth.

3. The combination of the side-bars E E and cross-bar F, substantially as shown and described.

4. The arrangement of the handles G G, with reference to the bars E E, substantially as shown and described.

89,193.—John F. Baldwin, Nashua, N. H.—*Till-Lock Alarm.*—April 20, 1869.

Claim.—1. The latch-plate L, and latches *a*, constructed substantially as described, to effect both the locking and the double-locking of the drawer, or till, as specified.

2. The swing-catch P, as described, and the reversible lips *n*, in combination therewith, to effect the changing of the combination which controls the locking and unlocking of the drawer, or till, as described.

3. The spring-latch *x*, constructed and arranged with relation to the swing-catch plate P, and the spring-hammer A, as and for the purpose described.

4. The keys $g^{1\,2\,3\,4\,5}$, arranged and operating with relation to the catch-plate P and lips $n^{1\,2\,3\,4\,5}$, as described, so as to control both the lifting of the latches *i*, to unlock the drawer, or till, and the swing-catch P, which prevents the unlocking of the drawer, except by a given combination, substantially as specified.

89,194.—Joseph W. Bates, St. Paul, Minn.—*Binding-Attachment for Harvesters.*—April 20, 1869.

Claim.—1. The combination of the slotted binding-table D, slotted inclined plane C, and slotted platform B, all constructed and arranged substantially as and for the purposes herein set forth.

2. The arrangement with table D, inclined plane C, and platform B of the shaft G, teeth I, tripper H, and seat F, all constructed and operating substantially as herein set forth.

89,195.—Orson P. Beardsley, McDonough, N. Y.—*Process of Refining Maple Sugar.*—April 20, 1869.

Claim.—Extracting magnesia and adherent impurities from maple sugar, by reducing the sugar from a consistency sufficient to cause granulation in the magnesia, and straining it, substantially as hereinbefore set forth.

89,196.—Valentin Borst, New York, N. Y.—*Harness-Saddle.*—April 20, 1869.

Claim.—1. A saddle-tree, composed of the wooden side-pieces *a a*, connected by the metallic flanged corner-pieces *b b*, substantially as described.

2. The cross-braces *d*, in combination with the side-pieces *a a* and corner-pieces *b b*, substantially as set forth.

3. The base-plate *g*, forming the support for the back-band loops *i*, and connected to the side-pieces *a a* and corner-pieces *b b*, substantially as described.

4. The lugs *k k*, on the cantel B, in combination with the sockets *j j*, in the corner-pieces *b b*, and with lips or flanges *l l*, on said corner-pieces, and with a key, *m*, substantially as set forth.

89,197.—Edward W. Brettell, Elizabeth, N. J.—*Door-Latch.*—April 20, 1869; antedated April 9, 1869.

Claim.—1. The center disk t^2, when used to turn the tube *v*, in combination with the key *r*, fitted thereto, substantially as shown and described.

2. The combination of the slide *p*, catch *m*, and spring *j*, constructed and arranged in the manner and for the purpose specified and shown.

89,198.—Morgan W. Brown, New York, N. Y. —*Composition for Coating Paper, for Manufacture of Neck-Ties, Cravats, and other Articles of Wearing-Apparel.*—April 20, 1869.

Claim.—The mode or means of preparing and manufacturing a composition of matter, for treating and preparing paper and paper-fiber, preparatory to and for its uses and application to the manufacture of paper neck-ties, or cravats, gloves, mittens, caps, collars, and articles of dress, wear, and utility, substantially as herein described and set forth.

89,199.—Robert Gordon Carlyle, San Francisco, Cal., assignor to A. C. Robinson, W. J. X. Robinson, and J. H. Addison; and said J. H. Addison assignor to John H. Wise.—*Drain-Tile Machine.*—April 20, 1869.

Claim.—1. The combination of the shaft A and water-tube with the core-barrel, having a conical spiral-bladed top, the lower die-plate M, and casing N, the whole arranged and operated substantially as and for the purpose set forth.

2. The combination of the vertically-moving core-barrel B, and its rollers *a a*, with the square-shaft A, as set forth.

89,200.—George B. Clarke, New York, N. Y. —*Cigar-Machine.*—April 20. 1869.

Claim.—1. The combination, with the table B, of the rollers C C^1 C^2 C^3, arranged substantially as described, for rotation in like directions, and formed, any or all of them, with trumpet-shaped extremities at their one end, essentially as specified.

2. The trumpet-shaped portions *i*, arranged to turn freely and independently of the rollers to which they belong, substantially as and for the purpose herein set forth.

3. The combination of the automatically-operating knife H, with the several cigar-forming rollers, and arranged in relation thereto, or to the trumpet-shaped portions thereof, essentially as and for the purpose specified.

4. In combination with the forming rollers, driven to rotate the cigar, as described, the knife K, adjustable in relation to said rollers, or to the cigar in between them, substantially as herein set forth.

5. The combination, with the rollers C C^2 C^3, of the upper roller C^1, hung in a swinging-frame, F, essentially as specified.

6. The combination, with the rollers C^1, C^2, and C^3, of the front roller C, carried by a swinging frame, E, substantially as described.

7. The combination of the swinging frames E and F, with their respective rollers C and C^1, in such manner as that the swinging of the one frame, F, may be made to swing or operate the other frame, E, essentially as herein set forth.

89,201.—Oliver Cogsil, Harlem Springs, Ohio. —*Ferry-Railway.*—April 20, 1869.

Claim.—A railway-ferry, in which the carriage is so formed as to support the cars, and run upon a track laid on the bottom of the river, and to connect with a railway on the banks, as and for the purpose set forth.

89,202.—E. S. Cram, New Hampton, N. H.— *Car-Coupling.*—April 20, 1869.

Claim.—1. The arrangement and combination of the coupling-pin C, with its enlargement *g*, the spring *i*, and the hollow guide G, with its smaller cavity for the spring, and its enlarged cavity *h*, for the reception of the pin-enlargement *g*, substantially as and for the purpose herein specified.

2. The arrangement and combination of the coupling-pin C, with its enlargement *g*, the link D, and the spring sliding block B, having its forward end both concave horizontally, and inclined forward vertically, and limited in its movement by the depression *b*, and pin, or projection *e*, substantially as and for the purpose herein specified.

89,203.—A. D. Dailey, Terre Haute, Ind.— *Fire-Place.*—April 20, 1869.

Claim.—As an article of manufacture, a cast-iron hearth-plate, constructed with a fillet, B, formed substantially as set forth.

89,204.—Edward A. Dana, Brookline, Mass. —*Concussion Fuse.*—April 20, 1869.

Claim.—1. The combination of the plunger, or cylinder B, with the walls H′, when the former is coated with a composition inflammable by friction against the latter, prepared substantially in the manner specified.

2. The combination of the plunger B, the plug G, and the powder block E, arranged substantially as described.

89,205.—Deloss A. Danforth, Elkhart, Ind., assignor to himself and W. P. Chamberlain, same place.—*Sash-Operator.*—April 20, 1869.

Claim.—The vertical rack C, with hook *f*, in combination with catch I and disk D, provided with a spiral thread, all constructed and arranged substantially as herein described, to operate and fasten window-sash.

89,206.—John Davis, New Bedford, Mass.— *Nut-Fastener.*—April 20, 1869.

Claim.—The bar A^2, with turned-up ends B^2 and clasps C^2 b^2, constructed substantially as described, and for the purpose specified.

89,207.—George Dryden, Worcester, Mass., assignor to R. Ball and Company, same place.— *Wood-Working Machine.*—April 20, 1869.

Claim.—1. The upper part L and lower part M of the divided spindle, and the set-screw *b*, when said parts are constructed and arranged for joint operation, as shown and described.

2. The hollow spindle F and pulley G, formed or cast in one piece, in combination with the spindle L M, said parts being constructed substantially as shown and described.

3. The combination with the frame C or journal-box D of the oil-chamber, with its sliding cap K, substantially as and for the purposes set forth.

89,208.—William F. Duerr, Newark, N. J., assignor to himself and Reuben D. Baldwin, same place. —*Feed-Water Device for Boilers.*—April 20, 1869.

Claim.—A boiler-feeding apparatus, constructed and arranged to operate substantially as herein described.

89,209.—Edward S. Earley, Philadelphia, Pa. —*Bedstead-Fastener.*—April 20, 1869.

Claim.—1. An augular or curved plate A, having a slot, *m*, to receive and guide the head of a bolt, E, and slots *d d*, for the auxiliary fastenings, for the purposes set forth.

2. In combination therewith, the angular or curved-headed bolt E, for the purposes described.

89,210.—Zebina Eastman, Chicago, Ill.—*Construction of Street-Railways.*—April 20, 1869.

Claim.—The formation of a wrought-iron flange of the rail, or a cast-iron attachment to the under part of it, with openings square or inclined, as the case may require, into which or through which to pass the paving-stone for the support of the rail, and so designed as to furnish a substitute for wooden stringers and ties.

89,211.—C. H. Emerson and J. F. Emerson, New York, N. Y.—*Machine for Making Bolt-Heads.* —April 20, 1869.

Claim.—1. The combination of the heading-stock L, having thereon preparatory and finishing-headers J J′, constructed substantially as described, with the gripers H H and head-squaring jaws I I, formed with upper and lower recesses *e* and *e*, arranged and operating first to roughly form the head, and afterward to finish it, substantially as specified.

2. In combination with the above, the heading-stock L, provided with wedges or inclines *f f*, at or near its forward end, and the inclines *g g*, attached to the squaring-jaws I I, essentially as shown and described, and for the purpose set forth.

89,212.—Orrin B. Gallup, Summit, R. I.—*Round Comb.*—April 20, 1869.

Claim.—The band A, having combs B, pivoted at each end, forming an adjustable round comb, substantially as described.

89,213.—J. C. Gaston, Cincinnati, Ohio.—*Stamp-Canceling Device.*—April 20, 1869.

Claim.—A stamp-canceler, consisting of a perforating blade, A, with adjustable ring D, for regulating the depth of the cut or perforations, constructed and arranged substantially as herein described.

89,214.—John Grant, Hampstead, England.—*Apparatus for Turning the Leaves of Books or Music.*—April 20, 1869.

Claim.—1. The combination of a deep-threaded screw, E, operated by any suitable mechanism, with a book-rest, B, for the purpose of turning the leaves of a book placed upon said rest, substantially as herein set forth.

2. The combination of a thumb-piece, G, with the upper turn F, of a deep threaded screw, when said screw is attached to a book rest, and made to operate, substantially in the manner and for the purpose herein set forth.

3. The combination of a horizontal foot-wheel or driving-pulley H with a deep-threaded screw, E, and suitable book-rest B, and with any suitable intermediate gearing, L, K, &c., substantially in the manner and for the purpose herein set forth.

89,215.—J. J. Groshans, Buffalo, N. Y.—*Counting Register for Paper-Ruling Machine.*—April 20, 1869.

Claim.—1. For the purposes of an indicator for paper-ruling machines, the spring-finger *h*, having its lower end free, and adapted to be struck by the paper, and its upper end carrying a spring-pawl, substantially as described.

2. In combination therewith, the grooved wheel *i*, substantially as and for the purpose described.

3. In combination with the spring-finger *h*, the toothed wheels C D, pin *d*, and hands *a* and *b*, substantially as and for the purpose described.

89,216.—Dan. Guptail, Elgin, Ill.—*Dish-Washing Machine.*—April 20, 1869.

Claim.—1. The combination of the case A and the disk or knife-holder I, substantially as shown and described.

2. The arrangement of the guide K, with reference to the case A and agitator C, substantially as shown and described.

3. The construction of the disk I, with its slots for holding the knives and forks, substantially as shown and described.

89,217.—E. R. Hall, Mexico, N. Y.—*Wood-Sawing Machine.*—April 20, 1869.

Claim.—A sawing-machine, for wood, having main frame and frame C, as described, grooved caps A, saw-frame B, wheels D and E, shafts *a* and *d*, crank G, pitman *c*, lever L, saw-horse H, and hook *s*, when each part is constructed, arranged, and operates as described.

89,218.—Cyrus H. Hardy, Bath, Me.—*Knife-Cleaner.*—April 20, 1869.

Claim.—The movable jaw G, pivoted on the short arm of the lever I, and furnished with lugs, *f*, to guide it in the grooves of frame C, substantially as set forth.

89,219.—Sylvester Harnden, Reading, Mass.—*Cabinet-Ventilator.*—April 20, 1869.

Claim.—An apparatus for ventilating and purifying rooms, constructed as a secretary or book-case, and consisting of the ice-receptacle B, having apertures *d*, C, and *c*, substantially as shown and described.

89,220.—Jacob H. Hawes, Stockbridge, Mass., assignor to the Hawes Patent Wood-Pulp Company, same place.—*Process for Preparing Paper-Stock from Wood.*—April 20, 1869.

Claim.—1. The process of preparing paper-stock from wood, by grating it, substantially as specified.

2. In preparing paper-stock from wood, by grating it, so presenting the block or wood to the grater as that its fibers are made to lie oblique to the plane of the grating-surface, and also to the travel of the grater, essentially as shown and described.

89,221.—Jacob H. Hawes, Stockbridge, Mass., assignor to the Hawes Patent Wood-Pulp Company, same place.—*Reducing Wood for Paper-Stock.*—April 20, 1869.

Claim.—1. The combination of a grater or graters, and wood-holding frame or frames, with a follower or followers, so arranged and operating as that by the travel of the grater over the edge or face of the wood presented to it, or travel of the wood over the face of the grater, and action of the follower or followers, said wood is automatically worked up and reduced, and its reduced or grated particles passed off through the grater for the purpose of producing paper-stock, substantially as specified.

2. The combination of the block-holding frames W W, divided into compartments H H, as described, with the automatic followers I I, and the reciprocating graters B B, having clearance spaces or passages *d d* at their backs, essentially as and for the purpose herein set forth.

3. In a combination of mechanism for reducing wood to paper-stock by grating, giving to the wood or blocks a reciprocating cross-movement relatively to the travel of the graters, substantially as specified.

4. The arrangement of the reciprocating grater-frame C, with its graters B B, clearance spaces or passages *d d*, and endless apron R, essentially as shown and described.

5. The up and down sliding wood-holding frames W W, arranged to reciprocate in reverse directions simultaneously, in combination with the grater-frame C, arranged to reciprocate in a crosswise direction thereto, and provided with opposite graters B B, against which the wood is pressed in reverse directions simultaneously, substantially as specified, and whereby increased freedom is secured to the operation of the grater slide or frame.

6. The combination of the eccentrically-grooved disks P P, the rollers Q Q, connected with the cross or vertically-sliding wood-holding frames W W, and the reciprocating graters B B, essentially as shown and described.

89,222.—Thomas N. Hickcox, Brooklyn, N. Y.—*Mucilage-Brush Handle.*—April 20, 1869.

Claim.—A mucilage-bottle cap, having a tubular or sleeve-like center opening or socket, and a mucilage-brush, having a longitudinally-slitted handle combined for operation, substantially as and for the purpose herein set forth.

89,223.—F. W. Hudson, Leominster, Mass.—*Stove-Shelf.*—April 20, 1869.

Claim.—1. The combination, with a stove, of one or more hinged, or moveable shelves, in the manner and for the purposes stated.

2. The post B, when attached to the side or top of the stove, for supporting a shelf, or shelves, substantially as described.

3. The combination, with the bottom of the post, of a base-piece and clamping-device, for securing, or fastening the post to the top plate of the stove.

4. The combination of the shelf-supporting post with the stove, in such a manner that the post shall stand, or occupy a position forward of the stovepipe.

5. The combination, with the supporting-post, of two swinging shelves, so constructed and arranged that they can be swung to or from each other, in the same horizontal plane, substantially as described.

6. The combination, with a supporting-post, B, of two shelves, and a holding-device, whereby said shelves can be adjusted up and down upon the post, for the purposes stated.

7. The combination, with a shelf-post, B, of an adjustable sleeve, E, and thumb-screw, *e*, or its equivalent, for the purposes stated.

8. The combination, with a supporting-post, B, of two shelves, constructed substantially as described, whereby they can be turned back, by the sides of the stove-pipe, substantially as set forth.

9. The combination and arrangement, with a stove,

of a shelf, for supporting articles to be dried or warmed in an elevated position above the top-plate of the stove, substantially as herein described.

10. The arrangement of supporting-devices above the top-plate of the stove, in such a manner that they can be moved from or toward each other, for supporting articles to be aired, dried, or warmed.

89,224.—JOHN HUGGETT and JOHN ALBERT HUGGETT, Eastbourne, England.—*Machine for Forging Horseshoe Nails.*—April 20, 1869; patented in England, September 27, 1867.

Claim.—1. The combination of the screw k^2x, or other equivalent device, with the claw *s* and lever *q*, for automatically holding and releasing the nail-bar in the notch of the holder *k*, substantially as before described.

2. In combination with a reciprocating and turning holder, a hammer faced with two dies for forming the sides and taper of the nail, and the anvil, faced with two corresponding dies, substantially as before set forth.

3. The device consisting of the gauge *v*, spring v^2, rod v^3, arm *q*x, and lever *q*, all arranged and operating substantially as before described.

4. The device consisting of the cords and springs attached to the axis *k*, the cam *o*, the lever *m*, springs *l n*, and gearing b^1 and *o'*, for shifting the holder *k*, substantially as before described.

5. In combination with the above device, the rods *r* and *w*, and the lever *q*, for returning the holder *k* to the position for receiving the blank, all substantially as hereinbefore described.

89,225.—GEORGE JOHNSTON, San Francisco, Cal.—*Still.*—April 20, 1869.

Claim.—1. The furnace D, with the two flues E and F, and the adjustable slide, or damper G, for transferring, regulating, and stopping the heat, substantially as herein described.

2. The curved pipe T, and the valve V, or an equivalent device for converting the heating-chamber into a chamber of the still, substantially as described.

3. The device consisting of the heating-vessel A, together with the vessel B, with its chambers and passages intervening between the vessel A, and the refrigerating-apparatus, when constructed and operating substantially as herein described.

4. Regulating the temperature of the chambers of the vessel B, by means of water passing through the pipe *i*, or an equivalent device, substantially as described.

89,226.—ROBERT KENT, Brooklyn, N. Y.—*Punching-Apparatus.*—April 20, 1869.

Claim.—The arrangement, substantially as described, of the levers A A', fulcrum *f*, punch and bolster *b* and *b'*, screw B, and rocking nut and bearing *e* and *e'*, for the purpose set forth.

89,227.—PETER LUGENBELL, Greensburgh, Ind.—*Ditching-Machine.*—April 20, 1869.

Claim.—The arrangement of the frame A, with an adjustable pivoted interior frame, having wheel I, flanges P P, shanks J J, and shields K K, with their respective parts all constructed and operating as and for the purposes set forth.

89,228.—CHARLES S. LYNCH and J. AUGUSTUS LYNCH, Boston, Mass., and CHARLES E. COFFIN, Muirkirk, Md.—*Mode of Utilizing Iron-Turnings, &c.*—April 20, 1869.

Claim.—1. Mixing of waste masses of solid iron, as set forth, with molten iron, preparatory to the remelting or reheating of the conglomerate, and for the purpose specified.

2. The employment of oxide of manganese with the waste mass of iron, as set forth, and molten iron, when mixed together, as and for the purpose as explained.

89,229.—SAMUEL MAWHINNEY, Worcester, Mass.—*Last.*—April 20, 1869.

Claim.—1. The metal quill D, provided with the flange E, in combination with the rear part of the last, substantially as set forth.

2. The combination, with the flange E, of one or more spurs, *a*, as and for the purposes set forth.

3. The combination, with the flange E, of the locking-piece F, substantially as and for the purposes set forth.

4. The combination, with the part A of the last and the locking-piece F, of the spiral spring *b*, substantially as and for the purposes set forth.

89,230.—BENJAMIN MERRITT, Jr., Newton, Mass., assignor to himself and CHARLES W. BEALS, same place.—*Lawn-Mower.*—April 20, 1869.

Claim.—1. The arrangement and combination of the guard-plate *k* with the two series of lever-knives and their connecting-bars, the whole being applied to the finger-bar frame, as set forth.

2. The combination and arrangement of the single serpentine groove C with the two levers, and the two series of knives, and the roller B, the whole being applied so as to operate as set forth.

89,231.—DANIEL S. MERRITT, Mount Morris, Mich.—*Propelling-Apparatus.*—April 20, 1869.

Claim.—The arrangement of the perpendicular paddles D D, provided with tenons or shanks *a a*, rod I, metal bar E, and set-screw F, whereby the paddles can be raised or lowered, substantially as and for the purposes herein set forth.

89,232.—JOHN WALTER MORGAN, Saltney, Great Britain.—*Anchor.*—April 20, 1869.

Claim.—1. Anchor-arms B, which are pivoted to the shank A, through the block F, or its equivalent, at a point inside the crown of the anchor, substantially as and for the purposes described.

2. The block F, or its equivalent, constructed as described, and secured to the crown of the anchor, and pivoted to the shank thereof, substantially as set forth.

89,233.—RICHARD P. MORGAN, Jr., Dwight, Ill.—*Elevated Railway.*—April 20, 1869.

Claim.—1. The elevated railway, constructed and arranged in the manner and for the purpose herein described.

2. The arches A and B, so connected as to act as a support to each other in sustaining the superstructure and trains in a street railway, in the manner and for the purpose herein described.

3. The combination of the arcs or arches A and B with the truss frames C and D, in the manner and for the purpose herein described.

4. The connection of the arcs or arches A and B of an elevated street railway by means of truss-frames, in the manner and for the purpose herein described.

5. The combination of the arcs or arches A and B with the tension-rods, as herein described, so as to resist the vertical and lateral pressure upon the whole structure, and by a conflict, and consequent resolution of forces, to direct the same into the line of the greatest strength of the material employed, thus enabling a light and economical structure to be used, and interfering in the smallest possible degree with the space, light, and ventilation of the streets occupied and the buildings thereon.

89,234.—SEBASTIAN OEDAMER, Muscatine, Iowa.—*Washing-Machine.*—April 20, 1869.

Claim.—1. The upper rubber, Fig. 3, when made of a fluted or irregular roller, covered by rubber rings, substantially as set forth.

2. The above, in combination with the horizontal series of rollers and the swinging arms I, supported on rubber springs M, and provided with slides G, substantially as set forth.

89,235.—ARTHUR O'NEILL, Hyde Park, Mass.—*Velocipede.*—April 20, 1869.

Claim.—1. The vibrating seat H, in combination with links G, angular double-armed lever F E, connecting-rod D, and crank C, in the manner and for the purpose as above described.

2. The vibrating seat H, in combination with link *l*, double-armed lever *c*, and stirrup *d*, in the manner and for the purpose as set forth.

3. The vibrating seat H, in combination with the propelling arrangement and stirrups, as applied to a three-wheeled velocipede.

89,236.—JOHN H. OWEN, Houston Township, Ill.—*Harvester-Cutter.*—April 20, 1869.

Claim.—The combination of the teeth A A, constructed with double-concave cutting edges, in combination with the double convex knives C C, when the said knives are worked by a lever, and all constructed and arranged substantially as and for the purpose described.

89,237.—JAMES A. B. PATTERSON, Springfield, Ill.—*Plow-Cleaner.*—April 20, 1869.

Claim.—1. The above-described device for cleaning plows, consisting of the cleaner A, connected with and suspended from the beam of a plow by the pivot bars D and E and the guides F and G, and operated by means of the lever B, substantially as and for the purposes before set forth.

2. The pivot bars D and E, in combination with the guides F and G, connecting and suspending the cleaner A to the beam of a plow, substantially as shown and for the purpose described.

89,238.—JAMES A. B. PATTERSON, Springfield, Ill.—*Harrow.*—April 20, 1869.

Claim.—The within-described adjustable and flexible harrow, consisting of the four similar triangular frames, A, B, C, and D, connected and hinged together by the metal strips E E, F F, H H H H, and G G, and the rod K, and provided with four handles, L L, &c., all constructed, arranged, and combined substantially as and for the purposes above set forth.

89,239.—TREAT T. PROSSER, Chicago, Ill.—*Furnace for Liberating and Using the Gaseous Products of Coal.*—April 20, 1869.

Claim.—A furnace or fire-box, containing a reservoir, within which the coal may be partially or entirely coked before passing to the grate-bars, and in which reservoir the gases evolved by the distillation of the coal may be collected and conducted by suitable pipes, so as to be discharged below the grate-bars, to be burned in passing through the bed of incandescent fuel thereon, substantially in the manner shown and described.

89,240.—TREAT T. PROSSER, Chicago, Ill., assignor to himself and HENRY WALLER, same place.—*Steam-Generator.*—April 20, 1869.

Claim.—1. A chamber or reservoir for exhaust steam, surrounding a steam-generator, and having a space interposed between said chamber and generator, within or through which the heat is radiated from the inner surface of the said chamber upon the outer surface of the generator, and whereby the exhaust steam is prevented from coming in contact with the generator, substantially as shown and described.

2. The combination of a steam-generator with a reservoir or chamber which surrounds the same, for the purpose of receiving the exhaust steam from the engine, they being so arranged as to leave an intervening chamber, A, between them, substantially as shown and described.

3. The combination of the boiler A, the steam reservoir or chamber H, the coal-reservoir C, and gas-conducting pipe D, substantially as shown and described.

89,241.—TREAT T. PROSSER, Chicago, Ill., assignor to himself and HENRY WALLER, same place.—*Steam-Generator.*—April 20, 1869.

Claim.—A steam-generator, having arranged within its fire-box, and opening out of the same, a magazine or reservoir for coals, and a pipe or conduit for conveying the gases which are generated by the distillation of such coals, and discharging them below the grate, substantially as shown and described.

89,242.—WILLIAM S. RABB, Winnsborough, S. C.—*Plow.*—April 20, 1869.

Claim.—The movable feet B C, to which the mold-boards or points are attached, arranged and operating substantially as and for the purposes herein specified.

89,243.—JOSEPH H. RACEY, New York, N.Y.—*Refrigerator.*—April 20, 1869.

Claim.—1. The combination of the corrugated roof D with the corrugated tapering side pockets F F, and lower water-troughs or receptacles G G, substantially as specified.

2. The combination with the refrigerator, constructed as described, of inner and outer doors, arranged to open in reverse directions—that is, the outer door or doors to open outward, and the inner door or doors to open inward—relatively to the chamber of such refrigerator, essentially as herein set forth.

89,244.—ISRAEL L. G. RICE, Cambridge, Mass.—*Inking Apparatus for Printing-Presses.*—April 20, 1869.

Claim.—The application of distributing-disks, placed at right angles with distributing-rollers, or inking-rollers, or inking-tables, substantially as and for the purpose set forth.

89,245.—SENECA M. RICHARDSON, Worcester, Mass.—*Tenoning-Machine.*—April 20, 1869.

Claim.—1. The combination of frame F with frame G, substantially as and for the purposes set forth.

2. The combination with frames F and G of the adjusting-screw H, said parts being constructed and arranged in relation to each other substantially as and for the purposes set forth.

3. The elevating frame G, constructed as described, and as shown in the accompanying drawings, for the purposes stated.

89,246.—JOHN MATHEW RILEY, Newark, N. J.—*Press for the Manufacture of Pens, Buttons, Jewelry, &c.*—April 20, 1869.

Claim.—1. The described arrangement upon the bolt C, formed with a screw-thread of the sleeve F, fitted in the upper bearing E, and secured by a nut or nuts, G, the cross-head H having arms J J, and retained in place by nuts I I and the cross-head L, having arms Q Q, said part L being connected to the cross-head H by links K, and also connected with the lever-arms O, substantially as herein shown and described.

2. The combination of the cross-head A J, nuts I, cross-head L, links K, plates S, nuts T, screw-shank C, and lever M, all constructed and arranged to operate substantially as and for the purposes herein set forth.

3. The adjustable stripper-fingers U U, in combination with the adjustable holder, substantially as described.

4. In combination with the parts A *b*, the holder V *a c*, having lugs K, stripper-arms U, pivots W, beveled plate *z*, and fastenings *d*, all constructed and arranged substantially as and for the purpose herein set forth.

89,247.—PETER J. SCHMIDT, Carlinville, Ill., assignor to SEIGEL, SCHMIDT, AND COMPANY, same place.—*Grain-Drill.*—April 20, 1869.

Claim.—1. The manner of holding the flukes in ground by elastic pressure upon the bar E, substantially as set forth.

2. Moving the flukes to a zigzag or right line setting by the shifting-bars I, substantially as set forth.

3. Moving the feed-tubes K by slides K′ to follow the flukes, substantially as set forth.

89,248.—J. Q. C. SEARLE, Topeka, Kans., assignor to JULIA E. SEARLE, same place.—*Base-Burning Stove.*—April 20, 1869.

Claim.—1. A fire-pot, suspended with a heater, substantially as described, in combination with an annular flue, *t′*, arranged as set forth.

2. A hollow fire-pot, having openings at the upper edge, in combination with an air-conducting tube, E, for the purpose described.

3. The combination of the fire-pot and a series of hollow air-conducting tubes or arms, which support the pot, substantially as set forth.

4. The tube E, extending from the fire-grate through the partition *d′*, and serving both to conduct the ashes to the drawer and to prevent the access of cold air to the exterior plates of the stove.

5. The combination of the fire-pot D, deflectors

G G′, and outer casing B of the heater, the whole being arranged substantially as and for the purpose described.

6. The combination of the above, the partitions *d d′*, openings *y y′*, and pipe X, all arranged as set forth.

7. The feeder H, in combination with the outer perforated casing C, substantially as and for the purpose described.

8. The feeder H, consisting of two concentric tubes and an intervening chamber, containing asbestos or its equivalent.

9. The arrangement of the casing C, feeder H, and inclined partitions *f f′*, extending between the casing and feeder, and inclosing an air-space, *w′*, all as set forth.

89,249.—JOHN SHEFFIELD, Buffalo, N. Y.—*Steam-Generator.*—April 20, 1869.

Claim.—The arrangement of the induction-air pipe D within the chimney C, and with its extension D′, communicating with the furnace B, as herein described.

89,250.—THEODORE SLOAT, Brooklyn, (E. D.,) N. Y.—*Cracker-Machine.*—April 20, 1869.

Claim.—1. The arrangement and combination of the vertical shaft L, crank M, and bevel-pinions I K, for operating the sliding knife B, by or from the shaft H, substantially as shown and described.

2. The combination of the longitudinally-adjustable and removable perforated false bottom C to the dough-box A with the intermittently reciprocating knife or slide B, having apertures, *b*, and formed with a series of cutting-bars, *c*, arranged to play beneath the perforations *a* in the false bottom, essentially as shown and described, and for the purposes set forth.

89,251.—ABRAM C. STANNARD, Milton, Wis.—*Washing-Machine.*—April 20, 1869.

Claim.—The arrangement with the box A of the perforated swinging board C, springs D, inclined board B, perforated beater H, arms G, and rock-shaft F, operated by the tortuously-grooved cylinder K and arm J, all substantially as shown and described.

89,252.—NATHAN STOCKWELL, Windsor, N. Y.—*Table.*—April 20, 1869.

Claim.—The combination of the table A, screw-standard H, sleeve-socket E, and set-screw J with the standard F, rings P, and legs O, provided with the notches R and wedges S, all constructed and arranged substantially as set forth.

89,253.—LEANDER R. STREETER, Chelsea, assignor to himself and A. B. ELY, (Trustees,) Newton, Mass.—*Dental Plate.*—April.20, 1869.

Claim.—1. The manufacture of dental plates and gums from the material or materials, substantially as described.

2. Dental plates and gums manufactured of the material or materials, substantially as described, or in the manufacture of which said material forms an essential ingredient, substantially as set forth.

3. The attachment or combination of artificial teeth to or with artificial bases, plates, or gums, made in whole or in part of the material, substantially as described.

4. The method of preparing, manipulating, and hardening the plate from the material or materials, and in the manner substantially as specified.

89,254.—LEANDER R. STREETER, Chelsea, assignor to himself and A. B. ELY, (Trustees,) Newton, Mass.—*Process of Treating Pyroxyle, Pyroxyline, and the Like Substance, for Forming Useful and Ornamental Articles.*—April 20, 1869.

Claim.—1. Treating pyroxyle, pyroxyline, or xyloidine, or its compounds, with suitable non-solvents, substantially as and for the purposes set forth.

2. Treating pyroxyline, or its compounds, with suitable non-solvents and cementive agents, substantially as and for the purposes set forth.

3. Pyroxyline, or xyloidine, or soluble gun-cotton, and its compounds, treated with suitable non-solvents, substantially as described.

4. Pyroxyline and its compounds treated with suitable non-solvents and cementive agents, substantially as described.

5. The formation of articles of ornament, utility, and manufacture from pyroxyle or pyroxyline and its compounds, rendered yielding, distensible, compressible, and impressible by a second process, substantially as set forth.

6. The formation of articles of ornament, utility, and manufacture, by rendering pyroxyle or pyroxyline, or its compounds, yielding, distensible, compressible, impressible, and adhesive, by a second process, substantially as set forth.

7. The attaching of pyroxyle, or pyroxyline, or its compounds, to other materials, articles, or bodies, after the said pyroxyle, &c., has been treated by my second process, substantially as set forth.

89,255.—JAMES STUTT, Fermanagh County, Ireland.—*Machine for Disintegrating Wood for Paper-Stock.*—April 20, 1869.

Claim.—1. The dogs F F, in combination with the head-blocks E E, and carriage D, for the purposes and substantially as described.

2. In combination with the dogs F F and head-blocks E E, the saws O, hung obliquely upon the shaft P, so that the sinuosities of the track of the saws will cut laterally, as well as longitudinally, for the purpose of making paper-pulp, and for the purposes described.

3. The rollers R R, in combination with the carriage D and saws O, substantially as herein set forth.

4. The bevel-gears M and endless screw K, gear-wheel J, and pinions I I, in combination with the rack H, carriage D, and the gang of saws O, when constructed and operated for the purposes and substantially as herein set forth.

89,256.—WILHELM C. A. THIELEPAPE, San Antonio, Texas.—*Needle-Threader for Sewing-Machines.*—April 20, 1869.

Claim.—The eyelet-frame *a*, in combination with the spring *b b*, for keeping the parallelopipeds together, and the pins *u* and *v* for separating them, the spring *e*, for attaching the device to the machine-needle, and the adjusting-plate *r*, with its notches *n* and *o*, adapted for a curved or a straight needle, all constructed and operating substantially as and for the purpose described.

89,257.—MOSES N. WARD, Linneus, assignor to FREDERICK H. COOMBS, Bangor, Me.—*Horse-Rake.*—April 20, 1869; antedated October 20, 1868.

Claim.—1. In a horse hay-rake, whose rake-head is placed behind the wheels, combining such head with levers or arms, whose fulcra are forward of the axle, and which are thus free to rise and fall independent of the axle, substantially as and for the purpose set forth.

2. The combination, with the rake-head E, of the swinging-arms or levers D, so hung that when at their lowest position they may rest at about their centers, on the carriage axle, substantially as described.

3. The stiff spring I, in combination with the rake-head E.

4. The vertical rods F F, B, and G G, and spiral springs *e e*, in combination with the rake-head E.

5. The combination and arrangement with the swinging-levers D, of the raking-teeth, in such manner that the act of backing shall automatically lift the levers and reverse the position of the teeth, and the forward movement bring them again into operative action, substantially as described.

6. The combination, with the raking-teeth, of the holding-teeth, substantially as and for the purpose described.

89,258.—ELIJAH WESTON, Buffalo, N. Y.—*Steam-Generator.*—April 20, 1869.

Claim.—1. The combustion-chamber E, formed by the partition F, having walls *a b*, and outside space G, in combination with the fire-box D, extended crown-sheet H, arranged substantially as herein specified.

2. The partitions I I′, in combination with the fire-box D, and boiler B of a locomotive, or other boiler, arranged substantially as herein set forth.

3. The wire sieve or screen *c*, and bars *e f g h*, arranged with reference to the fire-door of a boiler, as herein described.

89,259.—DAVID WIGGINS, Greenport, N. Y.—*Ice-Cream Freezer.*—April 20, 1869.

Claim.—The arms E, parallel bars F, pitmen J, fixed bar T, and stationary scraper C, combined and operating substantially as described.

89,260.—R. B. WILLIS, Rochester, N. Y.—*Base-Burning Stove.*—April 20, 1869.

Claim.—1. The screw-plate *h*, when applied to the supply-chamber of coal-stoves, for the purpose set forth.

2. The hollow shaft *b*, with or without the perforated plate *x*, in combination with the elevated supply-chamber of coal-stoves, when it conducts the cold air downward centrally into the combustion-chamber, for the purpose set forth.

89,261.—D. W. WYMAN, New York, N. Y.—*Locomotive-Engine Furnace.*—April 20, 1869.

Claim.—1. The arrangement of the side flues a^2 a^2, and dampers b^2 b^2, controlling the same, in combination with the interior upper deflecting flange or flanges B^2 B^2, arranged relatively to said flues and lower or base portion of the pan, substantially as specified.

2. The arrangement of the T-shaped levers D^2 D^2, link-rods d^2 d^2, and cranks e^2 e^2, on adjacent sides of the pan, for operating the several valves or dampers b^2 b^2, substantially as shown and described.

89,262.—A. R. FULLER, Burlington, Vt.—*Sad-Iron Cleaner.*—April 20, 1869.

Claim.—The combination of the hinged bed-pieces A A, cloth-pieces B B, and pivoted bands C C, all constructed substantially in the manner and for the purposes herein set forth.

89,263.—JAMES LYON, Norfolk, Va.—*Machine for Cleaning Bricks.*—April 20, 1869.

Claim.—1. The door F, hinged as described, in combination with the pin, slotted arms, and cross-head of the plunger, substantially as described.

2. The sets of corrugated rollers A A A A, arranged as herein shown and described, and operated by means of forcing the bricks between them, as herein set forth.

89,264.—E. G. LAMSON, Windsor, Vt.—*Rock-Channeling Machine.*—April 20, 1869.

Claim.—1. A stone-grooving or channeling machine, which is moved upon a track, provided with a series of reciprocating cutters upon each side of the propelling-mechanism when the cutters are operated by means of a crank-shaft, which is formed in sections, substantially as and for the purposes set forth.

2. In a stone-channeling or grooving machine, which is moved upon a track, and provided with reciprocating cutters, which operate on each side of the track, a mechanism which enables the operation of the cutters by one engine on either side of the track, or on both sides of the track at one time, substantially as set forth.

3. The notched lever or bar X, connected to a rock-shaft under the boiler, which is attached to the feed-mechanism, to cause the backward or forward operation of the machine, by the means substantially as set forth.

89,265.—E. G. LAMSON, Windsor, Vt.—*Stone-Channeling Machine.*—April 20, 1869.

Claim.—1. The arrangement, upon the bed-frame C, of the two sets of cutters V V, upon or around the guides R R, arranged upon the same side of the frame, and at each side of a boiler, A′, to operate outside of the frame and track, either vertically or at an angle, and braced upon the rear of the bed-frame, substantially as set forth.

2. In a stone-grooving or channeling machine, the method herein described of moving the machine up and down steep grades, by means of a rope, chain, or their equivalents, substantially as set forth.

3. The arrangement of the toothed wheel G′, chain H′, and weight J′, with a stone-channeling and grooving machine, substantially as set forth.

4. A stone-channeling or grooving machine, which is mounted upon a frame supporting a horizontal or upright steam-boiler, which is hung on trunnions, whereby the same will retain its normal position, irrespective of the incline or angle of the bed-frame, substantially as set forth.

5. In a stone-channeling or grooving machine carrying two or more engines and two or more sets of cutters, an arrangement of devices by which either engine may be made to feed the machine in either direction along the track, substantially as herein set forth.

6. Connecting the feed-mechanism with an eccentric on the main shaft of the engine in such a manner that the said feed-mechanism shall be operated at whatever angle the engine, engine-bed, and cutting-apparatus may be placed, substantially as herein set forth.

7. The cogged segmental arm Y, provided with a collar encircling the trunnion-shaft of the engine-bed G, and held in position by the clutch F′, substantially as and for the purposes herein set forth.

8. The combination, with the shaft *a*, of the worm-gear *x*, axle E, spur-wheel *y*′, and rack-bar B, whereby the spur-wheel is made to act upon its upper and lower face, substantially as set forth.

89,266.—JOHN M. BLAISDELL, Sanbornton, N. H.—*Extension-Table.*—April 20, 1869.

Claim.—1. The chamber F, for the reception of the detachable folded leaves, formed by the two transverse boards F′ and the hinged ends F″, supported by the extension-slides and the central leg J, and connected to the cross-bars H, so as to be inclosed entirely within the table-frame when the latter is closed, substantially as herein described.

2. The upper auxiliary leaves, folded and secured upon the bottom auxiliary folded leaf K″, and between the hinged ends F″ of the chamber F, in the manner and for the purpose described.

3. The ends F″ of the transverse chamber F, hinged for the purpose of serving as supports for the central detachable leaf when in place, and to open and close the ends of the chamber, to facilitate the removal of said leaves from and insertion into the chamber F, as described.

4. The fixed and detachable table-leaves, provided with spring-catches L and staples *l*, arranged and interlocking in the manner and for the purpose herein described.

5. The movable transverse chamber F, combined with the yielding central support or foot J J′, for the purpose described.

89,267.—GEORGE ADAIR and J. F. POOL, Monroe, Wis.—*Device for Cutting Bolts.*—April 27, 1869.

Claim.—The combination of the handle D and cam E with the lever B, the bar A, and knife *c*, all constructed, arranged, and operating substantially in the manner and for the purpose described.

89,268.—MOSES L. ANDREW, Cincinnati, Ohio assignor to himself and GEORGE BURROWS, same place.—*Rotary Pump.*—April 27, 1869.

Claim.—1. The arrangement of the hinged valve or plate C *c*, spring D, and set-screw E, with reference to the piston B, substantially as shown and described.

2. The arrangement of the tapering packing H, plate I, and set screw K, with reference to the piston G, substantially as shown and described.

89,269.—MOSES L. ANDREW, Cincinnati, Ohio, assignor to himself and GEORGE BURROWS, same place.—*Rotary Pump.*—April 27, 1869.

Claim.—1. The arrangement of the curved pipes B C, as set forth, and for the purpose specified.

2. In combination with the elements of the preceding clause, the check-valve *e*, wire F, and stopper G, for the purpose stated.

3. The sliding bearing N, frame O, and key P, in combination with the journals M M, for the purpose described.

4. The keys J, and springs K, in combination with the hubs I, for the purpose described.

89,270.—GUSTAV ANTON, Philadelphia, Pa.—*Holder for Candles and Ornaments on Christmas-Trees.*—April 27, 1869.

Claim.—Combining with a candle-holder the described series of sockets, or their equivalents, substantially as and for the purpose set forth.

89,271.—SILAS D. BALDWIN, Chicago, Ill., assignor to himself and DANIEL LEONARD, same place.—*Vapor-Burner.*—April 27, 1869.

Claim.—1. The deflector B, constructed substantially as and for the purposes specified.

2. The disk A, in combination with the cap C, and deflector B, all constructed and operating substantially as and for the purposes specified.

3. The cap C, constructed substantially as specified.

89,272.—ROBERT R. BALL, West Meriden, Conn.—*Sash-Lock.*—April 27, 1869; antedated April 24, 1869.

Claim.—1. In a sash-lock, as an improvement on the patent granted to me, as assignee of D. P. Lacy, on the 18th of August, 1868, providing the bolt G with lateral arms g g', and the guide e, for the purpose specified.

2. Constructing the tumbler E, with its central projection f^1, socket f^3, and cavity f^4, to be used in combination with the bolt G, for the object described.

3. In combination with the above, the arrangement and construction of the gravitating-crank H, with the tumbler F, and shield I, when employed in the manner and for the purposes stated.

89,273.—ROBERT R. BALL, West Meriden, Conn.—*Sash-Lock.*—April 27, 1869; antedated April 24, 1869.

Claim.—The slide K k, L l, constructed as described, and adapted for use in combination with the slotted lock D d, tumbler F, and bolt G, in the manner and for the purpose explained.

89,274.—JOSEPH B. BATCHELDER, Boston, Mass.—*Surfacing Fabrics with Bronze or Metallic Powders.*—April 27, 1869.

Claim.—The improvement in surfacing with metal or bronze powders substantially as described.

89,275.—EDWIN E. BEAN, Boston, assignor to DAVID WHITTEMORE, North Bridgewater, Mass.—*Sewing-Machine for Sewing Leather.*—April 27, 1869.

Claim.—1. The combination for effecting the movements of the awl and needle, the same consisting of the rotary driving-shaft D, the adjustable eccentric e, its connector f, the rocker-shaft h, its arms g i, and the cranked wheel H, and connecting-rod q, the whole being applied together, and to the awl and needle-carriers I G, and frame, and arranged substantially in manner and so as to operate as specified.

2. In combination with mechanism for feeding the material to be sewed, and mechanism for imparting to the awl and needle their vertical movements, the mechanism, substantially as described, by which the awl, while piercing the material, is moved laterally with such material and feeding-mechanism, without of itself in any way affecting the feeding of the material.

3. The combination for effecting the movements of the feeder and the presser, the same consisting of the grooved cam f', (applied to the driving-shaft,) the lever c', applied to the said cam, as described, the rocker-shaft y and its arms x g, the pendulous bar, or head L, the connecting-rod w, and the shaft u, and its arms t v, the whole being arranged with and applied to the presser, and feeder, and the frame of the machine, substantially as set forth.

4. In combination with the said mechanism for effecting the movements of the feeder and the presser-foot, the slot z, (in the arm x,) and the adjustable pin a', and its clamp-screw applied to the lever c', and the arm x, their purpose being to regulate the "length of stitch," as set forth.

5. The combination of the adjusting-screw p' and nuts q' r', or the equivalent thereof, with the pendulous bar L, the crank-pin o', and the arm g, of the mechanism for operating the awl and the feeder, as set forth, the purpose of the said parts o', p', q', and r', being to enable the awl to be adjusted with reference to the needle.

89,276.—WILLIAM BEERS, Milan, Ohio, assignor to himself and WILLIAM MCMILLEN, same place.—*Fastening for Carriage-Seats.*—April 27, 1869.

Claim.—The hook D and plate b, in combination with the pins E, seat, and box, arranged in relation to each other, as and for the purpose substantially as set forth.

89,277.—HENRY BICKFORD, Cincinnati, Ohio.—*Blind-Slat-Tenoning Machine.*—April 27, 1869.

Claim.—1. In combination with the rotating chucks F F', through which the material is fed endwise, the sliding adjustable jaws K, constructed and operating as described, and for the purpose set forth.

2. The weighted pawl P and bell-crank Q, arranged and operated in the manner and for the purpose specified.

3. The cutter-head A D d, constructed and operated as described, and for the purpose of cutting a double and divided tenon, as set forth.

4. The beveled spurs E, constructed substantially as described, and for the purpose set forth.

5. The adjustable gauge M O o, for the purpose set forth.

89,278.—JEHIAL E. BLODGETT, Oswego, N.Y.—*Stove-Cover Holder.*—April 27, 1869; antedated April 15, 1869.

Claim.—A stove-cover holder, designed to keep stove-covers when not in use, and constructed with one or more narrow open spaces, each between fixed bearing-places, and operating in the manner as herein described.

89,279.—VICTOR G. BLOEDE, Brooklyn, N. Y.—*Method of Utilizing the Waste Products of Sugar-Refineries.*—April 27, 1869.

Claim.—1. The utilization of the waste scum of sugar-refineries as a fertilizer.

2. The mode of treating it with acids, to prevent loss of ammoniacal products.

3. The thorough desiccation of the scum to increase its strength and portability.

4. The utilization of the scum for the manufacture of the prussiate of potash.

5. The method of increasing the fertilizing strength of the scum, by heaping and fermenting it, substantially in the manner and for the purpose herein set forth.

89,280.—REINARD BLUM, Champaign, Ill.—*Stove-Governor.*—April 27, 1869.

Claim.—1. The arrangement, on the outside of a stove-pipe, of the expansive plate a, having a socket, e, at each end, the non-expansive plate b, and the lever D, the lower end of said lever resting in the lower socket e, and the plate b resting on a shoulder, f, on the lever, and its upper end inserted in the upper socket e, all substantially as and for the purposes herein set forth.

2. The arrangement of the damper C, shank B, rod E, and nut h, with the lever D and plates a and b, all constructed as described, and operating substantially as and for the purposes herein set forth.

89,281.—DANIEL BORDNER, Canton, Ohio.—*Fence-Board Gauge-Holder.*—April 27, 1869; antedated April 22, 1869.

Claim.—The fence-board gauge-holder, herein described, consisting of the piece A, with plate F, supporting-pins B B, staples D D, and pins E E, the head-plate G, with one or more holes L, and the foot-rod C, the several parts being constructed, combined, and arranged, substantially as and for the purpose herein specified.

89,282.—JAMES F. BREWER, Plantsville, Conn.—*Chain.*—April 27, 1869.

Claim.—1. The cast-metal link A, with its eye a and pin b, all arranged substantially as shown and described, and for the purposes set forth.

2. As a new article of manufacture, a chain, the alternate links of which are connected by means o the eye a and pin b of a cast-metal link, all as an for the purpose substantially as required.

89,283.—Kennedy Brown, Gardner, Ill.—*Nut-Lock.*—April 27, 1869.

Claim.—The nut-lock represented at letter B, as and for the purpose above described.

89,284.—Simeon Brown, Utica, Ohio.—*Adjustable Gate for Grain-Elevators.*—April 27, 1869.

Claim.—The lever C, spring S, and crank-pin *p*, or its equivalent, in combination with the rod R, lever E, gate G, hopper H, and elevator B, substantially as shown and described.

89,285.—Willard C. Bruson, Chicago, Ill., assignor to himself and George Rounds, same place.—*Composition for Preserving Eggs.*—April 27, 1869.

Claim.—The composition above described, compounded of the ingredients mentioned, substantially as and for the purpose set forth.

89,286.—Isaac N. Buck, Elgin, Ill.—*Burglar-Alarm.*—April 27, 1869.

Claim.—1. In a burglar-alarm, the adjusting-screw M, in combination with the operating-bolt E, substantially as shown and described, for the purpose specified.

2. The combination of the tumbler-shaft F, with its lever-arm G, the operating-bolt E, with springs E E and H, arranged, relatively to each other, in the manner and for the purposes substantially as shown and described.

89,287.—W. H. Bustin, Watertown, Mass.—*Hames.*—April 27, 1869.

Claim.—The hames above described, consisting of plate A, with flange *b*, wood B, plate C, and ears *d*, when constructed in the manner and for the purpose substantially as described.

89,288.—William H. Bustin, Watertown, Mass.—*Hames for Harness.*—April 27, 1869.

Claim.—The hames A, constructed with flange *c* and projecting-plate *b*, and eyes *d*, in the manner and for the purpose specified.

89,289.—Charles Carr, Boston, Mass.—*Steam-Engine Cut-Off.*—April 27, 1869; antedated April 17, 1869.

Claim.—1. The cam *h*, substantially as shown and described, and for the purposes set forth.

2. The combination of the variable cam *h*, pivot, gudgeon *p*, hollow shaft *m*, rod *n*, stem *g*, arms *f*, and valves *r*, as herein set forth.

3. The inclined key *i*, in combination with the adjustable cams *h*, as herein described.

4. In combination with the cam *h*, the inclined key *i*, the hollow shaft *m*, the rod *n*, and toggle-joint *c c*, for the purpose of actuating the cams *h* from the governor-rod *b*, as described.

5. The arrangement of the arms *f f*, sliding valve *x*, and stem *g*, as described.

89,290.—Cyprien Chabot, Philadelphia, Pa—*Twisting and Drawing Heads for Spinning-Machines.*—April 27, 1869.

Claim.—The combination of the spindle C, having the hole through it bored tapering from each end to or about the middle, with the beveled rollers *e e'* made narrower than the diameter of the hole in the end of the spindle, all substantially as herein shown and described.

89,291.—James C. Cochrane, Rochester, N. Y.—*Steam-Generator.*—April 27, 1869.

Claim.—A low-water steam-port, composed of the valve-chamber, (Fig. A, 8,) the valve-seat, (Fig. A, 9,) and the valve, (Fig. A, 10, 11, 12,) in combination with the tube 7, all constructed and arranged substantially as described, for the purposes described.

89,292.—John Collins, Parma, Ohio.—*Spring-Balance Hammer.*—April 27, 1869.

Claim.—The arrangement of devices above described, to form a spring-balanced hammer, consisting of the spring I, hammer-helve C', spring J, hammer C, anvil B, and standards D and E, substantially as specified.

89,293.—Edwin Cowles and George R. Metten, Cleveland, Ohio.—*Velocipede.*—April 27, 1869.

Claim.—1. The arrangement of the drums J J, shaft *p*, wheel A, springs S, clutching-pawls, belts *c*, and treadles D D, in combination with the wheel A', frame or perch B C', and seat G', substantially in the manner and for the purpose described.

2. The arrangement of the device g^2, hook g^1, and cord *c*, in combination with a velocipede, which is constructed and operated substantially as described.

3. The combination and arrangement of the devices *d*, cords *c*, and treadles D D, with a velocipede, constructed and operated as herein described.

4. The arrangement and combination of the guiding-lever C, seat G', treadles D D, perch or frame B, cords *c c*, drums and clutching-pawls, springs, and tracking-wheels A A', substantially in the manner shown and described.

89,294.—Eli L. Crandall, Williamstown, N. Y.—*Table-Car or Caster.*—April 27, 1869.

Claim.—The portable table-car or caster, constructed with chambers or shelves, and mounted upon wheels or runners, all substantially as and for the purpose described.

89,295.—William Franklin Davis, Boston, and Charles Elbridge Broad, Milton, Mass.—*Door-Fastener.*—April 27, 1869.

Claim.—1. The reversible main-piece A, having a catch, *a*, at one end, and teeth *b* at the other end, substantially as and for the purpose herein specified.

2. The adjustable and reversible shoulder-pieces B C, in combination with the slotted main piece A, substantially as and for the purpose herein set forth.

89,296.—Augustus Day, Detroit, Mich.—*Track-Cleaner.*—April 27, 1869.

Claim.—1. The strap A, and adjustable-weight F, when constructed and operating substantially as and for the purposes set forth.

2. In combination with the above, the spur H, and auxiliary scraper or wings E, when arranged and operating substantially as and for the purposes described.

89,297.—Charles M. Dillon, Philadelphia, Pa.—*Swing.*—April 27, 1869.

Claim.—The construction and arrangement of the uprights V and V', cross-piece B, brackets *b* and *b'*, rockers R and R', provided with slots L, reversible seats T and T', with their uprights *a*, a^1, a^2, and a^3, and cross-pieces S and S', rods D and D', shaft H, cradle C, and swing-seat A, the whole operating substantially in the manner and for the purpose above set forth and described.

89,298.—William Henry Elton, Baltimore, Md.—*Machine for Cleaning Coffee.*—April 27, 1869.

Claim.—The cleaning-cylinder, as shown, formed of alternate sections of solid sheet-metal, B, and removable wire-cloth C, and provided with radial shelves E E^1 E^2, and spaces *e* between the outer edges of said shelves and the periphery of the cylinder, all constructed, arranged, and operating as herein set forth.

89,299.—William A. Fenn, Rochester, N. Y., assignor to himself and Henry B. Beach, same place.—*Oil-Can.*—April 27, 1869.

Claim.—1. The employment, in an oil or other can, of a turning or sliding gate *b*, used in combination with packing *a*, and so arranged as to perform the double effect of opening both the spout passage and the vent at one action, and *vice versa*, substantially as herein described.

2. The combination, with the cover of an oil or other can, of a spout, *h*, a vent, *k*, and a cut-off device, *b*, substantially as herein set forth.

3. The arrangement of the cylinder C with spout *h*, the packings *a a*, the gate *b*, and the air-tube *k*, substantially as and for the purpose specified.

4. The combination, with the packings *a a*, of the follower *j* and spring *p*, operating in the manner and for the purpose specified.

5. Attaching the vent-tube *k* to the follower *j*, in the manner and for the purpose specified.

89,300.—William A. Fenn, Rochester, N. Y., assiguor to himself and Henry B. Beach, Meriden, Conn.—*Animal-Trap.*—April 27, 1869.

Claim.—1. The combination, in the circular case A, of the centrally-pivoted gate *f*, operated by a weight or spring, and the hinged platform *n'*, said parts being arranged in such a manner that the gate itself divides the circle of the lower chamber into two compartments, the positions of which change with the rotation of the gate, to admit and discharge the animal, as herein set forth.

2. The offset D, containing the cavities *k l*, for the reception of the bait and the platform, as hereiu described.

3. The combination, with the two chambers B C, situated directly oue above the other, the transparent mica, or glass door *c*, arranged substantially as and for the purpose herein set forth.

89,301.—Benjamin Franklin Fisk, Fredonia Township, Mich.—*Gate.*—April 27, 1869.

Claim.—1. The latching-elevator F, and iuclined-hanging posts B, iu combination with the main gate-post A, and pivoted rails D, and slats S, of a counter-balanced gate, substautially as and for the purpose described.

2. The arrangement and coubination of the two horizontal levers L with the cross-bar C of the inclined hanging frame B C, when said levers are so connected with the latching-elevator F as to be capable of actuating it, in operating a pivoted folding gate, from a vehicle, or on horseback, substantially as set forth.

89,302.—Thomas Jefferson Flagg, New York, N. Y., assiguor to "Fisk, Clark, aud Flagg," same place.—*Felt Suspender-End.*—April 27, 1869.

Claim.—The felt suspender-end, hereinbefore described, as a new article of manufacture.

89,303.—Israel Forman, Fairmount, W. Va.—*Culinary Steamer.*—April 27, 1869.

Claim.—The bracket or ledge E E, in counection with the flange O, constructed substantially as and for the purpose set forth.

89,304.—Calvin Fulton, Rochester, N. Y., assignor to Norman H. Galusha, same place.—*Stove-Grate.*—April 27, 1869.

Claim.—The arrangement of the independent grate A and ring B, as herein described, the grate being sunken, and resting iu lugs *b b*, so as to leave a space, *f*, and having an independent dumpiug-action, as set forth.

89,305.—Benjamin Glasscock, Hillsborough, Ohio.—*Fly-Trap.*—April 27, 1869.

Claim.—1. The arrangement of the lid E, wire *a*, hook *b*, spring *c*, and buttons *f f*, all substantially as and for the purposes herein set forth.

2. The arrangemeut of the box A, divided into bait-box B, and prison C, one portion of the latter extending under the former, and having doors *e* and *h*, substantially as shown and described.

89,306.—Jonathan Goodher, Burlingtou, N. J.—*Trestle.*—April 27, 1869.

Claim.—1. A trestle, provided at each end with a number of hinged legs, H, of differeut lengths, arranged for adjustment, substantially as herein described, for the purpose of regulating the height of the said trestle.

2. The combiuation with the sections A A', having hinged legs H, of bars *c c*, adjustable on and independently of the said sections, for the purpose set forth.

3. The bloeks J J with their pins *s*, when arranged for attachment to the end-pieces of the trestle, substantially as herein described.

89,307.—Wilmer D. Gridley. New Britain, Conn.—*Book-Holder.*—April 27, 1869.

Claim.—1. A leaf-holder, consisting of the coiled spring *a*, socket *b*, aud holding-bar *c*, substautially as shown and described.

2. The combination of the spring *a*, socket *b*, bar *c*, with the supporting-rod *d*, and holdiug-elasp *e*, substantially as shown and described.

89,308.—Thomas Hall, Boston, Mass., assignor to himself and William Dillon, Stamford, Conu.—*Electric Signal for Railroads.*—April 27, 1869.

Claim.—The mechanism for the elevation of the signal, consisting of the armature-lever, the rod H, the lever K, and the chain and pulley, or their equivalents, connected with the counterbalanced signal-arm, substantially as described.

89,309.—George Haneline, Akron, Ohio.—*Fishing-Torch.*—April 27, 1869.

Claim.—The herein-described fishing-torch, consisting of the oil-can A, tube D, rod E', and torch F, when constructed and arranged in relation to each other in the manner substantially as described, and for the purpose specified.

89,310.—John Heatley, Etna, Pa.—*Oscillating Furnace for Puddling and Refining Iron.*—April 27, 1869.

Claim.—1. An oscillating or rotary furnace, for heating, boiliug, puddling, or otherwise working irou or other metals, constructed and operated substantially as and for the purposes above set forth.

2. A sliding pivot, *o'*, conneeted by one or more rods *r*, with a wheel, *t*, by which its distance from the cog-wheels is regulated, and thus a greater or less degree of oscillation obtained, arranged and used substantially as and for the purposes above expressed.

3. The use and arrangement of fire-grates around a central puddling-pan or basin, C', and their rotation under one fuel-hopper, Z, substantially as and for the purposes hereinbefore set forth.

4. A puddling-furnace, constructed with chills *e*, inclosing a circular space or pan, C', on the bottom plate *f*, surrounded by fire-grates, and so made as to rotate, and with openings in its roof, so relatively arrauged to each other and to the fire-grates as to exclude cold air from metal in the puddling-pan, constructed and used substantially as and for the purposes hereiubefore set forth.

5. In combination with the puddling-furnace a meltiug-stove, erected over it, operated by the heat from such furnace, and connected therewith by a pipe, *o*, arranged aud operated substantially as and for the purposes hereinbefore set forth.

6. The series of flues L' in or through the walls of the roof of a melting-stove, arranged and used substautially as and for the purposes above meutioued.

7. Purifying metal while in a molten state, passiug through the pipe *o*, by throwiug iuto it blasts, hot or cold water, or steam, in the manner and substantially as is hereinbefore set forth.

8. An elbow or bend in the conducting pipe *o*, open at the top, substantially as and for the purposes hereinbefore set forth.

89,311.—George Heim, Naperville, Ill., assiguor to himself and John Ruchty, same place.—*Compound for Forming Building-Blocks.*—April 27, 1869.

Claim.—A compound for building purposes, manufactured substantially as herein described.

89,312.—C. C. Hinsdale, Cleveland, Ohio.—*Manufacture of Sheet-Iron.*—April 27, 1869.

Claim.—The herein described mode or process of preparing sheet-iron for rolling, whereby a highly polished surface is given to said sheets, by the means and in the manuer substantially as set forth.

89,313.—Charles E. L. Holmes, New York, N. Y.—*Apparatus for Scouring and Drying Sheet-Metal.*—April 27, 1869; autedated April 20, 1869.

Claim.—1. The elastic rollers or brushes, to wash or scour sheet-metal on both sides, substantially in the manner specified.

2. The elastic squeezing-rollers *e f*, in combination with the water-vat *a* and drying chamber *k l*, substantially as set forth.

3. The coubination of scouriug mechanism for cleaning the surface of sheet-metal, with a heating apparatus for drying the surface of the sheet-metal

with rapidity, previous to its delivery from the machine, as specified.

4. The yielding range of drying-rollers *n*, fitted with springs or weights to keep them down, in combination with the standing-range *i* of rollers, substantially as set forth, so as to accommodate different thicknesses of metal, and to facilitate the introduction of the sheet, substantially as set forth.

5. The drum or roller *h*, made hollow, and heated, in combination with the scouring or drying mechanism, substantially as specified, so as to keep the sheet-metal hot while being wound, as specified.

89,314.—Otho E. Hornidy, Chauncy, Ill.—*Medicine for Cattle and other Animals.*—April 27, 1869.

Claim.—The above new and improved medical compound, the same being for the use of preventing and curing the above-mentioned diseases.

89,315.—P. Gengembre Hubert and J. W. Pitney, New York, N.Y.—*Dress-Protector for Carriage-Wheels.*—April 27, 1869.

Claim.—The carriage dress-protector herein described, made so as to be applied on and be secured to the wheel or wheels of a carriage, substantially in the manner and for the purpose set forth.

89,316.—George Hill Hurd, Memphis, Tenn.—*Dental Impression-Cup and Suction-Mold.*—April 27, 1869.

Claim.—The making an impression-cup for dental use, for taking an impression of the mouth, shaped to fit merely over the "alveolar" process, as shown in Fig. No. II, also mold to form the suction-cavity, as shown in Fig. No. I, each shaped and formed as above described and set forth, and for the purposes herein stated.

89,317.—Henry Hursh, Sen., Mansfield, Ohio.—*Rocking-Chair.*—April 27, 1869.

Claim.—A rocking-chair, constructed with rockers extending from the bottom of the front chair-legs, under the bottom of the rear chair-legs, up to or nearly to the top of the chair-back, substantially as and for the purpose specified.

89,318.—Charles B. Jarvis, New York, N. Y.—*Process of Distilling Spirits.*—April 27, 1869.

Claim.—1. Distilling spirit from mash or wash, continuously injected into a column with perforated divisions, wherein, as it passes, vaporization is induced by a continuous current of steam, substantially as described.

2. The combination of column A, perforated plates *k*, pipes *a*, and worm *d*, constructed and operating together, substantially as explained.

3. Column A, furnished with and divided by perforated plates *k*, for purposes of distillation.

4. The combination of columns A and C, perforated and dividing plates *k*, pipes *c*, *e*, and *f*, worms *d*, *f'*, and *g*, constructed and operating together to distill spirit, substantially in the manner described.

5. The combination of column A, perforated and dividing plates *k*, and siphon G, acting together for the purposes of distillation, substantially in the manner described.

6. A continuous distillation, in the manner set forth, by continuously contacting steam with the mash or wash, and vaporizing the spirits therein, and continuously discharging the slop or waste during the distillation, substantially in the manner set forth.

89,319.—Theophlie Laramie and John A. Scott, Wheeling, W. Va.—*Machine for Wrapping Sugar-Kisses.*—April 27, 1869; antedated April 17, 1869.

Claim.—1. The arrangement of the cross-heads *g* and *e*, with the guide-rods *f* and springs *i*, and the presser *y*, with the bar *r'*, spring *q'*, screw *o'*, and upright *p'*, for operating the presser, substantially as herein recited.

2. The hinged plates *m'* and *n'*, on the end of the presser, as and for the purposes described.

3. The kiss-receiver *z*, with the spring ends, as herein set forth.

4. The hinged plates *l'*, constructed and operated as described.

5. The recessed plates *h'*, in combination with the presser, for the purposes recited.

6. The arrangement of the springs *b'* and *c''*.

89,320.—Robert P. Leonard, Keene, N. H.—*Preparation for Raising Bread.*—April 27, 1869.

Claim.—A composition or yeast for making bread, compounded of the ingredients and prepared in the manner substantially as above set forth, with or without the use of hops.

89,321.—Henry E. Maker, Newton, (Upper Falls.) Mass., assignor to himself and Hosea C. Hoyt, same place.—*Spring Bed-Bottom or Cushion.*—April 27, 1869.

Claim.—1. The combination and arrangement of the two series of springs and the crossed and pivoted frames A B, the whole being applicable to a sacking or mattress, as set forth.

2. The arrangement and combination of the sustaining bars D D, the two series of springs C, and the crossed and pivoted frames A B, the whole being substantially as and for the purpose or purposes as hereinbefore explained.

89,322.—Jared Maris, Marietta, Ohio.—*Hub and Spoke for Carriage-Wheels.*—April 27, 1869.

Claim—1. A wheel-spoke so enlarged at its base as to form projecting offsets or shoulders G, on one or both sides thereof, in the line of the axis of the hub, wherein they are to be inserted, for the purpose of allowing a wider base for the spoke, without a corresponding width outside of the hub, substantially as herein set forth.

2. Bands E, in combination with a hub, and with shoulders G, formed upon the spokes F, in the line of the axis of the hub, substantially as herein described.

3. In combination with a wheel-spoke provided with projecting offsets or shoulders G, as above described, the double mortise A B, so driven in the hub as to make a bearing, C, therefor, below the surface of the hub, for an inner shoulder on the spoke, substantially as herein set forth.

4. The enlargement of that portion of the circumference of the hub included between the spokes, so that the spaces H H between the spokes shall be flush with the outer surface of the bands E, driven upon the hub against the spokes, substantially as and for the purpose herein set forth.

89,323.—Thomas F. Mayhew, Port Norris, N. J.—*Oyster-Dredge.*—April 27, 1869.

Claim.—The bent bar *s*, pivoted to the rods *b* and *b'* of an oyster-dredge, and arranged for attachment to the operating rope *x* of the same, substantially as and for the purpose herein described.

89,324.—Leander J. McCormick, William R. Baker, and Lambert Erpelding, Chicago, Ill.—*Harvester.*—April 27, 1869.

Claim.—1. The combination, substantially as set forth, of the main frame, the rocking coupling frame, and the interposed spring, crossing the pivot of the coupling-frame, to relieve the pressure of the cutting apparatus upon the ground.

2. The combination with the plate-spring, secured to the rocking coupling-frame of the adjusting-screw on the main frame, for the purpose specified.

3. The combination, with the spring of the flange-plate *e*2 on the coupling-frame, to prevent lateral deflection of the spring, as set forth.

4. The combination of the forked removable rocking-lever with the link *i*, substantially as set forth.

5. The reversible-bracket *h*, constructed as described.

6. The arrangement of the spring h^2, on the lifting-lever, as described.

89,325.—Thomas McMullin, Ira N. Mendenhall, and Miles Mendenhall, Jr., Osgood, Ind.—*Wash-Boiler.*—April 27, 1869.

Claim.—1. The wire-frame D, in combination with the spiral-spring E and movable ring *b'*, arranged to operate substantially as described.

2. An adjustable false bottom for any wash-boiler,

consisting of the metal pieces A A′ and end-pieees B B, in combination with wire frame D, spiral spring E, movable ring *b′*, and tube C, provided with spouts *b b*, arranged and operating substantially in the manner and for the purpose described.

89,326.—HUGH MERRIE, Cincinnati, Ohio.—*Machine for Making Tin-Lined Lead Pipe.*—April 27, 1869.

Claim.—1. In combination with the eylinder H, plunger E, and core J′, the additional or supplementary cylinders G I, plungers D F, and passages L M, arranged and operating substantially in the manner and for the purpose specified.

2. In the described connection with the additional or supplementary cylinders G I, plungers D F, and passages L M, the core N, arranged and operating in the manner and for the purpose described.

89,327.—HENRY MITCHELL, Osborne, Ohio, assignor to himself, G. W. GETZANDANER, and J. H. PROTZMAN, same place.—*Fruit-Can.*—April 27, 1869.

Claim.—The combination of the groove B, at the top of the fruit-can, with the flanged lid E, resting upon the groove B, in the full size of the can, with a wire lever, G, to hold the lid firmly to its place, substantially as described, and for the purposes set forth.

89,328.—CHARLES S. MOSELEY, Elgin, Ill.—*Watch.*—April 27, 1869.

Claim.—1. Providing the pillar-plate of a watch with a hole, *h*, or with a recess, through which to reach the pawl *c*, substantially as and for the purposes specified.

2. So constructing and attaching the pawl *c*, that it can be disengaged from the ratchet-wheel *b*, by the use of a pin or lever, substantially as and for the purposes specified.

89,329.—BYRON W. NICHOLS, Canton, Ohio, assignor to himself, CORNELIUS AULTMAN, GEORGE H. BUCKINS, PERCY S. SOWERS, and A. CLARK TONNER, same place.—*Mode of Converting Articles of Iron into Steel.*—April 27, 1869.

Claim.—1. The use of the ingredients herein named, when compounded and used in the manner and in about the proportions herein described, and for the purpose set forth.

2. The employment of the peroxides of manganese and iron in the process of converting into steel articles of iron that have previously been cast or wrought into the desired form for use.

89,330.—E. R. NORNY, McDonough, Del.—*Preserving Fruits and Vegetables, and in Compounds Therefor.*—April 27, 1869.

Claim.—1. The rendering sulphite of lime soluble for preserving purposes, substantially in the manner hereinbefore described.

2. The manufacture of a liquor, as above described, for preserving fruit and tomatoes either hot or cold, the same being hermetically sealed or not, as above set forth.

89,331.—ORRIN A. NORTH, New Britain, Conn.—*Door-Bell.*—April 27, 1869.

Claim.—The application of a lever-gear, matching into a gear-wheel or shaft, in combination with a ratchet and plate with pins or arms thereon, for the better operation of the hammer, to a door or call bell, substantially as set forth and described in the above specification.

89,332.—ALBERT OLMSTED, Windsor, Mich.—*Log-Boat.*—April 27, 1869.

Claim.—The rings B and B′, in combination with the cross-piece C of the log-boat, the chain being arranged with reference thereto, substantially as and for the purpose specified.

89,333.—HENRY PADDACK and CASWELL HOLLAR, Abington, Ill.—*Grain-Drill.*—April 27, 1869.

Claim.—1. The combination of the plate Y, shaft R, and lever J, operating together, substantially in the manner and for the purpose described.

2. The curved bar G and lever I, operating together to raise the shovel, substantially as described.

3. In combination with the lever I, connecting-rod U, and lever-bar M, the slide P, for shutting off the grain, substantially as described.

4. The combination and arrangement of the timbers A A, pin X, and movable bar H, for changing the position of the shovels, substantially as described.

89,334.—J. C. PARMATER and E. H. BOWEN, Vinton, Iowa.—*Grain-Separator.*—April 27, 1869.

Claim.—1. The trough G^3, situated directly beneath the wire screen *b*, and supplied with the spout or discharge-pipe *h*, passing through the upper rear end of shoe D, arranged and operated substantially as and for the purpose set forth.

2. The standards A A′, connected as described, trough B, brake C, handle *g*, shaft g^3, cog-wheel *J*, pinion g^1, shaft g^2, connecting-rod *j*, shoe, or casing D, screens G, G1, G2, and *b*, boards G3 G3 and G4, spout *h*, wire sereens H H′, spout, or troughs F F′, strips *c c*, roller *i*, guide or projection *i*2, and rail *i*1, all combined, arranged and constructed substantially as and for the purpose set forth.

89,335.—L. J. PARSONS, New Haven, Conn., assignor to himself and C. S. BUSHNELL, same place.—*Tool-Adjuster for Lathes.*—April 27, 1869.

Claim.—The combination, with the tool-post B and slotted ring-collar E, of the segment of a flat circular plate or disk, located in the mortise, in the tool-post, and serrated on the lower and curved surface for better adhesion to the ring-collar, all constructed and combined in the manner described.

89,336.—LAWSON G. PEEL, Preston, Ga.—*Coupling for Buggies.*—April 27, 1869.

Claim.—The arrangement of the axle A, fifth-wheel B, bar D, rods E E, and springs F F, all substantially as shown and described.

89,337.—JOHN J. PHARES, Zionsville, Ind.—*Railroad-Fare Box.*—April 27, 1869.

Claim.—1. The combination and arrangement of the covering-can, Fig. 1, with the revolving many-chambered ticket-holder, Figs. 2 and 3, operating substantially as and for the purpose described.

2. In combination with the above, the employment of the system of tickets shown in Fig. 4, substantially as described.

89,338.—JOHN R. POMROY and L. J. WALTER, Lockport, N. Y.—*Pump.*—April 27, 1869.

Claim.—The arrangement, relatively to the air-chamber A, of the valves *a a′*, the tube *b*, the eduction-outlet *c*, the partition *d*, and floor *f*, when the parts are adapted to operate together as described

89,339.—T. W. PORTER, Boston, Mass., and J. D. LEACH and SABIN HUTCHINGS, Penobscot, Me.—*Chain-Plate Attachment.*—April 27, 1869.

Claim.—1. In combination with the chain-plate *c* and holding-bolts *c c*, a metallic plate, or support, formed to be inserted in or secured to the side of the vessel, and through which the holding-bolts pass.

2. The support *d*, formed with the groove for the chain-plate *e*, and hollow pivots for the bolts *c*, substantially as and for the purposes specified.

3. The plates *f*, formed with a hollow pivot for the reception of the holding-bolts *c*, substantially in manner as described, and for the purposes specified.

89,340.—A. J. PYLE, New Galilee, Pa.—*Safety-Stove for Railroad-Cars.*—April 27, 1869.

Claim.—The tanks or reservoirs A A, in connection with a stove, constructed, arranged, and operating substantially as and for the purposes herein specified.

89,341.—JAMES RANKIN, Detroit, Mich.—*Velocipede.*—April 27, 1869.

Claim.—1. The combination of the treadles O, disks L, cylinders M, band N, and pulley P, all arranged to operate as and for the purposes set forth.

2. The hollow standard D, on the platform C, situated between the axles of wheels G and J, to form the bearing of the shaft E of the guide-wheel G, substantially as and for the purpose set forth.

3. The combination and arrangement of the standard D, shaft E, fork F, forked sleeve H, and pivoted

guide-lever I, substantially as and for the purpose set forth.

4. The combination of the flange *d*, lip *e*, notch *f*, and pivoted lever I, as and for the purpose set forth.

89,342.—D. W. S. RAWSON, Peru, Ill.—*Apparatus for Multiplying Photographic Images.*—April 27, 1869.

Claim.—1. The sectional parts of a concave lens, in front of a camera-lens, for multiplying the number of images in the camera.

2. The adjustable blenders D D D D, Fig. 2, moving to and from the center, by this or an equivalent device; also the same movement for the lenses.

3. The box C, for shading the lenses when in use, and protecting from dust when not in use.

89,343.—HENRY REES, Petersburgh, Ind.—*Horse-Rake.*—April 27, 1869.

Claim.—1. The handle B, constructed as described, in two parts, *a* and *b*, the handle proper, *a*, working inside the stock *b*, and also inside a wire spring, *c*, substantially as shown and described.

2. In combination with the handle B, constructed as above described, the stop D, rods *f f*, and hooks *d d*, all substantially as and for the purposes herein set forth.

3. The combination of the rake A, handle B, and slotted band C, all constructed and operating substantially as and for the purposes herein set forth.

89,344.—ALEXANDER K. RIDER, Elizabeth City, N. J.—*Pump-Valve.*—April 27, 1869.

Claim.—1. The cylindrical valve N, seat J, and cross-bars or girds M′, constructed and arranged as represented, relatively to each other, and to the ports I I of a pump, for the purposes herein set forth.

2. The freely rolling or shifting valve N, having an exterior of soft rubber, and an interior of metal, when made in the form of a hollow cylinder, and mounted to work upon a cylindrical seat, in the manner and for the purposes herein set forth.

3. The combination of the removable bushing M, formed with a seat, J, and webs M′, as represented, the bonnets C^1 C^2, the through-bolt D, and the tubular valve N, constructed, combined, and arranged as represented, for the purposes herein set forth.

89,345.—LOUIS S. ROBBINS, New York, N. Y.—*Mode of Preserving Telegraph-Poles.*—April 27, 1869.

Claim.—The process of impregnating the lower portion of telegraph-poles with creosote oil, substantially as herein described.

89,346.—WILLIAM A. ROBINSON, Grand Rapids, Mich.—*Horse-Collar Fastener.*—April 27, 1869; antedated April 17, 1869.

Claim.—1. The combination of the mortise *a*, Fig. 1, and the tenon *a*, Fig. 2, with the catch *c*, Fig. 2, and the spring *b*, Fig. 3, both said catch and spring working in said slot, when constructed and operating substantially as set forth and described.

2. The application of the curved bars, Figs. 1 and 2, or their equivalent, for the purpose specified.

3. The combination of the above-described device for fastening, or its equivalent, with the curved bars, or their equivalent, when applied as and for the purpose set forth and intended.

89,347.—FRANCIS H. ROOT, Buffalo, N. Y.—*Basket-Grate for Stoves.*—April 27, 1869.

Claim.—A circular basket-grate, B, provided with a tilting-bottom, C, when the whole is constructed and arranged so as to be capable of being vibrated, as set forth.

89,348.—CHARLES E. ROPER, Canton, Ohio, assignor to himself and I. DURLIM, actuary of E. BALL & Co., same place.—*Harvester-Pitman.*—April 27, 1869.

Claim.—The combination of box E, strap F, tube H, pipe J, ball C, taper-screw D, adjusting-screw G, and jam-nut I, with the journals B B, all constructed and arranged to operate substantially as herein set forth.

89,349.—HENRY B. ROWLEY, Buffalo, assignor to CARRIE R. LAMAN, Painted Post, N. Y.—*Journal-Box for Railway-Cars.*—April 27, 1869.

Claim.—An improved railway-car journal-box, the improvement therein consisting in the combination therewith of the vulcanized rubber surfaced oiling-roller *c*, substantially in the manner herein set forth.

89,350.—J. R. RUDE, Liberty, Ind.—*Seeding-Machine.*—April 27, 1869.

Claim.—1. The arms or bars C′ C′, pivoted to the brace C of frame A, and provided, at their inner ends, with slots *c c* and cogged segments, gearing into each other and operated by rod f^2 and lever F, substantially as and for the purpose set forth.

2. The crank-shaft *j*, cords *i i′*, seed-drills G^2 G^3 and beams G G^1, all arranged and operated substantially as described.

3. The peculiar construction of the seed-distributers h^1 h^1, arranged and operated substantially as described.

4. The combination of frame A, with the inclined frame *b*, embracing guiding-wheel *b′*, arms C′ C′, beams G G^1, seed-drills G^2 G^3, wire spouts *s s*, secured to outlets *j′ j′*, on seed-box J, cords *i i′*, crank-shaft *j*, lever F, stop or brake *f*, serrated piece f^1, connecting-rod f^2, and braces S S, provided with boxes, through which axle B′, supplied with wheels B B, passes, all constructed, arranged, and operated substantially as described.

89,351.—E. M. SEALAND, Cleveland, Ohio.—*Roller for Pavement.*—April 27, 1869.

Claim.—1. The rollers A, more or less in number, provided with a central flange or rib, E, when arranged and operated in the manner as and for the purpose set forth.

2. The rollers F, as arranged in combination with the rollers E, substantially as and for the purpose specified.

3. The oil-tank H, provided with sprinkling-nozzles M, when arranged in relation to the rollers A, and operated conjointly therewith, in the manner substantially as and for the purpose described.

89,352.—THOMAS SILLIMAN, Three Rivers, Mich.—*Animal-Trap.*—April 27, 1869.

Claim.—1. The combination, with the turning top B of the bait-receptacle *e*, and the lever C, surrounding the bait, and fulcrumed on the top, substantially as and for the purpose set forth.

2. The combination, with the self-setting turning top, and vertically-moving levers, of the stops *d*, the slides, and the spring-strips, substantially as and for the purpose set forth.

89,353.—THOMAS R. SINCLAIRE, New York, N. Y.—*Apparatus for Purifying and Rectifying Liquids.*—April 27, 1869.

Claim.—The pump D, or its mechanical equivalent, in combination with the filtering-vessel A, constructed and charged substantially as set forth.

89,354.—HARVEY A. SPENCER, Cleveland, Ohio, and ROBERT S. CUTTING, Providence, R. I.—*Pen-Holder.*—April 27, 1869.

Claim.—The combination, with the handle, of the pen-holder, constructed as herein described, with the hinge-piece *a* pivoted to the handle, and moving in a slot formed in the end of the same, in the manner and for the purposes shown and set forth.

89,355.—FRED. D. STURGES and WILLIAM M. YOUNG, Mount Vernon, Ohio.—*Car-Coupling.*—April 27, 1869.

Claim.—1. The draw-bar A, constructed as described, with two holes, for the insertion of a double coupling-pin, notches *b b* on its sides, and its under side *a* cut out, for the purpose set forth.

2. The double pin B, operating substantially as described.

3. The combination of the connecting-bar C, with the doubling coupling-pin B and rod D, all constructed as described, and operating substantially as and for the purposes herein set forth.

89,356.—GEORGE ANSON STURGES, Delhi, N. Y.—*Sash-Holder.*—April 37, 1869.

Claim.—The arrangement and application of the above-described device, as and for the purpose specified.

89,357.—H. L. SWARTWOUT, Chicago, Ill.—*Sewing Machine.*—April 27, 1869.

Claim.—1. The combination of the journals E E, frame G, guide-frame H, crank-wheels R R, and bars I J, as described.

2. The combination of the frame G, guide-frame H, bars I J, crank-wheels R R, journals E E, curved arm K, roller L, and spring M, arranged to operate as and for the purpose specified.

89,358.—JACOB P. TIRRELL, Charlestown, and HIRAM WHITNEY, Watertown, Mass., assignors by mesne assignments, to HIRAM WHITNEY and M. L. MARSHALL & CO.—*Paper-File.*—April 27, 1869.

Claim.—In combination, the board A, wires *c c' b d*, springs *d' d''*, and clasp B, the whole making a paper-file, substantially as described and specified.

89,359.—ROSA C. TOMB, Cedar Run, Pa.—*Quilting-Frame.*—April 27, 1869.

Claim.—The arrangement of the strips A, B, D, and E, provided with a series of pins and corresponding openings, and held together by means of the clamps C, substantially in the manner and for the purpose specified.

89,360.—JOHN TOOTHILL and WILLIAM TOOTHILL, Meriden, Conn.—*Process of Ornamenting Sheet-Metal Ware.*—April 27, 1869.

Claim.—The process herein described for ornamenting silver and plated ware.

89,361.—EUGENE A. TOUNLEY and EMIL S. FRIEDRICH, Washington, D. C.—*Steam-Plow.*—April 27, 1869.

Claim.—1. The frames E E, having the traction-feet or treads *a a*, coiled springs *b*, constructed in the manner and for the purpose substantially set forth.

2. The combination of the shafts B B, cams D, or cranks D', with the frames E E, constructed and arranged to operate in the manner substantially as described.

3. The combination of the lever G', connecting-bar *h*, link *h'*, with shafts *g g*, and caster-wheels F F, arranged to operate substantially in the manner and for the purpose as described.

4. The combination of the lever H'', shaft H, segmental pinion G'', with grooved wheels G G, shafts *g g*, and caster-wheels F F, arranged to operate in the manner and for the purpose substantially as described.

5. The combination of the lever K, having pawl *k'*, spring *k''*, with segmental toothed pinion *j*, shaft J, and toothed standard I', for the purpose substantially as described.

6. The flexible traction-feet or treads *a a*, when used for propelling a machine, substantially as described and for the purposes set forth.

7. The steam-plow machine above described, when the several parts are constructed, arranged, and combined together in one machine in the manner substantially as set forth.

89,362.—HIRAM TYLER, Gaines, N. Y.—*Tree and Plant Sprinkler.*—April 27, 1869; antedated April 15, 1869.

Claim.—The combination of the stationary cylinder B, plunger C, tube D, and sprinkler E, with a staff of suitable length, and a slide in the same, for the purpose of discharging fluid on the branches of a tree, of whatever height the same may be, the several parts being constructed and arranged substantially as herein set forth.

89,363.—ALONZO WARREN, Suffolk County, Mass.—*Turbine Water-Wheel.*—April 27, 1869.

Claim.—A series of gates, F, with projections, *l*, in combination with a series of curved sliding-plates, or graduators, K, so connected therewith that the opening of the gates will simultaneously open the graduators, substantially as described.

89,364.—HERMANN WENDT, Elizabeth, N. J., assignor to HENRY SEYMOUR & CO., New York City.—*Shears and Seissors.*—April 27, 1869.

Claim.—In shears, or scissors, which are provided with malleable cast-iron handles or shanks, the bending or curving of the handles or shanks, so that they will lap and work, one over the other, and still admit of the eyes, or thumb, and finger-loops *a a'* being in the same plane, and one of the loops, *a*, provided with a projection, or teat, *b*, to act against the other loop *a'*, and serve as the only stop for the blades A A, substantially as herein shown and described.

89,365.—JOSEPH F. WICKS, Millville, Mass.—*Operating Picking-Staff in Looms.*—April 27, 1869.

Claim.—The combination of the case M N, spiral springs Q S, center-rods I, and hooks J and L, connected by the straps H to the movable picker-staves D D', the whole being arranged substantially as herein described.

89,366.—DANIEL WINELAND, McComb, Ohio.—*Feed-Water Filtering-Heater for Boilers.*—April 27, 1869.

Claim.—1. The pans B, provided with partitions *c*, slots *d*, and inverted tubes C, substantially as specified.

2. The arrangement of the pans B with reference to the vessel A, water-inlet D, and outlet E, and a steam-inlet, E, and outlet *e*, substantially as herein set forth.

89,367.—CHARLES H. WOLCOTT, Randolph, N. Y.—*Lamp-Chimney.*—April 27, 1869; antedated April 16, 1869.

Claim.—The vertical flanges C C, when arranged on the ends of the curved flanges B of a lamp-chimney, to check the chimney, all as herein shown and described.

89,368.—DANIEL WOODBURY, Rochester, N. Y.—*Horse-Power.*—April 27, 1869.

Claim.—1. The metal frame E, with its legs 20, or their equivalents, and bridge-tree G, in combination with girders H and beam C, for the purpose of making a compact support for the machinery of horse-powers of this class.

2. The lugs *g* and *g'*, in combination with the bull-wheel D, as and for the purpose set forth.

3. The sustaining-braces P^3, connecting-plate G^2, and straining-rod H^2, in combination with the main frame of this class of horse-powers, as herein described, and for the purpose set forth.

4. Standards *y* and y^1, in combination with the lever h^2, for the purpose set forth.

5. The hook x^4, when constructed as herein shown, in combination with plate y^6 and bolt x^6, all acting conjointly for the purpose specified.

6. The bevel-wheel L, having a detachable hub, f^2, for the purpose set forth.

7. The pinion 3, when constructed with a cavity around the eye, as herein described, and for the purpose set forth.

8. The pivoted tongue J^3, in combination with the elevating devices, substantially as described.

9. The pipe-box *f*, when constructed in one piece, in combination with its cast seats, of main frame E, substantially as and for the purpose set forth.

10. The step S^6, in combination with the main frame of this class of horse-powers, as and for the purpose set forth.

11. The eye y^7, hook p^3, and beam C, in combination with the rod H^2 and sustaining-brace P^3, as and for the purpose set forth.

12. Attaching and supporting the main frame of horse-powers of this class on the axle, by means of standards B, braces 22, and holding them together by clamping-bolts, 21 as herein shown and described.

89,369.—STEPHEN W. WOODWARD, Buffalo, N. Y.—*Plane for Carpenters' use.*—April 27, 1869; antedated April 16, 1869.

Claim.—The sleeve I, provided with jaws, and pivoted to the bit E, arranged with the screws C and *b*, to operate as set forth.

89,370.—J. Rutherford Worster, New York, N. Y.—*Parlor-Bath*—April 27, 1869.

Claim.—A portable parlor-bath, constructed of parts detachable, as described, with combination of electricity and insulation, in the administration of medicated, steam, vapor, sulphur, spirit, or other kind of bath, as used for the purpose herein described.

89,371.—Reuben Wright, Houston, Texas.—*Spark-Conductor for Railroad-Trains.*—April 27, 1869.

Claim.—1. The combination of the coupling F, guides *f*, conical ring G, and standard H, substantially as set forth.

2. The coupling D, with the spiral spring *d*, in combination with the end *e* of the pipe E, substantially as described.

3. The hanging support L, in combination with the lever I, rod K, and pipe E, substantially as set forth

89,372.—Anton Zwiebel, Burlington, Wis.—*Band-Cutter.*—April 27, 1869.

Claim.—1. A band-cutter, constructed with frame A, cutter G, hangers H, handle F, crank I, and shaft E, and cover D, arranged substantially as described.

2. Cover D, handle F, cutter G, hangers H, and shield K, arranged substantially as described.

89,373.—Levi Abbott, Lewiston, Me., assignor to himself and Edwin H. Cummings, same place.—*Pipe-Coupling.*—April 27, 1869.

Claim.—In combination with metallic or other pipes, the coupling A, and the split fastening-rings G, arranged and applied substantially as and for the purposes described.

89,374.—Marshall J. Allen, New York, N. Y.—*Heating and Cooling Coil for Mash-Tubs.*—April 27, 1869.

Claim.—The concentric rings C.C, formed in the manner described, by means of the pipe a^1 passing successively through the bottom B of the tub, a water-cock being provided at each bend or joint thereof. all arranged so that the ends of the teeth *i* of the rake-head D may work between them, for the purpose indicated.

89,375.—Charles H. Anders, Myersville, Md.—*Sash-Blind.*—April 27, 1869.

Claim.—1. Improved blind, constructed of an outer stationary screen, A, composed of alternate open and closed spaces, *a b*, of equal or nearly equal width, covered by one or more sliding-screens B, having similar open and closed spaces formed therein and which shall operate to cover and uncover the apertures in the stationary screen, substantially as herein set forth.

2. The combination of the blinds A B, constructed as herein described, with sliding-frames or sashes C C, and with a detachable frame E, all substantially as herein set forth.

89,376.—John Anderson, Springfield, Ill.—*Combined Seeder, Harrow, and Roller.*—April 27, 1869.

Claim.—1. The construction and arrangement of the harrows E E, &c., and frame D, made adjustable vertically by means of the screws *n n*, &c., substantially as and for the purpose shown.

2. In combination with the frame of the machine A and the harrow-frame D, the screws *n n*, &c., substantially as and for the purpose specified.

3. The means employed for connecting the roller F to the rear end of the frame A, consisting of the angle pivot-rods *p p* and guides *r r*, substantially as shown and described.

4. The within-described agricultural implement, consisting of a sower, or seeder, harrow, and roller, all constructed and arranged to operate substantially as and for the purpose herein shown and described.

89,377.—James M. Austin, Georgetown, Mo., assignor to himself and John P. Deardoff, same place.—*Washing-Machine.*—April 27, 1869.

Claim.—The combination, with the swinging-frame and rollers, of the bent rod S, substantially as and for the purpose described.

89,378.—Salmon Belden, Visalia, Cal., assignor to himself and Edward F. Roberts, South Amboy, N. J.—*Pump.*—April 27, 1869.

Claim.—1. The two pumps D and D′, having vertical extensions A and A′, provided with stationary pistons B and B′, and arranged to operate substantially as described.

2. The pumps D and D′, arranged to rise and fall with the columns of water, substantially as and for the purpose herein set forth.

89,379.—Samuel S. Blackburn, Fredericktown, Ohio.—*Rest for Shoeing Horses.*—April 27, 1869.

Claim.—The rest, composed of standard B, bar C, having rack *b* and catch *a*, head D, with fixed cheek *d*, hinged cheek *d′*, and cushion *c*, all constructed and arranged to operate in the manner and for the purposes substantially as described.

89,380.—W. I. Blackman, Columbus, Miss.—*Toy-Gun.*—April 27, 1869.

Claim.—The barrel A, stock B, rod C, springs *g g*, and trigger J, arranged and operating in combination, substantially as herein shown and described, for the purposes set forth.

89,381.—C. W. Brewer, Racine, Wis.—*Piano-Bridge.*—April 27, 1869.

Claim.—The rubber lining on the bridge or string-support of a piano-forte, arranged substantially as described.

89,382.—Simon Bruhl, New York, N. Y.—*Neck-Tie Supporter.*—April 27, 1869.

Claim.—The angular loop B, hinged to the ends of the elastic frame A, whose center and arms, supporting the loop, are secured to the tie in such a manner that the ends are left free to be inserted between the folds of the collar, whereby the elasticity of said frame serves to hold the loop B upon the button of the collar, as herein shown and described.

89,383.—John D. Chambers, West Lebanon, Ind., assignor to himself and Reverdy I. Bowlus, same place.—*Device for Displaying Dry Goods.*—April 27, 1869.

Claim.—The combination of the perforated vertical shaft A, arm B, the sleeve C, provided with the notched ferrule, the pin D, the yard-arms E, having the hooks, the wires or cords G F, and the bracing-wire, all arranged as described, for the purpose specified.

89,384.—Almon Cook, Hillsdale, Mich.—*Apparatus for Swaging and Welding Toe-Calks to Horse-shoes.*—April 27, 1869.

Claim.—The combination of the drop C and holder H with the mold K, all arranged and operating as described, for the purpose of welding the toe-calk to a horseshoe, and shaping the same at one operation, substantially as herein shown and described.

89,385.—Augustus Day, Detroit, Mich.—*Wash-Boiler.*—April 27, 1869.

Claim.—The wash-boiler described, consisting of the boiler A, convex perforated false bottom B, end plates C, and cover F, with fillets D, the whole being combined as described, for the purpose set forth.

89,386.—H. B. Dean and S. A. Baker, Ludlowville, N. Y.—*Grain-Drill.*—April 27, 1869.

Claim.—1. The broad cup-table D, zig-zag cups E, movable spouts G^1 G^2, &c., substantially as herein shown and described, and for the purpose set forth.

2. So constructing the cups E, substantially as herein shown and described, as to bring their mouths or upper ends into or nearly into a line with each other, as set forth.

3. The bracket L, constructed as described, with a long and short arm, to receive the bars M, to which the beams N of the hoes are connected, substantially as described, for the purpose set forth.

4. Swaging, grooving, or flanging the spouts G^1 G^2, &c., near their upper ends, so as to form out-

wardly projecting swages or shoulders, substantially as herein shown and described, and for the purpose set forth.

89,387.—Victor de Lyon and Valentine Werner, Canton, Miss.—*Wood-Bending Machine.*—April 27, 1869.

Claim.—1. The strap C, provided with the bolt E, and combined with the former and hook-headed bolt, substantially as specified.

2. The carriage, constructed and arranged substantially as specified.

89,388.—Winfield Denton, Iowa City, Iowa.—*Hay-Loader.*—April 27, 1869.

Claim.—An improved loader, formed by the combination of the rope D, pivoted bar C, pivoted bar F, and rope G, with each other and with an ordinary hay-rack, substantially as herein shown and described, and for the purpose set forth.

89,389.—Ellis Douty, Collomsville, Pa.—*Straw-Cutter.*—April 27, 1869.

Claim.—The elastic strap *e*, in combination with the feed-board H and the feed-frame, consisting of the cross-piece *a*, sides *d d*, and pivoted presser-board *b*, all arranged as described, for the purpose specified.

89,390.—François Simeon Dumont, New York, N. Y.—*Apparatus for Compressing Air.*—April 27, 1869.

Claim.—The machine for compressing air, consisting of the hollow annular vessel A, divided by the partition *b*, above the water-line, into two compartments, *c d*, each provided with an air-aperture, *f*, and valve *g*, and communicating with the hollow axle B, by means of the pipes C C, containing valves *e e*, arranged and operating as described, and for the purpose specified.

89,391.—William C. Durant, West Troy, N. Y.—*Cooking-Stove.*—April 27, 1869.

Claim.—1. The hollow door E, when arranged in connection with the plate *a*, so as to form two passages, *c* and *e*, for the air to be heated before it enters the fire-place, as set forth.

2. Conducting air through the fire-place to the oven, and from the oven to the fire-place, to produce circulation, as specified.

3. The pipes G H, when arranged through the fire-place and fire-door respectively, to conduct fresh air to the oven, as set forth, in combination with the openings *g g*, through which the air can pass from the oven to the fire-place, as specified.

89,392.—Stephen J. Dwyer, Albany, N. Y.—*Milk-Can.*—April 27, 1869.

Claim.—1. The neck C and hinged cover D, constructed substantially as herein shown and described, in combination with an ordinary milk-can, as and for the purpose set forth.

2. The combination of the spring-bolt G H *g'*, with the cover D, and neck C, substantially as herein shown and described, and for the purpose set forth.

89,393.—James J. Essex, Newport, R. I.—*Syringe.*—April 27, 1869.

Claim.—Providing the discharge-pipe C of a bulb-syringe with two valve-boxes and valves at or near the outer and inner ends of the same, respectively, substantially as herein shown and described, for the purpose specified.

89,394.—Anderson Evans, Cincinnati, Ohio.—*Gauge for Setting Planing-Machine Cutters.*—April 27, 1869. antedated April 20, 1869.

Claim.—The planing-machine gauge, constructed as herein described, consisting of the rectangular frame A A B, having the gauge-screw C in the part B, and the screws D in the ends of the parts A A, and centering in the ends of the arbor of the cutter-head, all arranged to operate as and for the purpose herein set forth.

89,395.—Benjamin F. Field, Beloit, Wis.—*Roofing-Fabric.*—April 27, 1869.

Claim.—As a new article of trade and manufacture, the herein-described fabric, for covering the roofs and sides of buildings.

89,396.—Alcemous W. Fleming, Springfield, Ill.—*Corn-Harvester.*—April 27, 1869.

Claim.—The shaft F with its hinged joint T, in combination with the brace R, frame I, and the adjusting-bolt S, as and for the purposes specified.

89,397.—Thomas F. Fouts, Albia, Iowa.—*Railroad Chair and Tie.*—April 27, 1869.

Claim.—The combination of the chair B, clamp E, tie-bars C, and plank or board F, with the rail A, when the same are constructed and arranged substantially as and for the purposes herein shown and described.

89,398.—Walter W. Gilbert, New York, N. Y.—*Steam-Pump.*—April 27, 1869.

Claim.—1. The long valve M, attached to the steam-piston, arranged to alternately open and close ports at each end of the stroke, substantially as described.

2. The chamber O, for the admission of the said long valve, arranged substantially as described.

3. The pump-valves P and P′ and the stem Q, arranged and connected to the cap, as described, whereby the pair may be removed with the cap, substantially as specified.

4. The arrangement of the valve A, piston G, the ports E E′ and L L′, and the valve M, all substantstantially as specified.

89,399.—Walter W. Gilbert, New York, N. Y.—*Governor-Valve.*—April 27, 1869.

Claim.—1. The valve A and seat C, both provided with inclined slots, *a*, whereby the up-and-down movement of the valve, the rotary movement, or both combined, will open and close the steam-passages, substantially as herein shown and described.

2. The arrangement of the bearing surface K, terminating in a ledge, I, the spring H, or its equivalent, the arm F, and valve-spindle B, substantially as and for the purpose specified.

89,400.—Joseph Gill, Cincinnati, Ohio.—*Metallic Beam and Girder for Bridges.*—April 27, 1869.

Claim.—1 The cellular beam A, built up or constructed out of metallic bars of any regular geometrical figure, riveted or bolted together, substantially as set forth.

2. The metallic plate-iron beams B B, composed of plates that are arranged either vertically or obliquely in lattice-shape, and that have steps *b b* on their edges, as set forth, so that they can be fitted together, the said beam being made of one or more thicknesses of such plates, with crossed joints, as specified.

3. The combination of said cellular and plate-beams into a compound cellular and plate-girder, substantially as herein shown and described.

4. The cellular structures in the roof of the bridge, held apart by the distance columns, in combination with the cellular sides and step-plates, substantially as described, for the purpose specified.

5. The treble-plated folded cap-plates H, constructed and applied as herein set forth and shown.

89,401.—David Graves, Spring Valley, N. Y.—*Washing Machine.*—April 27, 1869.

Claim.—1. The movable tilting-box E, having wheels or rollers, F, pivoted to its lower part, in combination with the tilting-frame G, pivoted to the frame or case A, and operated by the lever H, or other suitable device, substantially as herein shown and described, and for the purpose set forth.

2. The stationary rubber-board B, adjustably connected to the frame or case A, in combination with the movable tilting-box E, substantially as herein shown and described, and for the purpose set forth.

3. The movable rubber-board J, constructed and operating substantially as herein shown and described, in combination with the movable tilting-box E and rubber B, as and for the purpose set forth.

89,402.—Alfred Gregory, New York, N. Y.—*Life-Preserver.*—April 27, 1869.

Claim.—The life-preserver, constructed of the sec-

tions A A′, extending over the entire back and front, in contradistinetion to the use of air-cells, inflated through the tubes *g*, shoulder-straps *a*, and straps *j*, *b*, and *b*,′ all constructed, arranged, and operated in the manner and for the purpose set forth.

89,403.—JOHN HALL, Boston, Mass.—*Stove-Pipe for Decks of Vessels.*—April 27, 1869.

Claim.—A deck stove-pipe for ships, when made flexible, by being connected by springs *a*, with a fixed supporting-pipe, B, substantially as herein shown and described.

89,404.—W. W. HAUPT, Mountain City, Texas.—*Seed-Planter.*—April 27, 1869.

Claim.—1. Constructing the dropping-cylinder F, with teeth *f*3, for dropping cotton-seeds, and with two or more sets of cups for different kinds of grain, so that the cylinder may be used without change for planting different kinds of seeds, substantially as herein shown and described.

2. The seed-block or bridge H, constructed substantially as herein shown and described, to support the lower ends of the end-plates M, in different positions, and to guide the different kinds of seeds to their appropriate cups, as set forth.

3. The seed-box J K L M, constructed with adjustable hinged end-boards M, in combination with the dropping-cylinder F and seed-block H, substantially as herein shown and described, and for the purpose set forth.

4. The hinged and folding extension-box N, constructed substantially as herein shown and described, in combination with the seed-box J K L M, as and for the purpose set forth.

5. An improved seed-planter, formed by the combination of the furrowing-plow D, having a conducting-spout, with a broad upper end formed in its standard, covering-plows E, covering-roller B, dropping-cylinder F, seed-block H, seed-box J K L M, and concave I, with each other and with the frame A, substantially as herein shown and described, and for the purpose set forth.

89,405.—H. R. HILDRETH, Lynn, Mass.—*Machine for Picking Hair-Rope.*—April 27, 1869.

Claim.—1. A machine for untwisting and picking hair-rope, constructed substantially as shown and described, that is to say, with a loose drum on a revolving shaft, into and from which the rope passes to a clasp or compresser, P, or its equivalent, arranged and operating substantially as specified, for the purposes set forth.

2. The combination and arrangement of the clutch *z*, gear-wheel *y*, shaft *w*, roller *s*, spring *g*, arm *e*, rod *d*, and lever *f*, substantially as described, for the purpose specified.

3. In combination with the spring-clasp P, shaft B, and drum J, the feed-rolls R S, and picking-cylinder B′, arranged substantially as described, for the purposes set forth.

89,406.—NEWELL HINMAN, Sparta Centre, Mich.,—*Elevator-Attachment for Fanning-Mills.*—April 27, 1869.

Claim.—The arrangement of the box A, endless chain of buckets B, hopper E, bolts *a*′, and hooks D, with relation to the fan-mill, as herein shown and described.

89,407.—G. W. HOLTON, Berlin, Ky.—*Clevis.*—April 27, 1869.

Claim.—Clevises, having the extended front-bar provided with the hitching-rings D, and braced, all substantially as specified.

89,408.—W. A. HOUGH, St. Johnsville, N. Y.—*Game-Register for Billiards.*—April 27, 1869.

Claim.—The combination with the bar A, having the series of notches *a* and *b*, of the counter D, provided with the pawls *a*′ *b*′, and the slide E, having an inclined projection, all substantially as and for the purpose described.

89,409.—BENJAMIN S. HYERS, Pekin, Ill.—*Cultivator.*—April 27, 1869.

Claim.—1. The loop B, when rigidly secured to the blade A, in combination with the hook C, substantially as and for the purposes herein shown and described.

2. The plates F and G, in combination with the loop B and hook C, as herein shown and described, and for the purposes set forth.

3. Also, the loop B, hook C, and plates F and G, in combination with the blade A, and leg D, when constructed and arranged substantially as herein shown and described.

89,410.—CORNELIUS L. IRVING, Indianapolis, Ind.—*Car Brake and Starter.*—April 27, 1869.

Claim.—1. A car brake and starter for street-railway cars, when constructed and arranged in the manner and for the purpose herein described,

2. The combination and arrangement of the windlass 1, rod *f*, beveled gear-wheels *o* and *q*, *w* and *w*′, in the manner and for the purpose herein described.

3. The combination and arrangement of the handle 4x with the rod *a*, levers *b d p*′, and rod *e*, in the manner and for the purpose herein described.

4. The combination and arrangement of the handle 4 with the rod *f*′, lever *c*, and flange *f*, and its sleeve, on the shaft *m*, in the manner and for the purpose herein described.

5. The combination and arrangement of the rod *gx* with its yoke *u*, clutch-sleeve *t*, and dog or ratchet *g*, sleeve and clutch *s*, chair *v*, and drum *x*′, and its spring, in the manner and for the purpose herein described.

6. The combination and arrangement of the drum *x*′, with an inclosed spring, the chain *v*, shafts *l* and *m*, clutches *s*, *t*, *m*′, and *n*, in the manner and for the purpose herein described.

89,411.—JAMES P. KINTNER, Harrison County, Ind.—*Screw for Cotton and Hay Presses.*—April 27, 1869.

Claim.—The arrangement of the female screw G, male screw C, in combination with the outside nut or collar, F, when used on top of the base-block O, provided with the automatic spring-latch E, and the spring L, pin M, and trip-rod U, with its supports, attached to the frame, all constructed and operating substantially as herein set forth.

89,412.—WILLIAM H. KNIGHT, East Machias, Me.—*Mowing-Machine.*—April 27, 1869.

Claim.—1. The arrangement of the sliding bell-crank levers E, connected together by the cord *h*, and operated by the pins *g* upon the driving-wheel, the rods *r*, cranks *s*, links *u*, and cutter-bars, as herein described, for the purpose specified.

2. The bell-cranks E E, when fitted upon a rod, *b*, and connected by means of levers F *d* and rods *e*, with a lever, G, so that they can be moved apart, and out of gear with the driving-wheel, as specified.

3. The arrangement of the pivoted bars *v*, vertical arm *k*, guide-plate *l*, cord or chain *m*, rod *n*, and lever I, with reference to the finger-bar H, and frame A, as herein described, for the purpose specified.

89,413.—L. M. KNOWLES, Owatonna, Minn.—*Water-Elevator.*—April 27, 1869.

Claim.—1. The combination of the slotted lever G, large gear-wheel I, small gear-wheels E and F, with each other and the cylinder D, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the short cross-bars M, and ropes or chains N, with the bucket-bails O, ropes L, and roller R, substantially as herein shown and described, and for the purpose set forth.

89,414.—I. LANCASTER, Baltimore, Md.—*Harvester-Rake.*—April 27, 1869.

Claim.—1. The sliding collar K, provided with the flange *h*, in combination with the arms O′ and S of the rocking-shaft, and the gate *q*, so arranged as to cause all of the rakes to sweep the platform, substantially as described.

2. The sliding collar K, having radial studs, *i i*, so arranged thereon as to rotate in different planes, so that only one, or every other one of the four rakes, may sweep the platform, substantially as described.

3. The rocking-shaft O, with arm O′, and crank-lever S, on the end thereof, in combination with the gate *q*, substantially as described.

89,415.—William W. Lowerree, Albany, N. Y.—*Ruffling-Attachment for Sewing-Machines.*—April 27, 1869.

Claim.—1. The tension-rollers A and B, and spring J, in combination with lever C, and ratchet D, and pawl E, when combined and operated by the needle-bar of a sewing-machine, substantially as and for the purpose herein shown and described.

2. The separating-plate H, and tension-wire G, or their equivalents, in combination with rollers A and B, substantially as and for the purpose herein shown and described.

89,416.—Newton Matlick, Williamstown, Mo.—*Derrick.*—April 27, 1869.

Claim.—An improved derrick, formed by the combination of the pivot-block E, pivoted lever F, inclined pivoted or hinged brace G, pulleys I, J, and K, and rope H, with each other, and with the supporting frame-work A *a'* B C D, said parts being arranged and operating substantially as herein shown and described, and for the purpose set forth.

89,417.—Thomas J. McArthur, New York, N. Y.—*Sewing-Machine.*—April 27, 1869.

Claim.—The arrangement and combination of the crank-shafts D E, needle-bar F, cam G, presser-foot *p*, connecting-rod *o*, shuttle-carrier J, feed-cams H I, forked feeder L M, and eccentric V, the whole constructed and operating substantially as described and specified

89,418.—W. C. McGill, Cincinnati, Ohio.—*Caster.*—April 27, 1869.

Claim.—The construction of the circular rings or bearings *b* and *b'*, as shown and described.

89,419.—Lewis McLellan, Gorham, Me.—*Culinary-Boiler.*—April 27, 1869.

Claim.—The trap I, in combination with the vessel A, constructed as described, and provided with the flange B, steam supply opening *m*, the hinged cover C, bail E, hook F, nut *g*, and rack H, as herein set forth, for the purpose specified.

89,420.—John McNaught and William McNaught, Jr., Rochdale, England.—*Machine for Washing Wool.*—April 27, 1869.

Claim.—1. The connecting-link *e5*, with its adjustable fulcrum, combined with the rakes, for regulating the sweep of the points thereof, substantially as specified.

2. The inclined plate *f*, forming part of the trough *a*, combined with the cradle or lifter *g*, substantially as specified.

3. The arrangement of the crank *k*, brackets *c'*, cams *k*[1], and bars *g'*, for actuating the cradle, substantially as specified.

4. The retaining-prongs *n*, combined with the inclined bottom *f*, and actuated substantially as specified.

5. The combination of the cradle *g'* with the incline *f*, rollers *h*, and squeezers *i*, substantially as specified.

89,421.—Theodore H. Mead, Boston, Mass.—*Machine for Mitering Printers' Rules.*—April 27, 1869.

Claim.—1. The arrangement of the frame A, segment-plate C, rule-holder D, and mitering-lever E, all constructed substantially as described, and for the purpose set forth.

2. Connecting the lever to the frame A, and guiding the same in its movements by means of the socket on the side of frame, the ball on the end of lever, and the slot in bed B, as described.

89,422.—Joseph B. Moody, Pembroke, Ky.—*Cultivator.*—April 27, 1869.

Claim.—The cultivator-teeth or plows G, constructed and attached to the frame A, substantially in the manner herein shown and described, and for the purpose set forth.

89,423.—Cyrus T. Moore, Gilmanton, N. H.—*Crank.*—April 27, 1869.

Claim.—The combination and arrangement of the reversible pawl D, and its holding-latch E, and spring *e*, with the shaft-head C, and the crank B, applied to the shaft A, substantially in manner as specified.

89,424.—J. T. Moxley, Owasso, Mich.—*Farm-Gate.*—April 27, 1869.

Claim.—The combination in a farm-gate of the several parts A C D *d f* G *a h*, operating substantially as and for the purpose shown and described.

89,425.—James Myers, Jr., Williamsburgh, N. Y., assignor to the Barrons Patent Steel Manufacturing Company.—*Steel-Surfaced Railroad-Bar.*—April 27, 1869.

Claim.—A rail, or railway-bar, so constructed that the rails, or parts of the same, shall consist of an interior core, of wrought or malleable iron, and an outer envelope of steel, of any desired thickness, formed from a homogeneous bar of wrought or malleable iron, through the conversion of the outer portions of such bar into steel, by chemical processes, as and for the purpose set forth.

89,426.—Edwin Norton, Toledo, Ohio.—*Blank for Stove-Pipes.*—April 27, 1869.

Claim.—The herein-described blanks for stove-pipe elbows, when the edges C D are separated from each other by dies, as specified, as an improved article of manufacture.

89,427.—Josiah Odell, Petroleum Centre, Pa.—*Quilting-Frame.*—April 27, 1869.

Claim.—The combination of the legs A, transverse bars B, rollers C, clamp-bearings D, E, and H, and thumb-screws G, when arranged and adapted for the employment in a quilting-frame or clothes-drier, as and for the purpose specified.

89,428.—William Ord, Brooklyn, Ohio.—*Steam-Engine Piston.*—April 27, 1869.

Claim.—1. The construction of the packing-ring A, composed of three or more hard-metal segments, united by a single piece of soft metal, substantially as specified.

2. The combination, with the soft-metal portion of the ring, of the T-shaped pieces B, substantially as specified.

3. The combination, with the piston-head and the packing-ring, of the sheet-metal rings E, when all arranged as specified.

4. The ring A, provided with the recess F, and opening H leading thereto, substantially as specified.

89,429.—D. J. Owen, Springville, Pa.—*Animal-Trap.*—April 27, 1869.

Claim.—1. The construction and arrangement of the pinion B, with its wings C in the frame A, and operating by means of the spring D, and toothed-spring platform H, in the manner shown, and for the purpose herein set forth and described.

2. The toothed-spring platform H, constructed as shown, and attached to the bottom of the trap, so as to operate through the opening *b*, in the manner and for the purposes herein set forth and described.

89,430.—P. G. Pearson, Jacksonville, Fla.—*Beverage from Sour or Bitter Oranges.*—April 27, 1869; antedated April 20, 1869.

Claim.—As a new article of manufacture, the orange-wine, made from sour or bitter oranges, in the manner and by the process herein shown and described.

89,431.—Charles Pratt, New York, and Conrad Seimel, Greenpoint, N. Y.—*Soldering-Apparatus.*—April 27, 1869.

Claim.—1. The air-tubes C C, arranged on the supporting-platform, or shield B, of a soldering-apparatus, substantially as and for the purposes herein shown and specified.

2. The supporting platform, or shield B, of a soldering-apparatus, when provided with one or more depressions, or indentations, *a a*, substantially as and for the purpose herein shown and described.

89,432.—James B. Pullman, Los Angeles, Cal.—*Subsoil-Plow.*—April 27, 1869.

Claim.—The combination in a subsoil-plow of the

share E, coulter D, and heel-plate G, with the stock A B C, substantially as and for the purpose herein shown and described.

89,433.—B. F. QUINBY, Boston, Mass., assignor to himself and G. W. QUINBY, same place.—*Machine for Making Paper Boxes*—April 27, 1869.

Claim.—1. The combination of the reciprocating matrix-cylinder h, and its piston i, with the reciprocating cylinder k and its elastic bag, or former l, expanded by fluid pressure, substantially as described.

2. In combination with the hollow piston p, the water-containing tank m, the pipe o, and its valve q, and tube v, and its safety-valve w, arranged to operate substantially as described.

3. In combination with the reciprocating matrix-cylinder and its piston i, and the piston or plunger-cylinder k, the fingers q^2, for carrying the blank into position over the piston i, and the fingers y^2, for arresting the blank and for removing the finished box, substantially as described.

4. In combination with the matrix, or cylinder h, elastic bag or former l, fluid cylinder k, and piston p, the mechanism for locking the parts together, substantially as described.

5. In combination with the matrix-cylinder h, the steam-box c, for imparting heat thereto, substantially as described.

6. A machine so organized that a semi-pulpy, or moist and soft box-blank, is operated upon while in a matrix, by an expanding plunger, to perfect its shape, substantially as described.

89,434.—JOSEPH REPETTI, Philadelphia, Pa.—*Quartz-Crusher.*—April 27, 1869.

Claim.—1. The arrangement herein described of the cam-wheel n^2, with its lugs o, in combination with the cylindrical stamp-collar p^3, when provided with ratchet-collars, for the purpose of imparting rotary motion to the said rods, and causing the same to remain for a time at rest upon the ring v, as herein described.

2. The pipe m, with its shoulders, and grooves r r r, when combined and arranged with the cylindrical stamps p^1, as described.

3. The arrangement, herein described, of tables a b c, hopper y, pipe m, toothed cam-wheel n^2, stamps p^1, pot x, shafts 6 and 10, wheels 8, 9, and 7, and E^2, screw 11, and worm-wheel 12, all constructed as set forth and shown.

89,435.—PETER ROBERT, New York, N. Y.—*Propelling-Apparatus.*—April 27, 1869.

Claim.—1. Raising or lowering the floats or propelling-devices O O′ vertically, at the end of each stroke, when the horizontal motion has entirely ceased, as specified.

2. The levers L L′, for raising and lowering the floats when pivoted to the sides of the carriages, substantially as herein shown and described.

3. Connecting the levers L L′ by means of the rods g and N, and by the plate M, with the sliding-bars J J′, substantially as herein shown and described, so that thereby the desired motion can be imparted to the floats, as set forth.

4. The bars J J′, when connected with the driving mechanism, to receive reciprocating motion, so that they may at once impart horizontal and vertical motion to the floats, as specified.

5. The carriages E E′, when arranged so that they carry the floats O O′ in a horizontal direction, while they cannot interfere with the vertical motion of the same.

6. The combination, with each other, of the levers L L′, bars g N, link h, plate M, and bar J, all arranged and operating substantially as described, so that, by their means, the motion of the floats can be reversed.

89,436.—WILLARD W. RUSSELL, Ludlow, Vt.—*Wire Bracket.*—April 27, 1869.

Claim.—The herein-described wire bracket, constructed as and for the purpose set forth.

89,437.—L. SAVAGE, Ashtabula, Ohio.—*Device for Transferring Freight on Railways.*—April 27, 1869; antedated April 16, 1869.

Claim.—1. The method of transferring railway freight by means of removable freight-boxes, supported by piers or platforms, arranged on each side of the track, and provided with suitable devices for taking the weight of the box, when the same are employed in combination with the rails arranged to raise and lower, all substantially as herein shown and described.

2. The mechanism for raising and supporting the freight-box, consisting of the eccentries b b, arranged on the inner ends of the rods d d, the latter being provided with arms connected by rods e e, all operated by the lever f, as herein set forth and described.

3. The eccentries g g, shafts h h, rods i i, and l, and lever j, as herein described, when employed to raise and lower the rails for the purpose herein set forth.

89,438.—JAMES F. SELL, Cambridge, assignor to CHARLES HOUGHTON, trustee, Roxbury, Mass.—*Process of Hardening Talc, Steatite, &c.*—April 27, 1869.

Claim.—The treatment of talc, or equivalent matter, or articles formed therefrom, by first heating them, with or without contact of salt, or salt and alum, and then immersing the talc, or its equivalent, while hot, in a sulphuric or other acid bath, substantially as described.

89,439.—WILLIAM SELLERS, New York, N. Y.—*Blind-Slat Fastener.*—April 27, 1869.

Claim.—The reversible fastening for blind-slats, composed of the sheet-metal plate a, slotted radially at c, to brace the tenon of one of the blind-slats, and adapted to be secured to the side-piece of the blind, either at its central portion or rim, whereby a spring is formed of either of said parts to act or press against the end of the slat, for the purpose of holding it in any desired position, as herein shown and described.

89,440.—DANIEL SHERWOOD, Lowell, Mass., assignor to WOODS, SHERWOOD & CO.—*Dish-Stand.*—April 27, 1869.

Claim.—As a new and improved article of manufacture, a wire dish-stand, composed of the parts A B C, substantially as described and specified.

89,441.—CHARLES WILLIAM SIEMENS, Westminster, England.—*Metallurgical Process and Furnace.*—April 27, 1869.

Claim.—1. Treating the metal in the bath of the furnace with litharge, or any other oxide of lead, formed into cakes or compact masses before use, by mixing it, substantially as described, with fused nitrate of soda, nitrate of potash, or any other fused salt, to which I sometimes add an oxide of manganese or other reagents.

2. The method of preventing injury to the furnace, or the choking up of the regenerators or flues, when oxide of lead, or other substances, which give off gases or vapors, are added to the molten metal in the bath of the furnace, by drawing off the gases or vapors, or the greatest part of them, from the furnace, without letting them pass into the regenerators or flues, and condensing them, to recover the products.

3. The combination and arrangement of one or more tubular hoppers I I′, and the surrounding heating-chamber or chambers F, with the furnace D, whether such hoppers be either wholly of metal, as shown in figs. 10 or 11, or constructed partly of metal and partly of clay, or its equivalent, as shown in figs. 1 and 2 of the accompanying drawings.

4. The combination and arrangement of the tube J or J′ with each of the said hoppers I I′.

5. The combination and arrangement of the connection M, provided with holes and caps, as set forth, with the tubes J J′, when arranged with the hoppers and furnace, in the manner as set forth.

6. The combination of the system of heat-generators, as described, with the furnace D, its tubular hopper or hoppers, and the air-heating chamber or chambers thereof, the whole being to operate together, and with one or more gas-producers, applied substantially as described.

7. In connection with the process of making steel by a bath of metal, and one or more hoppers and heating-chambers thereof, as described, the employ-

ment of a series of regenerators, (of the kind described,) in such manner that a portion of the products of combustion shall be withdrawn to heat the ore, metal, or materials, while descending, through the hopper or hoppers, into the furnace or bath-chamber, and the remaining products of combustion not reduced in temperature be caused to pass through the regenerators to, and escape by, the chimney, the effect being to not reduce the temperature of the furnace by the introduction of the cool ore or materials through the hopper or hoppers.

89,442.—FREDERICK H. SMITH.—Baltimore, Md.—*Bridge.*—April 27, 1869.

Claim.—1. The screw-loop G, bracing-rods H, and parting-timbers I, or their equivalents, when attached directly to the angle-blocks B, instead of to their chord-timbers, all constructed substantially as shown, and for the purpose specified.

2. Connecting the angle-blocks B B′ by the truss-rods, in such a manner that the truss-strains are rested directly upon the angle-blocks, instead of carrying them through the chords and block again.

3. The combination of the angle-blocks B B′, chord-timbers A A′, screw-loops G, rods H, braces I, rods C, and swivels D, or their equivalents, when arranged substantially as herein shown, and for the purpose specified.

89,443.—WILLIAM H. SMITH, Newport, R. I.—*Velocipede.*—April 27, 1869.

Claim.—1. The steering-apparatus, consisting of the pin *a*, index-hand *i*, and the arm *b*, of the pivoted lever F, and of the steering pivot E, having the arm *e*, all combined and operating substantially as herein shown and described.

2. The spring *g*, when arranged as described, in combination with the pin *a*, arm *b*, lever F, and arm *e*, of the steering-post, substantially as herein shown and described.

3. The combined brake and starting-lever I, when arranged to swing and slide, as herein shown and described, for the purpose specified.

89,444.—JOHN G. SOMES, Charlestown, Mass.—*Coal-Hod.*—April 27, 1869.

Claim.—A coal-hod, having a lateral outlet for removal of the coal, when said outlet is provided with the guard *g*, substantially as shown and described.

89,445.—JOHN SPARKS, Concord, Ky.—*Take-Up Mechanism for Looms.*—April 27, 1869.

Claim.—1. The combination, with a ratchet and pawl take-up mechanism, of the spring-actuated pawl *e*, substantially as and for the purpose described.

2. The combination, with the pawl *e*, of the oscillating-block *g*, provided with a pin, *i*, or its equivalent, substantially as and for the purpose described.

89,446.—JOSEPH THOMAS, New York, N. Y.—*Embroidering-Attachment for Sewing-Machines.*—April 27, 1869.

Claim.—The arrangement of the bell-crank levers B and C, turning on centers *b* and *c*, in combination with the rods or bars D and E, connecting-bar F, spring-rod *m*, and lever *f*, and the slide G, operating together in the manner and for the purpose substantially as set forth and described.

89,447.—J. A. TRUITT, Oakland, Pa.—*Mail-Bag Fastening.*—April 27, 1869.

Claim.—The chain C, constructed as described, and combined with the part A of the bag, and the staples E, substantially as specified.

89,448.—STEPHEN D. TUCKER, New York, N. Y.—*Machine for Grinding Circular Saws.*—April 27, 1869.

Claim.—1. A pair of geared rollers, arranged to grasp the saw on opposite sides by a spring pressure, substantially as described, and for the purpose specified.

2. The combination of a pair of geared rollers, for driving and controlling the saw, with a reciprocating carriage, upon which the saw is supported, that moves in a plane parallel to the axis of the grindstone, so as to present the saw to the action of the stone, substantially as described and specified.

3. The arrangement of the mechanism for moving the grindstone to and from the surface of the saw, in combination with the rollers for rotating the saw, and a reciprocating carriage, which holds and moves the saw, substantially as described, and for the purpose specified.

89,449.—JOSEPH R. VAN MARTER, Lyons, N. Y.—*Still.*—April 27, 1869.

Claim.—1. The rubbber packing, when inserted in a groove in the top of the staves, substantially as set forth.

2. The use of two hinges, to hold the cover from swinging on the top of the staves, and also the adjustability of the hinges in combination with the rubber packing between the two parts of the cover, substantially as set forth.

3. The use of the eccentrics, or cams, for fastening the cover, substantially as described.

4. The rim upon the cover, for the purposes specified.

5. The rubber packing around the tubes, substantially as set forth.

89,450.—WILLIAM W. WADE, Medford, Mass.—*Machine for Making Covered Buttons.*—April 27, 1869.

Claim.—1. A machine for forming and covering buttons, automatically constructed, and operating substantially as described.

2. Forming the dies in several detached parts, capable of having different movements, in combination with suitable mechanical devices for changing the positions of such parts in their proper order, and causing them to coöperate with the opposing die or dies, so that several separate operations may be performed in succession upon the inclosed material before it is released therefrom, substantially as described.

3. The combination of two series of bed-dies, arranged alternately in the same line of movement, which receive and form the materials to make the buttons, one of them the back parts, and the other the face parts, with two coöperating movable dies, by which the preparation of both parts of the button goes on simultaneously, substantially as described.

4. Combining the die which forms and holds one part of the button with the die that forms and holds the other part, so that by their coöperation the two parts will be forced together and secured, substantially as described.

5. The combination of the movable dies with the revolving chock, or its equivalent, substantially as described.

6. The combination of the bed-die, that forms the back part of the button, with the lever L, or its equivalent, that actuates the same, substantially as described.

7. The combination with the several composite dies, of the means described, or their equivalents, for producing a yielding resistance to the change in the relative positions of their several parts, substantially as described.

8. The employment of a removable guiding-ring, in combination with the dies that receive the paper-filling piece, or its equivalent, substantially as described.

89,451.—AARON WALDRON, Milford, Mass.—*Shoe-Nail.*—April 27, 1869.

Claim.—As a new article of manufacture, shoe-nails, each made tapering or wedge-shape, and with the serrated edges, substantially as shown and described.

89,452.—LINUS WEED, Norwalk, Conn.—*Ear-Drop Suspender.*—April 27, 1869.

Claim.—An ear-clasp, or drop-suspender, constructed of a single wire, having upper and lower hooks, or clasps, *a′ c*, and the intermediate spring *b*, substantially as and for the purpose set forth.

89,453.—JOHN A. WEISSE, New York, N. Y.—*Diving-Bell.*—April 27, 1869.

Claim.—1. The combination and arrangement of

pipes, valves, and stop-cocks, Nos. 4, 5, 25, 28′, and 40, as described, and for the purpose set forth.

2. The combination and arrangement of valves and stop-cocks Nos. 31, 32, 37, and 38, with reservoir No. 30, as described, and for the purpose set forth.

3. The combination of bags of leather, or other strong and flexible material, with the necessary hoisting and lowering apparatus arranged within the bell, as described, and for the purpose of enabling the unloading of freight in mid-water, instead of from the bottom, or at the surface, through the man-holes, as heretofore.

4. The deleterious-gas decomposer, formed of sponge and non-corroding wire-cloth, arranged as described, for the purpose set forth.

5. The use and arrangement of removable weights, constructed as described, in combination with water-reservoir No. 10 of the bell, for the purpose set forth.

6. The use and application of a graduated glass tube or gauge, in combination with the water-reservoir of the bell, for the purpose described and set forth.

7. The double-threaded screw-bolt 1, and nuts 1′, in combination with man-hole cover 18, to facilitate the fastening or removal of the same by persons outside of the bell, as well as by those within, substantially as described and set forth.

89,454.—Frederick Wittram, San Francisco, Cal.—*Anchor.*—April 27, 1869.

Claim.—The combination with the anchor-shank A, of two or more pairs of arms or flukes, pivoted or otherwise secured to the shank, in such a manner that they can be swung in pairs to a limited extent on each side of said shank, in planes perpendicular to or at any other convenient angle to each other, for the purpose specified.

89,455.—Albert F. Allen, Providence, R. I.—*Hose-Coupling.*—April 27, 1869.

Claim.—1. The nipple-piece N S, constructed with a shoulder *e*, to receive the end of the hose, in combination with the sleeve and collar I, constructed with horns D, and otherwise, substantially as shown and described, to effect the purpose specified.

2. In combination with the threaded nipple N of a hose-coupling, an entering and guiding surface *m*, at the end, substantially as shown and described.

3. The combination and arrangement of the swivel-sleeve S^2, the outer fixed sleeve I′, constructed with a shoulder, S^3, to receive the end of the hose and the swivel C, constructed with horns D, and otherwise, substantially as shown and described, to effect the purpose specified.

89,456.—Albert F. Allen, Providence, R. I.—*Nozzle for Hose-Pipes.*—April 27, 1869.

Claim.—1. The combination of the nozzle of a hose-pipe and an adjustable valve, B, constructed and arranged to operate in connection, substantially as described.

2. The said valve, as arranged, with a central orifice for a body-stream, to be operated substantially as specified.

3. The said valve, as arranged, constructed in two parts, so that the orifice in its center may be stopped or readily fitted for delivering a smaller or larger diameter of steam, substantially as described.

89,457.—Arthur M. Allen, New York, N. Y.—*Reversing-Gear for Steam-Engine.*—April 27, 1869.

Claim.—1. The reversing block, or disk, provided with two forward and two reversing ports, and with one or more exhaust-ports, arranged substantially in the manner set forth.

2. The reversing-disk A, provided with forward ports *b b′*, and reversing-ports *c c′*, and revolving on the exhaust-nipple B, under the slide-valve of a steam-engine, substantially in the manner described.

89,458.—Charles Allen, Hartford, Conn.—*Hot-Air Furnace.*—April 27, 1869.

Claim.—The plates A B, in combination with the inner and outer walls *b e* of a furnace, arranged substantially as described.

89,459.—Charles L. W. Baker, Hartford, Conn.—*Blacking-Brush.*—April 27, 1869.

Claim.—One or more supporters, *d*, with a blacking-brush, *a′*, substantially as and for the purpose described.

89,460.—William E. Ball, Belmont, Ohio.—*Nut-Lock.*—April 27, 1869.

Claim.—1. The screw or bolt A, cut square on two sides for a certain distance, substantially as shown and described.

2. The combination of the screw or bolt A, washer B, and nut C, all constructed and arranged to operate substantially as and for the purposes herein set forth.

89,461.—George W. Bishop, Stamford, Conn., assignor to the New England Manufacturing Works Company.—*Wrench.*—April 27, 1869.

Claim.—The lever E, of curved or cam-formation on its biting-end or face, provided with a stop-pin, *b*, operating in a slot, *c*, and pivoted in the jaws B B, in combination with the arbor, or its disk C, all constructed and arranged for operation together, as shown and described.

89,462.—Henry A. Bowman, Worcester, Mass.—*Awning.*—April 27, 1869.

Claim.—1. The combination, with the side-braces E E and hinged pieces C C, of the wall-supports or braces G G, substantially as and for the purposes set forth.

2. The combination, with the side-braces E E and short hinged pieces C C, of the hooks or eyes 1 and cords 2, substantially as and for the purposes set forth.

89,463.—Theodore Brockmann, Davenport-Iowa.—*Heating-Stove.*—April 27, 1869.

Claim.—1. The detachable back, consisting of the plates *a*, *b*, and *d*, constructed and arranged substantially as herein shown and described.

2. The gate-frame D, formed in two parts, as described, to permit of its ready removal, in the manner set forth.

89,464.—Michael Bush, Bloomington, Ill.—*Butt-Hinge.*—April 27, 1869.

Claim.—The arrangement of the L-shaped plate *a*, and its box *b*, inclosing spring I, and the angular L-shaped plate *d*, and its pintle, when said plates *a* and *d* are each formed of one piece of metal, all constructed as and for the purposes specified.

89,465.—J. A. Caldwell and C. S. Bugbee, Springfield, Mass.—*Whip-Socket.*—April 27, 1869.

Claim.—1. As a new article of manufacture, a whip-socket, turned up of wood, substantially in the manner shown.

2. The method of fastening the same, consisting of the two straps B and B, passed around and fastened together, between the socket and support, by the rivet, substantially as shown.

89,466.—William D. Chase, New York, N. Y.—*Machine for Cutting and Threading Pipe.*—April 27, 1869.

Claim.—1. The fixed socket B, having a screw-thread, *a*, around it, the rotating-wheel C, carrying the threaded leader E, wedge M, sliding cutter-holder I, and spring L, all constructed and arranged substantially as shown and described.

2. The combination with the above, of the sliding-stock J, with its adjustable gripper or grippers *d d′*, and the removable bush H, substantially as shown and described.

3. The arrangement of the die-holder N, with its die O, supported on guide-rods P P, attached to the revolving wheel C, for operation, in combination with the fixed socket B, and sliding gripping-stock J, with its adjustable gripper or grippers, substantially as set forth, for the purpose specified.

89,467.—Frank O. Claflin, Brooklyn, N. Y., assignor to himself and A. R. Carman, same place.—*Lasting Pincers and Nailer.*—April 27, 1869.

Claim.—1. The feeding-jaws *n o*, actuated by the toggle *r s*, and slide *e*, for feeding in the material to

form the peg, by pressing upon the head *f* of the slide *e*, substantially as set forth.

2. The lever *q* and die *p*, in combination with the die *v*, and punch or driver *i*, substantially as and for the purposes set forth.

89,468.—ALFRED B. COUCH, Worcester, Mass. —*Engine-Lathe.*—April 27, 1869.

Claim.—1. The arrangement of the vertical rotating shaft, whether detachable or not, with the helical cam, or its equivalent, and pin *a*, and the slide-nut, in the manner described.

2. The construction and arrangement for joint operation of plate E, shaft D, slide-nut H, pin *a*, helical cam G, and shaft K, as and for the purposes shown and specified.

89,469.—EDWIN CRAWLEY and THOMAS L. BAYLIES, Richmond, Ind.—*Vise.*—April 27, 1869.

Claim.—1. In combination with the jaw A, a movable jaw, B, lever E, nut D, and screw C, so arranged that the movable jaw and lever shall form a compound lever, operated by the screw, for the compression of an article placed between the jaws, substantially in the manner set forth.

2. In combination with said parts set forth in the first clause of claim, the bar F, and pawl I, arranged to form an adjustable fulcrum for the jaw B, substantially as set forth.

3. The combination of the jaws A and B, screw C, lever E, and nut D, with an adjustable fulcrum and spring, H, so arranged that the movable jaw shall be actuated by the screw in closing upon an article placed between the jaws, until the increased resistance, causing the spring to yield, brings into action the united compressing force of the screw and compound lever, substantially in the manner set forth.

4. The combination and arrangement of the jaws A and B, lever E, nut D, screw C, bar P, pawl I, and tripping-toe K, substantially as set forth.

89,470.—JOSEPH C. CURRYER and WILLIAM F. CURRYER, Thorntown, Ind.—*Clod-Fender.*—April 27, 1869.

Claim.—The devices herein described and shown, for attaching a clod-fender to a plow-beam, consisting of the staples *c*, wedges *s*, bolt *u*, rods *v*, with the tube or hook, as described, when constructed, arranged, and operating substantially as herein specified.

89,471.—CHARLES DAWSON, Lanesborough, Pa. —*Steam-Engine Valve.*—April 27, 1869.

Claim.—The construction of the curved rocking-valve A, arranged to work in an upper bonnet or partial cylinder, C, and provided with independent valves *m m*, for operation, in relation to the steam-cavities *c c*, essentially as shown and described.

89,472.—FRANÇOIS DE BOWENS, Philadelphia, Pa.—*Machinery for the Manufacture of Match-Sticks.*—April 27, 1869.

Claim.—1. Making match-splints and similar sticks, by securing the wood from which they are cut to a rotating wheel, substantially as shown and described.

2. Cutting blocks of wood into match-splints and similar sticks by the hexagonal arrangement of cuts, as shown in Fig. 5.

3. The arrangement of the knife D, the rack H, pinion *t'*, ratchet *r'' r'*, pawl p^1 p^2, operating substantially as shown and described.

4. The arrangement of the rotating wheel A and splint-blocks C, with the knives D, operating substantially as herein shown and described.

89,473.—THOMAS R. EVANS, Philadelphia, Pa. —*Shoe-Tree.*—April 27, 1869.

Claim.—The combination, with a revolving shoe-tree, of a pawl and ratchet-wheel, arranged and operating substantially as and for the purpose described.

89,474.—DANIEL FITZGERALD, New York, N. Y. —*Safe.*—April 27, 1869.

Claim.—1. The fire-proof safe A, when provided with a burglar-proof safe C, inside of its lower part, and with a book-case, B, in its upper part, substantially as shown and described.

2. The arrangement of the burglar-proof C, partitioned drawer E, with the cavity F, and doors or plugs G and H, all encased in the lower part of the fire-proof A, and protected by the door I, substantially as shown and described.

3. The arrangement of the book-case B, inner door K, weight N, outer doors L M, and detachable desks O, all substantially as shown and described.

89,475.—CHESTER S. FORD, New York, N. Y. assignor to himself and LEWIS J. MULFORD, same place.—*Finger-Ring.*—April 27, 1869.

Claim.—Finishing the stone of a finger-ring on a circle and flush with the inner side of the ring, substantially as and for the purposes herein shown and described.

89,476.—ROBERT GEORGE, Denver City, Colorado Territory,—*Machine for Concentrating and Separating Ores and Minerals.*—April 27, 1869.

Claim.—1. A machine for concentrating and separating metals and mineral substances from rocks, alluvials, and other substances, contained, in combination, in their natural state, or as mats, or other metallurgic products, when constructed and arranged in the manner and for the purpose herein described.

2. The construction and arrangement of the sieves B^1 and B^2, in a machine for concentrating and separating ores and metals, in the manner and for the purpose herein described.

3. The combination of the blast-chamber E with the valves k^1 k^2 n^1 n^2, guide-rods j^1 and j^2, and coil-spring i^1 and i^2, in the manner and for the purpose herein described.

4. The combination of the lifters C^1 C^2 C^3, with the truck *d*, on the shaft *e*, and piston D, in the manner and for the purpose herein described.

5. The pitman F^1 and F^2, with the adjustable screw *o*, crank G, wheels p^1 and p^2, and the conveyer H^1 and H^2, in the manner and for the purpose herein described.

6. The combination of the wheels e^1 e^2, cords f^1 f^2, and the set-screws g^1 and g^2, in the manner and for the purpose herein described.

89,477.—GEORGE L. GIBSON, Jr., Concord, N. C.—*Cork-Extractor.*—April 27, 1869.

Claim.—The spring-claws C C, in combination with the pointed rod A, when said claws are secured at such a distance above the point E that their length will be permanently the same, or about the same, as that portion of the rod below the place at which the claws and rod are secured, all arranged to operate as and for the purpose set forth.

89,478.—ELAM HARTER, Dowagiac, Mich.—*Horse Hay-Fork.*—April 27, 1869.

Claim.—In combination with the fork-head A, the cross-head C, with its braces 1, 2, 3, 4, the bail E, and catch *x*, when constructed, arranged, combined, and operated as set forth.

89,479.—JOEL HAYDEN, Jr.—Haydenville, Mass. —*Water-Closet.*—April 27, 1869.

Claim.—1. The construction and arrangement of the hinge-rod B, running entirely across the receiver, and through the sockets J and J, in the projections K K, upon the pan, and prevented, by the bearings D D, upon each side of them, from having any lateral motion, while, by loosening the screw in the socket, the rod B may be readily drawn out, the parts all being combined and arranged together substantially as shown and described.

2. The construction of the crank-arm O with the stop *b*, when combined and arranged with the dumping-pan, in the manner and for the purpose set forth.

3. The plane F, upon the hinge-rod B, constructed as described, and for the purpose set forth.

89,480.—JAMES C. HERVEY, Cincinnati, Ohio.—*Machine for Molding and Working Butter.*—April 27, 1869.

Claim.—A butter worker and molder, having box A, aperture *a*, axle C, shafts *b*, cross-bar *c*, compressing-boards D and E, staples *d* and *e*, slides G and H, and molding-box I, constructed, arranged, and operating substantially as specified.

89,481.—William Hibbert, Manchester, England.—*Medical Compound.*—April 27, 1869.

Claim.—The use of chloride of magnesium and bromine in combination, for the prevention or cure of contagious and other diseases arising from fermentation and decomposition, whether in human beings or animals.

89,482.—E. H. Hull, Warren, Ohio.—*Device for Winding Watches and Clocks.*—April 27, 1869.

Claim.—The smooth wheel B, provided with a flange, D, as arranged in combination with the friction-click E, when applied to winding watches and clocks, in the manner substantially as specified.

89,483.—John Humphreys, Chicopee Falls, Mass.—*Bench-Hook.*—April 27, 1869.

Claim.—The combination of the post A with the piece B, having the inclined projection C, and the guide-piece D, substantially as shown and described.

89,484.—Alfred Hutchinson, Philadelphia, Pa.—*School-Desk.*—April 27, 1869.

Claim.—The combination of the bar F, brackets H, and lugs *j*, when the whole are adapted for the retention and support of the adjustable seats B and B′ of a school-desk, as herein described.

89,485.—Peter Johnson, Wauconda, Ill.—*Flour-Cooler.*—April 27, 1869.

Claim.—1. The fan-blower B, in combination with the deflecting cone C, partitions C^1 C^2, and case A, substantially as and for the purpose set forth.

2. The shaft D and cones D^1 D^2, in combination with the fan-blower B, spout *e*, and conveyers d^2, the whole arranged and operating substantially as and for the purposes set forth.

89,486.—Charles B. Kerr, Columbus, Ind.—*Plow-Point.*—April 27, 1869.

Claim.—The cavity or recess D′, in the cast portion of the plow-point, for the purpose of facilitating the removal of the steel portion of such point, substantially as shown and described.

89,487.—Gamaliel King, Westfield, Mass.—*Whip.*—April 27, 1869.

Claim.—The combination of the grooved bolt A with the cap B, having the shoulder *b*, and cast in one piece of metal, for the purpose shown and described.

89,488.—William S. Lukenbach, Newport, Pa.—*Apparatus for Flowing and Sensitizing Photographic Paper, &c.*—April 27, 1869.

Claim.—The frame A, for the purpose of sensitizing photographic paper or other material, either albuminized or plain, by the use of a solution of "nitrate of silver," in the flowing process, or for flowing with other solutions, substantially in the manner and for the purposes set forth.

89,489.—Lucius Lyon, New York, N. Y.—*Sewing-Machine.*—April 27, 1869.

Claim.—The sleeve *k*, stud *l*, and thread-controller K, in combination with the globe-shaped stud *j*, needle-bar G, and lever H, all as set forth.

89,490.—Benjamin K. Maltby, Cincinnati, Ohio.—*Coffee-Roaster.*—April 27, 1869.

Claim.—The oscillating cylinder, furnished with oblique channels and movable slides for adjusting the position of the cylinder, and a pendulum, the whole constructed and arranged to operate substantially as described, and for the purpose specified.

89,491.—J. J. Marcy, West Meriden, Conn., assignor to himself and E. Miller & Co., same place.—*Machine for Spinning Metal.*—April 27, 1869.

Claim.—1. The arrangement of the guide-block P, with the longitudinal carriage G, combined with the lever N, so as to operate the tool on the transverse guide L, through the shaft H^2, substantially in the manner herein set forth.

2. The carriage G, and transverse guide L, with the rod I, when the said carriage and guide are made adjustable thereon, substantially as set forth.

3. In combination with the mandrel E, in the head E^1, the spirally grooved wheel E^5, arranged so as to operate the said mandrel, substantially as set forth.

89,492.—James McCann, St. Louis, Mo.—*Retort for Preparing Charcoal for Rectifying Spirits, &c.*—April 27, 1869.

Claim.—The combination, with the retort A, of a forked rod, C, or its equivalent, when constructed and operating substantially as and for the purpose specified.

89,493.—Joshua Merrill, Boston, Mass.—*Manufacture of Rosin-Oil.*—April 27, 1869.

Claim.—The within-described rosin-oil, produced and deodorized substantially as described.

89,494.—M. Ohmer, Dayton, Ohio.—*Spring Bed-Bottom.*—April 27, 1869.

Claim.—1. A reversible spring-slat, E, supported upon the pointed projections *f′* of the sockets F, substantially as and for the purpose set forth.

2. The combination of a spring-slat, E, supported upon the pointed projections *f′* of the socket F, and the rails D and sockets *d*, when the rail is arranged to oscillate within the socket, substantially as and for the purpose set forth.

89,495.—Joseph Olmsted, Galesburgh, Ill.—*Electro-Magnetic Car-Brake.*—April 27, 1869.

Claim.—1. The insulated grooved rings *k″ k*, the wires W″ W, having arms with two or more bearings on the rings *k*, springs *h h*, and shaft U, arranged substantially as described, and for the purpose set forth.

2. The arrangement of the pinions *e* and *d*, shaft 2, and revolving armature *a*, for transmitting motion to the friction-plate Z and shaft U, substantially as described.

3. The arrangement of the shaft U, friction-plate Z, and the insulated magnets *y y*, all constructed and operating in the manner and for the purposes herein set forth and described.

4. The revolving armature plate *a*, loosely attached, as described, to the shaft 2, so that the plate *a* may be held firmly in the direction of its revolutions with the shaft 2, and be allowed freedom in other directions, for the purpose of allowing it to always adjust itself exactly to the face of the friction-plate Z.

89,496.—James W. Owen, New Haven, Conn., assignor to himself and Edward M. Coe, same place.—*Fabric for Chair-Seats, &c.*—April 27, 1869.

Claim.—The fabric for chair-seating, herein described, consisting of the fabrics united by the cement, as herein set forth, as an article of manufacture.

89,497.—William S. Owen, Council Bluffs, Iowa.—*Churn-Dasher.*—April 27, 1869.

Claim.—The cone-shaped dasher A, provided with neck B and perforations *c c*, *d d*, in combination with the staff E, all arranged to operate as and for the purpose set forth.

89,498.—Seneca H. Parish, Chicago, Ill.—*Shears.*—April 27, 1869.

Claim.—Shears provided with an adjustable bolt for setting the blades A B together, when they become worn, as set forth.

89,499.—Horatio L. Pierce, Taunton, Mass.—*Belt-Hook.*—April 27, 1869.

Claim.—A fastener for belting and banding, consisting of a connecting-bar combined with two buttons, the axes of the shanks of which are at right angles to the bar, as described, the faces of said buttons, when applied to the belting, being about flush with, and so as not to project from the inner surface of the same, as and for the purposes set forth.

89,500.—Joseph I. Peyton and Charles N. S. Wallach, Washington, D. C.—*Bag-Holder.*—April 27, 1869.

Claim.—The combination, in the bag-holder, of the suspending-frame, the flaring band, and the clamping-ring, these parts being constructed, arranged, and operated as herein set forth.

89,501. — GEORGE M. PRATT, Middletown, Conn., assignor to FINKLE & LYON MANUFACTURING COMPANY, same place.—*Feed-Wheel for Sewing-Machines.*—April 27, 1869.

Claim.—In combination with the wheel-feed of a sewing-machine, the ring C, within the flange B, combined with the lever D and wheel E, with the pins *a* and *d*, and spring B, operating substantially as set forth.

89,502.—THOMAS PROSSER, New York, N. Y.—*Pin-Drill.*—April 27, 1869.

Claim.—The combination of the hub A, and its bits B, with the spirally guided center-pin, all constructed and arranged substantially as set forth.

89,503.—C. R. RAND, Dubuque, Iowa.—*Trunk.*—April 27, 1869.

Claim.—1. A trunk, consisting of an outer shell, B, with a hinged front, D, arranged to slide vertically on a bureau-body, A, so as to be extended and held by bolts *b*, substantially as herein described, for the purpose of being converted into a wardrobe, book-case, and writing-desk, as set forth.

2. In combination with the outer shell B and the bureau-body A, the corner-pieces *a*, and bolts *b*, or their equivalents, when constructed and arranged substantially as described, and for the purpose set forth.

3. The combination of the cover C, having a compartment provided with hooks *p*, with the sliding-shell B, having bar *o*, provided with hooks, and arranged to receive removable shelves and partitions, as herein described, and for the purpose set forth.

4. The bureau-body A, with drawers *c d e*, till *s*, and drawer *f*, with hinged cover, in combination with the outer shell B, provided with partitions, shelves, and hooks, constructed and arranged as described.

89,504.—EVERETT P. RICHARDSON, Lawrence, assignor to himself and FRANCIS W. CARRUTH, Boston, Mass.—*Manufacture of Boots and Shoes.*—April 27, 1869.

Claim.—1. The notches or indentations *a*, applied to or produced in an unchanneled sole before piercing the same, substantially as set forth.

2. Bending or griping the sole at the time and place of sewing, substantially as and for the purpose set forth.

89,505.—THOMAS P. ROSSITER, Cold Spring, N. Y.—*Base-Burning Cooking-Stove.*—April 27, 1869.

Claim.—1. The combination with the reservoir A with its flues *s* and *f*, the fire-pot B, arranged to extend beyond the reservoir, and the top-plate D, provided with suitable apertures, *c*, in it, for the reception of cooking-utensils, substantially as specified.

2. The combination of the oven E, having openings *u* in the top plate *j*, covering it with the reservoir A and fire-pot B, essentially as described.

3. The arrangement of the reservoir A, fire-pot B, and roasting-chamber or oven I, with its grate G and slide H, essentially as described.

4. The combination of a central fire-place supplied with fuel, as described, oven E, grated roasting-chamber I, hot-air chamber or water-back L, and ovens or oven-chambers K K′, substantially as specified.

89,506.—AUGUSTUS L. RUMPFF, Dansville, N. Y.—*Guide for Sewing-Machines.*—April 27, 1869.

Claim.—The guide B, constructed as described, and provided with an elongated slot, *a*, hole *b*, and slot *c*, all substantially as shown and specified.

89,507.—CYRUS W. SALADEE, Circleville, Ohio.—*Envelope.*—April 27, 1869.

Claim.—The card B, serving as an advertisement, and as a superscription to an answering letter, in combination with the envelope A, when formed separate from the envelope, and attached to its face, substantially as and for the purpose set forth.

89,509.—JUDSON W. SHAW, Concord, N. H.—*Harvester.*—April 27, 1869.

Claim.—1. The way, or guide-plate O, provided at either or both ends with elastic buffers, for the purpose set forth.

2. Adjusting the position of the cutters relative to the finger-bar and guard-fingers, by changing the point at which the vibrating-bar M′ is pivoted, relatively to the cam.

3. The latch P′ and arm P, in combination with the rock-shaft *m*, for the purpose set forth.

4. The spring-latch H, in combination with the foot-treadle Q and link *q*, constructed and operated substantially as set forth.

5. The shoe E, provided with the pivot-head E′ cast in one piece with the shoe, and constructed and operating substantially as set forth.

89,510.—THOMAS SIM and ELIAS S. HUTCHINSON, Baltimore, Md.—*Manufacture of Starch, Dextrine, and Glucose.*—April 27, 1869.

Claim.—As an improvement in the manufacture of starch, or any of the products of starch, the employment or use of bisulphide of carbon, or any equivalent chemical, to separate oil from meal or other material containing starch, in order to release or expose the said starch, substantially as set forth.

89,511.—JAMES F. SIPPLE, Fredrica, Del.—*Bolt for Shutters, &c.*—April 27, 1869.

Claim.—The use of the two disks D D′, in combination with the bolt B, plates *b c*, and shutters *s s′*, the whole constructed and arranged substantially as and for the purposes set forth.

89,512.—EUGENE SLOSSON and EDWIN C. SLOSSON, Vienna, Ill.—*Corn-Planter.*—April 27, 1869.

Claim.—1. The caster-wheel E, when applied to the corn-planter's frame, in the manner substantially as and for the purposes herein shown and described.

2. The raising and lowering device, consisting of frame H, bar I, arm L, and bar M, as also segment N, chain O, and pulley P, or their equivalents, all arranged and operating substantially as set forth.

3. The dropping-device, consisting of plates *d d′*, cam *g*, and slide *l*, arranged and operating as herein described and specified.

4. The manner of attaching scrapers U U to the machine, and operating the same, substantially as set forth.

89,513.—CYRENE SMITH, Louisville, Ky.—*Abdominal Corset.*—April 27, 1869.

Claim.—The corset-body A, with side-gussets C C and elastic strips D D, back-gusset B, and elastic strips J J, and short whalebones F K, all being constructed and used substantially as and for the purposes specified.

89,514.—FRANCIS B. STEVENS, Weehawken, and WILLIAM BROWN, Hoboken, N. J.; said STEVENS assignor to said BROWN.—*Iron Cleat and Chock.*—April 27, 1869.

Claim.—An iron cleat or chock, inlaid with brass or soft metal, in the manner and for the purpose herein set forth and described.

89,515.—ELIZABETH MARY STIGALE, Philadelphia, Pa.—*Method of Preserving Flowers.* — April 27, 1869.

Claim.—The preservation of flowers from the effects of exposure, by preparing them as described, and confining them in air-tight cases, as set forth.

89,516.—B. L. STONE, San Francisco, Cal.—*Toy-Target.*—April 27, 1869.

Claim.—The combination of target, letter A, with the dart, letter E, by the means of the elastic India rubber cord, letter C, and the piece of twine, letter D, in the manner herein described, and for the uses and purposes hereinbefore mentioned.

89,517.—GEORGE C. TAFT, Worcester, Mass.—*Wrench.*—April 27, 1869.

Claim.—The arrangement herein shown and described, of the screw E, rosette-nut F, jaw C, and bar D, when constructed and operating substantially as herein specified.

89,518.—EPHRAIM B. TALBOTT, Knoxville, Tenn.—*Saw-Mill.*—April 27, 1869.

Claim.—The arrangement, herein described, of

the mandrel B, standards E, racks F, pinion G, clamp I, shaft L, and arms P and *m*, when all the parts are constructed and operate as specified.

89,519.—J. PATTON THOMPSON, Philadelphia, Pa.—*Spool Reservoir or Case.*—April 27, 1869.

Claim.—The case A, with its vertical front glass B and back board C, vertical partitions *b*, and strip *d*, arranged, in respect to the lower edges of the front and back boards, substantially as and for the purpose described.

89,520.—NATHAN THOMPSON, Brooklyn, (E. D.,) N. Y.—*Lantern.*—April 27, 1869.

Claim.—The securing-bail, or loop E, pivoted as at *b b*, to an upper ring, C, of the guard B, and provided with a set-screw, *c*, or other suitable locking-device, in combination with the lantern-cap D, made removable from said guard, substantially as specified.

89,521.—WILLIAM H. TRIMBLE, Hillsborough, Ohio.—*Fence.*—April 27, 1869.

Claim.—1. A fence-post, constructed, as described, of the base A, braces B B, mortised board C, and with or without the mortised board E, substantially as shown and described.

2. In combination with the above, the rails D D, beveled at both ends, and the rails D′ D′, beveled at one end, and the other end cut square, with a shoulder, *a*, all substantially as and for the purposes herein set forth.

89,522.—HIRAM TUCKER, Newton, Mass.—*Plating Metals.*—April 27, 1869.

Claim.—1. The improvement in coating metals with metals, substantially as described.

2. Articles of manufacture in which metals are coated with metals, substantially as described.

3. The process consisting in covering a metal base, surfaced by electro-deposit, with a fluid or semi-fluid coating, afterward hardening said coating, and then removing portions of such coating, when hardened, and then coating the surfaces so exposed, by electro-deposit.

89,523.—HIRAM TUCKER, Newton, Mass.—*Mode of Ornamenting Metal Surfaces.*—April 27, 1869.

Claim.—1. The process, and its modifications, substantially as set forth, by which contrasted surfaces are produced on a metal base.

2. As a new manufacture, articles of metal, surfaced by my described process, or any of its described modifications, substantially as set forth.

89,524.—AARON H. VANCLEVE, South Amboy, N. J.—*Railroad Revolving Time-Table.*—April 27, 1869.

Claim.—1. In combination with a clock or other time-keeper, and operated by the same, one or more pointers, representing a train or trains running in one direction, and one or more pointers representing a train or trains running in the contrary direction, and a number of station-studs or their equivalents, representing stations on the road, and arranged in accordance with the graduations of the clock-dial and with the running time of the trains, all substantially as and for the purpose herein set forth.

2. The train-pointers, made adjustable on rings or plates operated by the clock, and graduated in accordance with the dial of the same.

89,525.—WILLIAM V. WALLACE, New York, N. Y.—*Car-Coupling.*—April 27, 1869.

Claim.—1. The construction and arrangement of a car-coupling, in the manner and for the purpose herein described.

2. The combination of the link C and hook B, in the manner and for the purpose herein described.

3. The link C, when constructed as herein shown and described, with a hook, weighted at its upper end, and pivoted centrally within the opposite bunter, as herein specified.

89,526.—BENJAMIN F. WATSON and CHARLES H. TINKEL, Bridgeport, Ill.—*Machine for Screening Grain and Seed.*—April 27, 1869.

Claim.—The combination and arrangement of the slide A, wires B, screens C, and boards M M, in the manner and for the purpose set forth.

89,527.—H. A. WEBER, Columbus, Ohio.—*Composition for Roofing Pavements, Floors, &c.*—April 27, 1869.

Claim.—The composition, or chemical cement, composed of the ingredients herein mentioned, in the proportions and manner substantially as herein described, and for the purposes set forth.

89,528.—ALLEN WEBSTER, Farmington, assignor to himself and N. C. HUBBELL, New Haven, Conn.—*Machine for Making Screws.*—April 27, 1869.

Claim.—1. The reciprocating and rotating carrier-wheel C′, provided with the milling-tool *a*, and threading-die *h*, combined with the mandrel E′, for revolving the wire, and the cutter *f*, operating as and for the purpose specified.

2. In combination with the subject-matter of the first clause of claim, the nicking and milling tool G, operating as and for the purpose set forth.

3. In combination with the subject-matter of the first and second clauses of claim, the screw-driver *m*, arranged so as to operate as and for the purpose specified.

4. The combination of the wheels P and R, stops L and *s*, with the pawl S, so as to operate as and for the purpose set forth.

89,529.—ASA WEEKS, Minneapolis, Minn.—*Heater and Ventilator for Railroad-Cars.*—April 27, 1869.

Claim.—1. The within-described arrangement of the deflector P, opening *c*, register R, rod I, fire-chamber F, and chamber E, as and for the purpose specified.

2. Providing the door *i e* i^2, to allow the box K to be cleaned, when employed in combination with my improved car-heater, in the manner described.

3. The supplementary heater M, constructed and adapted to operate in connection with my improved heater for the double purpose of heating and ventilating the cars, in the manner substantially as herein set forth.

4. The opening *w*′ and plate *w*, when arranged in the front wall of the furnace, with relation to the open ends of pipes C C, in the rear wall, substantially as and for the purpose described.

89,530.—E. WEISSENBORN, Hudson City, N. J.—*Device for Polishing Pencils.*—April 27, 1869.

Claim.—1. The combination of the guide-pieces B B, having recesses for separating and retaining the ends of the pencils, and the traveling bed C, for supporting and turning the pencils, substantially as herein described.

2. The traveling platform C, provided with raised edges *i i*, and parallel ridges *e*, substantially as and for the purpose herein set forth.

89,531.—WILLIAM M. WELLING, New York, N. Y.—*Composition for Artificial Ivory.*—April 27, 1869.

Claim.—The composition herein specified, prepared substantially as set forth.

89,532.—WILLIAM M. WELLING, New York, N. Y.—*Composition Resembling Ivory.*—April 27, 1869.

Claim.—The composition herein specified, having the appearance of ivory.

89,533.—ALONZO WHITCOMB, Worcester, Mass.—*Corn-Husker.*—April 27, 1869.

Claim.—1. The rubber-covered rolls H and J, arranged in the same horizontal plane, or nearly so, with a balance-wheel applied to the shaft of one of them, and both having motion imparted to them, for the purpose of stripping the husks from ears of corn, substantially as described.

2. In combination with said stripping-rolls, the concave P, arranged substantially as set forth.

3. The combination of the rolls H J, the revolving wings C, and concave P, when arranged substantially as described.

4. The use, in a corn-husking machine, of a concave, P, so constructed and arranged as to cover one

of the stripping-rolls, and keep the ear from resting upon said roll while being husked, substantially as described.

89,534.—JOSEPH C. WIGHTMAN, Newton, assignor to CHARLES HOUGHTON, trustee, Roxbury, Mass.—*Steam-Pump.*—April 27, 1869.

Claim.—1. The apparatus, substantially as herein first described, for raising and forcing water, substantially as set forth.

2. The construction of the main water and steam chamber *a*, with a dome or supplemental chamber, *b*, substantially as shown and described.

3. The plug or obstruction *m*, when pierced with the aperture *n*, and arranged in the pipe *k*, to operate substantially as described.

4. The arrangement of the pipes *c*, *f*, and *k*, valves *e d*, and cocks *u*, with the common water-back or coil and its connected tank and pipes, substantially as described.

89,535.—JOHN WALL WILSON, New York, N. Y.—*Game Entitled "Talisman."*—April 27, 1869.

Claim.—1. The game entitled "Talisman," substantially as herein described.

2. The combination of the wickets B B^1 B^2, with their posts C C^1 C^2, balls D D^1 D^2, and pins F^1 to F^{10}, and rings G, arranged essentially as specified.

3. The scoop H, constructed substantially as represented in fig. 2, for use by the player, as herein set forth.

4. The mallet I, constructed as represented in fig. 4, for use as described.

5. The combination of the wicket B^1 and central post C, substantially as and for the purpose described.

89,536.—JOSEPH S. WOOD, Plainfield, N. J.—*Lamp.*—April 27, 1869.

Claim.—1. The lamp-body G, in combination with the tubes L M, and flame-spreader P, for the purpose shown and described.

2. The combination of the globe G, containing an absorbent, S, with pipes L, M, and N, and burner O, arranged and operating substantially as described.

3. The adulterating pipe M and valve *m n*, for the purpose shown and described.

4. Heating the impelled current of air, at or near the point of combustion, as it passes on its way, through the absorbent S, to the burner.

89,537.—GEORGE M. PULLMAN, Chicago, Ill.—*Dining-Car for Railways.*—April 27, 1869.

Claim.—1. The provision-chamber E, located at or near the center of the car, in combination with the kitchen, substantially as shown.

2. The arrangement of closets or cupboards in the panels between each pair of windows, substantially as and for the purpose described.

3. The combination, in a dining-car, of kitchen A, water-tank B, range and provision-chamber E, when the latter is located below the floor of the car, substantially as described.

4. The combination, in a dining-car, of a kitchen, A, tables G, cupboards K K, wash-room and water-closet, substantially as described.

89,538.—GEORGE M. PULLMAN, Chicago, Ill.—*Hotel-Car for Railways.*—April 27, 1869.

Claim.—1. A state-room or rooms, located on one side of a railway-car, with passages on the opposite side of the car, and also longitudinally through the room, so that the room may be isolated or thrown open as part of the car, as may be desired.

2. A kitchen, provided with a cooking-apparatus, in combination with a sleeping-car, for the purpose described.

89,539.—AARON LONGSTREET, Chicago, Ill., assignor to GEORGE M. PULLMAN, same place.—*Lighting Railway-Cars.*—April 27, 1869.

Claim.—1. The lamp A, in combination with the recess D, in the panel of a railway-car, substantially as described.

2. The lamp A, in combination with the recess D, and sliding-panel B, substantially as and for the purposes described.

3. The combination with each set or pair of seats in a railway-car of a lamp, candle, or burner, located between the windows, substantially as described.

89,540.—RICHARD MONTGOMERY, New York, N. Y.—*Corrugated-Metal Building.*—April 27, 1869.

Claim.—An iron building, composed mainly of corrugated-metal columns, A A′, connected substantially as described, studs E E′, beams D D′, and metallic plates or sheets N, inserted within the grooves in said studs or columns, the whole being constructed substantially in the manner herein specified.

89,541.—RICHARD MONTGOMERY, New York, N. Y.—*Elevated Railway.*—April 27, 1869.

Claim.—1. Standards C C, in combination with the cross-tie beams A A, and continuous lateral guard-rails D D, of an elevated railway or railway-bridge, substantially as herein set forth.

2. Friction-wheels E E, when combined with a car or car-truck, F, running between the lateral guard-rails D D of an elevated railroad, substantially in the manner herein set forth.

89,542.—T. C. THEAKER, Bridgeport, Ohio.—*Railroad-Car Seat and Couch.*—April 27, 1869.

Claim.—1. The lower or outer frames A A, when constructed and operating substantially as shown and described.

2. The upper or inner frames B B, substantially as and for the purpose set forth.

3. The frames A, in combination with the frames B, constructed to slide in or upon each other, when operated by scrolls or other suitable device or devices, as and for the purpose set forth.

4. The shaft E, in combination with the double-worm or scroll-wheels D D, constructed and operating substantially as and for the purpose shown and described.

5. The combination of the oscillating seat-frame G with the frames B, of the described construction, as and for the purpose described and shown.

6. The combination of the shaft I, worm or screw-pinion *i*, segment H, and oscillating seat-frame G, all substantially as and for the purpose set forth.

7. The combination of the frame G, horns *o*, and back K, all substantially as and for the purpose set forth.

8. In combination with a reversible back, made to be held by hinged pins or horns, at its lower end, the head-rest *a a*, the supporting-pins of which fit into the holes in each end of the back, made for said hinged pins, all substantially as shown and described.

9. The arms L, with their grooves *c″*, provided with a channel having double-acting stops *p*, all substantially as and for the purpose set forth.

10. The combination of the slides *l* and pawls *m m*, all constructed and operating substantially as and for the purpose set forth.

11. The combination of the arms L and their grooves, as described, with the slides *l* and their pawls *m*, as and for the purpose shown and described.

12. The combination of the arms L with their grooves *c″*, slides *l*, connecting link or bar M, and back K, all substantially as and for the purpose set forth and described.

13. The extension foot-rest, when the whole is made substantially as shown and described.

14. An improved extensible rest, composed of the pieces O O and pieces S S, the latter being suitably braced and sliding on the former, when held together by open guides *t t*, all as and for the purpose set forth.

15. In combination with a foot-rest for a seat or chair, the arm P and notched bar R, all constructed and operating as set forth.

16. In combination with the pieces S S, suitably connected, the foot-board T, hinged as described, on a fixed rod or pivots, and operating in its connection, as set forth.

17. The foot-board T, constructed as described and shown, when supplied with a heel-board, *w*, all as set forth.

89,543.—H. CLAY LAURENCE, Canandaigua, assignor to WARREN H. MOAK and BENJAMIN JANSEN, Brooklyn, N. Y.—*Velocipede.*—April 27, 1869.

Claim.—1. The rising and falling seats *o m*, in

connection with cranks for operating a velocipede, by the assistance of the rider's weight, substantially as described.

2. In combination therewith, the slotted guide-rods *f*, for the purpose described.

3. The double cranks *c*, in combination with the pitman-rods *e*, and the slotted guide-rod *f*, substantially as and for the purpose described.

4. The double cranks *c*, in combination with the rising and falling frame *l*, substantially as described.

5. The double cranks *c*, in combination with the rising and falling reach, substantially as described.

89,544.—DAVID DOLMAGE WRIGHT, Oakville, Ontario, Canada.— *Railway-Car Coupling.*—April 27, 1869.

Claim.—1. The clamping cross-bars I I′, arranged in connection with the draw-head in such a manner as to sustain the coupling-pin E, and the solid swinging-gate G, and admit of the attachment of these parts to the open-sided draw-head, substantially as described.

2. The swinging-gate G, and cross-bar I′, constructed with stops *b c d*, operating substantially as described.

89,545.—CHARLES E. MILLER, Indianapolis, Ind.—*Wash-Boiler.*—April 27, 1869; antedated October 27, 1868.

Claim.—The combination of the false bottom C, perforated hinged flaps D D′, columns F, and nozzles G G′, all constructed and arranged to operate substantially as and for the purposes herein described.

89,546.—BENJAMIN F. BARNEY, Pontiac, Ill.—*Corn-Harvester.*—May 4, 1869.

Claim.—The combination and arrangement of the inclined knives J, guards K, reels L, hinged dropper-box P, and lever Q, in the manner described, for the purpose set forth.

89,547.—LAFAYETTE L. BETTYS, Ontario, N. Y.—*Potato-Digger.*—May 4, 1869.

Claim.—1. The hanger K, brace E, chain *h*, lever a^2, in combination with the scoop F, as and for the purpose herein shown and described.

2. The adjustable brace *e* and hangers K, in combination with the scoop F and sieve D, as and for the purpose set forth.

3. The crank-shaft A, connecting-rods B, vibrating-arms C, in combination with the longitudinally reciprocating screen D, arranged and operating as herein shown and for the purpose set forth.

89,548.—EZEKIEL BLAKE, Chicopee Falls, Mass.—*Spindle-Step for Spinning-Machines.*—May 4,1869.

Claim.—The spindle-step A, having the portion *a* elongated and enlarged, and having the seat *e*, oil-chamber E, and rim *f* formed therein, in combination with the cap C, having the central opening *c*, and the inner sides thereof conical in section to fit the tapering sides a^1 a^2 of the step, all constructed and arranged substantially as set forth.

89,549.—NATHANIEL A. BOYNTON, New York, N. Y.—*Hot-Air Furnace.*—May 4, 1869.

Claim.—The radiator A B E F G, when constructed substantially as set forth, and arranged and combined with a hot-air furnace, in the manner herein described.

89,550.—JOHN BOWLES, Augusta, Ga.—*Corn-Sheller.*—May 4, 1869.

Claim.—1. In combination with the shelling-cylinder A^* a^*, the equidistant and equiprominent points or projections a^{*1} a^{*1} a^{*1}, three or more, as and for the purposes specified.

2. The shield or funnel B, constructed and arranged substantially as described, in combination with the shelling-cylinder $A^{*\prime}$, for the purpose set forth.

3. In combination with the shelling-cylinder A^* a^*, the spring C, arranged between the jaws A′ A, substantially in the manner described, for the purposes specified.

4. The rigid arm or bar E, projecting rigidly from one of the jaws, and so engaging with the other as to prevent the longitudinal or edgewise displacement of the parts of the shelling-cylinder, substantially as and for the purpose described.

89,551.—JOHN N. BUNNELL, Unionville, Conn.—*Mouse-Trap.*—May 4, 1869.

Claim.—Constructing the body of an ordinary mouse-trap with rings or bands around its circumference, substantially as described.

89,552.—MARTIN BURNELL, Arundel, England.—*Boot-Blacking Machine.*—May 4, 1869.

Claim.—The construction and arrangement of the blacking-reservoir G, valve T, and spout *t*, with the distributing-brush *s*, and blacking-wheel F, as a whole, operating as set forth.

89,553.—EDWARD BURNHAM, Framingham, Mass.—*Rope-Guide for Window-Weights.*—May 4, 1869.

Claim.—The improved window-weight rope-guide, made as described, viz, as a cylinder having a flange, *a*, at one end, a projection, *b*, at the other, and a rope-channel, *c*, arranged as specified.

89,554.—ROBERT BUSTIN, St. John, New Brunswick, assignor to himself, JACOB D. MCDONALD, and GEORGE BEDELL, same place.—*Snow-Plow.*—May 4, 1869.

Claim.—The snow-plow, consisting of side-boards A A′, attached to the front cross-beam B of the locomotive and to the hanging-posts E E of said cross-beam, together with the eye-straps and pins D, and brace-rod F, the whole constructed and arranged as and for the purpose substantially as herein described.

89,555.—JOSEPH BOHNER, Alden, N. Y.—*Horse-Rake.*—May 4, 1869.

Claim.—The rake-head F, standards E, hinged to the main frame C, and provided with brace-hooks *i*, in combination with the hinged thills D, having rearward extensions and locking-pins *u*, arranged and operating substantially as and for the purpose herein described.

89,556.—JOHN CASSON, Sheffield Parish, England.—*Machinery for Planing.*—May 4, 1869.

Claim.—1. The compound carriage and fence hereinbefore described, and illustrated in the accompanying drawings, that is to say, a compound sliding-carriage, the upper part of which can be set at an angle to the lower part, so as to present the wood obliquely to the plane, and a fence jointed to the said upper part of the said carriage, and provided with the means herein described, so as to hold the wood to be planed at any required angle.

2. The combination with the parts named in the preceding clause, of the disk-plane, as hereinbefore described, and illustrated in the accompanying drawings.

3. The "dogs," as adjusted in manner hereinbefore described, and illustrated in the accompanying drawings.

4. The combination with the adjustable fence of the means hereinbefore described, and illustrated in the accompanying drawings, for planing wood into a cylindrical or other like forms, substantially as set forth.

89,557.—WILLIAM A. CASWELL, Providence, R. I.—*Blind-Stop.*—May 4, 1869.

Claim.—1. The blind-slat fastening herein described, consisting of the curved finger C, the plate D, and spring G, or their mechanical equivalents, arranged and operating substantially as set forth, for the purposes specified.

2. In combination with the plate D and finger C, the button H, constructed and operating substantially as described, for the purposes specified.

89,558.—J. W. CLEVELAND, North Tunbridge, Vt.—*Tire-Machine.*—May 4, 1869.

Claim.—The arrangement of the bed and uprights A A, dogs or clamps B B, and levers or springs C C, as shown and described.

89,559.—Edward Colson, Fort Wayne, Ind., assignor to himself and Chauncey B. Oakley, same place.—*Saw-Teeth.*—May 4, 1869.

Claim.—The tooth A, made straight on its forward side, with a semicircular notch, *x*, beveled at the top, from *y* to *z*, and straight from *z* to B, where there is an inclined shoulder, and straight from said shoulder to its horizontal base, D′, all as shown in Fig. 2, and connected to the blade in an inclined manner, substantially as shown and described.

89,560.—Howell, Cooper, Watertown, N.Y.—*Cheese-Hoop Follower.*—May 4, 1869.

Claim.—A cheese-hoop follower, having a metallic face or head, which is enameled, or treated in an equivalent manner, so as to be anti-corrosive and non-adhesive, substantially as and for the purposes shown and set forth.

89,561.—Jesse D. Cothrell, Hopedale, Mass.—*Weft-Stop Mechanism in Looms.*—May 4, 1869.

Claim.—The filling-fork G, as constructed, not only as a bent and fulcrated lever, supported on a pivot or fulcrum, *d*, as described, but as disconnected from and with its horizontal arm disposed underneath and against an arm or lever, I, combined with mechanism as explained, or its equivalent, for operating the shipper, the whole being substantially as specified and represented, and to enable the filling-fork, when a shuttle, during its flight, may be caught in the warp and borne against the backs of the prongs of the fork, to move, so as to allow the shuttle to pass it without causing breakage of the fork or any part of the mechanism for actuating the shipper.

2. The combination of the cammed arm L, or its mechanical equivalent, applied to, and so as to be operated by, the filling-fork, in manner and by means substantially as described, with the shelf or bracket M, the reciprocating pitman N, and its eccentric O, or their equivalent, and with the bent lever P, applied to the harness-operative mechanism, the "take-up mechanism," the "let-off mechanism," and the "drop-box operative mechanism," or either of the said mechanisms, substantially in manner as specified.

3. The arrangement of the tension-spring *s′*, of the "whip-roller," or "warp guide," on the upright rod *m′* of such guide, and within the worm-shaft *y*, and against a shoulder, *n′*, therein, the whole being substantially as, and to effect advantages as hereinbefore explained.

89,562.—Johnston D. Curl and John D. Bartlett, Mokena, Ill.—*Medical Compound.*—May 4, 1869.

Claim.—The combination of the ingredients described, in the manner and proportion as and for the purposes set forth.

89,563.—George Henry Daw, London, England.—*Cartridge.*—May 4, 1869.

Claim.—The construction of the cartridge-case, with a tubular body, composed of a strip of thin sheet-metal, soldered at its overlapping edges, and combined with a base-cup, containing the percussion-arrangement, and a wad or filling of paper-pulp, as hereinbefore set forth.

89,564.—James M. De Witt, Chicago, Ill.—*Fastening Handles to Tools.*—May 4, 1869.

Claim.—The chisel B, constructed as shown and described, as an article of manufacture.

89,565.—James M. Dormon, Claiborne Parish, La.—*Plow.*—May 4, 1869.

Claim.—The peculiarly formed plowshares F F′, in combination with the articulating and adjusting braces E E′, when said plowshares and said braces are constructed and operate as herein described.

89,566.—John R. Dunn, Queens County, and George B. Burroughs, Brooklyn, N. Y.—*Automatic Fan.*—May 4, 1869.

Claim.—The vibrating stem *e*, in combination with the handle A, segmental cog or escapement-wheel *c*, and spiral spring *d*, all arranged and operated in the manner and for the purpose set forth.

89,567.—Elijah Eaton, Hartford, Conn.—*Toy-Velocipede.*—May 4, 1869.

Claim.—A toy-velocipede, constructed and operating substantially as shown and described.

89,568.—Charles E. Evard, Leesburgh, Va.—*Freeing-Tool, Screw, and Jewel-Setter Combined.*—May 4, 1869.

Claim.—The combination of the improved tool, with the series of cutting, setting, and burnishing instruments, all constructed as and for the purposes described.

89,569.—Joseph Fanyon, Providence, R. I.—*Combined Measure and Funnel.*—May 4, 1869.

Claim.—The arrangement of the graduated funnel A, transparent plate *a*, faucet C, hollow tube *b*, notched rod *c*, and springs *d* and *f*, all substantially as herein shown and described.

89,570.—James H. Fellows, Alba, Pa.—*Device for Fastening Wagon-Seats.*—May 4, 1869.

Claim.—An automatic seat-fastener, consisting of a seat-iron, A, body-plate E, and eccentric or cam-lever F, constructed and arranged substantially as herein shown and described.

89,571.—W. A. Field, Schuylkill Haven, Pa.—*Potato-Digger.*—May 4, 1869.

Claim.—The combination of the share D, stationary screen E, and rotary clearer *i j*, when these several parts are constructed and arranged as herein specified.

89,572.—Stephen Fisk, Winchester, Ind.—*Wash-Boiler.*—May 4, 1869.

Claim.—The arrangement of the oval, perforated bottom B, curved bars *e e*, shields *i i*, tapering tube C, and cap D, with its slotted flange *b* and rims *c c*, all substantially as shown and described.

89,573.—W. Garrison and Charles H. Stevens, Syracuse, N. Y.—*Holdback.*—May 4, 1869; antedated December 8, 1868.

Claim.—The swinging platform *f* and spring *g*, in combination with a flat-headed hook C *h* and thill-iron A, as and for the purpose herein shown and described.

89,574.—J. H. Giles, New York, N. Y.—*Enameling Stone and Earthenware.*—May 4, 1869.

Claim.—The process of enameling, substantially as herein described and set forth.

89,575.—John Goodin, Centralia, Ill.—*Wrench.*—May 4, 1869.

Claim.—1. The arrangement of the handle A, having a flat, broad portion, B, which is slotted and grooved as described, the stationary jaw C, raised surface *a*, pawl *b*, spring *c*, and flanges *d* and *e*, all substantially as shown and described.

2. In combination with the handle A, flat portion B, and stationary jaw C, the slide D, movable jaw E, and notched cam-wheel F, all constructed and operating substantially as and for the purposes herein set forth.

89,576.—George H. Gregory, North Milton, Conn.—*Whip-Socket.*—May 4, 1869.

Claim.—The combined arrangement of the vertical serrated rod D, the oblique lever E, sliding bolt and spring F, and spiral spring G, in the manner and for the purpose substantially as herein described.

89,577.—John A. Haase, Philadelphia, Pa.—*Floor-Clamp.*—May 4, 1869.

Claim.—1. The construction of the jaw A with a supporting shoulder, *a′ a″*, substantially as described, and for the purpose set forth.

2. The construction of the jaws A and A′ with the slotted elbow *d* and lug *c*, substantially as described, and for the purpose specified.

3. A floor-clamp, composed of the retaining-jaws A and A′, retaining-screws B B, clamping-head D, guiding and supporting shaft F, and forcing-shaft C, when the several parts are constructed and arranged for joint operation, substantially in the manner and for the purpose set forth.

89,578.—Samuel Hodkinson, Louisville, Ky.—*Automatic Switch.*—May 4, 1869.

Claim.—The combination of the slotted lever E and spring G, the cranks I K, connecting-links J, J, and O, and shifting-bar M, all constructed, arranged, and operated in the manner and for the purpose set forth.

89,579.—William Wheeler Hubbell, Philadelphia, Pa.—*Flux for Extracting Precious Metals from their Ores.*—May 4, 1869.

Claim.—The use and application of sulphate of baryta to a furnace to form a flux, with which to separate the metals of gold or silver-ores from the other quartz or earthy matter and sulphur in them, substantially as described.

89,580.—H. S. Hudson, Selma, Ala.—*Automatic Feed-Regulator for Lamps.*—May 4, 1869.

Claim.—1. An adjustable automatic feeder or regulator, applied to a pipe leading from a supply reservoir to a burner, and constructed so as to operate substantially as described.

2. The combination of an automatic feeder, constructed substantially as described, with an apparatus which will regulate the supply to and pressure in a distributing-pipe leading to said feeder, substantially as and for the purposes set forth.

3. The well G, made adjustable upon pipe D, and so constructed as to expose to view the fluids into which the end of this pipe dips, substantially as described.

4. The lower end of pipe D, reduced to a knife-edge, and arranged within the well, substantially as described.

89,581.—Reuben K. Huntoon, Boston, Mass., assignor to himself and J. Augustus Lynch, same place.—*Governor for Steam-Engines.*—May 4, 1869.

Claim.—1. The combination of the cylinder W and piston X, with the screw-propeller G, its shaft F, and case A.

2. The combination and arrangement of the auxiliary shaft M and the toggles K L, with the propeller G and its shaft F, and mechanism for revolving the said auxiliary shaft M, such mechanism, as represented and described, being the gears O P, the shaft Q, and the pulley S.

3. The combination and arrangement of either or both the series of channels *o x*, with the seats *r* and passages *n q'* of the wheel-valve V, and its case B, applied together, and made in other respects substantially as set forth.

4. The arrangement and combination of the wings *a'* with the case A, the passages *m*, and the cylinder W, to be used with a piston, and the propeller and shaft, arranged in such case, substantially in manner, and to operate as described.

89,582.—John W. Hyatt, Jr., Albany, and David Blake, Spencertown, N. Y.—*Compound of Ivory-Dust and other Materials.*—May 4, 1869.

Claim.—1. Agglutinizing ivory-dust, or other pulverized material, by combining collodion therewith, and subjecting the composition to pressure during the evaporation of the volatile elements, substantially as described.

2. The evaporation of the alcohol and ether by means of heat, substantially as described.

89,583.—Isaac Ickelheimer, New York, N. Y.—*Watch-Winding Device.*—May 4, 1869.

Claim.—1. The combination, with a ratchet-wheel of the main-spring arbor and its retaining-pawl, of the winding-plate, with its square stem and its spring-click, for engaging with the said ratchet-wheel, all constructed and arranged for operation, substantially as herein shown and set forth.

2. The combination, with the parts named in the preceding clause, of the cover or cap, so constructed as to extend over and hold the winding-plate, and to constitute a socket for the protection of the winding-square, as and for the purpose shown and set forth.

89,584.—John H. Irwin, Philadelphia, Pa.—*Mode of Guiding Velocipedes on a Single Track.*—May 4, 1869.

Claim.—A velocipede, connected with a truck, acting as a counter-weight, as set forth, to operate under control of the rider, as described.

89,585.—John Johnson, Saco, Me.—*Sun-Dial.*—May 4, 1869.

Claim.—A translucent hollow globe, having an aperture at the top, through which a pencil of rays from the sun may pass, to mark time, the globe being rendered opaque at the top, and on the side next to the sun, for the purpose of giving a perfect delineation of the bright spot, as it traverses the surface of the globe.

89,586.—C. F. Keller, Nevada, Ohio, assignor to himself, William Balliet, and H. A. King, same place.—*Locking-Nut.*—May 4, 1869.

Claim.—A plate, E, provided with a suitable number of holes, as described, in combination with the plate B, having one or more staples attached for securing the plate E in place, by means of the pins J, to prevent the nuts turning or becoming loose, as and for the purpose set forth.

89,587.—George King, Frederick, Md.—*Sash-Lock.*—May 4, 1869.

Claim.—The knuckle-catch *b*, in combination with the spring C, the whole constructed and arranged with relation to the sash A, as shown and described.

89,588.—Hiram S. Maxim and James Radley, New York, N. Y.—*Apparatus for Making Illuminating Gas from Gasoline.*—May 4, 1869.

Claim.—1. The apparatus for making illuminating-gas from gasoline or other hydrocarbon-fluids and atmospheric air, in which the gas-fluid is forced from the tank or chamber in which it is held, to the heating and vaporizing chambers by the action of the compressed air, or its equivalent, in such tank or chamber, substantially as described.

2. Heating and vaporizing the gas-fluid in a small continuous stream, of sufficient volume only for the required light or lights, by forcing the fluid through the heating and vaporizing chambers by the action of compressed air, or its equivalent, upon such fluid, substantially as described.

3. Drawing atmospheric air into the apparatus, for the purpose of carbureting the same, so as to produce an illuminating-gas, by forcing the hydrocarbon-vapor through a contracted vent into the perforated air-tube, by the action of the compressed air or its equivalent upon such vapor, substantially as described.

4. The combination of the fluid and air chamber A, pipe B, and the heating and vaporizing chambers F and G, constructed and operating in the manner and for the purpose substantially as described.

89,589.—E. McLane, Young America, Ill.—*Corn-Separator.*—May 4, 1869.

Claim.—1. The arrangement of the frame A, spring-bars E E, shoe D, loops *a a*, and crank-shaft *b*, all substantially as and for the purposes herein set forth.

2. The shoe D, provided with cross-bars *c c*, and riddles I I, placed so as to form stair-steps, substantially as shown and described.

3. In combination with the shoe D, and riddles I I, the adjustable bars H H, substantially as specified.

89,590.—Henry N. Meeker, Smith's Mills, N. Y.—*Machine for Washing Hides and Leather.*—May 4, 1869.

Claim.—The rotating slatted cylinder B, when provided with inwardly-projecting ribs or shelves *e e*, for lifting portions of the water from the tub or vat A, constructed, arranged, and operating substantially in the manner and for the purpose set forth.

89,591.—Charles E. Miller, Indianapolis, Ind.—*Wash-Boiler.*—May 4, 1869.

Claim.—The combination of the false bottom C, perforated hinged flaps D D', columns F, and nozzles G G', all constructed and arranged to operate substantially as and for the purposes herein described.

89,592.—PETER MUNZINGER, Philadelphia, Pa.—*Straddle-Pipe for Hydraulic Gas-Mains.*—May 4, 1869.

Claim.—The interior pipe I, chamber J, neck M, and the diaphragm or weir N, the whole composing the straddle-pipe H, substantially as and for the purpose shown and described.

89,593.—JAMES H. MURRILL, Baltimore, Md., assignor to MURRILL and KEIZER, same place.—*Forming-Machine for Square Tin Cases.*—May 4, 1869.

Claim.—1. In a forming-machine, the direct attachment of the grooving-roller to the treadle without the intervention of joints.

2. The yielding fulcrum G, or its equivalent, for the purpose specified.

3. The spring goose-neck or yoke E, operating substantially as described.

4. In a forming-machine, as described, the use of the counterweight G, or its equivalent, for returning the working parts to a position of rest.

89,594.—EDWARD W. OWEN, Brooklyn, N. Y.—*Inhaling-Apparatus.*—May 4, 1869.

Claim.—One or more jars or chambers, 1, 2, 3, with the connection-tubes T and T′, ingress or air tubes N and N′, with flexible (or other) pipe M, and mouth-piece H, all suitably arranged, and operating in the manner and for the purpose set forth.

89,595.—WILLIAM SAMUEL PAGE and RICHARD EAST, Nine Elms Wharf, Nine Elms, England.—*Steam-Generator.*—May 4, 1869.

Claim.—The series of perforated cylinders, arranged to separate the water and other extraneous matters from the steam before it enters the steam-pipe leading to the engine, substantially as above described.

89,596.—EMERY PARKER, New Britain, Conn.—*Door-Key.*—May 4, 1869.

Claim.—A key for a lock, whose bow *a*, shank *b*, and bit *c*, made from sheet or plate metal, are combined with a stem, B, made separately therefrom, the article being constructed substantially as described.

89,597.—SAMUEL B. PARMENTER, Lewiston, Me.—*Spinning-Frame.*—May 4, 1869.

Claim.—The combination of the head C and the adjustable bar D, when constructed as described, with the lifting-rods B and ring-rails E, substantially as described, for the purpose set forth.

89,598.—ELIJAH S. PIERCE, Hartford, Conn., assignor to NATIONAL SCREW COMPANY, same place.—*Apparatus for Conveying Screw-Blanks.*—May 4, 1869.

Claim.—1. The combination and arrangement of the devices D, E, F, G, and S, and spring-levers P, for the purpose of moving and operating the rotating block H, substantially as described.

2. The combination and arrangement of the rotating carrier-block H, the spring-finger I, and the part A′, with the conducting-ways K, for the purpose of conveying the blanks, substantially as described.

3. The combination of the cam L, lever M, spring N, and spring-pin V, all arranged and operating together substantially in the manner set forth.

4. The combination and arrangement of the rotating-mechanism, moved by the cam D, and the pushing-mechanism, operated by the cam L, with the stationary rest A, for the purpose of conveying a blank from the ways to the jaws, substantially as herein set forth.

89,599.—JOHN PIPER, Utica, N. Y.—*Metal-Binding for Oil-Cloth, Carpet, &c.*—May 4, 1869.

Claim.—The sheet-metal edging, or binding, when attached to floor or other cloths, substantially in the manner stated.

89,600.—JOHN F. SANFORD, Keokuk, Iowa.—*Lamp.*—May 4, 1869.

Claim.—The position of the cog-wheels, or beveled gearing, with their shaft, placed on the outside of the wick-tube, the wheels working, together with their connections and thumb-piece, above the level of the oil in the reservoir, substantially as described.

89,601.—JULIUS SHELDON, New York, N. Y.—*Hat-Blocking Machine.*—May 4, 1869.

Claim.—In combination with a hat stretching or blocking machine, the continuous rubber cap *a*, applied substantially as and for the purpose set forth.

89,602.—GOTTLIEB SCHREYER, Columbus, Ohio.—*Axle-Skein.*—May 4, 1869.

Claim.—The screw-thread *g*, formed upon the cylindrical end of the axle-skein, substantially in the manner and for the purpose set forth.

89,603.—R. A. SMITH, Washington Mills, N. Y.—*Horse Hay-Fork.*—May 4, 1869.

Claim.—The sliding-catch S, when constructed with the slots G and I, and notch K, and used in combination with the pins *e* and *f*, spring H, rope F, and lifting-tine head M, with notch J therein, the several parts being arranged as and for the purpose herein specified.

89,604.—WILLIAM STEWART, Hartford, Conn.—*Carriage-Sash Fastener and Supporter.*—May 4,1869.

Claim.—The cams F F, springs G G, stops H H, guides C C, when arranged and used for supporting the sash of carriage-windows, as herein described.

89,605.—SUMNER STOUGHTON, Windsor, Ohio, assignor to himself and LEVERETT GROVER.—*Horse-Rake.*—May 4, 1869.

Claim.—The lever M and strap *n*, in combination with the arms F, as shown and for the purpose set forth.

89,606.—JOHN H. STRINGFELLOW, Richmond, Va.—*Seeding-Machine.*—May 4, 1869.

Claim.—1. The seed-distributing sash E, adjustable bridges g^2, seed-slides g g^1, roller *e*, adjustable cams *f*, spring S, rolling-bar H, and connecting-device h^2, combined substantially as and for the purpose described.

2. The combination of the rolling-bar H, arm *h*, rod H′, suspension-attachment h^1, drill-teeth J, sliding-sash E, and connecting-device h^2, substantially as and for the purpose described.

3. The combination of the laterally adjustable drag-bars D, the laterally adjustable hoppers G′, and the laterally reciprocating seed-distributing sash E, all substantially in the manner and for the purpose described.

4. The combination of the sash E, spring S, fixed block *v′*, and movable block *v*, all arranged and operated substantially in the manner described.

5. The lugs *p* on the drill-tubes J, pins *j* on the drag-bars, in combination with the pivoted coverers K K′, all arranged and operating as described.

6. The arrangement of the oblique and inclined supports *a a*, upright A^4 of the axle-tree B′, and the seat A^3, all in the manner and for the purpose described.

7. The tubular drill-tooth J, constructed with the wing J^4, and vertical plane-face J^3, in combination with the blades L and L′, substantially as and for the purpose described.

89,607.—CHARLES B. THAYER, Syracuse, N. Y.—*Toy-Gun.*—May 4, 1869.

Claim.—1. The spring D, combined with the barrel A, and arranged so that it is held in the position for discharging by the contact of one end thereof with the interior surface of the barrel, and may be discharged by pulling on the part H, substantially as and for the purpose described.

2. The combination, with the spring D and the barrel, of a hammer, I, when actuated by the said spring, substantially as and for the purpose specified.

89,608.—SAMUEL R. THOMPSON, New Market, N. H., assignor to himself and JOSEPH PINKHAM, same place.—*Plow.*—May 4, 1869.

Claim.—1. The combination of the tongue with the plow-beam.

2. The coulter A, as separate from the beam and supported by an arm, C, or its equivalent, projecting from the plowshare.

3. The combination of the bar G, the forked spanner H, the lever F, and their screws, with the plow-beam pivoted to the share, so as to operate therewith, substantially as described, the lever F being applied to the handles of the plow, as set forth.

89,609.—ALMON THWING, Hopedale, and CHARLES H. FOWLER, West Roxbury, Mass.—*Grinding-Mill.*—May 4, 1869.

Claim.—1. The circular-grooved cap-plate, arranged so as not only to rest on the outer series of balls, supported by the grooved runner, but to have its inner groove over the inner series of balls out of contact therewith, or disposed with a narrow space between it and them, the same being constructed as herein described and as represented.

2. The combination of one or more springs, *m*, or the equivalent thereof, with the circular-grooved cap E, and the circular-grooved runner D, and its series of balls F, such spring or springs being to enable the cap-plate to yield or move from the balls, or to hold and press them down upon the runner, while they may be in operation, substantially as herein shown and described.

3. The arrangement and combination of the concentric peripheral groove or channel *d*, of the runner, and the scraper *i*, guide *h*, and opening *g*, with the circular-grooved cap and runner, and their series of balls, arranged to operate together as set forth.

89,610.—WILLIAM D. TITUS, Brooklyn, N. Y.—*Hot-Air Furnace.*—May 4, 1869.

Claim.—Two or more heating-apparatus in one jacket, separated their entire width and height by a vertical air-flue, F, in combination with the inverted cone-shaped reflector R, reflecting-hood D, and air-flues 1, 2, 3, 3′, 4, 5, 6, 7, and dampers in flues 5, to regulate the flow of hot air from either furnace, A A′, all arranged and operating in the manner and for the purpose set forth.

89,611.—JOSEPH WADLEIGH, Chebanse, Ill.—*Machine for Raking and Cocking Hay.*—May 4, 1869.

Claim.—1. The pressing-box B, arranged to act automatically, as set forth.

2. The combination of the box B, bar 7′, rollers 28, pinion *h*, shaft *d*, pulleys *g* 29 *i*, bar *l*, clutch-wheel 41, pulley *n*, springs *m* 8′, ratchet 14′, and pawl 15′, as specified.

3. The combination of the box B, wheels H, bars O C, friction-rollers E G, hoop V, bevel-wheel 24, shaft 32, and wheels 31 54, shaft 7′, pinion *h*, and pulleys *i* 29, and weighted ropes 12′, 13′, as set forth and shown.

4. The drum 3′, provided with projecting bands 11, in combination with the housing A, provided with prongs 16, which operate between said bands, as set forth.

5. The combination of the shafts 23, 60, crank S′, arms *n*′, wheels 17 18 4′, prongs 12, bars K′, drum 3′, and carrier *y* 2, as specified.

89,612.—JOHN S. WALLIS, New Orleans, La.—*Cotton-Bale Tie.*—May 4, 1869.

Claim.—The buckle A, when constructed of plate-iron, one side being thicker than the other, and having two slots B B, and cleft C, as and for the purpose herein described.

89,613.—BENJAMIN WARDWELL, Providence, R. I.—*Culinary-Apparatus.*—May 4, 1869.

Claim.—A boiler for culinary purposes, made substantially in the manner herein described, so that there shall be a space or chamber, E, formed between the bottom of the boiler and the stove-plate, into which the steam, passing from the boiler through the pipe or conduit G, is discharged, as and for the purposes shown and set forth.

89,614.—SHEPHERD H. WHEELER, Dowagiac, Mich.—*Draught-Equalizer.*—May 4, 1869.

Claim.—1. The construction of a three-horse equalizing-draught lever, by uniting two concentric semicircles, A A, of different diameters, as and for the purpose specified.

2. In a three-horse equalizing-draught lever, formed of two semicircles, A A, the construction and arrangement of the lugs P P, the link L, and the recess O, substantially as described.

3. In a three-horse equalizing-draught lever, formed of two semicircles, A A, the use of a single chain, C C, provided at one end with the link L, and at the other end with the hook K, and fastened to the lugs P P, by means of the bolt or rivet F, in the manner and for the purpose set forth.

89,615.—BAXTER WRIGHT, Cardiff, N. Y.—*Root-Digger.*—May 4, 1869.

Claim.—So constructing and arranging the blades, by placing them at an inward angle, as that they will follow the root to be extracted, and prevent the drawing up of earth, substantially as described.

89,616.—S. S. ALLEN, Belvidere, N. Y.—*Churn.*—May 4, 1869.

Claim.—The tube H, having two spiral grooves formed in it, and the pin I, in combination with the swiveled and pivoted dasher-handle G, lever K, uprights C and D, and detachable horizontal bar E, substantially as herein shown and described, and for the purpose set forth.

89,617.—JAMES S. BALDWIN, Newark, N. J.—*Method of Controlling the Flow of Liquids under Pressure.*—May 4, 1869.

Claim.—1. Utilizing the power of outflowing currents, as described.

2. The equalizing device represented in Fig. II.

89,618.—CHARLES T. BARBER and BENJAMIN T. LOOMIS, New York, N. Y.—*Needle-Setter and Thread-Pincer.*—May 4, 1869.

Claim.—The combination, with a needle-setter, of thread pincers or clamps, substantially as described.

89,619.—ANGELINE BAYLEY, Battle Creek, Mich., administratrix of the estate of ALDEN C. BAYLEY, deceased.—*Hay-Rack.*—May 4, 1869.

Claim.—A hay-rack, when provided with the floor-timbers A and diagonal braces B, arranged as herein shown, and for the purposes described.

89,620.—ABNER G. BEVIN, East Hampton, Conn.—*Metallurgic Furnace.*—May 4, 1869.

Claim.—Constructing the flue of two parts, B B′, connected by a deflecting arch, *a*, arranged relatively with the partition *b*, and the chamber or spark-receptacle *e*, substantially as and for the purpose herein set forth.

89,621.—HORATIO N. BLACK, Philadelphia, Pa.—*Spring.*—May 4, 1869.

Claim.—The relative arrangement and combination of the series of springs or sections, substantially as described herein.

89,622.—W. I. BLACKMAN, Columbus, Miss.—*Book-Binding.*—May 4, 1869.

Claim.—In combination with a book, the slits B B, made in the back for receiving the fastening-twine or thread, and securing the tapes E, substantially as and for the purposes herein shown and described.

89,623.—ROBERT BLAKE and ANSEL CARPENTER, Scranton, Pa., assignors to ROBERT BLAKE.—*Machine for Swaging Ax-Polls.*—May 4, 1869.

Claim.—1. The combination with the lug or stop on cam-shaft or other part moving in unison therewith, of the hinged clutch-lever and its vibrating latch, arranged to engage with said lug or stop, substantially as and for the purposes shown and set forth.

2. The combination of the clutch, formed of two parts, as described, and cam-shaft, on which the said parts are mounted, and the clutch-lever and latch of the stop on the male portion of the clutch and corresponding stop on the machine-frame, and the lug on the said cam-shaft or other part moving in unison therewith, arranged for joint operation as herein shown and specified.

3. The combination with the punching-pin and squeezing-dies of an ear-forming center-piece or die, constructed and arranged to operate substantially as herein described, so that when the metal is punched from the one edge, the two ears on the other

edge of the poll will be formed in said die from the metal forced into the same by the punching operation, as set forth.

4. The employment, with the squeezing-dies, of a sliding center-piece, constructed and operated as described, so as to receive either the plain edge of the poll or that upon which the ears are formed, as and for the purposes set forth.

5. The employment, with the squeezing-dies, of the gauge, placed in rear of the dies and hinged to and moving with the cross-head, a spring for holding said gauge in position, with a yielding pressure, and an inclined block or stop for gradually withdrawing the gauge from between the dies, as the cross-head descends, and the poll is grasped by the dies, substantially in the manner herein shown and set forth.

6. The combination, with the squeezing-dies, of the center-piece or die, provided with a gauge-pin or permanent gauge, substantially as and for the purposes shown and set forth.

89,624.—JAMES E. BOYLE, New York, N. Y.—*Machine for Trimming Cue-Leather.*—May 4, 1869.

Claim.—The employment, in combination with a cutting mechanism or device, adapted to cut or shave around the circumference of the leather, of a rest or stop-surface, against which the leather may be forced and held to insure its retention on the cue while being revolved, substantially as set forth.

89,625.—WILLIAM H. BROCK, Bridgeport, Conn., assignor to himself and CHARLES H. HUNTOON, same place.—*Adjustable Center-Square.*—May 4, 1869.

Claim.—1. The combination of the tongue F with the legs A and B, at right angles to each other, the said legs provided with a guide, C, to receive the base, D, of the tongue, the said tongue made adjustable, so as to be moved to or from the angle of the two legs, and at an angle equally dividing the angle of the two legs, all substantially as set forth.

2. In combination with the subject-matter of the first clause, the pointer G, made adjustable, substantially as set forth.

89,626.—ELISHA BROWN, Wayne, Mich.—*Animal-Trap.*—May 4, 1869.

Claim.—The movable chamber G, suspended with the door C, by means of the cord E, when operated by the devices described, in the manner and for the purpose set forth.

89,627.—JOHN H. BROWN, Brockport, N. Y.—*Miter-Machine.*—May 4, 1869.

Claim.—1. The arrangement of two cutters, E, and their adjustable frames C, at angles to each other, and relatively to the V-shaped table H, as shown, and for the purpose described.

2. The arrangement upon the miter-table H, of the fixed clamp *g*, and the movable clamp *g'*, with its sliding handle, when the parts are adapted to operate as herein described.

89,628.—MYRON S. BROWNELL, Adrian, Mich.—*Caster.*—May 4, 1869.

Claim.—In a caster, of substantially the described construction, the traversing frame *a*, provided with journals H and friction-wheels F, when arranged to revolve upon pin I, in the manner and for the purpose described.

89,629.—JAMES M. BUCHANAN, Lawrenceville, Ill.—*Churn-Dasher.*—May 4, 1869.

Claim.—The improved churn-dasher herein described, when constructed substantially as specified.

89,630.—STEPHEN CARLTON, Lynn, Mass.—*Drain-Pipe.*—May 4, 1869.

Claim.—The perforated pipe A B, with its coupling C, in combination with the flanged cap D, so arranged that an open space, E, is formed between said cap and the pipe, for the admission of the surrounding water, all constructed as herein described and shown.

89,631.—EDMUND R. CARTER, Medina, and CORODON D. W. GIBSON, Bay City, Mich.—*Upsetting-Machine.*—May 4, 1869.

Claim.—An improved upsetting-machine, consisting of bed-plate A, provided with slots B, ribs F and pivot H; the sliding jaws C, provided with lugs D, serrated eccentries J, flanges L, serrated racks K, slots E, links I, and the lever G, when constructed, arranged, and operating substantially as herein specified, and for the purpose set forth.

89,632.—JOSEPH CONWAY, Harrison, Md.—*Balance-Line for Mast-Hoops.*—May 4, 1869.

Claim.—In connection with the cords *e e*, extending between the several mast-hoops, arranging the lifts *a a* in such a manner that they run from the side or forward part of the upper hoop obliquely back to a point upon the gaff under the throat-halyard, substantially as and for the purposes set forth.

89,633.—PATRICK CULLEN, Bridgeport, Conn.—*Boot-Jack.*—May 4, 1869.

Claim.—The boot-jack herein described, consisting of the parts A and B, the hinge, with the rest D, formed upon the two parts, and the said rest constructed so as to hinge the two parts together, in the manner herein set forth.

89,634.—J. M. CULVER, Gilbertsville, Iowa.—*Garden-Cultivator.*—May 4, 1869.

Claim.—The improved cultivator herein described, when constructed and arranged as specified.

89,635.—GEORGE H. DAVIS, Stony Brook, N.Y.—*Steering-Apparatus.*—May 4, 1869.

Claim.—In combination with the steering-wheel and windlass C D, or their equivalents, the chain-pulley E, constructed as described, and for the purposes set forth.

89,636.—G. W. DAVIS and ALBERT E. SMITH, Providence, R. I.—*Car-Starter.*—May 4, 1869.

Claim.—1. The method of starting street-cars, by means of a hand-crank, H, and intermediate toothed gearing, I E, or any suitable number of such gear-wheels and pitmen D D, cranks B B B B, arranged at right angles, and parallel rods C C, all substantially as shown and described, and for the purpose set forth.

2. The pinion I, when provided with the means of throwing it out of gear, substantially as described, in combination with the wheel E, pitmen D D, rods C C, and cranks B B B B, on the axles A, all as set forth.

3. In combination with the crank-axles A, connecting-rods C D, disks *b*, and shaft *d*, the boss or wheel *k*, and spring-band *m*, operated substantially as described, for the purpose specified.

89,637.—E. A. DAYTON, Richmond, Va.—*Bearing for Vertical Shafts.*—May 4, 1869.

Claim.—1. The box A, journal-bearing E, segmental bearings F, and shaft, all combined and arranged substantially as and for the purpose specified.

2. The box A, provided with the fixed bearing H and vertical tubular extension D, the tapered adjustable journal-bearing E, and shaft, all combined and arranged substantially as and for the purpose specified.

89,638.—JULIE DIETTRICH, Hoboken, N. J.—*Sad-Iron.*—May 4, 1869.

Claim.—1. The detachable sad-iron handle D, when supported in the posts B C, that are fixed to the sad-iron, and when locked by means of a hook, *g*, formed on a pivoted plate, F, substantially as herein shown and described, to operate as set forth.

2. The slotted plate F, pivoted to one of the posts that project from a sad-iron, and arranged to lock the removable handle D, substantially as herein shown and described.

89,639.—GEORGE B. DOUGLAS, Sedalia, Mo., assignor to himself and J. H. SCHEER, same place.—*Brake for Wagons.*—May 4, 1869.

Claim.—The combination and arrangement of the eccentric brake-blocks E, bar or shaft D, arm F, connecting-rod G, lever H, and guard I, having a catch *i*, formed upon it, with each other, operating as herein shown and described, and for the purpose set forth.

89,640.—William R. Dunn, Alton, Ind.—*Boot-Crimping Machine.*—May 4, 1869.

Claim.—1. The hinge E, in connection with lever C, rod *m*, guide-bars D D and F, and pins *f f*, or any other device substantially the same.

2. The latch *s*, in connection with the lever C and guide-bar F, or their equivalents.

89,641.—Robert S. Dunning, Fall River, Mass.—*Key-Fastener.*—May 4, 1869.

Claim.—The key-fastener, constructed and applied substantially as herein set forth.

89,642.—Felix J. Emery, Chicago, Ill.—*Manufacture of Metal Ornaments.*—May 4, 1869.

Claim.—Ornaments for architectural and other purposes, when made of wire, substantially as described.

89,643.—Le Roy Farnham and John Mosher, Delta, Mich.—*Fanning-Mill.*—May 4, 1869.

Claim.—In a grain-feeder of substantially the described construction, the slide E, held by the cam H, in the manner described, for the purpose set forth.

89,644.—John E. Finley, Memphis, Tenn.—*Bee-Hive.*—May 4, 1869.

Claim.—1. The removable comb-frames B B B, with the top and bottom bars made with four flanges each, as described, and for the purpose specified, with their projecting ends Q Q.

2. The combination, with sliding-frames, of the grooved bottom and grooved honey-board, as described.

3. In combination with the elements above claimed, the bee-hive casing, constructed as described.

89,645.—John E. Finley, Memphis, Tenn.—*Churn.*—May 4, 1869.

Claim.—1. The combination, of frames *m* and *n*, constructed with notches, and arranged as described.

2. The combination of the frames *n* and *m*, with the frame or casing P, cog-wheels B, D, and C, rod E, tube or thimble F, nut *d*, and pivots *e* and *s*, the whole constructed and arranged substantially as described, and for the purpose herein set forth.

89,646.—C. J. Fisher, Waukon, Iowa.—*Neck-Pad for Horses.*—May, 4, 1869.

Claim.—The neck-pad, having an inner lining of crimped leather, and provided with straps *b c*, to allow its being fastened to the collar, as herein shown and described, for the purpose specified.

89,647.—E. J. Fraser, Erie, Pa.—*Uterine-Supporter.*—May 4, 1869.

Claim.—1. The bell-shaped and oval ring *e*, with the bows *f*, either double or single, constructed and operating substantially as herein shown and described, for the purposes specified.

2. Supporting the uterus by an expanded ring, made to fit the base of the uterus, and allowing the mouth to be inclosed thereby, substantially as described.

89,648.—Theophilus Fravel, Westville, Ind.—*Apparatus for Treating Diseases by Vacuum.*—May 4, 1869.

Claim.—The combination of the case A with the rubber cap C, hinged cap D, band B, and catches *d d d*, all arranged to operate substantially in the manner and for the purpose described.

89,649.—Francis P. Furnald, Jr., New York, Remick W. Champion, Brooklyn, N. Y., and Isaac N. Davies, Bergen City, N. J.—*Paint-Brush.*—May 4, 1869.

Claim.—Packing the ferrules A, above the bristles, with cut bristles, grass, hair, or other substance having similar form, cut into the required lengths, and inserted and packed in the manner described.

89,650.—Alpheus C. Gallahue, Morrisania, N. Y., assignor to himself and David Gillispie, New York City.—*Rotary Steam-Engine.*—May 4, 1869.

Claim.—1. The arrangement of cam I, arm J, pivoted bar L, with the abutment G, and flanged cylinder C, and the piston D, as herein set forth.

2. The arrangement of the flanged cylinder C, carrying the piston D, with reference to the construction of the case B, as herein set forth.

3. The arrangement of the steam-chest P, with its slide-valve, and the ingress and egress ports, whereby the abutment G is enabled to move at the proper given time, so as to avoid the pressure of steam therein, as herein set forth.

89,651.—George L. Gerard, New Haven, Conn., assignor to himself, Thatcher B. Carpenter, and James E. Carpenter.—*Spring Bed-Bottom.*—May 4, 1869.

Claim.—The spring C, constructed with the turned-up end D, in combination with the strap or loops E and slats A, the said strap passing over each slat and secured to the cross-bar B, between each two of the slats, and the slat perforated to receive the end D of the spring, and so that the slat may be reversed as set forth, and the whole constructed and arranged so as to operate substantially as set forth.

89,652.—J. Goodrich and H. J. Colburn, Fitchburgh, Mass., assignors to Rollstone Machine Works, same place.—*Self-Oiling Pulley.*—May 4, 1869.

Claim.—1. The combination, with the hubs B and C, of the wooden bushing G, and hub-nut F, substantially as and for the purposes set forth.

2. The combination, with the rim A, hubs B and C, flanges or webs D E, of the wooden bushing G, and hub-nut F, substantially as and for the purposes set forth.

89,653.—Harmon Goodwin and Charles H. Bennett, 2d, South Berwick Junction, Me.—*Dough-Rolling Machine.*—May 4, 1869.

Claim.—The combination of the crank-roller B, supported at one end on the screw-spindle *a*, with the roller G, laterally adjustable by means of the bent bars H and the table I, when made removable, as set forth.

89,654.—Joseph L. Halliman, Grand Rapids, Mich.—*Medicated Cracker.*—May 4, 1869.

Claim.—A medicated cracker, when composed of the ingredients and substantially in the proportions herein set forth, for the purpose described.

89,655.—Robert Ham, Troy, N. Y.—*Cooking-Stove.*—May 4, 1869.

Claim.—1. A hot-water reservoir, A, having a flue, B, both at the bottom and back, indented throughout its whole extent, into the body of the reservoir, and arranged so as to receive the draught directly through the back plate of the stove, substantially as and for the purpose herein specified.

2. Casting the entire reservoir, except the covers, in two parts only, one part forming the body of the reservoir and the inside of the flues, and the other part, C, being an angular plate, covering the whole outside of the flues, as herein set forth.

89,656.—Thomas Harbottle, Brooklyn, N. Y.—*Hydraulic Press.*—May 4, 1869.

Claim.—The arrangement of the passage I, passages *h*, check-valves G, adjustable stops B B′, passages *b b′ a*, and the relief-valves C, as herein described, whereby each press is relieved independently, the pulsation of the liquid upon the relief-valves reduced, and one block provided for a number of presses, for the purpose specified.

89,657.—William Haslup, Sidney, Ohio.—*Water-Wheel.*—May 4, 1869.

Claim.—1. The wheel C, provided with the buckets *f f′*, constructed substantially as described, in combination with the plate F, provided with the conduit-openings *g g*, of different sizes, arranged and operating substantially as described.

2. Cylinder A, openings a^1 a^2, cap B, shafts *e e*, provided with cogged segments, rings, or bands B B′, on which are formed segments *b b′*, and openings, wheel C, and shaft J, all combined, constructed, arranged, and operated substantially as and for the purpose set forth.

89,658.—G. W. Hatch, Parkman, Ohio.—*Sleigh-Runner.*—May 4, 1869.

Claim.—Casting the runner, shoe, and knees in one piece, and with grooves, or recesses, to receive wooden strengthening-timbers, substantially as herein shown and described, and for the purpose set forth.

89,659.—James W. Hazelton and Alvin A. Southard, Drayton Plains, and Oliver Merwin, Elba, Mich.—*Nut-Locks for Fish-Plates.*—May 4, 1869.

Claim.—The spring nut-lock D, constructed substantially as described, and operating for the purpose specified.

89,660.—George W. Helt, Alma, Mich.—*Stove-Pipe Thimble.*—May 4, 1869.

Claim.—The conical flange or funnel F, in combination with a double-walled cylinder, constructed substantially as shown and described, and operating for the purpose specified.

89,661.—Thomas N. Henderson, Jackson, Mich.—*Potato-Digger.*—May 4, 1869.

Claim.—1. Movable grate I, with its shaking apparatus, and wheel E, ratchet-pins F, and levers G and H, constructed and operated substantially as and for the purpose aforesaid.

2. In combination with above, plow-point A, sides B B, handles C C, and beam D, constructed, arranged, and operated substantially as and for above-named purpose.

89,662.—D. P. Henry, Windsor, Ill.—*Pump.*—May 4, 1869.

Claim.—The pump-tube E, so constructed at its upper end above the discharge-spout K as to receive between its sides the gear-wheels *f g*, and carrying at its lower end the pump-barrel A, in which the solid plunger D is operated from the crank-shaft of the gear-wheel *g*, by means of the jointed connecting-rod I, all arranged and operating as described, for the purpose specified.

89,663.—Joseph Héroux, St. Paul, Minn.—*Propelling Boats.*—May 4, 1869.

Claim.—1. The cross-bar D, or its equivalent, by means of which, through suitable mechanism, motion can be imparted to the oars, by the feet of an oarsman, substantially as shown.

2. The levers E E, when pivoted to the boat, and connected with the cross-bar D, or its equivalent, and with the inner ends of the oars C C, substantially as and for the purpose specified.

3. The cross-bar D, and levers E E, together with their connecting-chains *d d*, *e e*, and *c c*, in combination with the boat A and oars C C, substantially as shown and for the purpose described.

89,664.—E. Jeanjaquet, New York, N. Y.—*Bottle-Filler.*—May 4, 1869.

Claim.—1. The cock D, or its equivalent, with one or more discharge-tubes or orifices, when the same is used in combination with the air-tube C, substantially as and for the purposes herein shown and described.

2. In combination with a cock, provided with one or more discharge-tubes or orifices, the slots *j*, substantially as and for the purposes specified.

89,665.—Josiah Jonson, Toledo, Ohio.—*Apparatus for Carbureting Air or Gas.*—May 4, 1869.

Claim.—1. The arrangement of a series of chambers, A^1 A^2 A^3, pipes *e* e^1 e^2, i^2 i^3, valves *v v v*, supply-pipe C, and exit-pipes D^1 D^2 E^3, having cocks d^1 d^2 d^3, in such manner as to operate substantially as and for the purposes set forth.

2. In connection with the several parts, thus arranged and operating, the arrangement and combination of the delivery-pipe O, having two branches, O^1 O^2, and two cocks, o^1 o^2, with relation to the chamber A^4 and gasometer G, substantially as and for the purposes set forth.

89,666.—J. George Krichbaum, Youngstown, Ohio.—*Ear for Water-Pails.*—May 4, 1869.

Claim.—The twisted ear, with prongs arranged as described, in combination with the pail, in the manner and for the purpose set forth.

89,667.—Adolph Lange, Glashëtte, Saxony.—*Device for Setting the Hands of Watches.*—May 4, 1869.

Claim.—The combination and arrangement of the spring-arm R *s*, and bent-spring lever L *c*, with the sliding cylindrical pinion-clutch H, for the purpose of engaging the hand-setting device of a watch with the stem-winding milled head, and disengaging the same automatically, by closing the outer case of the watch, substantially as shown and described.

89,668.—David S. Leavitt, Grand Rapids, Mich.—*Truss-Supporter.*—May 4, 1869.

Claim.—1. The combination of adjustable side-springs C C with supporter A and back-pads B B, substantially as and for the purpose specified.

2. The construction of the side-springs C C, with one or more holes, *e*, in combination with flat springs D, having buttons *e*, and sheaths *a*, of the supporter A, and back-pads B B, substantially as set forth.

3. The pad-plate H, or pad having a lateral movement in combination with the supporter A, substantially as and for the purpose specified.

4. The combination of an arm or lever, I, and set-screw J, with the pad-plate H, substantially as and for the purpose specified.

5. The construction of the pad-plate H, with elongated slot *n*, and nut *o*, in combination with arm I and set-screw J, substantially as set forth.

6. The construction of the arm I with hinge-joint *l*, and its attachment to the supporter by pivot screw *m*, substantially as set forth.

7. The combination of a hinge with the pad-plate and supporter, attached substantially in the manner and for the purpose set forth.

8. The construction of the side-springs C C, with hinge-joints E, substantially as and for the purpose specified.

9. The combination of elastic or rubber springs F F, with the joints of the side-springs, substantially as and for the purpose specified.

10. The combination of an elastic or rubber fastener, L, and buttons *p p*, with the back-pads, substantially as and for the purpose specified.

11. The supporter and back-pads, provided with sheaths *a*, in combination with side-springs C C, substantially as and for the purpose specified.

89,669.—George W. Lee, Sandy, Ohio.—*Feed-Cutting Attachment for Thrashing-Machines.*—May 4, 1869.

Claim.—1. The combination, with the toothed cylinder and toothed shell of a thrashing-machine, of the attachment D, provided with saws, and either permanently or detachably connected thereto, substantially as specified.

2. The aprons F G, combined with the attachment D, and the casing H, and arranged substantially as specified.

3. The plate L, combined with the apron G, the casing H, and attachment D, when arranged substantially as specified.

89,670.—Michael Lehmer, Oregon, Mo.—*Coal-Stove.*—May 4, 1869.

Claim.—An improved heater, formed by the combination of the fire-box A and drum B with each other, substantially in the manner herein shown and described—that is to say, in such a manner that a space may be left between the said fire-box and drum, for the free circulation of the air, as and for the purpose set forth.

89,671.—Joseph H. Lewis, Duxbury, Mass.—*Vise.*—May 4, 1869.

Claim.—The arrangement herein described and shown, of the screw-threaded sleeve or nut C, the screw D, and the jaws A B, all constructed as set forth.

89,672.—James H. Luddington, Bridgeport, Conn.—*Pump.*—May 4, 1869.

Claim.—1. The apertures B, in the side of the cylinder A, for admitting water, substantially as shown and described.

2. In combination with the apertures B, one or more, the piston C, valve E, and tubular piston-rod D, when constructed, arranged, and operating substantially as and for the purposes herein shown and described.

89,673.—O. E. MABIE, Camden, N. Y.—*Apparatus for Elevating Hay.*—May 4, 1869.

Claim.—1. The tackle-block, constructed of two parts, A B, the latter capable of being self-actingly detached or attached, substantially as specified.

2. The spring latch and lip E, combined with the block A B, substantially as specified.

3. The pulley H and cord G, combined with the block A B, substantially as specified.

89,674.—THEODORE W. MAHLER, Rome, N. Y.—*Gate for Water-Wheels.*—May 4, 1869.

Claim.—The gate C, in combination with the guides B and B′, all constructed and operating substantially as described.

89,675.—W. H. MANTZ, Centralia, Ill.—*Envelope-Opener.*—May 4, 1869.

Claim.—The envelope-opener and letter-clamp, constructed as described, of the cheeks A C, secured together centrally by the rivet or eyelet *a*, and the pivoted cutter B, provided with the guard *d* and cutting-point *c*, all arranged to operate in the manner described, for the purposes specified.

89,676.—WILLIAM D. MCKINNEY, Marion, Ind.—*Ditching-Machine.*—May 4, 1869.

Claim.—1. The vaulting-plow T^1, arranged and operating substantially as described.

2. The vaulting-plow T^1, connected to the machine by the rods *v v*, in the manner herein described.

3. The spring-clearers *p q r*, at the end of the conductor V, operated by the motion of the endless chain of buckets Z, as described, and for the purpose set forth.

89,677.—JAMES F. MCNEE, Philadelphia, Pa., assignor to himself and MARTIN MCNEE, same place.—*Non-Freezing Rain-Lead.*—May 4, 1869.

Claim.—1. The chamber E, having the removable door G and discharge-opening H, in combination with the spout A and interior pipe B, as herein described, for the purpose specified.

2. The rain-spout, constructed, as described, of the vertical spout A, formed with the enlarged chamber E at its base, and containing the pipe B, provided with the conical cap C, all arranged as described, for the purpose specified.

89,678.—C. L. MERRILL, Watertown, N. Y.—*Horse-Power.*—May 4, 1869.

Claim.—1. The arrangement of the sliding spring-bed L with the rotating arms E, for the purpose of producing on the machine a strain, when there is not any, substantially as herein shown and described.

2. The combination of the arms E E, on the rotating shaft D, said arms having the friction-rollers *e*, with the lever J, chain *e*, lever I, and chain G, all arranged and operating substantially as herein shown and described.

3. The plate L, provided with the grooved edges *h*, when fitted over the ends of the fixed bed M, and over the adjustable keys *i i*, substantially as herein shown and described.

4. The fixed guide-pins *l*, working with their enlarged heads *m*, in the plate L, substantially as described, in combination with the springs *g*, to operate as specified.

5 The windlass N, having the rope O, when arranged and operating substantially as specified.

89,679.—HIRAM T. METZGAR, Salem Cross-Roads, Pa.—*Velocipede.*—May 4, 1869.

Claim.—1. The rods R R′, in combination with the shaft E, double cranks *e e*, and treadles P P′, when constructed to operate as described, and adapted to be used as the motive apparatus of vehicles, substantially as and for the purposes specified.

2. Providing the rods R R′, when constructed to operate as above described, with the expanded lower end *r*, shaped like a horse's hoof, and having brads on its under surface, substantially as and for the purpose specified.

3. The steering-apparatus, consisting essentially of the standard D, handle *d*, pulley d^2, arm *e′*, sheaves *s s*, and cord, in conjunction with the spring d^1, all constructed and operating substantially as and for the purposes set forth.

4. The lifting-rod F, lever L, and connecting-rods, when adapted to raise or lower all the rods R R at once by a single movement of the lever, substantially as described and for the purposes specified.

89,680.—ASA MORGAN, Cedar Bayou, Texas.—*Brick-Machine.*—May 4, 1869.

Claim.—The presses N, constructed as described, and operated through the medium of the levers O P, the arms Q of the shaft A, and the springs R, all arranged as and for the purpose herein described.

89,681.—L. MORRISON and A. G. HARMS, Allegheny City, Pa.—*Muley-Saw Mill.*—May 4, 1869.

Claim.—1. The inclined guides D, when provided with curved slots at their ends, and when pivoted to the fixed plates B, as described, so that they can be adjusted by means of a screw, E, substantially as herein shown and described.

2. The pitman-straps J, connected as described, with slotted upper ends, for the reception of the wrist-pins *r*, of the slides *s*, arranged above the pivot *t*, as herein described, for the purpose specified.

3. The sleeves *y*, carrying the front guide-bars M, adapted to be moved laterally, as described, in the grooves *z* of the guide-carrying plates, for the purpose specified.

89,682.—JOHN N. MORRISON, Philadelphia, Pa.—*Spittoon Footstool.*—May 4, 1869.

Claim.—1. In combination with a spittoon footstool, the elastic cones *e f*, for closing the orifices in the spittoon, substantially as described.

2. The spring G, and the spring-lever J, with the hook *i*, plate *n*, and knob *m*, arranged and operating substantially as and for the purposes set forth.

89,683.—SAMUEL T. NIGH, Leitersburgh, Md., assignor to himself, J. W. NIGH, and UPTON BELL.—*Horse Hay-Fork.*—May 4, 1869.

Claim.—1. The curved bar *a*, central key-rod *b*, and suspended forks A B, so combined as to lock the forks apart, for the purpose described.

2. In combination with the curved bar *a*, central key-rod *b*, and suspended forks A B, the latch-devices *e d d′* and chains *i i*, when constructed and arranged in the manner and for the purpose specified.

89,684.—CHARLES F. POLLOCK and NICHOLAS TRICKEY, Tiieresa, N. Y.—*Milking-Stool.*—May 4, 1869.

Claim.—The combination of the device D E with the hoop B and stool A, as and for the purpose specified.

89,685.—LOOMIS E. RANSOM, Trenton, Mich.—*Apparatus for Tempering Clay.*—May 4, 1869.

Claim.—The perforated top B, provided with hoes or cutters E, spurs F, and ribs G, when combined with the box A, and operated substantially as described, for the purpose set forth.

89,686.—EDWIN P. RICHARDSON, Manchester, N. H.—*Fire-Escape.*—May 4, 1869.

Claim.—The combination of the sectional staff A, staff-head G, pulleys D and F F, with the sliding-frame E, and basket B, when constructed as described, and for the purpose set forth.

89,687.—H. D. RICHARDSON, East Hampton, Mass., assignor to himself and J. W. WILSON, same place.—*Tool for Turning Centers.*—May 4, 1869.

Claim.—The shank D and the bed-piece A, constructed of one piece, and of the form described, in combination with the sliding-plate B, having a tool-socket therein, and the feed-screw H, the whole arranged and operating substantially as set forth.

89,688.—H. D. RICHARDSON, East Hampton, Mass., assignor to himself and J. W. WILSON, same place.—*Tool-Holder.*—May 4, 1869.

Claim.—A tool-holder, A, having a tool-socket formed therein, in combination with the curved clamping part, B, having one end fastened to A, and having its free end shaped so as to bear against the tool, the whole applied and operated substantially as set forth.

89,689.—F. C. RICHER, Gilmer, Texas.—*Buckle.*—May 4, 1869.

Claim.—1. A self-fastening buckle, consisting of four transverse slots and five cross-bars, of which two are provided with teeth, substantially as herein shown and described.

2. A self-fastening buckle, whose ends, *c c'*, are horizontally perforated, to admit the straps through them, substantially as herein shown and described.

89,690.—F. C. RICHER, Gilmer, Texas.—*Wrench.*—May 4, 1869.

Claim.—The combination of the hollow handle E, screw-plug *e*, screw-nut *d*, the lips *f*, formed on the inner end of said handle, and the jaws D and A, the latter having the graduated shank B, all constructed and arranged as specified.

89,691.—ANDREW ROSEWATER, Omaha, Nebraska.—*Railway-Switch.*—May 4, 1869.

Claim.—1. The plate of the switch-chair A, cast with the groove X, and the raised rails *a b v*, and provided with the movable rail *r*, all arranged as described, for the purpose specified.

2. The switch-chairs A′ and A, Figs. 1 and 3, as constructed, combined, and applied to one main and two side tracks, and the chairs A and A′, Figs. 2 and 4, as constructed, combined, and applied to one main and one side track, as herein set forth.

89,692.—WILLIAM ROSSETER, Accrington, England.—*Loom.*—May 4, 1869.

Claim.—1. The slotted and movable shuttle-guards *h* and h^1, supported on the yokes h^2, and combined with the oscillating arms *d* and *p*, substantially as specified.

2. The combination with the slotted and movable shuttle-guard h^1, of the slide n^2, and arm *n*, attached to the lay with the oscillating arm *p*, substantially as specified.

3. The receiving-table *l*, provided with the springs l^2, and projections l^1, and combined with the lay, having a movable shuttle-guard, substantially as specified.

4. The combination with the yoke h^2, supporting the movable shuttle-guard *h*, of the bent spring-arm *f*, lever m^1, and shuttle-box *k*, substantially as specified.

5. The shuttle-box *k*, provided with the spring-guards *m*, substantially as specified.

89,693.—WATSON SANFORD, Brooklyn, N. Y.—*Jacket for Fire-Place Heater.*—May 4, 1869.

Claim.—1. Constructing the exterior jacket of a fire-place heater in a combined semicircular back and dome-top, substantially as shown and for the purposes described.

2. The arm *d*, attached to the valve *e*, when constructed, arranged, and operating substantially as described.

89,694.—HALCYON SKINNER, Yonkers, N. Y., assignor to ALEXANDER SMITH, same place.—*Power Loom for Weaving Carpets, &c.*—May 4, 1869.

Claim.—1. The arrangement for communicating motion to the jacquard from the lay, or equivalent part of the loom, by the interposition of a rocking-shaft with two sets of arms, at an angle with each other, substantially as and for the purpose described.

2. The mechanism, substantially as described, for operating alternately the two picker-staves, or either of them, two or more times successively, for the purpose set forth.

3. The mechanism for relieving the shuttles from the pressure of the check-springs, when they are to be thrown, substantially as and for the purpose described.

4. The mechanism by which the shuttle-shelves are shifted, which mechanism consists of a cogged rack, engaged by a worm on a shaft, turned by a chain, which is actuated by either of two reciprocating hooks, thrown in or out of action by the jacquard, as and for the purpose described.

5. The mechanism, substantially as described, for elevating and depressing the shuttle-shelves.

89,695.—JOHN C. SMITH, Brooklyn, N. Y.—*Velocipede.*—May 4, 1869.

Claim.—1. The combination of the saddle D, clevis E, double bell-crank G, stirrups J, and crank-shaft H, whereby the vehicle is adapted for operation, by alternate pressure of the feet and body upon the stirrups and saddle, substantially as herein shown and described.

2. The plate P, or its equivalent, whereby the action of the saddle, or seat D, on the bell-crank, is stopped or intermitted, substantially as and for the purposes described.

89,696.—SOLOMON P. SMITH, Waterford, N. Y.—*Lamp.*—May 4, 1869.

Claim.—In a lamp, provided with a blast-apparatus, the employment of rubber, or other packing, *m m'*, inserted between the clock-work and the walls of the lamp, to deaden the sound, substantially as described.

89,697.—SOLOMON P. SMITH, Waterford, N.Y.—*Horse-Rake.*—May 4, 1869.

Claim.—1. The detachable and removable bar O, in combination with the drag-bars L′ L′, and eye-bolts *o o*, attached to the tilting-frame K, substantially as and for the purpose described.

2. The tilting-frame K, in combination with the catch M′ *m*, handle M, drag-bars L′ L′, and teeth L L, when the frame, drag-bars, and teeth are so constructed as to be nearly balanced on the hinges *k k*, substantially as and for the purposes specified.

3. The tilting-frame K, springs *i i*, drag-bars L′ L′, and teeth L L, in combination with a catch, M′ *m*, when the parts are constructed to operate together, substantially as and for the purposes set forth.

89,698.—F. STÄDTER, Plattsmouth, Nebraska.—*Stove-Drum.*—May 4, 1869.

Claim.—The conical drum A, and spiral cone E on the shaft B, arranged and operating substantially as shown and described, for the purposes set forth.

89,699.—ABIJAH C. STEVENS, Hudson, N. Y.—*Breech-Loading Fire-Arm.*—May 4, 1869.

Claim.—1. The combination and arrangement of hammer H, cock C, hook *d*, tumbler T, and wedge-block B, so that the wedge-block B may be withdrawn, the breech A opened, and the spent cartridge *b* drawn, all at once, and by the single operation of cocking the gun, as or substantially as herein set forth.

2. Locking and bracing the breech firmly against recoil just before the striker I strikes the firing-pin P, by means of the wedge-block B, attached to the main-spring G, substantially in the manner herein set forth.

3. The combination of cock C and tumbler T, both working on the same center or pin L, substantially in the manner and for the purpose set forth.

4. The combination and arrangement of tumbler T, cock C, notches *d d*, &c., and dog E, so that the lock may be operated equally well by the latter working in the tumbler, or in the cock, or in both together, substantially in the manner and for the purpose herein set forth.

89,700.—GEORGE J. STURDY and SOLOMON W. YOUNG, Providence, R. I.—*Circular Velocipede.*—May 4, 1869.

Claim.—1. The main wheel A, the driving or velocipede wheels E, the shield F, and handles H, constructed, arranged, and operating substantially as herein shown and described, and for the purposes set forth.

2. A velocipede formed of a horizontal wheel or rim, when supported on vertical wheels adapted to be rotated by means of cranks, substantially as set forth.

89,701.—DANIEL F. SWEET, Otsego, assignor to himself and REUBEN SWEET, Kalamazoo, Mich.—*Heat-Radiator.*—May 4, 1869,

Claim.—The combination and arrangement of the

removable cylinders D and E, provided with the lugs I and I′ and spiral deflectors K, and the pipes Q and R, in connection with the shaft M, provided with the segmental pinion C, and damper O, regulator-plate L, and toothed-rack *a*, when used with the case C, provided with the cup B, and movable cap P, substantially as and for the purpose aforesaid.

89,702.—George C. Taft, Worcester, Mass., assignor to Loring Coes, same place.—*Wrench.*—May 4, 1869.

Claim.—1. The combination, with the shank D, ferrule A, and nut F of a wrench, of one or more sections of a supporting-quill, substantially as and for the purposes set forth.

2. A stop or check nut L, substantially as and for the purposes set forth.

3. The combination, with the ferrule A, shank D, and rosette-screw spindle B, of a divided quill, C, and stop-nut L, substantially as and for the purposes set forth.

89,703.—Calvin Taylor, Handsborough, Miss.—*Truck for Carrying Logs.*—May 4, 1869.

Claim.—1. The wheels D, constructed with segmental rims, and in substantially the manner herein shown and described, and for the purpose set forth.

2. The brake E F G H I, constructed and operating substantially as herein shown and described, and for the purpose set forth.

3. An improved log-carrier, formed by the combination of the wheels D, axle A, whether made in one or more parts, frame B, tongue C, and brake E F G H I, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

89,704.—T. Chalkley Taylor, Philadelphia, Pa.—*Mode of Putting up Caustic Soda for the Manufacture of Soap.*—May 4, 1869.

Claim.—A highly concentrated or basic soap, composed of a mixture of granulated soda, or other caustic alkali, and a fatty matter or its equivalent, substantially as described.

89,705.—Lafayette Z. Terrill, Chicopee, Mass.—*Magazine Fire-Arm.*—May 4, 1869.

Claim.—1. The hammer C, constructed as described, and bearing the friction-roller *o*, in combination with the receiver E, and finger H, as herein described, for the purpose specified.

2. The receiver E, and the finger H, arranged and operating substantially as shown and described.

3. The retractor *g*, attached to the hammer C by the spring *h*, in combination with the piece J, as herein described, for the purpose specified.

89,706.—John B. Terry, Brooklyn, N. Y.—*Steam-Heating Device.*—May 4, 1869.

Claim.—1. An apparatus for generating heat, substantially as herein described, the same consisting of a closed vessel, in which the liquid from the reservoir is converted into steam by falling in drops, or in a highly divided state, upon the heating-surface, and said steam, when condensed, is returned to the reservoir, to be used anew, substantially as shown and set forth.

2. The arrangement within the heater of a liquid-reservoir, raised above the heating-surface, and provided with means for conducting the liquid, so that it shall fall in drops, or in a finely divided state, upon the heating-surface, as set forth.

3. The combination of the liquid-reservoir and distributing device, of a trough arranged around the interior of the heater, to catch the condensed steam and conduct it back to the reservoir, as shown and set forth.

4. The arrangement with the heater and liquid-reservoir, of a safety-valve, for permitting the escape of steam after it reaches a certain pressure, and a return and condensing tube, to condense and carry back said steam to the reservoir, as shown and described.

5. The arrangement with the heating-apparatus of air flues or tubes, passing through the heater, substantially as shown and specified.

6. The arrangement with the heater of an air-valve, so as to be closed against the escape of steam, but to admit air when the heater cools, as herein shown and set forth.

89,707.—G. W. Tucker, Waterbury, Conn.—*Lamp-Shade.*—May 4, 1869.

Claim.—As an article of manufacture, a lamp-shade ornamented to represent upon the surface clearly defined figures or forms, by the combination of embossing and perforating, substantially as described.

89,708.—H. B. Tuthill, New York, N. Y., assignor to himself, M. C. Ogden, and William Slawson.—*Attaching Knobs to their Spindles.*—May 4, 1869.

Claim.—The spindle A, constructed as described, with the spring D′, adapted to engage with the shoulder formed in the socket C′, arranged and operating as described, for the purpose specified.

89,709.—David K. Tuttle and Orazio Lugo, Baltimore, Md.—*Preparation of Glue-Stock and other Products from Animal Substances.*—May 4, 1869.

Claim.—The process herein described for preparing glue-stock, the same consisting in treating the glue-stock material with benzine, naphtha, or other equivalent solvent of the oils and fats, substantially as described.

89,710.—Myron Vandeusen, Oxford, Mich.—*Combined Seed-Sower and Harrow.*—May 4, 1869.

Claim.—The arrangement of the perforated cylinder B, provided with sliding-rings J and pulley Q, and the harrow E, with the frame A, axle O, wheels P, pulley C, belt D, braces F, lever G, chain H, and seat M, when operating substantially as and for the purposes herein set forth.

89,711.—John D. Van Dusen, Auburn, N. Y.—*Washing-Machine.*—May 4, 1869.

Claim.—1. The frame B, formed with recess or chamber C, the ends of said chamber being provided with screens or perforated plates, in combination with plungers *g g*, operating substantially as and for the purpose set forth.

2. A washing-machine, consisting of frame B, slide F, plungers *g g*, screens *d d*, rollers D D′, wheel E, pitmen *h h*, and crank G, all constructed, arranged, and operating substantially in the manner and for the purpose set forth.

89,712.—Henrietta Vansittart Richmond, England.—*Method of Construction for Screw-Propellers.*—May 4, 1869.

Claim.—The method of determining the form or inclination of the outer edges of the blades of a screw-propeller, relative to the form or speed of the vessel to which it is attached, as herein described.

89,713.—John Vatter, Phillipsburgh, Ohio.—*Oven.*—May 4, 1869.

Claim.—1. The pivoted door D, constructed and arranged substantially as described, and for the purpose specified.

2. The register G, arranged with reference to the flues B and C, substantially as and for the purpose specified.

3. The arrangement of the oven A, flues B C, doors D E, and register G, substantially as described.

89,714.—William W. Virdin, Baltimore, Md.—*Low-Water Indicator.*—May 4, 1869.

Claim.—1. The weighted float B, when constructed and arranged substantially as herein shown.

2. In combination with the weighted float B, the valve E, fitting into a corresponding seat, C, and operated by means of the spindle *e*, substantially as described and set forth.

3. The construction and arrangement of the seat C and cover D, with reference to the valve E and joint F, substantially as herein shown and described.

4. The within-described apparatus for indicating low water in a boiler, by the escape of steam therefrom, consisting of the weighted float B, valve E, provided with a suitable seat, C, and cover D, flexible joint F, pipe G, and plug H, all constructed and

arranged substantially as herein shown and described, and, in combination therewith, the wheel K, pivoted within a suitable case, so as to be revolved by the escaping steam though the pipe M, and, by means of the cam *k*, secured to the axis of said wheel, alternately raise and release the hammer of a bell, as herein specified.

89,715.—CHARLES VOGT and CHRISTIAN VOGT, New York, N. Y.—*Method of Producing from Printed Paper New Plates for Reprinting.*—May 4, 1869.

Claim.—1. The herein-described process of transferring printed designs directly from paper to metal plates, for the purpose of reprinting the same, substantially as specified.

2. Treating the paper in the manner specified, so that paint will only adhere to the printed portions, as set forth.

3. The composition for paint, to be applied to the paper, and to be transferred to the metal plate, as specified.

4. The composition for colophony paint, to be applied to the metal plate before etching, as set forth.

5. Heating the metal plate during the etching process, for the purpose of melting the colophony to prevent the acid from eating in a lateral direction, as set forth.

89,716.—JOHN J. WALKER, Ann Arbor, Mich.—*Cistern.*—May 4, 1869.

Claim.—The cistern A, filter-chamber B, reservoir N, pipes F, G, and *h*, when arranged as described, and used, in connection with each other, for the purpose set forth.

89,717.—PETER M. WARREN, Edenton, N. C.—*Steam-Enginery for Seine-Hauling.*—May 4, 1869.

Claim.—1. In an apparatus for hauling seines, the drums E and Ex, with bevel-wheel *e* and *ex*, in combination with the bevel-wheels *e* and *ex*, intermediate shafts C and Cx, spur-wheels D and Dx, and pinion-wheels *b* and *bx* of the crank-shaft of a steam-engine, the whole constructed and arranged to operate substantially as described and set forth.

2. The drums E and Ex, driving-wheels, and steam-engine, in combination with the hauling-lines of a seine, as herein described.

89,718.—DEVOLSON WEAVER, Anamosa, Iowa.—*Drive-Well Point.*—May 4, 1869.

Claim.—The head or point A, constructed as described, and provided with a ribbed shank, A′, in combination with tube B, perforated and furnished with strips B¹, said tube being wound with a wire, all arranged to operate as and for the purpose set forth.

89,719.—HORACE J. WICKHAM, Manchester, Conn.—*Match-Box.*—May 4, 1869.

Claim.—1. The box *a*, cover *b*, stem *f*, constructed substantially as described, as a new improved article of manufacture.

2. In combination with the above, the joint formed by elevations and depressions *d e*, substantially as and for the purpose described.

89,720.—GEORGE WILLIAMSON, Milwaukee, Wis.—*Fire-Grate.*—May 4, 1869.

Claim.—An improved fire-grate, formed by the combination of one or more bars, B, whether movable or stationary, with the main or sliding grate C, in such a way that the upper part of the said bar or bars B may project through openings in the said grate C, substantially as herein shown and described, and for the purpose set forth.

89,721.—JOHN WILLIAMS, Sullivan, Ill.—*Mill-Bush and Spindle.*—May 4, 1869.

Claim.—1. The bush A, constructed as described, with recesses for the adjustable bearings B, the openings C, and the pockets E, between the bearings, communicating with the chambers F, containing absorbent substance, all arranged as described, for the purpose specified.

2. In combination with the above, the spindle H, having its enlarged collar provided with the annular chamber G, and tube K, as herein described, for the purpose specified.

89,722.—A. J. WILLIAMS, Barnesville, Ga.—*Pea-Dropper.*—May 4, 1869.

Claim.—The arrangement of the handle G, arm F, elbow-lever E, and slide D, with the box A and blocks B C, operating as herein described, for the purpose specified.

89,723.—RICHARD A. YORK, Reading, Mich.—*Combined Lifting-Jack and Wrench.*—May 4, 1869.

Claim.—1. The lever H, provided with bail I, and jaws J and K, when constructed to operate either in combination with standard A, rack C, and pawl E, as a lever-jack, or, independently of the same, as a wrench, substantially as and for the purpose set forth.

2. The combination of the above-named lever H, provided with bail I, and jaws J and K, with the standard A, slotted rack C, and pawl E, when arranged, and constructed, and operating substantially as and for the purposes described.

89,724.—E. L. ABBOTT, JAMISON H. HARRISON, and W. P. WELCH, Boston, Mass., assignors to E. L. ABBOTT; said ABBOTT assigns to himself and S. A. WOODS.—*Machine for Grinding Saws.*—May 4, 1869.

Claim.—1. A machine organized to form or sharpen saw-teeth by grinding, when constructed and arranged substantially as described, so that the saw can be clamped, mounted, and turned on its center, to present its teeth, successively, to the action of the grinder, and so that, while said center may be adjusted toward and from the grinder, to accommodate saws of various diameters, the angles of presentation of the flat surfaces of the saw may be universally varied.

2. In combination with a machine as before claimed, a rest *q*, arranged to be adjustable to any of the varied positions in which the saw is adjusted to receive the action of the grinding-wheel, substantially as and for the purpose specified.

3. The combination of the swinging-frame *c*, and its spring-support *h*, with the bolt *t* and collar *u*, substantially as and for the purpose set forth.

89,725.—THOMAS BARFIELD, Athens, Ill.—*Device for Preventing Incrustation in Boilers.*—May 4, 1869.

Claim.—The toothed wheel *s*, with its spindle and driving-wheel, when arranged with reference to the pipes *m n o p* and the tank A, substantially as herein specified.

89,726.—CHARLES R. ARNOLD, Hamilton, Ill.—*Wash-Boiler.*—May 4, 1869.

Claim.—As an article of manufacture, the reticulated false bottom A, as above described, in combination with the spouts C C, for the purposes specified.

89,727.—EMILE VICTOR AUDIBERT, New Orleans, La.—*Water-Proof Coating for Various Purposes.*—May 4, 1869.

Claim.—A solution of native asphaltum or Cuba bitumen, combined with mineral ingredients and fatty matters, substantially as and for the purpose herein specified.

89,728.—HENRY BEAN, Schuylkill, Pa.—*Seeding-Machine.*—May 4, 1869.

Claim.—1. The seed-slide *h*, having the cells or grooves formed in its edges, in the manner substantially as described.

2. The slide *g*, with the cells or grooves, and the stirrers *i*, constructed as herein set forth.

3. The slide R, provided with the arms *u*, for adjusting the position of the same, and having a series of perforations arranged in a cluster of V-form, for regulating the quantity of seed used, as herein described.

4. The curved rod D, constructed and arranged in connection with the levers C, for the purpose of automatically engaging with the frame, and supporting the levers, as the latter are raised by the operator.

5. The hinged partition *a*, arranged between the hoppers G and H, as shown and described.

6. The lever *m*, pivoted to the frame, and having the rear bearing of the shaft I mounted thereon, so as to swing with said lever, as and for the purpose described.

89,729.—Solyman Bell and George W. Bronson, La Salle County, Ill.—*Corn-Cultivator.*—May 4, 1869.

Claim.—1. The method by which the half-cylinder shield is attached to the tongue and standards, by spring-rod and chains, as above described.

2. The adjustable collar-clevis, by which the beams are attached to the frame.

3. The manner of attaching the handles of the machine to the standards and to the frame, by means of the loose staples and bolt and socket.

4. The whole machine, as a combination of gopher and cultivator, operating as hereinbefore more particularly described.

89,730.—Henry Brackett, Valley Falls, N. Y.—*Harvester.*—May 4, 1869.

Claim.—1. The obliqne arrangement of the forward transverse bar to the main frame, in combination with the main shoe and coupling brace, for connecting the finger-bar to said frame, substantially as and for the purpose described.

2. The carrying-wheel G′, attached to the main shoe by means of a horizontal swiveling-plate or arm, for the purpose set forth.

3. The adjustable swivelling carrying-wheel G′, in combination with the main shoe, substantially as described.

4. The main clip O, provided with the spurs o^1 o^2, and guide-arms o, operating as described.

5. The arrangement of the spring-head, or plunger, which holds the vertical rack H disengaged, except when the same is held in lock by the foot or hand of the driver.

6. The adjustment of the distance apart of the main and pinion shafts, through the spurred or tongued and grooved boxes, supporting plates for effecting a change of pinions, and change of speed of the cutters, as set forth.

7. The vibrating eccentric N, for operating the shipping-lever as described.

8. The eccentric, or shifting-box M, inclosing the shipping-cam and spring, substantially as described.

9. The swiveling main shoe-box j j^1, constructed and operating as described.

10. The flanged seat and tongue-plate D, provided with perforated arms d, lugs d^1, and flanged seat d^2, all cast in one piece, substantially as and for the purpose described.

89,731.—Henry Brackett, Valley Falls, N. Y.—*Harvester-Rake.*—May 4, 1869.

Claim.—1. The removable rake-frame D, provided with the several bearings for the horizontal and vertical rake and crank-shafts, arranged substantially as described.

2. The curved horizontal way or track K, provided with the gate or latch k, and the adjustable and spring-tops a a', substantially as described.

3. The horizontal semicircular track, or way K, mounted upon the removable rake-frame, substantially in the manner shown and described.

4. The pivoted rake-arm, provided with the arm and spur h h', operating in combination with the curved track K, gate or latch k, and incline k', as set forth.

5. The vertical rock-shaft E, in combination with the horizontal rake-arm shaft or pivot e, sleeve g^2, and beveled segments g g^1, arranged substantially as described.

6. Mounting the rake-shipping devices upon the removable rake-frame in such manner that said devices shall be removed from or applied to the machine with said rake-frame.

7. The vertical rake-shaft, provided with the shipping-cam for automatically throwing the rake out of gear.

8. The reciprocating shipping-box L, in combination with the rake-shaft and shipping-levers for automatically throwing the rake out of gear.

9. The arrangement of shipping-levers, dog, and springs, in combination with the sliding-box L or its equivalent, substantially as described.

10. Pivoting the rake-arm G upon a horizontal arm or shaft, keyed to and turning with the vertical rock-shaft.

11. Pivoting the rake-handle to the swinging end of the vibrating rake-arm, to adapt the rake-head to conform to the position of the hinged platform, substantially as described.

12. The rake-handle H, in combination with the adjustable plate or sleeved extension of the rake-arm, for adjusting the rake-head, as described.

13. The pivoted reel-guide standard V, in combination with the yielding or spring-brace or support, substantially as and for the purpose set forth.

14. The combination of the pivoted reel-guide standard with the lifting-lever, for the purpose set forth.

15. The adjustable connection of the grain-wheel with the platform, by means of the ribbed slotted plate Q′, axle-sleeve q, and through-bolt q^1, combined and operating as described.

89,732.—Henry Brackett, Valley Falls, N. Y.—*Harvester-Dropper.*—May 4, 1869.

Claim.—1. A dumping, or tilting platform, adapted to reciprocate in a path parallel, or thereabout, with the path of the machine, and to discharge the grain behind the machine, out of the way of the team and machine on the succeeding round.

2. The inclined track or way h, in combination with arm j, on the platform, or the equivalent thereof, for automatically tilting the platform in its backward movement.

3. A guide-rod and pivotal support H, and inclined track, h, in combination with the reciprocating and dumping platform, for the purpose set forth.

4. The combination of a platform reciprocating in a path parallel with the path of the machine, and a cut-off operated by said platform.

5. The combination of a reciprocating platform and spring, with the cut-off for operating the same, substantially as described.

6. The combination of crank-wheel P, connecting-rods K K^2, vibrating arm K^1, and rod H, or equivalent devices, for giving to the platform a reciprocating and dumping-movement, substantially as described.

7. The cam, on the crank-wheel, in combination with the spring-bolt and shipping-arm, or lever, or their equivalent, for throwing the mechanism, which operates the platform, out of gear, as set forth.

8. The combination of lever R with the spring-bolt Q, for releasing the same from the retracting-cam, as set forth.

89,733.—Henry Brackett, Valley Falls, N. Y.—*Dropper for Harvesters.*—May 4, 1869.

Claim.—1. Mounting the rock-shaft, which supports the dropping or tilting platform, and, by means of which, said platform and the cut-off are operated upon the reel-post, substantially as described.

2. The adjustable bracket or bearer P, provided with bearings for the rock-shaft p, in combination with the reel-post, as set forth.

3. The single overhung reel-post, carrying the devices for operating the dropping or tilting platform and cut-off, in combination with the straddling-standard L, substantially as described.

4. The treadle R, shaft p, and adjustable links q q^1 q^2, for sustaining and operating the platform and cut-off, when arranged and operating substantially as described.

5. The single-pivoted reel-post, in combination with the arched straddling-standard L, arranged on the pivoted main shoe, in front of the inner drive-wheel, substantially as described.

89,734.—John M. Bryan, Lincoln, Cal.—*Self-Discharging Blanket Ore-Concentrator.*—May 4, 1869.

Claim.—1. The adjustable swinging-frame B, rollers D, E, and G, canvas belt L, and tank K, the whole arranged substantially as and for the purpose herein described.

2. The frame B, rollers D, E, and G, and swinging-bar N, in combination with the ratchet-wheel F and pawl e, the whole arranged to operate substantially as and for the purpose herein described.

3. Passing the pulps across a revolving canvas belt from side to side, substantially as described.

89,735.—H. M. Burrows, Norwich, N. Y.—*Pattern, Measuring, and Laying Out Ladies' Dresses.*—May 4, 1869.

Claim.—The chart, diagram, or design for cutting

and fitting ladies' and misses' dresses, substantially and for the purposes above described and set forth.

89,736.—William Carr, St. Louis, Mo., assignor to himself and Charles P. Ford, same place. —*Spring-Seat for Chairs, Wagons, Cars, &c.*—May 4, 1869.

Claim.—The bands D, passing under the loops *c* of the springs C, and the tongues *d* passing over the same, (or the reversed arrangement,) when combined with the springs *c'* and hooks E, substantially as set forth, and for the purposes specified.

89,737.—James Christie, Pittsburgh, Pa.—*Machine for Making Horse-Shoes.*—May 4, 1869.

Claim.—1. The combination of the dies, secured to the vibrating sectors, the former I alternately elevated and depressed in the manner described, the presser-arms P and catches *s*, or their equivalents, the whole being arranged and operating together as and for the purpose herein set forth.

2. The combination of the bending levers P, reciprocating former I, catches *s s*, and the lower vibrating sector, all arranged as set forth.

3. The arrangement of parts, whereby the former I is reciprocated at the time and in the manner specified.

89,738.—Charles Cowan, New York, N. Y.—*Preparation of Copying-Paper.*—May 4, 1869.

Claim.—1. The within-described compound for preparing copying-paper, made of the ingredients herein specified, mixed together substantially in the manner set forth.

2. Treating paper first with a compound of boiled linseed oil, spirits of turpentine, and copal varnish, then with a coloring-compound levigated with a mixture of oil, turpentine, and beeswax, substantially as described.

89,739.—George H. Crocker, Marysville, assignor to himself and David L. Smith, San Francisco, Cal.—*Seed-Sower.*—May 4, 1869.

Claim.—1. The rock-shaft D and fingers *e e*, in combination with the peculiarly constructed cam *h* and lever *l*, and the connecting-rod *n*, substantially as set forth.

2. The detachable pole R, provided with the opening *r*, band X, and ring *v*, substantially as and for the purposes set forth.

89,740.—John Cyester, Osborn, Ohio.—*Feather-Renovator.*—May 4, 1869.

Claim.—The construction of a double cylinder, the inner one, H, being perforated and stationary, admitting steam at one end and hot air through an outside funnel-mouthed pipe, M, at the other end, while the outside cylinder E is revolved by the drum C and outside belt D, when arranged, combined, and operated as herein described and for the purpose set forth.

89,741.—Addison Davis, Boston, Mass.—*Sash-Holder.*—May 4, 1869.

Claim.—The combination of the pendent stop *f*, engaging with the bead-notches *e*, with the incline, or dog *l*, slide-rod *m*, and spring *v*, arranged to operate together, substantially as described.

89,742.—Loyal M. Doddridge, Henry Reitenour, and Jacob B. Swhier, New Mount Pleasant, Ind.—*Corn-Dropper.*—May 4, 1869.

Claim.—1. The combination of the cylinder B, crank G, seed-box A, and delivery-passage C, substantially as shown and described.

2. The combination of the seed-scatterer *b*, spring *c*, spring-plate E, and plate or frame D, substantially as and for the purpose set forth.

3. The combination of the spring-plate E, spring *o*, and frame or plate D, substantially as and for the purpose set forth.

4. The arrangement of the spring-plate E, spring *e*, bell-crank G, rods H and F, with reference to cylinder B, for the purpose of moving the same, substantially as shown and described.

89,743.—Jules George Dreyfus, New York, N. Y.—*Cap for Lamp-Chimney.*—May 4, 1869.

Claim.—A porcelain or enameled chimney-cap, *b c*, with perforations *a*, constructed as shown and described, as a new article of manufacture.

89,744.—L. E. Dugas, Warren, Ill.—*Velocipede.*—May 4, 1869.

Claim.—The combination of the suspended treadles D E, crank-shaft F H, seats U T, brake J J, rod B', bars A A, bar Z, bail N P, and bolster B, as described.

89,745.—James B. Eads, St. Louis, Mo.—*Bridge.*—May 4, 1869.

Claim.—1. The thrust-bars D D' and compensating-lever E, when applied to prevent oscillations of the pier C, substantially as set forth.

2. Giving to bridge-piers, which are supported and held at their foundations, and which resist the thrusts of arches, an additional support by rods connecting their upper ends with each other and with the abutments, substantially as set forth.

89,746.—John Ebling, New York, N. Y.—*Lock.*—May 4, 1869.

Claim.—1. The key K, made in two parts, and provided with bits *q*, said parts being hinged together, and made to open by pressing the handle *m*, substantially as and for the purpose described.

2. The tumblers G, hinged to a stud, *d* and provided with pins *i*, and hooked tails *c*, in combination with the socket F, key K, and bolt B, substantially as and for the purpose described.

3. The spring E, acting simultaneously on the bolt and on the latch, as shown and described.

89,747.—Henri Robert Ekegrén, Geneva, Switzerland.—*Stop-Watch.*—May 4, 1869.

Claim.—The spring I, in combination with the pin *i*, and disk *x'*, having teeth constructed with inclined sides, so as to operate on the pin, substantially as specified.

89,748.—Charles Louis Fleischmann, Washington, D. C.—*Process for Ageing Liquors and Spirits, and for Producing Aromatic Ethers.*—May 4, 1869.

Claim.—The process of impregnating porous substances with alcoholic liquors containing fusil-oil, and exposing it to the influence of oxygen to be aromatized and concentrated, for the purpose and in the manner above described.

89,749.—Charles Louis Flieschmann, Washington, D. C.—*Distilling-Apparatus.*—May 4, 1869.

Claim.—The method of distributing the liquid on the sides of the vessel by means of a revolving disk, I, the wings H H, for accelerating the evaporation, the ream P, as well as the general arrangement of the pipes, as herein described.

89,750.—Charles Louis Fleischmann, Washington, D. C.—*Process of Extracting Oil from Cotton-Seeds.*—May 4, 1869.

Claim.—The process, substantially as herein described, of extracting the oil from seeds.

89,751.—Charles Louis Fleischmann, Washington, D. C.—*Cotton-Gin.*—May 4, 1869.

Claim.—1. The grate, in combination with the feeding-roller A, as above described.

2. The grate-bars *a a a*, &c., when constructed and arranged as described.

3. The roller D, in combination with the grate.

4. The holder F, when actuated by the devices shown, or equivalent means, for producing the vertical and horizontal motion herein described.

5. The stripper P, in combination with the roller D, and holder F, substantially as herein described.

89,752.—Addison C. Fletcher, New York, N. Y.—*Railway-Car Wheel.*—May 4, 1869.

Claim.—A car-wheel, consisting of the hub-portion B, to be keyed upon the axle, and the tread or body-portion C, having an interposed yielding substance, D, and a central orifice slightly larger than the axle, so connected as to be capable of radial motion to the extent of the difference in diameter of

the axle and the orifice in the center of the body of the wheel, substantially as shown and described.

89,753.—Monroe B. Foote, Northampton, Mass., assignor to himself, William M. Gaylord, and E. N. Foote.—*Door-Lock.*—May 4, 1869.

Claim.—1. The combination of the lever *l*, cam-stop *f*, the spring-catch *k*, and the slotted bolt and cylindrical case, as described, with a latch-head or hook, *x*, on the front of such lever, and with a ward-block or a stud for the hook to catch upon, such ward-block or stud being projected from the case.

2. The ward-block or case, as constructed in two separate parts, *p q*, and having one of such parts attached to the cover, and the other to the case of the lock.

3. The ward-block, as made with the annular wards and the bolt-rib passage *o* going through it, as set forth.

89,754.—Philander S. Foster, Richmond, Me.—*Edge-Plane for Boots and Shoes.*—May 4, 1869.

Claim.—An edge-plane and channeler, for shoemakers' use, having block A, bit *d*, gauge *h*, screws *e*, *i*, *s*, and *y*, and knives *n* and *u*, constructed and arranged substantially as specified.

89,755.—Dan P. Foster, Waltham, Mass.—*Bit-Stock.*—May 4, 1869.

Claim.—Securing the head D to the stock A, by means of the tubular pieces B C, constructed, arranged, and operating substantially as described.

89,756.—George A. Fountain, Newark, N. J.—*Refrigerator.*—May 4, 1869.

Claim.—In a refrigerator, the combined peculiarly shaped drawer-bottom, and trough or gutter under the same, and automatic acting support, when constructed, combined, and arranged as hereinabove specified.

89,757.—J. B. N. Fournier and C. A. Lemaire, Paris, France.—*Electro-Magnetic Temperature-Alarm.*—May 4, 1869.

Claim.—The within-described combination of the compound metallic bar *b*, a pointer, *x*, operated by the bar, a graduated arc, *c*, and adjustable ribs or blocks, *x x'*, so constructed as to permit the pointer to pass over, but in contact with the same, when the said pointer and blocks are connected to the wires of the battery, as set forth.

89,758.—S. L. Fremont, Wilmington, N. C.—*Apparatus for Changing Car-Trucks.*—May 4, 1869.

Claim.—An apparatus for changing the trucks of railroad-cars, and transferring the same from one track to another of a different gauge, constructed, arranged, and operated in the manner substantially as shown and described.

89,759.—John W. Gosling, Cincinnati, Ohio.—*Carriage-Step and Wheel-Fender.*—May 4, 1869.

Claim.—1. The fixed step D *d* F F', flap E, pad or cushion G, and connections H I, constructed, arranged, and operating as and for the purpose set forth.

2. The arrangement of flap E, having the combined pivoted and hinged connection to the carriage-door, and sliding connection to the step, substantially as and for the purpose set forth.

3. The pad or cushion G, when used in combination with the fixed step D *d* F, and flap E, in the manner and for the purpose described.

89,760.—Carl Julius Graf, Chicago, Ill.—*Rocking-Chair.*—May 4, 1869.

Claim.—The bellows C, connecting-rod G, and arm H, in combination with a rocking-chair, A, having one of its side-brackets tubular, all constructed and arranged as herein described, for the purpose of sending a current of air through the tube L, as set forth.

89,761.—Abraham Havens, Trenton, N. J.—*Washing-Machine.*—May 4, 1869.

Claim.—The combination of the frame B, hung to the box A, and the frame C, hung to the upper end of the frame B, and carrying a series of conical elastic rollers, which may be detached separately from the shafts, for the purpose specified.

89,762.—Edward Herbster, Chicago, Ill.—*Alarm-Lock.*—May 4, 1869.

Claim.—A lock, A, provided with a rotating eye-cylinder, F, flange Y, ratchet M, spring K, and spring-stop D E, so operating as to give an alarm, and hold the key in the lock, as set forth.

89,763.—Charles Hewitt, Trenton, N. J.—*Method of Constructing Piles for Beams.*—May 4, 1869.

Claim.—Improved method of arranging piles for rolling bars of the general character herein pointed out, which method consists in composing the pile of a series of pieces, formed with ribs and grooves, and secured by wedges, substantially as described.

89,764.—William Heylman, Peoria, Ill.—*Device for Bending Plow-Handles.*—May 4, 1869.

Claim.—1. The formers *m n*, when constructed as herein described and for the purpose set forth.

2. The adjustable horizontal bars *a b c*, and *d*, *e*, and *f*, operated in the manner and for the purpose as described.

3. The combination of the formers *m n* with the bars *d* and *g* of the frame-work, substantially as described.

4. The adjustable bar or slide X, lever Z, uprights *y y*, box M, arm K, adjustable clamp L, balanced hook *u*, and adjustable beam *i*, combined and operated as described.

5. The formers *m* and *n*, strap *o*, bar *p*, holder *q*, hinged bar *r*, holdfast *t*, and catch *s*, combined and operated as described.

6. The combination of the levers *b b* with the iron uprights *l l* and cross-bars or supports, and uprights B B, for holding up strap, bar, and holder *q*, substantially as described.

89,765.—Alonzo Hitchcock, New York, N. Y.—*Rock-Breaker.*—May 4, 1869.

Claim.—The combination of the segmental cams *a* and *b*, the crank-shaft *g*, and yoke *k k*, arranged together, to produce a differential movement of said cams, substantially as shown and described.

89,766.—Carl Hofmann, Elkton, Md.—*Fourdrinier Paper-Machine.*—May 4, 1869.

Claim.—The combination, substantially as described, of one or more revolving brushes, with the wire-cloth apron of a Fourdrinier paper-machine, for the purpose herein set forth.

89,767.—David Brown Hunt, San Francisco, Cal.—*Divided Axle for Railway-Cars.*—May 4, 1869.

Claim.—The collar C, secured on the end of one part of the axle, in combination with the sleeve-piece B, secured to the other part of the axle, as a means of keeping the divided axle together.

89,768.—Walter Hunt, New York, N. Y., assignor by mesne assignments to William E. Lockwood, Philadelphia, Pa.—*Compound Fabrics for the Production of Shirt-Collars.*—May 4, 1869.

Claim.—A fabric for making shirt-collars, composed of two or more thicknesses of muslin, cambric, or other suitable cloth, united and finished by the web or quantity, substantially as herein described, whereby the necessity of sewing or stitching the collars, and of subsequent washing, starching, and ironing, is dispensed with.

89,769.—S. T. Hyde, Piasa, Ill.—*Hedge-Trimmer.*—May 4, 1869.

Claim.—1. The adjustable hinged cutter H, arranged relatively to the fixed vertical cutter, substantially as shown and described.

2. The extensible pitman, constructed as described, in combination with the adjustable hinged cutting-apparatus, for the purpose set forth.

3. The employment of the friction-brake *l*, and the locking-lever or latch *j*, arranged as described, for enabling the attendant to control and turn the machine, as set forth.

4. The fixed and adjustable cutters G and H, in combination with the crank-shafts *f* and *c* and the

bevel and spur-wheel F, all arranged and operating as described.

89,770.—JOHN H. IRWIN, Chicago, Ill.—*Lantern.*—May 4, 1869.

Claim.—1. The combination of the concave plate I, rim *g*, or its equivalent, tubes H and F F, and the base A B of the lantern, substantially in the manner specified and shown.

2. The combination of the globe G, concave plate I, tubes H and F, and base A B of the lantern, arranged and operating substantially as and for the purpose shown and set forth.

3. The combination of the plate I, tubes F, flange *t*, upon the top of the wick-tube, and the globe G, arranged to operate as set forth.

4. The combination of the perforated plate E, plate I, tubes H F, and the base A B of the lantern, arranged to operate as described, and for the purpose set forth.

89,771.—JOHN WILLIAM JARBOE, Brooklyn, (E. D.,) N. Y.—*Coal-Scuttle.*—May 4, 1869.

Claim.—A coal-scuttle, or other vessel, as a new article of manufacture, having its body made of sheet-metal, and its bottom of paper, substantially as specified.

89,772.—EBENEZER JENNINGS, Jr., New York, N. Y.—*Suspender.*—May 4, 1869.

Claim.—1. The combination of the shoulder-straps A A′, connecting-links C C′, and button-hole straps B B′, all constructed and arranged to operate substantially as shown and described.

2. In combination with the shoulder-straps, connecting-links, and button-hole straps, constructed as described, the hook *d′*, to connect the button-hole straps with the connecting-links, as shown and described.

89,773.—WILLIAM S. JESSUP, Newark, N. J.—*Trunk-Clamp.*—May 4, 1869.

Claim.—The cast malleable clamp, having a projecting hollow bead, *a*, which extends across the face of the plates constituting the clamp, in the direction of the angle thereof, as a new article of manufacture, for the purpose set forth.

89,774.—JONATHAN JOHNSON, Lowell, Mass.—*Horse-Shoe,*—May 4, 1869.

Claim.—1. The adjustable and removable calk-plate A and calk *b*, constructed so as to be capable of adjustment to any portion of the plate-shoe, in the manner and for the purpose specified.

2. The removable and adjustable calk-plate G, and the angle-calk b^2, which is adapted for a side-calk or a heel-calk.

89,775.—JONATHAN JOHNSON, Lowell, Mass.—*Horse-Shoe.*—May 4, 1869.

Claim.—1. The sole C, in combination with the inner sole F, the outer sole G, the metal sole J, and the bolts K and *m*, in the manner and for the purpose substantially as described.

2. The method, substantially as described, of securing the sole C to the shoe, viz, by means of plain or calked plates, as set forth.

3. The heel-pad H and straps *a* and *b*, in combination with the sole F, arranged and applied in the manner and for the purpose specified.

4. In combination with the soles C, F, and G, the absorbent S, for the purpose and substantially as described.

5. The arrangement of the bolt *m* beneath the inner sole F, directly or partly under the frog M, in the manner and for the purpose specified.

6. The universal plates and calk E, as described, and which are adapted to any part of the shoe, and changeable to any other part or position thereon.

89,776.—WILLIAM B. JONES, Cincinnati, Ohio.—*Sofa, Lounge, and Table.*—May 4, 1869.

Claim.—1. The rear standards B B′, on the seat-frame A, and having the open T-formed sockets or bearings *b*, for the headed pivots I of the back K, which back forms or is provided with a table, M, which, with said back, is capable of being folded down upon the arms in the manner stated.

2. In combination with the elements of the preceding clause, or their equivalents, the butt-hinged and depressible arms F G, having the bolts or catches H, as set forth.

3. Making the table proper and the back, or either of them, separable, in the manner and by the means herein designated.

89,777.—ALFRED C. LOUD, San Francisco, Cal.—*Propeller.*—May 4, 1869.

Claim.—A propelling-wheel, so constructed as to exert its propelling power against the water, by means of four or more rings or rims, *b* b^1 b^2 b^3, arranged obliquely with reference to the shaft, and intersecting each other, as described.

89,778.—WILLIAM LOWDEN, Thornapple, Mich.—*Scythe.*—May 4, 1869.

Claim.—The extension of the blade of the scythe back of the heel, in the form of an arc, which will cut the grass or grain that would, without such extended blade, slip by the heel, and remain uncut, as herein described.

89,779.—SAMUEL MACFERRAN, Philadelphia, Pa.—*Seat for Parks and Gardens.*—May 4, 1869.

Claim.—A seat, having parts A B, constructed of terra-cotta or terra-cotta and wood combined, substantially in the manner above described, and for the purpose specified.

89,780.—JEREMIAH AVERY MARDEN, Boston, Mass., assignor to GEORGE M. GIBSON and THOMAS A. JOHNSTON, same place.—*Governor for Steam and other Enginery.*—May 4, 1869.

Claim.—1. The construction and arrangement of the vanes G G′, in combination with the weight *f*, substantially as herein made known.

2. The combination of the vanes G G′, spindle L, bell-crank *b*, with the weight *f*, whereby to regulate steam and other enginery, substantially as herein set forth.

3. The combination and arrangement of the vanes G G′, rods H H, pallets J J, and spindle L, substantially as before explained.

89,781.—BENJAMIN GREEN MARTIN, New York. N. Y.—*Stop-Valve.*—May 4, 1869.

Claim.—The valve-plug B B′, consisting of the valve-plate B, and the wedge B′, whereby the plug, when seated, is expanded by the downward movement of the wedge, substantially as herein described,

89,782.—EDWIN MAY, Indianapolis, Ind.—*Fire-Proof Building.*—May 4, 1869.

Claim.—1. The furring or clamp B, to seize over the lower edge of the joists, and hold the metal arch C, when constructed and arranged substantially as herein described.

2. In combination with the above, the sheet-metal arch C and fastenings D, when arranged and constructed substantially as herein described.

89,783.—S. T. MCDOUGALL, Brooklyn, N. Y.—*Velocipede.*—May 4, 1869.

Claim.—The combination of the uprights F, provided with the pins or rounds *f*, placed as shown, with the cranks E, wheel D, reach A, and seat or saddle B, constructed and operating substantially as and for the purpose set forth.

89,784.—FREDERICH WILLIAM MILLER, Cincinnati, Ohio, assignor to FARES & MILLER, same place.—*Wash-Boiler.*—May 4, 1869.

Claim.—1. The plate H, when adapted to operate as set forth.

2. The clamp K, constructed and adapted to operate as set forth.

3. The general arrangement and combination, substantially as herein described, of the wash-boiler A, inclined longitudinal partitions D D′, perforated false bottom E *e*, channels F F′, slits *g g′*, deflecting-plates G G′, lid I J *j*, plate H, and clamp K, for the purpose specified.

89,785.—WILLIAM MILLER, Chicopee, Mass.—*Weather-Strip.*—May 4, 1869.

Claim.—A weather-strip, composed of boards A

A′, roller-socket B B′, and spring D, all arranged substantially as herein described.

89,786.—JOHN H. MILLS, Boston, Mass.—*Steam-Generator.*—May 4, 1869.

Claim.—1. As my improvement in the cast sectional boiler, the construction of the sections whereby the lower arm or branch water-pipe of each section shall form the grate-bar, and contain water, substantially as before explained.

2. In a steam-generator, composed of cast multitubular sections, the construction and arrangement of different pipes thereof, having gradual and easy curves, as hereinbefore set forth and explained.

3. The construction of the sections of the steam-generator, whereby the union of a series of sections is affected at two points only, the upper serving as the steam-circulating passage, and the lower one as the water-passage, substantially as explained.

4. The arrangement for effecting the union of two adjacent sections of the steam-generator, of tubular plugs, having right and left screws, substantially as before explained.

5. The construction and arrangement of the fuel-chamber and furnace-grate, whereby the water-legs of the outer pipe are prolonged, and the series of points, essentially as herein shown and described.

89,787.—D. H. MUNDY and H. W. HOFFMAN, Camden, N. J.—*Meat-Cutter.*—May 4, 1869.

Claim.—The sliding-frame J, in combination with the reciprocating cutter H, when constructed and arranged, in respect to each other, upon a suitable frame, substantially as and for the purpose set forth.

89,788.—MAURICE MURPHY, Vacaville, Cal.—*Gang-Plow.*—May 4, 1869.

Claim.—1. In combination with the arm or lever C, rigidly fixed upon the crank for raising the plow-frame, the adjustable connection of the crank E to the axle, by a polygonal pin and corresponding eye, substantially as and for the purpose set forth.

2. The low convexed share F, having the extended point *c*, and the eye or socket H, constructed substantially as and for the purpose described.

3. The mold-boards J, when constructed with the surface curved, as described, and having the convexed edge *d*, substantially as herein described.

89,789.—ALBERT W. PRATT, Salem, Mass., assignor to himself, WILLIAM A. PERKINS, and DAVID H. BURBANK, same place.—*Machine for Buffing, Whitening, Glassing, Polishing, and Stoning Leather.*—May 4, 1869.

Claim.—Placing the knives or tools used in this machine at an angle with the shaft of the revolving cylinder, in combination with forming the seat to which the knives or tools are fastened at an acute angle with a tangent of the periphery of the cylinder, projecting inward.

89,790.—NATHANIEL PURDY, Milwaukee, Wis.—*Wood-Bending Machine.*—May 4, 1869.

Claim.—A wood-bending machine, consisting of the stationary back-set B, the lever or support C, with its shoulder Q, sliding clevis D, rope E, shoulderless windlass F, pulley G, frame H, and flexible band K, substantially as set forth.

89,791.—JOHN A. QUICK, South Danville, N. Y.—*Cultivator.*—May 4, 1869.

Claim.—A cultivator having one or more rotary harrows, mounted in a frame, journaled at its front end, on the axle of the bearing-wheels, said harrows being rotated, by means of shaft H, with bevel-wheels J G, engaging with the bevel-wheel F, on the axle, substantially as shown and described.

89,792.—AMOS RANK, Salem, Ohio.—*Harvester-Dropper.*—May 4, 1869.

Claim.—1. A counterpoised vibrating platform, on which the grain falls when first cut, and from which the gavels are automatically discharged by their own weight, substantially as set forth.

2. The combination of a vibrating platform, on which the grain falls when first cut, with an adjustable counterpoise, to vary the size of the gavels, substantially as set forth.

3. The combination, substantially as set forth, of a vibrating platform, a vibrating lever, and a counterpoise traveling on the lever, to insure a quick vibration of the platform, in both its upward and downward movements.

4. The combination, substantially as set forth, of a vibrating counterpoised platform with a cut-off, automatically operated by a counterpoise.

5. The combination, substantially as set forth, of a reel-post, a counterpoise mounted thereon, a platform, and a cut-off.

89,793.—L. D. ROBERTS and C. C. ROBERTS, Cleveland, Ohio.—*Coal-Chute.*—May 4, 1869.

Claim.—1. Two or more aprons, C C′, hinged to each other, so that the upper end of the lower apron shall be elevated above the lower end of the upper apron, in the manner as and for the purpose set forth.

2. The aprons C C′, as arranged in combination with the chute B, and operating conjointly as and for the purpose specified.

89,794.—THOMAS F. ROWLAND, Greenpoint N. Y.—*Submarine-Drilling Apparatus.*—May 4, 1869.

Claim.—1. The telescopic drill-frame, forming or carrying a working platform, and made up of tubular legs and plungers or rods projecting therethrough, in combination with hydraulic attachments, or devices for forcing water, under the control of suitable valves, into the legs, substantially as and for the purpose or purposes herein set forth.

2. The combination of a floating steam-pump or engine, an auxiliary water-pressure engine, carried by an independent stationary frame or support, a flexible tubular connection, for transmitting power, through hydraulic pressure, or action from the one engine to the other, and a drill operated by the auxiliary or stationary engine, essentially as specified.

3. The combination of the floating steam-pump B, the stationary water-pressure engine F, for operating the drill, flexible tubular connections H J, and a working platform, made up of a table and telescopic legs, for action, substantially as described.

89,795.—FRANK SAUNDERS, Aberdeen, Miss.—*Safety-Lamp.*—May 4, 1869.

Claim.—1. The arrangement of the vent D, passing through the bottom of the lamp-reservoir, and forming a free communication between the air-space therein and the external air through the stem and base of the lamp, substantially as shown and described, for the purpose set forth.

2. The feed-tube *a*, with its piston-valve *e*, and funnel *b*, in combination with the oil-reservoir A, all constructed, arranged, and operating substantially as shown and described, for the purpose specified.

89,796.—IVES SCOVILLE and HIRAM H. SCOVILLE, Oakland, Cal.—*Side-Hill Plow.*—May 4, 1869.

Claim.—1. The angularly placed removable axes *a a*, arms *b b* and *c c*, for elevating and lowering the mold-boards, and holding their positions, substantially as described.

2. The lever C, hooks *e e*, rod *g*, and bar *h*, operating in the slotted standard E and slots *i*, the whole arranged substantially as and for the purpose described.

3. The two plows A and B, operating independently of each other, and turning up against opposite sides of the beam, and mounted on the angularly placed axes *a a*, substantially as described.

89,797.—GEORGE SEIBERT and JOHN SEIBERT, Ashley, Ill.—*Gang-Plow.*—May 4, 1869.

Claim.—1. The staples F and G, when arranged and operating substantially as and for the purposes described.

2. The hook *h* and perforated bar *n*, when combined with the plow herein described, and operating as and for the purposes mentioned.

89,798.—JOHN B. SIAS, Beverly, assignor to H. S. VROOMAN, Boston, Mass.—*Machine for Skiving and Channeling Soles.*—May 4, 1869.

Claim.—1. In combination with the feed and presser wheels and edge-guide, the skiving and slit,

or channel-forming knives or cutters, arranged to operate together, substantially as described.

2. In combination with the feed-wheels and edge-guide, a skiving-knife, attached to the arm or frame, upon which the presser-wheel is journaled, but acting upon the opposite surface of the sole, substantially as described.

89,799.—WILLIAM J. SIMMONS, Chariton, Iowa.—*Quilting-Frame.*—May 4, 1869.

Claim.—The described arrangement of mortised posts A C F, rails B E, and winches D, as and for the purpose stated.

89,800.—AMOR SMITH, Baltimore, Md.—*Machine for Desiccating Fertilizers.*—May 4, 1869.

Claim.—1. In combination with the oven B, a revolving tube, D, open at both ends, when arranged to operate substantially in the manner and for the purpose set forth.

2. The combination and arrangement of the oven, the tube, the pipe L, gearing G H I, shaft I′, and clutch K, substantially as set forth.

3. The revolving tube D, open at both ends, and constructed with internal ribs or fins; but this I claim only when said tube is arranged within an oven, to operate substantially as set forth.

89,801.—PHILANDER SPRAGUE, Peeatonica, Ill.—*Cultivator.*—May 4, 1869.

Claim.—1. The arrangement of the forked tongue A, axles B B, wheels C C, semicircular braces D and *f*, seat E, and bent rod or bar *g*, with its hooks *h h*, substantially as herein set forth.

2. The arrangement of the forked tongue A, plow-beams F F, handles P P, and adjustable brace T, all constructed and operating substantially as and for the purposes herein set forth.

3. The arrangement of the plow-beams F F, stationary shins I I, pivoted shins K K, and adjustable cross-bar M, to which a center-shin, N, is secured, substantially as herein set forth.

89,802.—T. G. SPRINGER, Clinton, Iowa.—*Producing Gas for Heating and Lighting.*—May 4, 1869.

Claim.—1. Connecting the wings or heaters of a gas-burner with the generating-chamber, or at some point between the generating and the mixing chambers, substantially as and for the purposes herein set forth.

2. Filling the generating-chamber of a gas-machine with perforated plaster Paris, or its equivalent, substantially as and for the purposes herein set forth.

3. Providing a gas-pipe with an inside funnel-shaped tube, for the purpose of preventing a flickering or unsteady light, substantially as herein set forth.

89,803.—GREENLEAF STACKPOLE, New York, N. Y.—*Mop-Holder.*—May 4, 1869.

Claim.—The cam-lever A B, spring I, and piston L, in combination with the wire frame E, and clamp D D, substantially as and for the purpose set forth.

89,804.—EBEN T. STARR, New York N. Y.—*Skate.*—May 4, 1869.

Claim.—1. The dovetailed guide-piece C, transversely arranged, and clamping the runner A, and secured to the sole-plate B of a skate, and constructed with lugs *f f*, for the reception of adjusting-screws *d d*, for operating clamping-jaws or strap-rings, substantially as herein described.

2. The sliding-clamps D D, having jaws with curvilinear serrated inner surfaces, substantially as specified.

3. The combination of the clamps D D and guide-piece C, extending all across the foot-plate, substantially as herein specified.

4. The attachable and removable heel-plate E, constructed independently of the heel-plate of the skate and of the boot-heel, and arranged for operating substantially as herein set forth.

5. The centrally pierced concave-headed adjusting-screws *d d*, *k k*, substantially as described and for the purposes herein set forth.

89,805.—EDWARD T. STEEN and WILLIAM B. MAY, San Francisco, Cal.—*Process of Removing Soluble Matters from Artificial Stone.*—May 4, 1869.

Claim.—Purging soluble substances from artificial stone, in the manner substantially as above described.

89,806.—DANIEL STIRN, Milwaukee, Wis.—*Piano-Forte.*—May 4, 1869.

Claim.—1. The combination of a concavo-convex sounding-board, B, with a cast-iron frame, F F′, having the part F′ arched, to correspond to the shape of the board below, substantially as and for the purpose set forth.

2. The use of the pieces b^2 b^2, in connection with an arched sounding-board, B, substantially as and for the purpose described.

89,807.—ALBERT STOCKWELL, Providence, R. I., assignor to CHARLES W. GREENE, trustee, and said GREENE, as trustee, assigns to ALBERT STOCKWELL and WINSOR STONE.—*Mule for Spinning.*—May 4, 1869.

Claim.—1. The combination of the spindle-bearing carriages A, with the mechanism for shifting the point of attachment of the spindle-driving chain A′ to the quadrant-lever B, by means of the yielding bar F, or its equivalent, and a suitable lever-connection, E L, for operating the same, substantially as described, for the purposes specified.

2. The combination of the cop-shaping mechanism with the levers *h h′*, or equivalent devices, for putting into action the hereinbefore-described mechanism, which shifts the point of attachment of the spindle-driving chain to the quadrant-lever, and with the vibrating levers *p p′*, and the yielding supporting-block *r*, substantially as described, for the purposes specified.

89,808.—H. A. STREETER, Worcester, Mass., assignor to J. P. STREETER & BROTHER.—*Horse-Rake.*—May 4, 1869.

Claim.—1. The combination, with the axle, rake-head, and clearer-finger bar, of the curved metallic bearing-arms G G, which carry the rake-head, finger-bar, and clearing fingers, when said arms are constructed with an open bearing for the rake-head and a support for the clear-finger bar, and are held to the axle, so as to project from the rear of the same, in the manner shown and described.

2. The arrangement, in connection with the shaft L, of the rotating shaft O, and treadle and fork, which it carries, and the spring 6 and pin 5, as and for the purposes shown and described.

3. The combination and relative arrangement, with the main frame and supporting-wheels of the driver's seat F, rake-head H, curved metallic arms G G, clearer-finger bar J, shafts O and L, treadles 9, 10, and fork 11, said parts being constructed and arranged with relation to each other, as and for the purposes set forth.

4. The combination, with shaft L and pin 5, of spring 6, made in the form and applied in the manner described and shown in the drawings.

89,809.—JOHN S. STUART, Philadelphia, Pa.—*Locomotive Steam-Engine.*—May 4, 1869.

Claim.—1. A locomotive-engine in which the cylinders are provided with a single valve-chest, C, arranged between and communicating with the said cylinders, substantially as herein set forth.

2. The valve-chest C, divided by a partition, *a*, into two equal compartments, *x* and *y*, provided with oscillating valves H and H′, all substantially as specified.

3. The slide-box F, with its valve *d*, arranged in respect to the valve-chest C and ports *e e′* and *f*, substantially as herein described.

4. The combination of the slotted valve-arms *l* with the eccentric rods *j*, when the latter are connected with devices by means of which the stroke of the valves, and the supply of steam to the cylinders, may be proportioned to the work to be performed by the locomotive, all substantially as herein set forth.

89,810.—J. B. SWEETLAND, Pontiac, Mich.—*Horse Hay-Fork.*—May 4, 1869.

Claim.—1. A two-tined hay-fork, when so constructed that the tines are standing or hanging one

above the other, substantially as shown and described.

2. The hook *d*, when constructed substantially as described, and used in connection with the adjustable handle C, as herein set forth.

89,811.—Freeman A. Taber, Baltimore, Md.—*Candlestick.*—May 4, 1869.

Claim.—1. The spring wick-holder L, for the wickless candle, when operated by the swivel-screw K, working through nut J, applied to part G, substantially as shown, and for the purpose set forth.

2. The candle-holder, constructed as described, of the support D, with guide *c*, cap E *f*, bottom piece G, connecting-wires E, spring H, spring wick-tube L, screw K, and nut J, all as herein set forth, and fitted within the casing A, as specified.

89,812.—Augustin L. Taveau, Chaptico, Md.—*Revolving Sulky-Harrow and Seeder Combined.*—May 4, 1869.

Claim.—1. A revolving sulky-harrow and seeder combined, or its equivalent, constructed and operating as herein set forth and described, to wit, the revolving spiked cylinder M, axle L, arms D, in combination with the gear-wheels B, movable pinions C, cylinder-journals *e*, clutches *m*, the spring-levers H, and spikes *g h*, in the manner specified; also, the combination of the gear-wheel B, wheel No. 5, wheel No. 2, and the entire seeding-apparatus, in conjunction with the harrow.

2. The construction and application of the jointed spikes *g h*, or their equivalent, held in position in the sockets by the iron bolt and wooden pin *v*, in the manner and for the purpose herein set forth and described.

3. The application of the rollers N, pin-drums *n*, and stay-chains *o*, in combination with the lever P, ratchets O, and construction of the foot-pawl R, in the manner and for the purpose herein set forth and described.

4. The application and combination of the double-acting spring-levers H, springs *s*, rods *a*, foot-lever K, and spring-catch Q, operating for the purpose as herein set forth and described.

5. The cylinder-comb *l*, brace-rods *x*, and spring-teeth *d*, or their equivalent, in combination with the spikes *g h*, constructed and operating as herein set forth and described.

6. The construction, combination, and arrangement of the guano and seed box to a revolving sulky-harrow and seeder combined, or their equivalent, and the application of a grass-seeder to the same, all constructed and operating as herein set forth and described.

89,813.—John I. Tay, San Francisco, Cal.—*Means for Hanging Window-Shades.*—May 4, 1869.

Claim.—The combination and arrangement of the cords *b*, *n*, and *n'*, the tension-spring *d*, and the rollers C, when applied to both ends of a curtain, so that the top may be rolled down, and the bottom rolled up, and each sustained at any desired height, by means of the weights I I', substantially as described.

89,814.—A. M. Utley, Watertown, N. Y.—*Cheese-Table, Shelving, &c.*—May 4, 1869.

Claim.—1. Forming that portion of the table, shelf, or other device upon which the cheese rests, and with which it is in contact during the process of curing, of paper, substantially as and for the purposes set forth.

2. A table-top, shelf, or its equivalent, for supporting the cheese during curing, composed of a perforated wooden base, provided with a paper covering, substantially as shown and set forth.

3. The combination of the removable table-top or shelf, the grooved uprights for supporting the same, and the detachable cross-bar connecting said uprights, constructed and arranged substantially as and for the purposes specified.

89,815.—John Van, Cincinnati, Ohio.—*Portable Laundry.*—May 4, 1869; antedated April 16, 1869.

Claim.—1. The dry-room of a portable laundry, consisting of the sectional floor A A^5, posts H', upper frame or plate B, and sections B^1 H', and provided with the metallic lining, substantially as and for the purpose set forth.

2. The metallic-lined sections B^1 C H' C^1 of the dry-room of the portable laundry, constructed in the manner described, for the purposes specified.

3. In the portable laundry, the stove D, constructed with the fire-box *c*, water-heating chambers D', air-heating drum M *m*, flues L N, and vapor-duct O, all arranged as described, in combination with the dry-house and water-reservoir, substantially as and for the purposes set forth.

4. The combined arrangement of the sectional floors A A^5, the dry-house B B^1, C H H', the clothes-frames P P^1 P^2 P^4, rails Z Z, stove D D' L M N O, and water-reservoir E, provided with the pipes *f f'*, I I, and cock *k*, substantially as described, to form an improved portable laundry.

89,816.—Fénélon Vie, Havre, France.—*Life Boat.*—May 4, 1869.

Claim.—1. The ribs B, with gore-shaped openings *a*, in combination with the covering C and lining D, and with the longitudinal braces E F, substantially as herein shown and described.

2. The double-flanged pieces *b*, in combination with the lining D, covering C, and ribs B, substantially as and for the purpose set forth.

3. The flanges *c*, in combination with the longitudinal braces E F, covering C, and lining D, substantially as and for the purpose described.

4. The air-chambers G, in combination with the longitudinal braces E, covering C, lining D, and ribs B, substantially as and for the purpose set forth.

89,817.—Ephraim Vorbe, San Francisco, Cal.—*Combination-Lock.*—May 4, 1869.

Claim.—1. The combination of the stem *c'*, holding-plate *k'*, and socket-stem D, substantially as described.

2. The stop R^1, with the catch *r*, the sliding-plate *r'*, and spring T, for holding and releasing the stop, substantially as and for the purpose herein described.

3. The tumblers N O P, with the lugs *n n n*, the arm *p*, the wheels Q R S T, and the lever Z, the whole operated from the knob E, for retreating the stop R^1, substantially as described.

4. The device for controlling and operating the bolt, consisting of the rotating case V, the plate *u*, with its arms 1, 2, and 3, the spring V', the stems *k k*, and the key M, together with the slotted segment *w*, the whole connected and operated substantially as herein described.

89,818.—Henry S. Vrooman, Boston, Mass.—*Sole-Channeling and Feather-Edging Machine.*—May 4, 1869.

Claim.—1. In combination with the smooth-surfaced upper feed-wheel, the toothed-surfaced lower feed-wheel, and the cutter or cutters, arranged to operate upon either surface of the sole, a stationary rest-plate, for supporting the sole and edge to be skived or channeled, substantially as shown and described.

2. So constructing this rest-plate that the skiving-cutter or its shank can pass through or by the plate from the arm *d*, so as to bring the cutter to the under surface of the sole, substantially as described.

3. In combination with the feed-wheels and cutter or cutters, arranged to operate as described, an adjustable edge-guide, substantially as described.

4. In combination with the feed-wheels, stationary rest, and cutter or cutters, arranged to operate on either side of the sole, an adjustable edge-guide, substantially as described.

5. In combination with the lower feed-wheel, an upper feed or presser wheel, made adjustable relatively to the edge-guide and the arm by which it is supported, substantially as described.

89,819.—Samuel Wagner, Galion, Ohio.—*Door Catch and Cushion.*—May 4, 1869.

Claim.—A protective knob and spring door-holder, in combination with a base, A, adapted to be secured to the wash-board or wall.

89,820.—Bernard Peard Walker, Wolverhampton, England.—*Belt-Joint.*—May 4, 1869.

Claim.—Joining the ends of driving-bands by

means of flat, thin metal plates, between which the ends of the band or strap are placed, and secured by rivets or screws passing through the two plates, and through the inclosed leather, or other material of which the band or strap is formed, as hereinbefore described.

89,821.—P. A. WILLSON, Camden, N. J., assignor to himself, MATTHEW WHILLDIN, and ALBERT ATWOOD, same place.—*Sash-Balance.*—May 4, 1869.

Claim.—A cord, F, secured at opposite ends to the frame of a window, and arranged upon a series of pulleys, D, D^1 D^2, as described, when the said pulleys rotate in a recess in the sash, and are so adjusted as to prevent the cord from being forced against the frame, as set forth.

89,822.—SETH WILMARTH, Malden, Mass.—*Velocipede.*—May 4, 1869.

Claim.—1. The auxiliary shaft E, with its fly-wheel O, connected with the main shaft by means of described gearing, combined with a foot-lever, G, and a steering-wheel, Q, substantially as and for the purpose set forth.

2. The foot-lever G, strap *b*, drum D, with its retracting-spring *g*, pawl *e*, and the ratchet-wheel I, in combination with the auxiliary shaft E, provided with a fly-wheel, O, and connected with the main-shaft A by suitable gearing, substantially as and for the purpose set forth.

3. Limiting the motion of the foot-lever G by the shoulders *k k*, in combination with the shoulders *l l*, in the bifurcated support H, in which it is pivoted, substantially as set forth.

89,823.—ALBERT WINSHIP, Turner, Me.—*Tire-Upsetting Machine.*—May 4, 1869.

Claim.—1. The combination of the beds *a b*, having the false beds *m*, when desired, and removable dogs *i*, with the arms *d e*, and right and left screw *f*, when the bed *a* is fixed and the bed *b* removable, and when the two beds are placed near the bottom of the arms *d e*, all as and for the purposes set forth.

2. The removable or false beds *m*, secured by studs *o*, to be applied to a tire-upsetter, as herein set forth, and used in combination with dogs *i*, as and for the purposes set forth.

89,824.—REUBEN WRIGHT, Houston, Texas.—*Machine for Cutting Stalks in the Field Preparatory to Plowing.*—May 4, 1869.

Claim.—The roller A, provided with spiral knives B B, crossing each other diagonally, the cross-bar D, the shaft C, axle *e*, and wheels E E, the whole constructed and arranged to operate substantially as and for the purpose set forth.

89,825.—JAMES M. ALBERTSON, New London, Conn.—*Horse-Power.*—May 4, 1869.

Claim.—1. The arrangement of the gear-wheel C, pinion F, shaft E, and wheel G, to allow the revolution of the wheel G within the wheel C, and to bring the shaft E at such height as to engage the pinion F.

2. In combination with above arrangement, the frame D D′, consisting of two arms provided with journals for the shaft E, the whole attached to the upper end of shaft B, substantially as herein described.

89,826.—HORACE L. ARNOLD, Chicago, Ill.—*Letter-Lock.*—May 4, 1869.

Claim.—1. The combination of the bolt C, the spring E, and the abutment F, when constructed and operating as described, and for the purpose set forth.

2. The combination of the washer W with the bolt C, spring E, and abutment F, when constructed and operating as described, and for the purpose set forth.

89,827.—G. L. BADLAM and CHARLES W. LANG, Brandon, Vt.—*Foot-Rest for Chairs.*—May 4, 1869.

Claim.—The foot-rest or pedal D, in combination with the notched bar *a*, standard B, plate E, and catch *e*, when constructed and arranged substantially in the manner and for the purposes specified.

89,828.—JOHN CHAPIN, Chicopee, assignor to R. H. SMITH, Springfield, Mass.—*Ticket-Punch.*—May 4, 1869.

Claim.—A ticket-punch, wherein the die, having the bearings *e* and e^1, connected by a thin portion or blade, *c*, is operated by means of a lever having two projections *n n* thereon, one upon each side of said blade *c*, all constructed and operating substantially as herein described, and for the purposes specified.

89,829.—J. WESLEY DODGE, Malden, Mass.—*Branding-Apparatus.*—May 4, 1869.

Claim.—The arrangement and combination of the forked handle, the eye, and the bail, with a brander or branding-box, provided with branding devices, and made to receive a heater, as described.

89,830.—L. M. HAM, Boston, Mass.—*Lock for Prison-Doors.*—May 4, 1869.

Claim.—1. Combining with an ordinary latch or lock, E, the catch L, made and arranged substantially as described, and for the purpose set forth.

2. The guard N of the lock-casing B C, in combination with the bar O and catch L, constructed and arranged substantially as described, and for the purpose set forth.

89,831.—WILLIAM HOFFMAN, Pittsburgh, Pa.—*Apparatus for Rolling and Notching Rails for Railroads.*—May 4, 1869.

Claim.—Rolls constructed and applied substantially as described, for making railroad-rails with notches in them, substantially as described.

89,832.—BENNETT KINDBLADE, Geneva, Ill.—*Sash-Holder.*—May 4, 1869.

Claim.—The spurred yoke C, applied within a hollow cam, B, constructed and operating substantially as described.

89,833.—THOMAS L. LUDERS, Olney, Ill.—*Field-Skate.*—May 4, 1869.

Claim.—1. For the purposes of a field-skate, the standard A, made adjustable as set forth.

2. The arrangement of the wheel B at the side of the adjustable standard A, substantially as and for the purpose described.

3. The side-wheel B, in combination with the standard A, and a foot-rest, C, secured thereto, below the axis of the wheel, substantially as and for the purpose described.

4. The springs interposed between the over-shoe and foot-rest, substantially as and for the purpose described.

89,834.—GEORGE C. HOWARD, Philadelphia, Pa.—*Hat-Press.*—May 4, 1869; antedated November 4, 1868.

Claim.—1. The combination of the link G, crank-arm F, and crank-shaft L^2, and spiral spring T, with the treadle H, substantially as and for the purposes specified.

2. The combination of link G, crank-pin L, and crank K, eccentric catch-pin J, and lever U, with the treadle H, substantially as and for the purpose set forth in this specification.

3. The combination of the latch X, bell-lever X^1, and pin X^2, with the treadle H, cross-head S, and link G, substantially as and for the purpose specified.

4. The arrangement of the hydraulic pump P and ram E^2, with the treadle H, catch or eccentric pin J, link G, cross-heads S and C, and guide-rod D, substantially as and for the purpose specified.

5. The arrangement of the nut R, handle Y, screw Z′, and platform Z, with the treadle H, eccentric pin J, link G, cross-heads S and C, Fig. 1, substantially as and for the purpose set forth in this specification.

89,835.—VIRGIL PRICE, New York, N. Y.—*Carriage-Wheel.*—May 4, 1869.

Claim.—The corrugated metallic rim or tire C, of a wheel, when so shaped that it is higher at or near the edges than toward the middle, and when supported at or near the edges by two separate sets of spokes, projecting from the same hub, substantially as herein shown and described.

89,836.—WILLIAM M. K. THORNTON, Clinton, Wis.—*Buckle.*—May 4, 1869.

Claim.—An improved article of manufacture, consisting of a buckle, having its side-bars *e e* flanged,

and its side-loops *f f* arranged so that their outer surfaces *a* are flush with the corresponding surface *a* of said bars and their cross-bars *b b*, as herein set forth.

89,837.—ZACHARIAH WALSH, Newark, N. J., assignor to himself and CORNELIUS WALSH, same place.—*Trunk-Lock.*—May 4, 1869.

Claim.—1. The studs K, arranged to operate in connection with the hinge-plate G, face-plate A, and hasp Q, substantially as and for the purposes described.

2. The construction and combination of the sliding-bolt *e*, the recessed projection L, and hinged-plate G, substantially as and for the purposes described.

89,838.—JACOB WEAVER, Jr., Pittsburgh, Pa.—*Washing-Machine.*—May 4, 1869.

Claim.—The combination of the roll A with the India rubber R, the spring N, the frame C, and rollers B, and springs O, as and for the purposes specified.

89,839.—RUFUS SIBLEY, Greenville, Conn.—*Journal-Box.*—May 4, 1869.

Claim.—1. The combination with a shaft or bearing designed to run in a journal-box, of one or more scoops, of any desired shape or section, formed on the exterior of either a shaft or of a collar thereon, substantially as and for the purposes set forth.

2. The combination of one or more of the sediment-chambers H, with one or more of the longitudinal channels G, substantially as and for the purposes described.

89,840.—GEORGE ADAMS, Jr., Alexander, N. Y.—*Scaffold.*—May 11, 1869.

Claim.—1. The standards B, platform A, bails *e*, pawl-hooks *g*, ratchets *b*, and hoisting-cable *h*, when arranged and combined to operate substantially as herein set forth.

2. The crank *l* and chain-pinion *m*, supported above the platform, in combination with the windlass K, and chain-wheel Q, below the platform and the connecting chain, guiding-pulleys *j*, and cable *h*, arranged to operate as and for the purpose described.

3. The arrangement of the crank and chain-wheels *x* and *x'*, pitmen *y y*, and foot-rests *y' y'*, as described.

4. The combination and arrangement of the brake-lever and strap L *a*, with pawl and ratchet-wheels *q n*, as and for the purpose specified.

5. The combination of the ropes *s*, angle-levers *t*, rope *s'*, arms *u w*, and pull-rod *w'*, with the hook-pawls *g*, for disengaging the latter, as set forth.

6. The combination and arrangement of the ratchet-standards B, braces *c*, and pulleys I, with the platform A, supporting-pawl hooks *g*, and hoisting-rope *h*, substantially as and for the purpose set forth.

7. The pulley I, provided with hooks *i* and eye i^1, constructed in the manner and for the purpose described.

8. The adjustable guard-arms D, provided with friction-rollers *z'*, arranged and operating as set forth.

89,841.—THOMAS ATKINSON, Memphis, Tenn.—*Bee-Hive.*—May 11, 1869.

Claim.—The entrance formed of the sloping encased tubes B B, in combination with the inclined bottom A A, when provided with the sliding ventilators, as set forth.

89,842.—ISAAC W. BARNUM, New York, N.Y.—*Tuck-Creaser for Sewing-Machines.*—May 11, 1869.

Claim.—1. The combination of the spring-arm B, hammer or notch D, and yielding arm E, with a non-adjustable base-plate, A, and toothed plate G, substantially as specified.

2. In combination with the above, the smoother H, for the purpose set forth.

89,843.—ELIAS BARTO, Tiffin, Ohio.—*Corn-Marker, Planter, and Cultivator.*—May 11, 1869.

Claim.—The cut-off slide *g*, with hole or bucket *h*, discharging tube *j*, spring *i*, elbow I, lever H, bail G, and gum-elastic strike *k*, together with the hopper F, for the use and purpose as specified and herein set forth.

89,844.—GEORGE N. BEARD, St. Louis, Mo.—*Cotton-Bale Tie.*—May 11, 1869.

Claim.—The tongue-lever B B', in combination with the buckle A, so shaped as, when drawn down by the band C, to cause the end C' of the band to bend about the end-rail A', forming, by the counter-pressure of the compressed bale, an S-shaped curve, substantially as herein described.

89,845.—LOUIS R. BOYD, New York, N. Y.—*Cap for Preserve-Jars.*—May 11, 1869.

Claim.—The within-described cap, for jars and other articles, formed partly of metal and partly of glass, or other vitreous substance, permanently secured to the metal, whether such cap is or is not provided with a rubber gasket, or equivalent, between the glass, or vitreous substance, and the metal.

89,846.—HIRAM R. BOZORTH, Philadelphia, Pa.—*Refrigerator.*—May 11, 1869.

Claim.—The combination of the ice-box T, drum D, drip-pan N, pipes P P^1 P^3, and siphon S, with the water-cooler W, and inner and outer casings B C, the whole arranged and operating substantially as and for the purposes set forth.

89,847.—GEORGE B. BRAYTON, Boston, Mass., assignor to "THE NOVELTY EYELET COMPANY," same place.—*Composition Metal for Eyelets.*—May 11, 1869.

Claim.—The use of a metal for eyelets, composed of the elements and of the character substantially as described.

89,848.—JOHN G. BRESLIN, Lancaster, Ohio.—*Spark-Conveying Device.*—May 11, 1869.

Claim.—The combination of the bell-mouthed sections of the continuous discharge-pipe, and the short adjustable connecting-sections E, substantially as described.

89,849.—SAMUEL BRILLINGER, Clarence Centre, N. Y.—*Pump.*—May 11, 1869.

Claim.—1. The combination and arrangement, with cylinder A, having side-passages C D, of the rock-chamber B, provided with ports *c d*, and reciprocating plunger E, the whole operating in the manner and for the purpose specified.

2. The combination and arrangement, with rock-chamber B and plunger E, of the forked lever J, arms H I, and the lever F, operating as described, and for the purpose herein specified.

89,850.—D. L. CADY, Mason, Michigan.—*Sheep-Shearing Table.*—May 11, 1869.

Claim.—The double-leaves B B', having mortises F F, the middle boards C', straps D D, having loops C C, the levers G G, having plates H, and the notched plates H', on the legs *a a*, all made to operate substantially as and for the purpose herein specified.

89,851.—WILLIAM CHURCHILL, St. Louis, Mo.—*Punching-Machine.*—May 11, 1869.

Claim.—1. The hinged and weighted take-off K, and its prongs k^2, operating with the slide D to hold the plate when being punched, substantially as set forth.

2. The die *h*, straightening-plates I, punch F, and take-off K, arranged and combined substantially as set forth.

89,852.—GEORGE W. CILLEY, Norwich, Conn.—*Combined Lock and Latch.*—May 11, 1869.

Claim.—The combination, with the tumblers, arranged to operate also as a shield or shields to the key-hole, of a locking-bolt, or catch, so constructed and applied as to hold the tumblers in unlocking line or position when raised, and to secure them when down, substantially as described.

89,853.—GEORGE W. CILLEY, Norwich, Conn., assignor to himself and WILLIAM P. ADAMS, same place.—*Combined Lock and Latch.*—May 11, 1869.

Claim.—1. In combination with the latch and

bolt, the dogs C and G, so constructed that they may connect the two former when the key is made to act on the bolt-dog, substantially as and for the purpose set forth.

2. The case, when constructed with projections I, K, L, and M, in combination with tumblers having a shoulder formed on the back, and so arranged in relation to the projections, that when the bolt has been projected, and is then pressed against the tumblers, said shoulders shall engage the projection I, and prevent the raising of the tumbler, substantially as set forth.

89,854.—Isaac W. Clarke, Providence, R. I. —*Stopping-Mechanism for Machine for Doubling Yarn.*—May 11, 1869.

Claim.—1. The combination of the weighted tension-lever M, the link-connection *k* P, and the spool-unseating spring-plate *e*, or the equivalents thereof, substantially as described, the apparatus operating, upon the fall of such lever M, to disconnect the spool E from its source of motion, as herein set forth.

2. The combination with a spool, E, seated upon a flange, *d*, upon the spindle of a spring-plate, *e*, or equivalent device for unseating the spool, substantially as described.

89,855.—André Couturier, Trinidad, Cuba.— *Vegetable Fiber to Imitate Hair.*—May 11, 1869.

Claim.—As a new article of manufacture, the fiber produced from the leaf of the Corojo palm, by the process and means herein described.

89,856.—Hugh H. Craigie, New York, N. Y. —*Cock for Water-Closets.*—May 11, 1869.

Claim.—1. The ring *i* and elastic washer 15, in combination with the diaphragm seat *c* of the valve, the parts being constructed and applied substantially as set forth.

2. The cylindrical projection 8 of the valve *e*, in combination with the elastic washer 15 and valve-seat, for the purposes set forth.

3. The combination of the elastic washer 15, valve *e*, cylindrical projection 8, piston *k*, cylinder *h*, and washer 4, to control the closing of the valve, substantially as set forth.

89,857.—Hugh H. Craigie, New York, N. Y.— *Water-Closet.*—May 11, 1869.

Claim.—1. The movable cover *g*, forming a portion of the support for the basin, in combination with the flange *d*, formed as a part of the hopper *a*, and constituting the other portion of the support for the basin, substantially as set forth.

2. The bearing-lug 6 on the under side of the cover *g*, and the divided bearings at 7, in combination with the axis *i*, pan *c*, and arm *k*, as and for the purposes set forth.

3. The screw-thimble *t*, formed as specified, in combination with the bridge *u* and socket *s*, substantially as set forth.

4. The inclined-plane washer *c*, combined with the hooked stud 5, as and for the purposes specified.

5. The cover *w*, applied to the inner end of the hollow projection *q*, for the purposes set forth.

89,858.—Hugh H. Craigie, New York, N. Y. *Waste-Trap for Wash-Basins.*—May 11, 1869.

Claim.—1. The trap *d*, screwed upon the ferrule *b*, and acting as a nut to clamp the ferrule *b* and washer to the basin, substantially as set forth.

2. The ferrule *b*, trap *d*, stop-plate *g*, and trap-screw *f*, the parts being combined and arranged substantially as set forth.

3. The ferrule *b* and plug *c*, in combination with the trap *d*, connected directly to said ferrule *b*, substantially as set forth.

4. The trap *d*, intervening between the screw-coupling of the waste-pipe and the ferrule and plug of the basin or sink.

89,859.—Hugh H. Craigie,, New York, N. Y. —*Water-Closet.*—May 11, 1869.

Claim.—1. The plates *c c'*, formed with the downward flanges 7, on their under sides, and secured to the hopper by the action of wedges, substantially in the manner set forth.

2. The arm *f*, socket *e*, and hopper *a*, connected together by wedges, substantially in the manner specified, so as to allow of adjustment, as set forth.

3. The projecting arm *p*, on the side of the hopper *a*, with a movable cover, for receiving the valve or cock, in combination with the shaft *r* and arms *s* and *t*, for the purposes and as specified.

4. The weight *n*, ring *l'* and wedge-bolt *o*, in combination with the link *k*, for the purpose and as specified.

5. The bolt 5, passing through a hole in the plate *c*, in combination with the hopper *a*, having a notch, into which said bolt passes, so that the parts can be separated without detaching the bolt 5 from the plate *c*, substantially as set forth.

89,860.—Harry A. Crossley, Cleveland, Ohio. —*Stave-Jointer.*—May 11, 1869.

Claim.—The hollow cylinder B, concave on its outer surface, in combination with the knives D D, when the latter are arranged so as to cut in opposite directions from the center of the stave, all the parts being constructed and arranged to operate as set forth.

89,861.—William Doyle, Albany, N. Y.— *Combined Stove Lid and Damper.*—May 11, 1869.

Claim.—The construction of a stove-cover, having a circular rim, A, attached to its under side, in combination with flue-strips C C and B, or their equivalents, substantially as herein shown and set forth.

89,862.—Jonathan G. Dyer, Chicago, Ill.— *Self-Indicating Weighing-Scale.*—May 11, 1869.

Claim. — 1. The balancing-lever D, having a weighted end, E, a screw-rod, F, and ball, G, for adjusting the scale to a standard weight, and weight H, made adjustable in the slot *c*, for fixing the starting-point, substantially as set forth.

2. The combination of the balancing-lever D, having arms J, with beam 5, connecting-rod N, multiplying-lever O, having a cogged segment, P, pinion, Q, pivot, T, and indicator, 7, the whole being arranged and constructed as herein described.

89,863.—William Hailes, Albany, N. Y.— *Stove-Grate.*—May 11, 1869.

Claim.—1. A tripod or bipedal bearer for a circular grate, consisting of a grooved ring, G, perforated at *n*, a central socket, *g'*, and arms *g d*, made of one piece, substantially as described and for the purposes set forth.

2. The concentric ring B', formed on the plate B, with the ring of a bearer, G, and with friction-rollers or balls between them, substantially as described.

3. The manner, substantially as described and shown, of combining a circular grate wtih a tripod or bipedal bearing, anti-friction rolling-bearings *s s s*, and divisions *t*, substantially as set forth.

89,864.—Alfred Hasbrouck, Ithaca, N. Y.— *Machine for Cleaning Hair from Hides.*—May 11, 1869.

Claim.—The above-described machine, with all its parts, as arranged, combined, and operating.

89,865.—John W. Hewitt and Robert Hewitt, Allegheny City, Pa.—*Lubricator.*—May 11, 1869.

Claim.—The arrangement of the plug A with the passage A^2, aperture A^3, and crevice A^4, lid B, and apertures B^1 and B^2, with the reservoir C, cock C^1, and plug C^3 when constructed, combined, arranged, and operating substantially as herein described, and for the purpose set forth.

89,866.—P. L. Higley, Cincinnati, Ohio.—*Machine for Molding Metal Disks, Rivets, &c.*—May 11, 1869.

Claim.—1. The above-described machine for molding metal disks, substantially as shown and described.

2. The movable plate G, perforated as described.

3. The double series of wires O O, attached to the stationary plate at one end, penetrating the molds, serving as guides to the mold-plate, and acting as cores for the holes, or slots in the castings, substantially as shown.

89,867.—Stephen Hull, Poughkeepsie, N. Y.—*Harvester-Rake.*—May 11, 1869.

Claim.—1. The bevel-wheel M, constructed with pins *y*, or their equivalents, extending up from the top of the bevel-wheel, whereby the armed hub O can be rigidly connected to the bevel-wheel by simply setting it down upon said wheel, and also whereby it can be disconnected therefrom by simply lifting it up from said wheel, substantially as described.

2. The vibrating grain-compresser E, applied upon a grain-platform, and operated by the rake during the act of raking off the grain, said compresser being constructed to operate substantially as described.

3. The tubular journal-box P, constructed with two bearings, *i i*, and adapted to serve the purposes described.

4. The construction of the shoe L, with an arched recess, L^2, substantially as described.

5. The construction and arrangement of the guide-plate G′, of the cam-rail G, and the adjustable bearing-pieces O′ of the rake or reel-arms, all in the manner and for joint operation substantially as described.

6. The rod D^2, extending backward and upward from the rear of the outer divider D^1, as described and shown, arranged with a combined rake and reel, which has arms of different lengths, so that the rake-arms, during their revolution, will move clear of the rod D^2, and the reel-arms will be lifted by said rod, substantially as specified.

7. Rocking-shaft S, constructed, arranged, and applied substantially as described, and the devices *p t* t^1 t^2, or the equivalents thereof, in combination with the ordinary cam-rail G, and with the independently hinged rake and reel-arms of a combined revolving rake and reel, for the purpose set forth.

8. The supporting-beam C^1, extended inward, and suspended from the draught-frame by means of an adjustable connection, Y, said beam supporting the platform and bearings of the finger-beam, and being secured to the shoe L, substantially as described.

9. The arrangement and combination of the washers P′, hub P, shaft I, bevel-wheel M, hub O, cam-plate H, cam-rail G, and independently hinged rake and reel-arms, substantially in the manner shown and described.

10. The device *p*, or its equivalent, applied to the crown-wheel M, or hub of the rake and reel, for automatically operating the device *t*, which suddenly elevates the rake and reel-arms, substantially as described.

89,868.—Leonard J. Johnson, Norwich, Conn., assignor to himself, Charles B. Stodder, and Harvey Chapman, same place—*Invalid Bedstead.*—May 11, 1869.

Claim.—The combination and arrangement of the operative spring *r*, screw *s′*, and nut *t*, and the clutches, as described, with the single crank *o*, and the main and auxillary shafts *e* and *g*, combined with the back-rest and leg-frame, by means of mechanism for operating them, substantially as set forth.

89,869.—Robert Kent, Brooklyn, N. Y., assignor to Thaddeus Fowler, Seymour, Conn.—*Die for Drawing and Reducing Wire.*—May 11, 1869.

Claim.—The herein-described apparatus for reducing wire, when constructed and operating substantially as set forth.

89,870.—Gideon King, Eminence, Ky.—*Clothes-Drier.*—May 11, 1869.

Claim.—The frames A A, rod *c*, bevels *d d d d*, arms *e e e e*, plates *h h h h*, arms K, tube *l*, and braces *i i*, when combined, arranged, and constructed substantially as and for the purpose specified.

89,871.—Edward M. Lang, Portland, Me.—*Lantern.*—May 11, 1869.

Claim.—1. The combination of the annular air-space formed by the base of the chimney, slightly elevated above the disk *e*, the unperforated disk *e*, the two cones, with the flaring or wider slot of the outer and the narrower slot of the inner, all as and for the purposes described.

2. In combination with the unperforated disk *e*, the deflector and chimney-base, the outwardly pressing spring-hooks, as and for the purposes described.

3. The unperforated disk *c*, in combination with the annular air-space, as and for the purposes set forth.

4. The cap *o*, when provided with the conical piece of metal *q*, and hinged cap *r*, as and for the purposes set forth.

89,872.—H. B. Leach, Philadelphia, Pa., assignor to E. C. Penfield, same place.—*Combined Suspender and Shoulder-Brace.*—May 11, 1869.

Claim.—1. The combined shoulder-brace and suspender, having a metallic buckle-plate, A, as represented in figs. 4 and 5 of the accompanying drawings, constructed substantially as and for the purpose herein described.

2. The combination of the bent wire loops *k k′*, with the buckles *c c′*, substantially as shown and described.

89,873.—George Leman and George W. Beals, Springfield, Mass.—*Vegetable-Slicer.*—May 11, 1869.

Claim.—The table B, with the guide E thereon, and the feed-bar C, operated in the guide D and ways *c*, by means of the spring *a* and guide-block F, in combination with the rotating-plate A, having the adjustable knives *a* thereon, the whole constituting a vegetable-slicer, constructed and operating substantially as and for the purposes herein specified and described.

89,874.—John McAuliffe, New York, N. Y.—*Umbrella.*—May 11, 1869.

Claim.—An umbrella-frame, in which a loop at the upper end of each rib works in a notch in the grooved crown-plate, and is embraced by a ring in said groove passing through the loops of all the ribs, and in which umbrella the divided or bifurcated upper end of the stretcher operates by means of an intermediate lap between it and the ribs, all substantially as described.

89,875.—J. L. McAlemy, Memphis, Tenn.—*Truss.*—May 11, 1869.

Claim.—The combination of the cover D, elastic cushion E, and pad C, constructed, arranged and operating substantially as described.

89,876.—Hugh McDonald, Pittsburgh, Pa.—*Manufacture of Steel-Faced Iron Plates.*—May 11, 1869.

Claim.—The hereinbefore-described mode of making compound metallic plates, by welding together two or more plates, slabs, bars, or ingots of iron of different relative capacities for taking carbon, or of iron and a low quality of steel, and then subjecting the face or faces of such compound plates to the process of cementation, substantially as described.

89,877.—Robert R. McDonald, Syracuse, N. Y.—*Shoe-Knife and Gauge.*—May 11, 1869.

Claim.—The knife-blade B, gauge C, screw D, wedge E, and thumb-screw F, when arranged substantially as and for the purpose set forth.

89,878.—Joseph C. McKenzie, Adrian, Mich.—*Tile-Machine.*—May 11, 1869.

Claim.—1. The adjustable mold E, surrounding the core C, in combination with the screws F F F, operating substantially as and for the purposes set forth.

2. In combination with the tapering angular trough A, the swing-bolts H, operating as and for the purposes set forth.

3. The combination of the tapering angular trough A, the shaft B, when supplied with the knives *b*, and screw *b′*, and the screws F, and mold E, and core C, substantially as and operating in the manner set forth.

89,879.—S. M. Meyenberg, New York, N. Y.—*Veil-Holder.*—May 11, 1869.

Claim.—A self-fastening veil-holder, *b*, made of spring material, having its ends terminated by eyes or knobs, as described.

89,880.—Glendy Moody, Falmouth, Me.—*Revolving Grate in Heating-Stoves.*—May 11, 1869.

Claim.—The improved stove, made and to be op-

erated as herein described, and having the devices herein shown, all as set forth.

89,881.—CURTIS C. CADY MORGAN, Auburn, N. Y., assignor to himself, CURTIS C. CADY, and ELMORE P. ROSS.—*Sheet-Metal from Lead and Zinc.*—May 11, 1869.

Claim.—1. The new article of manufacture, composed of lead and zinc, combined in the manner substantially as above described.

2. The process of fusing and combining other metals with zinc, by melting and fusing them while in the molten state, and cooling the mixture in oil, substantially as above described.

89,882.—WILLIAM H. NAUMAN, Dayton, Ohio, —*Seed-Drill.*—May 11, 1869; antedated April 13, 1869.

Claim.—1. A feed-wheel running in a cup under the hopper and through the hopper-bottom, when the quantity of seed is regulated by a slide, as described, as and for the purpose set forth.

2. The adjustable slide B, placed in front of the feed-wheel, in combination with the cup C, substantially as and for the purpose set forth.

3. The combination and arrangement of the feed-wheel A, slide B, and cup C, as described and shown.

89,883.—GEORGE W. NELL, Philadelphia, Pa.—*Curtain-Fixture.*—May 11, 1869.

Claim.—The combination of the S-shaped hook B with the toothed plate A, when the latter is provided with a longitudinal groove to receive the rib or pin *e*, formed upon the hook for the purpose of preventing the lateral play of the same, as herein shown and described.

89,884.—RICHARD NORRIS, Jr., Baltimore, Md. —*Hardening and Washing "Ransome Concrete Stone."*—May 11, 1869.

Claim.—An apparatus having two compartments, an open and a closed one, and with a packed and controllable diaphragm between them, of which the stone to be treated forms a part, for forcing, by artificial means, into or through what is known as the "Ransome concrete stone," either or both chloride of calcium of the proper strength to harden, or water, to dissolve and wash out the chloride of sodium formed therein, substantially in the manner herein described and represented.

89,885.—D. C. OWEN, Adams County, Ill.—*Pump.*—May 11, 1869.

Claim.—The stock-sockets C F, connecting-pipes D D, cylinders A A, pistons G G′, combined with the valves *d d*, *e e*, and chambers E E, all arranged and operated substantially as and for the purpose described.

89,886.—EMERY PARKER, New Britain, Conn. —*Key.*—May 11, 1869.

Claim.—The improvement, which consists in uniting the two parts, A and B, of the shank of a folding-key, by means of a joint, which is constructed with a slotted hole for the joint-pin, in combination with a fixed pin, *g*, and score, *f*, for locking such joint, substantially as described.

89,887.—GEORGE M. PHELPS, Brooklyn, N. Y. —*Printing-Telegraph.*—May 11, 1869.

Claim.—1. Rotating the type-wheel by means of a rotary magnetic motor, applied to a shaft that is connected with the type-wheel, substantially as set forth.

2. The governor and adjustable circuit-breaker, substantially as set forth, in combination with the electro-motor, substantially as set forth.

3. The mechanism, substantially as set forth, for giving an impression upon the type-wheel by the lever *k′*, and type-wheel actuated by the revolution of the shaft *l*.

4. The pawl 35, stops 39, collar 33, and ratchet 36, substantially as set forth, for locking the type-wheel during intervals in the transmission of words or signals.

5. The slides *v*, collar 33, and mechanism, substantially as set forth, for directing the current of electricity to the magnets o^1, as set forth.

6. The combination of the circuit-breaking lever *t* with the locking-lever and type-wheel, substantially as described.

89,888.—JESSE REYNOLDS, Philadelphia, Pa.—*Grate-Bar for Furnaces and Heaters.*—May 11, 1869.

Claim.—The combination and arrangement of the tapering or wedge-shaped piece *e* with the bearing-bars *d* of the grate, and sliding-bars *b*, whereby the bars may be pushed up to their places, substantially as described.

89,889.—WESTLEY RICHARDS, Birmingham, England.—*Breech-Loading Fire-Arm.*—May 11, 1869.

Claim.—1. The combination of the breech-lever and its stopper (constructed to be turned upward and forward to open the breech) with the hammer, through the intermediate cocking-lever *k*, the combination being and operating substantially as set forth.

2. The combination of the breech-lever and its stopper (constructed to be turned upward and forward to open the breech) with the hammer, by means of the intermediate levers interposed between the breech-lever and the hammer, the whole constructed to operate substantially as before set forth.

3. The combination of the breech-lever and its sliding-block with the plunger and the lever *i*, substantially as set forth, to draw back the plunger as the breech opens, and thus prevent accidental explosions.

4. The combination of the lever *i* with the jointed end k^3 of the cocking-lever, as set forth.

89,890.—CHARLES G. SARGENT, Westford, Mass. —*Cotton-Gin.*—May 11, 1869.

Claim.—1. The raw-hide or partially elastic working-edge of a stationary guard, in combination with a ginning or cleaning cylinder, substantially as described.

2. The reciprocating comb or finger-bar, in combination with a stationary guard and ginning or cleaning cylinder, the whole constructed to operate substantially as described.

3. The combination of one or more oscillating rakes with a ginning or cleaning cylinder, substantially as described.

89,891.—CHARLES G. SARGENT, Westford, and ALFRED B. ELY, Newton, Mass.—*Cotton-Gin.*—May 11, 1869.

Claim.—An elastic or partially elastic-surfaced roll, in combination with a reciprocating guard-plate, having a serrated or corrugated edge, arranged and operating substantially as described.

89,892.—JOHN SEEBERGER and JOSEPH SEEBERGER, West Troy, N. Y.—*Pump.*—May 11, 1869.

Claim.—1. The revolving bottom D, furnished with the valve V, constructed as described, in combination with the fixed bed E, with one or more pipe-holes *h*, all arranged and constructed as and for the purpose specified.

2. The revolving bottom D, packed with the leather *g*, as shown in fig. 6, and in combination with the shaft *i*, and the miter-gears *k* and *m*, as and for the purpose set forth and described.

3. The dial-face *o*, furnished with the numbered lines 1, 2, 3, and short lines *r*, in combination with the thumb-piece *p*, with its pointer *s* and miter-gears *m* and *k*, all arranged and operated as and for the purpose set forth and specified.

4. The eccentric W, worked by its thumb-piece W′, in combination with the stopper *u*, as and for the purpose set forth and described.

5. The vent Z, provided with the float Z′, in combination with the chamber G and nozzle *y*, as and for the purpose specified.

6. A pump constructed with the chamber A, plunger B, in combination with a revolving bottom, D, furnished with a valve, V, and moving in the pierced fixed bed E, by means of the shafts *i* and *u′* and the miter-gears *k* and *m*, as and for the purpose set forth and described.

89,893.—HENRY S. SHISLER, Manheim Township, Pa.—*Gate-Fastener.*—May 11, 1869.

Claim.—The connecting link or plate B, in com-

bination with a spring rod or pole, A, and wire C, when applied substantially in the manner and for the purpose specified.

89,894.—ANTHONY W. SMITH, Birmingham, Pa.—*Parlor-Game.*—May 11, 1869.

Claim.—The combination of a series of games, arranged in a series of concentric circles, so as to be played by a single pointer or revolving hand at the center, substantially as above set forth and described.

89,895.—EDWIN J. SMITH, Chicago, Ill.—*Revolving Bin.*—May 11, 1869.

Claim.—1. The table E, provided with partitions *b*, so as to form a series of compartments or bins, and cones D and C, so constructed and arranged that the table revolves on the apex of the cone C, substantially as and for the purposes herein specified.

2. The combination of the flange A, series of balls, or their equivalent, and the cones C and D, when constructed and arranged substantially as shown and specified.

89,896.—CHARLES E. SPAULDING, Theresa, N. Y.—*Bee-Hive.*—May 11, 1869; antedated April 8, 1869.

Claim.—1. The shaft H *h*, in connection with the removable upper chamber *a*, hive E, and lock *s*, substantially as and for the purpose herein described.

2. The revolving hoop *f*, in connection with bottom C *c n*, for opening and closing the entrances to the hive, substantially as set forth.

3. The shaft H, revolving upper chamber *a*, boxes D, revolving hoop *f*, and lower chamber E, having a covering-tube, *i*, and double walls *g f*, all constructed, arranged, and operated as and for the purpose herein set forth.

89,897.—MARTIN STIEFENHOFER, City Island, N. Y.—*Rocking-Chair and Rotary-Fan.*—May 11, 1869.

Claim.—The levers *o* and *p*, set upon the rockers of the chair, in combination with the standard *g*, hinged to the chair, so as to be adjusted, and the fan *k*, which is revolved by the cord, as and for the purposes set forth.

89,898.—J. F. TAPLEY, Springfield, Mass., assignor to himself, SAMUEL BOWLES, B. F. BOWLES, and CLARK W. BRYAN, same place.—*Paper-Fastener.*—May 11, 1869.

Claim.—Securing or binding sheets by a metal plate, substantially as and for the purposes herein described.

89,899.—JOHN F. THOMAS, Ilion, N. Y.—*Hay-Spreader.*—May 11, 1869.

Claim.—1. The stationary cams E, constructed substantially as described, for giving the positions and motions, as specified, to forks *f*, which turn upon axes parallel to the axis of the reel or shaft D, substantially as shown and set forth.

2. The stationary gear-box H, the intermediate pinion P, and the central pinions N, constructed and operating as described, in combination with the wheel C of the carriage, and with the tedder-arms and tines, for the purpose described.

3. The stationary pawl *s s*, in combination with the tedder-arms and tines and the carriage-wheels of the machine, substantially as described.

4. The combination of the arm or dog *g*, fork-tines *f*, and cam E, constructed and operating substantially as described.

5. The arrangement of independently movable forks or tines upon independent revolving arms, when the vibrating movements of the forks or tines are controlled by a stationary cam, substantially as described.

89,900.—ASAPH THOMPSON, Hudson, Ohio.—*Milk-Cooler.*—May 11, 1869.

Claim.—1. The two hollow boxes, with their metallic surfaces M M′, the knobs K K, &c., depressions D D′, and perforations, or their equivalents, substantially as shown and set forth.

2. The combination and arrangement of said boxes with faucets, reservoirs, and packing, for the purpose and substantially as herein set forth.

3. The mode of cooling milk and other liquids, by causing a thin stratum thereof to so flow between two metallic surfaces as to keep the cavity therefor at all times full of the liquid to be cooled, while the metallic surfaces are themselves kept cool by a stratum of cooling liquid, so flowing forward over the upper sides of the one, and (the same stratum) backward in full contact with the under side of the other, as to keep all the cavities at all times both full and flowing, substantially as set forth.

89,901.—ASAPH THOMPSON, Hudson, and JAMES DARLING, Northfield Township, Ohio.—*Milk-Cooler.*—May 11, 1869.

Claim.—1. The combination of the horizontal pipes P P, &c., for the cooling liquid to flow through, with the floats F F, &c., or their equivalents, substantially as and for the purpose set forth in the foregoing specification.

2. The mode of cooling liquids, by horizontal pipes, or their equivalents, kept floating on or at any desired depth beneath the surface of the liquid to be cooled, the pipes adjusting themselves to the varying height of the liquid to be cooled, and having constantly flowing through them the cooling liquid, substantially as herein set forth.

89,902.—SILVANUS FREDERICK VAN CHOATE, Boston, Mass.—*Breech-Loading Fire-Arm.*—May 11, 1869.

Claim.—1. The breech-frame *b*, as made with a slot, having walls in vertical planes, a bottom concentric with the bore of the barrel, and an open top, one of the walls having a groove for reception of the shell-extractor, the frame having also a recess at the rear to receive the recoil-cam, which locks the breech-piece in the breech-frame.

2. The breech-piece *a*, made to fill the slot in the frame, and to have its top flush with the cylindrical surface of the breech-frame, and with provision at the rear for the recoil-cam and its turning-shaft, and with the slot *n* for operating the cartridge-ejector, and the mortise, described and shown, for admitting the actuator of the firing-pin, and the slot which traverses pin *k*.

3. The shaft *e*, constructed at or near its end, as described, so as to operate as a safety-device to protect the firing-pin from being struck while the breech-piece is unlocked.

4. Combining with the shaft *e* a projection, *z*, as and for the purposes described.

5. In fire-arms in which the breech-piece *a* can be moved back and forth in the direction of the length of the barrel without turning, traversing in a slot in the breech-frame *b*, the employment of a cam, *f*, arranged to slide with the breech-piece, and to be turned crosswise of said piece, so as to lock into and unlock from cross-cuts or recoil-seats made in the opposite sides of the breech-frame *b*, as and for the purposes described.

89,903.—THOMAS B. WALKER, Wakefield, Mass.—*Cooking-Stove.*—May 11, 1869.

Claim.—1. The combination of the hot-air flues F, H, and I, and the openings *c e* thereof, with the air-heating chamber E, the fire-place A, the oven D, and the smoke-flues over the top, in rear, and underneath the oven, the whole being as set forth.

2. The combination of the chamber *h* (in the shelf M) and its openings *i f*, the fire-place A, the chamber E, with the oven D and the air and smoke-passages arranged about the same, in manner as described.

3. The arrangement of the air-flues F, H, and I, and the openings *c e* with the oven, in manner as set forth, when such flues are employed with a fire-place and air-heating chamber about the same, and with smoke-flues, as specified.

4. The arrangement of the shelf-chamber *h* and its openings *i f*, with the oven D, and the air and smoke flues about the same, and combined with a fire-place and air-heating chamber, as set forth.

89,904.—MARTIN WEAVER, East Earl Township, Pa., assignor to himself and PHILIP FOREMAN

same place.—*Feed-Regulator for Mills.*—May 11, 1869.

Claim.—The combination and arrangement of the external cup A with its conductors *a a a*, central elevated disk B, and curved beaters *b b b*, internal ring D, provided with flanges *d d d d*, and slotted ears E *e*, all suspended within the eye of the runner G, and operated as and for the purpose herein shown and described.

89,905.—William Wellington, Rockford, Ill.—*Ventilator and Refrigerator.*—May 11, 1869.

Claim.—The refrigerator and ventilator above described, consisting substantially of the refrigerator A, in combination with the tubes A^2 and B, with their slides *a* a^1 a^2, as and for the purpose set forth.

89,906.—William L. Williams, New York, N. Y.—*Wood-Splitting Machine.*—May 11, 1869.

Claim.—The swinging-arm *l* and pulley *k*, arranged as specified, to carry the feeding-chain for moving the wood in the trough of a wood-splitting machine, substantially as set forth.

89,907.—William H. Allen and William Stoddard, Winona, Minn.—*Flour-Bolt.*—May 11, 1869.

Claim.—The external rapper, (one or more,) having a shoulder, *b*, and the spring E, in combination with cleats *f*, on the ribs *a* of a flour-bolt, substantially as described.

89,908.—R. N. Allen and L. W. Kimball, Pittsford, Vt., assignors to themselves, William H. Mallory, and Edwin L. Butterfield, New York City.—*Car-Wheel.*—May 11, 1869.

Claim.—Car-wheels constructed of metal and paper, substantially as herein described.

89,909.—John A. Bailey, Detroit, Mich.—*Pneumatic Pump.*—May 11, 1869.

Claim.—1. The pneumatic pump, arranged as described, to effect the elevation of the water by the direct action of the compressed air on the water, and provided with its valve-mechanism D C *b h f a*, substantially as shown, for changing the pressure from one chamber to another, to admit of alternately filling the same, all as and for the purpose specified.

2. The valve C, as arranged to be operated by means of the compressed air, the same being admitted to act thereon after having expelled the water from the chamber F or G, through the medium of the float-valves L K, substantially as and for the purpose specified.

3. The vessel H, having the compartments F G, the valve C, provided with passages, as described, and its operating mechanism, the float-valves L K and valves S, all arranged and combined substantially as and for the purpose specified.

89,910.—Otto H. Bandisch, Berlin, Prussia, assignor to Frederick Volckmann, Hoboken, N. J.—*Explosive Compound.*—May 11, 1869.

Claim.—The explosive compound herein described.

89,911.—Virgil W. Blanchard, Bridport, Vt.—*Machine for Carving.*—May 11, 1869.

Claim.—1. The employment of the nuts G and H, screw-shafts p^3 and q^3, in combination with the two upright screw-shafts i^3 and j^2, and nuts N and O, for the purpose of giving at the same time a longitudinal sliding motion to the pattern or copy, and the material furnished to be carved, &c., and a rising and falling vertical motion to the molding and cutting or polishing points of the lathe or engine, substantially as and in the manner set forth.

2. The employment of the sliding frames E and F, and nuts H and G attached to said frames, in combination with the screw-shafts p^3 and q^3, having the mechanism for communicating motion to said shafts, substantially as and for the purpose described.

3. The nuts N and O, in combination with the screw-shafts i^3 and j^3, and guides T^1, T^2, and T^3, as and for the purpose set forth.

4. The shaft a^7, carried in the nut N, with the nut R and arm P, arranged and operating substantially in the manner and for the purpose specified.

5. The arm b^7, lever Q, and shaft S, carried by the nut O, arranged to operate substantially as described.

6. The combination of the shaft a^7, carried in the nut N, nut R, and arm P, with the arm b^7, lever Q, and shaft S, substantially as described.

7. The weighted lever V, pivoted to the arm of nut O and the sliding-frame S^1, in combination with shaft S, arranged to operate substantially as described.

8. The weight X, in combination with the lever Q, arm b^6, nut O, and screw-shaft j^3, arranged to operate substantially as and for the purpose set forth.

9. The employment of the lathe-mechanism attached to sliding-frame E, consisting of the parts *a* and B″, in combination with said frame, substantially as described.

10. The employment of the mechanism mounted on the sliding-plate K K, in combination with the bed-plate A A, ways *r r*, tooth-bar A^3, and folding-frames B B, when all the parts are constructed and arranged to operate substantially as and for the purpose described.

11. The ratchet-wheel f^2, pawl h^2, disconnecting lever c^6, and the shaft j^3, arranged and operated substantially as set forth.

12. The adjustable feed-mechanism, consisting of feed-bar O^2, the plate above it provided with a slot or mortise, and a screw, to vary the length of the stroke, substantially as and for the purpose set forth.

13. The arrangement of the differential gear-wheels k^3, b^3, t^3, and u^3, with the screw-shafts i^3, j^3, p^3, and q^3, and nuts N, O, H, and G, substantially as and for the purpose set forth.

89,912.—Alonzo T. Boon and James H. Bell, Galesburgh, Ill.—*Bed-Bottom.*—May 11, 1869.

Claim.—1. The boxes A A, provided with rubber, in combination with arms C C, substantially as and for the purpose set forth.

2. The spool D, as arranged and operated substantially in the manner and for the purpose as described.

89,913.—Albert Branshaw, Fond du Lac, Wis.—*Car-Coupling.*—May 11, 1869.

Claim.—The combination and arrangement of the draw-head A, gravitating-hook C, and pivoted device D, substantially as described.

89,914.—Theodore W. Burger, New York, N. Y.—*Vent for Cans.*—May 11, 1869.

Claim.—The plug or cap C, fitting within the socket B of the can, when provided with the pendant wire stop D, as herein described, for the purpose specified.

89,915.—Daniel C. Chester, Ogdensburgh, N. Y.—*Braiding-Foot for Sewing Machines.*—May 11, 1869.

Claim.—1. A braider-foot, constructed substantially as described, with elastic fingers *b b*, arranged along either side of the foot, and bent at their ends, to form a braid-passage, *c*, in line with, and so that it meets or approximates the needle-hole *d*, on the under side or face of the foot, essentially as specified.

2. The combination of the cam *e* and screw *f* with the elastic fingers *b b*, constructed to form a braid-passage, *c*, disposed, in relation to the needle-hole *d*, substantially as specified.

89,916.—Jonathan M. Clark, New York, N. Y.—*Steam-Generator.*—May 11, 1869.

Claim.—The combination of the hollow, angular head B, tubular connecting-plug C, and flange *d*, substantially as described.

89,917.—Benjamin F. Cloud, Philadelphia, Pa.—*Curtain-Fixture.*—May 11, 1869.

Claim.—The combination of the flanged journals *a*, hangers *c*, chords *e i*, rollers *f*, pulley *j*, friction-wheel *k*, casing *l*, and the friction-spring, as herein described, for the purpose specified.

89,918.—J. W. Cole, Mount Pleasant, Iowa.—*Pump.*—May 11, 1869.

Claim.—A metallic pump-bracket, held in place

by lateral flanges, embracing an outer portion of the pump-stock, the inner flanges being fixed in a groove, the bottom part of said bracket converging upon the base of the slot, the pump-brake pivoted upon bearings projecting about centrally from the bracket, all arranged so as to permit the full sweep of the handle, from a vertical position, when the piston is elevated to an acute angle in the reverse position.

89,919.—CHARLES CROSS, Louisville, Ky.—*Foot-Measure for Shoemakers.*—May 11, 1869.

Claim.—1. The combination, with the bed-piece A, provided with the side walls B and B′, of the measures C and C′, when inlaid in the same, substantially as and for the purpose described.

2. The combination, with the bed A, having the side walls B and B′, of the inlaid measures D and E, substantially as and for the purpose described.

3. The slide E, arranged in the adjustable part F of the bed, substantially as and for the purpose described.

4. The combination, with the inlaid measures C and C′, of the toe-gauges G, substantially as and for the purpose described.

89,920.—FREDERICK EBERT, Saxonburgh, Pa.—*Horse Hay-Fork.*—May 11, 1869.

Claim.—The arrangement shown and described of the sliding-block or plate D, and cross-tie or brace *a*, and lug a^1, with relation to the bent rod A, link E, lever F, sliding-rod C, and articulated arms B B′, as and for the purpose specified.

89,921.—GEORGE EWART, New York, N. Y.—*Needle-Wrapper.*—May 11, 1869.

Claim.—The needle-wrapper, which consists of the paper sheets A B, the sheet B having the projecting flaps *a b*, by means of which the loop *c* is formed, substantially as herein shown and described.

89,922.—DANIEL FASIG, Rowsburgh, Ohio.—*Device for Seizing Animals.*—May 11, 1869.

Claim.—The curved horns B and extensions *d*, in combination with the handle A, plate *b*, links *e*, rod *f*, loop *h*, and elastic strap C, all arranged as described, for the purpose specified.

89,923.—JOHN FIELD, New York, N. Y.—*Banjo.*—May 11, 1869.

Claim.—Constructing the drum of banjoes with a frame, A, formed with the projections 3 3, and cross-pieces 4 4, and ring B, substantially as and for the purpose herein shown.

89,924.—GAETANO FORMICA, New York, N. Y.—*Rocking-Chair.*—May 11, 1869.

Claim.—1. The levers E E, pivoted to the side bars of the swinging-seat, and connected with the rotary fan, as described, they being so hung that they will swing in opposite directions, substantially as herein shown and described.

2. The combination of the support A, which carries the pivoted seat, with the springs *e*, levers E, rods *f*, and rotary fan F, all arranged and operating substantially as herein shown and described.

89,925.—JOHN S. FRAY, Bridgeport, Conn., assignor to himself and HORACE PIGG, same place.—*Attachment to Boring-Brace.*—May 11, 1869.

Claim.—The attachment B, provided with the longitudinal groove, the lugs or ears C C, and the set-screws *d*, arranged and operating as described, whereby it is adapted to be applied to a common boring-brace, as herein set forth, for the purpose specified.

89,926.—C. E. FRITTS, Oneonta, N. Y.—*Curtain-Fixture.*—May 11, 1869.

Claim.—A window-shade fixture, consisting of the combination of the spring-drum *a*, spring *b*, arbors *c h*, cord *g*, recessed pulley K, cord *e*, ratchet-wheel *n*, pawl *o*, and spring-rod *p*, all combined and operating substantially as herein shown and described.

89,927.—L. P. GARNER, Ashland, Pa.—*Coal-Screen.*—May 11, 1869.

Claim.—1. A coal-screen, composed of the circular grate-bars A, constructed as described, and arranged for rotation, substantially as specified.

2. The combination, with the said rotary screen, of the roller B, provided with disks, working in the spaces between the grates, and the sliding spring-comb D, all substantially as specified.

89,928.—JAMES HERVEY GUEST and ELWOOD FAUCETT, New Albany, Ind.—*Memorandum-Book.*—May 11, 1869.

Claim.—Attaching the book B to the cover A by means of the hinge C, slots *f*, and pins *e*, all arranged as described, for the purpose specified.

89,929.—VALENTINE T. HALL, Brooklyn, N. Y.—*Locking-Device for Stop-Cocks.*—May 11, 1869.

Claim.—The collars, flanges, or lugs *d e* and *g h*, formed upon the cock C, sleeve B, and pipe A, to receive the padlocks, whereby either the cock is locked to the sleeve, or the sleeve to the pipe A, all arranged as described, for the purpose specified.

89,930.—VALENTINE T. HALL, Brooklyn, N. Y.—*Locking-Case for Stop-Cocks.*—May 11, 1869.

Claim.—The case or clasp C, provided with either an interior hook-fastening, or with a hinge, or other connection, and so constructed that a stop-cock or connection may be secured and prevented from being turned or removed, by applying a padlock to the case, substantially as shown and described.

89,931.—J. WAYTT JONES, Paducah, Ky.—*Door-Lock.*—May 11, 1869.

Claim.—The combination of the slides E and G with the bolts B and F, and levers *J*, *m*, and *n*, arranged substantially as shown and described, for the purposes set forth.

89,932.—T. D. KEITH, Mayville, Wis., assignor to himself and E. J. DAHM, same place.—*Operating-Drill.*—May 11, 1869.

Claim.—A ratchet-swivel, placed between two ropes, so constructed and arranged as to act and to automatically turn a drill, substantially as herein shown and described.

89,933.—THEODOR LANDMANN, Cincinnati, Ohio.—*Composition for Floors, Sidewalks, &c.*—May 11, 1869.

Claim.—1. The compound for floors, sidewalks, &c., herein described, when composed of the ingredients substantially in the manner set forth.

2. Soaking the cement floor or walk with linseed or other oil, after it is dry, to make it water-tight, as specified.

89,934.—ISRAEL LONG, Terre Haute, Ind.—*Coffee-Roaster.*—May 11, 1869.

Claim.—1. The compass-legs, in combination with the screw-nut, when applied to a coffee-roaster, substantially as and for the purpose specified.

2. As an article of manufacture, the whole device above described, consisting essentially of the globe A, handle *i*, legs *e e e*, compass-legs *m m*, screw-nut *n*, crank *b*, shaft B, arm *a*, and oblique plate C, all constructed, arranged, and adapted to operate substantially as and for the purposes set forth.

89,935.—F. X. LOUGHERY, Kelleysville, Pa.—*Warp-Beam for Loom for Weaving Skirts.*—May 11, 1869.

Claim.—The conical yarn-beam B, provided with the separating-disk D, substantially as and for the purpose described.

89,936.—CHARLES T. MASON, Sumter, S. C.—*Electric Alarm.*—May 11, 1869.

Claim.—The combination of the circuit-wire B, springs D, and arms F, with each other, substantially as herein shown and described and for the purpose set forth.

89,937.—W. A. MCDONALD, Morrisania, N. Y.—*Machine for Cutting Moldings in Wood.*—May 11, 1869.

Claim.—1. The stamped or molded saw-blade C, when formed with the requisite angular, curved, or irregular cross-section, and tapered toward one end,

its teeth being on the tapering edge, as shown, operating as described, for the purpose specified.

2. Arranging two molded tapering saw-blades C, which are constructed as herein described, on one machine, to cut into the edge of a wooden plate, as herein set forth, for the purpose specified.

89,938.—DANIEL B. NEAL, Mount Gilead, Ohio, assignor to himself, W. W. MCCLENACKEN, and E. C. CHASE, same place—*Horse Hay-Fork.*—May 11, 1869.

Claim.—In a horse hay-fork, constructed as described, the combination, with the handle H, of the shaft *a*, disk D, bar A, and cord C, constructed, arranged, and operating substantially in the manner specified.

89,939.—STEWART NEILL and ADAM PICK, Chillicothe, Ill.—*Extension End-Board for Wagons.*—May 11, 1869.

Claim.—The combination of the pivot-blocks or stops *b* with the triangular sides C, constructed substantially as described.

89,940.—HENRY L. PRATT, Beverly, Mass., administrator of the estate of E. L. PRATT, deceased.—*Pen.*—May 11, 1869.

Claim.—A pen-fountain, having two foraminous fluted tongues *a f*, arranged to clasp upon the body of a pen, and between each of which and the adjacent surface of the pen an ink-holding and nib-supplying reservoir is formed, as described.

89,941.—H. L. PRATT, Beverly, Mass., administrator of the estate of E. L. PRATT, deceased.—*Boiler-Scraper.*—May 11, 1869.

Claim.—The construction and arrangement of the heads *b*, pieces *c*, with scraping-edges *d*, and ribs *f* and *g*, and springs *e*, all operating together substantially as described.

89,942.—WILLIAM QUAYLE, Warsaw, Ill.—*Door-Fastener.*—May 11, 1869.

Claim.—The loose-spring pawls *h*, toe D, slotted plate A, having the ratchet-teeth *e* formed upon it, the bolt C, slotted back-plate B, spring J, and connecting-rod L, in combination with the roller *m*, all constructed, arranged, and operating as herein described, for the purpose specified.

89,943.—THOMAS M. RICHARDS, Philadelphia, Pa., assignor to JOHN H. EATON, Burlington, N. J.—*Ironing-Table.*—May 11, 1869.

Claim.—The board A, and the folding-frame A′, constructed, arranged, and operating in combination, substantially as and for the purposes herein shown and described.

89,944.—JOHN H. ROBERTS, Nashville, Tenn.—*Rock-Drilling Machine.*—May 11, 1869.

Claim.—1. The combination with the trip-catch E, arranged to operate the drill of the cam-driving shaft, gear-wheel B, and balance-wheel, geared thereto, when all arranged as specified.

2. The trip-catch E, arranged to slide on its axis, and provided with the friction-rollers I, spring K, and combined with the lever H, substantially as specified.

3. The combination, with the lever H, of the spring-dog O, and notched guide M, substantially as specified.

4. The combination, with the trip-catch, of the adjusting-spring S, substantially as specified.

5. The arrangement of the rope-case W on the drill-rope post, substantially as specified.

89,945.—ALBERT ROHRBECK, New York, N. Y.—*Apparatus for Stamping Lace-Paper.*—May 11, 1869.

Claim.—1. A machine for stamping lace-paper, consisting of the hammer A, slotted plate B, driving-shaft H, cylinder E, and springs G G, all arranged, combined, and operating substantially as herein shown and described.

2. The plate B, having the bent slot, when combined with the shaft H, which has the fingers *f* and *g*, all arranged and operating substantially as herein shown and described.

3. The perforated plate *c*, formed on the bar F below the springs G, in combination with the perforated plate *d*, which is loose on the bar F, above the springs G, both said plates have flanges *e*, substantially as and for the purpose herein shown and described.

89,946.—JOHN ROY, New Orleans, La.—*Draining-Apparatus.*—May 11, 1869.

Claim.—1. The draining-apparatus, so constructed that it may be placed at any desired depth beneath the water of the canal while forcing out the water against the outside head of water only, substantially as herein shown and described, and for the purpose set forth.

2. The arrangement of the water-tight compartment B, the compartments C, one or more, the piston-chambers F, and pistons G, with each other, substantially as herein shown and described, and for the purposes set forth.

89,947.—GUSTAV SCHULZ, Fort Madison, Iowa.—*Breech-Loading Fire-Arm.*—May 11, 1869.

Claim.—The lock, consisting of the fixed tube P, movable cylinder G, rod I, needle H, and springs J, K, and L, the rod I having two shoulders, *e* and *f*, and the springs K and L, the pins *g* and *h*, respectively, all made and operating substantially as herein shown and described.

89,948.—FREDERICK H. SMITH, Baltimore, Md.—*Bridge.*—May 11, 1869.

Claim.—1. Anchoring the tops of iron or steel piers of bridges, by means of longitudinal diagonal stays, or equivalent tension-members, to the feet or pedestals of other piers or abutments, substantially as herein described, so that the pier can be formed of but two columns, or equivalent compression-members, and still have the great longitudinal base afforded by the spread of the longitudinal diagonal stays, to give it stability under the action of temperature or moving load.

2. In combination with the system of longitudinal diagonal stays, specified in the preceding clause, iron or steel piers, stiffened by means of up-and-down strut or tension rods, and cross-struts or tension-rods, at such point in the height of the pier as will prevent flexure, substantially as shown and described.

3. Stiffening iron or steel bridge-piers, by means of longitudinal rods or struts, anchored to or abutting against masonry, and connecting therewith the piers, and the piers with other piers, at such point in their heights as will prevent flexure, substantially as described.

4. The combination of the iron and steel piers of bridges with the longitudinal diagonal stays, the up-and-down stiffening system, and the longitudinal stiffening system, substantially as and for the purposes set forth.

89,949.—N. L. SMITH, Derby, Conn.—*Alarm Feed-Water Regulator for Boilers.*—May 11, 1869.

Claim.—The arrangement of the yielding vessel B, stand A, and jointed pipes D E, with reference to the boiler F and whistle G, when constructed substantially as herein set forth.

89,950.—ERASTUS R. SPEAR and WILLIAM R. SPEAR, Orland, Ind.—*Horse-Rake.*—May 11, 1869.

Claim.—The lever M, carrying the forked head L, pivoted to and between the curved bars H, whose lower ends embrace the finger or tooth K, upon the rake-head, and whose upper ends are hung to the frame of the machine, all arranged as described, for the purpose specified.

89,951.—HENRY STOLLAR, Watertown, Ohio.—*Evaporator.*—May 11, 1869.

Claim.—An improved evaporator, formed by the combination of the main pan A, partitions a^2, and trough E with each other, said parts being constructed and arranged substantially as herein shown and described, and for the purposes set forth.

89,952.—JAMES STRATTON, Philadelphia, Pa., assignor to W. W. GLENWORTH, same place.—*Apparatus for Supplying Air to Hydrocarbon-Burners.*—May 11, 1869.

Claim.—1. The tapering-valve C, with its floats *b*

and rod c^2, in combination with the reservoir B and pipes D and H, arranged and operating substantially as decribed.

2. The reservoir B and tube E, in combination with the fan-cylinder A and pipe D, as and for the purpose described.

89,953.—A. R. SWARTZ, Carlisle, Pa.—*Child's Crib.*—May 11, 1869.

Claim.—Cribs for children, having the bottoms adjustable as to height, by means of the brackets B, arranged at different heights under the crib, as herein shown and described, for the purpose specified.

89,954.—JOHN H. TEAHL and JACOB C. ZIMMERMAN, Eberly's Mills, Pa.—*Sash-Holder.*—May 11, 1869.

Claim.—The drop E, constructed as described, in combination with the drop D and plate C, substantially in the manner and for the purpose specified.

89,955.—LOUIS B. TIEBEL, Hudson City, N. J., assignor to himself and CHARLES MATTERN, same place.—*Breech-Loading Arm.*—May 11, 1869.

Claim.—The sliding-block C, when arranged as shown, and when connected with the hinged lever D, spring E, needle *i*, and trigger F, all made and operating substantially as herein shown and described.

89,956.—ALBERT TSCHOP and JACOB HARTMAN, East Berlin, Pa.—*Horse-Rake.*—May 11, 1869.

Claim.—1. The combination and arrangement of plate K, having the notched or roughened lower edge, and the curved eccentric bar N, screwed to said plate at *n*, and having its lower end roughened or notched on the inner side, substantially as and for the purpose described.

2. In connection with the axle B, bar I, lever K, and eccentric N, the hinge *t*, when arranged to operate as and for the purpose set forth.

89,957.—SARA TUTTON, Tunkhannock, Pa.—*Presser-Foot for Sewing-Machines.*—May 11, 1869.

Claim.—The combination, with the presser-foot *a*, of the presser *b f*, and the spring *c*, all constructed and arranged so that the part *b* may be turned away from the part *a*, substantially as specified.

89,958.—ALEXANDER R. WIGGS, Iuka, Miss.—*Cotton-Planter.*—May 11, 1869.

Claim.—The arrangement and combination of the harrow A, plow C, hopper B, scraper D, and handles E, when constructed and operating as herein described, and for the purposes set forth.

89,959.—AMBROSE G. WILDER, Cohoes, N. Y.—*Pipe-Cutter.*—May 11, 1869.

Claim.—1. The arrangement of the knife or cutting-tool C and the spring E, operated upon by the screw-handle B, and in combination with the adjustable rollers H H, in the manner and for the purposes substantially as herein described and set forth.

2. The employment of the self-adjusting knife or tool or cutter C, arranged and operating within the frame A, and in combination with the adjustable rollers H H, in the manner, by the means, and for the purposes substantially as herein described and set forth.

89,960.—BENJAMIN F. WILSON, Geddes, N. Y.—*Velocipede.*—May 11, 1869.

Claim.—1. Crossed propelling-handles h' h'', Fig. 2, engaging and releasing apparatus, as shown in Fig. 4, when operating substantially in the manner described.

2. The pivoted seat C, spring *o*, and slotted arm *b*, when arranged and operating substantially in the manner set forth.

3. The independent spring-brakes l^1 l^2, Fig. 3, slots, with pins n^1 n^2, and springs m^1 m^2, when arranged and operating substantially in the manner shown and described.

4. The adjustable umbrella, awning, or parasol brackets, when operating substantially in the manner set forth.

89,961.—DANIEL WOODARD, Springfield, Tenn.—*Apparatus for Distilling and Purifying Spirits.*—May 11, 1869.

Claim.—1. The cylinders A B and perforated pipes O P, arranged in combination with a still, or boiler and condenser, substantially as specified.

2. The case D, hopper E, cylinder F, and rake H, combined with the cylinder B, substantially as specified.

3. The cylinders B and C, provided with the passages G, K, and N, and their valves, and the rakes I and M, all substantially as specified.

89,962.—R. B. ZWAHLEN, New York, N. Y.—*Till-Check.*—May 11, 1869.

Claim.—The combination of the frame C, bar *a*, and spring-bar E, with the frame A and the drawer B, as herein described, for the purpose specified.

89,963.—JOHN T. AGNER, Lexington, Va.—*Bolting-Reel.*—May 11, 1869.

Claim.—The arrangement of the bolting-cloth *e* between the wire cloths *g s*, for the purpose of protecting the cloth *e* from the ravages of insects, substantially as specified.

89,964.—JOHN ALLGAIER, Philadelphia, Pa.—*Velocipede.*—May 11, 1869.

Claim.—1. The driving-spindle *d*, arranged to turn in a slide, *e*, controlled by a screw, *f*, when the said slide is adapted to a frame, H^1, arranged in respect to the center of the axle D, and spindle *d*, all substantially as and for the purpose specified.

2. The frame H^1, extending from the rear axle, and provided at the upper end with an adjustable slide, *e*, carrying a crank-shaft holding a pulley, H, all substantially as and for the purpose described.

3. The spindles I′ I′, with their arms *m*, in combination with the lever M, the foot-lever *q′*, and the intermediate devices, or any equivalent to the same, by which the movement of the foot-lever may be communicated to the lever M.

4. The combination of the guided spindles I′ I′, spring-bed J, spring K, and cross-bar J′.

5. The arm P, adapted to a staple, *w*, in the spring-bed, J, and hinged to the connecting-rod *n*, all substantially as and for the purpose set forth.

89,965.—WILLIAM BACON, Monticello, Kans.—*Breech-Loading Ordnance.*—May 11, 1869.

Claim.—1. The gun, constructed of the central core C, the wire *w*, the two disks B B′, the front strap C, and the side straps D D′, having the trunnions upon which the gun is supported in its carriage, all said parts being constructed and arranged substantially as and for the purposes specified.

2. The combination of the block E, pivoted between the parts D D′, the arms G G, the rods H H, and the blocks I I, guided by the parts D D′, and carrying the breech-block J, all said parts being constructed to operate as and for the purpose described.

3. In combination with the parts E, F, G, H, I, and J, the screw-bolt M, operating as and for the purpose set forth.

4. In combination with the main barrel of the gun, the small barrel or tube *m*, adapted to tear and penetrate the gun-cartridge, and to discharge into it a small cartridge, as herein described.

5. In combination with the pivoted breech-block J, the small tube *m*, rod R, and spring S, arranged (all except the spring) within the block J, and operating substantially as described.

6. The arrangement of the rod R, stop *o′*, link *o″*, spring *p*, lever *n*, spring S, and cord M′, in connection with each other, substantially as and for the purpose set forth.

7. The adit *e*, when arranged in connection with the breech-block J, and the parts contained therein, substantially as and for the purpose specified.

89,966.—GILBERT L. BAILEY, Portland, Me.—*Sample-Holder.*—May 11, 1869.

Claim.—A metallic spring sample-holder, made and operating substantially as and for the purpose herein set forth and described.

89,967.—M. B. BATTEY, Washington, D. C.—*Fastening for Collars.*—May 11, 1869.

Claim.—As an article of manufacture, the fastening for collars above described, consisting essentially of the plate A, provided with the pointed projections

a a and the irregular opening *o*, adapted to receive and hold the stud in the manner described and shown.

89,968.—JACOB H. BEAM, Woodside, Ill.—*Corn-Harvester.*—May 11, 1869.

Claim.—1. A corn-harvester, constructed and arranged with the frame A, revolving-axle B, cogs C *c c*, receiving-platform D, revolving-saws E, tumble-shaft F, upright shaft G, reel H, cogs I, and lever-device K, substantially as herein described, and for the purposes set forth.

2. The lever-device K, as arranged and applied to corn-harvesters, in the manner described.

89,969.—ASA M. BEARD, Hillsborough, N. H.—*Head-Block for Saw-Mills.*—May 11, 1869.

Claim.—1. In combination with the longitudinal beam *c*, to which the log is secured, the sliding bar *l*, (with its gear-rack,) the stationary gear-racks or rails *a b*, the pinions *h h'*, and auxiliary pinions *k k'*, (the shafts of which turn in bearings fixed to and moving with the beam *c*,) the whole being constructed and arranged to operate substantially as described.

2. In combination with the above, and with the auxiliary pinion *k'* and shaft *g*, the friction-wheel *n* and spring-pawl *p*, substantially as and for the purpose set forth.

89,970.—J. W. BISHOP, New Haven, Conn.—*Picture-Nail.*—May 11, 1869.

Claim.—A cut-nail, the head of which, without previous preparation or change of form, is covered with a cap of metal, in the manner described and set forth, as an article of manufacture.

89,971.—GEORGE W. BROKAW, Lodi, N. Y.—*Apple Parer and Slicer.*—May 11, 1869.

Claim.—1. The wheel or casing F, constructed as described, with cogs on its inner edge, and a worm on its periphery, substantially as and for the purposes herein set forth.

2. The combination of the shaft H, arm O, having at its upper end a notched eccentric or cam-shaped slot, the shaft H, arm R, toothed wheel S, and pin T, all constructed as described, so as to give the shaft H a rocking motion, substantially as and for the purposes herein set forth.

3. In combination with the shaft H and a mechanism for giving said shaft a rocking motion, the arm I, with its bar M, each being provided with a cog-wheel, as described, so as to be alternately thrown in and out of gear with the cogs on the main wheel F, all substantially as and for the purposes herein set forth.

4. The arrangement of the lever V, pivoted to the standard E, and passing through a slot in the arm I, its outer end supporting the rack-bar X, so that by the motion of the said arm the rack-bar will be thrown in and out of gear with the worm Y on the main wheel F, substantially as and for the purposes herein set forth.

5. The arrangement of the shaft *d* within the hollow standard Z, when said shaft carries or supports the paring-knife, and receives its motion from a worm on the outside of the main wheel F, by means of a movable rack-bar, X, and cog-wheel, *c*, substantially as herein set forth.

6. The arm *f*, carrying the paring-knife *m*, when pivoted to the shaft *d*, and provided with an eccentric against which the spring *g* presses, so as to cause the paring-knife to have an equal pressure on the apple, at whatever angle said arm is placed—that is, whether the apple is large or small, substantially as herein set forth.

7. Constructing an apple parer and slicer in such a manner that the mechanism which operates the paring-knife will set the slicing-knife in proper position and *vice versa*, substantially as herein set forth.

8. The arrangement of the bent lever *o*, carrying at one end the slicing-knife *p*, and at the other end connected by a pitman, *s*, to the cog-wheel N, whereby the slicing-knife obtains a drawing as well as a cutting stroke, substantially as herein set forth.

9. The curved and slotted guide *v*, constructed as described, so as to guide the slicing-knife in a semi-circular course, following the shape of the core, substantially as herein set forth.

10. The knife-guide *v*, constructed as described, its inner end resting on a suitable pivot, and its outer end adjusted by means of the lever *t*, when combined and arranged substantially as and for the purposes herein set forth.

11. The arrangement of the notched latch F', bar G', lever *w*, which supports the inner end of the knife-guide *v*, and spring H, or their equivalents, whereby the slicing-knife is made to cut the first piece thin, substantially as herein set forth.

12. The arrangement of the bent lever C', pawl D', and spring E', the lever worked by the head of the pitman *s*, for the purpose of turning the apple while slicing, substantially as herein set forth.

13. Providing the cog-wheel, through which motion is communicated to the slicing-knife, with a balance, substantially as and for the purposes herein set forth.

89,972.—IRVINE CARMAN, Sandwich, Ill.—*Horse-Rake.*—May 11, 1869.

Claim.—1. The hinged seat H, with supporting-bars *a a*, connecting-bars *b b*, and the rake-roller I, all substantially as and for the purposes herein set forth.

2. The rest J, supporting-bars *d d*, connecting-bars *c c*, and the rake-roller I, with teeth *e e* and springs *f f*, all arranged and operating substantially as and for the purposes herein set forth.

89,973.—GRANT T. COOLMAN and CHARLES M. YOUNG, Corry, Pa.—*Harvester.*—May 11, 1869.

Claim.—1. The combination of the chambered collars fixed on the axle, the driving-wheel hub, inclosing the collar, and the loose jamming-rollers, the whole constructed as set forth, for joint operation.

2. The collar B, keyed fast on the axle, and constructed as described, with recessed chambers, having sides curved tangentially to the axle, as set forth.

89,974.—WILLIAM G. CREAMER, Brooklyn, N. Y.—*Railroad-Car Ventilator.*—May 11, 1869.

Claim.—The construction of a ventilating-register, substantially as described, and for the purposes mentioned.

89,975.—JONATHAN L. DEVOL, Parkersburgh, W. Va.—*Sash-Fastener.*—May 11, 1869.

Claim.—The construction of the handle B and lever C, and their arrangement with reference to the bell-crank lever D, substantially as shown and described.

89,976.—JAMES S. DIACK, Aurora Ill.—*Car-Seat.*—May 11, 1869.

Claim.—The foot-box E and hinged board F, when constructed as herein specified, and when used in combination with the adjustable car-seat herein described.

89,977.—C. J. DOTY and ALFRED S. DICKINSON, Washington, D. C.—*Velocipede.*—May 11, 1869.

Claim.—The arrangement of the cranks F F', connecting-rods G G', and jointed lever H, with reference to the steering-apparatus, substantially as and for the purpose specified.

89,978.—JOHN W. EVERHAM, Pittsgrove, N. J.—*Gate-Hinge.*—May 11, 1869.

Claim.—The pivots or knobs C, eyes or jaws E, and latch D, in combination with each other, said parts being constructed and operating in connection with each other, and in connection with the posts and gate, substantially as herein shown and described, and for the purposes set forth.

89,979.—JAMES H. FISHER and CHARLES HOLCOMB, Mendota, Ill.—*Corn-Harvester.*—May 11, 1869.

Claim.—1. Combining with a corn-harvesting machine a corn-husker, having fluted or corrugated rollers, substantially as and for the purpose set forth.

2. The within-described arrangement of the gear-wheels C^1 C^1, with reference to the wheel C^2, pinion B^6, driving-wheel B^2, and pinions N, on the husking-rollers, substantially as shown, and for the purpose set forth.

3. The arrangement of the fly-wheels upon the

ends of the shafts of the husking-rollers, substantially as and for the purpose set forth.

4. The combination of the inclined planes L L with the husking-rollers.

5. The arrangement of the inclined planes L L, with reference to the apron G^1 G^2 G^3, substantially as shown, and for the purpose set forth.

6. The arrangement of the apron G^1 G^2 G^3, elevator H H^1, and spout or delivery K, with reference to the receptacle I, substantially as and for the purpose set forth.

7. The combination and arrangement of the husking-rollers N N, wheel Q, and endless belt or apron R R^1 R^2, substantially as and for the purpose set forth.

8. The arrangement of the wheel V, with reference to the endless belt or apron R R^1 R^2, substantially as and for the purpose set forth.

9. The arrangement of the cam or projection over the driving-wheel, the bell-crank lever V^1, and depositing-wheel V, substantially as and for the purpose set forth.

10. The arrangement of the endless apron F F^1 F^2 F^4 with reference to the cutters and inclined planes L L, substantially as and for the purpose set forth.

11. The construction and arrangement of the inclined planes L L and M, substantially as and for the purpose set forth.

12. The arrangement of the inclines L and M, with reference to the husking-rollers, substantially as shown, and for the purpose of guiding the stalks to the husking-rollers.

89,980.—Carl Fogelberg, New York, N. Y.—*Process of Preparing Zinc for Organ-Pipes and for other Purposes.*—May 11, 1869.

Claim.—1. Impregnating zinc with lead and tin, either or both, substantially as herein described, and for the purpose set forth.

2. The application of sal-ammoniac to the zinc, preparatory to the application of the melted metal or metals, substantially as herein set forth and described.

89,981.—Thomas Garrick, Providence, R. I.—*Lawn-Mower.*—May 11, 1869.

Claim.—The combination, with the trundle-roller and its cams, and the finger-bar frame and hand-shafts, hung upon the axis of the roller, as described, of the cutter-bar and the vibratory levers, by which it is operated, under the arrangement herein shown and set forth.

89,982.—Joseph Gawler, Washington, D. C.—*Wooden Burial-Case.*—May 11, 1869.

Claim.—The above-described improvement in burial-cases.

89,983.—James Gould, Lexington, Mass.—*Grass-Renovator.*—May 11, 1869.

Claim.—1. Combining with a cultivator, otherwise of ordinary or proper construction, one or more rollers or drums, provided with a series of projections or teeth, essentially in manner and for the purpose as before explained.

2. The construction of a cultivator, when provided with the rollers above mentioned, whereby the teeth of such cultivator may be readily raised above the surface of the ground, in manner and to operate as specified.

89,984.—Bellville A. Grant, Lockport, Ill.—*Hand-Spinning Machine.*—May 11, 1869.

Claim.—The combination and arrangement of the sliding-bar Y, swinging-frame *a'*, feeding-bar K, pinions *i* and *n*, and the pivoted bar *c*, all constructed and operating substantially as and for the purposes specified.

89,985.—Gordon Y. Gray, Niles, Mich.—*Cracker-Machine.*—May 11, 1869.

Claim.—1. The hollow cylinder C, having a series of cutters mounted on its exterior surface, and having openings through the shell of the cylinder, in the spaces between the cutters, to permit the surplus dough to pass through into the interior of the cylinder, substantially as described.

2. The screw G, located within said cylinder C, and arranged to operate in connection therewith, substantially as and for the purpose set forth.

3. The combination, with cutting-cylinder C, of the wires or cords H, when arranged to operate as described, for the purpose of removing the crackers rom the cutters, as set forth.

89,986.—C. B. Gregory, Beverly, N. J.—*Furnace for Steam and other Enginery.*—May 11, 1869.

Claim.—1. The arrangement of channels and perforations in the walls of a fire-place, substantially as described.

2. The arrangement, substantially as described, of steam-pipes and nozzles, by which jets of steam are directed on to the fire, in the course described, for the purpose specified.

3. In combination with the subject-matter of the second claim, the valves *j* above the air-passages, for the purpose described.

89,987.—Lev. Griswold, Brooklyn, N. Y.—*Sewing-Machine.*—May 11, 1869.

Claim.—1. The shaft D, arranged longitudinally in the goose-neck crank O, rocker K, arms M P, and connecting-links N Q, for operating the needle-bar, in combination with the crank-arm W, link V, and driver T, for driving the shuttle, when all arranged and operated in the manner and for the purpose herein specified.

2. The tri-armed friction-frame Y Y^1 Y^2, Z, and lever *a*, with its roller *d*, in combination with the cam *e* and feed-wheel X, for the purposes substantially as set forth and described.

89,988.—Henry Grogan and George T. Lape, New York, N. Y.—*Distillation of Hydrocarbon-Oils.*—May 11, 1869.

Claim.—1. The application of cold hydrocarbon-oils to a heated still, in such quantities that the heat in the still will suddenly evolve their available products, or so much of them as may be desired, before admitting a subsequent supply.

2. Combining the means of supplying the oils to a still with a vacuum-pump, so as to have the supply of oils, and the exhaust of their evolved products, alternate substantially as and for the purpose herein specified.

3. Regulating the time of admission, and the quantity of oils admitted into the still, to its temperature, so that the available products, or so much of them as it may be desired to evolve, may be evolved together, and immediately drawn off by the vacuum-pump, without materially affecting the temperature of the still, substantially as and for the purpose herein specified.

4. Conducting the evolved products, first, through a hot-water condenser, then a cold-water condenser, into a vacuum distillate-receiver, whence the lighter or uncondensed vapors, remaining separated from the heavier or condensed products, are removed by the vacuum-pump, substantially as and for the purpose herein specified.

5. The combination of the means of supply with a vacuum-still, and a hot-water and a cold-water condenser, and vacuum distillate-receiver, and a vacuum-pump, substantially as and for the purpose herein specified.

6. The combination of the means of supply with a vacuum-still, and a hot-water and a cold-water condenser, and a vacuum-pump, substantially as and for the purpose herein specified.

7. The combination of the means of supply with a vacuum-still, and a cold-water condenser, and a vacuum-pump, substantially as and for the purpose herein specified.

8. The combination of a vacuum-still with a hot-water and a cold-water condenser, and a vacuum distillate-receiver, and a vacuum-pump, substantially as and for the purpose herein specified.

9. The combination of a vacuum-still with a hot-water and a cold-water condenser, and a vacuum-pump, substantially as and for the purpose herein specified.

89,989.—Henry Gross, Tiffin, Ohio.—*Combination-Lock.*—May 11, 1869.

Claim.—1. The combination of the movable tumblers *d d*, movable center *c*, and stationary center K,

all constructed and arranged substantially as and for the purposes herein set forth.

2. The arrangement of the horizontal slots *x* and *y* with a vertical connecting-slot in the back of the lock-box R, for the purpose of moving the slide I, substantially as herein set forth.

3. The curved projections N N, constructed and arranged to operate substantially as and for the purposes herein set forth.

4. The movable tumblers *d d*, movable center *e*, fixed center K, slide I, and curved projections N N, in combination with the bolt H, all constructed and arranged as a whole, substantially as and for the purposes herein set forth.

89,990.—E. P. HALSTED, Worcester, Mass., assignor to R. BALL & CO.—*Planing-Machine.*—May 11, 1869.

Claim.—The construction and arrangement, herein described, of the swinging feed-roll frame-joint, consisting of the recessed piece N, flanged head *c*, bracket O, and cap *d*, operating as described, for the purpose specified.

89,991.—THOMAS P. HANDY and CHRISTIAN R. KLEIBACKER, Baltimore, Md.—*Supplemental Horseshoe.*—May 11, 1869.

Claim.—1. In combination with a supplemental horseshoe, hinged at or near its front or toe-portion, the stationary studs or clips at or near its rear or heel-portion, to prevent it from being pressed inward, substantially as described.

2. In combination with a supplemental horseshoe, having stationary studs or clips thereon, the movable flanges, controlled or worked by a screw, to hold the supplemental and the ordinary shoe tight together, substantially as described.

3. In combination with a supplemental shoe, held to an ordinary horseshoe by means of screws, the locking-mechanism, to prevent said screws from turning or the fastening from becoming loose, substantially as described.

89,992.—THOMAS HARBOTTLE, Brooklyn, N. Y.—*Pressure-Gauge for Hydrostatic Presses.*—May 11, 1869.

Claim.—The pressure-indicating piston A, combined with and operating the valve E, by means substantially as described, when so applied that the pressure and current of the escape have a tendency to close said valve, as and for the purpose set forth.

89,993.—THOMAS B. HARKINS, Bristol, Pa.—*Folding-Bedstead.*—May 11, 1869.

Claim.—The combination of the posts A A, the side and end pieces consisting of two sections, each hinged together and to the posts, as described, and the buttons *k*, hung to the posts, and adapted to inclined recesses in the sections, all substantially as set forth.

89,994.—ROBERT HERMANCE, Schuylersville, N. Y.—*Washing-Machine.*—May 11, 1869.

Claim.—1. The board or strip *d*, extending from one end of the rack to the other, and made to project below the bars *a*, when used in the manner and for the purpose set forth.

2. In combination with the board *d*, the semicircular end-pieces B, boxes *b b*, bars *a* and *e*, and handle *e*, when used in the manner and connection as set forth.

89,995.—INCREASE S. HILL, Boston, and ANDREW BURNHAM, North Chelsea, Mass.—*Underpinning for Buildings.*—May 11, 1869.

Claim.—The system of metal underpinning, consisting of the straight and angular castings, arranged and connected together substantially as described.

89,996.—J. H. HOBBS, Wheeling, W. Va.—*Pitcher.*—May 11, 1869.

Claim.—As an article of manufacture, a pitcher, having projections C C′, to receive the sockets of the handle, a portion of the cover *a*, formed of the same material with the body, and a hinged cover, B, attached thereto, substantially as set forth.

89,997.—AUGUST HOEN, Baltimore, Md.—*Lithographic Press.*—May 11, 1869.

Claim.—1. The oscillating cross-beam D, adapted to support the scraper-holder E, and to apply pressure to the stone at the proper time by the operation of the arms G and dogs H, in conjunction with the movement of the bed, substantially as and for the purposes described.

2. In combination with the reciprocating bed of a lithographic printing-press, an eccentric cylinder, C, having its circumference equal to the distance traversed by each movement of the bed, and so constructed and arranged as to support the bed during its whole movement, and at one part of its movement to raise it, and thereby produce pressure upon the stone.

3. The driving-wheel L, with its double rim, one of said rims having the recess *a*, when employed in a printing-press, in combination with the shaft N and pinion M, to produce a forward and backward motion of the bed, substantially as described.

4. The combination of the hook R, lever *u*, and inking-carriage V, when constructed to operate as herein described.

5. In combination with said parts R, *u*, and V, constructed to operate as described, the lever P, shaft S′, and arm S, substantially as and for the purposes specified.

6. In a printing-press, the combination of the reciprocating-roller *a*, with the tilting distributing-table Y, when constructed to operate substantially as and for the purposes set forth.

7. The register-frame E′, pivoted at *e′*, having the tail-piece *f* and the open slot *g′*, in combination with the bed B, having the projection *g*, substantially as and for the purposes set forth.

8. Supporting the points *o o*, the register-frame *e*, and the stone, upon one and the same bed or frame B, for the purposes set forth.

89,998.—ALBERT H. HOOK, New York, N. Y. assignor to SMITH GARDNER.—*Apparatus for Freeing Petroleum and other Liquids from Gas.*—May 11, 1869.

Claim.—1. The dripping-chamber.

2. Passing a current of air up through the chamber while the liquid is dripping down it.

3. Checking or reducing the force of the current of air as soon as it has passed through the dripping-chamber, by means of the large chamber *f*, and thus preventing it from carrying the liquid away with it.

4. The construction, combination, and arrangement of the dripping-chamber, the large chamber *f*, and the flue *g*, substantially in the manner described, and for the purposes specified.

89,999.—E. J. HORNER, Wilmington, Del.—*Car-Spring.*—May 11, 1869.

Claim.—In combination with one, two, or more spiral springs, constructed as herein described, the rubber-pin C, tapering at its lower end, and resting on the stationary pin B, substantially as and for the purposes set forth.

90,000.—ABIJAH HUBBELL, Salisbury, Conn., assignor to himself, GEORGE V. CAPRON, and E. P. H. CAPRON.—*Turbine Water-Wheel.*—May 11, 1869.

Claim.—1. A water-wheel, consisting of the plates B, having the central notched opening, and having the buckets *a* formed and arranged in relation thereto, substantially as described.

2. The shaft C, secured to the wheel by means of the arms *f*, so as to leave an unobstructed opening through the center of the wheel, substantially as described.

90,001.—ABEL L. HURTT, Monticello, Ind.—*Washing-Machine.*—May 11, 1869.

Claim.—The combination of the case A, pipes B, plates C and E, springs D, arranged to operate substantially in the manner and for the purpose set forth.

90,002.—H. E. JAMES, West Alexandria, Pa.—*Churn.*—May 11, 1869.

Claim.—The combination and arrangement of the ring B, with its set-screws, standards C and *i*, shafts *c* and *e*, pinions *d*, and slotted arm, and pivot-

ed dasher-handle *s*, when constructed and operating substantially as and for the purposes specified.

90,003.—S. K. JONES and GEORGE H. SNOW, New Haven, Conn., assignors to S. K. JONES, A. A. WILCOX, LYSANDER FLAGG, and JESSE CUDWORTH, Jr.—*Machine for Making Cut Nails.*—May 11, 1869.

Claim.—1. In combination with the revolving cylinder M^3, movable cutters K K′, and fixed cutters L and L′, constructed and arranged to operate in the manner described, the transferring-die *a*, with its spring-catch *d*, as and for the purpose specified.

2. The combination of the movable cutter K, fixed cutter L, transferring-die *a*, with its spring-catch *d*, and the holding dies *f* and *g*, constructed and arranged so as to operate in the manner described.

3. In combination with the subject-matter of the second clause of claim, the heading-dies, operating as set forth.

90,004.—WILLIAM H. KAY, Lemont, Ill.—*Graining-Apparatus.*—May 11, 1869.

Claim.—1. The device shown in Fig. 1, constructed and arranged substantially as and for the purposes set forth.

2. The use of oil-cloth having apertures, as set forth, in combination with the device shown in Fig. 1, for the purpose described.

90,005.—JOHN E. KEYT, Louisville, Ky.—*Feed-Device for Saw-Mill.*—May 11, 1869.

Claim.—1. The arrangement of the cone-pulleys K and L, friction-pulleys F and G, and gear-wheels H, I, and J, for feeding the carriage and log toward the saw, substantially in the manner shown and described.

2. The arrangement of friction-wheels E and F, and gear-wheels H, I, and J, for gigging back the carriage and the log, substantially as shown and described.

90,006.—WILLIAM KOPP, Louisville, Ky.—*Method of Preparing and Embossing Wood.*—May 11, 1869.

Claim.—1. The method of pressing wood into certain shapes and forms, by pressing it with one sharp-edged sunk and one flat die, the former of which cuts the pasteboard, while the latter forces it into the cavities on the reversed side of the pressed wood, substantially as and for the purposes set forth.

2. The method of glueing pasteboard on the reverse side of wood to be pressed with such glue-composition, that the pasteboard and glue, when heated, cut, and pressed, will combine to form a pulp, which fills the cavities on the reverse side of the pressed wood, and dries during the operation, substantially as and for the purposes set forth.

90,007.—CHARLES MACKH, Elgin, Ill.—*Pocket-Lantern.*—May 11, 1869.

Claim.—1. The improved pocket-lamp and lantern, consisting of the lamp C, the guard F, and outer case A, constructed and operating substantially as described, for the purposes specified.

2. The within-described pocket-lamp and lantern, in combination with a match-box, arranged substantially as shown and described, for the purposes specified.

90,008.—NAPOLEON MAISONNEUVE, Kankakee, Ill.—*Corn-Planter.*—May 11, 1869.

Claim.—1. The combined arrangement of the beam M, lever N, arms *m m* and O O′, and marker Q, all arranged and operating substantially as herein described, and for the purpose specified.

2. The arrangement of the tongue T, pivoted to the upper side of the frame A, passing between the uprights V and the foot-lever X and cord Y, all as herein shown and described.

90,009.—JOHN MALTRY, Morrisania, N. Y.—*Automatic Fan.*—May 11, 1869.

Claim.—The combination and arrangement of fan B, balance-weight C, eccentric wrist-pin *c*, notched disk *h*, and spring-stop *f*, substantially as and for the purpose described.

90,010.—THOMAS MARKLAND, Jr., Philadelphia, Pa.—*Saw-Sharpening Device.*—May 11, 1869.

Claim.—1. The construction and arrangement herein described, of the cam *x*, oscillating frame Q, lever *w*, and swivel-head P, for the purpose set forth.

2. The construction and arrangement herein described, of the segmental bed-plate N, and jointed confining screw-bolt O, for the adjustment of the reversible bed B, to give the required lateral bevel to the back edge of the teeth or cutters.

3. The construction and arrangement herein described, of the clamping-board E, guide-board H, rack K, pinion L, bed B, standard C, in connection with segmental bed-plate N, and jointed confining screw-bolt O, for the purpose set forth.

90,011.—RUFUS S. MITCHELL and GEORGE Z. KESSINGER, Elizabeth, Ind.—*Flour-Bolt.*—May 11, 1869.

Claim.—In combination with a bolting-reel, having ratchet-bands K K, placed on each end, the arrangement of the cord A, extending lengthwise the exterior of the bolt, and fastened to springs B B, substantially in the manner herein set forth.

90,012.—EDMON L. MIX, Rochester, N. Y.—*Carbureter.*—May 11, 1869.

Claim.—1. The combination and arrangement of the carbureting-vessel A with the cistern B^3 and annular air-holder C, so that its sides and bottom are surrounded with water, while its upper extremity is open to the atmosphere, and accessible through the central space of the air-holder, for inspection, and the application of warming-agents, when required, substantially as set forth.

2. A carbureting-apparatus, consisting of the concentric annular compartments B^1 B^3, and intervening air-space B^2, the annular air-holder C C′, and the carbureting-vessel A, combined, arranged, and operating substantially as shown and described.

3. The arrangement, in combination with the central carbureting-vessel A, of the annular air-space B^2, intervening between the two annular water-chambers B^1 and B^3, substantially as and for the purpose set forth.

90,013.—GEORGE MURRAY, Waterloo, N. Y.—*Bag-Tie.*—May 11, 1869.

Claim.—The arrangement of the plates A and C, ears *a a* and *c c*, flange *b*, and pin *e*, all constructed as described, and operating substantially as and for the purposes herein set forth.

90,014.—BYRON W. NICHOLS, Canton, Ohio, assignor to himself, CORNELIUS AULTMAN, GEORGE H. BUCKINS, PERCY S. SOWERS, and A. CLARK TONNER, same place.—*Compound for Hardening Cast Iron.*—May 11, 1869.

Claim.—1. The employment of the ingredients herein named, or their chemical equivalents, when compounded and used (either in solid or liquid form) about in the proportions, and substantially in the manner and for the purpose set forth.

2. The employment of manganese and resin in the process of hardening cast iron.

90,015.—HENRY S. NORTH and THOMAS THOMPSON, Middletown, Conn., assignors to themselves and DANIEL R. BENHAM.—*Water-Cock.*—May 11, 1869.

Claim.—1. An India rubber sleeve or nut, with a hole through its center, and screw-threads on the outside, for the purpose of attaching a water-cock filter, or coupling a hose to a water-cock with a smooth bib, substantially as herein set forth.

2. The filter C, constructed, as described, with the tapering-chamber *a* at the upper end, and an annular groove, *d*, around the discharge-hole at the lower end, in combination with the rubber sleeve or nut B, for the purpose of attaching the filter to a water-cock with smooth bib, substantially as herein set forth.

90,016.—ABRAHAM OVERHOLT, Gardenville, Pa.—*Boot-Crimp.*—May 11, 1869.

Claim.—The adjustable jaws A, provided with the screw F, in combination with the form B, clamps E, and screw C, when all are arranged and combined in the manner and for the purpose set forth.

90,017.—JOHN D. PARSONS, Albany, N. Y.—*Advertising-Calendar.*—May 11, 1869.

Claim.—The combination of a permanent metallic cap with a single-sheet calendar-table, containing the days of the month, with separate slips of paper denoting the months and days of the week, substantially as described and shown.

90,018.—FREDRICK AUGUST PAUCK, St. Mary's, Ohio.—*Combined Carrier and Dresser for Tobacco.*—May 11, 1869.

Claim.—1. Combining with a rotating knife or cutter, for cutting tobacco, a series of fans or blowers, for the purpose of carrying the tobacco to any desired point, and dressing it during its transit, substantially as herein set forth.

2. The arrangement and combination of the wheel C on the end of the shaft B, with the knife or cutter E and fans and blowers F F, all working inside of the beveled drum D, substantially as and for the purpose herein set forth.

90,019.—JOSEPH B. PEDRICK, Columbus, Ind., assignor to himself and JOSEPH F. GENT, same place.—*Steam-Pipe for Reversing Steam-Engines.*—May 11, 1869.

Claim.—The arrangement of the valve-box *e*, the joint *h*, between the pipe *b* and the stem of the valve *k*, and the joints *c*, between the pipes *g* and the stems of the valves in the valve-boxes *d*.

90,020.—JOHN G. PERRY, Kingston, R. I.—*Harvester.*—May 11, 1869.

Claim.—1. The spiral lifting-sector, operating substantially as described.

2. The combination, substantially as set forth, with a cutting-apparatus and an open or annular driving-wheel, of a lifting-sector outside the wheel, a rock-shaft passing through the open or annular driving-wheel and a lifting-lever and detent inside wheel.

3. The combination, with the rock-shaft and hand-lever, of the rocking foot-lever and its swinging pawl, for the purposes specified.

4. The combination, with the coupling-arm, of the vertically moving depressing-lever and the horizontally moving stop-lever, operating as set forth, to hold down the heel-end of the finger-beam.

5. The combination of the drag-bar, slotted bracket, and loop, with the interposed spring, to hold down the bar, substantially as set forth.

6. The combination of the removable foot-board and the tool-chest, arranged as set forth.

7. The combination of the shipping-lever, eccentric and pendulum yoke, arranged on the tool-chest, with the counter-shaft and sliding-clutch, as set forth.

8. In a two-wheel harvester, the combination of the grain-platform, the finger-beam, and the open or annular driving-wheel, arranged substantially as described, and for the purposes set forth.

9. The combination, substantially as set forth, of an open or annular driving-wheel, a finger-beam, and a grain-platform, with a raker's seat supported by the open axle, or on an arm passing through the open or annular driving-wheel.

90,021.—JOSEPH T. POPE, New York, N. Y.—*Lamp-Shade Holder.*—May 11, 1869.

Claim.—The holder E, made of one continuous piece of wire, and forming an open hook, F, for attaching to the lamp or gas-burner, and the combination of the same with the mirror-shade L by the pivots *h h* and brackets *i i*, on the back of the shade, for the purposes herein specified.

90,022.—DAN READ, Hudson City, N. J.—*Method of Sheathing Vessels, &c.*—May 11, 1869.

Claim.—Sheathing the hulls, sides, and decks of vessels, and other surfaces of wood and of iron and other metals, with gutta-percha, India rubber, and allied gums and their vulcanizable and vulcanized compounds, substantially as and for the purposes specified.

90,023.—SAMUEL J. REEVES, Philadelphia, Pa.—*Railway-Rail.*—May 11, 1869.

Claim.—The supporting clamp-bars D D, with the flanges *e' e'*, combined with the ribbed bar B, constructed as described, and the whole adapted to the ordinary rail A, substantially as herein set forth.

90,024.—BENJAMIN S. ROBERTS, United States Army.—*Breech-Loading Fire-Arm.*—May 11, 1869.

Claim.—1. Arranging the hammer, the trigger, and spring H, centrally in the plane of the axis of the piece, in combination with a double main-spring, acting directly on both the cock and trigger, to operate substantially as described.

2. So arranging the hammer centrally, in relation to the slot *s* of the breech-plug lever C', that the act of cocking the hammer will positively adjust the breech-plug in position for firing, substantially as described.

3. The lever-catch J J', applied to the lever C', in combination with a spring, *j*, which is applied beneath the tang B' of the frame B, substantially as described.

4. The concavity *b* at the rear of the cheeks *a a*, receiving the rear end of a swinging breech-plug, C, which is pivoted between said cheeks, and which carries on its forward end a self-adjusting recoil-plate, F, substantially as described.

5. A swinging breech-plug, in combination with a recoil-plate, F, on its forward end, and a centrally arranged firing-pin, substantially as described.

6. A centrally arranged extractor, G, in combination with a spring, *g'*, formed on its opposite end, substantially as and for the purposes described.

7. The cam key-pin *r*, about which the breech-plug swings, when made with a spring-arm, *p*, and stud p^2, on the end thereof, in the manner and for the purpose specified.

90,025.—WILLIAM H. ROBINSON, Vermont, Ill.—*Leveling-Staff.*—May 11, 1869.

Claim.—A leveling-rod, having a traveling-band, as described, moving around the same longitudinally, when said rod and band are graduated and operate substantially as and for the purposes specified.

90,026.—GEORGE W. ROLAND, Salem, Oregon.—*Buckle.*—May 11, 1869.

Claim.—As a new article of manufacture, the clasp for securing harness or other straps, constructed substantially as specified and described.

90,027.—W. C. SCOTT, Richmond, Ind.—*Lumber-Drier.*—May 11, 1869.

Claim.—1. With the building and furnace, the heat-radiating pipes, arranged in combination with tank *c* and receptacle *d*, in the manner and for the purpose set forth.

2. The tank *c*, for the purposes of extinguishing sparks and supplying moisture to the lumber, as set forth.

3. The receptacle *d*, with its top plate *e*, and perforated or reticulated sides, when arranged, with relation to pipe *b*, in the manner set forth.

90,028.—W. S. SHOEMAKER, Towsontown, Md., and E. H. SHOEMAKER, Lancaster, Ohio.—*Hog-Ring*—May 11, 1869.

Claim.—A hog-ring, *a*, having a tongue a^1 a^1, formed by its ends bent as described, in combination with a looped seal-plate, *b*, substantially as described.

90,029.—GERARD SICKELS, Boston, Mass.—*Counting-Register.*—May 11, 1869.

Claim.—1. The combination and arrangement of springs *i* on plate B, with the notched rings C, substantially as and for the purposes set forth.

2. The segmental annular cams *g*, in combination with rims *f* on plate B, substantially as and for the purpose set forth.

3. The combination and arrangement of springs *m*, with rings C and cams *g*, substantially as and for the purpose described.

90,030.—MICHAEL SIMONS, Middletown, Conn.—*Coffee and Tea Pot.*—May 11, 1869.

Claim.—A spun or dished bottom, F, made of Britannia-ware, when attached permanently to a tin top, E, as herein described, and for the purpose set forth.

90,031.—GEORGE C. SMITH, Matteawan, N. Y.—*Hose.*—May 11, 1869.

Claim.—Constructing suction-hose around a series of hard-rubber or gutta-percha rings, when said rings form the inside lining of the hose, and are connected, substantially in the manner and for the purposes set forth.

90,032.—HUGH SMITH, Newark, N. J.—*Velocipede.*—May 11, 1869.

Claim.—1. The cranks C and *f*, connected by rods Q, in combination with the slotted hanger *k*, guide-bars *j j*, and treadles P, the latter having a motion in a vertical plane, while the rods Q move longitudinally, substantially as described.

2. The guide-bars *j*, extending from the treadles into the slotted hangers *k*, substantially as and for the purpose set forth.

3. The treadles P, in combination with the friction-rollers *i*, and rods Q, substantially as shown.

90,033.—THOMAS S. SPEAKMAN, Camden, N. J.—*Steam-Generator.*—May 11, 1869.

Claim.—1. The construction and arrangement of the hollow shaft *i*, provided with openings *j*, fan I, and hollow belt-wheel J, as set forth.

2. The arrangement of the discharge-pipe *f* below the line of the openings *h* of fan-case H, substantially as described.

3. The combination with the boiler A and jacket C of the chamber F, dampers *d e*. fan-case H, pipe H′, discharge-pipe *f*, and fan I, substantially as set forth.

4. The arrangement of chamber F, fan-case H, and connecting-pipe H′, whereby to surround the fan-case and pipe with water, so as to cool the same, and at the same time absorb the carbonic acid of the products of combustion, substantially as described.

90,034.—CHARLES SPRING, Hyde Park, and ANDREW SPRING, Weston, Mass.—*Velocipede.*—May 11, 1869.

Claim.—1. In combination with the leader-wheel, the two follower or trailing wheels, the axis of each of which is hung in bearings placed out of vertical line with the shaft by which the wheel-frame is connected to the carriage-frame.

2. In combination with each follower-wheel the plates f^2, g^2 and friction-rolls h^2, substantially as shown and described.

3. Follower or trailing wheels, arranged as described, and connected by a band or equivalent mechanism, substantially as described.

90,035.—JAMES TAYLOR, Philadelphia, Pa., assignor to himself, BENJAMIN SCHOFIELD, and THOMAS BRANSON.—*Washing and Fulling Machine.*—May 11, 1869.

Claim.—The combination of the vessel A and its perforated lining with the vibrating beater or beaters F, the whole being arranged and operating substantially as and for the purpose herein set forth.

90,036.—ALEXANDER TURNER, Newark, N. J.—*Child's Table-Tray.*—May 11, 1869.

Claim.—The child's table-tray, formed with the rims *b b* and *c* higher than the rim *d*, in combination with the stop-legs *e*, attached at the front edge of the tray, as and for the purposes set forth.

90,037.—E. D. WEATHERBEE, Worcester, Mass.—*Cork-Fastener.*—May 11, 1869.

Claim.—A cork-fastener, having a side-stop or loop, *d d e*, and otherwise constructed, substantially as shown and for the purposes described.

90,038.—BALAH W. WEAVER, Transitville, Ind.—*Stump-Extractor.*—May 11, 1869.

Claim.—1. The above-described arrangement of the wheels G G, with reference to the frame of the machine, as a consequence of which it is rendered capable of being transported from one place to another.

2. The arrangement of the nut D, screw C, tongue E, and chain F, substantially as and for the purpose set forth.

3. The combination of the tongue E, screw C, nut D, and staple I, substantially as and for the purpose set forth.

90,039.—JACOB H. WITTMER, Manor, Pa., assignor to himself and WILLIAM SIPLE, same place.—*Power-Press for Hay, &c.*—May 11, 1869.

Claim.—The arrangement of the removable box A, placed upon the bed or bottom F, and having grooves on the inside ends, central beam H, notched at the ends, centrally provided with a catch-plate, I, and top-boards 1 3 5 7 affixed, having bevel sides for the reception of the loose pieces 2 4 6, hooks J, ropes K, passing under pulleys O, and operated by ratchet-wheels and pawls, supported by posts B B at both ends of the press, all constructed and operated as herein shown and described.

90,040.—ALONZO E. YOUNG, Dorchester, Mass., assignor to BOSTON SILVER-GLASS COMPANY.—*Glass-Ware Mold.*—May 11, 1869.

Claim.—A lathe-turned mold, for forming glass dishes, said mold having a cavity and plunger, the molding surface of each of which is oval in section, substantially as described.

90,041.—C. W. COTTON, Portsmouth, Ohio.—*Machine for Forming Oval Tenons.*—May 11, 1869.

Claim.—The combination of the elliptic cam *v*, on shaft *m*, screw in arm *t*, and vibrating-frame *g*, with the cutter-head *d*, cutter-head disks *f*, and the mechanism for giving motion to the cutter-head, cutter-head disks, and shaft *m*, substantially in the manner and for the purpose described.

90,042.—THOMAS H. DE MOTTE, Woodford County, Ill.—*Washing-Machine.*—May 11, 1869.

Claim.—In a washing-machine, the plunger C, with sockets *p*, perforations *a*, reserve-chamber B, sediment-receiver *t*, inclined bottom D, and tramway *f f*, stay-rod *u*, drip-cups *i i*, handle *e*, and rods *d d*, all constructed, arranged, and combined substantially in the manner and for the purposes herein shown and set forth.

90,043.—WILLIAM GARDINER, Stoneborough, Pa.—*Sawing-Machine.*—May 11, 1869.

Claim.—In combination with the frame A and sill B, provided with suitable gearing and pitmen, the saw D and spring-pawls E, when all the parts are constructed and arranged to operate substantially as and for the purpose set forth.

90,044.—JOSEPH S. GOLD, Springfield, Ill.—*Measuring-Can for Liquids.*—May 11, 1869.

Claim.—The flanged receptacle A, provided with perforations in its top, in combination with the pump C, reservoir B, tubes D D and N, float E, guide-rods *f f* and H, and graduated measure F, all constructed, arranged, and operated in the manner and for the purpose set forth.

90,045.—ALEXANDER HARROUN, Jr., Onondaga County, N. Y.—*Machine-Made Stitch.*—May 11, 1869.

Claim.—The machine-made stitch, herein described and shown, formed by the three threads *c d e*, when combined as and for the purpose set forth.

90,046.—BEVERLY KENNON, New Orleans, La.—*Center-Board.*—May 11, 1869.

Claim.—The center-board herein described, consisting of two distinct plates, E, F, H, K, and L, M, N, K′, when the same are constructed and united for conjoint operation, substantially as herein described, for the purpose set forth.

90,047.—PAUL NARCISSE JOSEPH MACABIES, Paris, France.—*Automatic Boiler-Feeder.*—May 11, 1869.

Claim.—1. The combination of the receivers with the tubular supporting-arms and upper lever, arranged to maintain said receivers at all times in a vertical position, as set forth.

2. The arrangement, with respect to the receivers, of the vibratory tubular arms for supporting the same, substantially as set forth.

3. The combination with the upper vibratory lever, to which the receivers are connected, of the oscillating cylinder and its piston-rod, arranged to prevent the excessive movement of said lever, substantially as shown and set forth.

4. The combination with the receivers, tubular

arms, and lever, of the vertical tubular column B, serving as a condenser or steam-reservoir, as well as a support for the different organs of the apparatus, substantially as herein shown and set forth.

5. The arrangement of the joints and distributing cocks of the receivers and tubes, substantially in the manner herein shown and specified.

90,048.—James H. McCartney, Dansville, N. Y.—*Tonic Bitters.*—May 11, 1869.

Claim.—A preparation, compounded substantially in the manner and for the purpose described.

90,049.—F. Henry Morgan, Beverly, Mass.—*Method of Attaching to the Soles of Boots and Shoes Heels made of Vulcanized Wood.*—May 11, 1869.

Claim.—1. Introducing into molds for the formation of heels, when constructed as described, pieces of metal or other material, by which the heel can be attached to the sole of a boot or shoe.

2. Introducing into molds for the formation of heels, when constructed as described, pieces of metal, or other material, for strengthening and giving durability to the heels.

3. Introducing into molds for the formation of heels, when constructed as described, a screw, or its equivalent, to produce a matrix, by which to attach them to the soles of boots or shoes.

4. Heels for boots and shoes, constructed as herein described, as a new article of manufacture.

90,050.—A. M. Rodgers, Brooklyn, N. Y.—*Mosquito and Fly Net.*—May 11, 1869.

Claim.—1. The frame A, composed of detachable radial arms, the inner ends of which are formed to fit each other, and, so fitted, are secured, around a common center, by means of adjustable clamping-disks *b b'*, carried upon a central screw, *s*, which also serves to secure the frame to the ceiling, substantially as herein described.

2. The arrangement of the lifting-cords *g*, and their guide-rings, in connection with the weighted skirt of a mosquito or fly net, in combination with the above-claimed devices, substantially as and for the purpose herein set forth.

90,051.—Z. Rogers, Chicago, Ill.—*Air-Inhaler.*—May 11, 1869.

Claim.—1. The cylinder *h* and valve S, in combination with the mouth-piece A, arranged to operate substantially as herein described and shown.

2. The combination of the cylinder *h*, valve S, mouth-piece A, tube E, valve D, and cylinder B, the whole being arranged and constructed substantially as set forth.

90,052.—Mary Ann H. Saurman, Philadelphia, Pa.—*Book-Curb.*—May 11, 1869.

Claim.—A book-protector, consisting of a cord or chain, B, adapted to be secured to the backs of a book, to prevent the book from being opened too far, by means of the metallic clasps *a*, with slots *d d*, tongues *b b*, and point or holder *i*, as set forth.

90,053.—Jacob Scholer, Burlington, Iowa.—*Wine and Cider Press.*—May 11, 1869.

Claim.—1. The arrangement of bed H, movable floor *i*, movable tub I, and movable platen J, supported by standard K, strap L, and roller *l*, when said parts are employed in connection with a lever, F, substantially as and for the purpose specified.

2. The within-described arrangement of weight-frame G, link g^1, lever F, platen J, and cylinder I, constructed and operated in the manner and for the purpose specified.

90,054.—Henry Searle, Washington, D. C.—*Mosquito-Bar Frame.*—May 11, 1869.

Claim.—The combination of three or more intersecting springs, A B C, with a transverse adjusting-cord, I, and with lateral cords, D, D, E, F, G, and H, the whole constituting an adjustable arched mosquito-bar frame, substantially as herein set forth.

90,055.—W. S. Shoemaker, Towsontown, Md., and E. H. Shoemaker, Lancaster, Ohio.—*Clothes-Line Clamp.*—May 11, 1869.

Claim.—A clothes-line clasp, consisting of a ring, B, terminating, at its ends, in jaws *a a*, and stiffened by corrugating, substantially as described.

90,056.—William H. Smith, New York, N. Y.—*Graining-Machine.*—May 11, 1869.

Claim.—1. The compound belt H *h*, formed with a soft and ornamented outer surface, and with a tough and durable inner surface, and adapted to operate substantially as and for the purpose herein set forth.

2. Traversing the ornamenting-belt over a surface of small radius, G, in combination with a larger roller, C, and with an operating-frame, A *a*, or its equivalent, so as to ornament thereby not only on plain surfaces, but in recesses, or re-entering angles in the work, substantially as and for the purposes herein set forth.

90,057.—David Stewart, Port Penn, Del.—*Phosphate Fertilizing-Compound.*—May 11, 1869.

Claim.—1. The manner of composting insoluble substances containing silicates and phosphates with caustic alkalies, substantially as described.

2. The improved fertilizer, which I term "the persieator," composed of the within-described ingredients, compounded in about the relative proportions stated.

90,058.—I. R. Weisiger, Danville, Ky.—*Dermatic Medicator.*—May 11, 1869.

Claim.—The vessel A, constructed with an outer and inner wall, and provided with openings a^2 a^3, b^1 and b^4, and cover B, constructed with the opening C and collar *c*, all arranged and operated substantially as and for the purpose set forth.

90,059.—Marcus Brown Westhead, Manchester, and Charles Bartleet James, Redditch, England, assignors to Marcus Brown Westhead.—*Sewing-Package.*—May 11, 1869.

Claim.—A winder or case, for holding twine, needles, buttons, hooks and eyes, and pins, or either two or more of these articles, substantially as herein shown and described.

90,060.—Daniel Fitzgerald, New York, N. Y.—*Railway-Car.*—May 11, 1869.

Claim.—The railroad-car A, having double walls or sides, floor, and roof, one or more compartments, K, and burglar-proof cases F C H I, all substantially as shown and described.

90,061.—Henry H. Waters, Atlanta, Ga.—*Washing-Machine.*—May 11, 1869.

Claim.—1. The segmental presser, arranged and united to the connecting-rod E, and the balance-wheel F, by means of the hinged tray D, in such manner that said presser may be supported and pivoted upon the tub when elevated therefrom, substantially as described.

2. The square tub A, in connection with an oscillating presser, arranged as described, to allow the tub to be turned, so as to present the clothes to the presser at right angles to its former line of action, as described.

3. The foot-lever R, and center pivot or support S, in combination with a square tub, for the purpose of lifting the latter, to enable it to be swiveled or turned ninety degrees, for the purpose described.

4. The removable hood or cover P, when used in connection with a segmental presser, a square tub, and a wringer, in the manner and for the purpose described.

5. The removable hood or cover of the tub, in combination with the oscillating presser, by which it is removed and replaced upon its seat automatically, substantially as described.

90,062.—John F. Adams, Worcester, Mass.—*Gold-Leaf Condenser.*—May 18, 1869.

Claim.—The "leaf"-condenser, as a new article of manufacture, when the same consists of the two "workers" A B, made substantially as described, and for the purpose set forth.

90,063.—Joseph H. Atkinson, San Francisco, Cal.—*Combined Comb and Shears for Hair-Cutting.*—May 18, 1869.

Claim.—The clamping-device for adjustably securing a comb to a pair of scissors, consisting of the spring-clamps B B, D, screws A A, and nuts C C, arranged substantially as shown and described.

90,064.—E. J. Balcear, Martinez, assignor to Samuel Pillsbury, San Francisco, Cal.—*Cleansing-Liquid.*—May 18, 1869.

Claim.—A washing or cleansing fluid, composed of the ingredients named, prepared and mixed in the manner and in about the proportions above specified.

90,065.—Osmer W. Baldwin, Greenfield, Ohio, assignor to himself and Thomas F. Wright, same place.—*Potato-Digger.*—May 18, 1869.

Claim.—1. In combination with the digger and revolving slatted apron, the two rakes, operated by the double-crank shaft, substantially as and for the purpose set forth.

2. In combination with the slotted rakes, worked by a double-crank shaft, and supported by the frame H, as described, the adjusting-nuts *o*, as and for the purpose described.

3. In combination with the slotted rakes, worked by the double-crank shaft, and the supporting-frame H, the spiral springs *i*, on the plunger-rods of the rakes, substantially as and for the purpose described.

4. In combination with the slotted rakes, double-crank shaft, and supporting-frame H, the trunnions or oscillating braces *h*, substantially as described.

90,066.—Nicholas Baumann, Kalamazoo, Mich., assignor to himself and W. B. Clark, same place.—*Process of Using Unmashed Indian-Corn in Brewing Beer*, &c.—May 18, 1869.

Claim.—The combination of the separate mash-tub B, Fig. I, inclosing the spiral steam-pipe E E, Fig. III, perforated with small holes on the inside; the larger mash-tub A, Fig. I; the pipe C, provided with stop-cock F, connecting the tubs, for the purpose of discharging the contents of the tub B into the tub A, with the steam-pipes E and D, provided with stop-cocks for letting steam into or shutting it off from the tubs A and B, for the purposes set forth and described.

90,067.—Artemas Bigelow and James S. Baldwin, Newark, N. J., assignors to Henry Martin, Baltimore, Md.—*Purifying the Waste Gases from Copper-Roasting Furnaces.*—May 18, 1869.

Claim.—Removing the impurities held in mechanical suspension by the waste gases of copper-roasting or calcining furnaces, by washing said gases or reducing the speed of their flow, by the means substantially as described.

90,068.—John Adolph Bilz, Pleasanton, Cal.—*Plow-Clevis.*—May 18, 1869.

Claim.—1. The vertical slotted bar E, secured to the ends of the two arms A and B of a clevis, substantially as and for the purpose described.

2. The sliding-bar F, moving up and down through slots in said arms A and B, and held at the point desired by means of a set-screw, *g*, substantially as and for the purpose described.

3. The shackle G, attached by a swivel-joint to the screw *c*, said screw being secured to the lower end of the sliding-bar F, and moving up and down in the vertical slot *a*, substantially as and for the purpose described.

90,069.—Edward C. Blakeslee, Waterbury, Conn., assignor to "The Benedict and Burnham Manufacturing Company."—*Lamp-Reflector.*—May 18, 1869.

Claim.—The combination of a band, A, helical spring, B, and reflector, C, constructed and operating substantially as described, for the purposes set forth.

90,070.—Theodore Blodgett, Belchertown, and Warren S. Weatherby, Granby, assignors to themselves and Charles D. Clapp, Amherst, Mass.—*Alarm for Pocket-Books.*—May 18, 1869.

Claim.—A pocket-book protector and alarm, constructed of the stock *b*, in combination with muzzle *g*, hammer *t*, spring *v*, plug *u*, lever *j*, trigger *m*, and catch *n*, the whole arranged and operating substantially as specified.

90,071.—Hervey C. Boardman, Morrisville, Vt.—*Log-Sawing Machine.*—May 18, 1869.

Claim.—1. The combination of the obliquely arranged friction-roller D with the carriage A, and wheels, *a a*, and flanged rails or guides *i i*, substantially in the manner described.

2 The combination of the oblique roller D and the lever C, substantially as and for the purpose described.

3. The combination of the oblique roller D, bearing E, and lever C, substantially as and for the purpose described.

90,072.—Fredrick W. Born, Cleveland, Ohio.—*Washing-Machine.*—May 18, 1869.

Claim.—The combination of the radial-chambered machine A, the perforated diaphragm E, tube H, and valve G, all constructed and arranged to operate in the manner and for the purpose substantially as described.

90,073.—H. W. Bradley, Binghamton, N. Y., assignor to Charles M. Dickinson, same place.—*Paint-Compound.*—May 18, 1869.

Claim.—As a new article of manufacture, a paint composed of the within-described ingredients, or their equivalents, whereby oil and water are affined or saponified in such a manner that the pigments may be held in affinity, as herein described, for the purposes set forth.

90,074.—C. D. Brewer, Williamsport, Pa.—*Gate.*—May 18, 1869; antedated May 10, 1869.

Claim.—The hook *g* and swinging hinge-bar A, by means of which a swinging and sliding gate may be so opened and closed as to rest, either at right angles with or against the inside or outside of the fence, when the same is constructed for the purposes set forth and described.

90,075.—Henry Brooks, Pittsburgh, Pa.—*Process for Hardening Steel.*—May 18, 1869.

Claim.—The process of making and hardening homogeneous castings, substantially as herein described, when applied to the articles enumerated herein.

90,076.—Edwin Lee Brown, Chicago, Ill.—*Boot-Jack.*—May 18, 1869.

Claim.—A double-ended and double-sided or reversible boot-jack, substantially as herein shown and described, as a new article of manufacture.

90,077.—William H. Butterworth, Trenton, N. J.—*Hay-Spreader.*—May 18, 1869.

Claim.—1. The combination of the eccentric ring E, or its equivalent, the revolving-head G G′, and the slotted arms K, or their equivalent, with the reel, when the slotted arms K, or their equivalent, are pivoted to the reel-head at a distance from its center different from the distance of the pins *b* from the center of the revolving-head G G′, and arranged to operate in the manner described, and for the purpose set forth.

2. Operating the forks L L by mechanism, so constructed as to cause the tines of the forks to constantly project downward while being carried around a common center, and to assume a nearly vertical position while passing under and over the center of the reel, and to have a constantly varying outward inclination while passing from top to bottom, and from bottom to top of the reel, thereby gathering and discharging the hay, substantially in the manner set forth.

3. The fork-head, constructed of the bars I I′ and cross-pieces J, with the slotted arms K, as herein shown and described.

4. Fastening the teeth of a hay-tedder by a metallic clasp, combined and arranged as herein set forth.

5. The arrangement of the revolving-head G G′, the cranks *e e*, and the slotted arms K, when used to operate the forks of a hay-tedder, or rake, substantially as described.

90,078.—Wesley Chase, Buffalo, N. Y.—*Settee.*—May 18, 1869.

Claim.—The combination of the bent legs and

arms C C D, seat A, and girts or ties E, when constructed and connected in the manner herein represented and described.

90,079.—George W. Clapper, Martinsville, Ind., assignor to himself, Thomas E. Dawson, Joel M. Johnson, and A. S. Greggs.—*Feed-Regulator for Millstones.*—May 18, 1869.

Claim.—The adjustable funnel C, with its conductors E E, and perforated bottom *c*, when fixed within the eye of the runner A, by means of set-screws D, all constructed and arranged to operate substantially as and for the purposes herein set forth.

90,080.—William H. T. Clark, San Francisco, Cal.—*Pump.*—May 18, 1869.

Claim.—1. The arrangement of the partition *g*, chamber E, valve-chambers C and D, and air-chamber F, within the part A, substantially as described.

2. In combination with the above-named parts, arranged as claimed, the valves *e* and *e'*, provided with the raised seats *i*, and radiating-guides *r*, substantially as specified.

3. The arrangement of the parts *h h* and *h' h'*, in relation to the diaphragm *e*, and with reference to the cylinder B, whereby said cylinder may be attached to the part A, either in a vertical or horizontal position, substantially as set forth.

4. The compound packing-ring M, fastened to the interior flange *p*, together with the elongated plunger H, the whole constructed and arranged substantially as herein described.

90,081.—Leon Cline, Chicago, Ill.—*Machine for Hanging Wall-Paper.*—May 18, 1869.

Claim.—The combination of the troughs I J H, and U G' G M, rollers B C D, transfer-roller E, brush O P, friction-rollers H, and springs L, as described.

90,082.—Theodor De Kimp, Kirksville, Ill.—*Wagon-Seat.*—May 18, 1869.

Claim.—The combination and arrangement of the wagon-seat A, wooden springs B, with their clutches *v*, blocks *a* and *e*, and screws *s*, substantially as and for the purposes herein specified.

90,083.—Anthony Demarce, Fairfield, Iowa—*Steam-Generator.*—May 18, 1869.

Claim.—The arrangement of the bent tubes B, with reference to the boiler A and smoke-box C, substantially as herein set forth.

90,084.—Julius Edmund Dotch and Edward Duempelman, Washington, D. C.—*Composition for Pavements, Roofing, and for other Purposes.*—May 18, 1869.

Claim.—1. The improved method of treating pure asphaltum, either alone or mixed with coal-tar, brick-dust, or sand, substantially as and for the purposes described.

2. The foundation for pavements, prepared substantially as herein described.

3. The method of fastening tiles to roofs, as herein described.

90,085.—John C. Duckworth, Pittsfield, Mass,, assignor to Duckworth & Sons, same place.—*Power-Loom.*—May 18, 1869.

Claim.—1. In combination with the jacks, arranged horizontally at the side of the loom, and projecting outward therefrom, the segment-wheels and upright sliding-bars, connected with the leaves of heddles, substantially as described.

2. The evener-rods, in combination with the arms of the levers upon which they operate to close the shed, when the eveners are moved in the curve described by the movement of that part of the arms of the levers with which the eveners are in contact, substantially as and for the purposes described.

3. The arrangement and combination of the short crank-shaft with its two cranks and gear-wheel, with the gear-wheel and crank carried by the projecting end of the crank-shaft which drives the lay, whereby motion from the crank-shaft is imparted to the links which drive the lifter and depresser, and pattern-mechanism of the harness-motion, and the pattern-mechanism for selecting the shuttles, substantially as described.

4. In combination with the main shipping-lever, the rock-shaft, with its releasing-arm, the second lever, and connecting-rod, substantially as described, whereby the loom may be stopped or started from either side, as set forth.

90,086.—G. L. Dulaney, Mechaniesburgh, Pa.—*Harvester-Cutter.*—May 18, 1869.

Claim.—1. The lock-bolt D, when constructed and operated as shown and described, and for the purpose set forth.

2. The cutters *a a a*, constructed substantially as shown and described.

3. The combination of the bar B, constructed with a groove, C, the lock-bolt D, and the cutters *a a a*, when constructed and arranged as shown and described.

90,087.—George B. Flint, Sing Sing, N. Y., assignor to Montgomery Fork Company, New York City.—*Manure and Hay Fork.*—May 18, 1869.

Claim.—Supporting the tangs within a round ferrule by the means of internal lugs *b*, with the aid of hooks *e* or their equivalents, substantially as and for the purposes herein set forth.

90,088.—Chester D. Flynt, Philadelphia, Pa.—*Trunk.*—May 18, 1869.

Claim.—1. The cushion-form frames A and B, made of steel strips, woven together, to form lattice-work, substantially in the manner and for the purpose hereinbefore described.

2. The combination of the angle-strips C C' with the strips *a b*, substantially in the manner and for the purpose set forth.

3. The combination of the angle-strips D with the strips *a b*, whereby great additional strength is given to the lattice-work, substantially as described.

90,089.—Alfred Faucaut, Orleans, France.—*Submarine-Telegraph Cable.*—May 18, 1869.

Claim.—1. The construction of a telegraphic cable, in the manner and for the purpose herein described.

2. A conducting surface for induction-currents, when applied to the outside of the insulating-coating of each group of conductors, in the manner and for the purpose herein described.

3. A band, composed of linen, or analogous material, saturated with a compound of carbonate of lead, and litharged or other oil, when arranged in a telegraphic cable, in the manner and for the purpose herein described.

4. In a telegraphic cable, the construction of the coatings, formed of gutta-percha or composition, the metallic conducting-surface, the cotton thread, the band saturated with mastic, and the tarred rope, arranged in the manner and for the purpose described.

5. As an insulating material, used in the construction of telegraphic cables, the composition, composed of carbonate of lead or other similar substance, litharged or other oil, sawdust, or other analogous fibrous substance, in the manner and for the purpose herein described.

90,090.—Warren Gale, Peekskill, N. Y.—*Straw-Cutter.*—May 18, 1869.

Claim.—1. The pressure-cylinder B, having its flanges provided with convex faces, when used in combination with the concavo-convex strip C, (with or without stud *e*,) constructed and operating substantially as and for the purposes set forth.

2. The concavo-convex strip C, provided with one or more studs, *e*, and constructed and operating substantially as and for the purposes set forth.

3. The flanged knife-shaft D, made with a shoulder, *x*, at each end, for the knife to rest on, when used in combination with a knife, or knives, secured by screws or rivets, so that the knife, at the upper part of its hole, shall rest upon the upper part of its screw, the whole being geared to and used in combination with a pressure-shaft provided with metal-faced flanges, substantially as and for the purposes set forth.

4. The hinged bottom G of the automatic mouth,

in combination with spring E, constructed and operating substantially as and for the purposes set forth, when used in combination with the subject-matter of the first claim, as above set forth.

5. The combination, with the knife-shaft D, of the crank-arm *x*, when said arm is secured to the gear-wheel, on the end of the shaft, by means of the projections 3 and 4 and recesses 1 and 2, substantially as set forth.

90,091.—George P. Gordon, Rahway, N. J.—*Printing-Press.*—May 18, 1869.

Claim.—1. In combination with a reciprocating bed, operating an ink-distributing cylinder L^2, such ink-cylinder L^2 hung upon vibrating arms N, so that the cylinder may be vibrated or turned upward, and away from the inking-rollers, when desired, thus giving free access to said inking-rollers.

2. In combination with such cylinder, the arm R, to cause the cylinder to bear heavily or lightly upon the inking-rollers placed beneath it.

3. In combination with such cylinder and reciprocating bed, a revolving ink-distributing table, for the purposes specified.

90,092.—Lucius D. Gould, Newark, N. J.—*Window-Fastener.*—May 18, 1869.

Claim.—The hook G, for holding the sash, in combination with its adjustable bolt and plate F, all constructed, arranged, and operating as and for the purpose herein shown and described.

90,093.—Edwin H. Grant, Washington, D. C.—*Process of Tempering Metals.*—May 18, 1869.

Claim.—1. The process of tempering metals by the use of a jet or current of steam, as described.

2. The combination of the steam-chest, or inclosure A, the induction-pipes B B, the valves or stock-cocks C C, the steam-generator D, and the eduction-pipe or opening E, for the uses and purposes substantially as described.

90,094.—Charles Greenlee and William H. Redfield, Belvidere, Ill.—*Apparatus for Cooling Liquids.*—May 18, 1869.

Claim.—The tank, provided with apartments F G, in combination with plate A′, provided with grooves T, and corrugated plate S, provided with troughs D E, and gate L, as described.

90,095.—John Gwynn, Tiffin; Ohio.—*Hot-Air Furnace.*—May 18, 1869.

Claim.—1. The cast-iron frames I, J, K, L, and M, and the radiators P P, connected, as described, together with the front and rear plates marked R R, and the peculiar form of the brick-work in which they are built, for leading the fire and air in alternating, horizontal, and ascending thin layers, at right angles with each other.

2. The use of a plain sheet of iron, without bend, seam, or rivet, connected to an iron frame by means of grooves, as described, for radiating-surface.

3. The construction of the iron frames I, J, and K, with grooves, intended to receive the edges, and allow the withdrawal and renewal of the radiators P P P, and with orifices to form part of the fire-flues.

4. The forming of a flue, or tube, by the manner described of connecting the sheet-iron to frame, and the manner of making the same flues continuous and ascending, by their relative position with each other, in connection with the brick-work or casting, whichever may be used.

5. The combination of the parts herein described, for the purposes set forth.

90,096.—William Hall, Boston, Mass.—*Permutation-Lock.*—May 18, 1869.

Claim.—1. The combination of the adjustable dog M with the wheel L, substantially as described, and for the purpose set forth.

2. The combination of the cam G G′ with the wheel L, sliding-lever C C′, and latch D D′, all operating as described, and for the purpose set forth.

3. The combination of the lever C C′ with the latch D D′, arranged and operating substantially as described, and for the purpose set forth.

90,097.—Melancthon Hanford, Boston, Mass.—*Apparatus for Purifying, Screening, and Cooling Reburnt Bone-Black.*—May 18, 1869.

Claim.—As a device for elevating, cooling in transition, and screening a mass of renewed charcoal from sugar-refineries, the employment and arrangement of an air-engine, a receiving, elevating, and cooling chute, and screening and receiving chests, the chute being connected with the engine, and provided with the filling-hopper, or its equivalent, and the receiving-chest with the apiculated deflector L and screen O, and connected with the receiving-chest Q by the conduit P, the latter being provided with means for admitting steam to its interior, and the whole operating in manner and to produce results substantially as before shown and described.

90,098.—Samuel Z. Hawbecker, Upton, and Abraham Thomas, St. Thomas, Pa.—*Horse Hay-Fork.*—May 18, 1869.

Claim.—In combination with the geared rod and barbs or tines, the arm D, levers E and *f*, and cord *h*, for the purpose of holding, and for tripping the said barbs or tines, as may be required, and as set forth.

90,099.—Moses H. Hawkins, New Haven, Conn.—*Artificial Leg and Foot.*—May 18, 1869.

Claim.—1. The combination of the knee-cord B and the leather sheath *t*, with the main spring C, adjustable bar *a a*, and fulcrum-pin *g*, when constructed, arranged, and fitted substantially as herein described and set forth.

2. The combination of the cords *d* and *e*, with the screws *r* and *s*, and the main-spring C, substantially as herein described and set forth.

3. The combination of the devices which constitute the double-acting ankle-joint *l l* and *m*, Fig. 5, substantially as herein described and set forth.

90,100.—E. E. Hendrick, Carbondale, Pa.—*Compound for the Manufacture of Lubricating Oils.*—May 18, 1869.

Claim.—The use of the compound formed by a union of lead with the oxide of lead, in the manner and for the purposes substantially as described.

90,101.—Edward N. Hillsgrove, Concord, N. H.—*Ox-Yoke.*—May 18, 1869.

Claim.—A yoke constructed with the beam *a a*, the hook-plate *e*, and the neck-pieces *b b*, and the dogs *k k*, combined, arranged, and adjusted as described, as and for the purposes described and set forth.

90,102.—Nelson H. Howard, Beloit, Wis.—*Stove-Pipe Shelf.*—May 18, 1869.

Claim.—The yoke B, provided with the arms G and lips E, in combination with the bar D and screw C, all arranged and operating substantially as described.

90,103.—S. K. Hoxsie, Philadelphia, Pa.—*Coal and Grain Boat Elevator.*—May 18, 1869.

Claim.—1. The combination and arrangement of the vertical trunks B with the wharves A A, for the passage of the reciprocating tanks C, substantially as described.

2. The combination of the elevating platform D and reciprocating tanks C, with the elevated water-reservoirs G, the several parts being arranged and operating substantially in the manner and for the purpose set forth.

3. The combination and arrangement of the brake-shaft N, wheels T T, pulleys O O, O^2 O^2, chains P P, swivels Q Q, and bars R R, with the platform D, substantially as described.

4. The combination and arrangement of the weighted vessels S, chains D, and pulleys O^1 O^1, with the brake-shaft N, substantially in the manner and for the purpose set forth.

5. The connection of chains or ropes E of regularly increased length, with the movable tanks C, for giving an angle to the platform D, when in its elevated position, substantially as described.

6. The combination and arrangement of the rod L, ropes N, and levers K, with the valves J, for operating the latter, as above described.

7. The combination and arrangement of the rod *h*,

ropes W and W′, sheaves g g^1 g^2, and weight-shaft f, with the valves V, substantially in the manner and for the purpose set forth.

90,104.—Lucius H. Ives, Syracuse, N. Y.—*Meat-Block.*—May 18, 1869.

Claim.—A meat-block made in sections, and bolted and held together and in place substantially in the manner above set forth.

90,105.—Bruce Irons, Columbus, Wis.—*Carriage-Painters' Easel.*—May 18, 1869.

Claim.—A machine by which a carriage-body may be placed and sustained in any required position, in the manner and by the means herein described.

90,106.—John L. Kidwell, Washington, D. C.—*Composition for Pavements, Roofing, Drain-Pipes, &c.*—May 18, 1869.

Claim.—The improved composition for pavements and roofing, as above described and set forth.

90,107.—V. P. Kimball, Watertown, N. Y.—*Cheese-Box.*—May 18, 1869.

Claim.—1. Forming the cover for the cheese-ends of a paper disk or blank, the outer or projecting portion of which is bent down over the end and upon the sides of the cheese, and is there held, by means of a metallic or other hoop, applied to said cover and cheese, substantially in the manner and for the purposes set forth.

2. The method of boxing cheese by the employment of a paper strip or band, to encircle the sides of the cheese, in combination with the covers for the ends, and the hoops for holding the same, constructed and applied substantially as herein shown and specified.

90,108.—Jacob B. Kingman, Dorchester, Mass.—*Machine for Making Cut Nails.*—May 18, 1869.

Claim.—The combination of the rebated griper M, the vibrating griper C″, and the fixed griper N, all arranged and operating as specified.

90,109.—Peter Lawson, Lowell, Mass.—*Composition Drawing or Roving Can for Use in the Manufacture of Yarns.*—May 18, 1869.

Claim.—The improved composition-can for rovings, made of paper-pulp or other fibrous materials, united substantially as and for the purpose herein described.

90,110.—Daniel Lee, Boston, Mass.—*Steam-Engine.*—May 18, 1869.

Claim.—1. Utilizing the exhaust-steam in a steam-engine, by bringing it in communication with the live steam, and producing a current, by the mechanical devices substantially as shown and described.

2. The vacuum-chamber E, arranged substantially as specified.

3. The pipe b, in combination with the vacuum-chamber E, pipe C, and valves c and d, substantially as shown and described.

4. The receiving-chamber F, arranged substantially as specified.

5. The weight J, tubular rod I, and piston H, in combination with the valves e and d, substantially as shown and described.

90,111.—Charles S. Lynch, Boston, Mass.—*Mode of Utilizing the Slag of a Rolling-Mill Furnace.*—May 18, 1869.

Claim.—The employment of the furnace-slag or cinder, as described, with iron-ore alone, or with such and a quantity of oxide of manganese, in the manner, and under circumstances, and for the purposes substantially as hereinbefore explained.

90,112.—J. McIlvain, Hancock, Ill.—*Cultivator.*—May 18, 1869.

Claim.—1. The standard and brace I, when attached at front and rear as deseribed, for the purpose set forth.

2. The screw-hooks K, when arranged as described, for the purpose set forth.

90,113.—William McKay and Charles E. Bayley, Newburyport, Mass.—*Sail-Hank.*—May 18, 1869.

Claim.—The improved sail-hank, constructed as represented and described, viz, with the two parts, B B′, of its frame hinged together at one extremity of each, and provided with lap-hooks D D′ at their opposite ends, and also having the connection-screw bolt of such parts B B′ arranged and applied to them, so as not only to hold them together, but serve, at the same time, as a pivot or journal, to support the friction-roller of the hank, as set forth.

90,114.—Theodore H. Mead, Boston, Mass.—*Fly-Frame for Printing-Presses.*—May 18, 1869.

Claim.—1. The fingers F F, &c., when the form of their faces is modified by the application of the rods W W, &c., substantially as described.

2. The combination of the adjustable gauge G with the fingers F F, &c., for the purpose described.

90,115.—Michael Meade, Boston, Mass.—*Graduating Pattern for Boots and Shoes.*—May 18, 1869.

Claim.—The extension-pattern, when provided with the graduating-scales E and H, as described, and for the purpose set forth.

90,116.—Clark W. Mills, Brooklyn, N. Y.—*Grain-Bin.*—May 18, 1869.

Claim.—A grain-bin, formed with ranges of ventilating and supporting troughs, introduced substantially as and for the purposes set forth.

90,117.—Thomas Nevison, Morgan, Ohio.—*Portable Fence.*—May 18, 1869.

Claim.—The braces D, standards C, in combination with the rails E, sills A, and rider F, when constructed and arranged as herein described, and for the purpose specified.

90,118.—Enoch Osgood, Boston, Mass.—*Compound to be Applied to Shoes and other Articles.*—May 18, 1869.

Claim.—1. The application of rubber and emery, or their equivalent, vulcanized together hard or semi-hard, to horseshoes, or to boots and shoes for ladies' and gents' wear, either with or without a base, to prevent their slipping, substantially as and for the purpose herein set forth.

2. A horseshoe made with compartments, to be filled with a substance that will prevent horses and other animals from slipping, substantially as herein set forth.

3. The rubber and emery vulcanized compound, applied to brakes or other surfaces, so as to prevent slipping, substantially as and for the purpose herein set forth.

90,119.—Oscar Paddock, Watertown, N. Y.—*Button.*—May 18, 1869.

Claim.—A button or stud, having combined with its head and shank a dished volute wire spring, arranged, with relation to the button-head, in the manner and for the purposes set forth.

90,120.—P. M. Papin, St. Louis, Mo.—*Apparatus for Ageing Spirits.*—May 18, 1869.

Claim.—The combination of the air-duct F with its perforations and head f, coil E, vessel C, with perforated cover C′, spaces D, D^1, and D^2, diaphragm B, with vessel A and pipe G, constructed and arranged to operate substantially in the manner and for the purpose described.

90,121.—Emery Parker, New Britain, Conn.—*Key.*—May 18, 1869.

Claim.—The improvement, which consists in uniting the two members A and B of the shank of an extension-key, by means of the slot b, terminated by the reverse curved slot c d, formed in one member, in combination with the fixed pins e e, in the other member, the whole operating in the manner substantially as described, for the purposes specified.

90,122.—A. G. Perry, Clyde, Ohio.—*Eaves-Trough Supporter.*—May 18, 1869.

Claim.—The strap A, with a jaw. B, in combina-

tion with the upright shaft D, bolt C, with an eye, K and bar, H, when used with the cross-bar F, all arranged substantially as described, as and for the purpose set forth.

90,123.—Townsend Poore, Scranton, Pa.—*Fluid-Meter.*—May 18, 1869.

Claim.—1. The loaded levers P, applied to disk E, or its equivalent, and so connected to valve *g* as to shut this valve at the termination of the down-strokes of said disk, substantially as described.

2. The loaded lever L, applied to disk E, or its equivalent, and provided with a gravitating-catch, M, and so connected to the valve *g*, and loaded lever P, as to open this valve at the termination of the up-strokes of the disk E, substantially as and for the purposes described.

3. The combination of loaded levers L and P, and their respective catches, with valve *g*, and reciprocating disk E, said parts being so constructed and arranged as to operate to shut valve *g*, at the termination of the down-stroke of disk E, and to open and lock open the valve at the termination of the up-stroke of said disk, substantially as described.

4. The combination of the gravitating latches and catches with a reciprocating valve-disk, E, of a fluid-meter, arranged and constructed so as to automatically open and lock open the valve of said disk, at the termination of its up-stroke, so that the valve cannot casually shut while the disk is descending by gravity, substantially as described.

90,124.—Ph. J. Probeck and John B. Corlett, Newburgh, Ohio.—*Invalid-Table and Book-Holder.*—May 18, 1869.

Claim.—The combination of the jointed frame or book-holder I, pivoted arm E, table D, tray H, and adjustable standard C, all arranged and constructed to operate in the manner and for the purpose substantially as described.

90,125.—George Robinson and Harvey O. Silver, Sodus, N. Y.—*Saw-Filing Machine.*—May 18, 1869.

Claim.—1. The adjustable two-part stirrups C *e*, C *e*, constructed as described, and suspended from the weighted roller B, for altering the inclination of the file, as and for the purpose set forth.

2. The saw-filing apparatus, composed of the vertical clamps D D and keys *e e*, for holding the saw, and the two-part adjustable stirrups C *e* suspended from the weighted roller B, for supporting the file in different positions and at various inclinations, all constructed substantially as described, and arranged within a suitable frame, to operate as set forth.

90,126.—George Lamb Scott, Manchester, England.—*Apparatus for Molding Pulleys.*—May 18, 1869.

Claim.—1. For the purpose herein set forth, the use of a trammel, carrying gearing and other parts, substantially as described.

2. The use of the movable center of motion *a b*, and constructing the molding-apparatus so as to constitute a machine complete in itself, and capable of being adapted to any part of the foundry.

90,127.—Thomas Shaw, Philadelphia, Pa.—*Water-Heater.*—May 18, 1869.

Claim.—The employment of a woven tube, in the manner and for the purpose set forth.

90,128.—Philander Shaw, Boston, Mass., assignor to Shaw's Union Air-Engine Company, same place.—*Hot-Air Engine.*—May 18, 1869.

Claim.—1. The inlet-valve V, when made hollow and combined with the cold-air pipe T″, substantially as described.

2. The combination of the inlet-vacuum valve V″ with the working-cylinder of the air-engine, substantially as described.

90,129.—William N. Shellabarger, Union, Ohio.—*Folding Feed-Trough.*—May 18, 1869.

Claim.—1. The folding feed-trough, constructed substantially as described.

2. The construction of a hay-rack in connection therewith, substantially as described.

90,130.—Simon P. Sleppy, Wilkesbarre, Pa.—*Sewing-Machine.*—May 18, 1869.

Claim.—1. The elliptical cam 6 and its flange 6″, in combination with the main-shaft 2 and intermediate gearing, all constructed and operating substantially as herein described.

2. The compound cam 7, combined with the looping-arm 16, and constructed to operate substantially as and for the purpose herein set forth.

3. The double-hooked spreader 10, constructed and operating substantially as described.

4. The slotted lip 20, attached to front face of the double-hooked spreader 10, constructed, arranged, and operating substantially as and for the purpose set forth.

5. The combination, as herein described, of the feed-dog 17, friction-wheel 17′, and adjusting-screw 17‴, with the cam 6 6″, for imparting vertical and longitudinal motion to the feed-dog 17.

6. The combination, with the above, of the arms 17″ and their adjusting screw or screws, and the cam 6′, for giving lateral, vertical, and forward motion to the cloth or feed, substantially as herein set forth.

7. The curved lever 16, having its long arm forked or divided, and supported on and made adjustable by the fulcrum-screw 15, substantially as herein described.

8. The needle-bar C, when provided with arm *b* for carrying the rods *f* and *g*′, and working in the tube *a*, attached to the front face of the stationary arm or goose-neck B, all substantially in the manner and for the purpose herein set forth.

9. The conical-headed screw, Fig. 7, in combination with the needle-bar C, when used to secure the needle in place, substantially as described.

10. The outer cylinder *d*′ of the feed-wheel, with its spring *h*, clutch *f*, rod *f*′, and clamp *f*″, when combined, constructed, and operating substantially as set forth.

11. The inner cylinder *e* of the upper feed-wheel, with its corrugated ends, Fig. 6, adjusting-screws *i i*′, and clutch *g*, and rods *g*′, clamp *g*″, and spring *h*′, combined, constructed, and operating as set forth, to give lateral motion to the feed-wheel.

12. The combination of the outer feeding-cylinder *d* and its appendages with the inner cylinder *e* and its appendages, for giving lateral and forward or retrograde motion to the cloth, as described.

13. The roller, Fig. 8, when used in combination with the upper feed-apparatus, in the manner and for the purpose set forth.

14. The adjustable plate, Fig. 9, constructed as described and for the purpose set forth, in combination with the upper and lower feeding-apparatus, operating as and for the purpose herein set forth.

15. The looper-needle 31, eyed and pointed at one end, and forked at the other, substantially as described.

16. The combination, with the looper-needle 31, of the notched plate 27, spring 28, pin 29, and screw 30, for fastening and operating the looper-needle, in the manner and for the purpose set forth.

17. The combination of the frame 33 and its arms 33′ and 33″ with the large wheel 34 and small wheel 35, for winding the thread on the bobbin 23 automatically, substantially as described.

18. The tension-spring 38, in combination with the described winding-apparatus for regulating the tension of the thread in its passage from the spool to the bobbin, as described.

19. In sewing-machines, where rotary hooks or spreaders are used to carry a loop around a spool or bobbin, or the spool or bobbin-case, the combination of the rotary spreading-hook 10 with a feeding-mechanism, feeding the cloth or fabric toward the free face of the hook or spreader, and in a plane at right angles, or nearly so, to the plane of revolution of the said hook or spreader, to cause the loop just forming to be caught with certainty by the point of the hook or spreader.

20. The combination, in a sewing-machine, of two feeding-devices, substantially as herein described, when one of them is constructed to feed the material in an opposite direction to the other.

21. The combination, with a sewing-machine, of

two feeding-devices, constructed substantially as herein described, either one of which may be made to perform alone all the requirements of a feed-apparatus, both for zigzag and direct stitches.

22. The combination, with a sewing-machine, of two feeding-devices, either of which may be made to perform, substantially as herein described, all the requirements of a feed-apparatus for a direct stitch, whilst the other vibrates or oscillates laterally.

23. The combination, with a sewing-machine, of two feeding-devices, constructed and operating substantially as herein described, so that both may have a vibrating, oscillating, or zigzag motion, in like or opposite directions at the same time, while the stitching continues in a uniform or direct line, thus forming two connected lines of stitches.

24. The combination, with a sewing-machine, of a cylindrical or spheroidal bobbin, a turning or revolving looper-hook, and a forked or barbed looper vibrating below the bed-plate, when constructed substantially as herein described, so that it will be unnecessary to remove either of these elements or devices therefrom to render the machine capable of making either a single-loop or a back-stitch.

25. The combination, in a sewing-machine, of mechanical devices, constructed and arranged substantially as herein described, so as to operate efficiently in making not only a stitch or stitches with three threads, but also in making a stitch or stitches with either one or two threads, at option, without the removal therefrom or the addition thereto of any mechanical device or part of the machine used in making a stitch with three threads.

90,131.— WILLIAM H. STAATS and AUGUST C. SCHWANKE, La Prairie, and LUCAS STADLER, Bowen, Ill.—*Land-Roller.*—May 18, 1869.

Claim.—The arrangement of the frames *a* and *b*, lever *c*, roller *d*, wheels *e*, and brace *f*, or their equivalents, when constructed and operating substantially as and for the purposes herein described.

90,132.—G. CARTER STAMPER, Osceola, Iowa.—*Nut-Lock.*—May 18, 1869.

Claim.—1. The riveted spring-plate A, having at the ends holes *a* or flanges *b*, or teeth or pins *c*, in combination with plate B and outer nuts *d d*, substantially as described.

2. Cap C, having flanges *e e*, and square hole *k*, in combination with bolt D, having square part *f*, and with nut *h*, substantially as described.

90,133.—EDWARD S. STIMPSON, Milford, Mass., assignor to DUTCHER TEMPLE COMPANY, same place.—*Lubricating Temple for Looms.*—May 18, 1869.

Claim.—The arrangement of the oiling-passage E in the projection *b* of the cap C of such temple, so that oil, after having been poured into such passage, shall be conveyed by it both to the spindle and to the next adjacent end of the toothed roller, before going through the bore of the roller, the whole being substantially as specified.

90,134.—THEODORE R. TIMBY, Saratoga Springs, N. Y.—*Umbrella-Fastening.*—May 18, 1869.

Claim.—The ring *c*, attached to the staff *a* of an umbrella or parasol, by means of a staple, *b*, or other suitable connection, in such a manner as to allow the ring to pass over and beyond the ends of the ribs, to secure the same, substantially as described.

90,135.—JAMES S. TRAVIS, New York, N. Y., assignor to ARCHER \& PANCOAST MANUFACTURING COMPANY, same place.—*Lamp-Shade.*—May 18, 1869.

Claim.—The translucent disk C, made of a separate piece from, but applied in connection with, the shade of a gas or other burner, substantially as and for the purpose herein set forth.

90,136.—WILLIAM L. TRULAND, Waterford, N. Y.—*Cutting-Plier.*—May 18, 1869.

Claim.—As a new article of manufacture, the within-described pliers, constructed with cutting-edges at the rear-ends of the jaws, and furnished with plates D D, substantially as set forth.

90,137.—ALEXANDER C. TWINING, New Haven, Conn.—*Detachable Fixture for Casters.*—May 18, 1869.

Claim.—1. The combination of a plate or socket with the elastic strip, wire, or branches traversing or skirting the bore, and attached, substantially as and for the purpose set forth.

2. The knob *k* in the same combination.

3. The swell *s* of the shaft or pintle in the same combination.

90,138.—WILLIAM V. VAN SYCKEL, Joshua, Ill.—*Fence-Gauge.*—May 18, 1869.

Claim.—The fence-gauge herein described, consisting of blocks C, arms E E, wedge D, strips B, and roller F, when constructed and arranged as set forth.

90,139.—WILLIAM H. WALL, Boston, Mass.—*Driving Reins and Bridle.*—May 18, 1869.

Claim.—1. The combination of the driving-reins, headstall, and bit, substantially in the manner as described, each driving-rein, under such mode of combining the parts, being made with two branches connected to the martingale and cheek-pieces of the headstall, and applied to one of the rings of the bit, substantially as and so as to operate therewith as described.

2. In combination therewith, the application of one of the branches each of the driving-reins to the cheek-rein, substantially in manner and so as to operate therewith, as hereinbefore explained.

90,140.—ISIDOR WALZ and JOHN M. PENDLETON, New York, N. Y.—*Manufacture of Carbonate of Soda and Other Chemicals.*—May 18, 1869.

Claim.—1. The use of steam in connection with a heated mass of carbonate of lime and nitrate of soda in a highly heated vessel or retort, for the regeneration of nitric acid, substantially as above described.

2. The production of a mass, consisting of quicklime and carbonate of soda, in exactly or nearly their chemical proportions or equivalents, and forming a mass applicable to the production of caustic-soda lyes from carbonate of lime and nitrate of soda, treated in the manner substantially as herein described.

90,141.—DAVID WELLS, Lowell, Mass.—*Coal-Stove.*—May 18, 1869.

Claim.—1. The combination of the auxiliary chamber M, having the discharge-opening N, arranged in the upper part of it, with the fire-place B, the smoke-consuming chamber G, its vertical flues H, and front flame-holes *h*, the whole being substantially as described.

2. A stove as made not only with the smoke-consuming chamber G, the vertical flues H, and fire-place B, combined and arranged as set forth, but as having a hole or opening, K, through the back of the fire-place and front of the smoke-consuming chamber G, and a separate perforated plate, L, arranged to extend across such opening, as specified.

3. A stove provided with a smoke-consuming chamber, G, arranged and combined with its fire-place by flues, and also communicating with the fire-chamber by flame passages or holes *h*, tapered in manner as set forth.

90,142.—SHEPHERD H. WHEELER and LYMAN V. ROUSE, Dowagiac, Mich.—*Potato-Digger.*—May 18, 1869.

Claim.—1. The bars *a*, when constructed, combined, and arranged as set forth.

2. In combination with the bars *a a a a*, the beam A, standard B, and share C, substantially as and for the purposes set forth.

90,143.—PARKER WINEMAN, Joliet, Ill.—*Pump.* May 18, 1869.

Claim.—1. The metal tube-section B, coated with a vitreous substance, and constructed with flaring ends, and receiving into said ends the lower terminus of the wooden section A, and the upper terminus of the lower wooden section B, all substantially as described.

2. An annular grooved ring-piston D, constructed with a raised valve-seat, *v*, and a forked stem, *i c*,

in combination with the valve *g*, substantially as described.

90,144.—ALLYN E. WOLCOTT, Chicago, Ill., assignor to himself and ISAAC SIMMONS, Baltimore, Md.—*Carriage-Spring.*—May 18, 1869.

Claim.—The combination of two or more sets of metallic springs B and D, and their attendant curved bearings A and C, and connecting-rods E, when constructed and arranged so as to operate substantially as shown and specified.

90,145.—ALLYN E. WOLCOTT, Chicago, Ill., assignor to himself and ISAAC SIMMONS, Baltimore, Md.—*Carriage-Spring.*—May 18, 1869.

Claim.—1. The combination of the curved bearings B, springs A, suspended adjusting-links C, and connecting-bar D, when constructed and arranged so as to operate substantially as and for the purposes set forth.

2. The combination of the springs A A and the curved bearings B B, arranged to operate substantially as herein set forth, either with or without the suspended links C C and connecting-bar D, or either of them.

90,146.—ALLYN E. WOLCOTT, Chicago, Ill., assignor to himself and ISAAC SIMMONS, Baltimore, Md.—*Carriage-Spring.*—May 18, 1869.

Claim.—1. A straight metallic resilient plate or spring, in combination with the auxiliary spring-plate I, or its equivalent, and a curved bearing on support, when arranged so as to operate substantially as described.

2. The combination of the adjusting links or arms C, a metallic resilient plate or spring, and a curved bearing, when constructed and arranged so as to operate substantially as and for the purpose specified.

3. The connecting beam or bar D, adjusting-links, or arms C, resilient plate or spring, and curved bearing, when constructed and operating substantially as described.

4. The flanges L and projections O, when constructed and operating substantially as and for the purposes shown and described.

5. The auxiliary ledges K and springs I, when constructed and arranged substantially as shown and specified.

90,147.—JOHN ZELLER, Stouchsburgh, Pa.—*Wagon-Jack.*—May 18, 1869.

Claim.—1. Lever C, in combination with the bail *f*, bar B, and rod or cord *g*, all arranged to operate substantially as and for the purpose set forth.

2. A lifting-jack, consisting of bar B, stock A, lever C, bail *f*, cord or rod *g*, knee-lever *m*, springs *n* and *l*, and stop *k*, all combined, arranged, and operating substantially as and for the purpose described.

90,148.—CHARLES ANTHONY, Providence, R. I.—*Rigging for Gaff-Topsails.*—May 18, 1869.

Claim.—The mode described of hanging and securing the gaff-topsail to the mast and gaff by means of the pintles P T and the latch-link K, or their equivalent, operated by halyards from the deck of the vessel, substantially as specified.

90,149.—DANIEL S. BIGLER, Siddonstown, Pa.—*Horse Hay-Fork.*—May 18, 1869.

Claim.—The fork-head, constructed, as described, of the curved side-pieces *a a*, united by the cross-piece *b*, the rocking fork-heads *c*, carrying the tines *h*, the slotted upright *d*, rods *f*, slotted runner *j*, and spring-catch *i*, all arranged and operating as described, for the purpose specified.

90,150.—EDWARD BLOOMFIELD and DWIGHT P. OTIS, New York, N.Y.—*Piano-Forte.*—May 18, 1869.

Claim.—The combination of the heavy notched bar F, screws E, and arm C, with the bridge D, all arranged and operating substantially as herein shown and described, for the purpose specified.

90,151.—WILLIAM BOND and JOHN WROATH, Sandy Hill, N. Y.—*Screw-Plate.*—May 18, 1869.

Claim.—The arrangement, substantially as described, of the stock A, lever D, screw E, handle F, and steadying-dies B B, for the purpose set forth.

90,152.—ADDISON P. BOREN, Greensborough, N. C.—*Baling-Press.*—May 18, 1869.

Claim.—1. The clamps H, having their parts hinged together, in combination with the yokes I, when arranged so as to be placed in the press before filling, and so as to clamp and secure the bale automatically the instant the compression is effected, substantially as described.

2. In combination with clamps and yokes, arranged as above claimed, the grooves or guides *a*, whereby the clamps are guided into the yokes while the bale is being compressed, substantially as described.

90,153.—GEORGE E. BRETTELL, Rochester, N.Y.—*Mop-Head.*—May 18, 1869.

Claim.—The combination of the jaws C C and D with the cloth-bar B and screw E, nut *e*, and sleeve A, when constructed and arranged substantially as described.

90,154.—WILLIAM BYRON, New York, N. Y., assignor to himself and GEORGE S. RICE, of same place.—*Combining Hard Rubber with Jet and other Substances to Produce Useful and Ornamental Articles.*—May 18, 1869.

Claim.—1. The method of combining hard rubber, or vulcanite, with jet or other substances, substantially in the manner and for the purposes set forth.

2. As a new manufacture, jewelry composed of jet, mounted in or upon, or combined with hard rubber, substantially as herein described.

90,155.—GEORGE W. DALBEY, Carrollton, Miss.—*Thread-Guard.*—May 18, 1869.

Claim.—The guard A, with the lips B and the cutters C, arranged substantially as and for the purposes herein shown and described.

90,156.—REUBEN DANIELS, Woodstock, Vt.—*Bearing for Shafts.*—May 18, 1869.

Claim.—The journal-box A B, provided with the supplementary bearing-plate C, adjustable by means of the set-screw E, substantially in the manner herein described, for the purpose specified.

90,157.—JAMES H. DEVIRS and DANIEL GRAVATT, Pleasantville, Pa.—*Tube-Well Pump.*—May 18, 1869.

Claim.—The described arrangement and combination of the detachable inner barrel *d*, tube *a'*, springs *e e*, ring or collar *c*, and weight *f*, substantially as and for the purposes set forth.

90,158.—PIERRE A. DORMOY, Vienna, Austria.—*Apparatus and Machinery for Puddling Iron.*—May 18, 1869.

Claim.—1. The mode of puddling substantially as hereinbefore described; that is to say, by means of tools to which rotary motion on their axes is imparted mechanically, while they are, at the same time, directed, by the puddler, to any required part of the furnace.

2. Constructing apparatus for imparting rotary motion to puddling-tools, substantially as hereinbefore described and represented in the accompanying drawings.

3. Constructing tools to be employed in puddling, with a handle, which will allow the tool-shaft to rotate while the handle is held by the puddler, substantially as hereinbefore described and represented in the accompanying drawings.

4. The employment of hollow rotating tools, as a means for injecting air, steam, or other gases into the molten iron during the puddling, and the constructing of the same substantially as hereinbefore described and represented in the accompanying drawings, whereby I would have it understood that what I claim as my invention is not simply the injection of air, steam, or gases, by means of puddling-tools as already known, but the employment, for that purpose, of tools rotating, as described, simultaneously with the injection of air, steam, or other gases.

5. The mode of compressing and forming the blooms in the puddling-furnace by means of oscillating tools cooled by an internal stream of water, air, or steam, substantially as hereinbefore de-

scribed and represented in the accompanying drawings.

6. The mode of compressing and forming the blooms in the puddling-furnace by means of tools introduced into the furnace from above, and rotating, rising, and sinking, substantially as hereinbefore described and represented in the accompanying drawings.

7. Constructing apparatus for imparting oscillating or rotating and rising and sinking motion to tools for forming and compressing blooms in the puddling-furnace, substantially as hereinbefore described and represented in the accompanying drawings.

90,159.—W. C. C. ERSKINE, Nether Kinnedder Dunfermline, Scotland.—*Coffee-Pot.*—May 18, 1869.

Claim.—The strainer, constructed as described, of the cone B, provided with coarse perforations, and the finely perforated tube C, extending vertically through said cone, both arranged as described, and adapted for attachment to the interior of the case A, in the manner set forth, for the purpose specified.

90,160.—HUGO FLECK, Dresden, Saxony, assignor to WILLIAM A. FLECK, Philadelphia, Pa.—*Manufacture of Glue.*—May 18, 1869.

Claim.—The herein-described use of salt and its solutions in the process of drying glue.

90,161.—GEORGE P. FULLER, Philadelphia, Pa.—*Railway-Chair.*—May 18, 1869.

Claim.—The combination and arrangement of the railroad-chair A, having a slot, *a*, vertical wings D, and flanges G, the plate-key E, and spring-key F, with the rails B, substantially as described.

90,162.—ANDREW FULTON, Albany, N. Y.—*Binder for Closing Gas-Retorts.*—May 18, 1869.

Claim.—The combination, with the retort, of the arms C D, link F, levers G K, all arranged substantially as specified.

90,163.—THOMAS GAMBLE, Richmond, Va.—*Saw-Grinding Machine.*—May 18, 1869.

Claim.—The combination of the housings B, boxes A, blocks E, and wedges, connected by the adjustable yokes D, when arranged substantially as and for the purpose described.

90,164.—THOMAS D. GIBSON, Wilmington, Del.—*Hollow Projectile for Fire-Arms.*—May 18, 1869.

Claim.—A hollow projectile for fire-arms, composed of the bars *a a*, arranged around the charge A, when notched as described, for the purpose herein shown.

90,165.—J. GODFREY, New York, N. Y.—*Iron Last.*—May 18, 1869.

Claim.—Connecting the foot B to the standard A, by an adjustable joint, without other support, substantially as herein shown and described, and for the purpose set forth.

90,166.—CHARLES R. GORGAS, Roughsburgh, Ohio.—*Pessary.*—May 18, 1869.

Claim.—1. The inflating rubber pessary, having a conical pear-shaped body, A, cord B, and funnel-mouth, C, substantially as shown and described.

2. The hard-rubber cannula D, for introducing the pessary into the vagina, constructed as shown and described.

3. The hollow stem E, answering the two-fold purpose of introducing and inflating the pessary, substantially as shown and described.

90,167.—THOMAS G. HALL, Beech Haven, assignor to himself and DANIEL F. LEYBERT, Salem, Pa.—*Water-Wheel.*—May 18, 1869.

Claim.—1. A series of perpendicular gates, connected to a ring at the top, by the elevation of which ring they may be simultaneously raised, said gates having a transverse double flange at the bottom, the outward part of which flares, or curves upward, and the inner part conducts the flow in a direct line to the wheel, all substantially as and for the purpose described.

2. A turbine-wheel, having the two concentric sets of buckets, I and G, all substantially as described.

90,168.—GEORGE HARRISON, New York, N. Y.—*Pen-Holder.*—May 18, 1869.

Claim.—Discharging the pen from the barrel A by means of the lip *f g*, upon the divided discharge-tube B, working within the slots C *b* of the barrel A, all the parts being constructed and arranged as herein shown and described.

90,169.—L. O. HAYWORTH, New Cumberland, Ind.—*Hand Corn-Planter.*—May 18, 1869.

Claim.—1. The dropping-plate D, spiral plate G, and slotted stud H, in combination with the seed-box C, table or plate F, frame A, and plunger B, substantially as herein shown and described, and for the purpose set forth.

2. An improved corn-planter, formed by the combination of the frame A, plunger B, seed-box C, dropping-plate D *d'*, brush *c*, table F, spiral plate G, hopper E, plate I, and spring-plate K, with each other, said parts being constructed, arranged, and operating substantially as herein shown and described, and for the purpose set forth.

3. Constructing the dropping-plate D in such a way that it may be held up against the bottom of the seed-box C with an elastic pressure, to facilitate the discharge of any stray kernels that may find their way between the said plate and seed-box, substantially as herein shown and described.

90,170.—GEORGE W. HOBART, Silverton, Oregon.—*Machine for Stuffing Horse-Collars.*—May 18, 1869.

Claim.—1. The combination of the crank-wheel D, adjustable crank-pin d^2, pitman E, sliding-block or cross-head F, stuffing-rod G, feed-rack I, and hopper L, either or both, tube J, slide K, and adjustable collar-board M, with each other and with the frame A B, C^1 C^2 C^3, substantially as herein shown and described, and for the purpose set forth.

2. Adjustably pivoting the collar-board M to the slide K, by means of the slotted and recessed plate k^1, substantially as herein shown and described, and for the purposes set forth.

3. The combination of the rack k^2, gear-wheel N, shaft O, rack V, pawl U, crank P, pulley Q, rope or chain R, and weight T, with each other and with the slide K, and beams or bars C^1 C^2 C^3, substantially as herein shown and described, and for the purposes set forth.

90,171.—E. C. HOLDEN and E. L. BROCKETT, Owatonna, Minn.—*Bed-Bottom.*—May 18, 1869.

Claim.—The arrangement of the two parallel pieces *a c*, the curved piece *b*, the two blocks *d d*, one on each side of the center, and the hanging cranks *e e*, substantially as and for the purposes specified.

90,172.—JAMES HOLLINGSWORTH, Chicago, Ill.—*Horse-Stall Floor.*—May 18, 1869.

Claim.—The inclined floor *c*, slats *f f*, and trough *g*, all constructed, combined, and arranged in the manner and for the purpose herein described.

90,173.—LAWRENCE HOLMS, Paterson, N. J.—*Alarm-Bell.*—May 18, 1869.

Claim.—1. In ringing alarm and other fixed bells, the combination of the rotating-spindle *c*, with the swinging-hammer, all constructed and arranged substantially as shown and described.

2. In ringing alarm and other fixed bells, in combination with a rotating-spindle and swinging-hammer suspended therefrom, the sliding-sleeve *k*, feather *c'*, links *i i*, swivel-collar *l*, links *m m*, and forked lever *n*, substantially as and for the purposes shown and described.

3. In ringing alarm and other fixed bells, and in combination with a rotating-spindle and swinging-hammer suspended therefrom, substantially as described, the tangential or worm wheel *q*, worm *r*, ratchet-wheel *s*, lever *t*, and pawl-link *u*, and lever *v*, for the purpose of giving rotary motion to the spindle *c* and hammer *j*, either together with, or in-

dependently of, the ringing mechanism, substantially as shown and described.

4. In combination with a bell-hammer, the cross-arms *g g'*, and springs *h h*, substantially as and for the purposes shown and described.

5. Making the striking-faces of a bell-hammer of a curvature corresponding in reverse to that of the sound-bow of the bell, substantially as and for the purposes shown and described.

6. Arming a bell-hammer with hard wood, or other semi-elastic material, substantially in the manner shown and for the purposes described.

90,174.—Wesley Hull, Fort Wayne, Ind.—*Neck-Yoke.*—May 18, 1869.

Claim.—The ferrules *b b*, constructed and secured to the yoke A, as described, and provided with rollers *d d*, as and for the purpose set forth.

90,175.—W. Davidson Jones, Hagaman's Mills, N. Y.—*Corn-Husker.*—May 18, 1869.

Claim.—The separator *d d d d*, made and constructed substantially as described and shown, having beating or tripping edges, said beaters being provided with recesses *e e e e*, operating substantially as and for the purposes shown and set forth.

90,176.—James L. Judge, Milwaukee, Wis.—*Steam-Heater.*—May 18, 1869.

Claim.—1. The steam-heater, constructed with shell A, circulator E and F, flues G and H, and corrugations K, all arranged substantially as described.

2. Base B, with doors L, M, N, and O, and holes to correspond with the flues G and H, arranged substantially as described.

3. Circulator E and F, flues G and A, corrugations K, steam-chamber I, with shell A, constructed and arranged substantially as described.

90,177.—R. D. King, Brooklyn, N. Y.—*Shutter and Awning Combined.*—May 18, 1869.

Claim.—The attaching, to the front of a building, the upper ends of one or more shutters, by hinges or joints, so that said shutters may be freely raised and lowered, in combination with windlasses, or their equivalent, one or more, arranged with chains or cords, pulleys, and suitable fastenings, whereby the shutter or shutters are made to serve the double purpose or use of an awning and shutters, substantially as herein set forth.

90,178.—J. W. Lewis, Oregon City, Oregon.—*Gang-Plow.*—May 18, 1869.

Claim.—1. The frame A and draught-pole E, with the platform D for the driver's feet, and the seat F, in combination with the toggle H, lever I, and the rack Ix, all constructed and arranged substantially as and for the purpose specified.

2. The pivoted bar J, guides L' Lx, pin *d*, lever N, carrying the catch O *e*, the chain *ax*, and pulley *f*, in combination with the axle L, substantially as described, for the purpose specified.

90,179.—James C. Lewis, Belfast, Me.—*Compound for Treating Asthma and other Diseases.*—May 18, 1869.

Claim.—The compounding of the above ingredients and their preparation, as herein set forth.

90,180.—Melville E. Mead, Darien Depot, Conn.—*Automatic Ventilator.*—May 18, 1869.

Claim.—The automatic ventilator, consisting of the two oppositely arranged series of pivoted slats, connected by adjustable rods or bars, whereby they are adapted to operate substantially in the manner herein set forth, for the purpose specified.

90,181.—Thomas J. Mell, Macon, Ga.—*Railroad-Car Ventilator.*—May 18, 1869.

Claim.—The ventilator A, on the rod B, operated by the cord, chain, or wire C, in combination with the hood or cap D, the whole being set, arranged, and operating in the manner and for the purpose substantially as herein shown and described.

90,182.—Dennis Michaels and John H. Croskey, Hopedale, Ohio.—*Horse-Power.*—May 18, 1869.

Claim.—The combination and arrangement of the drum A, mounted upon the shaft B in the framing, the notched ring E, sweep C, spring-latch D, cord H, and stay-ring I, as herein described, for the purpose specified.

90,183.—David H. Nation, St. Louis, Mo.—*Folding-Seat.*—May 18, 1869.

Claim.—The method of uniting a folding-seat to its standards by elliptical projections *b b'* and sockets *c c'*, with shoulders *o o'*, and bolts passing through them, in the manner shown and specified.

90,184.—John Nichol, New York, N. Y.—*Shears for Cutting Iron.*—May 18, 1869.

Claim.—1. The combination of the arms F, one or more, and friction-rollers H, with the movable cutter-bar C and standards G, attached to the bed or frame A, whether used with or without the adjusting-plates I, substantially as herein shown and described, and for the purpose set forth.

2. The adjustable clamp L M, constructed and adjusted substantially as herein shown and described, and for the purpose set forth.

3. The lever N n^1 n^2, constructed as described, in combination with the adjustable clamp L M and bed A, substantially as herein shown and described, and for the purpose set forth.

90,185.—S. W. Palmer and J. F. Palmer, Auburn, N. Y., assignors to S. W. Palmer and C. M. Palmer, same place.—*Clothes-Wringer.*—May 18, 1869.

Claim.—1. The upright flat springs, when employed on the ends of a wringer, substantially as herein shown and described, to operate as set forth.

2. The pivoted arm *g*, attached to the sliding-plate G, and carrying the pinion J, when provided with the segmental edge *j*, for keeping the pinion in constant gear, as set forth.

3. The combination of the axles E F and gear-wheels K L, with the pinion J and pivoted arm *g*, all combined and operating substantially as herein shown and described.

4. The combination of the handled cams H with the plate G and block *d*, for the purpose of removing and putting on the pressure quickly and easily, when arranged and made substantially as herein shown.

90,186.—Anson Peirce, Lake City, Minn.—*Wagon-Brake.*—May 18, 1869.

Claim.—The pivoted levers K, having slotted cross-heads *k'* formed upon their free ends, the plate or bar L, and connecting-rods J, in combination with each other and with the tongue-rod H, axle D, and sliding-bar M, by which the brake-bar P is operated, substantially as herein shown and described, and for the purpose set forth.

90,187.—J. Deming Perkins, New York, N. Y.—*Alarm Cash-Box.*—May 18, 1869.

Claim.—1. Operating the alarm-mechanism through the box-handle I, which is provided with the coiled spring, substantially as herein shown and described.

2. The combination of the curved arm M, having the laterally projecting pin, with the cover of the box, the spring-hammer L, and the bell K, arranged in the end compartment of the box, all operating as described, to sound the bell when the cover is raised, as herein set forth and shown.

3. The combination of the bells B G K, and their operating mechanism, with the cash-box and cover, all arranged as described, for the purpose specified.

90,188.—Charles Perley, New York, N. Y.—*Sash-Fastening.*—May 18, 1869.

Claim.—The pawl *a*, with its T-head, in combination with the strap, setting over said pawl, and provided with a mortise, for the pawl to pass through, constructed and arranged as and for the purposes set forth.

90,189.—Jacob Pfitzinger, Buffalo, N. Y.—*Elevator-Bucket.*—May 18, 1869.

Claim.—The center-brace C, constructed and fastened to the bucket and binding-frame, substantially in the manner and for the purposes herein set forth and described.

90,190.—Ansel Phinney, Bainbridge, N. Y.—*Holder for Screw-Cutting Dies.*—May 18, 1869.

Claim.—The construction and arrangement of the die-plate A, having the dies and set-screw, and the crotched shank B, terminating in the end C, adapted to fit in a bit-stock, therein described, for the purpose specified.

90,191.—Merritt F. Potter, Kaneville, Ill.—*Abdominal Supporter.*—May 18, 1869.

Claim.—1. The India rubber bag B, combined with the tube C, in the manner and for the purpose set forth.

2. The clasp D, in combination with the bag B.

3. The combination of the bag B and tube C with a syringe for distending it in the manner and for the purpose set forth.

4. The utero-abdominal compress, constructed and combined as set forth, as a new article of manufacture.

90,192.—Mark H. Prescott, Ottawa, Ill.—*Heel for Boots and Shoes.*—May 18, 1869.

Claim.—As an improved article of manufacture, the hollow heel A, having the bent flange D, and the raised bottom B, upon which the wearing surface C rests, secured to the plate E upon the boot or shoe, by means of the screws F F, as herein described, for the purpose specified.

90,193.—Edmond Prud'homme and Pantaleon Moses Leprohon, New York, N. Y.—*Sliding-Door.*—May 18, 1869.

Claim.—The rollers *b*, supported upon the springs *e*, in the upper end of a sliding-door, substantially as described, for the purpose specified.

90,194.—B. M. Quint, St. Joseph, Mich.—*Insect-Trap for Protecting Fruit While Growing.*—May 18, 1869.

Claim.—An improved insect-trap, formed by the combination of the two parallel bars A, open at one end, cross-bar B, outer frame C, plank or brace D, rubber-block E, and sheet F, with each other, substantially in the manner herein shown and described, and for the purpose set forth.

90,195.—H. J. Rickard, Rochester, N. Y.—*Hollow Auger.*—May 18, 1869.

Claim.—1. The head *x*, screws *h*, in combination with the movable T-headed arms *a*, all being constructed and arranged to operate substantially as and for the purpose set forth.

2. In combination with the above, the sustaining-bars *p* and clamping-screws x^2, as and for the purpose set forth.

90,196.—Philippe Ricord and John R. Scattergood, Newark, N. J.—*Fastening for Horses.*—May 18, 1869.

Claim.—1. The spring-catch or snap, consisting of metallic clasp A, bolt B, retracting-bar D, sockets E and G, spring H, and ring I, constructed as described, and for the purpose of enabling the releasement of a driving-rein, or its equivalent, by a simple pull on the part of the driver, after having mounted his carriage.

2. The combination of said snap with a driving-rein, halter, or its equivalent, and the peculiar manner of attaching the same to a post, tree, or other suitable object, without the use of fixed rings or hooks, whereby the strain of the animal tied, when pulling, comes directly on said post, and not on the snap, substantially as described.

90,197.—William Rogers, New York, N. Y., assignor to himself and O. S. Paine, same place.—*Heating-Shoe.*—May 18, 1869.

Claim.—A shoe, boot, or sock, provided with a pocket or compartment for containing any heating material or substance, substantially as and for the purposes herein shown and described.

90,198.—Edward Sealy, Newark, N. J.—*Felted Hat.*—May 18, 1869.

Claim.—The inlaid hat, substantially as hereinbefore described, having a body variegated by pattern-threads inserted in such body, and combined with it by felting, the same being a new article of manufacture.

90,199.—Norman B. Sebring, Matamora, Ohio.—*Bee-Hive.*—May 18, 1869.

Claim.—1. The self-supporting railing *g*, with its several inclined slats *f f*, &c., in combination with the comb-supporting frames, in the manner set forth and described.

2. The two perforated tin cutters T T, tray R, grappers w^1 and w^2, for the use and purposes herein described.

90,200.—Hugh Shepherd, Lee's Summit, Mo., assignor to himself and George W. Scott, same place.—*Seed-Drill.*—May 18, 1869.

Claim.—1. The arrangement of the drill-tooth A, its cutter A^2, with the drag-bar B, by the bolt *b*, and holes *b'*, substantially as set forth.

2. The braces D and E, arranged adjustably by the bolts *d* and *e*, and holes *d'* and e^1, respectively, to support and guide the roller C, in connection with the tooth A, substantially as set forth.

90,201.—John Joseph Charles Smith, Philadelphia, Pa., assignor to "The Metallic Compression Casting Company," Boston, Mass.—*Method of Casting Metal Pipes.*—May 18, 1869.

Claim.—1. The apparatus adapted to receive the molten metal at top, and discharge a portion of it at bottom, substantially as herein described, for the purposes stated.

2. In combination with the mold A, the lined reservoir E and plug G, constructed and arranged as described, to provide for the instantaneous introduction of molten metal into the said mold.

3. The combination of the mold A, the unyielding base or gate S, by which the bottom of the said mold may be opened or closed at pleasure, and a temporary bottom, *s*, of yielding and non-conducting material, all being constructed and arranged to operate substantially as shown and described, for the purposes set forth.

90,202.—Andrew N. Staley, Waynesborough, Pa., assignor to himself and D. B. Russell, same place.—*Hay-Knife.*—May 18, 1869.

Claim.—As a new article of manufacture, the within-described hay-knife, the blade of which being formed diamond-shape, substantially as and for the purpose set forth.

90,203.—R. P. Starbuck, Gallatin, Mo.—*Bee-Hive.*—May 18, 1869.

Claim.—The adjustable entrance-protector *d'*, in combination with the legs *l* and flaps *h*. as and for the purpose specified.

90,204.—George C. Stevens, West Townsend, and J. F. Stevens, Fitchburgh, Mass.—*Turbine Water-Wheel.*—May 18, 1869.

Claim.—1. The top plate *b* and the annular bottom plate *c*, constructed and arranged with the space between them widening toward the center, all as described, for the purpose specified.

2. The stationary chutes E E, constructed as described, and arranged, with relation to the buckets *d*, plates *b c*, and the swinging-gates F, as herein described, for the purpose specified.

3. The gates F F of a water-wheel, connected with two or more wheels, or rings, G H, so that they can be separately or simultaneously opened or closed, as set forth.

4. The wheels or rings G H, by which the gates can be separately moved, with each other, connected by means of a screw, K, for the purpose of allowing the simultaneous setting of the gates as set forth.

90,205.—George W. Strong and Walter L. Strong, San Francisco, Cal.—*Ore-Concentrator.*—May 18, 1869.

Claim.—1. The vibrating-trough C, having the divergent sides E E and inclined bottom N, said sides gradually approaching each other, toward the upper end of the trough, substantially as and for the purpose described.

2. A trough, having divergent sides and an in-

clined bottom, moving on a pivot or standard, D, adjustable by means of the pin *a* at one end, and suspended, by means of rods *e e*, at the opposite end, said trough having communicated to it a shaking or vibrating motion, substantially as and for the purpose above described.

90,206.—CHARLES E. SWENEY, Geneseo, Ill.—*Thill-Coupling.*—May 18, 1869.

Claim.—The clip A, with its projections B B, the thill part D, with the block E, pivot pin J, and nut H, constructed, arranged, combined, and operating substantially as and for the purposes herein shown and described.

90,207.—ALBERT THOMPSON, Ridgeway, Pa., assignor to himself and GILMAN T. WHEELER, same place.—*Saw-Filing Machine.*—May 18, 1869.

Claim.—1. Having the saw-filing machine on a frame or other fixture, as described, so that it can be swung to and adjusted on a circular saw, without removing the saw from its arbor, substantially as herein shown and described, and for the purposes set forth.

2. The plate J, carrying the filing-mechanism, when supported by the central journal *k*, and the arm L, hung upon the shaft I, and adapted for turning the file to an angle other than a right angle to the saw, by means of the graduated disk M and spring-catch lever N, all arranged and operating as herein shown and described.

3. The laterally adjustable roll *e*, and the roll *e'*, having fixed bearings, when operated by means of the gear-wheels *g h*, ratchet-wheel *i*, and pawl-lever *j*, and arranged upon the plate *d*, suspended from the frame B, as herein described, for the purpose specified.

4. Reversing and stopping the file, and holding it in any desired position, by means of the adjustable collar *a*, arm *z*, and spring-bar *b*, as described.

5. In combination with the movable plate J, the disk or index *m*, with the catch-lever N, substantially as and for the purposes herein shown and described.

90,208.—HIRAM VAN METER, Macomb, Ill.—*Cultivator.*—May 18, 1869.

Claim.—1. The combination of the plow-beams I I with a cultivator-frame, constructed as shown and described, with the plow-beams attached to the frame, as set forth.

2. The sockets *ex*, arranged as described, upon the cross-bar A, whereby the elastic bars D of the seat are adapted to be held upon the frame, with their centers resting upon the boxes *c* of the axles, as herein set forth and shown.

90,209.—LORENZO P. WATERMAN and CHARLES H. PORTER, Bridgeport, Conn., assignors to themselves and JAMES M. HUNT, same place.—*Attaching Roses for Knobs to Doors.*—May 18, 1869.

Claim.—Securing the two roses by means of the tubular screws, (Fig. 2,) passing through the door and the two roses A and B, and the end secured in the rose B by the nut *b*, Fig. 3, substantially as herein described, and set forth in Fig. 1.

90,210.—JOHN W. WEBB, Cotton Valley, Ala.—*Cotton-Gin.*—May 18, 1869.

Claim.—1. In combination with a saw-cylinder and brush of a cotton-gin, a woven-wire moat-board, arranged and agitated substantially as described.

2. The movable vibrating ends in the breast or feed-box, pressed toward each other by springs or their equivalents, substantially as described, for the purpose set forth.

90,211.—OTIS H. WEED, Boston, Mass.—*Carpet-Sweeper.*—May 18, 1869.

Claim.—The combination and arrangement of the driving-wheels A A with their cogs, in combination with the cog-wheel B and adjustable bearings D D and G G, substantially as and for the purpose described.

90,212.—WILLIAM WHITESIDE, Manayunk, Philadelphia, assignor to THOMAS WOOD, Philadelphia, Pa.—*Mechanism for Operating Shuttle-Boxes in Looms.*—May 18, 1869.

Claim.—In combination with the box-rod supporting-lever B, and star-cam C, the weighted lever D, for retaining the same in position, substantially as described.

90,213.—H. O. WINSOR, Duxbury, Mass.—*Snatch-Block.*—May 18, 1869.

Claim.—The combination, with a tackle-block, divided at the upper end, as described, of the hinged transverse bar D, supporting the hook, and the hinged catch C, substantially as specified.

90,214.—FRIEDRICH WOHLGEMUTH, New York, N. Y.—*Breech-Loading Fire-Arm.*—May 18, 1869.

Claim.—Combining, with a "break-down" breech-loading shot-gun, fitted with a barrel-lock, as shown, a breech-loading rifle-barrel, made with a small flange on its rear end, and to fit the shot-barrel only at its rear end, the rifle-barrel to be secured by the said lock, and to be of any length less than the shot-barrel.

90,215.—JOSEPH BELL ALEXANDER, Washington, D. C.—*Siphon-Bottle.*—May 18, 1869.

Claim.—1. The India-rubber piece, represented in Fig. 6, with its lower tube K, its flanch or disk R, and its upper conical tube Z, in combination with the glass tube L, having its upper end conical, substantially as described, and for the purpose set forth.

2. The combination of the two-part collar D, and its upper flanch *a*, and its groove *g*, and its lower flanch *f*, and its holes V V, with the lip T, on the neck of the bottle M, and the cement-filling N, substantially as described and for the purpose set forth.

3. The combination of the cap C with its conical throat S, and the draught-pipe E, and the India rubber disk G, and the pipe-support F, and the washer H, and the crown B, and the thumb-screw A, in combination with the washer I, rubber-piece K R Z, glass tube L, collar D, lip T, on the mouth of bottle M, and cement-filling N, substantially as described and for the purpose set forth.

90,216.—W. P. ANDERSON, New York, N. Y.—*Railway-Car Connection.*—May 18, 1869.

Claim.—Combining with a car, for use upon railways, a device, consisting of cases B B', for containing springs, springs for receiving the shock in starting the car, a rope or chain, F, a drum or pulley, D, and a shaft, C, for communicating the propelling-power to the springs, substantially as and for the purpose specified.

90,217.—B. H. AYLWORTH, Oxford, N. Y.—*Vaginal Speculum.*—May 18, 1869.

Claim.—1. A vaginal speculum, made close or air-tight, when in use, by means of a glass or lens fitted to its body in rear of the tube which enters the vagina, and provided with an attachment for blowing or forcing in air to distend the vagina, substantially as specified.

2. The combination of the inflatable collar E and stiff back or collar D with the tube C, the body A, the lens B, and the tube G, essentially as and for the purposes herein set forth.

3. The combination, with a speculum, provided with an attachment for inflation of the vagina, of a flexible tube, for the introduction of instruments capable of manipulation therethrough, substantially as described.

90,218.—ROBERT BAILEY, Cleveland, Ohio.—*Center-Plate for Cooking-Stoves.*—May 18, 1869.

Claim.—1. The cross-plate or center-piece A, provided with one or more strengthening-bars, substantially as described, in combination with narrow slots or rows of perforations for the admission of air, arranged substantially as described.

2. In combination with two or more fixed bars *a a*, one or more separate bars, *b*, bolted, riveted, or otherwise held between them, substantially as herein described.

90,219.—THOMAS F. BAKER, Cincinnati, Ohio.—*Prison-Grating.*—May 18, 1869.

Claim.—1. The mode of constructing a jail door or grating with steel or steel-faced stiles and rails A

B, rods D, and steel sleeves E, countersunk into the rails, as set forth.

2. The combination of the two concentric sleeves E and G, substantially as and for the purposes set forth.

90,220.—ARVID O. BALDWIN and CHARLES H. MILLER, Lincoln, Ill.— *Velocipede.*—May 18, 1869.

Claim.—The arrangement of the springs D, with one end in the hangers E, and with the other attached to the cranks C, and provided with stirrup G, sliding in guide F, as described and shown.

90,221.—LEWIS M. BALLARD, New York, N. Y.—*Locking-Cap for Bottles.*—May 18, 1869.

Claim.—The locking-cap C, composed in part of or provided with a series of notched internally flanged rings, operating on the principle of a combination or permutation lock, in combination with lugs on the neck of a bottle or other vessel, or upon a collar permanently attached thereto, substantially as and for the purpose herein described.

90,222.—GROVE S. BARTHOLOMEW and ADELBERT R. CHAPMAN, Reading, Mich.—*Revolving-Harrow.*—May 18, 1869.

Claim.—A convertible harrow and cart, having separator B, draught-bars C, journals *c*, arms, hinges, and adjustable bands, as described, when constructed and operated substantially as specified.

90,223.—M. BERGNER and OTTO NETZOW, Baltimore, Md., assignors to themselves and JOSEPH LICHTENSTEIN.—*Lubricator.*—May 18, 1869.

Claim.—The construction and arrangement of the journal-box, having the double-chambered oil-box E E, with perforated partitions *e e*, between which slides the wick-holder F, bearing the adjustable wick *f*, the holder F being supported by the spring H, all as shown and described.

90,224.—WILLIAM JONES BERNE, Cincinnati, Ohio.—*Detachable Calk for Horseshoes.*—May 18, 1869.

Claim.—1. The detachable calk; composed of the jaw B, spurred flange D D′, dovetailed shank E, nut G, undercut groove I, steel bit J, jaw C *c*, gain F, lip K, and screw H, constructed and combined to operate substantially as and for the purposes set forth.

2. In combination with the detachable calk, the pad L, for the purposes specified.

90,225.—LYMAN R. BLAKE, Boston, Mass.—*Manufacture of Boots and Shoes.*—May 18, 1869.

Claim.—1. In combination with a narrow lasting-sole, the rib *e*, acting as a guide to keep the lasting-sole from lateral displacement, and as a brace to retain said sole in form, substantially as described.

2. In combination with means for preventing lateral displacement of the lasting-sole, a steady pin or pins, *g*, for fixing the sole in position in the direction of its length, substantially as described.

3. In combination with a last upon which such lasting-sole is used, the clinching-blocks *l*, attached to the last, and acting to turn the points of the tacks or nails driven through the outer sole and lasting-sole, substantially as described.

4 In combination with the narrow rigid metal lasting-sole, the lasting-thread, passing only through the edges of the upper, without passing around or being attached to pins extending above the surface of said sole, as herein described.

5. The process of making a shoe without a permanent or stitched inner sole, said process consisting in first lasting the edges of the upper over a narrow and rigid lasting-sole, (which sole fits upon the face of the last, and is so held in place thereon that the last can be slipped out from the shoe and off from the lasting-sole, the lasting-stitches passing across the last, and through and only through the edges of the upper,) then temporarily fastening the outer sole accurately in position, and then withdrawing the last and uniting the outer sole and vamp, by a series of stitches or other fastenings, passing through the sole and vamp, outside of the edge of the lasting-sole, said latter sole being left free to be withdrawn from the shoe by drawing out the lasting-tacks.

90,226.—SAMUEL BODEN, Louisville, Ky.—*Safety-Valve.*—May 18, 1869.

Claim.—1. The valve-rod D, with its slotted link *r*, adjustable connecting-nut *g*, spring *p*, set-screw *o*, loose joint *c*, and valve G, constructed, combined, and arranged substantially as herein set forth.

2. The arrangement of the foregoing-stated elements with the lever *h*, adjustable bearing *b*, and fulcrum-standard H, connecting link *a* and stem *d*, valve G′, and weight P, substantially as herein set forth.

90,227.—RUDOLPH BOEHM, Chicago, Ill.—*Ore-Washer.*—May 18, 1869.

Claim.—1. The combination of the table W, screw-rods O, suspended water-trough *c*, and sluices *f*, as and for the purpose set forth.

2. The combination of the cam 2, shaft *n*, bumper K, depending-plate *l*, T-brackets F, screw-rod *m*, spring *r*, table W, sluices *f*, and suspended trough E, as described.

90,228.—RUDOLPH BOHEM, Chicago, Ill.—*Smelting-Furnace.*—May 18, 1869.

Claim.—The peculiar construction of the cap C, when operated in combination with the casement A, fire-box S, pan E L, as described.

90,229.—HENRY D. BOLT, Elmira, N. Y.—*Brace for Spring-Beds.*—May 18, 1869.

Claim.—The brace D, clamped to the coil of the spring at *c*, and secured to the upper and lower frames, by means of rivets, or their equivalent, passing through the eyes *f f*, substantially as shown, for the purpose set forth.

90,230.—DAVID BOOKWALTER, Gardner, Ill.—*Corn-Husker.*—May 18, 1869.

Claim.—A husking-machine, having husking-rollers *c*, with their central shafts, flanches, spurs, and drums, constructed as described, in combination with the rollers *y* and bent wires *v*, when constructed, arranged, and operating substantially as specified.

90,231.—GEORGE BRADSHAW, Sandoval, Ill.—*Washing-Machine.*—May 18, 1869.

Claim.—The combination and arrangement of the box C, with ways *f*, open beater F, provided with friction-rollers *c*, performing the double function described, rod *a*, lever E, and springs D, all constructed and operated in the manner and for the purpose set forth.

90,232.—T. E. C. BRINLY, Louisville, Ky.—*Plow.*—May 18, 1869.

Claim.—1. The frame C, constructed substantially as and for the purpose set forth.

2. The combination of the shovel, the frame C, constructed with a notched surface at *c*3, and the notched plate E, and bolts F, substantially as set forth.

3. The adjustable cutter G, when attached to the beam by an adjustable plate, H, and arranged in front of the share, to operate substantially as and for the purpose set forth.

90,233.—ADAM S. BROWN, Lebanon, Pa.—*Horse Hay-Fork.*—May 18, 1869.

Claim.—A hay-fork, having tines A and B, strap C, dog *d*, spring *a*, catch *i*, trip *s*, slotted arm D, and pulley *v*, constructed, arranged, and operating substantially as specified.

90,234.—HENRY BULLARD and ROBERT HOLMES, Middletown, Conn.—*Hard-Metal Bottom for Tea and Coffee Pots.*—May 18, 1869.

Claim.—In a tea or coffee pot constructed with a hard-metal bottom, coating the said hard-metal bottom with porcelain, in the manner and for the purpose set forth.

90,235.—EDMUND F. BURROWS, Mystic River, Conn.—*Tooth-Brush.*—May 18, 1869.

Claim.—As an article of manufacture, a tooth-brush, composed of the parts A, B, and C, the part B having the screws *a* and *b* cut upon it, and all constructed and arranged, in relation to one another, substantially as and for the purpose set forth.

90,236.—Michael K. Carpenter, Cincinnati, Ohio.—*Hoisting-Machine.*—May 18, 1869.

Claim.—The cams H H′, slides E E′, *a a′*, and curved ways J J′, in the described connection or relation to each other, in the herein-described hoisting-machine, and constructed and operating substantially in the manner and for the purpose specified.

90,237.—George R. Carter, New York, N. Y. —*Gang-Plow.*—May 18, 1869.

Claim.—1. In combination with the plow-beams or beam-frame, the tilting carriage-frame, substantially as described.

2. With the tilting carriage-frame and the plow-frame pivoted to the front end thereof, the long seat extending from the axle to the rear of the carriage-frame, substantially as shown and described.

3. A gang-plow, having the plow-beams or beam-frame pivoted to the front end of the carriage-frame, when the latter is arranged to tip relatively to the draught-pole, substantially as shown and described.

90,238.—J. A. Casey, Maysville, Ky.—*Water Purifier and Cooler.*—May 18, 1869.

Claim.—The combination and arrangement of the devices herein described and shown, consisting mainly of the urns A and B, basin E, sand-bag *o*, tubes *i*, *s*, and *y*, perforated cover *d*, and caps *a′* and *c′*, substantially as and for the purposes herein specified.

90,239.—Eben Simpson Chase, Eau Claire, Wis.—*Sawdust-Burner.*—May 18, 1869.

Claim.—1. Utilizing the sawdust of a saw-mill, by placing the same in contact with a steam or blow-pipe or pipes, whereby the same is scattered upon the furnace, substantially as herein set forth.

2. The hollow-flanges E E, provided with fixed valves *a a*, and placed at suitable points in a furnace, for the purpose of receiving and scattering the sawdust on the grates when steam is admitted, substantially as shown and described.

3. In combination with a furnace, the flanges E E, provided with valves *a a*, and connected, by means of one or more pipes, *b*, with the boiler, substantially as and for the purposes herein set forth.

90,240.—John B. Cornell, New York, N. Y. —*Fire-Proof Skylight.*—May 18, 1869.

Claim.—Improved burglar-proof and fire-proof curved or dome-shaped skylight, composed of curved and rebated metallic rafters *a a*, thick plates of curved glass *c c*, curved metallic caps *d d*, a ridge-piece, *b*, and a double gutter-piece, *e f*, all combined with each other, substantially in the manner herein set forth.

90,241.—Thomas Daly, Erie, Pa.—*Railroad Switch and Signal.*—May 18, 1869.

Claim.—In combination with the rails B B′ D D C, and crank-shaft A, constructed and operating as herein specified, the cranks K K′ and their shaft, the two signals *l l′*, the cords *e e′*, and the sheaves *h h′*, all arranged and combined as shown, for the purpose of operating the signals and switch simultaneously in the manner described.

90,242.—Henry C. Dart, New York, N. Y.— *Beer-Cooler.*—May 18, 1869.

Claim.—The corrugated cooler, having its sides inclined at their top, to form an apex, in combination with a slotted distributer, made adjustable relatively to said cooler, substantially as specified.

90,243.—Augustus Day, Detroit, Mich.—*Ice-Tongs.*—May 18, 1869.

Claim.—As an article of manufacture, the ice-tongs A C, when constructed of one piece of metal, so bent as to resemble the figure 8, with the upper portion A smaller than the lower portion C, at the bottom of which the ends of the metal terminate with sharp points, and secured from spreading by the ring D, which embraces it where it is crossed between the upper portion A and the lower portion C, as and for the purpose above described.

90,244.—Samuel B. Dean, Boston, Mass.— *Bronze Ordnance.*—May 18, 1869.

Claim.—As a new manufacture, a bronze gun, in which the metal immediately surrounding the bore is put in the condition that is produced by the process of condensation set forth.

90,245.—J. G. Dillaha, Waco, Texas.—*Horse-Power.*—May 18, 1869.

Claim.—1. The wheels A and A″, constructed substantially as and for the purpose set forth.

2. The combination of wheels A A″ and pinion E″, arranged substantially as and for the purpose set forth.

3. The combination of cross-bars B B″ and bed-piece C, when arranged to operate in the manner and for the purpose described.

90,246.—H. B. Durfee, Decatur, Ill.—*Plow.*— May 18, 1869.

Claim.—The forked standard F, with its branches *c c*, the former attached to the beam, and the latter to the beam and handle both, for securing the plow to the beam, as well as the handle D to the beam and standard, as and for the purposes herein described.

90,247.—Philip Dyer, Jr., Unadilla, Mich., assignor to Robert P. Morden, same place.—*Harvester.*—May 18, 1869.

Claim.—1. The removable disk Z, supporting the vibrating-lever J, substantially as described.

2. The arrangement of the main frame, the axle, star-wheels I I, the disk Z, and the lever J, substantially as described.

90,248.—George A. Eyars, Meriden, Conn., assignor to Wilbur F. Parker, same place.—*Grate-Bar for Boiler and other Furnaces.*—May 18, 1869.

Claim.—The construction of the grate-bars, with one or both sides of either or both ends inclined, substantially as herein specified.

90,249.—David Eynon, Richmond, Va.—*Machine for Removing the Burrs from Railroad-Chairs.*—May 18, 1869.

Claim.—1. The combination of a cutter, D, formed for burring the inside of railroad-chairs, and the guide C, for holding the chair while being subjected to the action of the cutter, substantially in the manner and for the purpose set forth.

2. The combination and arrangement of the shaft E, guide C, bracket B, and cutter D, substantially as shown and described.

90,250.—John Fanning, Detroit, Mich.—*Washing-Machine.*—May 18, 1869.

Claim.—In a rotary washing-machine, the triangular flanges F, flanges G, in combination with cover H, attached by clamp I and thumb-screw, tubular journal C, and drip-tube E, when combined, as and for the purpose set forth.

90,251.—Norman T. Frary and Ezra T. Sherwin, Adrian, Mich.—*Turbine Water-Wheel.*—May 18, 1869.

Claim.—The within-described direct and reaction turbine water-wheel, consisting of the chamber A A, provided with the chutes M N O, (including the annular series,) and the wheel B, revolving on a vertical axis, and provided with the perpendicular buckets *m n o*, (including the annular series,) and oblique issues *m′ n′ o′*, (including the annular series,) the whole constructed and arranged to operate substantially as sot forth and described.

90,252.—James A. French, Scenery Hill, Pa., assignor to himself and J. D. Ulery, same place.— *Shoe-Pattern.*—May 18, 1869.

Claim.—The shoe-pattern A B of the configuration, when constructed and arranged as shown and described.

90,253.—William Freudenau, St. Louis, Mo. —*Process for Treating Corn, &c., in the Manufacture of Flour and Meal.*—May 18, 1869.

Claim.—The method of treating corn or Indian maize in the manufacture of corn-flour, meal, &c., by separating and removing the germ from the grain

before the corn is ground, substantially as and for the purposes herein set forth.

90,254.—E. E. FURNBY, Chicopee, Mass.—*Mechanical Movement.*—May 18, 1869.

Claim.—1. The combination of the cylinder, having a concave gear, G, applied thereto, main-shaft D, having one or more eccentric portions, I J K, and a gear, A, B, or C, for each of such eccentrics, when such gears are left free to follow the thrust of their respective eccentrics, but are prevented from revolving with the main-shaft by means of the sleeve and annular keys, substantially as and for the purposes specified.

2. The construction of the annular keys 1, 2, 3, in combination with the channeled rings A, B, or C, carried upon eccentrics, and with the stationary channeled disk or collar *e*, substantially as and for the purposes set forth.

90,255.—A. O. GALLUP, Salem, and E. A. HEWITT, Groton, Conn.—*Churn.*—May 18, 1869.

Claim.—1. The dasher B, constructed as described, with the beaters C and C′, serrated as shown.

2. In combination with the dasher B, with the arms C and C′, constructed as shown, the corrugated bottom and sides, or either, as set forth.

3. The arrangement of the arms F, in the manner shown and described, so that the flat side of one beater shall follow the sharp edge of the other, as set forth.

4. In combination with the cylinder *q*, having the right-angled stem S T, the blowing-wheel P, when arranged on the outside of the churn, as and for the purpose set forth.

90,256.—J. A. GLENN, West Middlesex, Pa.—*Horse Hay-Fork.*—May 18, 1869.

Claim.—The curved hook D, pivoted upon the extremity of the bar A, and upon the side of the elongated bar E, all constructed and operating substantially as set forth.

90,257.—CHARLES GRASSER, Philadelphia, Pa., asignor to METALLIC COMPRESSION CASTING COMPANY, Boston, Mass.—*Composition for Molds and Cores for Casting Metals.*—May 18, 1869.

Claim.—A composition of the specified materials, in proportion about the same, or their chemical equivalents, to be used for making molds and cores used in casting metals.

90,258.—CHARLES GREEN, Vincentown, N. J.—*Cooking-Stove.*—May 18, 1869.

Claim.—1. The arrangement, with respect to the ovens F and F′, of a cooking-stove, of the within-described passages or flues, for the purpose specified.

2. The diagonal partition *i*, arranged within the flue *a*, substantially as and for the purpose set forth.

90,259.—C. C. HARE, Kansas City, Mo.—*Gas-Machine.*—May 18, 1869.

Claim.—1. The revolving screw-cylinder, with its sleeve I, when used in the construction of a pneumatic gas-machine, constructed substantially as and for the purpose described.

2. The partially filling the spiral grooves of the cylinder described with cotton, wool, or other porous or fibrous material, substantially in the manner and for the purpose described.

3. The hollow shaft E, with its arms G, H, and F, and stop *p*, when used in the construction of a pneumatic gas-machine, constructed substantially as and for the purpose described.

4. The described revolving cylinder, in combination with the described hollow shaft E and its parts, when used in the construction of a pneumatic gas-machine, when constructed and arranged substantially as and for the purpose described.

5. The outer vessel A A A A, with its stuffing-boxes L and M, in combination with the described revolving cylinder and its parts, and the described hollow shaft E and its component parts, when used in the construction of a pneumatic gas-machine, constructed and arranged substantially as described.

6. The friction-joint K, in combination with the described cylinder and its component parts, and the described outer vessel and its parts, and the described hollow shaft and its component parts, when used in the construction of a pneumatic gas-machine, constructed and arranged substantially as and for the purpose described.

90,260.—GEORGE F. HARLAN, Elkton, Md.—*Grain-Separator.*—May 18, 1869.

Claim.—1. The inclined partition E, when arranged and operating substantially as shown and described.

2. The vertical partitions D, when arranged and operating substantially as shown and described.

3. The combination of the inclined partition E, vertical partitions D, and gates *c c*, substantially as shown and described.

4. The combination of the slide G and case C, substantially as and for the purpose shown and described.

90,261.—HENRY P. HASKIN, Roscoe, Ill.—*Gate.*—May 18, 1869.

Claim.—Broadly the arrangement and employment of the levers E, cords or chains and pulleys F *h* and G H, substantially as and for the purposes specified.

90,262.—WILLIAM HEBDON, New York, N. Y., assignor to himself, CHARLES H. F. AHRENS, and CHARLES S. BALDWIN, same place.—*Cloth-Measuring Machine.*—May 18, 1869.

Claim.—The tension-regulator *d d*, constructed as specified, in combination with the measuring-cylinder *b*, and roller 4, whereby the cloth will be guided as it passes along, and the proper tension applied thereto, substantially as set forth.

90,263.—GEORGE P. HERTHEL, Jr., St. Louis, Mo.—*Truss-Bridge.*—May 18, 1869.

Claim.—1. In the construction of bridges, the combination of the equally divided curved or polygonal chords, with vertical posts, and horizontal chords, and tie-rods, the whole arranged substantially in the manner and for the purpose herein described.

2. The construction of a post or strut, so as to resist strains of both tension and compression, either from a central rod, *c*, acting principally under tension, and trussing the same by compression-truss c^1, or from a central column, *d*, acting solely under compression, and trussed by rods d^1, arranged to sustain tension, and combining said parts with the floor-beams G, or its seat *g′*, and upper chord A, in the manner and for the purpose herein set forth.

3. The end bolts a^2, or their sleeves, in combination with their seats a^3 and rollers a^4, in the manner and for the purpose herein set forth.

4. The crown-pieces a^5, in combination with the king-bolts a^1, or their sleeves, as and for the purpose herein set forth.

5. The floor-beam seat, resting upon or suspended from the queen-bolt or queen-bolt sleeve, as and for the purpose herein set forth.

6. The wind-strut E, when arched and braced by the angle-bars *e*, as herein set forth.

7. The diagonal bands F or F′, when formed continuously, and adjusted by the bolt *f*, when combined with the wind-struts E, substantially in the manner and for the purpose herein set forth.

90,264.—ARVA B. HITCHCOCK, Juneau, Wis., assignor to himself and RICHARD MERTZ, same place.—*Railway-Switch.*—May 18, 1869.

Claim.—1. The combination and arrangement of the curved levers F, with the weighted levers H, rods U, and rock-shaft V, for unlocking the switch, substantially as shown.

2. The levers G, when so curved and located that the wheel J, in passing over in either direction, will come in contact therewith, and unlock the switch, before striking or operating the levers F, substantially as specified.

3. The combination and arrangement of the levers F and G, weighted levers H, and rods T U, with the bent levers S, and rock-shafts V and V′, substantially as and for the purposes set forth.

4. The catch *l* and *n*, in combination with the head-blocks Q and slides R, substantially as and for the purposes specified.

5. The rock-shaft V, when provided with the

spring-catch *c*, substantially as and for the purposes specified.

6. The pivoted connections *a*, in combination with the rods T, U, and *b*, provided with heads *f*, substantially as described.

7. The collars K, in combination with the wheels J and lever M, substantially as and for the purposes specified.

8. The operating-lever O, provided with the cross-head O′ and rods *h*, in combination with the bell-crank levers P, rods *g*, and lever M, provided with the cross-bars N and L, for adjusting the wheels J, substantially as specified.

90,265.—JOHN HOUPT, Springtown, Pa.—*Steam-Engine.*—May 18, 1869.

Claim.—1. A steam-reservoir, provided with inlet and outlet pipes, *h* and *i*, communicating with a cylinder, in which is a weighted piston, H, and surrounded by a casing or jacket, B, through which heated products of combustion are arranged to pass, all substantially as herein described.

2. A pipe, *r*, arranged, in respect to the cylinder F and its piston, as specified.

90,266.—JOHN HOUPT, Springfield, Pa.—*Condensing Steam-Engine.*—May 18, 1869.

Claim.—In combination with a single steam-cylinder, a plurality of condensers, arranged to operate substantially as described, for the purpose specified.

90,267.—ROBERT A. HUNTER, Ionia, Mich.—*Stove-Drum.*—May 18, 1869.

Claim.—1. The generator B, arranged with a double or single chamber, as shown, and being arranged to set in the top of the stove A, and to connect with the conductor O, and having flange C, orifices E E, and smoke-hole D, substantially as and for the purpose set forth.

2. Constructing the distributer P funnel-shaped, as shown, and providing it with a conical-shaped lid, T, substantially as shown, and for the purpose set forth.

3. Connecting the pipe S, within the distributer P, to the conductor O, and providing it with a damper, W, as and for the purpose herein specified.

4. As a combination, the means described for ventilating the distributers and side-pipes, and arranging the latter between the ceiling and floor, to connect the main conductor with other distributers, and the arrangement of the conductor O within the stove-pipe Z, and passing it out at the elbow Z′, when it is used to connect the generator B with the distributer P, substantially as and for the purpose herein specified.

90,268.—JOSEPH INGELS, Milton, Ind.—*Seeding-Machine.*—May 18, 1869.

Claim.—1. In combination with the main-gear B, the slotted plates C F, moving around the same center with said gear B, for the purpose of carrying and controlling the intermediate changeable and reversible gears that drive the seed-wheels, substantially as and for the purpose described.

2. In combination with the gears and the slotted plates, the lever and seat *g*, for the reception and attachment of a lever, by which they may be actuated, substantially as herein described.

3. The seed-wheel, with its cogs or projections *m*, and recesses *o*, substantially as and for the purposes described.

4. In combination with the seed-wheel, and the cheeks in the seed-boxes, the projecting or extending of the cogs or projections thereon beyond the body and cheeks, as shown at *n*, substantially as described.

90,269.—FREDERICK G. JENKINS, Brooklyn, (E. D.) N. Y., assignor to JOSEPH RECKENDORFER, New York City.—*Manufacture of Lead-Pencils.*—May 18, 1869.

Claim.—1. The method of shaping and polishing, or both shaping and polishing, polygonal lead-pencils, and like articles, by the employment of one or more stationary dies, having the form required for the finished article, in which the stock is compressed into the desired shape, or polished, after being previously shaped, or both compressed and polished, substantially in the manner and for the purposes set forth.

2. The combination of the stationary compressing and polishing or burnishing die or dies, and one or more sets of feed-rolls, or their equivalents, for carrying forward and forcing the stock through said die or dies, substantially in the manner and for the purposes set forth.

90,270.—CHARLES S. JONES, Albany, N. Y.—*Telegraphic Switch-Board.*—May 18, 1869.

Claim.—1. The improved switch-board, constructed of strips of metal and wood, arranged transversely to each other, in the manner and for the purpose as set forth.

2. The upper and lower straps, insulated from each other by the frame, combined with the metallic plug-pin and spring, by which any two straps are locked together, substantially as described.

90,271.—ISAAC KENNEDY, Binghamton, N. Y.—*Plow.*—May 18, 1869.

Claim.—The supplementary mold-board A, attached to the mold-board of the plow, by means of the clamp D D and thumb-screws, or their equivalents, substantially as herein described, and as essential for the purposes set forth.

90,272.—MATTHEW KERR, New Florence, Pa.—*Railroad-Switch.*—May 18, 1869.

Claim.—The flanges *g* of the switch-rod or bridle G, in combination with the locking-rod F, and arms or flanges *f f*, substantially as and for the purpose set forth.

90,273.—WILLIAM A. KIRBY, Auburn, N. Y., assignor to himself and DAVID M. OSBORNE, same place.—*Harvester.*—May 18, 1869.

Claim.—1. Hinging the axle-frame of a harvesting-machine, on which two driving-wheels are hung, to bearings or bosses, through which the shaft carrying the pinions passes, and in which it turns, so that the pinions and shaft may rise and fall in the arc of a circle, of which the point of the pole or tongue is the center, and the pinions remain in gear with the drive-wheels, as described and represented.

2. In combination with the two frames, hinged together, and controlled in the extent of their motion by an adjustable stop arranged between said frames, a hand-lever, for raising or lowering, or for rolling the finger-bar in the line of its advancing movement, to raise or lower the points of the guards, as and for the purpose described.

3. In combination with the axle and the main frames, and a tongue or pole hinged to each other, the herein-described special devices, by which either or all of said hinged joints may be made rigid or flexible, as may be desired.

4. In combination with a two-wheeled harvesting-machine, which has two frames, hinged to each other, a lever-seat, connected to both frames, and spanning the joint between, so that the driver in said seat may, with the lever S, raise and lower the cutting apparatus, as and for the purpose described.

5. In combination with a pitman, a pitman-connection, which will drive the cutters when they are in working position, and cease to drive the cutter when the finger-bar is folded up for transportation, while the pitman continues to work, substantially as described.

6. In combination with a finger-bar, so hinged to the inner shoe as that it may be folded up against and carried by the main frame, a caster-wheel, carried by an arm or support, independent of said shoe, but so that its journal or turning-center shall be in the line of the centers on which the finger-bar swings, and in advance of said centers, so that while the finger-bar is free to be folded up, the caster-wheel shall serve to roll down the grass in advance of the shoe, and serve the purpose of a caster wheel, when the machine is being turned around, the whole being accomplished by an arrangement of devices, such as herein described and represented.

90,274.—FIELDING L. KIRTLEY, Cleyborne, Texas.—*Combined Plow-Carrier and Cotton-Chopper.*—May 18, 1869.

Claim.—1. The combination of the cotton-chop-

per *m*, *m'*, *n*, and *n'*, with the frame A and hangers *d e*, as and for the purpose described.

2. The slotted and swinging hangers *d e*, as and for the purpose described.

3. The slotted swinging-hangers *d e*, in combination with the connecting-rod *k* and lever *l*, as and for the purpose specified.

4. The shaft *m'* of the cotton-chopper, in combination with the lifting-apparatus *o r*, and for the purpose described.

5. The plow-beams *h*, each provided with two plows, and made so as to be capable of being readily shifted into or out of the hangers, as described.

90,275.—HENRY KUMMER, New York, N. Y.—*Computing-Tablet.*—May 18, 1869.

Claim.—1. The carrying-angles *c d*, in combination with the slots *a b*, in the tablet A, and with the slides B, substantially as set forth.

2. The arrangement of open slots *k* and holes *i j*, in the slides B, as described.

3. The arrangement of open slots *l* in the slides opposite the open slots *k* therein, substantially in the manner set forth.

90,276.—P. W. LAMBERT, New York, N. Y.—*Sewing-Case and Pocket-Book Combined.*—May 18, 1869.

Claim.—The tubular sewing-case B, containing a needle-cushion, a spool, and a thimble, in combination with the pocket-book A, and secured to the same in the manner shown and described.

90,277.—SILAS P. LIONBERGER, St. Mary's Township, Ill.—*Ground-Marker.*—May 18, 1869.

Claim.—The marking-machine, consisting of the frame A, having the shaft B, with the stationary roller D, and the loose rollers C, all constructed and arranged substantially as described.

90,278.—JAMES LINNARD, Philadelphia, Pa., assignor to himself, FRANCIS D. WORLEY, and WILLIAM S. HASELL, same place.—*Safety-Valve.*—May 18, 1869.

Claim.—1. The combination of the lever J, valve B, and links connecting the lever to the valve, substantially as herein described.

2. The combination of the lever J, valve B, spring D, and links *d d*, when arranged in respect to the lever M, or its equivalent, substantially as specified.

90,279.—JOHN D. LYNDE, Philadelphia, Pa.—*Safety-Valve.*—May 18, 1869.

Claim.—1. The valve A, with its concave disk C, ribs B, and guide-pin D, constructed and combined substantially as herein set forth.

2. The disk C, combined with the valve A, annular passage G, and rim F, substantially as herein described.

3. The combination and arrangement of the valve A, disk C, ribs B, guide-pin D, guide-nut I, valve-seat E, braces K, holder H, annular passage G, rim F, spring N, bolts L, cross-head M, lever P, and cover O, substantially as herein made known.

90,280.—ROBERT MCFARLANE, Dane, Wis.—*Fence.*—May 18, 1869.

Claim.—The method of constructing a portable fence of lengths A, braces D, and stakes C, by uniting them with pins *a*, for supporting the structure upon and attaching it to the ground, substantially as herein described.

90,281.—JOHN MATHEIS, Ottawa, Ill.—*Machine for Punching Leather Straps for Fly-Nets.*—May 18, 1869.

Claim.—1. The feeding-device, composed of the combination of the adjustable crank H, the pitman I, the lever J, the pitman L, the feed-bar M, the rod N, with eccentric P, and the gauge-bar Q, the same only when applied to a machine for punching leather straps, substantially as described.

2. The pressure-foot, consisting of the plate R, the rod S, the support U, the lever T, and the spring V, the same only when applied to a machine for punching leather straps, substantially as described.

90,282.—THEODORE T. MCGRATH, Detroit, Mich.—*Reversible Skate-Runner.*—May 18, 1869.

Claim.—The toe-clips C, provided with the lock-pin *d*, in connection with the aperture *b* and slot *c* of the runner, substantially as and for the purposes set forth.

90,283.—MARTIN MACKENZIE, Malden, Mass.—*Key-Hole Guard.*—May 18, 1869.

Claim.—As new, the eccentric lever H I, secured by the rivet C to the major part, T S, of the lock-guard, arranged to pass through the key-hole, and be secured by any suitable fastening device upon the other side. (See Plate 6.)

90,284.—JOSHUA MERRILL, Boston, Mass.—*Manufacture of Deodorized Heavy Hydrocarbon Oil.*—May 18, 1869.

Claim.—1. The above-described new manufacture of deodorized heavy hydrocarbon oils, suitable for lubricating and other purposes, free from the characteristic odors of hydrocarbon oils, and having a slight smell like fatty oil, from heavy hydrocarbon oils, by treating them substantially as hereinbefore described.

2. In combination with a still suitable for distilling oils, the superheating-coil, with its steam-pipe, outlet-pipe, and return-pipe, and their stop-cocks, arranged substantially as described.

90,285.—GEORGE A. METCALF, Malden, Mass.—*Brick-Press.*—May 18, 1869.

Claim.—In combination with the reciprocating mold and piston, the lever *q*, acting by a single movement to first throw forward the mold and then the piston, substantially as set forth.

90,286.—S. D. MILAM, Leoti, Ind.—*Horse-Rake.*—May 18, 1869.

Claim.—1. Providing the ends of a rake-head with wheels flanged on the inner side, substantially as and for the purposes herein set forth.

2. In combination with the carriage A B C D, the hinged or pivoted bars F F, rake-head G, teeth H H, and wheels I I, all constructed and arranged to operate substantially as and for the purposes herein set forth.

3. The combination of the standard J, lever K, hook *c*, and loop *a*, for the purpose of raising and lowering and setting the rake, substantially as herein set forth.

90,287.—CHARLES M. MITCHELL, Waterbury, Conn.—*Lamp-Shade Holder.*—May 18, 1869.

Claim.—The herein-described globe-holder, as an article of manufacture, consisting of the three springs C, arranged and secured to the base substantially as described.

90,288.—W. T. MUNGER, New Britain, Conn., assignor to P. and F. CORBIN, same place.—*Reversible Latch.*—May 18, 1869.

Claim.—The bent claw *g*, upon the inner end of the shank *d* of the latch, in combination with the link *f*, and the swinging block-piece *k*, whereby said claw *g* becomes the connection between the latch-shank and the link *f*, and also the stop, to take against the blocking-piece *k*, as and for the purposes specified.

90,289.—L. B. MYERS, Elmore, Ohio.—*Pencil-Sharpener.*—May 18, 1869.

Claim.—The combined pencil-sharpener and eraser, constructed as described, of the conical metallic sharpener A, having its apex removed, for the passage of the pencil-lead *b*, and provided with the base-flange *a*, over which is fitted the India-rubber tube B, whose outer end clasps the pencil, and holds the eraser thereon, as herein described, for the purpose specified.

90,290.—JOHN F. NAGEL, Ligonier, Pa.—*Car-Coupling.*—May 18, 1869.

Claim.—The levers C D, constructed and pivoted as described, the latter being bent, and provided with a hole for the passage of the pin, and a ring to retain the pin, in combination with the flange-headed

pin, and operated by the link, as and for the purpose set forth.

90,291.—HARRISON OGBORN, Richmond, Ind.—*Grain-Separator.*—May 18, 1869.

Claim.—1. The shackles *e* and *e'*, so constructed with pulley *d* and shoe as to give four vibrations to the shoe to each revolution of the pulley *d*, substantially in the manner set forth.

2. The arrangement of the double bell-cranks, provided with adjusting-holes, whereby a lateral vibrating motion is communicated to the shoe, which motion may be so governed as to produce greater rapidity at one end of the shoe than at the other, substantially as set forth, and for the purpose described.

3. The knocking-lever P, operated by cam *r*, in combination with the screens of a grain or seed separator, for the purpose set forth.

4. In combination with hopper B, the gates or levers *t*, the latter operating independently of each other, as set forth.

90,292.—SPENCER H. OSTROM, Schenectady, N. Y.—*Hand-Drill.*—May 18, 1869.

Claim.—The spring *f*, in combination with the strap *e*, head A, swivel-arm B, and handle C, substantially as set forth.

90,293.—PETER PARADIS, Rochester, N. Y., assignor to EQUITABLE CO-OPERATIVE FOUNDRY COMPANY, same place.—*Cooking-Stove.*—May 18, 1869.

Claim.—1. A cook-stove, having the hollow ribs *a*. with the inlet-passage H, chamber *b*. and the side-flues *m*. with pipes D, connecting said flues with the oven, all constructed and arranged to operate substantially as shown and described.

2. The arrangement, within the smoke-flues of the oven, of the front inclined plates I, with the deflecting-plate G at the top, the rear inclined plates 1^2, with the valve K, and deflecting-plates S, as herein set forth.

90,294.—JAMES PARLANE, Brooklyn, N. Y.—*Steam-Engine Governor.*—May 18, 1869.

Claim.—The combination of the slotted radius arms B B, the track D, and rollers E E, substantially as specified.

90,295.—G. PEDERSEN, Chicago, Ill.—*Straw and Feed Cutter.*—May 18, 1869.

Claim.—1. The combination of the toothed feed-cylinders G' H', toothed plates Z Z', cylinder-box L, and cutter-box K *d* N, constructed as and for the purpose set forth.

2. The combination of the feed-cylinders G' H', toothed plates Z Z', boxes L K *d* N, compound gear-wheel E, sliding-pinion R, and shaft C, as described.

90,296.—BENNET C. PERRY, Bridgeport, Conn.—*Polishing-Machine for Polishing Wood Moldings*, &c.—May 18, 1869.

Claim.—The combination of the vulcanized India-rubber circle, with the two inflexible rims C C and G G, when they are constructed, arranged, and fitted for use, substantially as herein described and set forth.

90,297.—G. W. PERRY and J. D. BILLINGS, Wilmington, Del.—*Railway-Car Seat.*—May 18, 1869.

Claim.—1. The seat H, pivoted directly or indirectly to the rod *b* of the frame, and having racks *g g* adapted to toothed cams M M', by the movement of which, through the medium of the devices herein described, or any equivalent to the same, the said seat H may be adjusted, as set forth.

2. The sliding yoke J, carrying the toothed cams M and M', and controlled by the screw L, in combination with the racks *g g* beneath the seat H, the whole being arranged and operating substantially as and for the purpose herein set forth.

90,298.—FRANCIS PETERS and GEORGE CLEM, Cincinnati, Ohio.—*Privy-Seat.*—May 18, 1869,

Claim.—One or more rollers, constituting a privy-seat, substantially as and for the purpose designated.

90,299.—FRANK P. PFLEGHAR, New Haven, Conn.—*Guide for Fitting Locks to Doors.*—May 18, 1869.

Claim.—The combination of the block A B, clamps E and F, chock *e*, and screw *c d*, when all the parts are constructed and arranged to operate as shown, and for the purposes substantially as herein described.

90,300.—DAVID PHILIPS, Cordova, Ill.—*Portable Fence.*—May 18, 1869.

Claim.—The portable fence, consisting of the posts *a*, made of two pieces of board, nailed together, with the blocks between them, in combination with the bed-pieces *b*, braces *c*, and boards *f*, when said parts are united and arranged as shown and described.

90,301.—J. B. POSADA, New York, N. Y.—*Process of Treating Tobacco.*—May 18, 1869.

Claim.—1. Extracting the nicotine from the tobacco-leaf by immersing the same in boiling water, substantially as set forth and described.

2. Impregnating the tobacco-leaf with the aromatic ingredients herein specified, and general treatment thereof, substantially as and for the purposes described and set forth.

90,302.—WILLIAM H. RACEY, New York, N. Y.—*Apparatus for Connecting Velocipedes.*—May 18, 1869.

Claim.—1. Connecting two independent bicycles together, to be used as one vehicle, substantially as and for the purposes set forth.

2. As a coupling for bicycles or other velocipedes, the clamps *b b*, connected by bars *a a* and braces *d d*, or their equivalents, substantially as set forth.

90,303.—C. D. READ, Burlington, Vt.—*Bed-Bottom.*—May 18, 1869.

Claim.—The combination of the bottom A, conical helical spring B, secured to said bottom by means of a circular groove or recess, the slat C, strap D, and hooks *d d*, all constructed and arranged substantially as shown and described.

90,304.—FRANK W. REILLY, Chicago, Ill.—*Weight-Lifting Apparatus.*—May 18, 1869.

Claim.—1. An arrangement, in connection with weights to be lifted, by which a portion of a given amount of weight may be raised as desired, without the necessity of displacing or replacing the remainder.

2. So constructing the weights of a series adapted for use in a lifting-apparatus, that they shall always return to their original relative positions.

3. The weight-plate C C' C'', when adapted to receive the pin or key F, as and for the purpose described.

4. The weight-plate C C' C'', having the lugs G G G and depressions H H H, as and for the purpose described.

5. The weight-shaft D, perforated or slotted, substantially as and for the purpose described.

6. Connecting the handle-rods of a lifting-apparatus to the cross-bar, by means of the nut S, working in the box S', as shown and described, for the purposes specified.

90,305.—FRANK W. REILLY, Chicago, Ill.—*Handle for Weight-Lifting Apparatus.*—May 18, 1869.

Claim.—The construction of handles or grasping-pieces with surfaces adapted to the entire palm of the hand and fingers, at such an inclination from the line of traction as shall throw the greatest pressure upon the upper fleshy cushions of the hands, and the least upon the bony fingers, substantially as has been described.

90,306.—GEORGE H. RICH, Geneva, Ill.—*Machine for Separating Cockle from Wheat.*—May 18, 1869.

Claim.—The arrangement of the cylinder C, with cells *e*, as herein set forth, brush B, inclines F, and spout D, all as herein specified.

90,307.—Bernard Riley, San Francisco, Cal.—*Pipe-Tongs.*—May 18, 1869.

Claim.—A gas-pipe tongs, with the combined parts arranged and constructed in the manner substantially as herein described, and for the purposes as above set forth.

90,308.—Evans Robinson, Fairport, N. Y.—*Medical Compound.*—May 18, 1869.

Claim.—The medical compound composed of the ingredients above described, and in the proportions named, and compounded in the manner herein set forth.

90,309.—Jacob S. Ross, Bloomington, Ill.—*Washing-Machine.*—May 18, 1869.

Claim.—1. The revolving cylinder B, constructed with the inner perforated shell B″, partitioned annular space B‴, and ribs or projections B⁗, adapted to operate substantially as described, for the purpose specified.

2. The combination of the cylinder B, constructed as described and shown, with the boiler A, substantially as and for the purpose set forth.

90,310.—Francis Rourk, Erie, Pa.—*Apparatus for Operating Velocipedes and other Machines.*—May 18, 1869.

Claim.—The shaft E, the cranks D^1 D^1, C^1 C^1, and A^1, the connecting-rods D^2 D^2, C^2 C^2, and A^2, and the levers D D, C C, and A, or their equivalent, when arranged and operated substantially as described and for the purpose set forth.

90,311.—Jacob Russell, Brooklyn, N. Y., assignor to himself, Eddy, Reynolds & Co., Milton Holmes, and Jacob Chase.—*Corn-Husker.*—May 18, 1869.

Claim.—1. The stripping-rollers D D′, those of each pair being of different sizes, and having their axes arranged in the same plane whereby the husking-troughs are formed, substantially as specified.

2. The endless aprons G and the lower rollers or belt-carriers E, in combination with the stripping-rollers of a corn-husker, substantially as and for the purpose herein set forth.

3. The friction-rollers *f*, forming one side of the husking-trough, in combination with the endless apron G, for giving twisting motion to the ears of the corn, substantially as specified.

4. The combination of the husking-rollers, as arranged with their axes in the same plane, and the lower rollers E, having adjustable boxes, whereby one roller may be removed without disturbing the others, and whereby the belts or aprons may be tightened at pleasure, substantially as herein described.

90,312.—Edward John Scott, Glasgow, Great Britain.—*Process of Ornamenting Boots and Shoes.*—May 18, 1869.

Claim.—The ornamenting of boots and shoes by printing with varnish-colors in imitation of stitch-work, substantially as hereinbefore described.

90,313.—William Anthony Shaw, New York, N. Y.—*Process of Converting Wrought-Iron Wire, Ribbon, and Plates into Steel.*—May 18, 1869.

Claim.—1. The process of converting wrought-iron ribbon, wire, plates, or like articles into steel, by the employment of a bath of cyanide of potassium and charcoal, prepared substantially as described, in which the metal to be converted is treated as herein set forth.

2. The process of converting the wrought iron into steel, and of distributing or equalizing the conversion by first treating the metal to be converted in a bath of the character specified, and afterward subjecting it, when taken from the bath, to a prolonged heating, substantially in the manner and for the purposes described.

3. An apparatus for converting wrought iron into steel, constructed substantially as herein shown and set forth.

90,314.—William Anthony Shaw, New York, N. Y.—*Tempering Steel-Wire.*—May 18, 1869.

Claim.—1. The employment, with the heating-furnace of the tempering-apparatus, of a muffle, containing powders or powder, substantially such as herein specified, as and for the purposes set forth.

2. The muffle, when formed of an iron tube, coated externally and internally with a composition of plumbago and clay, and closed at its ends by plugs of plumbago or asbestos fibers, as and for the purposes specified.

3. The construction of the apparatus for containing the bath of oil or other tempering-liquid, and the jacket for containing the water to regulate the temperature of such liquid, substantially as shown and described.

4. The employment, with the tempering-apparatus, of griping-rollers, in combination with levers and weights, or their mechanical equivalent, for regulating the tension of the wire as it passes through the apparatus.

5. The combination and arrangement of the heating-furnace and its muffle, the annealing-furnace, the oil-bath and surrounding water-jacket, constructed as described, and the griping-rollers for regulating the tension of the wire, substantially as shown and set forth.

90,315.—Isaac Sherck, Flat Rock, Ohio.—*Jack for Thrashing-Machine.*—May 18, 1869.

Claim.—1. The employment of an auxiliary or intermediate device, receiving motion from a primary power, as a means for transmitting motion to thrashing or other machinery, arranged in different positions, with respect to the primary power and auxiliary machine, substantially as shown and described.

2. The adjustable frame L, shaft I, pulley M, and coupling N, arranged and operating substantially as shown and described.

3. The combination of the adjustable frame L and annular platform K, substantially as shown and described.

4. The bevel-wheel C, pinion D, bevel-wheel G, and pinion H, in combination with the frame L and annular plate K, when arranged and operating substantially as shown and described.

90,316.—William H. Simmons, Skaneateles, N. Y.—*Fire-Escape.*—May 18, 1869.

Claim.—1. The extension-ladder, formed of the sections K, adapted to be locked into each other automatically as they are raised, by means of the springs L and slide O, and to be released by pressing the ends of the springs L toward each other, as herein shown and described.

2. The combination of the crank-gear wheels E, and their shaft-gear wheels F, and their shaft-connecting rods G, crank-wheels H, gear-wheels N, and their shaft I, with each other, with the hinged frame D, and with the toothed racks M, of the sections K, substantially as herein shown and described, and for the purposes set forth.

3. The combination of the guide and fulcrum rod J with the slotted middle parts of the connecting-rods G, substantially as herein shown and described, and for the purpose set forth.

4. The adjustable belt B′, made in sections, and provided with buckets or shelves, in combination with the sections K, hollow roller D′, and crank-roller F′, substantially as herein shown and described, and for the purpose set forth.

5. The double hooks W, pivoted to the upper end of the upper section K, held in position by the rope X, and adapted to be thrown forward through the window, by the springs A′, when released by said rope, as herein described, for the purpose specified.

90,317.—John D. Smith, Schuylerville, N. Y.—*Axle.*—May 18, 1869.

Claim.—The combination of the axle A, having a metal plate, as shown and described, the plate D, formed of two pieces, having clips *c c* and a square opening, *d*, all substantially as set forth.

90,318.—John Joseph Charles Smith, Philadelphia, Pa., assignor to the Metallic Compression Casting Company, Boston, Mass.—*Method of Casting Metals Under Pressure.*—May 18, 1869.

Claim.—1. The arrangement of a series of hinged metallic mold-plates radially around the periphery

of a revolving wheel or cylinder, so as to admit of injecting the fluid metal at the periphery of the wheel, and discharging the castings automatically, substantially as set forth.

2. The gates F′, so constructed as to form between them wedge-shaped partitions, substantially as and for the purposes described.

3. The mouth-piece or guard-plate M, operating substantially as described, in combination with the series of molds F, passing in succession an injecting-vessel, in the manner and for the purposes stated.

4. The combination of the separate injecting-vessel, having a non-conducting detachable lining, with the series of molds F F F, passing in succession the mouth or opening for the emission of fluid metal from the said injecting-vessel, substantially in the manner described.

90,319.—WILLIAM SOMERS, Bridgeport, assignor to himself and GEORGE E. SOMERS, Waterbury, Conn.—*Garden Implement and Weeder.*—May 18, 1869.

Claim.—The herein-described instrument for gardeners' use, consisting of the two arms A, attached together by a spring, B, at one end, and at the other formed into pointed jaws, C, so as to operate in the manner substantially as set forth.

90,320.—PETER H. TURNER, Madison, Wis.—*Sawing-Machine.*—May 18, 1869.

Claim.—1. The employment and arrangement of the triangular clevis S, in connection with the rope R, snatch-block Q, and whiffle-tree W, substantially as and for the purpose described.

2. The arrangement and employment of the guide-standard P, grooved drum V, provided with spur-gear X, and the shaft T, provided with the grooved pulley U, pinion Y, and face-plate Z, substantially as described and for the purposes specified.

3. The combination of the above-named parts with the connecting-rod 3, saw-pitman H, vertical guide I, yoke J, hanger K, guide L, lifting-lever M, cord N, sheave O, pendulum G, platform A, frame B B, standards C, D, and F, transverse frame 5, roller 4, drum 7, and feed-rope 6, in connection with any proper drag-saw, when constructed, arranged, and operating substantially as herein described and for the purposes above set forth.

90,321.—JOHN VAN SLOOTEN, New Orleans, La. *Railway-Car Axle.*—May 18, 1869.

Claim.—A car-axle, consisting of the solid axle A, provided with the enlargements A″ and collar *d*, and having the wheel C′ rigidly attached, in combination with the tubular axle B, with the wheel C rigidly attached, when constructed and arranged substantially as herein described.

90,322.—SAMUEL VANSTONE, Providence, R. I., assignor to himself and JOHN W. HOARD, same place.—*Art of Making Metal Tubes.*—May 18, 1869.

Claim.—The method herein described of forming tubes or pipes, by rolling each half of the blank with corresponding flanges, and welding the said flanges together, in the manner specified.

90,323.—JOSIAH VAVASSEUR, Southwark, England.—*Lock for Ordnance.*—May 18, 1869; patented in England November 2, 1868.

Claim.—1. The combination of the dovetailed vent-piece with the horizontally moving cover, the combination being and operating substantially as set forth.

2. The combination, with the horizontally moving cover, of the firing-pin and its spring, to prevent accidental explosions, as set forth.

3. The combination of the vent-piece, capsule-chamber, and its extractor, the combination being and operating as set forth.

4. The combination of the vertically moving hammer with the horizontally moving cover, both swinging on a common axis, to clear the vent, as set forth.

5. The combination of the cover, the hammer, the spring, and the trigger, all mounted on the vent-stopper, as set forth.

90,324.—ANTOINETTE VIDAL, Paris, France.—*Porous Porcelain for Use in Filtering, &c.*—May 18, 1869.

Claim.—1. A compound for porous porcelain, made of the ingredients herein described, and mixed together substantially in the manner herein set forth.

2. The process, substantially as described, for producing a porous porcelain, by mixing gypsum and kaoline with charcoal or other analogous material, and subjecting the mixture to heat, so as to burn out the charcoal or analogous material, as set forth.

90,325.—GEORGE J. WARDWELL, Rutland, Vt., assignor to STEAM STONE-CUTTER COMPANY.—*Stone-Channeling Machinery.*—May 18, 1869; antedated January 30, 1869.

Claim.—1. The arms H H, links *b b*, and spring *h*, or their equivalents, constructed, applied, and operating substantially as and for the purpose herein specified.

2. The combination of reciprocating gangs of channeling or quarrying chisels, applied to opposite sides of the carriage-bed A, a crank-shaft, the yielding connecting-devices H H, *b b*, and *h*, and the engine mounted upon the carriage-bed A, all substantially as herein specified.

3. The forked standard guide or guides B, applied to a stone-channeling machine, and adapted to serve as guides for the chisels, substantially as described.

4. In combination with a reciprocating gang of stone-channeling chisels, guided and supported substantially as described, the adjustable plate, carrying the wrist-pin h^2, substantially as herein specified.

5. The combination of the crank-shaft D, gangs of chisels, carriage of the machine, worm-screw D^2, spur-wheel D^3, longitudinal shaft e^1, spur-wheel *e*, shifting-gearing O^1 O^2, axle *r*, and transporting-wheels S^1, substantially as herein specified.

6. The shifting-gearing O^1 O^2, slide F^2, and locking-bar F^3, applied to a stone-channeling machine, and adapted to operate substantially as and for the purposes described.

7. The plates V O, connected together by means of bolts and interlocking horizontal serrations, in combination with plate P, substantially as and for the purpose described.

90,326.—DARIUS WILCOX, Ansonia, Conn.—*Body-Loop Head for Carriages.*—May 18, 1869.

Claim.—The herein-described body-loop head, consisting of the head A, shank B, and the two lugs C and E, constructed in the manner and for the purpose substantially as herein set forth as an article of manufacture.

90,327.—GEORGE F. WILSON, East Providence, R. I.—*Manufacture of Black Pigment for Making Shoe-Blacking, &c.*—May 18, 1869.

Claim.—1. The manufacture, substantially as herein described, of black pigment.

2. The method of grinding and mixing the blacking or other compound, under pressure, by the employment of a hydrostatic mill, substantially as herein specified.

3. The use of the above-described pigment, for the purposes herein specified.

90,328.—GEORGE F. WILSON, East Providence, R. I.—*Process of Treating Offal Gelatine and Scrap for the Manufacture of Fertilizers.*—May 18, 1869.

Claim.—1. The treatment of offal gelatine and scrap substantially as herein described, employing in such treatment the apparatus, or its equivalent, described in letters-patent numbered 75,327, and dated March 10, 1868, as above specified.

2. The application of the above-described acid phosphate of lime, and of salt of iron, separate or combined, as and for the purposes substantially as described.

3. The employment, in combination with the apparatus, or its equivalent, referred to in the first clause of claims, of the apparatus devised and patented by Charles J. Everett and C. E. Gray, also referred to in this specification, for the purpose of utilizing thereby the above-described residuary products, which result from the method described in their aforesaid

patents, of rendering tallow and fats from the materials employed for the purpose, as therein specified.

4. The combined use of the apparatus referred to in the first clause of claim, and of the aforesaid acid phosphate of lime and salt of iron, used separately or together, for the purpose of treating the above-described offal gelatine and scrap, however obtained.

5. The use of the bone-sulphate of lime described in my patent of August 11, 1863, and numbered 39,519, with the aforesaid offal gelatine and scrap, either before or after its concentration, as above described.

6. The use of the aforesaid bone-sulphate of lime, of dried peat, of gypsum, of clay, of marl, or their equivalents, with the product resulting from the treatment of offal gelatine and scrap, substantially as herein described, for the purpose of rendering the same less sticky and gummy, and easier of uniform distribution in the soil.

7. The concentration of the aforesaid offal gelatine and scrap, whenever the aforesaid acid phosphate of lime and salt of iron are used separately or together, whether the same be effected in my aforesaid patent apparatus, or otherwise, for the purposes substantially as above described; and also the use of either of the bodies described in sixth clause of claims, or their equivalent, either before or after the concentration of the aforesaid offal gelatine and scrap.

8. The fertilizer, produced by the treatment of offal gelatine and scrap, in the manner and for the purpose substantially as herein described.

90,329.—H. S. WING, Plattsburgh, N. Y.—*Bedstead-Fastener.*—May 18, 1869.

Claim.—The combination of the plate C with prongs G G, notched on both sides, and the cam-lever E, all arranged to operate substantially as set forth.

90,330.—H. J. WALTERS, Salem, Mass.—*Reversible Hinge.*—May 18, 1869.

Claim.—The hinge, consisting of the two closed conical sockets B, and the double-conical pintle *a a*, with washer *b*, when constructed to operate together as described.

90,331.—ALBERT C. CORSE, Troy, N. Y.—*Cooking-Stove.*—May 18, 1869.

Claim.—1. The reservoir or water-tank A, containing the air-chamber B, the exit-pipe C, arranged and combined therewith, substantially as herein described and set forth, in combination with a cooking-stove having two vertical flues in the rear end thereof, in the manner and for the purpose substantially as herein described and set forth.

2. The arrangement and employment of the flanges or grooves E and E′, when used upon a cooking-stove, substantially as herein described, and in combination with the projections F and F′, upon the reservoir or water-tank A, in the manner substantially as herein described and set forth.

3. The chamber B, immediately below the reservoir or water-tank A, when used in combination with the exit-pipe C, and with a vertical ascending and descending flue, in the rear end of a cooking-stove, and communicating therewith, in the manner and for the purposes substantially as herein described and set forth.

90,332.—ISAAC ADAMS, Jr., Boston, Mass.—*Mode of Electro-Plating with Nickel.*—May 25, 1869.

Claim.—The use of a solution of sulphite of nickel in a solution of sulphite or bisulphite of ammonia, for depositing nickel.

90,333.—ROBERT ANDREWS, Milwaukee, Wis.—*Composition for Stuffing Leather.*—May 25, 1869.

Claim.—The mode of combining common or crude pitch or tar, tallow, beeswax, linseed-oil, neat's-foot oil, and oil of tar, in any proportion, and also for the composition to be applied to leather, in any form, either in its manufacture or for improving or preserving it, or to any other article or thing for which it can be used, disclaiming all other things, except the composition as above described, and the method of making it, which composition I will denominate "tar leather-stuffing."

90,334.—JOHN ATWOOD, JR., Provincetown, Mass.—*Process of Curing and Putting Up Fish.*—May 25, 1869.

Claim.—The method or process of curing and putting up fish, substantially as herein described.

90,335.—JOSEPH BECK, Trenton, N. J.—*Mode of Coloring and Tinting Rubber Goods.*—May 25, 1869.

Claim.—Forming sheets of India rubber of variegated colors, in the manner as above set forth.

90,336.—JOHN H. BELLAMY, Charlestown, assignor to himself and L. M. FAXON, Boston, Mass.—*Railway-Hose Protector.*—May 25, 1869.

Claim.—The arch A, when secured to the track D by means of the slotted clamps B and bolts C, all constructed and arranged substantially as described, and for the purpose specified.

90,337.—GEORGE B. BRAYTON, Boston, Mass., assignor to "THE NOVELTY EYELET COMPANY," same place.—*Alloy for Forming Eyelets.*—May 25, 1869.

Claim.—The use of a metal for eyelets, composed of the elements and of the character substantially as described.

90,338.—GEORGE E. BRETTELL, Rochester, N. Y.—*Chuck.*—May 25, 1869.

Claim.—In self-centering chuck, closed by movable inclines, the construction and arrangement of the slotted jaws C, ferrules *f*, and springs *s*, as and for the purpose specified.

90,339.—T. J. BURKE, Sandwich, Ill.—*Brick-Press.*—May 25, 1869.

Claim.—1. The combination, substantially as set forth, of the pivoted frame *e e* and plunger B, connected together and retained in their respective places by means of the slots *b′ b′* in the side-pieces *a a*, as described.

2. The press, consisting of the frame A, provided with side-pieces *a a* and slots *b′ b′*, pivoted frame *e e*, mold *b*, roller D, cap E, lever F, and plunger B, all combined, arranged, and operating substantially in the manner and for the purpose described.

90,340.—GEORGE F. CLEMONS, Springfield, Mass.—*Tuck-Creaser and Guide for Sewing-Machines.*—May 25, 1869.

Claim.—1. The employment, in a tuck-marker for sewing-machines, of an adjustable knife-edge plate, and a notched non-vibrating spring-pressure plate, adapted together, substantially as set forth, for forming creases for tuck-marks upon the cloth being sewed, when used in combination with means which produce automatically, substantially in the manner set forth, the described counteracting cloth-guiding action.

2. In a tuck-marker for sewing-machines, adapting the device to form a crease on the cloth, and to guide inward toward a gauge-face, while the cloth is being sewed, by means of continuous automatic pressing and crimping of the cloth over a knife-edge plate, and also adapting the device to produce, simultaneously, an outward counteracting guiding of the cloth, by means of automatic pressure upon it at another point, at or near its inner edge, for the twofold purpose of tuck-marking the cloth and guiding it straight through the sewing-machine; and further, in such devices, adapting them to give adjustable and variable spring-pressure upon the cloth, at the line of creasing, and at or near the inner edge of the cloth, for the purposes set forth.

3. The notched adjustable pressure-plate *i*, adapted both to crease and to guide the cloth, substantially as set forth.

4. The adjustable knife-edge plate *m*, in combination with the notched creasing and guiding adjustable pressure-plate *i*, when adapted together for the purposes set forth.

5. The combination of the adjustable knife-edge plate *m*, stationary base-plate *a*, and notched creasing and guiding adjustable pressure-plate *i*, when adapted together for the purposes set forth.

6. The adjustable knife-edge plate *m*, stationary base-plate *a*, notched creasing and guiding-plate *i*,

adapted together for the purposes set forth, and combined with a cloth-gauge, when the latter is connected to the former by means which are adapted to give the described adjustable and variable spring-pressure to the creasing and guiding plate *i*, for the purposes set forth.

7. The combined tuck-marker and cloth-guide, consisting of the base-plate *a*, slotted gauge-shank *b*, rigid plate *d*, gauge *e*, spring-plates *g* and *h*, creasing and guiding plate *i*, set-screws *j* and *k*, and adjustable knife-edge plate *m*, all substantially as and for the purposes set forth.

8. The cloth-guide, consisting of the base-plate *a*, slotted gauge-shank *b*, rigid plate *d*, gauge *e*, spring-plates *g* and *h*, cloth-guiding plate *i*, and pressure set-screws *j* and *k*, all substantially as and for the purposes set forth.

90,341.—IRA COOPER, Middlefield, Ohio.—*Potato-Digger.*—May 25, 1869.

Claim.—1. The spades or shares E, as arranged in relation to and in combination with the inclined sieve, consisting of the bars G, substantially as and for the purpose set forth.

2. The standards I, pivoted frame C, arms B, and cross-bar A, when arranged and combined to operate in the manner described.

90,342.—EDMUND J. CRIDGE, Troy, N. Y.—*Cooking-Stove.*—May 25, 1869.

Claim.—A removable water-reservoir, which is inclosed within a flue-chamber formed between the back wall of the stove and the back wall of the oven, and which is supported in such a chamber by extending the flue-plates, or their equivalents, of the stove beneath the bottom of this reservoir, and up the front and rear sides thereof, substantially as described, and for the purposes set forth.

90,343.—GEORGE T. DALTON, New York, N. Y.—*Faucet.*—May 25, 1869.

Claim.—The hollow plug A, provided with the flanged head B, and constructed so as to screw into the shoulder C, so as that a tight joint may be produced, by means of the said flanged head and shoulder, placed the one on the inside and the other on he outside of the vessel.

90,344.—GEORGE DARE, Auburn, N. Y.—*Bag-Holder.*—May 25, 1869.

Claim.—The horizontal sliding-bar B, provided at its outer end with the ring or holder *b*, and furnished on its lower opposite side with the bar D, acting as a pawl and lever, and spring-bar *d*, and serrated bar or staudard A, constructed, arranged, and operated substantially as and for the purpose set forth.

90,345.—MARK L. DEERING, New York, N. Y.—*Sliding-Door Sheave.*—May 25, 1869.

Claim.—The arrangement and application of the friction-rollers I I, in combination with the sheave D, and shaft G, frames A and E, and slides H, as shown and described, for the purpose described.

90,346.—CORNELIUS H. DE LAMATER, New York, N. Y.—*Furnace for Steam and other Purposes.*—May 25, 1869.

Claim.—In furnaces, the within-described construction and arrangement of the air-flues N, earthy wall D, induction-orifices *n*, and discharging-orifices *p*, delivering the air thus heated into the inner chamber M, above the grate, as herein set forth.

90,347.—ASHEL J. DENISON, Paris, Mich.—*Compound for the Cure of Diphtheria, &c.*—May 25, 1869.

Claim.—The composition of a remedy, called golden oil, from the ingredients named above, compounded and prepared substantially as and for the purposes above set forth.

90,348. THÉODORE DESCHAMPS, Paris, France.—*Fastening for Gloves.*—May 25, 1869.

Claim.—1. The combination of the eye or hook *a* or a^1 of the clasp *d*, with a crotchet, *l*, and of the ends *b* b^1 of the lace, substantially as hereinbefore described, and represented in Figs. 1 and 2.

2. The combination of the button a^2 of the clasp *d*, with an aperture, l^1, and of the two ends *b* b^1 of the lace, substantially as hereinbefore described, and represented in Figs. 8 and 9.

3. The combination of the button a^2 of the clasp *d*, and of the ring l^2, movable between the two ends *b* b^1 of the lace, substantially as hereinbefore described, and represented in Fig. 12.

90,349.—WILLIAM DIETRICHSEN, Newark, N. J.—*Apparatus for Preserving Beer.*—May 25, 1869.

Claim.—The construction of two chambers or vessels, A and A′, connected together by a pipe or pipes, provided with suitable cocks, and provided with escape-pipes F and F′, the whole being combined and arranged to turn on its axis B, and operating in the manner and for the purpose described.

90,350.—GEORGE C. DOBSON and WILLIAM MCDONNELL, Boston, Mass., assignors to G. C. DOBSON.—*Banjo.*—May 25, 1869.

Claim.—1. The arrangement of the movable hoop C, operated by screws *e* within a hoop, A, having at its upper edge a shoulder or flesh-rim, *b*, the skin-hoop *d*, and the head B, substantially as and for the purpose described.

2. The removable blocks or brackets *f*, with their screws *e*, in combination with the socket-plates *i*, substantially as and for the purpose set forth.

90,351.—JOHN L. DOLSON, Charlotte, Mich.—*Carriage.*—May 25, 1869.

Claim.—1. In combination with the perch-pole A, extension D, and brace F, the tube A, plate H, braces *h c*, and loop *f*, all constructed and arranged to operate substantially in the manner and for the purposes herein set forth.

2. In combination with a pivot-point, interposed between the spring and body of a vehicle, the sockets I I, and pins or guides *y y*, substantially as and for the purposes herein set forth.

90,352.—G. L. DU LANEY, Meehaniesburgh, Pa.—*Device for Attaching and Detaching Horses.*—May 25, 1869.

Claim.—A curved guide-plate, C, screwed fast to the cross-piece, midway between the shafts, with cam-shaped groove, in combination with the elbow-rods or bolts D, and stays O O, when the outer end of the said elbow-rod is made to pass in and out between the end of the single-tree B and the stays O O, and thus engage and disengage the traces, substantially as described.

90,353.—DAVID H. FANNING, Worcester, Mass.—*Corset.*—May 25, 1869.

Claim.—The combination, with the end of the bone or stiffener A, used in a corset, of a metal holding-device, consisting of the shield E and points *a*, and the flanges *b*, curved so as to hold the end of the stiffener between them, and to prevent the splitting or lateral working of the same, said device being applied in the manner shown and described.

90,354.—TALLMADGE O. FOOT, Newburgh, Ill.—*Sewing-Machine for Quilting.*—May 25, 1869.

Claim.—The reversible looper P and hooks *p p*, in combination with traversing-frame B and stationary serrated bars C, when constructed and arranged substantially in the manner and for the purpose herein set forth.

90,355.—JAMES GORTON, Cohocton, N. Y.—*Road-Scraper.*—May 25, 1869.

Claim.—The double revolving scraper E, pivoted to the metallic frame A, at its center, said frame being provided with horizontal levers D D and springs *e e*, for securing the scraper, and allowing the same to revolve, the whole being constructed, arranged, and operating as set forth.

90,356.—JOHN W. GRAHAM, Chillicothe, Ohio.—*Lamp-Post.*—May 25, 1869.

Claim.—1. The plug, Fig. 3, provided with a short pipe and stop-cock, in combination with a lamp-post, constructed in the manner herein described, substantially as and for the purposes specified.

2. The enlarged reservoir *d*, with closed bottom *a*,

to attach to the foot of iron lamp-posts, constructed as and for the purposes herein set forth.

90,357.— WILLIAM HAILES, Albany, N. Y.—*Base-Burning Stove.*—May 25, 1869.

Claim.—1. The oven-chamber F, with its flue-plates S S, divided as described, and held together by the devices described, and all for the purpose set forth.

2. The arrangement of the collar-base *g*, flue-plates S S, oven-chamber F G G′, and collars *h p′*, substantially in the manner shown and described, and for the purpose set forth.

3. The arrangement of the single flat wall G′, plates G G, door *i*, and the plates S S, for the purpose of forming an oven with a single flat wall, and with a flue-space around two of its sides, all as herein described and shown.

90,358.—WILLIAM HAILES, Albany, N. Y.—*Cooking-Stove.*—May 25, 1869.

Claim.—1. The arrangement of the flue-space D, for receiving a portable water-reservoir, N, immediately in rear of the fire-place C, and between two ovens, O O, substantially as described.

3. The draught-dampers *h h* and *i i*, arranged in flue-spaces *g g′*, between ovens O O and the top-plate of the stove, in combination with the depressed flue-space D, and a reservoir, N, substantially as described.

3. The extension D′, arranged in rear of the space D, when the latter is between ovens and separated from the fire-chamber C by a single wall, W, substantially as described.

4. The warming-closet J, arranged beneath the space D, directly in rear of the fire-place W, and between ovens, substantially as described.

90,359.—EBERHARD HARRSCH, New York, N. Y.—*Manufacture of Colors.*—May 25, 1869.

Claim.—The production of colors, by dissolving the ores of zinc in nitric, nitro-muriatic, or muriatic acids, and mixing the solution with soluble salts of baryta or its equivalents, substantially in the manner and for the purpose described.

90,360.—ROBER HENEAGE, Buffalo, N. Y.—*Ice-Preserver and Water-Cooler.*—May 25, 1869.

Claim.—As a cooler for water supplied to a faucet an ice-holder, the walls of which consist of a closely-laid coil of the supplying-pipe, when the whole is inclosed within the double-walled vessel A, having the air-spaces *a*, and provided with the cover C, whereby the apparatus serves the purposes both of an ice-preserver and a refrigerator of the water supplied, substantially as set forth.

90,361.—RICHARD M. HOE, New York, N. Y.—*Fire-Proof Building.*—May 25, 1869.

Claim.—1. The method of constructing a fire-proof building, substantially as described, consisting in the employment of the non-conducting material, the tarred paper, or equivalent therefor, and the metal plate, combined with the beams or flooring, substantially as and for the purpose specified.

2. In combination with metal sheets, arranged as shown, the interposed tarred paper, or like material, substantially as and for the purpose set forth.

90,362.—JAMES HOLLINGSWORTH, Chicago, Ill.—*Horse-Rake.*—May 25, 1869.

Claim.—1. The eye-bolts *d d d*, in combination with the nuts *d′ d′ d′* and flattened teeth *f f f*, for the purpose of adjusting the teeth to smooth or rough ground, substantially as specified.

2. Grooving the under side of forward piece *a*, when said piece is used in combination with eye-bolts *d d d* and teeth *f f f*, operating substantially as and for the purpose specified.

3. The strippers or cleaners B′ B′, in combination with spiral spring *x*, substantially as described.

4. The combination of rocking-frame C, rake-teeth *f f f*, eye-bolts *d d d*, and nuts *d′ d′ d′*, with hand-lever E, all combined, arranged, and operating substantially in the manner and for the purpose set forth.

90,363.—LOUISA L. JACKSON, Richmond, Ind.—*Guide for Measuring the Person and Cutting Out Ladies' Dresses.*—May 25, 1869.

Claim.—1. The several guides, shown in Figs. 1, 2, 3, and 4, when constructed with the configuration, and perforated and marked with figures, as set forth, said parts being intended for use in combination with one another, in forming dress-patterns from six measurements of the person, substantially as described.

2. The back rule, shown in Fig. 1, having a row of perforations, to determine the proper position of the hooks and eyes on each side, substantially as described.

90,364.—EDWIN GEORGE JELLEY, Pawtucket, R. I.—*Heddle for Looms.*—May 25, 1869.

Claim.—A knitted heddle, made in the manner and for the purposes shown and specified.

90,365.—JOHN M. JOHNSTON, Mayfield, Cal.—*Saw and Saw-Tooth.*—May 25, 1869.

Claim.—In combination with the wedge-shaped recess D, cut in the base of the tooth, the wedge E, consisting of two pieces, riveted together, and provided with beveled edges, substantially as and for the purpose set forth.

90,366.—A. H. KNAPP, Newton Centre, Mass.—*Curtain-Fixture.*—May 25, 1869.

Claim.—1. Forming the bracket-case of two parts, B C, one shutting and fitting over the other, and both secured to a base-plate, A, substantially as and for the purpose herein specified.

2. The lips *c c* and the indentations *d d*, on the base-plate A, formed and arranged in relation to and in combination with the parts B C of the bracket-case, substantially as and for the purpose herein specified.

3. The catch *a*, struck up from the metal of the base-plate A, and arranged in combination with the spring D, and its free or unattached holder E, substantially as and for the purpose herein set forth.

4. The spring-holder E, constructed substantially as described, in combination with the spring, and applied to the fixture, thereby serving the several purposes, as herein set forth.

5. The knob I, when formed of sheet-metal into a hollow or cup shape, with peripheral corrugations, for the purpose herein set forth.

6. The left-hand bracket, having mounted in it the sliding-journal N, spring *r*, and projecting thumb-piece *p*, substantially as and for the purpose herein specified.

90,367.—WILLIAM LALOR, Utica, N. Y.—*Fertilizer.*—May 25, 1869.

Claim.—The use of the said refuse for the uses and purposes mentioned.

90,368.—FREDERICK A. LANE, Swanzey, N. H., assignor to himself and LUTHER S. LANE, same place.—*Stuffing for Mattresses.*—May 25, 1869.

Claim.—As an improved article of manufacture, for stuffing-purposes, woolen-fiber, made from the refuse of woolen goods, rags, &c., by bunching and curling as described.

90,369.—MINNIE E. LLOYD, New York, N. Y.—*Fruit-Drier.*—May 25, 1869; antedated May 8, 1869.

Claim.—The chambers B, constructed as shown and described, and provided with transverse bars or spurs *d*, whereby a free upward as well as lateral escape for the vapors is afforded, the whole arranged within a chamber having free circulation between said chambers B, for the passage and escape of heated air, substantially as set forth.

90,370.—A. LODEMAN and M. DESENBERG, Kalamazoo, Mich.—*Manner of Applying Rollers to Rocking-Chairs.*—May 25, 1869.

Claim.—The levers A B and C D, connected by the bar B D, and provided with the pins G and H, for the purpose described, in combination with the disk T, springs P and Q, wires R and S, bolts N and O, and stops U and V, as and for the purpose set forth.

90,371.—J. AUGUSTUS LYNCH, Boston, Mass., assignor to himself, R. K. HUNTOON, and C. S.

LYNCH, same place.—*Steam-Engine Lubricator.*—May 25, 1869.

Claim.—1. The combination as well as the arrangement of the grease-vessel B with the stop-valve *b*, its case *a*, and stem *b*, substantially as described, such being so that steam, when in the said case, may come into contact with and heat the said grease-vessel.

2. The combination of the grease-vessel B, the spray-duct C, one or more passages *m*, and the auxiliary valve-seat *k*, with the stop-valve *b*, its case *a*, and operative mechanism, and with the auxiliary valve *l*, applied to the stem of the said stop-valves, as explained, the whole being substantially as hereinbefore described.

90,372.—WILLIAM M. LYON, Pittsburgh, Pa.—*Manufacture of Iron.*—May 25, 1869.

Claim.—The mixing of solid carbon with iron-ore, or other oxide, and melted pig-metal, in the formation of the conglomerate known as "pig-bloom," or "pig-scrap," in such manner and in such proportion, substantially as hereinbefore described, as to reduce the excess of oxides in the conglomerate, and thus lessen the formation of cinder, and increase the yield of malleable iron, in the process of treating the conglomerate preparatory to rolling or hammering the iron.

90,373.—WILLIAM M. LYON, Pittsburgh, Pa.—*Manufacture of Wrought Iron.*—May 25, 1869.

Claim.—1. In the manufacture of wrought iron, the production of a solid mixture or conglomerate of cast iron and anthracite coal, charcoal, coke, or other like substances containing a large percentage of carbon, by so uniting or intermixing the molten iron and crushed or pulverized carbonaceous matter, that such uniting or intermixing shall result in a solid product, substantially as above described.

2. As a new article of manufacture, a solid mixture or conglomerate of cast iron and carbonaceous matter, produced by uniting or intermixing with cast iron, in a fluid state, crushed, pulverized, or finely divided anthracite coal, charcoal, coke, or other like carbonaceous substances, in a solid state, in such manner and relative proportions as to produce a solid product.

90,374.—M. F. MCINTYRE, Girard, Pa.—*Horse-Collar Fastening.*—May 25, 1869.

Claim.—The spring-clasp C and bar B, in combination with the caps A A′, substantially as shown and described, for the purpose specified.

90,375.—GEORGE H. MITTAN, De Witt, Ill.—*Spring for Wagon-Seats.*—May 25, 1869.

Claim.—As a new article of manufacture, a spring for carriage-seats, consisting of the curved part I, circular parts B D, bars C E, and hooks F, as set forth.

90,376.—WILLIS E. MOORE, Crawfordsville, Ind.—*Fender for Cultivator-Plows.*—May 25, 1869.

Claim.—1. A guard or clod-fender for cultivators, composed of tines *b b′*, formed and pivoted to head E and bar F, substantially as described.

2. A jointed fender, attached to arm *a* by means of a pivot-joint, and provided with a stop, *c*, substantially as described.

90,377.—WILLIAM MOREHOUSE, Buffalo, N. Y.—*Locking-Nut.*—May 25, 1869.

Claim.—The within-described spring-plate C, of bowing form, and with corrugated or serrated projections *b a′*, on its surface, the said spring and projection being united together, and used in connection with a screw-nut and bolt, all in the manner and for the purpose herein shown and described.

90,378.—EUSTIS P. MORGAN, Saco, and JAMES H. MCMULLAN, Biddeford, Me.—*Roving-Frame.*—May 25, 1869.

Claim.—1. The system or series of curved levers, driven by a segment-gear and pinion, or their equivalents, and having the free or outer end of each lever of such a curve as will impart to the bolster-rail, and the bobbins supported by it, a uniform motion in all positions of the lever

2. In combination with the system of levers or arms, herein set forth, the spiral pulley X, and the counterpoise Z, or their equivalents, substantially as herein described, and for the purpose specified.

90,379.—PETER MUNZINGER, Philadelphia, Pa.—*Leveling Hydraulic Gas-Mains.*—May 25, 1869.

Claim.—The use and application of leveling-screws, either fixed or movable, substantially for the purpose shown.

90,380.—ELIJAH MYRICK, Harvard, Mass.—*Chimney-Cap.*—May 25, 1869.

Claim.—1. A chimney-cap, when constructed of separate sections, held in position by means of flanges, substantially as described.

2. A chimney-cap, constructed in sections, held together by means of lips, recesses, and starts, substantially as described and set forth.

90,381.—J. D. S. NEWELL, Tensas Parish, assignor to himself, A. G. BRICE, E. TOMATIS, and THOMAS PICKLES, New Orleans, La.—*Breech-Loading Fire-Arm.*—May 25, 1869.

Claim.—The breech-piece A, when the same is solid at its front extremity, and provided with the wedge-like projection *e* on its front, and the angle *c* at its rear end, and actuated by direct contact with the jaw of the hammer, and the removable plate *i*, when the same is combined with the hammer B, and is actuated thereby, by means of the hooked bar C, and is locked, at the moment of the explosion of the charge, by the action of the angle *d* against the angle *c*, as herein set forth.

90,382.—JOHN S. PALMER, Providence, R. I.—*Device for Setting Button-Hooks.*—May 25, 1869.

Claim.—1. In combination with the jaws A A′ and fixed die-block *h*, the sliding-plate B, for holding the button-hook, substantially as described.

2. The combination of the sliding-plate B with the jaw A and the gauge-plate *d*, substantially as described.

90,383.—GEORGE O. PARKMAN, Lincolnville, and JOHN M. TRUSSELL, Belfast, assignors to themselves and AMBROSE STROUT, Belfast, Me.—*Filter.*—May 25, 1869.

Claim.—The arrangement and combination of perforated bottom-boards B C, the series of frames A A′ A″, the layers *a* of sponge, and the clamp-screws and nuts, the whole being substantially as and for the purpose hereinbefore specified.

90,384.—J. FRANKLIN PECK, Springfield, Mass.—*Spring Bed-Bottom.*—May 25, 1869.

Claim.—The application of the cushions to the metal strips at each intersection of the same, and the construction of the circular corner-pieces with slots, in the manner set forth, and for the purposes described.

90,385.—WALTER PECK, Rockford, Ill.—*Wind-Wheel.*—May 25, 1869.

Claim.—The fan H, standard G, stop L, chain I, roller K, and weighted lever C, with its connections, when combined and arranged as and for the purpose described.

90,386.—H. W. PERSING, Chicago, Ill.—*Coffee-Roaster.*—May 25, 1869.

Claim.—A coffee-roaster, having perforated corrugated bottom B B, wire-gauze inner bottom D D, and stirrer E E, arranged and constructed to operate substantially as described.

90,387.—H. W. PERSING and J. F. PEASE, Chicago, Ill.—*Apparatus for Making Tea and Coffee.*—May 25, 1869.

Claim.—The combination of the pipe E, water-distributer *e*, percolator *d*, with the coffee-pot A, having partition A′, inner bottom *a a*, having flange *b*, with hole *c*, all constructed and arranged to operate in the manner and for the purpose described.

90,388.—W. R. POMEROY, Millersburgh, Ohio.—*Dental Instrument.*—May 25, 1869.

Claim.—The adjusting-screw *a*, yoke F, arm E,

bracket A, mallet G, and plugger C, combined and arranged to operate in the manner substantially as described, and for the purpose specified.

90,389.—JOHN L, PORTER, Kirksville, Mo.—*Abdominal Supporter.*—May 25, 1869.

Claim.—As a new article of manufacture, the within-described abdominal supporter, consisting of the body A, divided horizontally from either end, as shown in the drawing, and provided with the straps B B and D D, strip C, and openings *b b*, all constructed and arranged to operate as and for the purpose shown.

90,390.—EDWARD S. POUCHER, New York, N. Y.—*Carpet-Cleaning Machine.*—May 25, 1869.

Claim.—1. The combination of a portable folding-frame, A B, having beating-arms *s*, a brush, F, and carpet-rollers D D^1 D^2, arranged upon it, substantially as and for the purposes described.

2. The combination of the suction-device G G^1 G^2 with the carpet-cleaning machine, substantially as described.

3. Tappet-carrying shafts E E, arranged so as to be driven by roller C′, and to operate upon beaters, which are pivoted on opposite sides of frame A, substantially as described.

4. The combination of the endless bands *e e* with the beaters *s s* and carpet-rollers, substantially as and for the purposes described.

5. In combination with the folding-frame A B, the rollers D D^1 D^2, and the beating-arms *s s s*, arranged substantially as described.

90,391.—SAMUEL G. RICE, Albany, N. Y.—*Washing-Machine.*—May 25, 1869.

Claim.—1. The arrangement of a compresser, G *g*, loosely within a slatted drum, so as to operate substantially as described.

2. The double-beveled and rounded-edge blades or slats *a*, arranged around a swiveling blade, *g*, substantially as described.

90,392.—LUCIEN M. RICE, Hartford, Conn., and SIDNEY E. ADAMS, Charlestown, Mass.—*Apparatus for Treating Hydrocarbon Oils.*—May 25, 1869.

Claim.—The combination and arrangement of the sprinkler C and its pipe B with the pan A and pipe D, for the purpose of treating and refining hydrocarbon oils, substantially as herein described.

90,393.—JOHN P. RIDER, Brooklyn, N. Y.—*Manufacture of Flexible Hose, Tube, or Pipe for Conveying Fluids Under Pressure.*—May 25, 1869.

Claim.—Reinforcing the ends of the vulcanized rubber hose to which the couplings are applied by means of one or more extra plies of cloth, duck, or equivalent material, coated with rubber, and applied to and united with the body of the hose, substantially in the manner herein set forth.

90,394.—DAVID ROBERGE, Mooers, N. Y.—*Horseshoe.*—May 25, 1869.

Claim.—A horseshoe, in which the weight of the animal is taken upon a central support, in the manner specified, so as to allow the hoof to conform to the position required by the other parts of the leg, as forth.

90,395.—HENRY ROUNDY, San Francisco, Cal., assignor to THOMAS M. CASH, same place.—*Paint for Ships' Bottoms.*—May 25, 1869.

Claim.—The above-described composition for paint, made of the ingredients named, mixed or compounded as enumerated, in about the proportions specified.

90,396.—GIDEON A. RUSSELL, Chicago, Ill.—*Window.*—May 25, 1869.

Claim.—1. The combination of the strips *a b* upon window-sash, to operate within the grooves *e*, in the manner and for the purposes set forth.

2. The arrangement of the strips *d* upon the lower sash, in the manner and for the purposes described.

3. The arrangement of the movable strip *c*, in combination with the sash A, to operate in the manner specified.

90,397.—JUNIUS SCHENCK, Brooklyn, N. Y.—*Manufacture of Hose, Tubing, and other Rubber Fabrics.*—May 25, 1869.

Claim.—1. The application of the preservative compound herein mentioned, or their equivalents, to hose, belting, and the like fabrics, so as to preserve the same, substantially as described.

2. The improved hose, belting, packing, and other fabrics, prepared by combining the substances herein named with the fibrous material composing the same, substantially as described.

90,398.—STEPHEN SCOTTON, Richmond, Ind.—*Tree-Box.*—May 25, 1869.

Claim.—The combination of the slats B B with the iron rod A, formed and secured substantially as described, and for the purposes herein set forth.

90,399.—JOHN L. SHILLITO and WILLIAM M. WALKER, Wellsville, Pa.—*Rein-Holder.*—May 25, 1869.

Claim.—As a new article of manufacture, the within-described line-holder, consisting of the bifurcated frame A, clasp D, spring-catch *a*, detent *d*, and rubber-pads *c* and *d′*, substantially as and for the purpose shown.

90,400.—A. D. SMITH, Grafton, Ohio.—*Metallic Door-Strip.*—May 25, 1869.

Claim.—The combination of the latch-strip A with a latch-catch, C, when so arranged, in relation to each other and to the adjoining parts, that by closing the door the latch-strip A is made to rise up from the inside on to the latch-catch C, and latch down on the opposite and outside of it and the door B, substantially as herein shown and described.

90,401.—HENRY SMITH, Southington, Conn.—*Flue-Stopper.*—May 25, 1869.

Claim.—The combination of the socket *d*, spring *c*, and register *a*, the whole combined and arranged with a flue-stopper, substantially as described, and for the purposes herein set forth.

90,402.—WARREN SMITH, Alexandria, Ind.—*Fly-Trap.*—May 25, 1869.

Claim.—1. The combination of the transparent vessel D, the conduit C, and feed-chamber A, substantially as shown and described.

2. In combination with the feed-chamber A and its cover B, the spring H, arranged substantially as as and for the purpose described.

90,403.—WILLIAM B. SNOW and WILLIAM A. ELMENDORF, Chicago, Ill.—*Truss-Rocker Beam.*—May 25, 1869.

Claim.—1. A truss-rocker beam for car-trucks, consisting of the diagonal bars D D and braces C C, constructed and arranged to brace the sills of a car, and support its weight on the trucks, as and for the purpose specified and shown.

2. The combination of the truss D C, center-plate E, sills A, and draught-timbers I I, as specified.

90,404.—SIMON SOULES, Dowagiac, Mich.—*Potato-Digger.*—May 25, 1869.

Claim.—The bars *a a*, shovels *x x*, and the teeth 1, 2, 3, 4, 5, 6, 7, 8, 9, when constructed, combined, and arranged as set forth.

90,405.—THOMAS STEWART, Philadelphia, Pa., assignor to himself and WILLIAM C. STILES, same place.—*Filter.*—May 25, 1869.

Claim.—The cylinder C, with its detachable strainer F, the cylinder D, with its detachable or changeable filtering-medium G, and outlet-tube I, and the intermediate chamber E, with its outlet-tube *e′*, the said parts being combined together and arranged within a suitable chamber, at B, so as to operate substantially in the manner described, for the purpose specified.

90,406.—CHARLES E. SWENEY, Geneseo, Ill.—*Neck-Yoke.*—May 25, 1869.

Claim.—The combination of the lever J and spring P, with the lever H, hook B, and plate D, and thumb-key L, substantially as described, and for the purpose set forth.

90,407.—Warren Tanner, Chicago, Ill., assignor to himself and Oliver Bascom, Whitehall, Vt.—*Device for Sharpening the Cutters of Mowing-Machines.*—May 25, 1869.

Claim.—The within-described device for sharpening harvester and mowing-machines cutters, consisting of the standards G^1 G^2, shaft D, grinding-wheel A, driving-sheave or pulley E, clamp-washer and nut B C, the whole arranged as and for the purpose herein set forth.

90,408.—Henry H. Thomas, Titusville, Pa.—*Torpedo for Oil-Wells.*—May 25, 1869.

Claim.—The plunger *k*, fixed and movable rods *g* and *i*, primers *h h*, and weight *l*, arranged to operate substantially in the manner and for the purposes set forth.

90,409.—James Thomson, Gibsonville, Cal.—*Amalgamator.*—May 25, 1869.

Claim.—1. The inside cylinder D, with its perforated cover E, confining-ring P, and clamp O, in combination with the feed-pipe B, constructed and operating substantially as described.

2. The wooden bottom J, provided with a concave surface-cover, I, in combination with the perforated water-pipe C, substantially as and for the purpose herein set forth.

3. The heater K, adapted for steam or fuel, in combination with the amalgamator, substantially as herein described.

90,410.—Charles D. Tisdale, Boston, Mass., assignor to himself and Joseph H. Clapp, same place.—*Railway-Car Wheel and Axle.*—May 25, 1869.

Claim.—1. The combination and arrangement of the wedge-keys *b b*, the stop-piece *c*, and the grooves *a o*, in the wheel-hub and axle, the whole being applied to the wheel and axle in manner as set forth.

2. The combination and arrangement of the helix-coil or key *e*, with the stop-piece *c*, and the wedge-keys *b b*, applied to the wheel and axle in manner as explained.

90,411.—Lewis W. Turner, Yalesville, Conn.—*Broom-Holder.*—May 25, 1869.

Claim.—The holder, composed of the body A, screw B, and spring clamps or clasps *d* and *e*, when the whole is constructed, attached, and fitted for use, substantially as herein described and set forth.

90,412.—T. H. Tyndale, Belleville, Ill.—*Attaching Handles to Axes.*—May 25, 1869.

Claim.—The combination of the handle B, band C, and staple E, when all the parts are constructed and arranged to operate as shown and described.

90,413.—Orsamus A. White, Norwalk, Ohio.—*Churn-Dasher.*—May 25, 1869.

Claim.—The combination, with the rigid radial arms C, constructed with slanting sides, and provided with a wire coil or series of rings, of the adjustable radial arms B, formed also with slanting sides that incline in the direction opposite to that of the sides of the rigid arms, said adjustable arms being also provided with the wire coil, or series of rings specified.

90,414.—A. G. Wilkins, G. N. Crodle, and F. L. Niner, Cooperstown, Pa.—*Churn.*—May 25, 1869.

Claim.—1. The removable and reversible partition F, perforated, provided with wings P P, and arranged within an oscillating churn-box, substantially as described.

2. The construction of the dash-arms C, of one piece, of the curved form described, in combination with the oscillating churn-box A A′ and partition F, substantially as and for the purposes described.

3. The removable dash-rod C, the removable partition F, and the oscillating churn-box, combined and arranged to operate substantially as described.

90,415.—Lewis John Wolf, Port Richmond, Philadelphia, Pa.—*Ale, Beer, and Water Cooler.*—May 25, 1869.

Claim.—The construction of the cooler A, with its inside movable cooler C, sieve G, coiled pipe H, branches K, L, and M, water-pipe N, and thermometer B, when arranged and combined as herein described, and for the purposes set forth.

90,416.—J. B. Woolsey, Bloomfield, Iowa.—*Washing-Machine.*—May 25, 1869.

Claim.—1. The construction and the arrangement, with relation to each other and the heads of the washing-cylinder, of the over-lapping metallic plates which constitute the body of the said cylinder, as herein shown and specified.

2. The arrangement, in connection with the cylinder-heads and metallic plates, constructed and applied to each other as specified, of the bars J K, held between the cylinder-heads, the former being placed close to and extending across the center of the metallic plates, or thereabouts, the latter being placed at a distance from said plates and over the apertures formed for the ingress and egress of the water, as and for the purposes herein shown and set forth.

90,417.—John Zengeler, Chicago, Ill.—*Ink Powder and Dye from Aniline Colors.*—May 25, 1869.

Claim.—The preparation of an ink or dye material, in the form of a dry powder, the same being prepared in the manner above described, or in any equivalent manner.

90,418.—Sidney E. Allen, Company's Shops, N. C.—*Pocket-Case for Railroad-Schedules.*—May 25, 1869.

Claim.—The case A, composed of several sections, hinged together, and constructed and arranged substantially as and for the purpose specified.

90,419.—V. M. Baker, Preston, Minn.—*Turbine-Wheel.*—May 25, 1869.

Claim.—1. The tube G, having a flange, *g′*, upon its lower end, to serve as a cap for the box C, in combination with the box C, ring-plate K, and shaft A, substantially as herein shown and described, and for the purposes set forth.

2. The gates J, constructed, arranged, and operating in connection with the wheel H and chutes I, substantially as herein shown and described, and for the purpose set forth.

3. The long levers L, short or hook-levers M, and ring-plate K, in combination with each other and with the gates J and case D, substantially as herein shown and described, and for the purpose set forth.

4. The buckets h^1 h^2, constructed, arranged, and operating substantially as herein shown and described, and for the purpose set forth.

5. The combination of the box C and adjustable blocks E, with the grooved shaft A and case D, substantially as herein shown and described, and for the purpose set forth.

90,420.—Charles L. Bates, New York, N. Y.—*Rose for Door-Knobs.*—May 25, 1869.

Claim.—The plate C, provided with the hollow projections extending through the porcelain rose A and the shank-socket B, holding the plate C and rose A together, all arranged as described, for the purpose specified.

90,421.—Francis C. Brown and Cyrus Allen, Palmyra, N. Y.—*Gate.*—May 25, 1869.

Claim.—The double-braced triangular frame A B C, carrying the sliding-gate, when hinged by means of the hinges *h h*, directly to the inner face of the gate-post *b′*, centrally of the same, as herein shown and described, for the purpose specified.

90,422.—Arnout Cannon, Jr., Poughkeepsie, N. Y.—*Dumb-Waiter.*—May 25, 1869.

Claim.—1. The combination of the heavy or weighted pulley N with the endless hoisting-rope L and hoisting-wheel K, substantially as herein shown and described, that is to say, in such a way that the axis of the suspended heavy pulley N may be in the same vertical plane with the axis of the hoisting-wheel K, as and for the purposes set forth.

2. The combination and arrangement of the rope C, guide-pulley D, large pulley E, guide-pulleys G and H, and weight J, with each other, with the

hoisting-wheel K, and waiter B, substantially as herein shown and described, and for the purpose set forth.

90,423.—PETER CARY, Coeymans, N. Y.—*Hoisting-Attachment for Portable Horse-Power.*—May 25, 1869.

Claim.—In combination with a horse-power, the hoisting-attachment herein shown and described; that is to say, the shaft A, with ratchet B, bars F, and ropes G, with the pawls and lever connected therewith, arranged and operating for the purpose set forth.

90,424.—THEODORE A. CASE, Ellington, N. Y.—*Cream-Pump.*—May 25, 1869.

Claim.—The arrangement of the elevated vessel A, having the spout B, the tubular pendent extension G, the removable cylinder *d*, carrying the strainer *a* and valve *e* and the piston-rod C and valve-bucket *h*, as herein described, for the purpose specified.

90,425.—ALBERT CLARK, Cadiz, Ohio.—*Hay Raker and Loader.*—May 25, 1869.

Claim.—1. The chute A, supported on the supplementary axle, and connected to the wagon-rack by means of the bars B, arranged as specified.

2. The combination with the jointed fingers of the rods E, crank-shaft F, handles H, spring-braces and rake-head G, all substantially as specified.

90,426.—JOHN L. CLARK, Providence, R. I.—*Corpse-Preserver.*—May 25, 1869.

Claim.—1. A corpse-preserver, so constructed that the box is detachable from the bottom, A, so that the body may be laid out on the perforated plate E, which rests on the bottom, without requiring it to be at once placed into the box, substantially as herein shown and described.

2. The combination of the separate bottom A and perforated plate E, with the box B, surrounded by felt, the cover C and roof-shaped partition D, the latter having the air-pipes *a*, all constructed and arranged substantially as herein shown and described.

90,427.—CHARLES A. CONDÉ, Indianapolis, Ind.—*Governor Stop-Valve for Steam-Engines.*—May 25, 1869.

Claim.—The combination and arrangement of the valve-seat B, valve D, and steam-chamber C, with the ports or spaces *i* and *j*, formed by a series of rings, connected by ribs, substantially as herein shown and described.

90,428.—ABEL CROOK, New York, N. Y.—*Lamp.*—May 25, 1869.

Claim.—1. The passages *f* and *g*, tubes *a a*, plate *b*, provided with the elliptical opening *c*, and lateral opening *d*, and the cone made in sections, when constructed, arranged, and combined as set forth.

2. The plate *b*, constructed and adapted for shaping the inflowing air, as described, and combined with the tubes *a a* and the burner, substantially as specified.

90,429.—REUBEN DANIELS, Woodstock, Vt.—*Vegetable-Crusher.*—May 25, 1869.

Claim.—Two or more crushing-rollers of different diameters, provided with an equal number of ribs, and arranged and operated in such a manner that they shall make the same number of revolutions, and the respective ribs scrape or clean the opposite roller while the fruit or other substance is being crushed between said ribs, substantially as specified.

90,430.—F. W. DEAN, Tremont, Ill.—*Harness-Buckle.*—May 25, 1869.

Claim.—The harness-buckle, consisting of the metallic loop B, provided with the semicircular case *b*, formed centrally upon its side, to receive and inclose the curved pivoted tongue *d*, whose free end engages with the edge of the slot *e*, formed in the lower plate of the loop, all constructed as herein described, for the purpose specified.

90,431.—LEVI DEDERICK, New York, N. Y.—*Hay and Cotton Press.*—May 25, 1869.

Claim.—1. The arrangement of the chains and bars F, with reference to the inner ends of the pointed levers E, as herein described, for the purpose specified.

2. The arrangement of the jointed or flexible connecting-bars or chains G and levers E, with reference to each other and the frame A, as herein described, for the purpose specified.

90,432.—PATRICK S. DEVLAN, Jersey City, N. J.—*Railway Car Truck.*—May 25, 1869.

Claim.—The double-flanged wheel D, when secured to the axle B, at about the middle thereof, in combination with the central rail F, as and for the purpose specified.

90,433.—A. S. DINSMORE, New York, N. Y.—*Needle-Sharpener.*—May 25, 1869.

Claim.—The needle-sharpener, constructed as described, of the plates A B, secured together by screws, and having their upper proximate edges beveled and roughened, one of said plates being formed with the shoulder *a*, fitting over the bevel upon the opposite plate, as herein described, for the purpose specified.

90,434.—W. G. DOWD, Scranton, Pa.—*Miners' Lamp.*—May 25, 1869.

Claim.—The wire C, bent over the outer edge of the wick-tube B, with its outer portion sliding in the guide, and its inner portion bent to form an eye, *e*, to which are hung the fork *g*, and plate *h*, all constructed as described, for the purpose specified.

90,435.—WILLIAM V. DUBOIS, Covington, Ind., assignor to himself and W. A. and J. G. SANGSTER, same place.—*Knitting-Machine Register.*—May 25, 1869.

Claim.—The herein-described arrangement of the disk A, provided with the ratchet-teeth, the scale, the pointer G, and the pins H, the oval-plate C, grooved table B, slide F, spring-pawl E, and the alarm-mechanism, as herein described, for the purpose specified.

90,436.—C. F. DUNDERDALE, New York, N. Y.—*Carbureter.*—May 25, 1869.

Claim.—1. The combination of the pipe B, heater C, pipe D, carbureting-vessel E, and pipe F, to conduct the carbureted air to the burner, with each other and with an ordinary gas-fixture, substantially as herein shown and described, and for the purpose set forth.

2. An arrangement of mechanism, by means of which the air to be carbureted is heated by the flame which it is designed to feed, substantially as herein shown and described, and for the purpose set forth.

90,437.—JOHN L. ELLITHORP and PETER SLOAN, Canajoharie, N. Y.—*Coal-Scuttle.*—May 25, 1869.

Claim.—1. A coal-scuttle, provided with a pivoted hood, B, which has side-plates, *b b*, extending into the scuttle, to prevent the lateral discharge of the contents, substantially as herein shown and described.

2. The pivoted hood B, whose sides work in sheaths of the scuttle, substantially as herein set forth and described, to operate as specified.

3. The hinged cover C, when arranged in combination with the scuttle A and hood B, substantially as herein set forth and described.

90,438.—ALPHEUS C. FORD, Lynn, assignor to himself and ROBERT B. SWISHER, Springville, Pa., and WILLIAM C. LARZELAIR, Blairstown, N. J.—*Composition for Cleaning Marble, Stone, &c.*—May 25, 1869.

Claim.—An improved composition for cleaning marble, stone, &c., formed of the ingredients and in the proportions and manner substantially as herein described and set forth.

90,439.—L. P. GARNER, Ashland, Pa.—*Coal Breaker and Separator.*—May 25, 1869.

Claim.—1. The arrangement of the perforated spiked curb C, grate G, and ledge H, with reference to the spiked breaker A and rotary screen I, as herein described, for the purpose specified.

2. The combination, with the curb C and stationary or rotary screen I, of the grate G, when arranged substantially as specified,

3. The combination with the breaker A, of the breaker K and screen I, when arranged substantially as specified.

4. The spikes arranged in the recesses L, and secured by the bolts M, substantially as specified.

90,440.—DAVID H. GEIGER, St. Clair, Pa.—*Apparatus for Collecting and Forcing Gases from Blast, Puddling, and other Furnaces.*—May 25, 1869.

Claim.—1. A fan-blower, constructed with hollow shaft, arms, and wings, substantially as herein shown and described.

2. Circulating the heated gases and products of combustion of blast-furnaces, or furnaces used for other purposes, by passing them through a water-protected fan-blower, substantially as described.

90,441.—F. A. GEISLER, Bristol, R. I.—*Revolving Christmas-Tree.*—May 25, 1869.

Claim.—The arrangement and combination of the shaft A with the shelves A′, the frame composed of the rods or posts C, cap D, base B, and wind-wheel F, substantially as and for the purposes herein shown and described.

90,442.—KINGSTON GODDARD, Richmond, N. Y.—*Detachable Calks for Horseshoes.*—May 25, 1869.

Claim.—The detachable calk B, constructed and secured to the shoe A, substantially in the manner shown and described, and for the purpose set forth.

90,443.—SOLOMON GRADENWITZ, New York, N. Y., assignor to B. OLLENDORFF, same place.—*Composition for Making Imitation Ivory, Wood, Horn, &c.*—May 25, 1869.

Claim.—1. A composition for making imitation ivory, wood, jet, horn, and other similar articles, which is compounded of the materials, in or about the proportions and substantially in the manner herein set forth.

2. Grinding sawdust to an impalpable powder, and adding it to pasty substances, to make them appear like wood, as set forth.

90,444.—WILLIAM ALBERT GRAY, New York, N. Y., assignor to J. HOWARD WAINWRIGHT, same place.—*Apparatus for Distilling and Producing Fresh, Potable Water.*—May 25, 1869.

Claim.—The combination and arrangement of the vessel A, chambers C D, cooler F, and filter R, with the tubes and parts connected therewith, substantially as and for the purposes herein shown and described.

90,445.—J. W. GROAT, Fremont, Ohio.—*Gas-Machine.*—May 25, 1869.

Claim.—1. Connecting the tank A of a gas-machine, by means of a pipe, F, with the carbureter, so that the gas-holder, when raised, will cause air to be drawn through the carbureter into the tank, and to absorb enough gasoline during such passage through the carbureter as to be converted into illuminating-gas, substantially as herein shown and described.

2. Arranging an annular vessel, I, around the carbureter, substantially as and for the purpose shown and described.

3. Providing the porous column H within the carbureter G, so that the gasoline may be exposed to the action of the air that is drawn through the carbureter, substantially as herein shown and described.

4. A gas-machine, consisting of the tank A, gas-holder B, pipe F, carbureter G, porous column H, or its equivalent, and weight E, or its equivalent, all made, combined, and operating substantially as herein shown and described.

90,446.—STEPHEN J. HALSTEAD, Margarettville N. Y.—*Horse-Rake.*—May 25, 1869.

Claim.—The combination of the swinging-bar J with the rock-shaft F, arm *e*, rod *f*, and rake-head, all arranged and operating so that the height of the teeth above the ground, while raking, can be regulated at will, substantially as herein shown and described.

90,447.—THOMAS HARDCASTLE, of the Bradshaw Works, near Bolton, England.—*Composition Bowl for Mangles, Washing-Machines, &c.*—May 25, 1869.

Claim.—1. The application of cocoa-nut fiber, or coir, or other fibers of palm-trees, to the manufacture of bowls for starching and other mangles, washing-machines, squeezers, calenders, and other purposes.

2. As new articles of manufacture, bowls or rollers for washing-machines, mangles, and other purposes, when provided with a covering made of cocoa-nut fiber, coir, or other fiber of palm-trees, as set forth.

90,448.—NATHAN HARPER, Philadelphia, Pa.—*Blank for Rake and Hoe Combined.*—May 25, 1869.

Claim.—The method, herein described, of forming a combined hoe and rake from one piece of metal, for the purpose specified.

90,449.—ELIHU HOAG, Coxsackie, N. Y.—*Adjustable Bed-Bottom.*—May 25, 1869.

Claim.—The combination of the cams F, shaft G, ratchet-wheel I, and lever-pawl J, with the movable hinged part E of the bed-bottom, and with the side-rails C of the bedstead, substantially as herein shown and described, and for the purpose set forth.

90,450.—JAMES HOWARD and EDWARD TENNEY BOUSFIELD, Bedford, England.—*Steam-Generator.*—May 25, 1869.

Claim.—1. The construction and arrangement of the vertical and horizontal tubes, and the conical-screwed nozzles E and F, substantially as described.

2. The zigzag pipes D, arranged with reference to each other and the upper ends of the vertical tubes, substantially as set forth.

3. The combination of the supports *a*, of the tubes A, and the division-plates G, arranged with reference to the vertical pipes, substantially as herein described.

90,451.—JOHN E. HUNTER, Mechanicsburgh, assignor to himself and T. MARTIN, Catawba, Ohio.—*Corn-Shock Binder.*—May 25, 1869.

Claim.—The ratchet-wheel D, spring-bolt F, G, and cap E, in combination with the pointed crank-shaft A C, plate B, and cord H, substantially in the manner herein shown and described, and for the purpose set forth.

90,452.—ENOS B. JOHNSON, Milwaukee, Wis.—*Drawer for Furniture, &c.*—May 25, 1869.

Claim.—The combination of the shaft C, gear-wheels D, and toothed racks E, with the drawer B and frame A, as herein shown and described, and for the purpose set forth.

90,453.—JOHN KEANE, New York, assignor to himself and GEORGE H. BROWN, Milbrook, Washington Hollow, N. Y.—*Water-Closet Apparatus.*—May 25, 1869.

Claim.—1. A supply water cock or valve, A, operated by means of a pinion or sector-rack, in combination with a retarding-cylinder, arranged substantially as shown and described.

2. The combination of the levers F and K with the projections *t* and *u* and latch *v*, and the retarding-cylinder *x*, all constructed, arranged, and operating substantially as herein shown and described.

3. The combination of the arm D′, slide R, and latch *v*, substantially as and for the purpose specified.

4. The combination of the spring J, levers F and K, pin D, sector E, cylinder *x*, with its piston and rod *y*, and latch *v*, arranged and operating substantially as and for the purposes set forth.

90,454.—JOSEPH J. LOVELL, New York, N. Y., assignor to himself and GEORGE W. MILLAR, same place.—*Eaves-Protector.*—May 25, 1869.

Claim.—An adjustable eaves-protector, for hoisting hose upon roofs, constructed substantially as herein described.

90,455.—THOMAS E. LUTNER, Philadelphia, Pa.—*Crank-Axle for Wagons.*—May 25, 1869.

Claim.—Cranked axles for wagons, having the vertical portions *d* thereof reduced in the direction of the length of the axle, and widened correspondingly in the direction transversely to the said vertical parts, substantially as and for the purpose described.

90,456.—NATHAN P. MAKER, Providence, R. I.—*Drop-Press.*—May 25, 1869.

Claim.—The bed for drops, trip-hammers, &c., consisting of the fixed base A, provided with the semi-spherical cavity, and the plate C, provided with the semi-spherical projection D, and adjusted by means of the set-screws *a* or *b*, in combination with the oscillating-frame B, and the hammer, as herein described, for the purpose specified.

90,457.—G. B. MASSEY, New York, N. Y.—*Measuring-Funnel.*—May 25, 1869.

Claim.—In combination with a funnel, the perforated cylinder H, float I, valve B, and revolving-wheel J, constructed, arranged, and operated substantially as shown and described, for the purposes set forth.

90,458.—FRANCIS MILLS, Mount Vernon, Ind.—*Device for Setting Wagon-Tires.*—May 25, 1869.

Claim.—The table B, provided with the rollers F, and arranged on the journals C, in the framing A, the pin D, adjustable in the block H, the segmental block E, adjustable by means of the slotted bar B, and the trough G, connected to the projecting ends of the sills of frame A, as and for the purpose herein described.

90,459.—J. A. MINER and H. J. TORREY, Wellsville, N. Y.—*Stove-Pipe Shelf and Oven.*—May 25, 1869.

Claim.—1. A stove-pipe shelf, composed of the two parts A B, and provided with the hooks C′, lugs D, and the central recesses, all substantially as specified.

2. The combination with a shelf, constructed as described, of the cover I, substantially as specified.

3. The combination with the shelf, constructed as described, of the sectional collars E, arranged as specified.

90,460.—ABEL MORRALL, Studley, England.—*Sewing-Needle.*—May 25, 1869.

Claim.—As a new article of manufacture, the hand-sewing needle *a*, having the lower portion of the eye *b* enlarged, the upper portion, *c*, reduced, and the point of communication between *b* and *c* provided with a narrow neck, *d*, as herein described, for the purpose specified.

90,461.—SAMUEL PRETTYMAN MUMFORD and JOHN WALIS, Greenwich, England.—*Machine for Dressing Millstones.*—May 25, 1869.

Claim.—The improved millstone-dressing machine, composed of the vertical shaft *b*, arranged to rotate in the vertical axis of the stone, and provided with the arm C and sliding tool-holder, actuated as set forth, all substantially as and for the purpose set forth.

90,462.—IRA A. NEWHALL, Crooked Creek, Pa.—*Washing-Machine.*—May 25, 1869.

Claim.—The combination of the roller-frames B, pivoted, below their centers, to the side of the box A, the end strips C having their lower ends beveled, and the frame D, provided with two rows of rollers *d*′, all arranged and operating as described, for the purpose specified.

90,463.—L. D. PITCHER, Pitcherville, Ill.—*Hay and Manure Fork.*—May 25, 1869.

Claim.—A hay and manure fork, consisting of the sheet-metal tines, fitted over the cross-bar B and under the head C, and of the handle A, fitted over the head C and under the bars B, substantially as herein shown and described, all arranged as specified.

90,464.—FRANCIS RAITH, Calumet, Mich.; assigns one-third to EDMUND F. KRELLWITZ, same place.—*Coal-Stove.*—May 25, 1869.

Claim.—The stove, consisting of the three compartments B C D, and provided with the pipes *f* E, and spiral annular pipes F, and with the pipes G, A, and I, all arranged, combined, and operating substantially as herein shown and described.

90,465.—WILLIAM C. RICE, Oquawka, Ill.—*Paddle-Wheel.*—May 25, 1869.

Claim.—The arrangement of the eccentric hoop *a*, eccentric ring *b*, arms D, and cranks *d*, with the shaft A and wheel B E C, as herein described, for the purpose specified.

90,466.—ANDREW SHELINE, Edon, Ohio.—*Wagon-Seat.*—May 25, 1869.

Claim.—An improved seat, formed by the combination of the upper part A, lower part B, slides or bars C, levers D, and coiled springs E, with each other, substantially as herein shown and described, and for the purpose set forth.

90,467.—J. M. SHUCK, Oskaloosa, Iowa.—*Washing-Machine.*—May 25, 1869.

Claim.—The board E, when pivoted at its upper end, and connected to the crank-shaft D at the same point, by means of the pitman H, in combination with the board B, also connected to the crank-shaft D, all operating as described, for the purpose specified.

90,468.—J. C. SMITH, Mahanoy, Pa.—*Water-Wheel.*—May 25, 1869.

Claim.—Spiral buckets, whose bottom edges extend in radial lines from the hub, about one-third their lengths, and then change into curves as they approach the periphery, and whose top edges are radial lines, the length of which exceeds the radial length of the bottom edges, in proportion to the thickness of the wedge-shaped piece cut from the inner side of the outer rim, as described.

90,469.—WILLIAM H. SNYDER, Phelps, N. Y.—*Water-Wheel.*—May 25, 1869.

Claim.—The hollow bucket F, of triangular form, the base whereof is in excess, so as to form an external lip or point on the periphery, all substantially as described.

90,470.—L. H. SOULE, Mount Morris, N. Y.—*Velocipede.*—May 25, 1869.

Claim.—1. Securing the rear wheels H H to pivoted levers J, that can be swung apart or together, for the purpose of allowing the wheels to be brought apart or together, substantially as herein shown and described.

2. The combination of the wheels H H with the hinged plates I, bars J, braces K, and levers L, all arranged and operating substantially as herein shown and described.

3. Connecting the braces K by means of a pin, *e*, which has a forked or slotted part, *f*, that embraces the reach D, as set forth, for the purpose of controlling the position of the rear wheels, as specified.

4. In combination with the foregoing, the rods F F, provided with the foot-rests *c c*, and connected with the pivoted steering-lever E, having projecting handles, and with the cranks of the driving-axle, all arranged and combined as herein described, for the purpose specified.

90,471.—JOHN STARK, Thomasville, Ga.—*Automatic Dough-Raiser.*—May 25, 1869.

Claim.—1. The can B, when provided with an adjustable cover, D, which can be moved up and down by means of or on a screw or rod, C, substantially as herein shown and described.

2. The lug *h* and the rod *g*, having the head *f*, and the spring *i*, for closing the end of the pipe F or H, when arranged in combination with the lever G, for opening the said pipe, as set forth.

3. The automatic dough-raiser, consisting of the pail A, can B, cover D, and screw or rod C, in combination with the cover E, pipe F or H, sliding pipe-compresser *g*, and lever G, all made and operating substantially as herein shown and described.

4. The devise set forth in the foregoing clause, in combination with the vessel I and siphon J, arranged and operating as set forth.

90,472.—Richard R. Sylands, Millburn, N. J., assignor to himself and John S. Reeve, same place. —*Submerged Centrifugal Pulp-Washer.*—May 25, 1869.

Claim.—1. In combination with a paper or pulp engine, the revolving sieve or perforated disk F, arranged in the bottom of the engine, and operating substantially as and for the purposes described.

2. The washing-vessel B, in combination with a revolving sieve, arranged substantially as set forth.

3. The arrangement shown and described, (or any equivalent arrangement,) whereby a sieve or perforated disk or screen may be revolved, so as to discharge the water and impurities from the bottom of a pulp-engine.

90,473.—J. Newton Thatcher, Martinsburgh, W. Va.—*Carriage-Jack.*—May 25, 1869.

Claim.—The combination, with the stand A, having an elongated foot, of the lever D, notched holding-bar G, and loop F, all substantially as specified.

90,474.—William Veber, Jr., Shingle Creek, N. Y.—*Knife for Paring Vegetables, &c.*—May 25, 1869.

Claim.—The vegetable-knife, constructed as described, with the curved bits A B, of unequal lengths, formed in continuation of the edge and back, as herein set forth, for the purpose specified.

90,475.—Edward Wiard, Louisville, Ky.—*Plow.*—May 25, 1869.

Claim.—The standard B, mold-board C, and recessed landside-support D, all cast in one piece, in combination with the landside E, when secured to the recessed support D by means of the hook *a* and single bolt *b*, all arranged as described, for the purpose specified.

90,476.—Isaac Adams, Jr., Boston, Mass.—*Mode of Melting, Casting, and Hardening Nickel.*—May 25, 1869.

Claim.—The combining of nickel with silica or carbon, or both, for the purpose of making it harder, increasing its fusibility, and giving it qualities which enable it to be used in casting.

90,477.—John B. Aikin, Somerton, Ohio.—*Boot-Crimper.*—May 25, 1869.

Claim.—1. The bent rod N, having the part O articulated to it, as shown at *o*, and adapted to be attached to the crimping-board by means of the pin *m*, rack *m'*, and hook P, substantially as and for the purposes set forth.

2. In combination with slide F, wheels G *g*, and crank *g'*, the bent rod J, having the notch at its upper end, and adapted to operate in connection with the stop *t*, attached to the crimping-board, substantially as and for the purposes specified.

3. The combination of the spring-standard D with the nut *c*, screw-rod C, and movable jaw *B'*, when employed in a boot-crimper, substantially as and for the purposes set forth.

90,478.—John Alexander, Greenpoint, and Nathaniel J. Burchell, New York, N. Y.—*Iron Front for Buildings.*—May 25, 1869.

Claim.—In the ornamentation and protection of the walls of buildings, the plates A A, with their inward-projecting flanges, bolted or riveted together in the manner described, and attached or fastened to the walls by means of the metallic hooks or rods *a*, and the eyes formed on the inner sides of the outer plates, all constructed and arranged substantially in the manner and for the purpose herein described.

90,479.—Cyrus W. Baldwin, Boston, Mass.—*Fluid-Meter.*—May 25, 1869.

Claim.—1. In a liquid-meter, in which an elastic diaphragm is employed for the purpose specified, the improved construction of such meter, whereby nearly the entire surfaces or area of such diaphragm are covered, at each extreme of its movement, by a portion or portions of the case of the instrument, and by a disk or grating, the same being for the purpose of compelling a uniform action of the diaphragm, under all conditions, with resulting advantages before stated.

2. In combination with the elastic diaphragm of a liquid-meter, of the class before alluded to, the foraminous disks *c c'*, when connected with and operating the valve or valves of such meter, and when also acting as a stop or abutment to determine a uniform operation of the diaphragm, for the purpose before set forth and explained.

3. The levers *d d'*, when pivoted to the case G, and combined with the diaphragm C and disks *c c'*, to operate the valve Q, substantially in manner and for the purpose as before explained.

4. The arrangement of the inlets, and the general conduit or passage M, in connection with the valve Q and the ports N O P, whereby a liquid-meter may possess several points of ingress and departure for liquid, substantially as before premised.

90,480.—Edwin P. Ball, Chicopee, Mass.—*Steam-Engine.*—May 25, 1869.

Claim.—1. The primary valve I, with the ports *b*, b^1, and b^2, the intermediate valve B^8, with the ports in the cylinder B, and the piston A^1, with the ports *a* and a^1, said valves and piston operating to control each other in their movements, substantially as herein described.

2. The primary valve I in connection with the ports *b*, b^1, and b^2, and the port c^4, all operating to cause the intermediate valve B^8 to perform two distinct movements during its entire upward stroke, substantially as set forth.

3. The devices for regulating the passage of the exhaust steam from out the ends of the cylinder B, so that the intermediate valve B^8 may operate fast or slow during each stroke, substantially as herein described.

4. The exhaust-apertures *x* and x^1, in the cylinder B, in connection with small ports c^4 and c^5, for the purpose of retaining the intermediate valve B^8 in its proper position while at rest, at each end of its stroke, substantially as herein described.

5. The primary valve I, with the ports *b*, b^2, b^3, and b^4, the intermediate valve B^8, with the ports c^4 and c^5, and the piston A^1, with the ports *a* and a^1, all constructed and arranged substantially as and for the purposes specified.

90,481.—Darius Banks, New York, N. Y.—*Friction-Clutch.*—May 25, 1869.

Claim.—The combination of the loose pulley B, provided with the friction-hub C, the shell L, arranged loosely on the pipes A, the clamping-levers E, pivoted to said shaft, and the conical hub G, sliding thereon and operated by the hand-lever H, all the parts being constructed, arranged, and operating as set forth.

90,482.—Henry Barth, Cincinnati, Ohio.—*Feed-Table for Printing-Presses.*—May 25, 1869.

Claim.—1. The provision of a finger or fingers, E, bent or inclined upward from the delivery-edge of a paper-feed board, substantially as and for the purpose set forth.

2. A feed-board, A, having fingers E, and capable of being set to any desired angle, substantially as described.

90,483.—F. H. Bartholomew, New York, N. Y.—*Automatic Valve.*—May 25, 1869.

Claim.—The lift-valve F, constructed to operate in connection with an inlet, B, and outlets C and D, to the valve-box A, substantially as herein described, whereby, on a valve or faucet being opened to establish a drain through the upper outlet D, supply of the fluid is automatically cut off from the lower outlet C, substantially as specified.

90,484.—John F. Bartlett, Winsted, Conn.—*Lamp-Chimney.*—May 25, 1869.

Claim.—The chimney above described, consisting substantially of the tube A, frame-work B, and glass sections C, substantially as described.

90,485.—S. Y. Beach, Seymour, Conn.—*Belt Awl.*—May 25, 1869.

Claim.—A belt-awl, constructed with a slitted shank-end, substantially in the manner and for the purpose set forth.

90,486.—NELSON W. BECKWITH, MeDonough, N. Y.—*Hot Closet for Stove-Pipes.*—May 25, 1869.

Claim.—A hot closet, constructed in sections, and provided with clamping-devices, for attachment to a stove-pipe, substantially as herein described.

90,487.—WILLIAM BELLOWS, Cincinnati, Ohio.—*Lathe-Chuck.*—May 25, 1869.

Claim.—The construction and arrangement of the sliding-bed, right and left hand screw, and jaws A and B, substantially in the manner specified, and for the purposes set forth.

90,488.—ANDREW C. BLACK, Kaukauna, Wis.—*Plow-Clearer.*—May 25, 1869.

Claim.—The combination and arrangement of the lever L, cord *c*, spring D, cord *e*, and stop B, in the manner and for the purpose described.

90,489.—P. J. BORIS, Boston, Mass.—*Velocipede.*—May 25, 1869.

Claim.—1. In combination with the leader-wheel of a velocipede, whose steering-wheel is in the rear, the frame *k*, adjustable about its axis, and carrying the foot-driven cranks, geared to the main axle, substially as described.

2. In combination with the adjusting-bar *m*, the brake *t*, arranged to be operated substantially as described.

90,490.—BRANSON BREEDEN, Lexington, Va.—*Washing-Machine.*—May 25, 1869.

Claim.—The washing-machine herein described, consisting essentially of the furnace H, rotary tub A, cog-rim *a*, gear B, crank and shaft C C^1, pegged or toothed cylinder C, beaters D, provided at their upper ends with weights W W^1 W^2, the plate G, and lever L, all constructed and arranged in the manner and for the purpose specified.

90,491.—WEBB BROOMHALL, Circleville, Ohio, assignor to himself and ACKER KING, same place.—*Coffin.*—May 25, 1869.

Claim.—1. The combination of the flanged pieces *a a'* with the flanged and slotted pieces *b b'*, as and for the purpose set forth.

2. The combination of the foregoing with the hook and eye *d d'*, substantially as described.

90,492.—GEORGE W. BROWN, Galesburgh, Ill.—*Machine for Bending Metals Edgewise.*—May 25, 1869.

Claim.—1. The turning-piece D, having its narrow chamber D^1, and the provision, G, for securing the material when in a straight form, with the concentric part A', and its groove B, arranged to operate on straight, thin pieces of material, and to bend them edgewise by the turning of the part D, substantially and in the manner and for the purpose herein set forth.

2. The thin grooved wheel H, arranged, as represented, relatively to the thin chamber B in the part A', and the thin chamber D^1 in the part D, for the purposes herein set forth.

3. The stop I, operated, as represented, and arranged to serve relatively to the chamber D^1, and to the bender D and its connections, substantially in the manner and for the purpose herein shown and described.

90,493.—HIRAM L. BROWN and CALVIN P. BROWN, Manchester, N. Y.—*Machine for Distributing Guano.*—May 25, 1869.

Claim.—1. In combination with a hopper, A, having at the bottom orifices A^1, the fingers B^1, and bar B, arranged in relation to the hopper, substantially as and for the purpose set forth.

2. The jointed lever, constructed substantially as shown and described.

90,494.—JOHN BURT, Detroit, Mich.—*Manufacture of Iron.*—May 25, 1869.

Claim.—1. The manufacture of "crude bloom," by mixing the molten or cast metal and oxidizing or carbonizing agents employed in a closed or open crucible or mold, substantially as and for the purposes set forth.

2. Maintaining the heat in the crucible during the formation of the "crude bloom," by heating the same externally, or by mixing suitable heating-agents with the mass within the crucible, substantially as and for the purposes set forth.

3. The employment, in the manufacture of the "crude bloom," of a closed reversible crucible or mold, to effect the thorough mixture of the ingredients placed within it, substantially as set forth

4. The mixture, within a closed or open crucible, of the molten cast-metal with a mixture of oxides, fine cast or wrought scrap and carbons, for the purpose of increasing the quantity of the metal in the "crude bloom," substantially as herein set forth.

90,495.—M. E. BURTLESS, Seneca Falls, N. Y.—*Ditching-Machine.*—May 25, 1869.

Claim.—A ditching-machine, composed of the frame A, clevis-bar B, adjusting-wheels C, with bearings D, screw E, scoop G, coulters I I, and adjustable mold-board K, the whole arranged as described, and operating in the manner and for the purpose specified.

90,496.—J. W. BYERS, Mechanicsburgh, Pa.—*Farm-Gate.*—May 25, 1869.

Claim.—The within-described gate, consisting of the horizontal bars A A, &c., pivoted within the uprights B, C, and D, and provided with the diagolal brace G, pivoted at its lower end to the lower bar, and secured at its upper end to upper bar, by means of the pin *g*, substantially as shown, and for the purpose set forth.

90,497.—WELLINGTON CAMPBELL, Millburn, N. J.—*Composite Paper for Hangings and for other Purposes.*—May 25, 1869.

Claim.—A paper, having adjacent strips of its breadth of different strength, each strip of greater strength being produced by combining, with the damp sheet of paper material, a damp strip of paper material of the required breadth, and by consolidating the whole by pressure, the article produced constituting a new article of manufacture.

90,498.—LEVI CHAPMAN, New York, N. Y.—*Handle for Umbrellas and Canes.*—May 25, 1869.

Claim.—The handle, formed of a plastic composition, pressed to shape around a tubular metallic socket, that receives the cane or stick, as and for the purposes set forth.

90,499.—EDWIN CHESTERMAN, Tremont, N. Y.—*Insole for Boots and Shoes.*—May 25, 1869.

Claim.—1. An insole, made of leather, supported on strips or bearings of rubber, constructed and arranged in the manner and for the purpose set forth.

2. An insole, formed of a suitable material pervious to air and moisture, supported upon bearings of a water proof or non-absorbent material, all constructed, arranged, and operating as described, for the purpose specified.

90,500.—CHARLES B. CLARK, Buffalo, N. Y.—*Blind-Hinge.*—May 25, 1869.

Claim.—The locking-tongue *d*, recess *f*, incline *e'* and *i*, and oval hole *g*, arranged and combined to operate as herein described.

90,501.—FRANCIS CLAUSEN, San Francisco, Cal.—*Belt-Buckle.*—May 25, 1869.

Claim.—The projecting lip *a*, fixed relatively to the plate of the buckle, and provided with short or friction teeth, in combination with the smooth, vibrating, slotted bar *b*, arranged to press the ribbon against said teeth, substantially as described.

90,502.—BENJAMIN R. COLE, Buffalo, N. Y.—*Water-Closet.*—May 25, 1869.

Claim.—1. The combination and arrangement, with the side lever C, of the auxiliary lever I, weighted connection M, and push-rod *k*, operated by seat L, substantially as set forth.

2. The segment P, fulcrum-standard J, and lever I, provided with slot *n*, and notches *s*, for rendering the lever adjustable, and securing it in place, all arranged and combined as set forth.

90,503.—GEORGE N. COMPTON, Canton, Ohio.—*Spring-Whiffletree.*—May 25, 1869.

Claim.—1. The peculiar arrangement of the center-bar A A, end levers B B, and spring K, the several parts being combined substantially as and for the purpose specified.

2. The center-bar A A, composed of the two parts A A, constructed and united as shown, when said parts form both the center-bar of the whiffletree and a box which incloses the draught-spring K and inner ends of levers B B, substantially as and for the purpose specified.

3. The scales N N, on the levers B B, when used in combination with pointers O O on the center-bar A A, for the purpose of indicating the amount of draught applied to the whiffletree, substantially as and for the purpose herein specified.

4. The stop-pins E E, when used in combination with the levers B B and spring K, substantially as and for the purpose herein specified.

5. The improved spring-whiffletree herein described, composed of the center-bar A A, with center-pin D, stop-pins E E, axial pins F F, points O O, and spring K, clevis C, draught-levers B B, with scales N N, and trace-hooks H H, the several parts being constructed, combined, and arranged substantially as and for the purpose specified.

90,504.—JOHN J. COWELL, Newark, N. J.—*Hinge and Spring Combined.*—May 25, 1869.

Claim.—The arrangement, with the casing A, shaft C, and spring D, of the arms E, and F, and rod or link G, so as to form a combined hinge and spring, or spring alone, substantially as herein set forth.

90,505.—JOHN H. CRANE and CHARLES W. CRANE, Charlestown, Mass.—*Process of Making Ornamental Signs, &c.*—May 25, 1869.

Claim.—The process described for the manufacture of signs, &c., and as a new manufacture, signs, &c., produced by the described process.

90,506.—BENJAMIN CRAWFORD, Allegheny City, Pa.—*Steam-Generator.*—May 25, 1869.

Claim.—1. A steam-generator, constructed of nests of tubes, the ends of which are secured in boxes or chests, such chests communicating directly with one another, substantially in the manner herein set forth.

2. Boxes or chests, each containing a plurality of tubes, and constructed with removable doors, substantially in the manner herein described.

3. The water-reservoir N, connected with the steam-drum S, or other part, in combination with the inclined tubes of the generator, substantially as described.

4. The diaphragm R, in combination with the inclined tubes, and the chimney D of the generator, all arranged substantially as herein specified.

5. The combination of the mud-well M, inclined tubes G, chambers S and N, and boxes J *e*, substantially as herein specified.

90,507.—C. O. CROSBY, New Haven, Conn.—*Sewing-Machine for Making Boots and Shoes.*—May 25, 1869.

Claim.—1. The vertical last-carrying spindle F^2 in the carriage F, and arranged to move in the swinging-frame F^1, whereby a universal movement may be imparted to the said last, substantially as set forth.

2. In combination with the mechanism of the first clause of claim, the former *e*, for controlling the movement of the last-carrying spindle, substantially as set forth.

3. The reciprocating bar T^1, with one or more inclines, T, in combination with the last-supporting spindle, carried in a swinging-frame, so as to hold the said spindle in the required position vertically, substantially as set forth.

4. The adjustable stationary guide L, in combination with the mechanism of the first clause of claim, so as to govern the extent of the vertical movement of the last-supporting spindle, carrying the boot or shoe being sewed, substantially as set forth.

90,508.—C. O. CROSBY, New Haven, Conn.—*Machine for Making Tatting.*—May 25, 1869.

Claim.—1. In a machine for making tatting, the eye-pointed needle, when provided with a reed-finger, and operating substantially as and for the purpose set forth.

2. The hook or looper, constructed as described, with the notch 13 at its base, so as to operate in the manner specified.

3. The combination of the needle and looper, both constructed as described, and operating together substantially as set forth.

4. The needle-operating devices, arranged and operating as described, so that the needle may be gradually depressed, and at the proper time be operated to beat up, substantially as and for the purpose herein set forth.

5. In combination with a needle and hook, operating in the manner described, the jaws L, arranged and operated as specified, so as to grasp and hold the work, substantially as set forth.

6. In combination with the needle and hook, operating as described, the warp-thread carriers 1, 2, 3, more or less in number, and arranged so as to present the proper threads at the required instant, substantially as and for the purpose specified.

7. In combination with the needle and hook, operating as described, the arrangement of mechanism for letting off the warp-threads as required, substantially as and for the purpose set forth.

90,509.—JOSEPH DAVIDSON, Xenia, Ohio.—*Dough-Mixing Machine.*—May 25, 1869.

Claim.—1. A dough-mixing machine, consisting of the cylinder A, having a shaft, C, with radial T-headed arms attached, and provided with an opening, K, and slide, J, communicating with a conical receiver, D, having a screw, E, therein, mounted on a shaft, F, the whole constructed and arranged to operate substantially as herein described.

2. The combination of the cylinder A and the conical or tapering receiver D, with screw E mounted therein, when arranged with a communicating opening, K, provided with slide J, substantially as herein described, and for the purpose set forth.

90,510.—MILES B. DODGE, Brooklyn, N. Y.—*Ore-Crusher.*—May 25, 1869.

Claim.—The application of soft wrought-iron faces to the rollers of a quartz-crusher, as and for the purpose herein set forth.

90,511.—DAVID DONALDS, New York, N. Y.—*Sad-Iron.*—May 25, 1869.

Claim.—The screw *g* and wheel *h*, in combination with the jaw *e*, handle *c*, rib *b*, and iron *a*, the parts being constructed as and for the purposes specified.

90,512.—SOLOMON H. DWIGHT, Decatur, Ill., and CALVIN WELLS, Pittsburg, Pa.—*Compound Mold-Board for Plows.*—May 25, 1869.

Claim.—A mold-board for plows, made of steel, welded between two plates of iron, then properly shaped and hardened, and afterward so ground as to remove the iron from one side and expose a facing of steel, all substantially as and for the purpose herein set forth.

90,513.—ZEBINA EASTMAN, Chicago, Ill.—*Running-Gear of Street-Cars.*—May 25, 1869.

Claim.—In combination with the reach *a*, and crossed diagonal reaches *b b*, the center-bolt *c*, substantially as and for the purpose set forth.

90,514.—ERNEST EDWARDS, Firs Willesden, Great Britain.—*Photographic Printing.*—May 25, 1869.

Claim.—Gelatine, gum, albumen, fibrine, and such like organic substances, prepared and rendered insoluble substantially as herein described, when employed for the purpose of receiving, during the process of washing, and of subsequently permanently retaining, gelatine photographs.

90,515.—ABIAL ELLIOT, South Wolfborough, N. H.—*Construction of Reverberatory and Melting Furnaces.*—May 25, 1869.

Claim.—1. The manner of arranging the hot-air pipes, for heating the blast longitudinally in a chamber under the hearth, so as to receive, and in this manner utilize, the whole waste heat of the furnace

through their entire length, and which chamber forms a part or continuation of the main flue, and entirely incloses the heating-pipes.

2. The construction and arrangement of the two parts *a* and *c*, combined with the coal-hopper or reservoir, operating for the purpose and in the manner substantially as described.

3. The construction of the auxiliary grate, arranged and combined with the bridge-wall *b* and the main grate *a*, so as to prepare the fuel, and also push it forward when required, and distribute it upon the main grate, substantially as described.

4. The slotted plate and slide $g\ g^1\ g^2$, by which the separate chamber under grate *c* is provided, and by and through which the admission of the hot air from the blast, under grate *c*, may be regulated, in the manner and for the purpose substantially as described.

90,516.—Matthew H. Fairchild, Newtown, Coun.—*Horn Comb.*—May 25, 1869.

Claim.—In the manufacture of horn combs, constructing the back with the two parts *a* and *d*, of the form described, with the groove *c* between, substantially as and for the purpose specified.

90,517.—Henry Felthoff and Lucas D. Tingley, Prince William, Ind.—*Ditching-Machine.*—May 25, 1869.

Claim.—1. The spade-wheel H, in combination with standards C′ and M, slides F and L, and adjusting bolts and tops *a′*, *z*, and *c*, and pins *t*, all substantially as herein set forth.

2. The crank P and lever Q, in combination with the scraper *u*, substantially in the manner and for the purpose herein set forth.

90,518.—Charles E. Fisk, New York, N.Y.—*Printers' Shears.*—May 25, 1869.

Claim.—In combination with printers' shears or rule-cutter of otherwise ordinary construction, the miter-cutter *a*, with corresponding indentation *a′*, and the gauge or holder *b*, substantially as described and for the purposes specified.

90,519.—Henry G. Fiske, Springfield, Mass.—*Apparatus for Lighting Gas.*—May 25, 1869.

Claim.—1. The combination of the electro-magnet, having the extension-poles C passing through a non-magnetic substance, with the armature operating within a chamber, in the manner substantially as described.

2. An apparatus for letting on and lighting gas by electricity, consisting of the two poles C of a horse-shoe magnet, brought within a chamber and operating the valve, the insulator E′, burner, and one or more insulated lighting-wires *b*, all constructed and operating substantially as herein described and specified.

90,520.—Samuel Gantz, Beaver Creek, Md.—*Mop-Head.*—May 25, 1869.

Claim.—The mop-head above described, consisting essentially of the handle A, fixed jaw B, movable jaw C, having a slot, *m*, slightly larger than the handle A, and rod D, constructed and operating substantially as and for the purposes set forth.

90,521.—Benjamin George George, London, England.—*Machinery for Bronzing Printed Work.*—May 25, 1869.

Claim.—1. Fitting to the distributing roller or rollers or brush or brushes of bronzing-machines, a spreader, for the purpose set forth.

2. Throwing the bronze-distributers and the clearing-brush and polisher out of action, in the manner and for the purpose above described.

90,522.—Washington L. Gilroy, Philadelphia, Pa.—*Implement for Cutting Green Corn from the Cob.*—May 25, 1869.

Claim.—An implement consisting of the shell A B, provided with a series of cutters, D, and a springy bar, E, constructed and combined together, substantially as and for the purpose described.

90,523.—John H. Goodfellow, Troy, N.Y.—*Filtering-Funnel.*—May 25, 1869.

Claim.—The filtering-funnel, provided with springs C′, substantially as described, and for the purpose set forth.

90,524.—John H. Goodfellow, Troy, N.Y., assignor to himself and R. S. Goodfellow, same place.—*Coal-Stove.*—May 25, 1869.

Claim.—1. The air-chamber formed in the upper part of the stove by the combination of the perforated inverted conical plate N, dished plate M, and pipe L, with each other, and with the top and sides of the case C, substantially as herein shown and described, and for the purpose set forth.

2. The plate E, in combination with the outer case C, inner perforated case A, plate F, and base H of the stove, substantially as herein shown and described, to produce the arrangement of the flues D G I, herein set forth.

3. The fire-box A, having the perforations *a* in its side, and lined with the fire-brick B, perforated with holes corresponding with those in the fire-box, substantially as and for the purpose specified.

90,525.—George W. Gregory, Watertown, N.Y.—*Metal Pulley-Block.*—May 25, 1869.

Claim.—1. A pulley-wheel, made or cast in two parts, and having secured between its parts strips of lead, or equivalent material, substantially as and for the purpose described.

2. A pulley-wheel, having attached thereto the bearing-hubs, made hollow, and provided with inlet and outlet passages for oil, substantially as set forth.

3. The combination of a divided frame and swivel, constructed as described, with a wheel having a grooved lining, as described.

4. The combination of a divided frame and swivel, as described, with a wheel, and means for lubricating and packing the bearings of the same, substantially as set forth.

90,526.—Henry Gross, Middletown, Pa.—*Manure Hook or Drag.*—May 25, 1869.

Claim.—1. Locking the tine-shaft of a manure-drag by means of a trap-lever plate, when the same is hinged to the main beam, and works in a recess formed in the upper surface of the same, substantially as described, as and for the purpose specified.

2. The trap-lever plate C and handle E, when the same are arranged in combination with a tine-shaft, D, having ears *d d*, substantially as described, as and for the purposes specified.

90,527.—Henry Gross, Middletown, Pa.—*Manure Hook or Drag.*—May 25, 1869.

Claim.—1. The yoke or staple B, having a recess, *b*, when the same is in combination with the lever D, spring E, and ratchet-arm F, substantially as described, as and for the purpose specified.

2. The tine-shaft H, having ears *h′ h′*, when the same is in combination with the handles C C′, having recesses *c′ c′*, substantially as described, as and for the purpose specified.

3. The combination of the handles C C′, yoke or staple B, lever D, spring E, arm F, and shaft H, when the whole is so arranged as to operate substantially as described, as and for the purpose specified.

90,528.—Julius Gutmann, Berlin, Prussia.—*Sewing-Machine.*—May 25, 1869.

Claim.—1. The rotary and vertically reciprocating needle-bar C, having two or more needles, substantially as and for the purpose herein set forth.

2. In combination with the above, the mechanism for operating the bar *a*, substantially as set forth.

3. In combination with the tubular needle-bar C, the separating-finger *f*, for the two threads, substantially as set forth.

4. The movable finger *e*, in combination with the supporting-table, operating substantially as described, so as to form a guide for the work.

5. In combination with the finger *c*, the lever T, arranged so as to arrest the feed, substantially as set forth.

90,529.—Lewis A. Haines, Wakefield, Md.—*Time-Lock.*—May 25, 1869.

Claim.—1. The combination of the shaft *s* with

the pinion F, pulley *i*, and spring *p*, all constructed and arranged to operate substantially as set forth.

2. The bar *n* and rod *l*, arranged in relation to the lever L, substantially as shown and described.

90,530.—William Hall, Jr., North Adams, Mass.—*Skating Rod and Stool.*—May 25, 1869.

Claim.—The rod A, when constructed as described, and provided with seat B, strap C, and foot D, and operating substantially as and for the purposes set forth.

90,531.—Daniel Halladay, and Burton H. Ruggles, Batavia, Ill.—*Iron Grinding-Plate.*—May 25, 1869.

Claim.—The method of constructing grinding-plates with their upper and under surfaces serrated, substantially as described, and for the purposes hereinbefore specified and set forth.

90,532.—John Hamilton, L. E. Hanson, George W. Hamilton, and Joseph Hamilton, Wheeling, W. Va.—*Ore-Crusher.*—May 25, 1869.

Claim.—The arrangement herein described of the arms I, secured to the upright shaft, the braces K K, extending out beyond the wheels, the rods L L on the axle G, and the detachable sleeves H H, for keeping the wheels in place, all constructed and operated in the manner set forth.

90,533.—William Harris, Washington, Mo.—*Machine for Threading Rods, Bolts, &c.*—May 25, 1869.

Claim.—The improved screw-cutting machine herein described, having frames A and C, wheels D, G, and H, and the quadrangular opening *s*, constructed, arranged, and operating substantially as herein specified.

90,534.—John J. Harris, St. Louis, Mo., assignor to himself, Richard Morgan, and John Gayso.—*Sawing-Machine.*—May 25, 1869.

Claim.—Connecting the two driving-wheels of a sawing-machine by a slotted pitman, which acts upon and is guided by a shaft passing horizontally through it, all constructed and operating substantially as described.

90,535.—Thomas C. Hargrave, Boston, Mass.—*Water-Meter.*—May 25, 1869.

Claim.—1. A rolling or sliding counterbalance-weight, G, in combination with the oscillating measuring-chambers B C, operating substantially in the manner and for the purpose described.

2. The measuring-chambers B C, balanced upon a hollow tube or axis, D, provided with ports, through which the liquid is received, in combination with a rolling or sliding counterbalance weight, G, and the casing A, substantially as set forth.

3. The valves *k*, and stationary stops *l*, in combination with the oscillating measuring-chambers B C, and a rolling or sliding counterbalance-weight, G, operating substantially as described.

90,536.—Russell Hathaway, Jr., and Joel D. Stetson, Fair Haven, Mass., assignors to the American Tack Company, same place.—*Machine for Finishing Galvanized Tacks.*—May 25, 1869.

Claim.—1. A machine so constructed that articles that have been dipped in tin, lead, zinc, &c., may be freed from the superfluous metal adhering to them, by being thrown violently against some surface, substantially as herein set forth.

2. The arrangement of the frame A, cylinder B, vertical plate C, and inclined plates D and F, substantially as shown and described.

3. The arrangement of the horizontal shaft I, miter-wheels H and J, vertical shaft L, disk M, and hopper O, all substantially as shown and described.

90,537.—John H. Helm, Pittsburgh, Pa.—*Coal-Stove.*—May 25, 1869.

Claim.—The circular, bottle-shaped shell A, with openings B, extending around its base; guides C, vertically moving doors D, supporting-ring G, standards H, revolving basket-grate K, and concave receptacle L; the whole being constructed, combined, and arranged, with relation to each other, substantially in the manner shown and described.

90,538.—Charles Herrmann, Evansville, Ind.—*Saw-Set.*—May 25, 1869.

Claim.—1. A saw-set, consisting of the stock A, treadle D, vertical bar C, plate B, adjustable slide E, and adjustable rest G, constructed and arranged to operate substantially as herein described.

2. The treadle D, and vertical bar C, with head *e*, in combination with the plate B, constructed and arranged to operate substantially as herein described, and for the purpose set forth.

90,539.—John Heuermann, Davenport, Iowa.—*Cover for Drinking-Vessel.*—May 25, 1869.

Claim.—The cover described, consisting substantially of the cover A, serrated flange *a a'*, orifices B, with the cover C, and its orifices *c c*, substantially as described.

90,540.—Richard A. Hill, Washington, D. C.—*Fire-Plug.*—May 25, 1869.

Claim.—1. The screw-nut *c*, in combination with the hollow valve-stem *a*, and the waste-water openings, as described, substantially as and for the purposes set forth.

2. The case E, surmounted by a cap and containing a plurality of plugs, as above described, and constituting a common receptacle for the leakage, all substantially as described.

3. The combination of the parts A and E of the case, with an intermediate plate, in which a plurality of plugs is seated, substantially as described.

90,541.—R. A. Hill, Washington, D. C.—*Branch Stop-Cock for Mains.*—May 25, 1869.

Claim.—The hollow plunger C, with its openings D, the four-way branch, as described, the ratchet-plate G, standard *s*, pinion *u*, and conducting-pipe H, combined, arranged, and operating substantially as set forth.

90,542.—John Houpt, Springtown, Pa.—*Steam-Engine Condenser.*—May 25, 1869.

Claim.—1. A casing, into which project perforated tubes D, through which steam is discharged, and perforated pipes F, communicating with the external air, substantially as described.

2. The arrangement of the compartments A and A', perforated tubes D and F, and fan G, the whole being constructed substantially as set forth.

3. The combination of the compartments A and A', tubes E and F, and inclined partition *i*, substantially as herein described.

4. The valve C, operated by a bell-crank lever, *r*, slotted eccentric rod *s*, and spring *t*, substantially in the manner set forth.

90,543.—James L. Howard, Hartford, Conn.—*Bracket-Basket for Railroad-Cars.*—May 25, 1869.

Claim.—The combination of the bracket-basket, made substantially as described, with the cords described, or their equivalents, the whole constructed, arranged, and operating as and for the purposes described.

90,544.—James S. Huffman, Brownsburgh, Va.—*Churn.*—May 25, 1869.

Claim.—1. In a churning-apparatus, having the upright shaft D and crank J, with which to operate the dasher B, making the staff vertically adjustable in a stand, C, by means of the set-screw *d*, or its equivalent, substantially as and for the purpose specified.

2. The combination of the parts E E' *e*, when constructed with a recess to fit around the side of the churn, and adapted to receive and hold the latter, in manner and for the purpose substantially as described.

90,545.—W. W. Hughes, Philadelphia, Pa.—*Process of Drying Malt.*—May 25, 1869.

Claim.—The mode or process, substantially as herein set forth, of drying malt; that is to say, by agitating and overturning the malt in an air-tight vessel, subjected to heat, and communicating with a condenser and vacuum-pump, or their equivalents, substantially in the manner described.

90,546.—ELON HUNTINGTON, New York, N. Y. —*Velocipede.*—May 25, 1869.

Claim.—1. In combination with a body suspended beneath the axle, the means employed for actuating the wheels, consisting of the crank-shaft F, and pulleys *f f* and G G, connected by means of cords or their equivalents, substantially as shown and described.

2. The combination and arrangement of the collars *b b*, and clutches *a a*, substantially as and for the purpose shown.

3. The means employed for disengaging the clutches from the collars, consisting of the bands H H, constructed and operated substantially as described.

4. In combination with the disengaging devices above mentioned, the brake-shoes *h h*, constructed substantially as described, and operated by the brake-beam K and rods I I, as and for the purpose shown.

90,547.—GEORGE HUTCHINS, New York, N. Y. —*Ratchet-Drill.*—May 25, 1869.

Claim.—The arrangement herein described of the spring-pawls P P′, in the bifurcated handle L, at right angles to its longitudinal axis, and the combination of those parts, so arranged with the toothed inner surface of the gear-wheels W W′, and with the sleeve C, as and for the purpose set forth.

90,548.—SULLIVAN HUTCHINSON, Bristol, N. H. —*Propagating Trees and Shrubs.*—May 25, 1869.

Claim.—The grafting of roots or root-producing scions *d d*, into limbs B B, previous to surrounding them with earth, for propagating trees and shrubs, substantially as and for the purposes herein specified.

90,549.—GUSTAVUS A. JASPER, Charlestown, Mass.—*Apparatus for Drying Sugar and Cooling Charcoal, &c.*—May 25, 1869.

Claim.—1. The rotary cylinder A, provided with means for carrying a current of air through it, substantially as described, for the purpose of drying the sugar and like articles, and cooling the charcoal and like articles, by the action of the air.

2. The combination of the rotary cutter L and rollers M M with a tunnel, substantially as described, for the purpose described.

90,550.—WILLIAM JOHNSON, Milwaukee, Wis. —*Cask-Washing Machine.*—May 25, 1869.

Claim.—1. A barrel-washing machine, constructed with bed-frame A, standards B B B B, cylinder D, cylinder-rod E, bevel-wheels F and G, driving-shaft H, slides K K, cross-heads L L, pitman M, and keepers O and P, substantially as described.

2. Cask-holder Q, screws R, springs S S, operated by cylinder-rod E, substantially as described.

3. Cylinder D, pipes T and V, sprinkler W, and holes U, in cylinder-rod E, for the purpose of supplying water, substantially as described.

90,551.—WILLIAM FREDERICK JOBBINS, New York, N. Y.—*Boot and Shoe.*—May 25, 1869.

Claim.—The sheet or cap D, provided with an elastic shank, F, and secured between the outer and the inner sole of a boot or shoe, and overlapping the edges of said inner sole, substantially as shown and described.

90,552.—JOHN THOMAS JONES, New York, N. Y.—*Sewing-Machine.*—May 25, 1869.

Claim.—1. The combination of the throat-plate and the intermittent tension-nippers, to make tension upon the shuttle-thread, the whole being constructed to operate upon the under thread, substantially as before set forth.

2. The combination of the throat-plate, the spring-nippers, the mechanism for adjusting the tension of the spring that presses one jaw of the nippers toward the other, the whole being constructed to operate substantially as before set forth.

90,553.—ROBERT V. JONES, Canton, Ohio.—*Ladies' Work-Basket.*—May 25, 1869.

Claim.—The improved ladies' work-basket and spool-stand, herein described, composed of the basket A B B, constructed as specified, and the standard C, with handle G, ring E, with pin or emery ball F, and spool-arms D D, with spool-pins J, the several parts being constructed and arranged substantially as and for the purpose specified.

90,554.—FREDERICK J. KALDENBERG, New York, N. Y.—*Smoking-Pipe.*—May 25, 1869.

Claim.—1. The cup C, when constructed of meerschaum in its natural state, and applied to the bowl of a meerschaum pipe, to operate substantially in the manner described.

2. The cup C, when provided with a saucer, *c*, and openings *d*, leading into the saucer, arranged to operate as and for the purpose described.

90,555.—JOHN KELLER, Paducah, Ky., assignor to himself, F. J. FAIRBANK, and J. W. COLE, same place.—*Brick-Machine.*—May 25, 1869.

Claim.—1. The series of plungers N, working radially to press the bricks between two series of radial slides, Q U, which open and close the tops and bottoms of the molds, in combination with the vertical plungers M, for discharging the bricks upon the table X, all constructed and arranged substantially as described.

2. The series of molds *h*, with the reciprocating plungers N and slides Q U, the rotating-table X, and guide-bars B X, all constructed, arranged, and operating as and for the purposes herein set forth.

90,556.—JOHN F. KELLER, Hagerstown, assignor to HAGERSTOWN AGRICULTURAL IMPLEMENT MANUFACTURING COMPANY, Hagerstown, Md.—*Combined Seed-Drill and Fertilizer.*—May 25, 1869.

Claim.—1. The cranks and shafts R R, when constructed solid, as herein described, and for the purposes set forth.

2. The stationary bar *s*, when constructed as a support and bearing for the solid crank-shafts R, to keep the shafts in line and preserve their vertical position, as herein described.

3. The slides K K, when constructed so as to open from the center, to gauge the quantity of grain, and having their side-pieces at the openings inclining down to a point between the rollers F and G, for the purpose of preventing any lateral discharge of the grain, as herein described.

90,557.—JOHN S. KENDALL, Northfield, Minn., assignor to himself, RALPH EMERSON, and WILLIAM A. TALCOTT, Rockford, Ill.—*Railway Stock-Car.*—May 25, 1869.

Claim.—1. Providing a railway stock-car with a water space or reservoir, B, substantially as described, in which water can be transported, for the purpose of watering or sprinkling stock while *in transitu*.

2. A railway stock-car, when constructed with a double top or roof, substantially as and for the purposes described.

3. Dividing a reservoir, for containing water on a railway stock-car, into connected apartments, by placing divisions, partly or entirely, across said tank, in such manner as to prevent or retard the surging of water therein from end to end while the car is in motion, the reservoir being located overhead, and the partitions serving as supports to the roof, or as transverse braces to the car.

90,558.—GEORGE KING, Frederick, Md.—*Sash-Lock.*—May 25, 1869.

Claim.—Loose metal dogs, working upon pendent rods, and resting on the bottom or square of the slot or mortise when the window is descending, as hereinbefore described and set forth.

90,559.—RICHARD KNOTT, Suisun City, Cal.—*Stake-Puller.*—May 25, 1869.

Claim.—In combination with the lever A, and its fulcrum, the ring B, pivoted at one side to the end of said lever substantially in the manner and for the purpose set forth.

90,560.—STEPHEN E. KNOTT, Chicago, Ill.—*Door for Grain-Cars.*—May 25, 1869.

Claim.—1. The plates A, having flanged guides *a*, pivoted to the frame of the car-door, the cams B,

and the trapezoidal door C, substantially as and for the purposes set forth.

2. In combination with the above, the chains *c*, rods *d*, brackets E, and latches D, or their equivalent, when constructed, arranged, and operating substantially as described, and for the purposes specified.

90,561.—L. B. Lathrop, San José, Cal.—*Machine for Reaping and Thrashing Grain.*—May 25, 1869.

Claim.—1. The device herein shown and described, for raising and lowering the sickle-bar, or rather the whole front of the apparatus, said device consisting of the upright screw *b*, nut *c*, on arm *d*, the latter being hinged to the tongue C, while the screw *b* is swiveled in the frame-work of the machine, the tongue C being hinged, at its rear end, by a horizontal bolt, j^2, substantially as and for the purpose herein shown and described.

2. The spring *l*, attached by means of a link to the off-end of the sickle-bar, substantially as and for the purpose herein shown and described.

3. The application of the fan d^1 in the cylinder I′, immediately below the inner end of the apron Z, and under and in front of the thrashing-cylinder, substantially as and for the purpose herein shown and described,

4. In combination with the roller S and thrashing-cylinder D′, the separator J′, when operated in an inclined box, M′, by two or more eccentric shafts, K′, substantially as herein shown and described.

5. The method herein shown and described, of moving the endless apron C′ by means of two flexible or rubber rollers, Q′ and *l*′, which bite the under side of the apron, substantially as herein shown and described.

6. Lining the edges of the endless apron C′ with cords or strings m^1, substantially as and for the purpose herein shown and described.

7. The manner herein shown and described, of regulating the blast of the fan *n*′ in the cylinder R′, by means of the sliding inclined plate P′, substantially as set forth.

8. The application of a blast of air, which is created by means of a fan, g^2, in a drum S′, and tube I′, for the purpose of elevating grain to the hopper U′, substantially as herein shown and described.

9. The bag-holder, when consisting of the U-shaped bar *s*′, which is hinged to the side of the frame of the machine, and which is combined with the bar V′ and plates *w*′ and a^2, the latter being operated by a lever, e^1, and all being made and operated substantially as herein shown and described.

10. The combination with the above, of an up-and-down adjustable board, W′, substantially as set forth.

11. The combined comb and rake, consisting of the bar X, hinged rod *m*, tines Y, revolving toothed reel B′, all made and operating substantially as and for the purpose herein shown and described.

90,562.—Joseph Law, New York, N.Y.—*Mop.*—May 25, 1869.

Claim.—A looped mop, as a new article of manufacture, consisting of the woven center A C and the looped ends B, made and arranged as described.

90,563.—Benjamin S. Lawson, New York, N. Y.—*Velocipede.*—May 25, 1869.

Claim.—The seat K, having a wedged-shape bottom, held by a clasp upon the spring, and adjustable on said spring by the wedge only, substantially as and for the purposes specified.

90,564.—R. O. Lowrey, Salem, N. Y.—*Composition for Rendering Fabrics Water-Repellent and for Fixing their Colors.*—May 25, 1869.

Claim.—1. The compound, consisting of the ingredients herein mentioned, united in the manner and proportions substantially as described, and for the purposes set forth.

2. The process of rendering fabrics water-repellent, and of fixing their colors, substantially as herein described, and for the purposes set forth.

3. The product, resulting from the process herein described, as a new article of manufacture.

90,565.—William John Lynd, Golden City, Col. Ter.—*Process of Separating Iron and other Metals from Potters' Clay.*—May 25, 1869.

Claim.—1. The process of removing iron, copper, and other discoloring matters from potters' clay and other argillaceous substances, by subjecting the clay when in solution to the action of one or more magnets, in the manner and for the purposes set forth.

2. The method of precipitating the iron and other discoloring matter in the clay solution, by passing through the bath containing such solution a current of electricity, as and for the purposes set forth.

3. The mode of preparing potters' clay and like substances from which discoloring matter is to be removed, by subjecting such substance, in solution, first to the action of a current of electricity, and afterward to magnetic action, in the manner and for the purposes specified.

90,566.—George E. Marshall, Louisville, Ky.—*Preparation of Paper-Stock.*—May 25, 1869.

Claim.—1. The herein-described process of preparing paper-stock, that is to say, cooking or treating fibrous material in an alkaline solution and introducing superheated steam directly into the vessel in which said material is being cooked or treated, substantially as described.

2. The combination of a boiler for generating steam, a furnace for superheating the steam, and a vessel for cooking the stock, when arranged to operate substantially as described.

90,567.—Harvey McCown, Enon Valley, Pa.—*Nut-Lock.*—May 25, 1869.

Claim.—The washer D, for locking nuts, when constructed substantially as described, and for the purpose set forth.

90,568.—Peter McIntyre, Norwich, Conn.—*Bedstead-Fastening.*—May 25, 1869.

Claim.—A bedstead-fastener, consisting of a mortise and a notched tenon, secured by a latch, H, having an armature, *m*, attached to its lever K, to take against the outer lever N, by which outer lever the latch H is lifted and retained out of the notch G, of the tenon E, when required, constructed, and operating in the manner and for the purpose substantially as described.

90,569.—John McLain and Jared Kelsey, St. Mary's, Ohio, assignors to themselves and Snyder Filson, same place.—*Automatic Car-Coupling.*—May 25, 1869.

Claim.—1. The coupling-box B, constructed as described, with hinged top *a*, and flanges *f f*, forming an inclined plane along its sides, substantially as and for the purposes herein set forth.

2. The coupling-link E, constructed as described, with V-shaped notches *m m*, substantially as and for the purposes herein set forth.

3. The combination of the coupling-box B, plunger D, link E, pin *e*, and top *a*, all constructed and operating substantially as and for the purposes herein set forth.

90,570.—Ellis Michael, LaPorte, Ind.—*Fanning-Mill.*—May 25, 1869.

Claim.—1. The combination of the grain-board K and the adjustable board K′ with the intervening hinged board L, substantially as set forth.

2. The arrangement of the grain-boards K, L, and K′, in connection with the secondary grain-board N, substantially as herein described.

3. The side-delivering spout O, in combination with the opening *c*, and adjustable board K′, arranged to operate substantially as described.

4. The grain-sieves *f*, having the meshes at their front made smaller than at the rear, and having the wires attached to the under side of the front bar and to the upper side of the rear bar, as described,

5. Suspending the shoe F at its front by means of an arm, R, pivoted in front of the front posts B, substantially as described.

6. The spring-bar *o*, arranged to hold the slide M of the hopper, as set forth.

7. The slides D, having the pivoted bar *h* attached as set forth.

8. The slides E, arranged to slide in the opening

in the side of the case A, and be flush therewith, as described.

90,571.—BENJAMIN MOSER, Philadelphia, Pa.—*Curtain-Fixture.*—May 25, 1869; antedated May 19, 1869.

Claim.—1. Tightening the pulley-cord, by means of the rotating screw-spindle, substantially as described.

2. The swinging-button B and the jam-nuts E, in combination with the screw-spindle, substantially as and for the purpose described.

3. The pin F, in combination with nut H, for concealing the fastening between plate D and section A, in combination with the screw-spindle, substantially as described.

90,572.—CARLTON NEWMAN, San Francisco, Cal.—*Lamp-Extinguisher.*—May 25, 1869.

Claim.—1. The short sliding tube E and the link F, in combination with the lid *a*, whether attached directly to the lid or not, the whole constructed and operating substantially as herein described.

2. The curved rod *c c c'* and the weight H, when in combination with the link F and tube E, substantially as herein described.

3. In combination with the tube E, link F, and lid *a*, the curved rod *c*, and weight H, substantially as described.

90,573.—WILLIAM B. PARSONS, Short Tract, N. Y.—*Car-Coupling.*—May 25, 1869.

Claim.—The car-coupling, consisting of the rotating spear-headed bolt C, with the weight F, attached, in connection with the lever G, link H, spring-catch I, and pin L, all substantially as described.

90,574.—O. S. PERKINS and L. A. CRANDALL, New Haven, Conn.—*Corn-Husker.*—May 25, 1869.

Claim.—The vertical slide C, cutter *d*, lever E, with its handle F, in combination with the block G and treadle D, the whole constructed and arranged so as to operate substantially as and for the purpose specified.

90,575.—GEORGE W. R. POLLOCK, Boston, Mass.—*Spring Burglar-Alarm for Doors.*—May 25, 1869.

Claim.—The combined door spring and alarm, constructed and arranged as described, so as to close the door with which it may be connected, and to sound an alarm both in the opening and in the closing of the door.

90,576.—ANDREW J. PRITCHARD, Liverpool, Ohio.—*Pump.*—May 25, 1869.

Claim.—The herein-described pump-plunger, when constructed with a noteh, E, wherein the valve is inclined, substantially as and for the purpose specified.

90,577.—JOSEPH REPETTI, Philadelphia, Pa.—*Cake-Machine.*—May 25, 1869.

Claim.—1. The combination of the automatic stopping-device, consisting of the finger *l*, roek-shaft *i*, arms *h* and *h'*, rod *d*, spring *f'* and stopper *g*, with the plunger *j*, screw *k*, and pulleys *a* and *a'*, or their equivalents, substantially as and for the purpose herein described.

2. The combination of the upright shaft *m* with the projection r^2, dough-box 10, with its hinged and removable door 7, plunger *j*, and screw *k*.

3. The combination of the revolving eutter s^1 with the dough-box 10, substantially as and for the purpose set forth in this specifieation.

4. The combination of the single non-revolving screw *k*, with the plunger *j*, ratchet-wheel 1, pawl 2, oscillating arm 3, and adjustable crank 4, substantially as speeified.

5. The eombination of the loose or removable pins or "combs" *x*, with the dough-box, substantially as and for the purpose specified.

6. The combination of the bevel-wheels 7 and 8, and hand-wheel 9, with the non-revolving screw *k*, revolving nut *z*, and plunger *j*, substantially as and for the purpose specified.

7. The combination of the slide 6 with the movable bottom y^2 and dough-box 10, substantially as and for the purpose set forth in this specification.

8. The combination of the cutter, Fig. 6, composed of the wire s^1, frame s^2, and shank s^3, with a revolving shaft, *m*, substantially as herein specified.

90,578.—WILLIAM S. REYBURN and EDMUND A. W. HUNTER, Philadelphia, Pa.—*Lightning-Rod Coupling.*—May 25, 1869.

Claim.—The lightning-rod coupling for connecting angular lightning-rods, provided with the slots *e* and *d*, and constructed substantially as and for the purpose herein shown and described.

90,579.—JAMES REYNOLDS, Brooklyn, N. Y., assignor to himself and JOHN J. MARSHALL, New York City.—*Velocipede.*—May 25, 1869.

Claim.—1. The arrangement of the seat C on the independent rear frame D, carrying the steering-wheel F, and pivoted, as at *a*, to the main frame, which carries the driving-wheels E E, substantially as shown and described.

2. The arrangement of the slotted hand-levers I I, and treadles J J, relatively to each other and the cranks *k k* and *l l*, substantially as specified.

90,580.—MAURICE M. REILY, New Haven, Conn.—*Ventilator.*—May 25, 1869.

Claim.—In the basement of buildings, forming a communication beneath the floors and around the walls to flues, constructed so as to admit external air, for the purpose of ventilation, substantially as set forth.

90,581.—MARCUS W. RIKER and DANIEL T. TORREY, Hastings, Mich., assignors by mesne assignments to DANIEL T. TORREY.—*Washing-Machine.*—May 25, 1869.

Claim.—1. The combination, in a washing-machine, of the brush *g* and rollers F F with the cylinder *a*, substantially as set forth.

2. The combination, in a washing-machine, of the brush *g* and friction-roller *b* with the cylinder *a*, all operating substantially as described.

3. The combination, in a washing-machine, of the following elements, namely, a revolving cylinder, adapted to carry the clothes with it in its revolutions, a series of rollers which shall press the clothes against said cylinder, a brush for scouring the clothes, and a rub-board.

90,582.—JOHN L. RITER, Brownsville, Ind.—*Grain-Drill.*—May 25, 1869; antedated November 25, 1868.

Claim.—1. The plates *m m*, in combination with the seed-cells *a a a* and arms O O, substantially in the manner and for the purpose set forth.

2. The slide D, in combination with the thumb-screw *c*, substantially as and for the purpose herein set forth.

90,583.—HENRY R. ROBBINS, Baltimore, Md., assignor to himself and J. J. MORAN, same place.—*Cooking-Range.*—May 25, 1869.

Claim.—1. The vertical chamber M, when formed around the bulging front wall of a range or stove, as shown and described, and provided with the vertieal slots *u u*, and with covers, substantially as and for the purposes specified.

2. The arrangement, in a stove or range, of the four chambers *a a''*, *b b'*, the chamber *b* containing a large grate, adapted for common use for cooking, &c., and the chamber *b'* containing a small grate, *b''*, at its center, and holes through its rear wall, by means of which cold air may be admitted, all constructed to operate as and for the purposes set forth.

90,584.—JOHN ROBERTS, Cincinnati, Ohio.—*Step-Cover and Wheel-Fender for Carriages.*—May 25, 1869.

Claim.—The combined arrangement of the flexible fender G, attached and strengthened at its upper end, the guards or cushions I J, and step D E F, all constructed to operate as and for the purposes set forth.

90,585.—PHILIP C. ROWE, Boston, Mass.—*Velocipede.*—May 25, 1869.

Claim.—1. A velocipede, made with a body reaching nearly to the ground, and pendent between two supporting-wheels, one of which is arranged to be turned either to the right or left, when provided with steadying-wheels on either side of the body, made adjustable as to position, and operating substantially as described.

2. The combination of the springs *x* with the steering-wheel, when arranged to operate substantially as described.

3. The combination, in one vehicle, of a central leading and a central trailing-wheel, when one is arranged as a steering wheel, and when each wheel is provided with a pair of cranks, and each crank of each pair is arranged at an angle of about one hundred and eighty degrees with reference to its fellow, and one pair is provided with means for being operated by the feet, and the other pair by the hands of the rider.

4. The combination, with the steering-wheel; of flexible connections and leaders therefor, arranged substantially as and for the purpose set forth.

90,586.—JOHN A. RUMSEY, Seneca Falls, N. Y. —*Non-Corrosive Cast-Iron Pump.*—May 25, 1869.

Claim.—A galvanized iron pump, as an article of manufacture, substantially as and for the purpose specified.

90,587.—R. J. RUSSELL, Wheeling, West Va.—*Skate.*—May 25, 1869.

Claim.—The combination of the spring B C B, the rest E F, the point G, the point on the toe D, the T on the heel of the skate-runner, at A, all in Fig. 4, and the heel-plate I H, in Fig. 1, substantially as described and set forth.

90,588.—FRANCIS S. RUTSCHMAN, Philadelphia, Pa., assignor to himself, JOHN RUTSCHMAN, and WILLIAM RUTSCHMAN, same place.—*Meat-Cutter.*—May 25, 1869.

Claim.—The frame A, shaft B, connecting-rod D, sliding-block *f*, adjustable cutter-bar C, cutter-frame E, knives F, revolving block G, carrier H, and track I, combined and arranged for operation, substantially as specified, whereby an efficient and convenient meat-cutter is obtained.

90,589.—DAVID SAUNDERSON, St. Louis; assigns one-half his right to A. B. M. THOMPSON, Webster Groves, Mo.—*Metallic Roofing.*—May 25, 1869.

Claim.—The method, herein described, of laying metallic roofing, when the sheets A are provided with slots for the nails, the strips or sheets being nailed and bent so as to cover the nail-heads, substantially as and for the purposes specified.

90,590.—CHRISTIAN SHARPS, Philadelphia, Pa. —*Propeller.*—May 25, 1869.

Claim.—1. A recess, *f*, on the under side of the vessel, at the side of the keel, where the blades of the propeller enter the water, as herein set forth, for the purpose specified.

2. The propeller-shaft, so arranged as to be lower at the rear than in front, in combination with an inclined propeller-wheel, having a limited dip in the water, as set forth, for the purpose specified.

90,591.—FREDERICK SHICKLE, St. Louis, Mo., assignor to SHICKLE, HARRISON & CO., same place. —*Apparatus for Molding Pipe.*—May 25, 1869.

Claim.—1. Supporting the flasks C C′ and pattern-frame D vertically, by hinges, upon bearings B B′, substantially as set forth.

2. The half flasks C C′, and their terminal ribs F F′, combined with the movable patterns E, and the devices for moving the same into and from contact, substantially as and for the purposes set forth.

3. The flasks C C′, arranged with openings e^2, for ramming the sand about bell-ends and similar projections, substantially as set forth.

90,592.—A. J. SHUNK, Millersburgh, Ohio.—*Horse-Rake.*—May 25, 1869.

Claim.—1. The combination and arrangement of the crank *a*, bolt or catch *b*, and lever *e*, substantially as shown and described.

2. The combination and arrangement of crank *a*, bolt or catch *b*, and a lever, for tilting the rake, with and in reference to the uprights K, hinges L, and cross-bar I, all substantially as and for the purpose set forth.

90,593.—GEORGE F. SIMONDS, Fitchburgh, Mass., assignor to the SIMONDS MANUFACTURING COMPANY, same place.—*Method of Making Serrated Sickle-Sections.*—May 25, 1869.

Claim.—1. The improved process of serrating sickle-sections, by first cutting the groove on the beveled surface upon a flat bed, next bending down the whole edge of the bevel, and, finally, grinding off the edge, substantially as described.

2. Sickle-sections made by the improved process described.

90,594.—JOSEPH SISSONS, Horncastle, England. —*Ice-Cream Freezer.*—May 25, 1869.

Claim.—The construction and arrangement of the frame *a*, vessel *m*, crank *c*, fly-wheel *d*, shaft *b*, wheels *e f*, stationary shaft *h*, sleeve *g*, bracket *l*, rotating cylinders *n p*, and stationary knives or scrapers *r r*, when combined and operating substantially as and for the purposes herein set forth.

90,595.—JOSEPH SIMPSON, Newark, Ohio.—*Velocipede.*—May 25, 1869.

Claim.—The treadles F, pivoted near their centers to the guide-pillar H, and connected to the straps G, in combination with the pulleys C, flanges D, axle B, and springs E, of a two-wheeled velocipede, substantially as set forth.

90,596.—SAMUEL SIMPSON, Wallingford, Conn., assignor to SIMPSON, HALL, MILLER & CO.—*Die for Raising and Trimming Metal.*—May 25, 1869.

Claim.—A die for raising sheet-metals, constructing the same in two parts, A and C, the part C removable from the part A, for the purpose set forth.

90,597.—ALBA F. SMITH, Norwich, Conn.—*Railway-Rail.*—May 25, 1869.

Claim.—In railroad-tracks, the rounded form of the notches *a a′* in the rails A, arranged as and for the purposes herein set forth.

90,598.—CHARLES P. SNOW, Freeport, Ill.—*Washing-Machine.*—May 25, 1869.

Claim.—A rubbing-frame, consisting of the curved levers L, hand-hold M, slats *y y*, and rollers *n*, when constructed and arranged as shown, and operating in combination with the ways W and spring-roller bed J J, with guides C, in the manner and for the purposes herein set forth and described.

90,599.—GEORGE K. SNOW, Watertown, Mass. —*Paper Cuff.*—May 25, 1869.

Claim.—A wristband, containing two button-holes of different shapes, substantially as and for the purposes specified.

90,600.—THOMAS S. SPEAKMAN, Camden, N. J. —*Chimney-Cowl.*—May 25, 1869.

Claim.—A chimney-cowl, consisting of two hollow cones A A′, in combination with a ring, C, arranged to operate substantially as herein described.

90,601.—CHARLES SPRING, Hyde Park, and ANDREW SPRING, Weston, Mass.—*Veloeipede.*—May 25, 1869.

Claim.—1. In a jointed perch, a grooved sleeve or tube on one part and a tongued spindle on the other, these parts being constructed substantially as described, so that, when connected ready for use, they shall be self-locked by means of the tongue.

2. The above, in combination with the pin and slot, to allow a determined extent of rotative tipping, substantially as shown and set forth.

90,602.—JOHN STACKER, West Winsted, Conn., assignor to FRANKLIN MOORE and EDWARD CLARK, same place.—*Machine for Pointing Bolts or Rivets.* —May 25, 1869.

Claim.—The gauge-rod D, constructed as described, when combined with the hammer E and anvil-block B, in the manner and for the purpose described.

90,603. — GEORGE K. STILLMAN, Cincinnati, Ohio.—*Roller-Skate.*—May 25, 1869.

Claim.—The strap or fastening-device F, which encircles the foot of the skater, and attaches it to the foot-board A of a skate in such a manner that the rollers or runners will be turned or adjusted thereby, so as to run the skate in a curved line, right or left, substantially as described.

90,604.—OLE O. STORLE, Norway, Wis.—*Plow-Point.*—May 25, 1869.

Claim.—1. Plow-point B, with its socket G, in combination with plow-frame A, substantially as described.

2. Adjustable plow-point B, substantially as described.

90,605. — LEVI SUMNER, Oskaloosa, Iowa.—*Band-Cutter for Thrashing-Machines.* — May 25, 1869.

Claim.—1. A band-cutting apparatus, consisting of the frame A, having the belts B arranged as described, with a saw, I, located beneath the frame, and having its periphery projecting through an opening therein, all as herein shown and described.

2. The shafts D E, provided with arms *n*, and arranged to have a reciprocating transverse and rotary motion combined, for separating or spreading the bundle of grain, as set forth.

90,606.—JOHN THOMPSON and JAMES GEORGE INGRAM, London, England; said INGRAM assigns his right to JOHN THOMPSON.—*Cap for Feeding-Bottles for Infants and Invalids.*—May 25, 1869.

Claim.—The forming caps of feeding-bottles, substantially as herein described, from vulcanizable India rubber compounds, molded to form in dies, by pressure, and subsequently vulcanized or changed.

90,607.—WILLIAM TIBBALS, South Coventry, Conn.—*Metallic Cartridge.*—May 25, 1869.

Claim.—The cup or reinforce B, when inserted within the flanged metallic case A, in such a manner as to cover and protect the flange, substantially as described.

90,608. — THEODORE R. TIMBY, Saratoga Springs, N. Y.—*Toilet Pin-Case.*—May 25, 1869.

Claim.—As a new article of manufacture, the toilet pin-case herein described, consisting of a box, B, with one or more covers, C, and one or more diaphragms, D, adapted to receive and hold the pins, in the manner specified.

90,609.—NATHANIEL TUFTS, Boston, Mass.—*Gas-Light Governor-Case.*—May 25, 1869.

Claim.—1. A gas-light governor-case made in two parts, and with the conduits *h* and *e*, with flanges about their adjacent ends, for reception of the yielding washer *l*, substantially as and for the purpose specified.

2. The lower part of a gas-light governor-case, when made with the flange *b*, projecting above the joint flange *a*, substantially as and for the purpose set forth.

90,610.—WILLIAM ULRICH and CHARLES HACHMEISTER, Newark, N. J.—*Harness-Ornament.*—May 25, 1869.

Claim.—The rosette, consisting of the metallic base B, plate D, hard-rubber piece A, and bolt E, as an improved article of manufacture, all arranged and constructed in the manner and for the purpose set forth.

90,611.—GEORGE UNGER, Danville, Pa.—*Fence-Post Socket.*—May 25, 1869.

Claim.—The construction and use of a post-socket, formed of cast-iron plates, with sockets and flanges, connected with rods, and arranged substantially for the purpose as hereinbefore described.

90,612.—ADRIEN VIRIDET, Glasgow, Ky.—*Bridle-Bit.*—May 25, 1869.

Claim.—1. A bridle-bit without a cross-bar, to pass through the mouth of the horse, constructed substantially as described.

2. In combination with the frame A, the cheek-plates B, flanges C, and short connecting-bars *a*, substantially as and for the purpose described.

90,613.—HUGO VOGEL and VICTOR VOGEL, St. Louis, Mo., assignors to HUGO VOGEL and FRANK JUSTIN.—*Piano-Stool.*—May 25, 1869.

Claim.—1. The half-seats D and seats E, when pivoted upon a rest-bracket, B, substantially in the manner hereinbefore specified.

2. The seat-locks *g d* and *g e*, rods *h*, lever *i*, and knob I, when combined with the seats D and E, substantially as and for the purposes set forth.

90,614.—FRIEDRICH VON MARTINI, Frauenfeld' Switzerland.—*Breech-Loading Fire-Arm.*—May 25 1869.

Claim.—1. The tilting-lever and cocking-lever, in combination with the hinged and vertically swinging breech-block, under the arrangement and for operation as herein shown and set forth.

2. The combination, with the cocking-lever and main tilting-lever, of the hinged and vertically swinging breech, and the firing-pin, and its spring, arranged within the breech-block, and operated by the lever which moves said block, substantially in the manner and for the purposes set forth.

3. The combination, with the cocking-lever, constructed and connected with the hinged breech, and firing-pin, and tilting-lever, as described, of the trigger, by which said lever is caused to compress the spring of the firing-pin, and hold said pin in its cocked position during the raising of the breech-block, substantially in the manner shown and specified.

4. The combination, with the swinging breech and sliding firing-pins, of the indicator-pin, arranged in the rear of the breech-receiver, and in juxtaposition with the breech and firing-pin, as and for the purposes set forth.

90,615.—LUTHER R. WALLACE, Adrian, Mich.—*Steam-Boiler Furnace.*—May 25, 1869.

Claim.—1. The arrangement of the register S, furnace or fire-chamber B, combustion-chambers D E, and flues *f*, substantially as represented and described, for the purpose set forth.

2. The water-space A, between the fire-furnace B and fire-box E, substantially as set forth and described.

3. The oblique backs *b* and *b'*, in combination with the doors *a* and *a'*, for the purposes set forth and described.

90,616.—CARL FRIEDRICH LUDWIG WANDEL, Waldau, near Bernburg, North German Confederation, assignor to F. O. MATTHIESSEN and W. A. WIECHERS, New York, N. Y.—*Refining Sugar.*—May 25, 1869.

Claim.—The use of hydrate of magnesia or phosphate of magnesia, or both combined, as neutralizing and clarifying agents in the process of sugar-refining, substantially as specified.

90,617.—CARL FRIEDRICH LUDWIG WANDEL, Waldau, near Bernburg, North German Confederation, assignor to F. O. MATTHIESSEN and W. A. WIECHERS, New York, N. Y.—*Purification of Animal-Charcoal.*—May 25, 1869.

Claim.—The use of the above-named salts, as oxidizers, in the revivification of animal-charcoal, substantially as specified.

90,618.—GEORGE F. WATERS, Boston, Mass.—*Pruning-Implement.*—May 25, 1869.

Claim.—The combination of a saw with a pruning-instrument, substantially as shown and described, so that the saw may be brought into operative action or confined point downward upon the handle, without interfering with the position or action of the cutter.

90,619.—JOHN HARVEY WILLIAMS, New York, N. Y.—*Bird-Cage.*—May 25, 1869.

Claim.—1. A bird-cage, constructed of glass tubes *a*, with metal cores *b*, in combination with the top *e*, annular base *d*, and guide-rings *e*, all as shown and described.

2. The dish B, of a bird-cage, constructed of seg-

ments *f*, of horn, secured in a metallic frame, *g*, as shown and described.

90,620.—CHARLES V. WOERD, Waltham, assignor to AMERICAN WATCH COMPANY, Boston, Mass.—*Lathe for Grinding and Polishing Pivots of Watch-Work.*—May 25, 1869.

Claim.—1. In combination with the head-stock of a lathe, a shaft or slide, *l*, provided with a back-center bearing-piece, *m*, and a guide, *n*, or its equivalent, substantially as described.

2. The combination, with a lathe, of a swinging frame or bearing, a polishing-wheel, and a grinding lap or laps, arranged to operate substantially as described.

3. The combination, with a polishing-wheel, of a gauging-stop, arranged to operate substantially as described.

90,621.—GEORGE W. N. YOST, Corry, Pa., assignor to CORRY MACHINE COMPANY, same place.—*Harvester.*—May 25, 1869.

Claim.—The arrangement of a level-bar, X′, with a lever, X, floating-bar S, and finger-bar U, operating as described, for grass and grain cutting machines.

90,622.—JOHN YOUNG of C. Fair View, and C. I. GRUMBINE, Frederick, Md.—*Machine for Boring Posts and Pointing Rails.*—May 25, 1869.

Claim.—1. In combination with the slotted metallic brackets I I^1 I^2, set nuts and screws *i i* and lever J′, the vertically adjustable frame J, carrying the boxes for the auger-mandrels, and shaft M, all constructed as shown and described, for the purpose specified.

2. The combination of the eccentric-headed lever P, pawl *p*, ratchet-plate R, block O, and clamping-box C, when the several parts are constructed to operate in the manner and for the purpose specified.

3. The machine herein described, for boring posts and sharpening rails, consisting essentially of the disks K K′, carrying the curved adjustable cutting-blades T T, the carriage G, and the clamping-box C, and its appendages, all constructed and arranged to operate in the manner and for the purpose specified.

90,623.—EMANUEL ANDREWS, Williamsport, Pa.—*Strap for Saws.*—June 1, 1869; antedated May 21, 1869.

Claim.—The straps B, for the ends of reciprocating saws, formed of one piece of metal, when made and arranged as described, and for the purposes set forth.

96,624.—CHARLES F. ANNAN, Boston, Mass., assignor to B. S. BINNEY, same place.—*Paper-Bag Machine.*—June 1, 1869.

Claim.—1. The segment-gear wheel C^7, in combination with a tucker-frame, P^3 P^3 P^4, operating substantially as described, and for the purpose set forth.

2. The tucker-frame P^3 P^3 P^4, in combination with the pivoted sides P^2 P^2 and the guides P^7 P^7, substantially as described, and for the purpose set forth.

3. The tucker P^6, in combination with the opener T′, operating substantially as described, and for the purpose set forth.

4. The combination and arrangement of the four rollers S S′ and R^3 R^4, operating together substantially as described, and for the purpose set forth.

5. Combining, with the rollers R^3 R^4, the device consisting of the standard K^4, links K^3 K^2, lever K^1, and cam K, or its mechanical equivalent, operating as described, and for the purpose set forth.

6. The rollers S S′ and R^3 R^4, in combination with the vertical tucker H^7 and horizontal tucker L^6, operating as described, and for the purpose set forth.

90,625.—FRANKLIN BABCOCK and FREDERICK BABCOCK, Middletown, Conn.—*Blind-Fastener.*—June 1, 1869.

Claim.—1. The projections on the inner side of the hollow screw-shell, which holds the hook in position, in combination with the spring C, for the purposes set forth.

2. The threaded single shell A A, with the pivot D, in combination with the hook *b b*, and spring C, all constructed as and for the purpose set forth.

90,626.—ARTHUR BARBARIN, New Orleans, La.—*Apparatus for Lighting Gas by Electricity.*—June 1, 1869.

Claim.—1. The method of closing the circuit in an electrical gas-lighting apparatus, by means of the pressure of the gas escaping to the burner, acting upon a lever, key, or piston, or equivalent circuit, closed, substantially as herein shown and specified.

2. The method of street-gas lighting, by the employment, in connection with each burner, in which the flow of the gas is regulated by means of a reservoir of quicksilver or other suitable liquid, in combination with the gas-induction pipe, as herein described, of an independent battery, combined and arranged to operate with the gas-lighting apparatus over the burner, as and for the purposes herein set forth.

3. Connecting the ends of the wires *a* a^1, by means of an asbestos thread, carrying beads of platinum, or its equivalent, and arranged above the orifice in the tip of the gas-burner, as described.

90,627.—A. A. BARKER, Lewiston, Me.—*Stop-Motion for Looms.*—June 1, 1869.

Claim.—The combination, with the weft-fork, pattern-cylinder, and shuttle-box operating-cam, of the rods *e*, *i*, *n*, and *q*, and levers *o m*, for stopping the pattern cylinder and shuttle-box cam when the weft fails, substantially as described.

90,628.—CALEB BATES, Kingston, Mass.—*Revolving Harrow.*—June 1, 1869.

Claim.—1. The paddle M, in combination with the tooth K, working as described, and for the purpose set forth.

2. The bent knife L, in combination with the axle H and tooth K′, as described, and for the purpose set forth.

3. In combination with the harrow, the bars N N′, when arranged to operate substantially as described, and for the purpose set forth.

90,629.—EDWIN E. BEAN, Boston, Mass.—*Apparatus for Lighting and Extinguishing Gas by Electricity.*—June 1, 1869.

Claim.—1. The within-described method of operating gas-valves, by means of a current of electricity passing alternately through separate wires, in combination with the springs *k s*, and cam *o*, or equivalent device, for automatically breaking the circuit through the electro-magnet, and causing the current to pass to the next apparatus, substantially as described.

2. Breaking and closing the electric lighting circuit at any desired point, for the purpose of producing the sparks to ignite the gas, by means of the cam *i′*, upon the shaft of the gas-cock, operating the lever *e′*, or their equivalents, substantially as described.

3. In combination with the mechanism by which the gas-valve is operated, the cam *i′*, and lever *e′* or equivalent device for breaking the electric lighting-circuit, so arranged that, as the gas-valve is opened, the sparks will be produced at the required point, to ignite the gas, substantially as set forth.

90,630.—P. D. BECKWITH, Dowagiac, Mich.—*Hot-Air Furnace.*—June 1, 1869.

Claim.—1. The combination, with a stove having outlets, F F, of zigzag descending-flues G G, horizontal flue G′, and upright escape-flue L, arranged to operate substantially as described.

2. Inclined deflecting-plates J J, applied to their arms *c c*, to the outer wall of a stove or furnace, and arranged between the same and a casing, H, so as to operate substantially as described.

3. The combination of deflectors J and zigzag flues G G, arranged within a hot-air furnace, in the manner substantially as described.

90,631.—JOSEPH F. BLOOD, Providence, R. I.—*Button-Fastening.*—June 1, 1869.

Claim.—1. The L-shaped shank B, with its cam-shaped projections, secured to the back of the stud or button, in the manner and for the purposes specified.

2. The improved shirt stud or button herein described, consisting of the front A, shank B, having

cam-shaped projections, and spring-arm C, constructed and operating substantially in the manner and for the purpose specified.

90,632.—CLAUDIUS V. BOUGHTON, Titusville, Pa.—*Safety-Attachment for Pockets.*—June 1, 1869.

Claim.—The combination of the hook A and spring B with the clamping-plates C E, substantially as and for the purpose set forth.

90,633.—HARVEY BRISCO and JOB W. BLACKHAM, Brooklyn, N. Y., assignors to themselves and JAMES H. PRENTICE, same place.—*Felting-Machine.* June 1, 1869.

Claim.—The yielding covers H, arranged to operate in connection with the shover or shovers D^1 D^2, and yielding casing B C, and with the mass M to be felted, whereby the operation of felting is accomplished rapidly and advantageously, even upon hats of delicate fur, substantially as herein set forth

90,634.—HERBERT BUFFINGTON, South Coventry, Conn.—*Gun-Capper.*—June 1, 1869,

Claim.—A gun-capper, constructed substantially as described, having the orifice *a*, for the reception of caps, protected by the spring *s*, and the two-forked spring *c*, attached in the manner described, turning at right angles *c' c'*, all operating as described, for the purposes described.

90,635.—WILLIAM K. CAVETT, Allegheny City, Pa.; assigns one-half to JAMES L. ANDERSON, same place.—*Steam-Engine Slide-Valve.*—June 1, 1869.

Claim.—The cap D, with the spring D^1, set-screw D^2, in combination with the chamber A b and base A, metallic ring B, follower C, and tube A e, when constructed and arranged substantially as herein described and set forth.

90,636.—H. D. CHANCE, Allentown, Pa.—*Burglar-Alarm.*—June 1, 1869.

Claim.—1. The charged rack C, button E, and spring-hammer B, all constructed, arranged, and operating as specified and shown.

2. In combination with the above, the plate D and block F, as and for the purpose set forth.

90,637.—ISAAC H. CLARK, Boston, Mass., assignor to PAUL P. TODD, same place.—*Chemical Fire-Engine.*—June 1, 1869.

Claim.—1. Adapting the air-chamber of a fire-engine to the double purpose of an air-chamber and of a receptacle for containing chemical ingredients of such nature as to remain inert until acted upon by the flames upon which they are thrown, for the purpose substantially as before explained.

2. In combination with the air-chamber C, adapted as before explained, the pipes *e* and *d*, provided with the valve *e*, and operating as before set forth and explained.

90,638.—HYMEN CLENDENEN, Washington County, Ohio.—*Saw-Set.*—June 1, 1869.

Claim.—1. The rule A, with its temper-screw *f*, in combination with the gumming-board C, with its shoulders *e e*, substantially as and for the purpose set forth.

2. The gauge B, with the screw *c*, in combination with the rule A, with its temper-screw *f*, as and for the purpose set forth.

90,639.—WILLIAM G. COMSTOCK, East Hartford, Conn.—*Hand Cultivator and Weeder.*—June 1, 1869.

Claim.—The combination and arrangement of the slotted frame B and adjustable rakes A, all as constructed and operated as described.

90,640.—ABEL LEE CROW, Pennville, Ind.—*Corn-Planter.*—June 1, 1869.

Claim.—The combination of the arms D, loose band E, and the hub, as shown and described.

90,641.—E. A. CROWNHART, Bridgeport, N. Y.—*Trace-Buckle.*—June 1, 1869.

Claim.—The trace-buckle, consisting of the frame C, curved up at the front, and cast with the broad, flat bottom *c*, ears *e e*, and side loops, and the clamping-plate D hung on rod *f*, between the ears *e e*, and having the projection *d*, heel *i*, and part *g*, all constructed and arranged substantially as herein described.

90,642.—SAMUEL B. DODGE, Roslyn, assignor to himself and DANIEL D. WINANT, Brooklyn, N. Y.—*Forging-Hammer.*—June 1, 1869.

Claim.—The forging-hammer, provided with the standard *m*, carrying the fulcrum, and adjustable, as set forth, in combination with the revolving crank-pin *i*, adjustable link *r*, spring *s*, hammer *k*, and anvil *n*, as and for the purposes specified.

90,643.—SAMUEL DUNBAR, New York, N. Y.—*Steam-Engine Cut-Off.*—June 1, 1869.

Claim.—1. The yokes E and F, when constructed substantially as shown and described.

2. The combination of the yokes E and F with the toes G and H, when constructed substantially as shown and described.

3. The cam I and yoke F, when constructed as shown and described.

4. The cam I and lever J, when constructed and arranged to operate as shown and described.

90,644.—CLEAVELAND F. DUNDERDALE, New York, N. Y.—*Apparatus for Generating and Carbureting Gas.*—June 1, 1869.

Claim.—1. The manufacture of carbureted hydrogen gas, by so placing the hydrocarbon liquid and the diluted acid in different vessels or compartments, not in contact with each other, but under the same cover and near each other, as herein described and set forth.

2. The combination and arrangement of the cover B, containing the funnel-shaped cylinder D, and annular chamber E, with pipes F, and outlets *m*. The chamber D as a regulator, conductor for the hydrogen gas, and supporter for the hydrocarbon chamber E, the tank A, water-chamber C, and feed-pipe H, the whole being combined in the manner and for the purpose substantially as herein set forth and described.

90,645.—B. W. DUNKLEE, Boston, Mass.—*Grate.*—June 1, 1869.

Claim.—The fire-grate A B, constructed substantially as shown and described.

90,646.—THOMAS A. EDISON, Boston, Mass., assignor to himself and DEWITT C. ROBERTS, same place.—*Electrographic Vote-Recorder.*—June 1, 1869.

Claim.—1. The combination of a switch or switches, *e e'*, types and cylinder *p*, with an electric battery, connected and operated substantially as and for the purpose set forth.

2. The combination of switch *e*, strips *o o'*, types, and the separated and insulated rollers *q q'*, magnets *v v''*, armature, escapement, pointer, and dial-plate, with the battery *b*, connected and operated substantially as and for the purpose above described.

3. The combination of switch, types, cylinder *p*, rollers *q q'*, strips *o o'*, and insulators *j j'*, magnets *v v''*, armature &c., constructed in the manner and for the purpose above specified.

90,647.—JULIUS ELSON, Boston, Mass.—*Attaching Hands to Watches.*—June 1, 1869.

Claim.—The spiral spring *c*, in combination with the center-wheel and pinion C, and cup *b*, on spindle *a*, as described.

90,648.—BERNHARD ESCH, Sandusky, Ohio.—*Boot-Crimping Machine.*—June 1, 1869.

Claim.—1. The application, to a crimping-board, A, of jointed bars B B^1, and an adjusting-screw, D, arranged so as to adjust both of these bars simultaneously, substantially as described.

2. Arranging the screw D and guides C C, in parallel lines, and applying these parts to the crimping-board and stretching-bars, substantially as described.

90,649.—I. B. FARQUHAR, Bloody Run, assignor to himself and J. W. LINGENFELTER, Bedford, Pa.—*Bee-Hive.*—June 1, 1869.

Claim.—1. The slotted honey-board D, and ven-

tilating and feeding chamber F, in combination with each other and with the frames C, and semi-cylindrical hive A, substantially as herein shown and described, and for the purpose set forth.

2. The supports B, and entrance-board b', in combination with the pivoted semi-cylindrical hive A a^1, substantially as herein shown and described, and for the purpose set forth.

90,650.—WILLIAM E. FISCHER, Boston, Mass., assignor to himself and G. H. JOHNSTON, same place.—*Hand-Nailer for Lasting Boots and Shoes.*—June 1, 1869.

Claim.—1. The combination of a stationary cutter, a sliding nail-blank holder, and a sliding nail-driver, when arranged to operate substantially as described.

2. A nail cutter and driver, in which the nail-blank is composed of a series of shank-forming teeth, united at top, each tooth being severed from the blank, (to be driven,) substantially as described.

3. The feed-spring or pawl, operating to present the end of the nail-blank to the action of the cutter, substantially as described.

90,651.—WILLIAM E. FISCHER, Boston, Mass., assignor to AMERICAN LASTING-MACHINE COMPANY, same place.—*Toe-Piece for Lasting-Machine.*—June 1, 1869.

Claim.—In combination with or for use upon a lasting-machine, the tipping-socket or toe piece, having provision for adjustment, substantially as described.

90,652.—CYRUS P. FISHER, Leesville, Ohio.—*Rotary Harrow.*—June 1, 1869.

Claim.—1. The revolving flexible harrow, constructed substantially as described, and operating as and for the purposes set forth.

2. The combination of the revolving flexible harrow with a two-wheel carriage, constructed substantially as described, and operating as and for the purposes set forth.

3. The manner herein described for raising and lowering the harrow, constructed substantially as described, and operating as and for the purposes set forth.

90,653.—JOHN F. FISHER, Greencastle, Pa., assignor to himself and DANIEL BREED, Washington, D. C.—*Guano-Attachment for Seed-Drills.*—June 1, 1869.

Claim.—1. The quarter-pinion F and reciprocating rack-bar E, or their equivalents, placed under the hopper, in combination with the swinging fingers or stirrers inside of the hopper, substantially as set forth.

2. In combination with the stirrers and quarter-pinion, the reciprocating-bar E, the rod D, crank C, pinion B, and gear-wheel A, substantially as set forth.

90,654.—WILLIAM FLETCHER, New York, N.Y.—*Bell.*—June 1, 1869.

Claim.—Forming that part of the inner circumference of a bell against which the clapper strikes with cross-grooves, substantially as and for the purpose set forth.

90,655.—GEORGE FOWLER, Philmont, N. Y,—*Apparatus for Adjusting Eccentrics to Connecting-Rods.*—June 1, 1869.

Claim.—Attaching a connecting-rod to its eccentric by means of an elastic metallic strap, capable of being tightened or loosened at pleasure, substantially in the manner as described.

90,656.—WILLIAM FRANKEL, Springfield, Ohio.—*Velocipede.*—June 1, 1869.

Claim.—1. The arrangement of the guide-rods *r r* with the T-head G on the guide-fork F, the slotted cross-levers *m m*, with the coupling-bar D, connecting-rods *c c*, and levers S S, as shown and described.

2. Operating a three-wheeled velocipede by the oscillating-seat motion and switching-seat attachment, as shown and described.

3. The combination of the oscillating-seat motion with the treadle-movement and switching-attachment, as shown and described.

90,657.—PERRY G. GARDINER, New York, N.Y.—*Air-Spring for Railroad-Cars.*—June 1, 1869.

Claim.—1. The rubber cylinder A, having a closed end, A′, and flange *a*, whereby it is secured to the plate B, having a cock, *d h*, said cylinder A being encircled by a spring, *m*, and covered by a plate, D, connected with the lower plate by rods b', which serve as guides, all substantially as herein shown and described.

2. The combination of the outer cylinder A A′, *a*, inner cylinder E, plates B D *p*, and spring *m*, all constructed and arranged substantially as and for the purpose herein set forth.

3. The combination of the cylinder A A′ *a*, plates B, *w x u*, supporting-springs J, and spring *m*, all substantially as herein described, for the purpose specified.

90,658.—DAVID GARRISON, Philadelphia, Pa., assignor to HALL & GARRISON, same place.—*Device for Applying Gilding Preparations to Oval Frames.*—June 1, 1869.

Claim.—Preparing "insides" for frames by revolving them in an oval or circular holder, that is revolved upon its edge, and without the use of a face-plate, in combination with a scraper, operating substantially as described.

90,659.—THOMAS S. GATES and ALEXANDER H. FRITCHEY, Franklin County, assignors to themselves and THOMAS WARD, Columbus, Ohio.—*Vapor-Burner.*—June 1, 1869.

Claim.—The combination, with the main burner, having the chambers B and G, of the vertical tube E, connected thereto and communicating therewith, substantially as and for the purpose set forth.

90,660.—A. F. GRAVES and T. J. CLARK, Red Wing, Minn.—*Coal-Stove.*—June 1, 1869.

Claim.—1. The combination of the air-pipes B with the cold-air chamber F, provided with the valve G, with the fire-chamber of the stove, of the general construction herein shown and described.

2. The combination of the damper-plate L and damper K with the fire-chamber of the stove A, and with the depressed middle part of the hot-air chamber C, substantially as herein shown and described, and for the purposes set forth.

90,661.—JAMES L. HALL, Abingdon, Mass.—*Bolt-Machine.*—June 1, 1869.

Claim.—The reciprocating lever H and toggles *h h′*, in combination with the holding-jaws A A′, knives B B′, gauge E, and heading-plunger C, all arranged and operating together, in the manner described.

90,662.—THOMAS C. HARGRAVE, Boston, Mass.—*Water-Meter.*—June 1, 1869.

Claim.—1. The oscillating measuring-chambers B C, balanced upon a knife-edge, *e*, or its equivalent, within a casing, A, in combination with a rolling or sliding counterbalance-weight, H, and the pipes *f g*, partitioned box D, and inlet-pipe G, or equivalent device for admitting the liquid alternately to the measuring-chambers, substantially as described.

2. The air-chamber J, in combination with an air-tight casing, A, and the mechanism contained therein, as above recited, and the inlet and outlet pipes G K, operating substantially in the manner and for the purpose set forth.

90,663.—BERTRAND JOSEPH HOFFACKER, Melrose, N. Y.—*Envelope.*—June 1, 1869.

Claim.—The hookwise combination of the four flaps, as set forth.

90,664.—CHARLES HOLMES, Boston, Mass., assignor to CHESTER GUILD, Jr., same place.—*Machine for Scouring and Setting Out Leather.*—June 1, 1869.

Claim.—1. The combination of the screw-nut or block E, and the arm F, pivoted together and connected with the carriage, substantially as described, with the tool-lifter rod, and its screw, as set forth.

2. The combination of the handle *q*, the rod *o*, and the notched slide-bar G, arranged, connected, and

applied to the carriage, and to the series of arms F F, of the lifter-rods, substantially as specified.

3. The combination and arrangement of the spouts or gutters *e*, and the oil-receiver B, with the lower carriage-guides *b b*.

4. The combination of the buffers or dampers *h*, with the tool-carrier lifter-rods *f*, and the rocker-plate D.

5. When the spouts and drip-pan are employed with the lower guides of the carriage, as described, the arrangements of the heads of the screws T T beneath and against the shelf *q'*, such being as and for the purpose set forth.

90,665.—GAYLORD JONES, Grand Rapids, Mich., assignor to himself and JAMES C. STEWART, same place.—*Churn.*—June 1, 1869.

Claim.—1. The apparatus, consisting of the bellows E F, operated by means of lever D and arms A B, valves G H I J, and funnel K, when operating to churn cream in any vessel, independent of and separate from the above apparatus, as and for the purposes described.

2. In combination with the above, the perforated cone M, substantially as and for the purposes set forth.

90,666.—J. HERVA JONES, Rockford, Ill.—*Harvester.*—June 1, 1869.

Claim.—1. The combination, with the grain-receptacle, of a binding-table, on the inner or grain-side, and at or near the front end of said receptacle.

2. The combination, with the grain-receptacle, of a binding-table, on the inner or grain-side, and at or near the rear end of said receptacle.

3. The combination of the binder's foot-board, on the inner side of the grain-receptacle, with binding-tables respectively attached to the front and rear of the grain-receptacle.

4. The combination of the elevating conveyer with the curved bottom *f* of the grain-receptacle, as set forth.

90,667.—JOHN W. KINGMAN, North Bridgewater, Mass.—*Metallic Roofing.*—June 1, 1869.

Claim.—1. As an improvement in sheathing, a surface with metallic plates, the arrangement of the strips of hair-felt, saturated with oil-paint, or other water-proof drying equivalent, with the jointed or lapped plates, their fastening-nails, and the roof or surface to which the same may be applied.

2. The arrangement of the auxiliary plate or strip *c*, the strip of hair-felt, its saturating material or oil-paint, the jointed or over-lapped plates, the fastening-nails, and the roof or surface to which the same may be applied, the whole being substantially as herein-before set forth.

90,668.—MOSES KLEEMAN, Columbus, Ohio.—*Brad-Setter for Glaziers' Use.*—June 1, 1869.

Claim.—The combination of the setter or driver C, the spring D, and the opening or slot H, substantially as and for the purpose specified.

90,669.—JOHN L. KREIDER, Chestnut Level, Pa.—*Appliance to Hames and Means of Hitching Horses to Vehicles.*—June 1, 1869.

Claim.—1. The vibrating bar E and hook D, when connected by the rods F and applied to hames of substantially the described construction, for the purpose set forth.

2. The hook D, constructed substantially as described, when combined with the loop G, upon the end of the shaft or pole, as and for the purpose set forth.

3. The turning-bar U, constructed substantially as described, when used in connection with the hook D, as and for the purpose set forth.

90,670.—SAMUEL LAUCHLI, St. Louis, Mo., assignor to himself and FREDERICK SHICKLE, same place.—*Drilling-Apparatus.*—June 1, 1869.

Claim.—The combination and arrangement of the handles D and D', each having a collar, *d*, about the flanges *a*, with the rollers C and cheek-nuts E, upon the stock A, substantially as and for the purposes set forth.

90,671.—JACOB E. LUTZ, East Cocalico Township, Pa.—*Horse-Power.*—June 1, 1869.

Claim.—The combination and arrangement of the loose cogged hub *f*, with its spur-wheel F, when on the vertical shaft *d*, of the master-wheel E, and on the same horizontal plane, so that both act jointly upon two pairs of pinions, *g*, on their shafts G G, and impart motion to a pinion, H, on the pulley-shaft *h*, substantially in the manner and for the purpose specified.

90,672.—JACOB MAERHOFFER, Boonville, Mo.—*Cider-Press.*—June 1, 1869.

Claim.—The arrangement herein described of the nut F, provided with rollers R, arms G, and hooks I, in combination with the nurse K and eyes J, all constructed as and for the purpose set forth.

90,673.—JOSEPH MAYER, Brooklyn, N. Y., assignor to himself and JULIUS WATERMAN, New York City.—*Hoop-Skirt.*—June 1, 1869.

Claim.—A lady's skirt, formed of a woven or similar fabric, and provided with holes, through which the hoops are threaded, and for the purposes set forth

90,674.—WALTER S. MCMANUS and ROBERT S. MERRYMAN, Brunswick, Mc.—*Churn.*—June 1, 1869.

Claim.—The machine herein described, composed of all the described parts conjointly for operating the churn-dasher *z*, viz, base A, wheel *p*, crank *j*, rod *h*, arm *e*, standard *b*, rod *t*, arm *v*, with its hinged part *a'*, clamps *y y*, and support *w*, as herein set forth.

90,675.—EMILY W. MEYERS, Lincoln, Ill.—*Composition for the Production of Wax Flowers, Fruit, &c.*—June 1, 1869.

Claim.—The within-described compound, for the production of artificial flowers, fruits, &c., substantially as shown and described.

90,676.—JAMES MONTGOMERY, New York, N. Y.—*Coffee-Pot, Boiler, Digester, Oven, and Lamp.*—June 1, 1869.

Claim.—1. The combination, with the outer vessel, of an inner cylinder, arranged to move telescopically and automatically therein, substantially as and for the purpose described.

2. The combination, with the inner vessel, of a rod, G, or its equivalent, to control or extinguish the flame of the lamp, substantially as and for the purpose described.

3. The employment, as an additional heating-surface, of a tube extending upward through the liquid, and serving also as a steadying post or guide for the rising and falling cylinder, and a sheath for the adjusting-rod.

4. The means, substantially as described, for the preliminary adjustment of the height to which the inner vessel shall ascend before diminishing the flame of the lamp.

5. Within the oil-chamber, a boat-like top floating therein, and operating substantially as set forth.

6. The combination of the perforated tubes descending into the combustible matter, with the sliding-sleeves, having metallic lips, and operating automatically, substantially as and for the purpose set forth.

7. In combination with the means, substantially as described, of giving to the current of atmospheric air a course downward, then underneath the lamp, and then upward along its inner sides, the covered boat 4 serving to confine the current, and direct its exit only through the openings 6, surrounding the wick-tubes.

8. A lamp, constructed and operating substantially as set forth.

90,677.—CHARLES W. MOORE, San Francisco, Cal.—*Reducing Sulphur-Ore.*—June 1, 1869.

Claim.—The use of black oxide of manganese, burnt lime, and charcoal, in combination or together, as a desulphurizer, substantially in the proportion and manner and for the purposes specified.

90,678.—GEORGE RODNEY MOORE, Philadelphia, Pa.—*Gas and Water Meter.*—June 1, 1869.

Claim.—1. The rocking-valves *e e*, in combination with the water-ways *a b c d*, operated by the partition D, substantially in the manner and for the purpose herein set forth.

2. The pawls *k* and *l*, arranged to hold the valves, and to be operated by the partition D, substantially in the manner and for the purpose herein set forth.

3. The arrangement of the rotating piston D, with grooved edges, in combination with springs *g* and *h* and rods *j j*, substantially in the manner and for the purpose herein set forth.

4. The flanges 1 1 and underlapping edges 2 2, with a space between them, so as to allow a direction of current outward from D, or contrary to its direction when in motion, and thus constituting a self-acting fluid-packing, substantially in the manner and for the purpose herein set forth.

90,679.—CHARLES MURDOCK, Hartford, Conn.—*Barrel-Stave.*—June 1, 1869.

Claim.—The stave above described, when sawed so as that the transverse curvature at the center or bilge is on a longer radius than at the two ends, substantially as described.

90,680.—JOHN H. NALE, Decatur, Ill., assignor to himself and JOHN O. SLOAN, same place.—*Wagon-Seat.*—June 1, 1869.

Claim.—1. The combination and arrangement of the spring-slats B B and C C, and the supports D D, &c., with the seat A, substantially as and for the purpose shown and described.

2. The employment of the adjustable blocks D D, &c., in combination with the seat A and spring-slats C C, &c., for the purpose of increasing or lessening the tension of said springs, substantially as herein described.

90,681.—JOHN S. PALMER, Providence, R. I.—*Machine for Making Button-Hooks.*—June 1, 1869.

Claim.—1. In combination with the intermittently revolving table of a machine for forming button-hooks and like articles, the employment of a supplemental disk-plate, C, carrying a series of punches, A, arranged to operate substantially as described.

2. The combination of the punch-bearing disk-plate C and the concentric guide-plate H, or its equivalent, substantially as described, for the purposes specified.

3. The combination and arrangement of the disk-plate C, provided with a series of punches, as described, the intermittently revolving table F, the plunger D, and the guide-plate H, substantially as herein set forth.

90,682.—OLIVER E. PILLARD, New Britain, Conn., assignor to FREDERICK H. NORTH, same place.—*Combination-Lock.*—June 1, 1869.

Claim.—1. The arrangement of the slot *e* in the tumbler A, in combination with the tumbler B, pin *d*, slot *d'*, and latch *a*, so that when the latch *a* falls into the slot *e*, and allows the bolt D to withdraw, the slot *e* shall be on a line with the centers of the tumblers A and B, substantially as and for the purposes described.

2. The combination of the sleeve F, shaft E, pins *o o*, and grooves *m* and *n*, substantially as described, and for the purposes set forth.

90,683.—OLIVER E. PILLARD, New Britain, Conn., assignor to FREDERICK H. NORTH, same place.—*Permutation-Lock.*—June 1, 1869.

Claim.—Wholly or partially removing an occasional tooth, as at *e e'*, of the tumbler A, for the purpose of making the backlash in the teeth of tumblers A and B vary at irregular distances, substantially as described and for the purpose set forth.

90,684.—JOSEPH F. POND, Cleveland, Ohio.—*Chimney-Cowl.*—June 1, 1869.

Claim.—1. The curved overlapping revolving hood or shield D, so inclined and supported by its spindle C, upon the branched step B, that its lower edge will project below and beyond the top of the pipe A, without touching any part thereof, as shown, and for the purpose set forth.

2. The branched step B, when connected with the chimney or pipe A, in the line of its axis, as shown, and with the hood D, by means of the spindle C, socket *v*, and pin *f*, or their equivalents, substantially as shown, and for the purposes herein set forth and described.

90,685.—WILLIAM P. POTTER, Pittsburgh, Pa., assignor to "PITTSBURGH FORGE AND IRON COMPANY."—*Nut-Lock.*—June 1, 1869.

Claim.—The slot or slots in the plate or washer, and the slot or slots in the under side of the nut, and a key or pin driven into these slots or grooves, when matched or in line, which effectually prevents the nut from turning, and without the necessity of bending up the end or ends of the key, substantially as described.

90,686.—LEWIS PRESTON, Elizabeth Port, N. J.—*Spring-Butt.*—June 1, 1869.

Claim.—The rods D D, the shoulder C, and notches *n*, when used in connection with the butt B and spring E, substantially as and for the purpose specified.

90,687.—HENRY RATHMANN and GEORGE H. JOHNSON, Buffalo, N. Y.—*Velocipide.*—June 1, 1869.

Claim.—In a two-wheel velocipede, the forwardly projecting tiller N, cast or formed with the bifurcated bar L, arranged beneath the seat, and provided with the foot-rest and steering-plate *n'*, in combination with the frame B, carrying-frame C, and pulleys H I, and having said bar L jointed to its rear, through the medium of spindle *m*, as described.

90,688.—H. O. REED and JOSEPH W. FOWLE, Boston, Mass.—*Dry-Earth Water-Closet.*—June 1, 1869.

Claim.—The apparatus described in Figs. 1 and 2, including the application and combination of the valves and valve-rod, inclosed in the conductor *e*, in the manner and for the purposes shown and set forth.

90,689.—ISAAC S. ROLAND, Reading, Pa.—*Spoke-Lathe.*—June 1, 1869.

Claim.—1. The combination of the carriage F' with the chuck-carrier F, the rack-bar O, and the shaft P, substantially in the manner herein set forth.

2. The peculiar arrangement of parts for communicating the required longitudinal movements to the carriage F', and the respective operating-parts that are combined therewith, viz, the bevel-wheel *v*, secured to the loose pulley Q on the shaft P, and gearing with the bevel-wheel *u* on the transverse shaft *a*, the pinion *d'* on the shaft *a*, gearing with the toothed wheel I on the transverse shaft *t'*, the sliding pinion *u'* on the shaft *t'*, whose teeth can, by the action of the hand-lever *q*, be made to gear with the teeth of the rack-bar O, all substantially in the manner herein described.

3. The herein-described combination of parts by which I am enabled to impart such a compound series of movements to a spoke-blank, that a series of rotating cutters, *b b*, is enabled to reduce said blank to the desired spoke-shape, viz, commencing with a circular shape at the outer end of the spoke, and changing from that to a gradually widening oval shape toward the butt-end of the same, all substantially as herein set forth.

4. The herein-described combination of parts by which I am enabled to impart the requisite movements to the spoke to enable the rotating cutters *b b* to give the desired shape to the butt-portion thereof, (shown by Fig. 5½,) all substantially in the manner herein set forth.

5. The combination of the hand-lever J with the weighted lever *p*, the shaft *z*, and the auxiliary spoke-blank holder *a' f'*, Fig. 3, substantially in the manner and for the purpose herein set forth.

90,690.—BENJAMIN D. SANDERS, Wellsburgh, W. Va.—*Manufacture of Bungs.*—June 1, 1869.

Claim.—1. The mode of making bungs, plugs, taps, and jar-covers, by the means substantially as herein shown and described.

2. Two longitudinally converging grooved surfaces, made with the bottom of the grooves beveled or inclined in opposite directions, so as to operate in

reducing, by compression, a cylindrical blank to a taper form, substantially in the manner described.

3. A grooved segmental roller-plate, A, adjustable in a frame, B, substantially as described, so as to increase or lessen the eccentricity of the grooved wheel A′ with reference thereto, for the purposes set forth.

4. A roller taper-bung, made substantially as described, as a new article of manufacture.

90,691.—F. Le Roy Senour, Eaton, Ohio.—*Combined Hoe and Rake.*—June 1, 1869.

Claim.—1. The described construction of the rake, in such manner that it will fold, as set forth.

2. The combination of a rake thus constructed with a hoe, in the manner set forth.

90,692.—Nicholas Seubert, Syracuse, N. Y.—*Alarm-Lock.*—June 1, 1869.

Claim.—1. The triangular cam H, in combination with the cams *d d*, or their equivalent, and the arm G, substantially as and for the purpose shown.

2. The pivoted angular arm G, operated upon by both knob and bolt, through the cams *b* and *g*, or their equivalents, substantially as and for the purpose herein described.

3. The within-described alarm, consisting of the arm G, cams *b*, *d d*, *g*, and H, hammer F, and bell E, when applied to a lock, substantially as and for the purpose set forth.

90,693.—Thomas Shaw, Philadelphia, Pa., assignor to himself and Philip S. Justice.—*Riveting-Machine.*—June 1, 1869.

Claim.—1. Arranging said combination of devices in the manner described, in frame *b a*, and combining therewith the anvil post or block *u*, and the screw and wedge *s* and *r*, for preventing lateral play of the hammer, substantially as described.

2. In combination with the combinations first mentioned in the foregoing clause, the disk *g*, or an equivalent pulley, the friction-belt *x*, and mechanism which shall simultaneously tighten the driving-belt and slacken the friction-belt, or slacken the driving-belt and tighten the friction-belt, substantially as and for the purpose set forth.

90,694.—Joel Shedd, Waltham, Mass.—*Wash-Boiler.*—June 1, 1869.

Claim.—The combination and arrangement of the double cover E E, D D, with the drop-channels C C and the tubes B B, substantially as described, and for the purpose set forth.

90,695.—H. Julius Smith, Boston, Mass., assignor to himself and Richard Smith.—*Paper and Print Roller.*—June 1, 1869.

Claim.—As a new article of manufacture, and an improvement in the arts of paper-making, cloth-printing, and other analogous arts, the rollers made, as hereinbefore specified, of nickle, or of metal coated with nickel by electro-deposition or otherwise.

90,696.—William Smith, Philadelphia, Pa.—*Steam-Engine Governor.*—June 1, 1869.

Claim.—The combination of the weights G G′, having inclines *g* and the springs H H, arranged substantially in the manner and for the purpose set forth.

90,697.—Alvin Soule, Yarmouth, Me.—*Mowing-Machine.*—June 1, 1869.

Claim.—1. The combination of wheel *i*, arms *l o m n*, with crank-shaft *q*, and arms connecting it with the cutters, as herein set forth.

2. The arrangement of wheels *b*, shaft *a*, gears *d e*, wheel *i*, arms *l m n o*, and crank-shaft *q*, as herein described.

3. The arrangement of brace *c′*, and arm jointed at *g*, to prevent the shoe from striking the wheel *b′* when the cutters are raised, as herein illustrated and described.

90,698.—M. M. Sprinkle, Rochelle, Va., assignor to himself and Robert C. Garnett, same place.—*Corn-Planter and Fertilizer.*—June 1, 1869.

Claim.—1. The slide M, constructed and operating, in connection with the part J, as and for the purposes specified.

2. In combination with slide M and bottom J, the levers L O, catch *o*, and cams *k k′*, constructed and operating as described.

3. The adjusting-plates *r r*, and screws *s s*, in combination with the sliding-plate M, and bottom J, substantially as and for the purpose specified.

90,699.—James J. Steward, Big Prairie, Ohio.—*Locking-Burr.*—June 1, 1869.

Claim.—1. The base *a*, provided with projection *c* and spring *d*, in combination with the grooved screw *b*, substantially in the manner and for the purpose described.

2. The nut *e*, formed on its lower surface with steps *g g g*, in combination with base *a*, provided with projection *c* and spring *d*, and grooved screw *b*, arranged and operating substantially as described.

90,700.—Luke W. Taylor, Weathersfield, Vt.—*Automaton-Hoop.*—June 1, 1869; antedated May 28, 1869.

Claim.—1. The arrangement as well as the combination of the annulus A, the frame B, the driving-wheel C, and its crank or crank-wheel D.

2. The arrangement of the automaton E, and its supporting-frame B, with the annulus A, and the driving-wheel C.

3. The combination for effecting the movements of the body and legs of the automaton, such combination consisting of the posts or standards *e e*, the shaft F, with its four cranks, the crank-wheel D, or its equivalent, and the branched connecting-rod, the whole being applied to the body and legs of the automaton, as set forth.

4. The combination of the auxiliary arms *l* with the primary arms *c*, and the body and legs of the automaton, provided with mechanism as described, for operating them, in manner as set forth.

90,701.—Daniel E. Teal, Norwich, N. Y.—*Spring Rocking-Chair.* — June 1, 1869; antedated May 19, 1869.

Claim.—1. The box or mortise C, when used in connection with the shaft D, as and for the purpose specified.

2. The combination of spider B, box or mortise C, shaft D, and springs F F, as and for the purpose herein described.

90,702.—Stephen D. Tucker, New York, N. Y.—*Lithographic Inking-Roller.*—June 1, 1869.

Claim.—A roller, for inking lithographic stones, formed of a metal core, A, surrounded by a coating of rubber, B, combined with an outer covering of leather, C, or its equivalent, substantially as described and specified.

90,703.—J. J. Tucker, Eugene, Ill.—*Hedge-Planter.*—June 1, 1869.

Claim.—1. Plow H, with plow-standard C and adjustable apparatus of levers F and K and spring *b*, as above described, substantially as and for the purpose aforesaid.

2. Hopper B, in connection with plow H and adjustable plow-standard C, as before set forth, substantially as and for the above-named purpose.

3. Earth-rollers D D, in combination with plow H, adjustable plow-standard C, and hopper B, all as described, substantially as and for the purpose before mentioned.

4. Covering-shovels E E, adjustable laterally in mortises *f f*, by screws *g g*, in combination with earth-rollers D D, plow H, adjustable plow-standard C, and hopper B, substantially as and for the purpose before named.

5. The hedge-planter, herein described, consisting of wagon-body A A, mounted upon wheels, with plow H, adjustable plow-standard C, hopper B, earth-rollers D D, and covering-shovels E E, operated and constructed as aforesaid, substantially as and for the purpose described.

90,704.—S. D. Tuttle, Eaton, Ohio.—*Combined Punch and Screw-Driver.*—June 1, 1869.

Claim.—The bar A, provided with rectangular projections *b b* and screw-driver C, substantially in the manner and for the purpose described.

60,705.—C. VON BONHORST, Lancaster, Ohio.—*Dental Mouth-Meter.*—June 1, 1869; antedated May 15, 1869.

Claim.—1. An adjustable or spring mouth-meter, adapted to be used in the process of inserting artificial teeth, substantially as described.

2. The mouth-meter, combining the spring and index, made in one piece, substantially as described.

90,706.—C. VON BONHORST, Lancaster, Ohio.—*Dental Articulating-Cup.*—June 1, 1869; antedated May 15, 1869.

Claim.—1. A dental articulating-cup, constructed substantially as described, for obtaining the "bite" of the mouth.

2. The articulating-cup, provided with a graduated scale, for indicating the length of the upper lip, and of the teeth to be inserted, substantially as described.

90,707.—ALMERN B. WALTERS, Philadelphia Pa.—*Coffee-Pot.*—June 1, 1869.

Claim.—The application of the tube T, constructed as set forth, to the lid L of coffee-pots, substantially as and for the purpose specified.

90,708.—D. J. WALTZ, H. A. SOLIDAY, and WILLIAM HAMSHER, Doylestown, Ohio.—*Railway-Gate.*—June 1, 1869.

Claim.—The combination of the connecting-rod C and hinged links D, and weight G, when used to operate gate A, by the means and in the manner substantially as described.

90,709.—GEORGE E. WARING, Jr., Newport, R. I., assignor to the EARTH-CLOSET COMPANY, Hartford, Conn.—*Deodorizing Water-Closets.*—June 1, 1869.

Claim.—1. The movable platforms *i* and *j*, substantially as herein described.

2. The combination of the hopper *g* with the movable platforms *i* and *j*, for the purposes of an earth-closet, substantially as specified.

3. The movable platform *i*, with its projection *i'*, for carrying forward the proper quantity of earth, in combination with the hopper *g*, substantially in the manner herein described.

4. The platform *j*, at a given depth below the seat, so that the earth may always be transferred to the same place to cover the excrement, substantially as specified.

90,710.—GEORGE H. WHITE, Huntington, N. Y.—*Ferrule for Shoe-Strings.*—June 1, 1869; antedated May 20, 1869.

Claim.—A metal binding for shoe-strings, and other laces constructed of a blank, which is folded in the manner shown, substantially as and for the purpose specified.

90,711.—JOSEPH W. WHITE, Weymouth, Mass.—*Machine for Manufacturing Webbing for Ladies' Fans.*—June 1, 1869.

Claim.—1. The combination of the slotted roller D with a cement-supplying roller, C, in a machine for producing fan-webbing, substantially as described.

2. The combination of calendering-rollers with a roller, D, which is slotted or grooved, substantially as described.

3. In a machine adapted for producing fan-webbing, the printing of one of the sheets with a cementing-substance on its way to heated calendering-rollers, substantially as described.

4. A roller, D, which is slotted or grooved, substantially as and for the purpose described.

90,712.—DANIEL D. WHITNEY, Leominster, Mass.—*Stove-Shelf.*—June 1, 1869.

Claim.—1. The combination, with a stove-shelf, C, of the spring-catch D, for holding the same at the desired height, by contact with a projection or shoulder upon the supporting-standard, substantially as described.

2. The combination of the shelf C, provided with a spring-catch, D, with the vertical standard A, having horizontal grooves or recesses B, substantially as and for the purpose set forth.

90,713.—JACOB P. WILE, Nashville, Mich.—*Harrow.*—June 1, 1869.

Claim.—1. The arrangement of the extension-pole C and attached seat S, with the carriage-axle and wheels A B, and hinged harrow-sections D D, constructed, connected, and operated substantially as and for the purpose specified.

2. In combination with a wheel-carriage and hinged sectional harrow, the pulley E, crank *n*, and chain G, when said pulley and crank are elevated in front of the driver's seat, and the chain hooked to the harrow-sections, substantially as and for the uses set forth.

90,714.—ELBRIDGE G. WOODSIDE, San Francisco, Cal.—*Carriage-Wheel.*—June 1, 1869.

Claim.—The elastic packing-rings B, with their projections *e* and recesses *g*, and with or without shoulders *b b*, *f*, applied to the ends of the box C, in combination with the hub A, the ends of the interior of which are of a form corresponding to that of the rings B, substantially as and for the purpose described.

90,715.—HENRY ADOLPH, Clinton, Kansas.—*Medical Compound.*—June 1, 1869.

Claim.—The compound formed of the ingredients (in about the proportions) herein named, substantially as and for the purposes set forth.

90,716.—JOHN AGATE, Pittsford, N. Y.—*Beer-Cooler.*—June 1, 1869.

Claim.—1. The coupling C, constructed and operating substantially as and for the purposes set forth.

2. The application of the faucet F, so constructed and arranged, in connection with the pipes *i*, *j*, and *l*, so as to operate in the manner and for the purposes set forth.

3. The arrangement of the beer-channels B within the vat A, substantially as shown, so as to form the circuitous water-spaces by the channels themselves, for the purpose set forth.

4. The overflow-pipe *p*, arranged and operating as and for the purposes shown and described.

5. The arrangement of the induction beer-pipes *i* and *j*, and exit-pipe P, in combination with the inlet water-pipe *y'*, and discharge pipes *k*, or their equivalents, for the purpose of producing a double counter-current of the two liquids.

90,717.—R. N. ALLEN, Pittsford, Vt.—*Water-Meter.*—June 1, 1869.

Claim.—The sleeve F, provided with ports or openings, and the tubular shaft, having also ports or openings, in combination with the vibrating box and diaphragm M, substantially as and for the purpose herein specified.

90,718.—JOHN S. APPEL, Kulpsville, Pa.—*Pumping-Lever.*—June 1, 1869.

Claim.—The arrangement of the adjustable clips *n*, the removable levers *m*, the notched brake-beam L and the looped rods C, as herein described, for the purpose specified.

90,719.—MARGARET ARMSTRONG, West Alexander, Pa.—*Cooking-Stove.*—June 1, 1869.

Claim.—1. The arrangement of the hearth H, fire-chamber F, large oven C, smaller rear extension O', pipe P, and ash-box R, extending from the front edge of the hearth to the rear edge of the small oven, as and for the purposes specified.

2. In connection with a stove, constructed substantially as herein described, the detachable ornamental pieces A B C, each having the flat part *a b c*, and the vertical flange or flanges a^1 b^1 c^1, a^2 b^2 c^2, substantially as and for the purpose specified.

90,720.—A. C. BACON, Bergen, N. J.—*Steam-Heater.*—June 1, 1869.

Claim.—1. The arrangement of the heater A and water-reservoir B, with reference to the fire-place of the heater, whereby to produce steam for heating purposes, as set forth.

2. The arrangement of the steam-heat radiator E and pipe *a* with the water-reservoir B, arranged

within the heater, substantially as herein shown and described.

3. The arrangement of the condensing-pipe *c*, steam-heat radiator E, and water-reservoir B, as set forth.

90,721.—ALFRED BAILEY, Oswego, N. Y.—*Rotary Steam-Engine.*—June 1, 1869.

Claim.—1. The arrangement of the devices whereby the steam is admitted to and exhausted from the cylinder, substantially as herein described and shown.

2. The construction of the abutments G, arranged substantially as herein described.

90,722.—NATHAN BREED, Jeffersonville, Ind.—*Cotton-Seed Planter.*—June 1, 1869.

Claim.—1. The adjustable seed box or boxes G, constructed with an adjustable hinged bottom, L, substantially as herein shown and described, and for the purpose set forth.

2. The adjustable sleeve or sleeves K, provided with arms or teeth N, in combination with the seed box or boxes G, and axle or shaft, from which they receive motion, substantially as herein shown and described, and for the purpose set forth.

3. The scrapers O, in combination with the seed-box G and arms N, substantially as herein shown and described, and for the purpose set forth.

90,723.—GEORGE C. BUELL, New Haven, Conn.—*Velocipede.*—June 1, 1869.

Claim.—The application to velocipedes of either a flat, spiral, or other kind of spring, of any shape or form whatsoever, to the supports, rising from the axle of either or both wheels, for the purpose set forth and described.

90,724.—JOSIAH BURGESS, Zanesville, Ohio.—*Portable Soldering-Furnace.*—June 1, 1869.

Claim.—The soldering-furnace, constructed as described, of the case C, having its slotted bottom provided with lips D, the hood E, and the perforated top H, arranged with the burner A and tube B, as herein set forth, for the purpose specified.

90,725.—D. S. BUTLER, Otterville, Mo.—*Tug-Buckle.*—June 1, 1869.

Claim.—An improved tug-buckle, formed by the combination of the body A a^1 a^2 and tongue-piece C c^1 c^2 with each other, said parts being constructed, arranged, and operating substantially as herein shown and described, and for the purpose set forth.

90,726.—LUKE CHAPMAN, Collinsville, Conn.—*Machine for Forming Bits for Axes.*—June 1, 1869.

Claim.—1. The bit-forming dies E C, made of cast iron, and constructed and arranged substantially as specified.

2. The dies C, made in two parts, *a*, and secured to the recesses in the support B, having the passages D, by keys, as specified.

3. The combination of the feeding-tables H, arms I, shaft K, arms L, N, R, hub O, spring P, and stud Q, on the driving-wheel, all substantially as specified

90,727.—ROBERT A. CHESEBROUGH, New York, N. Y.—*Mode of Preventing Canals, &c., from being Closed by Ice.*—June 1, 1869.

Claim.—1. One or more heating-pipes, *a*, arranged in sections of convenient length, and connected with boilers or furnaces located at suitable intervals along the line of a canal or water-course, substantially as and for the purpose described.

2. Inclosing locks or other portions of a canal or water-course with a shelter, whose walls are transparent, or in part transparent, and its ends movable vertically, substantially as and for the purpose described.

90,728.—ISAAC CHURCH, Jr., Norwalk, Conn.—*Steam-Engine Lubricator.*—June 1, 1869.

Claim.—The arrangement of the two vertical stem-valves I K, substantially as herein set forth.

90,729.—A. B. COOK, Manchester, Tenn., assignor to WILLIAM S. HUGGINS, same place.—*Anti-Friction Metal.*—June 1, 1869.

Claim.—The metallic composition herein described, to be used as an anti-friction bearing for shafts, &c., as specified.

90,730.—JOHN W. CURRIER, Springfield, Mass. *Car-Coupling.*—June 1, 1869.

Claim.—The hunters A and B, provided with laps H and H, and sockets G, when combined with the link F, constructed with flange *a*, in the manner and for the purpose shown and described.

90,731.—JOHN W. CURRIER, Springfield, Mass.—*Device for Holding Interfering-Bands in Place.*—June 1, 1869.

Claim.—In combination with the rubber band A, the wire or metal hook B, constructed as herein described, and for the purpose set forth.

90,732.—JAMES CURTIS, Chicago, Ill.—*Projectile.*—June 1, 1869.

Claim.—The slots or cuts B and C, (more or less in number,) in a musket-ball or elongated conical shot, arranged and formed substantially as and for the purposes described.

90,733.—H. T. CUSHMAN, North Bennington, Vt.—*Composition Paper-Polisher.*—June 1, 1869.

Claim.—1. The herein-described compound of matter, composed of the ingredients, mixed as specified, and adapted for polishing paper, as set forth.

2. A paper-polishing implement, composed of a handle, A, of ivory or other substance, and a mass, B, of the compound herein specified.

90,734.—SAMUEL C. DARDEN, Connersville, Miss.—*Cotton-Cultivator.* June 1, 1869.

Claim.—A convertible cotton-cultivator, constructed and operating substantially as herein shown and described; that is to say, with the driving or traction-wheels B B′, gear-wheel and pinion D and F, shafts C and E, revolving teeth or harrow G, and choppers H′, and triangular harrow I, arranged substantially as and for the purposes set forth.

90,735.—MILLINGTON EASLEY, Rush, Ill.—*Bee-Hive.*—June 1, 1869.

Claim.—The application to a bee-hive of the cloth A, substantially as and for the purpose specified.

90,736.—ELIAS EVANS, Montgomery, Ala.—*Clevis.*—June 1, 1869.

Claim.—The clevis herein described, consisting of the shank S and curved body A, having the holes *a* *a*, D, together with the bolts C C′ and nuts *e*, when adapted to be employed in connection with a plow-beam having the gain *b*, substantially as and for the purposes set forth.

90,737.—CHARLES H. FINSON, Bangor, Me., assignor to himself and JOSEPH SEMPLE, same place.—*Meat-Chopper.*—June 1, 1869.

Claim.—1. A meat-chopper, so constructed and arranged that the dish and the blades may both be rotated upon a common center, substantially in manner as and for the purposes specified.

2. The combination and arrangement of platform A, with spindle *a* inserted therein, the tube *i* sliding upon rod *a*, and having secured to A the handle J and the cutting-blades and the chopping-dish, all arranged to operate substantially in manner as and for the purposes specified.

90,738.—JAMES FOSTER, Jr., Camden, N. J., assignor to himself and NOAH HAND, same place.—*Boat-Detaching Apparatus.*—June 1, 1869.

Claim.—In a boat-detaching hook, the combination and arrangement of the levers C, D, and E, as herein described and for the purpose set forth.

90,739.—EDWARD P. FURLONG, Portland, Me.—*Machine for Forming Shirt-Bosoms from Paper and Cloth Combined.*—June 1, 1869.

Claim.—1. The shafts *a* *b*, with their peculiarly constructed fixed and rotary trucks, as herein described.

2. The combination of the said trucks with the paste roll and shaft *d*, as described.

3. The combination of the trucks on the said shafts *a b* with the guide-racks, guide-rolls, paste-roll, and shaft *d*, as described.

4. The smoothing-roll *m*, arranged as described, and for the purpose set forth.

5. The adjustable table A, with its guides *k*, combined and arranged as herein described.

90,740.—CARL GÜNTHER, Berlin, Prussia, assignor to FREDERICK VOLKMAN, Hoboken, N. J.—*Mode of Coating Threads with Metals.*—June 1, 1869.

Claim.—As new articles of manufacture, flexible threads, covered with metal foil, in imitation of gold and silver threads, as herein described, for the purpose specified.

90,741.—JOHN W. GOODALE, Amherst, Mass.—*Fire-Arm.*—June 1, 1869.

Claim.—The arrangement, as shown and described, of the firing-pin, nipple, and frame, pivoted to the side of the barrel of a fire-arm, so that they can be swung off from the track of the hammer when it is desirable to fire the rear charge.

90,742.—REUBEN C. GROVER and CHARLES W. RANDALL, Newton, Mass.—*Attaching Picks to their Handles.*—June 1, 1869.

Claim.—An eyeless pick, with recesses *d d*, secured to a slotted handle, C, by means of a strap, B. wedge E passing through the handle C and socket D, with its projections *e e*, the whole constructed and operated substantially as set forth.

90,743.—THOMAS S. HALL, Stamford, assignor to HALL'S ELECTRIC RAILWAY-SWITCH AND DRAWBRIDGE SIGNAL COMPANY, New Haven, Conn.—*Connection for Drawbridge-Signals.*—June 1, 1869.

Claim.—1. Applying the key or wedge of a drawbridge to operate automatically an electric or mechanical signal, as set forth.

2. The apparatus for closing circuits, to operate signals in the vicinity of drawbridges, consisting of the key C and of the box D, having the lugs *f*.*g*, slide-pin B, the shoulder *h*, and spring *i*, or their respective equivalents, all arranged and operating substantially as herein shown and described.

90,744.—THOMAS S. HALL, Stamford, assignor to HALL'S ELECTRIC RAILWAY-SWITCH AND DRAWBRIDGE SIGNAL COMPANY, New Haven, Conn.—*Switch-Alarm Connection.*—June 1, 1869.

Claim.—1. Conducting the lever I from the switch into a movable box, in which the device for establishing an electric current is contained, substantially as herein shown and described.

2. Attaching the cylinders C, that contain the wire-connecting devices and their appendages, to a movable sliding-plate, B, which is arranged in a box, C, substantially as herein shown and described.

3. The combination of the cylinder C with the insulated block D, metal plates E E′, oscillating plug G, lug *a*, levers H and I, all arranged and operating substantially as herein shown and described.

90,745.—CHARLES A. HARRIS, Owego, N. Y.—*Railway-Chair.*—June 1, 1869.

Claim.—Supporting the ends of rails, to prevent their being crushed, by means of the base-casting A, false side B, and drop-block C, in combination with the projections *e e*, for preventing the rails from being driven out, substantially in the manner herein set forth and described.

90,746.—CHARLES J. HARTMANN, London, England.—*Looking-Glass Attachment.*—June 1, 1869.

Claim.—1. The bracket C′, provided with the stud D, limited in movement upon its lateral axis by means of the stud E and projection F, and adapted to support the extension-tubes C, by the jointed connection, which is capable of oscillation or adjustment horizontally and vertically, as herein shown and described, for the purpose specified.

2. The reflector A, supported upon the extension-tubes C, by means of the oscillating adjustable stud L. the stud M, and oscillating stud N, all constructed and arranged as described, for the purpose specified.

90,747.—C. HARTZELL, St. Joseph, Mo.—*Plow.*—June 1, 1869.

Claim.—1. The triangular, elongated, horizontal cutting-blade or share *a*, attached to the landside of a plow, for the purpose described.

2. The clevis, with a horizontal jaw, *c*, vertically operating shanks *f*, horizontal draught-pin or bolt *i*, and the set or regulating-screw *l*, in combination with one another, substantially as and for the purpose specified.

90,748.—T. W. HAWKINS, New Haven, Conn.—*Fan.*—June 1, 1869.

Claim.—In a fan in which the two outer parts, on the opening of the fan, form the handle, constructing the said outer parts from sheet-metal, struck into concavo-convex form, substantially as set forth.

90,749.—E. H. HAWLEY, Kalamazoo, Mich.—*Air Gun and Pistol.*—June 1, 1869.

Claim.—1. The manner of covering the disk *f* of the puppet-valve with a skin of elastic rubber, for the purposes above described and set forth.

2. So arranging the puppet-valve *f* of an air-gun, in relation to the stock and barrel thereof, that the same may be operated by means of a spring, cock, or hammer, outside of and unenclosed by the stock, substantially as and for the purpose specified.

90,750.—E. C. HICKMAN, Washington, D. C.—*Flour-Sifter.*—June 1, 1869.

Claim.—The device above described, consisting essentially of the box B, the drawer D, the reciprocating-box C, having a sieve-bottom, E, the guides *w w*, the detachable pitman P, the crank *g*, the shaft G, the wheels *m* M, and crank K, the hinged cover B′, the hopper H, and the slide I, all constructed, arranged, and combined to operate in connection with each other, as and for the purposes specified.

90,751.—CORNELIUS R. HIGHT, Geneva, Ill.—*Portable Fence.*—June 1, 1869.

Claim.—The combination and arrangement of the whole as specified and set forth in the accompanying specifications and drawings.

90,752.—S. R. HOCKMAN, Urbana, Ohio.—*Hulling-Machine.*—June 1, 1869.

Claim.—The combination of the sharpened radial pins D with spirally fluted shaft C, and longitudinally grooved cylinder A, said pins being arranged in spiral lines, as shown, for the purpose specified.

90,753.—JOHN HONECKER, Columbus, Ohio.—*Boot and Shoe Top.*—June 1, 1869.

Claim.—As a new article of manufacture, top-pieces for boots and shoes, perforated by suitable dies and machinery, to represent any desired figure, and ornamented in the manner shown, by placing under said perforations pieces of leather of the same or different colors, and lining and stitching the whole together, as described, and for the purpose set forth.

90,754.—M. L. IVERS, Oneco, and GEORGE L. COOLEY, Plainfield, Conn.—*Compound for Cleaning Stone, &c.*—June 1, 1869.

Claim.—The composition herein set forth for cleaning stone.

90,755.—W. A. IVES, New Haven, Conn.—*Auger-Bit.*—June 1, 1869.

Claim.—In double-twist auger-bits, forming a floor-lip, *a*, upon one twist, and the other twist terminating in the spur-cutter *d*, and so as to form a recess between the said spur and the center screw, substantially as specified.

90,756.—WILLIAM J. KEEP, Troy, N. Y.—*Cooking-Stove.*—June 1, 1869.

Claim.—1. The separating of the direct sheet-flue from the return sheet-flue, by means of the arched dividing flue-plate E, or any equivalent therefor, constructed, arranged, and combined with said sheet-flues, in the manner and for the purpose substantially as herein shown and described.

2. The dividing of the space between the bottom oven and stove-plates, by means of the inclined and arched dividing flue-plate E, or any equivalent there-

for, in the manner and for the purpose substantially as herein shown and described.

3. The sheet-flue division-plate E, having a recess, K, at each front corner thereof, and a projection, H, between such recesses, and with an arched or raised center, extending from the rear end to within a short distance of the front end thereof, substantially as and for the purpose herein set forth.

4. The employment of the raised or arched sheet-flue division-plate E, or any equivalent therefor, in combination with the oven and oven-bottom flues, in the manner and for the purpose substantially as herein described and set forth.

5. The triangular opening G, or its equivalent, in and through the sheet-flue division-plate E, at or near to the rear end of the return sheet-flue, substantially as shown, and for the purpose specified.

90,757.—A. J. LANGWORTHY, Milwaukee, Wis.—*Shaft-Coupling.*—June 1, 1869.

Claim.—The coupling A B C, constructed substantially as described.

90,758.—SURVETUS LEACH, Wilbraham, Mass.—*Churn.*—June 1, 1869.

Claim.—The construction and arrangement of the frame A, cross-pieces K and K, hinged pieces L and L′, and forming bearings for the shaft I, when used in combination with the arrangement of shafts G and I and dashers H and J, herein described and shown.

90,759.—H. C. LEWIS, Essex, Conn.—*Auger-Bit.*—June 1, 1869.

Claim.—A single-twist auger-bit, having the spur forged solidly thereon, and in the relative position to the cutter shown and described, and in the manner and for the purpose specified.

90,760.—FRANCIS LUDLOW, Lake View, Ill.—*Horticultural Building.*—June 1, 1869.

Claim.—1. The double-walled horticultural building, having such construction of ventilators that the interior may be ventilated without permitting the escape of heat from between the walls, substantially as herein shown and described.

2. In combination with a double-walled horticultural building, a door, H H, the walls of which inclose a heating-chamber, and a slide, G, for admitting air into said chamber when the door is shut, and preventing air from escaping when the door is open, as herein specified and shown.

90,761.—EDWARD THOMAS MAINWARING, Tipton, England.—*Cotton-Bale Tie.*—June 1, 1869,

Claim.—The bale-tie, consisting of the rectangular slotted plate C, having one or more extended sides, E, and applied to the deflected portion of the hoop A, in the manner described, and secured thereto by the clip or clips D, as herein set forth, for the purpose specified.

90,762.—LOUIS JOSEPH FRÉDÉRIC MARGUERITTE, Paris, France.—*Extracting, Refining, and Crystalizing Sugar.*—June 1, 1869.

Claim.—1. The working up of the molasses, together with 85° alcohol, acidulated with any energetic acid, or variable proportions of alcohol at various degrees or temperatures, and the filtering of this mixture, substantially as specified.

2. Successive additions to the saccharine dissolution of various volumes of alcohol, at 95°, or more concentrated, if possible, substantially as specified.

3. The setting in contact of the saccharine liquor with sugar crystals, or hemp skeins, fabrics, or any supports previously covered with sugar crystals, for the purpose of determining the crystalization of the liquor, which otherwise would remain inert, substantially as specified.

4. The crystalization of sugar amidst the alcoholic liquor, and obtaining the same in the pure state, in the presence of the eliminated acids, by sulphuric acid, and all impurities contained in the molasses, substantially as specified.

5. Purifying the white or raw sugars of trade by means of alcohol more or less concentrated, substantially as specified.

6. Agglomerating this so pulverized, purified sugar by a saccharine alcoholic dissolution of variable concentration, using, for these two operations, spirit of wood, substantially as specified.

7. Using an aqueous saccharine decoloring material for agglomerating and lumping the sugar crystals, washed by alcohol, substantially as specified.

8. Agglomerating the crystals, either with or without compression, in close apparatus, substantially as specified.

9. Preparing sugar-candy by the continuous increase of the sugar crystals amidst the solution of sugar into alcohol.

90,763.—JOSEPH MARSHALL, New York, N. Y.—*Bath-Brush.*—June 1, 1869.

Claim.—The use of sponge, in combination with bristles or hair, or the equivalents of bristles or hair, in the construction of brushes, substantially as and for the purposes herein shown and described.

90,764.—JOHN MCCASKEY, Jr., Orville, Ohio.—*Revolving Clothes-Drier.*—June 1, 1869.

Claim.—A revolving clothes-frame, consisting of the stem or standard *b*, base *a*, cap *c*, formed with slots *d d*, ring *e*, arms *f f f*, and sliding-button *g*, all combined, arranged, and operating substantially in the manner and for the purpose described.

90,765.—JOHN A. MCCLELLAND, Louisville, Ky.—*Dental Plate.*—June 1, 1869.

Claim.—1. A palate or base-plate, A, having an upturned margin, *a*, and produced substantially as described, as a new and improved article of manufacture.

2. Making the gums and attaching them to the prepared palate or base-plate at one and the same operation of pressing, substantially as described.

90,766.—JOHN A. MCCLELLAND, Louisville, Ky.—*Machine for Treating Collodion and its Compounds.*—June 1, 1869.

Claim.—1. The preparation of collodion and its compounds in a vacuum, substantially as and for the purposes described.

2. The combination of mixing-vessels, having pistons working air-tight therein with reticulated or finely perforated passages, through which the substances, while being treated, are compelled to pass, substantially as and for the purposes described.

90,767.—JOHN ALEXANDER MCKAY, Auburn, Ind.—*Bridge.*—June 1, 1869.

Claim.—The combination of the chords B B′, the single and double braces A A^1 A^2, each bolted to the chords independently of all the others, and the triangular blocks D, intervening between the adjacent ends of the brakes, when said parts are constructed and arranged substantially in the manner and for the purpose herein set forth.

90,768.—CHARLES S. MEEKER, New Haven, Conn., assignor to himself and T. B. CARPENTER, same place.—*Adjustable Clamp.*—June 1, 1869.

Claim.—The combination of the socket A and nut B, each constructed with a loop, *a*, and provided with the screw C, and combined with the band D, attached to the said loops, the whole constructed substantially as herein set forth.

90,769.—H. B. MIDDAUGH, Mansfield, Pa.—*Spring-Hinge.*—June 1, 1869.

Claim.—The coiled spring D, secured at one end to the axle C, which carries the ratchet-wheel E, and has its bearings in the brackets B B, formed upon the leaf A of the hinge, and provided with the pawl F, the free end of said spring being adapted to catch over the edge of the leaf of the hinge, secured to the door in such a manner as to be released when the door is swung open to its fullest extent, or nearly so, as herein shown and described, for the purpose specified.

90,770.—OLIVER F. MOMANY, Dowagiac, Mich.—*Roller Grain-Drill.*—June 1, 1869.

Claim.—1. The construction and arrangement of the frame A and hopper C, in combination with the wheels B, sliding-frames *d*, and lever W, as and for the purposes specified.

2. In combination with frame A, wheels B, hop-

per C, and the frames *d*, the construction and arrangement of slides *f* and O, the bars *i* and 3, levers N, and handle *r*, and the arrangement of the coverers S, in combination with the pedestals T T, driver's seat X, all as and for the purpose specified.

90,771.—DANIEL MOORE, Davenport, Iowa.—*Bake-Oven.*—June 1, 1869.

Claim.—The inner oven B, having a bottom paved with brick, and provided with doors D D, and ventilating-openings, with dampers *d d*, in combination with an outer oven, A, chimneys C C, dampers *e e*, flues with dampers *c c*, and furnaces E E, having flues *b b* and openings S S, substantially in the manner and for the purpose as described.

90,772.—DAVID MORGAN, Hammondsville, Ohio.—*Machine for Desulphurizing Bituminous Coal.*—June 1, 1869.

Claim.—1. Desulphurizing bituminous coal by washing with water, substantially in the manner described.

2. The inclined troughs B, one or more, with the cross-bars or cleats *c*, substantially as and for the purposes herein shown and described.

3. In combination with the troughs B B, or either of them, the spiral conveyer E, substantially as and for the purposes set forth.

90,773.—EDGAR G. NICHOLS, Beaufort, S. C.—*Fence-Post.*—June 1, 1869.

Claim.—The fence-post herein described, constructed of one or two bars, as shown in Figs. 1 and 2, provided with braces which serve to support the rails or wires, said post being formed wedge-shaped at its lower extremity, substantially as and for the purposes set forth.

90,774.—ALFRED NIELSEN, Williamsburgh, N. Y.—*Velocipede.*—June 1, 1869.

Claim.—The double or slotted saddle-bar C, pivoted to the reach or connecting-bar A A′, at the angle of the same, provided at its front end with the pivoted operating-stirrups H, and connected at its rear end to the cranks F, by means of the connecting-rods E, all arranged as described, for the purpose specified.

90,775.—CHARLES G. NYE, Onondaga, N. Y.—*Tire-Heating Oven.*—June 1, 1869.

Claim.—1. In combination with the furnace or fire-box C, the annular heating-chamber, composed of the wings and annular flanged plate B B A *a* and the chimney *f*, substantially as and for the purpose herein set forth.

2. The combination of the furnace C, annular flue H, dampers I *i j k*, heating-chamber and chimney, substantially as and for the purpose described.

3. The combination of the adjusting-hinges *b* with the wings B B and annular flanged plate A *a*, substantially as described.

90,776.—THOMAS O'KEEFE, Appleton, Wis.—*Bedstead-Fastening.*—June 1, 1869.

Claim.—The improved bedstead-fastening plates A, provided with hooks B C, and otherwise arranged and applied, as specified.

90,777.—ALMARIN B. PAUL, San Francisco, Cal.—*Electro-Magnetic Amalgamator for Gold and Silver.*—June 1, 1869.

Claim.—1. The construction of the horizontal rotating hollow-axled glass or earthen cylinder A, for the purpose of amalgamating and separating metals, whether precious or base.

2. The introduction of electricity, through hollow axles or trunnions, into glass or earthen barrels, for the purpose of preparing ores for amalgamation, and for separating metals.

3. The introduction of magnets into glass or earthen barrels, for the purpose of acting magnetically upon ores during separation and amalgamation.

4. The amalgamation of pulverized ore, in a dry or wet condition, with mercury, in glass or earthen barrels or cylinders.

90,778.—I. C. PENNINGTON, Paterson, N. J.—*Steam-Generator Furnace.*—June 1, 1869.

Claim.—The arrangement of the air-pipes F, supported by the plates H C, with reference to the enlarged flue D, chimney-flue H, boiler C, and fire box and grate A B, as herein set forth and shown.

90,779.—W. H. H. PETERS, Tuskegee, Ala.—*Medical Compound.*—June 1, 1869.

Claim.—A medical compound, composed of the ingredients herein set forth.

90,780.—CALVIN D. PURDY, La Porte, Ind.—*Bedstead-Fastening.*—June 1, 1869.

Claim.—The socket for bedstead-fastening, constructed with the parallel perpendicular sides *b b*, containing the inclined planes *c c c c*, in combination with the round-beveled end *d*, and the hollow beveled key-seat, respectively, constructed and arranged substantially as set forth.

90,781.—SALMON W. PUTNAM, Jr., Fitchburgh, Mass.—*Bearing for Spindles and Shafts.*—June 1, 1869.

Claim.—1. The shaft, having the bearing so inclining or curved that a longitudinal pressure exerted in either direction will tend to retain it firmly in place within its box in a true central line, substantially in the manner and for the purpose described.

2. The box C, as constructed, and operating substantially in manner shown, box C being provided with the central groove or oil-chamber *i*, substantially as described.

90,782.—GEORGE P. REED, Boston, Mass.—*Velocipede.*—June 1, 1869.

Claim.—A velocipede containing the characteristics, arranged as before described, that is to say, the combination and arrangement of the swiveled axle *c*, provided with its independent wheels *d d*, and steering-rod *e*, the perch *a*, with its dasher or foot-rest *g*, driver's seat *b*, and brake *i*, and the driving-wheel, provided with the ratchet-wheels *j j*, and their cranks and pawls, or equivalents, and connected with the hand-levers *m m′*, and foot-treadles *s s′*, the whole being substantially as before described.

90,783.—CHARLES H. RIGGS, Windsor Locks, Conn.—*Auxiliary Jaw for Planer-Chuck.*—June 1, 1869.

Claim.—The construction and arrangement of the plates A and B, with semi-cylindrical jaws D, held in place between projections E by tongues and grooves, and operated by means of the worms H, the parts being all combined together, substantially as and for the purpose described.

90,784.—WILLIAM ROBERTS, Blue Hill, Me.—*Saw-File.*—June 1, 1869.

Claim.—The improved saw-file, made as described, and combining the features herein set forth, for the purposes specified.

90,785.—OBED RUGGLES, Franklin, Mass.—*Stove-Pipe Shelf.*—June 1, 1869.

Claim.—A portable warming-shelf for stoves, composed of the furcated bracket B, provided with the set-screws D D′, and formed with the double bearing surfaces F and J, and the ears G G, in combination with the shelf H, the whole being so made and combined as to be adapted to perpendicular or horizontal pipes, in manner and for the purpose as before explained.

90,786.—L. M. RUMSEY and W. P. SMITH, St. Louis, Mo.—*Pipe-Driver.*—June 1, 1869.

Claim.—The stirrup K, in combination with the follower J and adjustable drive-head E, provided with an internal screw-thread, to receive the end of the pipe F, as herein described, for the purpose specified.

90,787.—L. M. RUMSEY and W. P. SMITH, St. Louis, Mo.—*Drill for Rock and Earth with Attached Tube.*—June 1, 1869.

Claim.—1. The drill formed in one piece, with three or more cutting-chisel edges, radiating from a common center, and arranged in such a manner that wedge-shaped grooves *e* are formed between each

wedge-shaped chisel, terminating at the point *f*, as herein described, for the purpose specified.

2. The tube B, grooved spirally, and perforated, substantially as and for the purposes described.

3. Fastening a screen on to a well-tube, by a wire, which forces the screen into a spiral groove of the tube, so that the wire is depressed below the surface of the screen, substantially as shown and described.

4. The combination of the tube B with the drill A, or with any drill equivalent thereto, substantially as and for the purposes specified.

90,788.—F. SCHULTZ, Hoboken, N. J., and C. RENNE, New York, N. Y.—*Machine for Cutting Files.*—June 1, 1869.

Claim.—1. The combination of the belts or chains C, shaft D, and toothed wheel E, with the disk *d*, shaft F, ratchet-wheel H, pawl *f*, and springs G, all arranged and operating to impart the requisite feed-motion to the sliding-bed B, substantially as herein shown and described.

2. The cutter-holder L, when provided with a cross-slot and with two set-screws *l*, or their equivalent, for the purpose of holding the cutter K in either position, substantially as herein shown and described.

3. An improved file-cutting machine, consisting of the frame A, movable bed B, belts or chains C, intermittently rotating shaft D, shaft F, springs G, ratchet-wheel L H, pawl *f*, cam *o*, hammer N, spring cutter-holder L, cutter K, and rocking-support J, all combined and operating substantially as herein shown and described.

90,789.—JAMES M. SEYMOUR and DANIEL WHITLOCK, Newark, N. J.—*Machine for Wiring Blind-Slats.*—June 1, 1869.

Claim.—In a machine for wiring blind-slats, the independent cut-off A, provided with the spring *b*, or its equivalent, when constructed and operated substantially in the manner and for the purpose specified and shown.

90,790.—SAMUEL SIMPSON, Wallingford, Conn., assignor to SIMPSON, HALL, MILLER & CO., same place.—*Tea and Coffee Pot.*—June 1, 1869.

Claim.—In a pot, divided by the perforated division F, the arrangement of the cover G, so as to close either of the two divisions, in the manner substantially as herein set forth.

90,791.—GARNER A. SMITH, Bleecker, N. Y.—*Saw-Guide and Jointer.*—June 1, 1869.

Claim.—The saw-guide and jointer herein described, when all the parts are constructed, arranged, and operated as shown.

90,792.—WILLIAM SYDNEY SMOOT, Washington, D. C., assignor to THOMAS POULTNEY, Baltimore, Md.—*Breech-Loading Fire-Arm.*—June 1, 1869.

Claim.—The plunger *a*, in combination with the stud *o* and notch *n*, when arranged and operating substantially as and for the purpose set forth.

90,793.—FREDERICK SUTER, Williamsburgh, N. Y.—*Musical Instrument.*—June 1, 1869.

Claim.—The sonorous metallic disks B, hung in inclined positions upon the arms *a*, and adapted to be struck from below by any suitable mechanism, as herein described, for the purpose specified.

90,794.—HENRY TAYLOR and JOSEPH M. COALE, Baltimore, Md.—*Steam-Generator Safety-Valve.*—June 1, 1869.

Claim.—1. The intermediate or reciprocating valve F, in combination with the steam-passage G and perforations *f*, for the escape of steam, substantially as set forth.

2. The valve H, as constructed, with the steam-passage G running through its center, and the perforations *f* through its top, substantially as described.

3. The combination of the valves E F H with each other and with the steam-passages, substantially as described.

90,795.—H. THIELSEN, Burlington, Iowa.—*Railway-Car Truck.*—June 1, 1869.

Claim.—1. The cross-beams H, composed of plates arranged on edge, stiffened by means of angles along their upper and lower edges, and united at their ends to head-pieces K, substantially as described.

2. The construction of head-pieces K for the cross-beams, with flanges k k^1 k^3, and interior strengthening-wall k^2, substantially as and for the purposes described.

3. A tubular swing-beam, C, for a railroad-car truck, constructed substantially as described.

4. The construction upon a tubular swing-beam, C, of a socket-bearing, B, and side-stays *b*, substantially as described.

5. The construction of one piece of metal of a transom, A, with flanges a^1, rib *a*, and bearings a^2, substantially as described.

90,796.—SAMUEL THOMAS and JOHN THOMAS, Hokendaugau, Pa.—*Hot-Blast Oven for Iron-Furnaces.*—June 1, 1869.

Claim.—In an oven, or apparatus for heating an air-blast by the heated gases discharged from a furnace, introducing such heated gases at the top of the oven or heating-apparatus, substantially as shown and described, and for the purposes set forth.

90,797.—HENRY THOMPSON, Mobile, Ala.—*Velocipede.*—June 1, 1869.

Claim.—1. The combination, with the lever D and crotched connection with the front wheel, of the cross-head and rods H, connecting with the cranks, substantially as specified.

2. The arrangement of the rest M, fulcrum E, and lever D, with relation to each other and the frame or reach, as herein described, for the purpose specified.

90,798.—JOHN H. TOMLINSON, Chicago, Ill.—*Bucket.*—June 1, 1869.

Claim.—In combination with a bailed vessel, the handles C, arranged substantially as and for the purposes herein shown and described.

90,799.—S. B. WILKINS, Milton, Pa.—*Steam-Plow.*—June 1, 1869.

Claim.—1. In combination with the cylinder E, the frame N, plows W, and gauge-wheels S S, arranged substantially as described, for the purposes set forth.

2. The employment, in a steam-plow, of one or more plows, arranged in line, with rows of teeth upon a rotative cylinder, substantially as and for the purpose specified,

3. The combination of the plows W with the gauge-wheels S, stands T, and screw-rods U, provided with the hand-wheels V, substantially as herein described, for the purpose set forth.

90,800.—JOHN B. WILLETT, West Meriden, Conn.—*Vise.*—June 1, 1869.

Claim.—The dovetail projection *a*, upon the base and arm, and the corresponding recess *b*, in the jaws, with the block *d*, the set-screws *f*, for forming a bearing upon which the jaws will turn, substantially as set forth.

90,801.—DANIEL WILLIS, Jersey City, N. J.—*Toy.*—June 1, 1869.

Claim.—1. A toy-vehicle, provided with pivoted representations of animals, which are set in motion when the vehicle is drawn ahead, substantially as herein shown and described.

2. Connecting the pivoted representations, D, of animals, by means of the rods F, with the revolving wheels or axles of toy-vehicles, so that they will be oscillated when said axles or wheels are revolving, substantially as herein shown and described.

90,802.—C. L. WUESTENBERG, Pittsburgh, Pa.—*Impression Dental Cup.*—June 1, 1869.

Claim.—An impression-cup, made of the material herein set forth, said cup having a highly polished exterior, while the inside is left rough or unpolished, for the purposes stated.

90,803.—William L. Yantis, Brownsville. Mo. —*Self-Adjusting Switch for Street-Cars.*—June 1, 1869.

Claim.—The pivoted switch-block D, constructed substantially as herein shown and described, and provided with a coiled or equivalent spring, in combination with the rails of the main and switch tracks, as and for the purpose set forth.

90,804.—Herrmann Ahrend, Brooklyn, N. Y. —*Trunk-Lock.*—June 1, 1869.

Claim.—The slide-latch *d e*, fitted into guide-ways *g*, on the lock-plate, in combination with the spring-platform *b*, hasp A, and with an ordinary locking-mechanism, all as shown and described.

90,805.—Herrmann Ahrend, Brooklyn, N. Y. —*Lock for Piano, &c.*—June 1, 1869.

Claim.—The bolts B B′, swinging on separate pivots *b b′*, and connected by a pin, *c*, and slot *d*, in combination with the tumbler C and stud *f*, all constructed and operating substantially in the manner shown and described.

90,806.—Alexander Allen, Rochester, N.Y.— *Automatic Fire-Alarm Apparatus.*—June 1, 1869.

Claim.—1. The system of signals for fire-alarm telegraphs herein shown, composed of a series of rapid alarm-signals, and a series of box-signals, when the same are so used as that an alarm-signal is interposed between any two successive box-signals, substantially as and for the purpose herein specified.

2. So arranging a series of pins or notches on any circuit-wheel, used in connection with a circuit-breaker, for the purpose of breaking the circuit in a magnetic fire-alarm telegraph, substantially as herein shown, as that two or more revolutions of said circuit-wheel shall cause two or more alarm-signals, and two or more box-signals, an alarm-signal being interposed between any two successive box-signals substantially in the manner and for the purpose herein specified.

3. So constructing an automatic fire-alarm, and the circuit-wheel connected thereto, as that said alarm shall first sound a fire-signal, then a box-signal, then repeat fire-signal, then repeat box-signal, and so on, substantially in the manner and for the purpose herein specified.

4. The peculiar arrangement and combination of the segmental drive-wheel 13, stops 25 25, pinion 12, shaft 37, and circuit-wheel 17, the several parts being arranged substantially as and for the purpose herein specified.

5. The peculiar arrangement and combination of the crank 28, shaft 38, spring 27, segmental drive-wheel 13, pinion 12, shaft 37, and circuit-wheel 17, the several parts being arranged substantially as and for the purpose herein specified.

6. The peculiar arrangement and combination of the spring 27, shaft 38, segmental drive-wheel 13, pinion 12, shaft 37, with circuit-wheel 17, and ratchet-wheel 14 thereon, gear-wheel 11, with pall 15 and spring 16, gear-train 10, 9, 8, 7, 6, and shaft 35, with regulator 33 thereon, the several parts being arranged substantially and for the purpose specified.

7. The circuit-breaker 4, having the sliding-rod 21 arranged therein, when used in combination with the circuit-wheel 17, having pins 18, 19, 20, or their equivalents, arranged thereon, the several parts being arranged substantially as and for the purpose herein specified.

8. The peculiar arrangement and combination of the standard 1, having one end of the main circuit attached thereto, the circuit-breaker 4 having the other end of main circuit attached thereto, and the sliding-rod 21 arranged therein, the circuit-wheel 17 with pins 18, 19, 20, or their equivalents, arranged thereon, the shaft 37, pinion 12, segmental drive-wheel 13, shaft 38, and spring 27, the several parts being arranged substantially as and for the purpose herein specified.

90,807.—John F. Appleby, Mazo Manie, Wis., assignor to himself and William Thompson, same place.—*Grain-Binder.*—June 1, 1869.

Claim.—1. The combination and arrangement of arms D *g* F, operating substantially as and for the purposes set forth.

2. The arm D, when provided with a forked part, E, one prong of which is again forked, to receive a pulley, *f*, and pin *x*, as and for the purpose set forth.

3. The arm F, when pivoted on the arm *g*, and provided with hooked lower end, and projections *h i*, substantially as and for the purposes described.

4. The rope *n*, when arranged as described, and operated by a spring, I, in combination with the arms D F, substantially as and for the purpose set forth.

5. In combination with the rope *n*, spring I, and arms D F, the brace K L, arranged to operate substantially as and for the purposes set forth.

6. In combination with the arm D, the guard *l*, when arranged and operating substantially as and for the purposes set forth.

7. The shuttle, when constructed with the hinged lid P, and grooved standard O, substantially as and for the purposes set forth.

8. The spring-stop *u*, when arranged to operate in the grooved standard O and hollow stem *r*, against the grooves *y*, in wheel N of the shuttle, substantially as shown and described.

9. The spiral end R of the shuttle, in combination with the bar C′, substantially as and for the purposes set forth.

10. The toothed wheel N, of the shuttle, the flanges of its disks being even with the ends of its teeth, and provided with two grooves *y* diagonally opposite each other, in combination with the openings *s′* in the shuttle, which openings are of smaller diameter than the wheel N, for the purpose of seizing and holding the two parts of the wire, and producing a short twist, substantially as herein described.

11. The cutter *j k′ k*, moving freely in projection *i* of arm F, and operated by spring G and plate B′, substantially as and for the purposes set forth.

12. The cutter *j k′ k*, when arranged to operate in such a manner as to cut off the long part of the wire only, as and for the purposes described.

13. The combination of pin *x*, in the forked part E of arm D, with the tongue J on arm F, for the purpose of keeping the two parts of the wire under the center of the shuttle during the operation of twisting, substantially as and for the purposes set forth.

90,808.—Elkanah S. Atwood, Boston Highlands, Mass., assignor to "Pratt & Wentworth," same place.—*Hinging Tea-Kettle Covers.*—June 1, 1869.

Claim.—A kettle, having a hinged lid, the hinge being formed substantially as described, to prevent the water of condensation from escaping to or dropping upon the outer surface of the kettle.

90,809.—Henry Bergstein, San Francisco Cal.—*Burglar-Alarm.*—June 1, 1869.

Claim.—1. The lever A, spring *b′*, and wire D, when arranged as described, in relation to a window-sash, and combined with the alarm-device I H′ h^1 h^3, in the manner described, and for the purpose set forth.

2. The hand-slide M, signal-board L, wire *k*, and lever K, when combined and arranged with each other, and with the alarm-device I H′ h^1 h^3, as described, for the purpose set forth.

90,810.—Eugène Henri Bernier, Paris France.—*Hoisting-Apparatus.*—June 1, 1869.

Claim.—1. An apparatus for raising and lowering weights, consisting of a frame, C, having mounted thereon the hoisting-gear, constructed as described; a self-acting safety-device, consisting of the stop-catches A′ A″ A‴ A⁗, and the parts connected therewith for operating the same, constructed as described; a guide-stretcher for the hoisting-chain *a*, composed of the grooved pulley V and a suspended weight, X, and the safety-chain G′, provided with a counter-weight, K′, all constructed, arranged, and operating substantially as herein shown and described.

2. The self-acting safety-apparatus, consisting of the stop-catches A′ A″ A‴ A⁗, and the parts connected therewith for operating the same, all constructed, arranged, and operating substantially as herein shown, as set forth.

3. The stretching-guide for the hoisting-chain *a*, consisting of the grooved pulley V and the suspended weight X, constructed and operating substantially as described.

90,811.—ABNER G. BEVIN, East Hampton, Conn.—*Bell.*—June 1, 1869.

Claim.—The spiral spring *x*, or its equivalent, placed upon the tongue B, between its pivot *s* and the perforated stud *c*, for the purpose of giving a sudden "trip" to the tongue at both ends of its vibration or play, all arranged, constructed, and operated as described.

90,812.—ALONZO T. BOON and LUCIEN MILLS, Galesburgh, Ill.—*Halter-Hitch.*—June 1, 1869.

Claim.—The slot or opening F, of a box or other device, provided with a bolt or catch, E, in combination with the loop of a halter, substantially as and for the purpose set forth.

90,813.—M. T. BOYD, Buffalo, N. Y.—*Composition for Dressing Harness and other Articles Made of Leather.*—June 1, 1869.

Claim.—The herein-described composition, compounded of the ingredients specified, substantially in the manner set forth.

90,814.—L. W. BROADWELL, New Orleans, La.—*Gun-Carriage.*—June 1, 1869.

Claim.—1. The combination of the wing-piece or plate F, and elevating-screw G, with the trunnion-piece D and revolving supporting-piece E, essentially as shown and described.

2. The combination of the end-piece I, the traveling nut or box J, with its operating-screw K, and the revolving supporting-piece E, substantially as specified.

90,815.—EDWARD BROWN, Philadelphia, Pa.—*Pyrometer.*—June 1, 1869.

Claim.—The detachable hand-pyrometer, constructed with the tube A, open at each end for the free passage of the hot blast, in combination with the usual expansion-strip D, arranged therein, for giving motion to the pointer of a dial, secured upon the non-expanding bar E, substantially as described.

90,816.—HAYDN BROWN and SOMERBY N. NOYES, West Newbury, Mass., assignors to S. C. NOYES & CO., same place.—*Comb.*—June 1, 1869.

Claim.—1. The new manufacture of comb-back, made as described, viz, with the fastening-flange or tenon, and the tooth-guard, arranged together as set forth.

2. The improved manufacture or comb, in the back of the body of which a brace of metal, for strengthening the same, is fitted and fastened, and so lapped down on one side of the body as to form, between the brace and the body, a recess or space for the reception of the teeth or points of the teeth, of another comb-body, when pivoted to and closed with the first body, in manner as hereinbefore mentioned.

3. When a metallic brace is applied to an ivory, horn, shell, or hard-rubber comb-body, as described, the formation of all the rivet-holes but one of such brace, as slots, arranged so as to allow of the expansion and contraction of the body, lengthwise thereof, without hinderance from the rivets going through such slots, the same being to prevent breakage or warping of the body.

90,817.—FRANK BUCKELEW, San Rafael, Cal.—*Washing-Machine.*—June 1, 1869.

Claim.—Constructing the tub with the supporting-cleat D, and with inclined sides A B, against which the fabric strikes as the wheel is turned, with the radial arms G, provided with openings G′, to which the fabric to be washed is attached, as set forth and shown, for the purpose specified.

90,818.—HIRAM P. BURDICK, Buffalo, N. Y.—*Hay Raker and Loader.*—June 1, 1869.

Claim.—1. The hinged endless carrier G, in combination with the hay-platform C′, permanently supported by both the front and rear wheels of the wagon, by means of the forward extension of the side-rails C, the whole arranged and operating as herein set forth and described.

2. The arrangement for elevating the carrier E, consisting of the drum M, hand-wheel M′, dog *p*, chains *n n*, and pulleys *o o′*, substantially as set forth.

3. The combination and arrangement of the rod *s*, spring *t*, chains *q n*, and endless carrier E, for automatically elevating the latter, as set forth.

4. The rope *u u′*, for unloading, when applied and operating in the manner specified.

90,819.—WILLIAM J. COCHRAN, Baltimore, Md.—*Construction of Retorts for the Manufacture of Coal-Gas.*—June 1, 1869.

Claim.—A retort for the production of coal-gas, or for other purposes, composed of iron and fire-brick, or fire-clay, in combination with each other, in the manner and by the means substantially as herein described.

90,820.—JOHN L. COOPER and ELIAS A. MONROE, Elmira, N. Y.—*Spring Bed-Bottom.*—June 1, 1869.

Claim.—A spring bed-bottom, consisting of frame A, parallel wires *a a*, longitudinal wires *b b*, diagonal braces D D, E E, and spiral springs B B, the whole being constructed, combined, and arranged substantially as and for the purpose specified.

90,821.—ROBERT P. CRANE, Beloit, Wis., and ELLERY B. CRANE, Worcester, Mass.—*Automatic Railway-Gate.*—June 1, 1869.

Claim.—1. The combination of the lever G, the hanger or lifter *g*, provided with the stud *r*, the lever-catch H, the lever E, and its operating mechanism, as described, the said lever E being applied to the gate, and the said lever G being applied to the tripper, by means substantially as specified.

2. In combination therewith, the auxiliary or guard catch I, arranged and combined with the main catch H, in manner and for the purpose as explained.

90,822.—J. THOMPSON CREE, Worcester, Mass. *Stone-Dressing Machine.*—June 1, 1869.

Claim.—1. The frame C, supported upon friction-balls, substantially as and for the purpose set forth.

2. The combination with the columns or standards B, and frame C, of the friction-balls *b*, substantially as and for the purposes set forth.

3. The combination, with the frame C, supported upon friction-balls, of the operating-cranks *d d*, substantially as described.

4. The combination, with a lower stone-frame, having a rotary reciprocating motion, of an upper stone-frame, having a reciprocating motion, substantially as described.

5. The combination, with frames G and H, of the friction-balls 1, substantially as and for the purposes set forth.

6. The arrangement with the upper reciprocating-frame H of two blocks of stone, to be ground and polished, substantially as shown and described, whereby a central longitudinal opening, *s*, is left between them, for the reception and more rapid and even distribution of the grinding and polishing material, substantially as described.

7. The combination, with the blocks of stone to be ground and polished, arranged in reciprocating-frames, the upper one of which is capable of rising, for the purpose stated, of small pieces of buhrstone, chilled iron, and steel, substantially as and for the purposes set forth.

90,823.—LEWIS CUTTING, San Francisco, Cal.—*Hoisting-Apparatus.*—June 1, 1869.

Claim.—1. The brake-bar I, provided with the angular shoulders K, in combination with the brake D, horizontal brake M, and connecting-rod F, the whole constructed and arranged to operate substantially as described.

2. The slotted link L, for connecting the brake-bar and horizontal brake, as described, and the pin P, for arresting the downward movement of the brake-bar, substantially as set forth.

90,824.—JOHN DICKENSON, Bay Ridge, N. Y.—*Preparation of Mineral Carbon for use in the Arts.*—June 1, 1869.

Claim.—1. The within-described process for forming mineral carbons in any shape desired, substantially as and for the purposes herein set forth.

2. As a new article of manufacture, mineral carbon, when formed in shape for making drills, cutters,

or dressers, for drilling, cutting, or dressing stone, metal, or other hard substances, substantially as herein set forth.

90,825.—Julius Edmund Dotch and Edward Duempelmann, Washington, D. C.—*Composition for Paving, Roofing, and for other Purposes.*—June 1, 1869.

Claim.—1. The employment of the metallic oxide, such as litharge, or finely divided metals, &c., to combine with the superfluous sulphur, in the treatment of hydrocarbons, for the purpose herein described.

2. The employment of chloride of sulphur, or the combinations of sulphur, in the various bases, for the treatment of hydrocarbons, as and for the purposes described.

3. The use of tungstate of baryta, in combination with drying oils, for coating the composition, as herein described.

4. A concrete pavement, having its surface roughened or indented, as herein described.

5. The corrugated roller, for indenting the surface of pavements, herein described.

90,826.—Robert Dunbar, Buffalo, N. Y.—*Turbine Water-Wheel.*—June 1, 1869.

Claim.—The combination of the guides *f* with the gates D, rods *g*, and ring E, arranged and operating as described.

90,827.—Nathan Eisendrath, Chicago, Ill.—*Treatment of Grain-Mashes, Worts, and Beer, after Fermentation.*—June 1, 1869.

Claim.—The treatment of grain-mashes, worts, or beer, (produced by the patented process mentioned,) after fermentation, and before distillation, with lime-water, or equivalent carbonate solutions, in the manner substantially as herein described, and for the purpose set forth.

90,828.—J. Austin Eldridge, Milford, Mass.—*Boot-Crimping Machine.*—June 1, 1869.

Claim.—1. The arrangement of the clamping-jaws of a boot-crimping machine, whereby the vertical parallelism of such jaws is maintained under all conditions of movement, substantially as herein described.

2. Operating the movable jaws of a boot-crimping machine, by means of a right and left hand screw cut upon the shaft, which passes through them, whereby great simplicity and cheapness of construction and effective operation are obtained, substantially as before explained.

3. In order to maintain vertical parallelism of the clamping-plates, the combination, with such plates, and their actuating-device, of the toggle-arms *e e* and springs *h h*, or their equivalents, the whole being arranged and operating as explained.

4. Applying the clamping-jaws to a boot-crimping machine, substantially in the manner described, so as to secure horizontal adjustment of such jaws for the purpose explained.

5. The combination, with the movable jaws, of a boot-crimping machine and their actuating-screws, of the swiveling-nuts *d d*, the same being applied and operating in manner as before set forth.

90,829.—William R. English and Stephen Rogers, English Centre, Pa.—*Wagon-Brake.*—June 1, 1869.

Claim.—1. The arrangement of the perch-pole D, levers F F, rods I I, brake-bar H, and bar J, in combination with the box C, pin *m*, and lever *n*, with the spring O, all constructed and operating substantially as herein specified.

2. The arrangement of the perch-pole D, plates or bars *a b d*, pin *e*, arms *f f*, tongue L, and slotted bounds O O, all substantially as and for the purposes herein set forth.

90,830.—Benjamin D. Evans, Columbus, Ohio.—*Combined Vapor-Burner and Lamp-Post.*—June 1, 1869.

Claim.—1. The arrangement of the generator E, with its chimney inside the generating-box B, with the jet at Fig. 6, all constructed as hereinbefore set forth, as and for the purposes described.

2. The attachment of the pipe R with the chimney, passing up through the outer pipe C, to the burner K, whereby the gas is conveyed to the burner, substantially as shown and described.

3. The combination of the burner K, the pipe R, the generator E, pipe D, reservoir A, the outer pipe C, and generator-box B, by which a lamp and lamp-post are constructed and formed, all constructed and arranged as set forth in the foregoing specification, and in Figs. I, II, III of the drawings hereto attached.

90,831.—Corydon A. Fargo, Soquel, Cal., assignor to himself and Barber Darling.—*Gang-Plow.*—June 1, 1869.

Claim.—1. The bent plates D D, attached to the outer frame, as described, the vertical set-screws D′ D′, which bear upon the said plates, for raising or lowering the plow-beams, substantially as set forth.

2. The vertical ways E E, friction-rollers E′ E′, operating in the said ways, and the transverse bar F, to which the rollers are connected, substantially as and for the purpose set forth.

3. Connecting the two crank-axles H H by the rod K′, so that both of the said axles may be operated by the upright levers L L′, substantially as and for the purpose specified.

4. The set-screws J J, operating in the beams of the plow-frame, and linked to the arms I I of the axles, in combination with the said axles, as and for the purpose set forth.

5. In combination with the levers L L′, operating in the double-rack M, the pawls R R, for unshipping or releasing the levers alternately from the notches P′, substantially as and for the purpose specified.

6. The front-end cross-beam of the outer frame, for attachment of the neap, or pole, axle, and crank-axle of the driving-wheels, in combination with the crank-axle S′ and semicircular rack U, the whole constructed and arranged to operate substantially as specified.

90,832.—George F. Fessenden, Arlington, Mass.—*Castanet.*—June 1, 1869.

Claim.—Castanets or clappers composed of main piece A and one or more auxiliary pieces attached to main piece, substantially as shown and described.

90,833.—Chester D. Flynt, Philadelphia, Pa.—*Life-Boat.*—June 1, 1869.

Claim.—As a new article of manufacture, a boat, the body of which is formed of interwoven strips or bands of steel, and a covering of canvas, oiled and painted, or otherwise made impervious to water, the canvas and steel strips being fastened to the gunwales and keel of the boat, all substantially as set forth.

90,834.—M. R. Fory, New York, N. Y.—*Apparatus for Felling Trees.*—June 1, 1869.

Claim.—1. The combination and arrangement of the frame A, guides D D, and carriage F, holding a series of augers, all as and for the purpose specified.

2. The arrangement of the adjustable arms I I, having hooked ends, and hung to the guides D D, as and for the purpose specified.

90,835.—Theodore F. Frank, Buffalo, N. Y.—*Tea and Coffee Pot.*—June 1, 1869.

Claim.—An oscillating coffee pot, of the general construction herein shown, having the chambers D D′, pipe I, and passage *e*, arranged as described, and for the purpose shown.

90,836.—Washington L. Gilroy, Philadelphia, Pa.—*Green-Corn Fork.*—June 1, 1869.

Claim.—The application of cutting-edges to a table-fork or spoon-fork, substantially in the manner and for the purpose described.

90,837.—Joseph Guild, Buffalo, N. Y.—*Velocipede.*—June 1, 1869.

Claim.—1. The slotted pedals K K, cranks *b*, bent lever N, and pitman *p*, all arranged and combined as herein described.

2. Hinging the bifurcated lever E to the frame C, by the eye-bolt *f*, in combination with the rest *g*, turning-rod *h*, and bearing *i*, so that a lateral move-

ment of the lever will cause it to turn on its axis and tip the steering-wheel D, as and for the purpose set forth.

90,838.—EDMUND J. HALL, Cambridge, Mass., assignor to ORVILLE PECKHAM, trustee, and said trustee assigns to EDMUND J. HALL and EDWIN A. HALL.—*Loom-Picker Shoe.*—June 1, 1869.

Claim.—The loom-shoe G *a*, having the friction-roller *c* placed in a lubricating-reservoir, all constructed and operating substantially as herein described, for the purposes specified.

90,839.—THOMAS F. HALL, Circleville, Ohio.—*Farm-Gate.*—June 1, 1869.

Claim.—1. The posts A, in combination with the arch C and pulleys D and E, as specified.

2. The combination of the gate F with the posts A, arch C, and pulleys D E, as specified.

3. The combination of the catch G, gate F, and springs H, as set forth.

4. In combination with the elements of these preceding clauses, the ropes K and L, and weight I, as specified.

5. The arrangement of the springs H H, for the purpose specified.

90,840.—WILLIAM HAWORTH, Canton, Ohio.—*Spring Bed-Bottom.*—June 1, 1869.

Claim.—1. The combination of the elastic wire rim E, conical springs B B, A A, spring-slats J J, and cords *p r*, the several parts being constructed, combined, and arranged substantially as and for the purpose herein specified.

2. The improved spring-bed, herein described, composed of the side-frame pieces G G, with notches *h h*, upper-end frame-piece N, with heads of slats J J secured thereto, cross-bar I, spring-slats J J, with slots *l* therein, lower-end frame-piece H with pins *k k* therein, edge springs B B, center springs A A, elastic wire rim E E E, cording *p p*, *r r*, *t t*, elevating hinge-blocks *a a*, *b b*, hinges *c c*, head-frame K L M K, with springs C C, D D, elastic rim F F, cording *u v*, and frame-pawl O P O, with axial hinges *d d*, the several parts being constructed, combined, and arranged in the manner and for the purposes herein specified.

90,841.—M. HIPP, Neufchatel, Switzerland.—*Electric Clock.*—June 1, 1869.

Claim.—1. The circuit closing and reversing mechanism, adapted and employed to operate one or more detached "dials," under the control of a central regulator, substantially as described.

2. The series of circuit-closers v^1 v^2 v^3 v^4, arranged to actuate the "dials" or sections of "dials" in succession, substantially as described.

3. The pallet F, operating in combination with the notched plate I and key K, substantially as and for the purposes described.

4. The combination of the spring *k'* with the key K, notched plate I, and pallet F, substantially as set forth.

90,842.—ALBERT E. HERRINGTON and JOHN D. RICHARDS, Schooleraft, Mich.—*Portable Scaffold.*—June 1, 1869.

Claim.—The arrangement of the posts D, levers L, ladders F, sills A and B, wheel C, catches N, dogs I, and chains M, when all are combined, in the manner and for the purposes described.

90,843.—FRANCIS HOVEY and GEORGE F. HOVEY, New York, N. Y.—*Cider Mill and Press.*—June 1, 1869.

Claim.—1. The stationary sleeve , attached to the bottom of the hopper, projecting within the shaft B, and surrounding the screw A, substantially as and for the purpose herein set forth.

2. The cutting-blades *d*, having one or more ribs or corrugations upon their flat surfaces or sides, whereby the apples are mashed after they are cut, substantially as specified.

90,844.—ANDREW HUNTER, San Francisco, Cal.—*Grain-Separator.*—June 1, 1869.

Claim.—1. The formation of the chute B and C, with screen W W, and perforated plates Y Y Y Y, and inclining as shown in Fig. 1, substantially as described, and for the uses and purposes as hereinbefore set forth.

2. The combination, with the grain-separating chutes, of the mechanism substantially such as herein described, for imparting a horizontal vibratory, or both horizontal and vertical vibratory movement to the same, in the manner and for the purposes set forth.

3. The combination of the cross bars N N with chutes B and C, set-screws O and M, and pulleys X X, substantially as described, and for the uses and purposes hereinbefore set forth.

4. The combination of hopper E, feed-board I, feed-roller F, eccentric-roller H, substantially as described, and for the uses and purposes hereinbefore set forth, said combination of hopper, feed-board, and rollers to be attached to any machine for similar uses.

90,845.—DANIEL N. HURLBUT, Chicago, Ill.—*Adjustable Window-Screen.*—June 1, 1869.

Claim.—1. The combination of the cross-piece K with the frames A and B, when arranged and operating in a window-screen, substantially as and for the purposes described.

2. The combination of the pins O and set-screws P and cross-piece I, when arranged in a window-screen, substantially as and for the purposes set forth.

90,846.—FRANÇOIS ALPHONSE JACQUET, Paris, France.—*Gas Heating and Cooking Apparatus.*—June 1, 1869.

Claim.—A portable apparatus for cooking or heating, or both cooking and heating by gas, in which the air-deflector and the reflector are arranged, with relation to the gas-jet, so as to produce a double current of air, substantially as shown and described.

90,847.—GEORGE H. JOHNSON and GEORGE MILSOM, Buffalo, N. Y.—*Grain-Drier.*—June 1, 1869.

Claim.—An apparatus for drying and renovating grain, constructed of a chamber or bin, C, permeated by a system of porous flues, F, communicating with a furnace, B, below, and a chimney or escape-vent, L, above, all substantially in the manner and for the purpose herein set forth.

90,848.—THOMAS W. JOHNSON, New York, N. Y., assignor to himself and HENRY C. JOHNSON, Jr.—*Apparatus for Making Extracts from Tan-Bark.*—June 1, 1869; antedated May 25, 1869.

Claim.—The within-described process of making extract from tan-bark, by exposing the same, in succession, to the disintegrating action of a grinding-mill, and then to the disintegrating action of crushing-rollers, substantially in the manner herein set forth.

90,849.—WILLIAM V. KAY, Chicago, Ill., assignor to S. S. SARGEANT, Newark, N. J.—*Buckle.*—June 1, 1869.

Claim.—The lateral projections J K, arranged upon the inner extremity of the wedge G, and so proportioned to the loop F Z, that while they are free to pass therethrough before the trace is inserted, they prevent its possible loss, after the trace is connected with the tug, substantially as set forth.

90,850.—W. J. KEEP, Troy, N. Y.—*Cooking-Stove.*—June 1, 1869.

Claim.—1. The employment and arrangement of the flues M M, in combination with the heating space or chamber K and shield-plate O, for the purpose of supplying a continual current of highly heated air to the oven, substantially as herein shown and described.

2. The employment and arrangement of the shield-plate O beneath and in rear of the fuel-chamber A, and ash-tube C, for the purpose of protecting the oven from the intense heat radiated from said fuel-chamber and ash-tube, and also in combination with the hot-air chamber K and flues M M, to furnish means whereby the air admitted to the oven through said flues shall be compelled to pass over the front and end plates of the fuel-chamber and the entire

outer surface of the ash-tube, and become highly heated by contact with the surfaces of said fuel-chamber and ash-tube before entering the oven, substantially as herein specified.

3. The employment and arrangement of the additional top-oven plate P, near the top of the oven B, for the purpose of protecting said oven from the heat radiated from the combustion-flue N, and to prevent ashes from falling into said oven through the air jets or passages n', substantially as herein shown and described.

4. The employment and arrangement of the additional back-oven plate R within the back center-flue S, for the purpose of preventing radiation of heat from the oven B into said flue, and also, in combination with the double-top oven-plates n and P, and openings t and t', through the back-oven plate b' and openings n', through the plate n, to furnish a flue for the escape of air from said oven into the combustion-flue N, substantially as and for the purpose herein specified.

5. The employment and arrangement of the solid raised hearth G, which, in combination with the solid front plates of the ash-tube c and fuel-chamber a', prevents the entrance of air to said fuel-chamber above said hearth, substantially as herein shown and described.

6. The employment and arrangement of an opening for the admission of air to the fuel-chamber beneath and in combination with the solid hearth G, in the manner and for the purpose substantially as herein set forth.

7. The employment and construction of a damper or slide for the admission of air to the fuel-chamber, in which the openings are so arranged as that their front or rear edges shall be at an angle with, instead of parallel to, the front or rear edges of the corresponding openings in the plate beneath said damper, substantially as and for the purpose shown.

8. Dropping or offsetting the bottom-plate E at or near the front of the stove, for the purpose of giving increased depth to the ash-pit, which is situated entirely or principally forward of the front plate of said stove, substantially as herein shown and described.

9. The combination and arrangement of the extended and dropped or offset bottom-plate E, extended side-plates F F, solid raised hearth G, and front-plate or door V, for the purpose of producing an ash-pit, substantially as shown and specified.

10. The employment and arrangement of suitable doors, communicating with the hot-air space K, in front of the fuel-chamber A, in combination with the high solid hearth G, substantially as herein shown and for the purpose set forth.

90,851.—John S. Kendall, Northfield, Minn., assignor to himself, Ralph Emerson, and William A. Talcott, Rockford, Ill.—*Railway Stock-Car.*—June 1, 1869.

Claim.—1. The pipe R, arranged outside of the car, so as to conduct the water from the reservoir to the troughs, substantially as and for the purposes herein specified.

2. Hinging said trough to the side or end of the car, so that it can be turned down, out of the way, when not in use, substantially as herein described.

3. The combination of the feed-board V with the car and troughs, arranged substantially as and for the purposes specified.

4. In a railway stock-car, an elongated staple, T, with chain U, when constructed and arranged in such a manner as to prevent the cattle either from lying down or from rearing, substantially as set forth.

90,852.—Nathaniel Keyser, Newton, Iowa.—*Coal-Stove.*—June 1, 1869.

Claim.—The arrangement of the inclined tapering-pipe D, tubes E E, grate C, and ash-box B, within the stove A, substantially as set forth.

90,853.—Hiram Kimball, Randolph, Vt.—*Low-Water Indicator for Boilers.*—June 1, 1869.

Claim.—The combined arrangement of the elevated chamber B, buoyant cylinder F, valve G, and connecting-pipe P, substantially as herein set forth.

90,854.—William Copp and William Wrampelmeier, Louisville, Ky.—*Mode of Treating Wood to Resemble Carved Work.*—June 1, 1869.

Claim.—1. The glue composition, when consisting of the ingredients mentioned, and applied in the manner and for the purpose specified.

2. The filling composition, when consisting of the ingredients mentioned, and applied in the manner and for the purpose set forth.

3. The combination, in the method of pressing wood into shapes to resemble carvings, &c., of the glue and filling compositions, when applied as and for the purpose described.

90,855.—Alphons Krizek, Philadelphia, Pa., assignor to himself, Thomas Richardson, and John Neath, same place.—*Toothpick.*—June 1, 1869.

Claim.—A toothpick having a pointed hook, b, and spoon-shaped projection, c, for the purpose specified.

90,856.—Hugh Lee, Beloit, Wis.—*Railway Stock-Car.*—June 1, 1869.

Claim.—1. The movable transverse portions, subdividing the car-box into compartments, with their attached spouts and feed or water troughs, substantially as herein set forth and described, for the purpose specified.

2. The movable hinged head, neck, and hip partitions, subdividing the car or compartments into stalls, according to the size of the animals or gauge of the railroad, and connected to the transverse partitions, and to the ends or sides of the cars, substantially as herein set forth and described.

90,857.—Josiah Letchworth, Buffalo, N. Y.—*Bridle-Bit.*—June 1, 1869.

Claim.—The combination, with a wrought-iron mouth-piece of a bridle-bit, of the sleeves or mouth-protectors C cast thereon, substantially as set forth.

90,858.—John Cameron Macdonald, Waddon, and Joseph Calverley, Albany Road, Camberwell, England.—*Printing-Press.*—June 1, 1869; patented in England December 6, 1866.

Claim.—1. The combination of the dampening-rollers, their box, and steam-pipe, with the printing mechanism, substantially as described.

2. The combination of the driving-cam, swing-frame, tapes, and vibrating fingers, substantially as described.

90,859.—William Maclean and James H. Harris, Vermont, Ill.—*Buckle.*—June 1, 1869.

Claim.—The loops c' d', formed at the rear end of the buckle a, by means of the bar d, placed centrally between the bars c and e, substantially as described.

90,860.—Henry C. March, Limerick Station, Pa.—*Base-Burning Stove.*—June 1, 1869.

Claim.—1. The grate, consisting of the annular grated portion G, arranged to turn beneath the fire-pot, and a circular grated portion, G', hung to the portion G, and turning with the latter, substantially as described.

2. The combination of the hinged portion G of the grate with the curved rod H, and its stops c.

3. The arrangement of the ring D, and its mica-covered openings, in respect to the annular portion G' of the grate.

4. The said ring D, in combination with the ring I, when both are controlled by the agitating-rod of the grate G, substantially as specified.

5. The doors k, hinged at the top to the casing L of the stove, substantially as and for the purpose specified.

6. The making of the feeder or reservoir R in two halves, adapted to each other, and connected together, substantially as described.

7. The scoop-like fuel-receiver V, and the lid V' of the same, when the two are connected together, and both are applied to the casing and feeder of the stove, for operating substantially in the manner described.

90,861.—Edmond P. McCarthy, San Francisco, Cal., assignor to himself and John Grant.—*Wagon-Spring.*—June 1, 1869.

Claim.—The bolt E, constructed with the head H',

as described, so as to form a countersink above and below it in the cushion or spring, substantially as specified.

90,862.—Frank H. Merrill, Cape Elizabeth, Me.—*Attaching Collars for Stove-Pipes.*—June 1, 1869.

Claim.—The combination of the inner and outer flanged rings, clamped together, without the employment of rivets, or equivalent fastening devices, substantially as described.

90,863.—Rufus S. Merrill and William Carleton, Boston, Mass.—*Lamp-Burner.*—June 1, 1869.

Claim.—In a lamp-burner, such as described, the combination, with the cone and chimney-holder, of a sleeve fitting the wick-tube, and provided with apertures or air-passages, as herein shown and set forth, so as to admit air to the flame when the said sleeve, together with its cone and chimney-holder, is being applied to or removed from the wick-tube, substantially in the manner shown and specified.

90,864.—John F. Milligan, St. Louis, Mo.—*Door-Lock.*—June 1, 1869.

Claim.—1. The detent K, arranged to be moved out of engagement with the tumbler H, substantially as set forth.

2. The tumbler H, pivoted at d', and arranged with the end h^2 operating to unlatch the tumbler G, when combined with the bolt D, detent K, and spring I, substantially as and for the purposes set forth.

90,865.—Augustus Moore and John Aylwerd, Mission of San José, Cal.—*Device for Holding Horses attached to Carriages.*—June 1, 1869.

Claim.—The ring C, to which is attached the strap H, when used in connection with bent arm G, and combined with connecting-rod E and T-shaped bar E′, as described, for the purpose set forth.

90,866.—D. Wellington Onderdonk, Albion, N. Y., assignor to himself, Philo A. Castle, and Andrew S. Onderdonk, same place.—*Thill-Coupling.*—June 1, 1869.

Claim.—The hinged cap C, with its catch E, bolt or rivet J, key-bolt F, with its spring H and rubber *a*, all combined and arranged as herein shown and described.

90,867.—George Palmer, Littlestown, Pa.—*Nut-Lock.*—June 1, 1869.

Claim.—1. Locking a nut upon the bed or washer, by forming a groove or cavity in the bed or washer, and mashing the corners of the nut into the grooves or cavities thus formed, substantially as herein set forth.

2. Locking nuts when extending over the edge of the surface, by mashing down the lower rim, or cutting small projections upon the edge, so as to catch upon the side, substantially as set forth and described.

90,868.—Ebenezer Pierce, Hallowell, Me.—*Bomb-Lance.*—June 1, 1869.

Claim.—1. The independent fire-chamber D, having no means of communication with the magazine, except through the nipple and stationary fuse-tube, substantially as herein shown and described, for the purposes specified.

2. The tail-piece C, consisting of the divided cylindrical shaft, connected with the bomb, and expanded, substantially in the manner and for the purposes herein specified.

3. The bomb-lance herein described, consisting of a lance-head and magazine, with or without the tail-piece, provided with independent fire-chambers and independent hammers, the whole constructed, arranged, and operating substantially as herein described, for the purposes specified.

90,869.—J. F. Piper, Boston, Mass.—*Velocipede.*—June 1, 1869.

Claim.—In a velocipede propelled by the rocking of the rider's chair or seat, and having its guide wheel or wheels in the rear of the seat, the arrangement of the seat-perch *f*, rock-lever *k*, and links *g* and *j*, relatively to each other and to the wheels, substantially as shown and described.

90,870.—Wesley S. Poulson, Cadiz, Ohio.—*Book-Holder.*—June 1, 1869.

Claim.—The book-holder, herein described and shown, when constructed with board A, door B, cross-bar *a*, pins *c*, coiled wire C, ratchet *d*, and pawl *s*, arranged and operating substantially as specified.

90,871.—Timothy J. Power, New York, N. Y., assignor to J. P. Fitch and J. R. Van Vechten.—*Priming Metallic Cartridges.*—June 1, 1869.

Claim.—Charging cartridge-cases with detonate, by means of the centrifugal force generated by revolving the case on its own axis, substantially as described.

90,872.—John Robertson, Brooklyn, N. Y.—*Machine for Making Tin-Lined Lead Pipe.*—June 1, 1869.

Claim.—1. The improved laterally swinging die-holding ram E, having a countersink or cavity, *m*, as and for the purpose specified.

2. The arrangement of the swinging lead ram E, knives *k l*, and stationary frame H, in the manner shown and described.

90,873.—James M. Robnett, Centralia, Ill.—*Bee-Hive.*—June 1, 1869.

Claim.—1. The arrangement of the inclined bottom D, inclined board E, and triangular bar F, forming a chamber outside of the entrance to the main hive, substantially as shown and described.

2. The frame G, constructed as described, with inclined beveled guide *g*, and inclined bar *h*, substantially as shown and described.

3. In combination with the main hive A and frames G G, the frame H, containing the honey-boxes I I, and glass frames J J, substantially as shown and described.

90,874.—Thomas Rowe, New York, N. Y.—*Safety-Valve.*—June 1, 1869.

Claim.—The combination of the piston A, lever F, spring-balance J, lever K, and safety-valve K′, all constructed substantially as shown and described.

90,875.—Martin R. Ruble, Nineveh, Ind.—*Smut-Machine.*—June 1, 1869.

Claim.—1. The trough J, operated in the manner described, and having the transverse ridges *m n*, opening *l*, cockle and sand-screen *o*, and spouts *k k*, all constructed and arranged substantially as herein described.

2. The arrangement of the trough J, suction-spouts O P R S, vertical spout V, discharge-spout W, cylinder E, inner slotted cylinder I, beater H *f f′*, fan G, and the intermediate conductors *k k s* X, all constructed, arranged, and operating substantially as herein described.

90,876.—Theodore Rüdiger, Oberle's Corners, Minn.—*Belt-Coupling.*—June 1, 1869.

Claim.—1. The hinge-plates B, provided with the tapering bevel-edged slots *a*, when used in combination with the dovetail-headed pins *b*, substantially as herein shown and described, to operate as set forth.

2. The pin C, for connecting the two ends of a belt, when provided with one or more bent portions, *c*, substantially as and for the purpose herein shown and described.

90,877.—Salom Henry Salom, London, and Thomas Field, Westminster, Great Britain; said Thomas Field assigns his right to said Salom.—*Apparatus for Clipping the Hair from Horses, &c.*—June 1, 1869.

Claim.—Oscillating knife or cutter-blade *f*, in combination with a curved comb, and with a handle pivoted to the comb-plate, to operate the said cutter, substantially as herein described, for the purpose of clipping and shearing the hair of horses and other animals.

90,878.—Abraham V. Sargeant, Syracuse, N. Y.—*Buckle.*—June 1, 1869.

Claim.—The buckle A, having its tongue *f* carried upon and combined with an eccentric, B, hinged or pivoted upon the center-bar, in such manner that the draught upon the tongue shall cause the eccentric to bite upon the strap, substantially as herein shown and described.

90,879.—John N. Scranton, Bennington, Vt., and Henry H. Parsons, Hoosick Falls, N. Y.—*Dental Plugging-Instrument.*—June 1, 1869.

Claim.—1. The arrangement of the hollow case, with the tool-holder and tool sliding therein, and a lever or system of levers, and a tripping-mechanism connected therewith, by which the hammer is raised and let fall, as herein described and represented.

2. The combination of the spring-catch J, inclined plane, hammer, tool-holder, levers, and spring, when the same are inclosed within the case.

3. The combination of the perforated disk M, and ring B, with a spring-catch *c*, substantially as set forth.

4. The combination of the hammer and spring N, with the bearings X X, resting upon the rubber stops P P.

90,880.—Albert P. Seymour, Jr., Hecla Works, N. Y.—*Hinge.*—June 1, 1869.

Claim.—1. The arrangement and combination of the spurs *c'* on the portion C, and the circumferential ribs or flanches *e'*, upon the portion D of the lower hinge, substantially as shown and described.

2. In combination with the lower hinge, constructed as described, the stud *b''* on the upper hinge, arranged substantially as and for the purpose set forth.

90,881.—Louis Theodor Simon, New York, N. Y.—*Clothes-Pin.*—June 1, 1869.

Claim.—The coiled spring, having its two ends projecting in opposite directions, and the jaws B C, having recesses for said ends at corresponding points, when the two parts are combined together to operate as described.

90,882.—James Simpson, Libertyville, Ill.—*Churn.*—June 1, 1869.

Claim.—1. The combination of the frame A B C, platform W, suspended with adjustable straps E, spring D D, rods I, ears P, and adjustable bearings F, as set forth.

2. The combination of the braces B, bearings R, fan S, spring D D, churn G, and rod I, as set forth.

90,883.—Orren M. Smith, Philadelphia, Pa.—*Umbrella-Runner.*—June 1, 1869.

Claim.—An umbrella notch or runner in which the grooved or slotted flange is made of three sheet-metal rings, formed and adapted to each other, substantially as and for the purpose herein set forth.

90,884.—William G. Snook, Corning, N. Y., assignor to himself, A. H. Gorton, and O. C. Patchell, same place.—*Steam-Engine Piston.*—June 1, 1869.

Claim.—1. The construction of the hollow-stemmed valves I, substantially as shown and described.

2. The combination and arrangement of the hollow-stemmed double-vented valves I, sections A A' of the spider, and the spring K, substantially as shown and described.

3. The combination of the eccentric D, the ratchet-wheel F, and movable section of piston C, substantially as shown and described.

4. The arrangement of the springs K, with reference to the valves I, substantially as shown and described.

5. The arrangement of the apertures in the stems of valves I, with reference to the passages in the sections of the spider, leading to the recesses *a* beneath the packing-rings, substantially as shown and described.

90,885.—Gaylord S. Stanard, Buffalo, N. Y.—*Base-Burning Stove.*—June 1, 1869.

Claim.—1. The lateral openings *c c*, near the base of the magazine, in combination with the air-supply flue E, so as to give the draught an inward and downward direction through the fire, as described.

2. The gas-escapes *s s*, communicating directly with the flue E, so as to cause the return of the gases to the fire, as described.

3. Suspending the magazine by the flange *a*, at the top, in connection with the guide-ring *i* at the bottom, so that it may be vibrated, substantially as described.

90,886.—Ernst Gottlieb Starck, Chicago, Ill.—*Still for Alcohol.*—June 1, 1869.

Claim.—An improvement in apparatus for distilling alcohol, consisting of two or more pans, A and B, with cold-water connecting-tubes *n*, each having upper and lower concave bottoms, *b* and *d*, with an intervening plate, *e*, provided with central tube *e*, also with cups *f* and pipe *g*, the whole constructed and arranged in connection with the pipes D, E, C, and *h*, substantially as herein shown and described, for the purpose set forth.

90,887.—John D. Stewart, La Porte, Ind.—*Steam-Balanced Slide-Valve.*—June 1, 1869.

Claim.—1. The construction of the adjustable upper valve-seat, with its projections and apertures, arranged substantially as shown and described.

2. The combination of the adjustable valve-seat D, section of steam or valve chest A, and valve C', substantially as shown and described.

3. The arrangement of the glands E E', packing *a a*, and adjustable seat D, substantially as shown and described.

4. The arrangement of the stops or projections F F upon the plate of section A of the steam-chest, and at the ends of the adjustable valve-seat D, substantially as shown and described.

90,888.—Albert Stockwell, Providence, R. I.—*Loom.*—June 1, 1869.

Claim.—The buffer *m*, or its equivalent, secured above the lathe-beam, to receive the stroke of the picker *h* at or near the upper end of said picker, substantially as described, for the purpose specified.

90,889.—George W. Swett, Troy, N. Y.—*Cooking-Stove.*—June 1, 1869.

Claim.—1. The ribs *b b*, arranged in the case E, that contains the water-reservoir, for the purpose of guiding the heating-gases so that they cannot escape without having entirely surrounded the water-reservoir, said ribs *b* being arranged in combination with the rib *p*, or with the ribs *q q*, or with both, substantially as described.

2. The apertures *e* and *f*, in the back of the stove, when arranged in combination with the aperture *i* or *l*, and with the ribs *b*, substantially as described, all operating as set forth.

90,890.—William Trump, Louisville, Ohio.—*Attachment for Wagon-Pole.*—June 1, 1869.

Claim.—1. The draught-bars E F, when used in combination with the pole A, with slotted hole P, bolt G, draught-pin H, and double-tree L, substantially as and for the purpose specified.

2. The combination of the draught-bars E F, bolt G, pole A, with slotted hole P, draught-pin H, clevis K, spring M, and double-tree L, the several parts being constructed, combined, and arranged substantially as and for the purpose specified.

90,891.—Hiram Tucker, Newton, Mass.—*Coating Articles of Iron-Ware.*—June 1, 1869.

Claim.—Outer-coating with oil-varnish articles of iron bronzed or colored by the process, substantially as described.

90,892.—Hiram Tucker, Newton, Mass.—*Surfacing Articles of Cast Metal.*—June 1, 1869.

Claim.—As a new manufacture, articles formed with raised and sunken surfaces, by casting, coated substantially as described.

90,893.—Hiram Tucker, Newton, Mass.—*Electro-Gilding Iron.*—June 1, 1869.

Claim.—1. The improvement in electro-gilding

iron surfaces by outer coating the gold-deposition, substantially as described.

2. Articles of iron-ware so gilded by electro-deposition, and outer-coated, substantially as described.

90,894.—HIRAM TUCKER, Newton, Mass.—*Electro Plating and Gilding Cast Iron.*—June 1, 1869.

Claim.—1. The improvement in surfacing cast-iron articles, by show coating them with a thin electro-deposit, and varnishing the same, substantially as described.

2. Cast-iron articles, having a thin show-coat of deposited metal protected by varnish, substantially as described.

90,895.—WILLIAM HARLOW TYLER, Conneautville, Pa.—*Plow.*—June 1, 1869.

Claim.—1. In combination with a beam and land-side, the separate and independent plow-points, shares, and mold boards, arranged to vibrate on horizontal axis or axes, substantially as described.

2. The sliding-bolt, arranged in or over the land-side, in combination with the braces which connect the vibrating points, shares, and mold-boards to the land-side, substantially as described.

3. In combination with the vibrating mold-boards and their appurtenances, the pronged lever Q, for vibrating and locking the mold-boards, substantially as described.

4. Making the revolving cutter or coulter jagged or toothed, substantially as described.

5. The removable sub-coulter W, described.

90,896.—FREDERICK VALENTINE, Buffalo, N.Y., assignor to "PRATT & LETCHWORTH," same place.—*Snap-Hook.*—June 1, 1869.

Claim.—1. The construction and arrangement of the recess and mortise *a a'*, bearings *m*, *n*, and *e*, flat spring *f*, and lock-trigger *b b'*, as herein described, and for the purpose set forth.

90,897.—SAMUEL VANSTONE, Providence, R. I., assignor to himself and JOHN W. HOARD, same place.—*Nut-Bar.*—June 1, 1869.

Claim.—The compound nut-bar herein described, to be afterward divided into nuts, substantially in the manner described.

90,898.—CHARLES B. VAN VALKENBURGH, Valatie, N. Y.—*Machine for Making Paper.*—June 1, 1869.

Claim.—1. Making pulp-paper of any kind, by conveying it from the vat A to the first drier without first or second press-felts or row-cloth, substantially in the manner herein set forth.

2. The combination and arrangement of forming-cylinder B, coucher C, and press-rolls E E', substantially in the manner and for the purpose herein described.

3. Sloping or inclining the press-rolls E E' in relation to the pulp-vat A, and to each other, substantially in the manner and for the purpose herein set forth.

4. The construction and arrangement of frame F F F, &c., for the support of the rolls E E' and coucher C, in the manner or substantially in the manner set forth.

90,899.—JOHN VIALL, Somerville, Mass.—*Locomotive Spark and Smoke Conductor.*—June 1, 1869.

Claim.—1. A smoke and spark conductor, having a downward draught, as described, and provided with deflecting-tubes, arranged to convey air from the exterior down within the conductor, substantially as specified.

2. The arrangement of the inlet *a*, the crown or head *b*, and the side or leg flues *d d*, with their deflecting tubes and bonnets, operating to establish a downward draught, essentially as herein set forth.

3. The combination, with a smoke and spark-conductor, provided with air-deflecting tubes, to create a downward draught through it, as described, of a lower screen or screens, arranged to swing or open and close, substantially as and for the purpose herein specified.

90,900.—WILLIAM A. WEBSTER, Westford, Mass.—*Wooden Shoe.*—June 1, 1869.

Claim.—1. A shoe formed of a hollow toe-piece made of one piece of wood, and hinged to a shank-piece, of which the sole and upper are formed of one piece of wood.

2. A toe-piece, of which the upper and sole are one piece of wood, when made for application to, or to form part of a hinged or jointed shoe, substantially as described.

3. The shank-piece, having its upper and sole one piece of wood, to be hinged to the toe-piece, substantially as shown and described, and whether such shank-piece is made integral with the heel or quarter or as a separate piece fastened thereto.

4. A quarter and heel made of one piece of wood, (whether forming an integral part of the shank or not,) when made for application to, or to form part of, a hinged or jointed shoe, substantially as described.

90,901.—NORMAN WESTCOTT, Morrisville, N.Y.—*Whiffletree.*—June 1, 1869.

Claim.—A whiffletree, having apertures *a*, screws with hooked heads thereto, as described, and staples *s*, constructed and operating substantially as and for the purposes specified.

90,902.—H. F. WHIDDEN, South Abington, Mass.—*Shoe-Nail.*—June 1, 1869.

Claim.—1. An improved cut shoe-nail, having a round frusto-conical head, a tapering shank, and serrated corners or edges, substantially as shown and described.

90,903.—A. M. WHITE, Thompsonville, assignor to AMERICAN BRUSH COMPANY, New Haven, Conn.—*Machine for Making Brushes.*—June 1, 1869.

Claim.—1. The table C, arranged upon a universal joint on the spindle B, so as to be adjusted to present the brush-back to the bit or tufting-apparatus, substantially in the manner and for the purpose set forth.

2. The holder E, perforated or indented corresponding to the design of the brush to be produced, so as to be adjusted upon the point *a*, on the table, substantially as and for the purpose set forth.

90,904.—A. S. WHITTEMORE, Willimantie, Conn.—*Thrashing-Machine.*—June 1, 1869.

Claim.—1. The arrangement of the shaft and flails, with relation to the floor of the machine, and to the support E, as that the thrashed straw, falling from the latter, shall lie beyond the reach of said flails, as and for the purpose herein set forth.

2. The pivot-rods *a*, carrying the flails, arranged relatively to each other, to the flails, and to the main shaft, and in combination with the disks C, substantially as herein described, to prevent the falling back of the flails upon the shaft, and to protect the shaft from the straw.

90,905.—L. H. WILKINSON, Michigan City, Ind.—*Cultivator.*—June 1, 1869.

Claim.—1. The rod G, in combination with the lever V, sheave-block and pulleys H, beams B B, shovels L, standard N, and catch R, the whole being constructed and arranged substantially as and for the purpose set forth.

2 The combination of the loop-bolts C, beams B, B, shovels L, and cross-pieces D E, the latter having a series of holes through them, for adjusting the beams, substantially as herein described.

3. The combination of the frame A A, cross-pieces D E, loop-bolts C, beams B B, shovels L, and axle-tree arms F, said arms being adjustable on the frame, and constructed as and for the purpose described.

90,906.—JOHN HARVEY WILLIAMS, New York, N. Y.—*Rod for the Construction of Bird-Cages.*—June 1, 1869.

Claim.—The non-corrosive rod for bird-cages, consisting of a glass tube having an internal flexible metallic core, combined together as described, as a new article of manufacture.

90,907.—SETH WILMARTH, Malden, Mass.—*Planing-Machine.*—June 1, 1869.

Claim.—1. In combination with the cross-bar E, the cross-heads L and O, standing at right angles to

each other, and the tool-holders W and N, substantially as described.

2. The shaft K, with its beveled gearing *l*, and the vertical shaft I, with its gearing *h k*, in combination with the screw H, for working either or both of the cross-heads L and O, standing at right angles to each other, substantially as set forth.

90,908.—Solomon J. Woland, Lincoln, Ill.—*Corn-Marker.*—June 1, 1869.

Claim.—A corn-marker having wheels B and H, bolster C, sectional and pivoted axle E, pins *g*, and curved reach D, constructed, arranged, and operating substantially as specified.

90,909.—George W. N. Yost, Corry, Pa.—*Harvester.*—June 1, 1869.

Claim.—1. The combination of the bands *r* with the cylinder R S of the cases of the body A and A′, as described, for grass and grain cutters.

2. The combination of the loops *r′*, attached to the floating-bar S, with the cylinders R of the cases of the body A and A′, as described, for grass and grain cutting machines.

90,910.—David Stuart and Lewis Bridge, Philadelphia, Pa.—*Fire-Place Stove.*—June 1, 1869.

Claim.—1. A fire-place stove, having at the base a flange or hearth-plate, B, arranged substantially as described.

2. The hearth-plate B, forming a continuation of the bottom-plate of the stove, and having in front a perforated flange, *b*, to which air is admitted beneath the said hearth-plate and bottom-plate, all substantially as described, for the purpose specified.

3. The hearth-plate B, arranged to rest with its flange *b* on the floor, and so connected to the stove as to be detachable therefrom, for the purpose specified.

4. A water-reservoir, *q*, placed within the hot air chamber of a base-burning stove; which contains the feeder, so as to communicate both with the lower and with the upper chamber, for the purpose specified.

90,911.—Moses Adams, Chilmark, Mass.—*Seed-Planter.*—June 8, 1869.

Claim.—1. The ground-wheel, provided with a number of changeable pins, to regulate said distances, in combination with elbow-lever F, spring G, driving-rod T, slide B, operating substantially as set forth.

2. The adjustable seed-driver C, constructed and operating as and for the purpose described.

3. The crank-agitator A, and driving-rod T, constructed and operating substantially as set forth.

4. The combination of vertical slides E and D, and screws L L, slide B, seed-driver C, crank-agitator A, driving-rod T, elbow-lever F, spring G, with the pins in the ground-wheel, constructed and operating as and for the purpose set forth.

90,912.—Thomas K. Anderson, Hornellsville, N. Y.—*Stove-Pipe Damper.*—June 8, 1869.

Claim.—The combination of the oval damper B, connecting-rod F, slide E, or its equivalent, with the compensating-strap D, as described, when arranged to operate in the manner substantially as herein set forth.

90,913.—Hobart G. Arnold, Rochester, N. Y.—*Sash-Lock.*—June 8, 1869.

Claim.—Slot B, in combination with pin *n*, point O, and flange R, or their equivalent, substantially as an improvement to my patent reissued December 31, 1867.

90,914.—Joseph H. Baird, Oakville, Conn.—*Conveyer, to Transfer Blanks from a Punching-Press.*—June 8, 1869.

Claim.—The improved conveyer, of the form described, constructed, arranged, and operating substantially in the manner and for the purposes set forth.

90,915.—Frank E. Barr, Albion, assignor to himself and Julius J. Barr, Elba, N. Y.—*Three-Horse Equalizer.*—June 8, 1869.

Claim.—A three-horse equalizer, composed of the grooved pulleys A and D, with their bands *a* and guards *c*, the chain H, and clevises *d*, *e*, *g*, and *h*, together with the double-trees C, C, and C′, combined and arranged in the manner shown, and for the purposes herein set forth and described.

90,916.—William Barry, Carthage, N. Y.—*Measuring-Can for Liquids.*—June 8, 1869.

Claim.—1. The arrangement of the measuring-chamber, opening directly into the base or bottom, and forming part of the can or other vessel with which it is employed, substantially as and for the purposes shown and set forth.

2. The combination, with the liquid-containing vessel and measuring-chamber, arranged as specified in preceding clause, of the plunger and valve located beneath said plunger, together with the rods for actuating the same, having their common bearing in the cover of said vessel, and arranged to operate as herein shown and described.

90,917.—Robert Briggs, Philadelphia, Pa.—*Mode of Forming the Connections of Gas-Burners.*—June 8, 1869.

Claim.—The forming of inlet and outlet connections to gas-purifiers, with central and annular openings, or in one casting, with passages, substantially as and for the purpose described.

90,918.—Robert Briggs and Peter Muntzinger, Philadelphia, Pa.—*Center-Valve of Gas-Works.*—June 8, 1869.

Claim.—The combination of the conical plug and its seat with the valve-body and its appliances, substantially as and for the purpose described.

90,919.—Elisha Broad, St. Anthony, Minn.—*Attaching Augers to Handles.*—June 8, 1869; antedated June 3, 1869.

Claim.—The plate A, when constructed as shown, with the socket E, as herein described.

90,920.—J. W. Brooks, Boston, Mass.—*Corset Skirt-Supporter.*—June 8, 1869.

Claim.—1. The combination of the supporter H I J K with a corset, A, when said supporter is constructed and arranged to operate as herein described and represented.

2. The combination of the contracting and expanding springs H I and J K with the flexible but non-elastic portion I J, between said springs, for forming a removable and replaceable skirt-supporter, substantially as and for the purpose described.

90,921.—John Bryan, Lebanon, Ill.—*Machine for Plowing and Breaking Up Ground.*—June 8, 1869.

Claim.—1. The pivoted frame or hounds A A, in combination with the plow-beams and main-frame J J, as constructed and arranged.

2. The lever and link *i i′*, in combination with the hounds A A, and main-frame J, as shown.

90,922.—Albert Carter, New York, N. Y., assignor to himself and George K. Ryan, same place.—*Cord-Tightener for Curtain-Fixtures.*—June 8, 1869.

Claim.—Clamping-buckle, formed by the cross-piece *d* and frame *c*, in combination with the grooved segment or wheel *a*, and the adjusting-strap, as and for the purposes set forth.

90,923.—Benjamin Carter, Middletown, Conn.—*Bosom-Pad.*—June 1, 1869.

Claim.—An adjustable spring-supporting frame for bosom-pads, consisting of the springs *a*, eyes *e*, and elastic cord D, combined substantially as described and for the purpose set forth.

90,924.—Thomas J. Chubb, Williamsburgh, N. Y.—*Furnace for the Manufacture of Iron and Steel.*—June 8, 1869.

Claim.—1. Constructing furnaces with a series of flues, to admit separate, continuous, and simultaneous currents of gases and air, to pass onward, unmingled, to a place of combustion, in which said separate, continuous, and simultaneous currents of mingled gases and air are heated at one and the

same time, by the product of their joint combustion, escaping through another series of flues, divided from the incoming gases and air by thin walls or partitions, through the medium of which the heat of the outgoing gases is transmitted or imparted to the incoming gases or air, on their way to the combustion-chamber, when applied to this peculiar mechanical construction and arrangement of furnace.

2. Placing the flues or tubes in the heating and intensifying chamber in sets or clusters, each set so arranged with relation to the other as that the product of combustion will pass through them alternately, and in reverse direction.

3. Conducting the heated gases and air from the heating and intensifying chambers through a series of separate alternating flues, L M, arranged so as to admit the gases and air to enter at one and the same side of the furnace, by which the flame will be deflected upon the metal during the operation of melting and refining.

4. Setting the arch of the melting and refining chamber at such an angle, with respect to the supply and exit flues, as that the current of flame will be directed downward, and caused to impinge against the metal during the operation of melting and refining.

5. Dividing the melting-chamber into two or more parts, by building up from the bed of the furnace one or more low partitions, so as to form a number of small melting-chambers within the body of one furnace.

6. Arranging a number of small melting-chambers within the body of one furnace, so that the metal melted in one of these chambers will flow or can be otherwise transferred directly to one of the other chambers, as the process of melting and refining may require.

7. Constructing the melting and refining chambers of different depths, and the bottom of each at a slight incline, so that the lowest part of the bottom of the upper chamber will be on a level, or nearly so, with the highest part of the bottom of the one next it, and providing each chamber with a gate or outlet at the lowest part of its bottom, communicating with the contiguous chamber, to facilitate the transfer of metals from one to the other.

8. Placing at each end of the small melting and refining chambers a door, leading from the outside of the furnace thereinto, by which the interior of each may be reached, and through which the manipulation of metals may be carried on.

9. Making the top of the combustion-chamber or the melting and refining chamber removable, by securing the brick composing it within the gripe of a strong iron clasp.

10. The valves or dampers *g g'*, arranged for the purposes set forth.

11. The construction, combination, and arrangement of the several parts of this furnace and its appendages, substantially in the manner herein shown and set forth.

90,925.—Thomas J. Chubb, Williamsburgh, N. Y.—*Mode of Making Cast-Steel Castings.*—June 8, 1869.

Claim.—1. Producing cast-steel castings by means of or aid of highly heated gas or gases and heated air, as herein described.

2. The process of converting or making cast steel herein described, with the process of making cast-steel castings.

3. The application and combination of a gas-producer and an air-heating and gas-heating apparatus or furnace, and a stationary melting and refining vessel or chamber for melting and refining metal for making cast-steel castings.

90,926.—Thomas J. Chubb, Williamsburgh, N. Y.—*Process of Making Cast Steel.*—June 1, 1869.

Claim.—1. Reducing crude cast or other carbureted iron into cast steel, by means substantially as described.

2. Submerging natured, malleable, or wrought iron into a bath of cast iron, or into a mass of molten carburet of iron, and converting and refining the same into cast steel, substantially as described.

3. Submerging natured iron ore, or partly natured iron ore, into a bath of cast iron or other molten carburet of iron, and reducing, refining, and converting the mass into cast steel, by means substantially as described.

4. Heating air and heating gas, or reheating gas, previously to ignition or combustion, and employing them in the process of making steel, substantially as described.

90,927.—Thomas J. Chubb, Williamsburgh, N. Y.—*Process of Melting and Refining Iron for Malleable Iron Castings.*—June 8, 1869.

Claim.—1. The application of superheated gas and highly heated air, for the purpose described.

2. The application and combination of a gas generator, a gas and air heating furnace or apparatus, and a melting and refining chamber, for the purpose set forth.

3. The process described of refining crude iron with the process of making malleable iron castings.

90,928.—Thomas J. Chubb, Williamsburgh, N. Y.—*Making Blooms of Steel and Wrought Iron.*—June 8, 1869.

Claim.—1. Making blooms of low steel, similar to puddled steel, by the means herein described.

2. Making blooms of wrought iron, similar to puddled iron, by the means herein described.

90,929.—S. H. Clapp, Malden, Mass.—*Brick and Tile Kiln.*—June 8, 1869.

Claim.—The kiln as shown, provided with end fire-chambers D Di, chimney-stacks E Ei Eii, &c., with fire-places at their base-burning chambers C Ci Cii Ciii, and flues O Oi Oii Oiii, all constructed and arranged as and for the purposes herein set forth.

90,930.—Hugh Coll, Millville Borough, Pa.—*Steam-Operated Water-Ejector.*—June 8, 1869.

Claim.—The combination of the pear-shaped heads *a* and *e* with the injection-pipe *c*, arranged substantially as and for the purposes hereinbefore set forth.

90,931.—Edwin Cowles, Cleveland, Ohio.—*Machinery for Cutting Cards.*—June 8, 1869.

Claim.—1. An open-bottom chute, composed of a fixed plate, G, and an adjustable plate, G^1, flanged on their bottom edges, substantially as and for the purposes described.

2. The arrangement of the adjustable chute G^1, so as to serve also as a gauge-plate for regulating the widths of cards to be cut, substantially as described.

3. Stiffening-plates F F', in combination with a card-cutter, operating substantially as described.

4. The lip or offset *n*, formed on the yielding-plate F, in combination with the movable shear-blade C^3, and arranged to be acted upon by this blade, substantially as described.

5. The set-screw *p*, and spring *o*, applied to plates F F', substantially as and for the purposes described.

6. The fixed guide *e* and yielding pressure-guides *f f*, arranged and operating in combination with card-cutting mechanism, substantially as described.

7. Spring *t*, arranged and operating substantially as and for the purpose described.

8. The frictional feed-belt D', or its equivalent, in combination with card cutting and guiding machinery, constructed and operated substantially as described.

90,932.—James J. Crowley, San Francisco, Cal.—*Grain Separator and Mixer.*—June 8, 1869.

Claim.—1. The device for regulating the feed, consisting of the hinged bottom *a*, the lug *b*, and plate *c*, operated by the screw *d*, substantially as herein described.

2. The oscillating-frame K, with the screens D, F, G, and I, and the discharge-trough E and J, for separating and conveying the different classes, substantially as herein described.

3. The mixing-cylinder H, with its stirrer P and the overflow-trough *h*, substantially as and for the purpose described.

4. In combination with the mixing-cylinder, the tank R, with its adjustable gate S, for supplying the solution, substantially as described.

5. The vertically shaking screen W, with its operating-cam Y, for partially drying the grain and discharging it, substantially as herein described.

90,933.—Edward M. Davis, Pittsburgh, Pa., assignor to George R. Duncan, same place.—*Rolling-Apparatus.*—June 8, 1869.

Claim.—The groove *e*, extending spirally around one or both of a pair of cylindrical metallic rolls, arranged as herein described, in combination with a "cut-away," or depression at the termination of the groove, for the purpose of delivering the metal from the machine.

90,934.—Royal E. Deane, Brooklyn, N. Y.—*Draught-Regulator for Heating-Apparatus.*—June 8, 1869.

Claim.—1. The combination of a steam-chamber, float, and door, connected to the float in any convenient manner, when the same shall be constructed and operate substantially as and for the purposes set forth.

2. Combining, with the float, the lever operating the valve of the water-supply pipe, substantially as and for the purpose set forth.

3. The combination with the inner case C, of the pipe S, connecting directly with a furnace, as and for the purpose specified.

90,935.—I. A. Dewar, D. S. Smith, and R. A. Brasher, Franklin, Pa.—*Coupling for Pump-Rods.*—June 8, 1869.

Claim.—The rod A, socket B B, corrugations 1, 2, 3, 4, 5, and the wedge E, when constructed as described, for the purposes set forth.

90,936.—Edwin P. Dickey, Racine, Wis.—*Fanning-Mill.*—June 8, 1869.

Claim.—1. Adjustable rod *f*, in combination with metal pieces W, when those metal pieces project out over the shoe, and the openings for the rod *f* are made open like hooks, substantially as and for the purpose described.

2. Tail-board V, in combination with metal grooves *h* and knobs *g*, when made and arranged substantially as described.

3. Cover Z, in combination with sieve, attached to spout N, substantially as and for the purpose described.

4. Cover Y, substantially as and for the purpose described.

5. Adjustable grader and spout N, substantially as and for the purpose described.

6. Adjustable grader *i*, which, when hauled forward, lets the grain run out the back side of the mill, substantially as described.

7. Hanging spout *b* on to the shoe, substantially as described.

8. A hurdle, when made as shown by Fig. 6, with meshes in squares, three and one-half in number to the inch, each way, in combination with the stiles at the head of the hurdle, of different widths, the upper stile the narrowest, and the next a little wider, and so on, for the purpose of cleaning oats from barley, substantially as described.

90,937.—James Duff, Peoria, Ill., assignor to himself and E. B. Pierce, same place.—*Hanger for Shafting.*—June 8, 1869.

Claim.—The oil-box B, when cast with the bracket A, and having therein center-bearings *i i*, in combination with the journal-box E, provided with the rib *k*, projections *m m* and *q q*, and wick-openings *n n* on the side thereof, the whole constructed substantially as herein described and shown.

90,938.—John Eck, Medora, Ind.—*Tug-Hook.*—June 8, 1869.

Claim.—The improved safety trace-hook herein described, consisting of the parts A and B, constructed and operating substantially as set forth.

90,939.—Joseph Foltz, Valley Mills, Ind.—*Harrow.*—June 8, 1869.

Claim.—The teeth D, constructed as shown, and attached to the supplementary adjustable frame E F, all arranged to operate substantially as and for the purpose set forth.

90,940.—Isaac N. Forrester, Bridgeport, Conn.—*Pump.*—June 8, 1869.

Claim.—The combination of the piston, consisting of the tubes *f f*, disk *i i*, and main tubes B and C, with the main cylinder A A, when they are arranged substantially as herein described and set forth.

90,941.—Clinton T. Frost, Medfield, Mass.—*Bedstead, Seat, &c.*—June 8, 1869.

Claim.—A device for constituting bed-bottoms, spring-seats, &c., composed of the cross-bars *a a'*, and *a a'*, pivoted together, and provided with springs, and supporting upon their upper and free extremities the slatted frame *d*, such frame being fixed to one extremity of each arm, and resting upon anti-friction rollers applied to opposite ends thereof, the whole being substantially in manner as before explained.

90,942.—George M. Granger, Memphis, Mich.—*Wash-Boiler.*—June 8, 1869.

Claim.—The channels or tubes G, with openings F and H, in combination with the cradle B and hook I, and any suitable cover and boiler, when constructed, arranged, and operating substantially as aforesaid.

90,943.—Francis L. Hagadorn, Baltimore, Md.—*Pinking-Machine.*—June 8, 1869.

Claim.—The corrugated circular knife A, or its equivalent, secured and adjusted substantially in the manner hereinbefore described, and for the purposes herein set forth.

90,944.—Charles Havard and Manuel X. Harmony, London, England.—*Process of Preserving Meat, Fowl, Fish, &c.*—June 8, 1869.

Claim.—To preserve meat, fowls, fish, fruit, &c., by extracting therefrom the air, and when so, impregnate it with the gelatine, as above described, using for that purpose the aforesaid process and substances, or any others substantially the same, and which will produce the intended effect.

90,945.—James E. Hills, Orange, Mass.—*Key-Fastener.*—June 8, 1869.

Claim.—1. The combination of the screw B, the duplex-clawed nut A, and the screw-supporter C, the whole to be employed with a key in manner and for the purpose as set forth.

2. The screw-supporter, as made with the hook and the concavo-convex projection, as specified.

90,946.—Moses Jerome, Dixon, Ill.—*Machine for Scutching and Thrashing Flax.*—June 8, 1869.

Claim.—1. The combination of feed-rollers for holding the material while being treated, and slowly feeding it to its work, with yielding wings, or beating blades, substantially as described.

2. A grating or separator, G, or its equivalent, with yielding wings or beaters, substantially as described.

90,947.—Edgar A. Jones, Sturgis, Mich.—*Velocipede.*—June 8, 1869.

Claim.—1. The tiller G, curved for the purpose of bringing its handle over and in front of the rider, in connection with the guiding-wheel F, substantially as and for the purpose aforesaid.

2. In combination with the weighted stirrups I, the heel-straps *i*, when constructed and operating as above described.

3. In combination with the above-named tiller G, guiding-wheel F, weighted stirrups I, and heel-straps *i*, the arrangement of the wheels A, cranked axle B, rotating in the bearings *c* of the bifurcated reach C, hollow standard D, pawls *n*, ratchets *o*, and seat H, when constructed and operating as and for the purpose above set forth.

90,948.—James G. Kenyon, Providence, R. I.—*Stud.*—June 8, 1869.

Claim.—The improved shirt-stud herein described, consisting of the front A, with its slotted shank, the hollow back C, provided with a spring, and the back-shank B, the whole arranged and operating substantially as described, for the purposes specified.

90,949.—THEODORE T. KINSEY, deceased, Philadelphia, Pa., (MATILDA H. KINSEY and JAMES GILKYSON, administrators.)—*Lightning-Rod.*—June 8, 1869.

Claim.—A lightning-conductor, the body of which consists of two strips of sheet-metal folded longitudinally, riveted together through their angles, and twisted into a spiral form, substantially as set forth.

90,950.—HENRY E. MARCHAND, Louisville, Ky., assignor to ROBERT E. CROSS, same place.—*Corset.*—June 8, 1869.

Claim.—A corset provided with the elastic belt A, covered plate B, buckle C, and diagonal elastic bands I J, all constructed, arranged, and operated in the manner and for the purpose set forth.

90,951.—JOSIAH V. MEIGS, Washington, D. C.—*Metallic Cartridge.*—June 8, 1869.

Claim.—The combination, as set forth, of the bar-anvil, with the square-edged depression on the bottom of the cartridge-case, constructed, arranged, and operating as and for the purpose set forth.

90,952.—JOHN E. MURRAY, Provincetown, assignor to himself, Z. D. RICH, Somerville, and JOSEPH HALL, Cambridge, Mass.—*Shifting-Cleats or Ring-Bolts, &c.*—June 8, 1869.

Claim.—A shifting-cleat, ring-bolt, or hook, composed of socket A, screw-plug B, burr or nut C, cleat D, or ring-bolt E, all constructed, arranged, and operated in the manner as and for the purposes set forth.

90,953.—JOHN J. NAYLOR, Brighton, Mich.—*Seeder and Fertilizer.*—June 8, 1869.

Claim.—The construction of an apparatus combining the wheels A, axles B, frame C, hopper D, cylinder E, spurs F, shaft H, pulleys I and J, belts K, gate M, conductor N, distributing-box O, cylinder P, conveyer R, geared wheels T and V, pinion U, shaft W, bearings X, belt Y, pulley Z, slide A″, and lever B″, when arranged and operating substantially as and for the purposes herein set forth and shown.

90,954.—JAMES NEALE and PETER BECK, Bridgeport, Conn.—*Sewing-Machine.*—June 8, 1869.

Claim.—The combination of the loose stud *a* and the straight needle *b* with the parallel or rectilinear guide *d*, and needle-bar A, when they are constructed, arranged, and fitted for use, substantially as herein described and set forth.

90,955.—AUGUST F. W. PARTZ, Oakland, Cal.—*Process of Collecting Gold and Silver from Ores.*—June 8, 1869.

Claim.—1. Placing the positive electrode at the bottom of the vessel containing the ore-pulp, and imparting to the said vessel and electrode a swinging or shaking motion, which will cause the heavier particles of the ore to settle, and thus be brought and kept in contact with the said electrode, substantially in the manner and for the purpose herein specified.

2. The use of metallic tubes as negative electrodes, substantially as described.

90,956.—HORATIO L. PEIRCE, Taunton, Mass. *Ring for Spinning-Machine.*—June 8, 1869.

Claim.—A spinning-ring, having a steel lining, constructed and applied substantially as herein described.

90,957.—DAVID S. QUIMBY, Jr., Brooklyn, N. Y., assignor to DAVID S. QUIMBY, same place.—*Fire-Place Heater.*—June 8, 1869.

Claim.—1. The double dome *e h*, forming the top of the cylinder *d*, and also a flue, that regulates the escape of the products of combustion, substantially as set forth.

2. The evaporating-pan, introduced into the air-space at the side of the ash-pan, and below the base *b*, as and for the purposes specified.

3. The hood *s*, extending from the front of the frame, and provided with the register *n*, in combination with the heater-cylinder *d* and register *l*, as and for the purposes specified.

90,958.—GEORGE RICHARDSON, Lowell, Mass.—*Step and Bearing for Vertical Shafts.*—June 8, 1869.

Claim.—1. The cavity E, in the step B, and upper bearing A, for a vertical shaft; that is, having the upper portion of the sides of the cavity E contracted or brought in toward the shaft, to form a top or cover for the cavity; also, having an elevated edge or lip, G, raised from the bottom of the cavity, and surrounding the shaft, all arranged substantially as described, and for the purposes set forth.

2. The ring or circle F, of felt, or other similar porous material, placed within the cavity E, in combination with the shaft and steps A and B, substantially as and for the purpose set forth.

90,959.—WARREN RICHARDSON, Colfax, Cal.—*Device for Turning Saw-Logs.*—June 8, 1869.

Claim.—The blocks B B, sliding vertically in mortises, and having beveled tops, in combination with the eccentries I I and shaft C, the whole being constructed and arranged substantially as and for the purpose set forth.

90,960.—EZEKIEL ROOT, Parma, Mich.—*Miter-Box.*—June 8, 1869.

Claim.—1. The arrangement of the hollow saw-guides M, connecting-brace L, laterally adjusting screw R, and eccentric rings S, secured in place by the jam-nut T, flanged sleeve P, and rod N, connected with it, spring O, and vertically adjusting screw-nut Q, upon the lower threaded portion of said guide M, when constructed and operating as and for the purpose aforesaid.

2. In combination with the above-described guides, and their several parts before mentioned, the cradles J, adjusting-screw K, circular beds I, disk B, bed-plate A, dogs E E, stop F, rest G, and movable gauge H, constructed, arranged, and operating as and for the purpose before set forth.

90,961.—ROGER SANDIFORD, Joliet, Ill.—*Combined Land-Roller, Marker, and Harrow.*—June 8, 1869.

Claim.—1. The rocking coupling-box *c*, frame-joint boxes *e*, and tongue-seat *u*, and brace-box *x*, in combination with the round shaft *b*, arranged, operating, and constructed as set forth.

2. The metal seat *u* for the tongue, as set forth, in combination with the round shaft *b*, for the purpose described.

3. The metal harrow-disk *h*, with projections or flanges, as set forth, for the purpose described.

4. The crooked center-arm *i*, in combination with the main frame and chains, as set forth.

5. The lever and crooked bar *r*, with roller *o*, for the purpose described.

6. The outer wheels *n n*, in combination with the center wheel *o* and harrow-frame *d*, when arranged, operating, and constructed as set forth.

90,962.—OSCAR SCIDMORE, Albany, N. Y.—*Medical Compound.*—June 8, 1869.

Claim.—The composition above described, compounded of the several medicinal substances named, and in the proportions specified, substantially in the manner set forth, for the purpose specified.

90,963.—WILLIAM SEYBOLD, McKeesport, Pa., assignor to himself and SAMUEL H. HOFFMAN, same place.—*Miners' Lamp.*—June 8, 1869.

Claim.—1. Extending the wick-tube upward, within the lamp-chamber, nearly to the top of the lamp, in the manner and for the purpose described.

2. In combination with the interior upward extension of the wick-tube, extending the exterior portion of the wick-tube above the top of the lamp.

3. The short burning-wick *h*, inserted into the end of the wick-tube, in combination with the feeding-wick *g*, and fibrous filling *f*, substantially as and for the purposes hereinbefore described.

90,964.—WILLIAM W. SLY, South Haven, Mich.—*Snap-Hook.*—June 8, 1869.

Claim.—The arrangement of the vibrating fork B, provided with the prongs *b* and *b′* and the curved slot *d*, and operated by spring D, in combination with the recessed hook A, substantially as and for the purpose above named.

90,965.—Obediah Smith, Bloomington, Ill., assignor to himself, Michael Y. Givler, and William H. Roser, same place.—*Buggy-Top Bow-Setter.*—June 8, 1869.

Claim.—The loop *c*, in combination with the cross-bar *b'* and the vertical rest *d*, as and for the purpose set forth.

90,966.—Henry Soggs, Columbus, Pa.—*Ironing-Table.*—June 8, 1869.

Claim.—The table *a*, with its groove *c* around its edge, and notches *h*, on the under side, in combination with the cross-legs *d*, bar *g*, and spring *f*, as and for the purposes herein described.

90,967.—John S. Sommerville, Snow Shoe, Pa.—*Miners' Lamp.*—June 8, 1869.

Claim.—1. In combination with an exterior jacket or shell, and tube or spout, an interior cylinder, E, and interior wick-tube, F, substantially as and for the purpose described.

2. In combination with the exterior shell and tube, and the interior shell and tube, the inverted and removable cylinder G, for containing the supply of fluid, as herein described and represented.

90,968.—Thomas Spurrier, Sharon, Pa.—*Carriage-Axle.*—June 8, 1869.

Claim.—The combination of the hard-metal washers B B^1 B^2, provided with side-flanges *b*, with the axle A, having tapering or conical ends, when secured thereon by set-screws C, or similar devices, substantially as described, so as to be removed, when worn, without injury to themselves or the axle, as set forth.

90,969.—Thomas H. Stevens, Dover, N. Y.—*Stone-Sawing Machine.*—June 8, 1869.

Claim.—The combination of the reciprocating frame D, saws D' D', with the four guide-rollers C C C C, all constructed and arranged to operate in the manner and for the purpose set forth.

90,970.—Enoch Thomas, Craigsville, Va.—*Hay and Cotton Press.*—June 8, 1869.

Claim.—The ratchet-bars D, in combination with the double-acting toggle-levers E E', when operated by the coupling-bars G, connecting-rods J, eccentrics H, and driving-shaft I, all constructed and arranged in the manner herein set forth.

90,971.—Charles W. Todd, Spring Arbor, Mich.—*Farm-Gate.*—June 8, 1869.

Claim.—The crane G, provided with supports I and K, and rollers J and L, in connection with eye E and step F, when employed for operating gates, substantially as herein set forth.

90,972.—William Tucker, Philadelphia, assignor to himself and Prince A. Snell, Pittsburgh, Pa.—*Saw-Filing Machine.*—June 8, 1869.

Claim.—1. The arrangement of the rotary file M, the clamp-jaws B B', either with or without the anti-friction rollers *m n*, and the right and left hand screws *a a*, for operating said jaws B B', substantially as shown and described.

2. The stationary screw-shaft C, forming a part of the frame of the machine, and a support for the file-carriage, as represented and described.

3. The traveling index-nut D, in combination with the stationary screw-shaft C and file-carriage E, constructed and operating substantially in the manner described, for the purpose specified.

4. The double countersunk circular file or cutter M, held between the conical or beveled shoulder *e**, of the arbor *e*, and the conical or beveled clamping-nut N, substantially as and for the purposes described.

5. In combination with the rotary file or cutter M, the sliding-frame H, provided with the gauge-screw *i*, and constructed and operated substantially in the manner and for the purposes specified.

6. The arrangement of the sliding-frame H, file or cutter M, gearing *f g*, shaft *e'*, and crank *h*, all constructed and operating substantially in the manner described.

7. The arrangement of the shouldered arbor I, clamping-nut *j*, ratchet-wheel K, lever J, catch *k*, and studs L *l*, all constructed to operate substantially in the manner described, for the purpose specified.

90,973.—C. G. Udell, Chicago, Ill.—*Step-Ladder.*—June 8, 1869.

Claim.—The stiles U, formed of single pieces of material, slotted out at their central parts, and so sprung outward as to form segments T T, as set forth.

90,974.—George W. Walker, Lowell, Mass.—*Shoulder-Brace.*—June 8, 1869.

Claim.—The combination with the shoulder-strap B, and the back-strap C, of the gusset A, as shown and described, when arranged and applied in the manner and for the purpose specified.

90,975.—Carl Weidling, New York, N. Y.—*Fire-Escape Ladder.*—June 8, 1869.

Claim.—The combination, with the said ladder and turn-table, of adjusting-screws, by means of which the elevating-frame, to which the ladder is attached, may be leveled, and firmly supported, substantially as hereinbefore set forth.

90,976.—Henry White, Chicago, Ill., assignor to himself and William F. Whitehouse, same place.—*Ventilator.*—June 8, 1869.

Claim.—The combination of the air-chamber A and the exhaust-flue H, and the application thereto of a deodorizer or disinfectant, Fig. 8, in manner and form substantially as shown and for the purposes as set forth.

90,977.—O. D. Woodruff, Southington, Conn.—*Railway-Car Coupling.*—June 8, 1869.

Claim.—1. The pin C, provided with its beveled end *a*, and projection *c*, in combination with the slot D and slotted spring E, substantially as described, and for the purposes set forth.

2. The combination and arrangement of the rod *k*, lever *e*, slotted spring E, and pin C, substantially as and for the purpose described.

90,978.—Henry Albright, Cranesville, W. Va.—*Grinding-Mill.*—June 8, 1869.

Claim.—1. The combination of the damsel *a*, feeding-cup *b*, and tubes *b' b'*, all constructed in the manner and to operate substantially as described.

2. The conducting-tube *d*, when constructed upon and arranged to operate with the hopper D, in the manner and for the purpose substantially as set forth.

90,979.—James Alcorn, Charlestown, Mass., assignor to James N. Melvin for one-third, and Thomas Quinn for one-third, same place.—*Clothes-Rack.*—June 8, 1869.

Claim.—The combination of the yoke A, supporting the arms B, with the bracket L, when pivoted thereto, and arranged for adjustment substantially as specified.

90,980.—A. W. Ball, Delaware Grove, Pa.—*Harrow.*—June 8, 1869.

Claim.—The metallic harrow, constructed as described, of two parts, A A, each composed of bars *a c*, strengthened by the brace *b*, and hinged to the central bar B, in such a manner as to operate independently of each other, the bars *a b* being provided with the metallic sockets *e*, for the teeth *g*, all arranged as described, for the purpose specified.

90,981.—Stephen Ballard, Sr., Sullivan, Ind.—*Grain-Separator.*—June 8, 1869.

Claim.—A grain-separator, consisting of the box C, sieve D, rockers A A, uprights *d d*, and lever E, all constructed, arranged, and operating substantially in the manner and for the purpose set forth.

90,982.—Darius Banks, Jr., New York, N. Y.—*Friction Clutch and Brake.*—June 8, 1869.

Claim.—The sliding loose pulleys A, provided with the conical hubs B and annular grooves, the friction-arms C, hubs D, fixed tubular brake F, having annular flanges H, and operating-levers, when combined and arranged substantially as specified.

90,983.—Otis B. Bartlett, Lewiston, Me.—*Stove-Cover.*—June 8, 1869.

Claim.—1. A stove-cover, when provided with mica, substantially as described.

2. The cover A, of the form shown, when constructed substantially as described, for the purpose set forth.

90,984.—J. H. Bassler, Pine Grove, Pa.—*Bee-Hive.*—June 8, 1869.

Claim.—1. A side for a bee-hive, formed of straw-matting, as described, covered with cement, and so constructed that a dead-air space, F, is formed within it, substantially as herein set forth, for the purpose specified.

2. The composition for cement herein described.

90,985.—William Berg and Mathias Stephan, Canton, Ohio.—*Baby-Jumper.*—June 8, 1869.

Claim.—The combination of the base, bearer, notched plate, lever, link, and spring, arranged and operating together, substantially in the manner and for the purpose herein described and represented.

90,986.—William M. Bleakley, Verplanck, N. Y.—*Stall-Floor.*—June 8, 1869.

Claim.—1. The combination of the slats D D, that can be raised or lowered, as specified, with the ditch C under the floor, said ditch being provided with a gutter, *b*, as specified.

2. The combination of the pivoted slats D D, composing the stall-floor, with the hook E, pulley *e*, cross-bar F, and rope G, all made and operating substantially as herein shown and described.

3. A stall-floor, consisting of a series of slats, pivoted at their front ends, so that they can be swung up separately or together, substantially as described, for the purpose specified.

90,987.—John G. Borden and Walter Power, Brewster Station, N. Y.—*Soldering-Furnace.*—June 8, 1869.

Claim.—1. The top-plate C of a stove or furnace, provided with chambers B, D, H, and I, constructed and arranged substantially as herein shown and described. and for the purpose set forth.

2. The combination of the heads or centers J K, and shafts L P, with the top-plate C, provided with the chambers B, D, H, and I, substantially as herein shown and described, and for the purpose set forth.

3. The soldering-tools E, in combination with the chambers D of the top-plate C, and with the heads or centers J K, substantially as herein shown and described, and for the purpose set forth.

4. Adjustably securing the soldering-tools E, by means of the rest F and set-screws G, substantially as herein shown and described, and for the purpose set forth.

5. The combination of the levers Q and S and spring T, or their equivalent, with the shaft O of the center or head K, and with the standard P, substantially as herein shown and described, and for the purpose set forth.

90,988.—Charles Bourgeois, Buffalo, N. Y.—*Combined Steam and Vacuum Gauge.*—June 8, 1869.

Claim.—The combination of the mechanism of a steam-gauge and the mechanism of a vacuum-gauge within a cylindrical inclosing-case, so arranged as to actuate concentric index-hands over the same dial-plate, substantially as herein described.

90,989.—David J. Brady, Greenwich Township, Ohio.—*Coupling for Whiffletrees.*—June 8, 1869.

Claim.—A compound clevis, when used for uniting double and single trees, constructed substantially as has been shown and described.

90,990.—John R. Bragg, Williamsburgh, Mo.—*Spring Saddle-Tree.*—June 8, 1869.

Claim.—The combination of the coiled springs B and F, and sheet-metal plates C, with the tree A and leather D, substantially as herein shown and described, and for the purpose set forth.

90,991.—George E. Burt and Edwin A. Hildreth, Harvard, Mass.—*Fork for Hay-Spreaders.*—June 8, 1869.

Claim.—1. In combination with a hay-tedder, a spring-fork constructed of two separate pieces of wire, when arranged to rock on the support J, and connected firmly together by the bolt or pivot *k*, in such a manner as to hold the pivot *k* in its proper position without any other connection than the shanks of the fork, between the pivot or bolt *k* and the bearing upon which the coils of the fork are supported, substantially as described.

2. The bolt *k* and nut L, when provided with seats for the shanks C and D, in combination with a hay-tedder fork, substantially as described.

3. The nut L, when constructed with a boss, *n*, provided with a seat, *o'*, substantially as described, in combination with a hay tedder fork.

4. The combination of the operating-arm R, turning upon the bolt *k*, the tedder-forks A and B, constructed of separate pieces of wire, and the bolt *k*, with shoulders on each side of the operating-arm, to keep it in position, substantially as described.

90,992.—C. W. Cardot, Jamestown, N. Y.—*Friction-Clutch.*—June 8, 1869.

Claim.—The combination of the hub B, having concave eccentric faces *f*, the concave grooved sleeve C, and balls E E, as herein set forth and described.

90,993.—Charles F. Carman, Hamburgh, Iowa.—*Carriage-Wheel.*—June 8, 1869.

Claim.—Connecting the spokes to the hubs in pairs in each mortise, when the tenons and the mortises are arranged substantially as specified.

90,994.—Paul Clareton, New York, N. Y.—*Meat-Chopper.*—June 8, 1869.

Claim.—In combination with the carriage A, cam-shaft C, cutters E, and springs *i*, the rollers *d*, and plates F, substantially as herein shown and described, and for the purpose specified.

90,995.—Lucas C. Clark, Plantsville, Conn.—*Teapot-Handle.*—June 8, 1869.

Claim.—As a new article of manufacture, a skeleton or perforated teapot-handle, cast in a single piece, substantially as described, and for the purpose set forth.

90,996.—William R. Clark, North Adams, Mass.—*Let-off Mechanism for Looms.*—June 8, 1869.

Claim.—The combination, with the levers D and friction-straps, of the bell-cranks, having adjustable slides, and operated substantially as specified.

90,997.—Susan C. Currie, New York, N. Y.—*Pocket-Book.*—June 8, 1869.

Claim.—1. The adjustable elastic band-fastening and the safety-pin, whether used in combination or separately, when applied to a portmonnaie, wallet, pocket-book, or other article of a similar nature, substantially as and for the purpose described.

2. In combination with a portmonnaie, the safety-chain K, arranged substantially as and for the purpose set forth.

90,998.—R. d'Heureuse, New York, N. Y.—*Cord-Holder for Picture-Frames, &c.*—June 8, 1869.

Claim.—1. An improved cord attachment or holder, formed by bending a rod upon itself, so as to form an acute angle or angles to receive and hold the cord or cords after passing around said rod, substantially as herein shown and described, and for the purposes set forth.

2. An improved cord attachment or holder, formed by bending a rod upon itself, so as to form an acute angle or angles, the sides forming the angles being corrugated or roughened to receive and hold the cord or cords after passing around said rod, substantially as herein described and shown.

90,999.—Samuel Dunlap, Rome, Ga.—*Bed-Bottom.*—June 8, 1869.

Claim.—The combination, with a bedstead, of the India-rubber straps *a*, rollers, ratchets, and pawls, and either the bearing-plates or not, all substantially as specified.

91,000.—P. S. DEVLAN, Jersey City, N. J., assignor to himself and W. H. JEWELL, New York City.—*Lubricating-Cushion for Railway-Car Journals.*—June 8, 1869.

Claim.—A lubricating-cushion for car-journals, formed by inclosing patent elastic sponge, either alone or in alternate layers, with some suitable fibrous material, in a suitable textile covering, substantially as herein shown and described.

91,001.—WILLIAM H. ELLIOT, New York, assignor of one-half to M. D. MYERS, Frankfort, N. Y.—*Hay-Spreader.*—June 8, 1869.

Claim.—The tedder-fork head *b*, tines *c*, and set-screw *f*, all being constructed and operating substantially as herein described and shown.

91,002.—FRIEDRICK E. A. ENGELMAN, Cheektowaga, N. Y.—*Seed-Planter.*—June 8, 1869.

Claim.—The general combination, with each other, of the revolving droppers I I, having the adjustable cups *a*, of the laterally adjustable hopper-frame K, and drop-box L, and of the up-and-down adjustable hollow shovel-standard, all arranged and operating substantially as herein shown and described.

91,003.—F. FANNING, Atchison, Kans.—*Corn-Sheller.*—June 8, 1869.

Claim.—1. The combination of the interior toothed cylinder E, exterior drum K, cross-bars L, fingers M, hinged plates O, springs P, stop-bars Q, and arms R, with each other, and with the gratings or racks B D, case A, and cams or inclines S, whether said cams or inclines are movable or stationary, substantially as herein shown and described, and for the purpose set forth.

2. The movable adjustable cams or inclines S, riding upon the journals of the cylinder E, and connected with the case A by the arms T, cross-bar U, and bar V, in combination with the arms R of the hinged holding-plates O, substantially as herein shown and described, and for the purpose set forth.

91,004.—E. A. FISHER, Morganville, N. Y.—*Bag-Holder.*—June 8, 1869.

Claim.—The frame I J, adjustable bar K, and hinged board L, in combination with the hopper A and jointed standard E, substantially as herein shown and described, and for the purpose set forth.

91,005.—AMANDER FORD, Toledo, Ohio.—*Corn-Harvester.*—June 8, 1869.

Claim.—1. The adjusting or expanding guides C C, arranged to operate substantially as and for the purpose set forth.

2. The knives I I, in combination with the expanding-guide C C, substantially as and for the purpose described.

3. The combination of stationary guides F F, with expanding-guides C C, as and for the purpose specified.

4. A corn-stalk cutter, consisting of toothed wheels K K′, circular knives R R, guides C C and F F, bar W, rods X X, semicircular guide *a*, and stationary knives I I, all combined substantially as and for the purpose set forth.

91,006.—E. P. FORD, Shipman, Ill.—*Weather-Strip.*—June 8, 1869.

Claim.—In combination with a door, the strip H, and the guide and stop-plate *g*, constructed, combined, arranged, and operating substantially as and for the purpose herein shown and described.

91,007.—WALTER B. FOWLER, Lawrence, Mass.—*Packing in Cylinders for Drying Paper.*—June 8, 1869.

Claim.—The combination of the packing-box A, having the flange *a* and shoulder *b*, with the pipe B, having the flanges *c d*, and with the packing C and nut D, all arranged and operating substantially as herein shown and described.

91,008.—SAMUEL FULTON, Conshohoeken, Pa.—*Manufacture of Cores.*—June 8, 1869.

Claim.—In combination with the central bar of a core for casting metal pipes, the forming tube B substantially as and for the purposes described.

91,009.—D. A. T. GALE, Poughkeepsie, N. Y.—*Nut and Coffee Roaster.*—June 8, 1869.

Claim.—1. The combination of the spiral springs I with the strings *j*, cones *k*, and shaft H, all arranged to automatically revolve the roasting-cylinder, as specified.

2. In combination with the roasting-cylinder, the burner D, constructed as described, of the boxes *c d*, pipes *e*, and screen *f*, all arranged as set forth, for the purpose specified.

91,010.—JOHN GATES, Portland, Oreg.—*Steam-Engine Piston-Packing.*—June 8, 1869.

Claim.—1. The combination, with the piston-head A, made in one piece, of the segmental packing-ring, having the interior arcs *d*, and the spring *g*, substantially as specified.

2. The combination, with the spring *q* and segmental packing-ring, divided into two parts, *a* and *b*, of the equalizing-rollers *e*, substantially as specified.

3. The combination with the segmental packing-ring, divided in two parts, *a* and *b*, of the springs *i*, substantially as specified.

4. The piston-head A, provided with the segmental webs *c*, and combined with the spring *g*, and segmental packing ring, substantially as specified.

91,011.—SAMUEL R. GOODSELL and JOHN QUINCY ADAMS, Brooklyn, N. Y.—*Knife-Scourer.*—June 8, 1869.

Claim.—1. The block B, provided with one or more sand-cavities, *a*, apertures *b*, brushes or rubbing-blocks *c*, and end-blocks *d*, all arranged and operating substantially as herein shown and described.

2. The combination of the box A with the reciprocating block B, which is provided with the cavities *a*, rubbers *c*, and buffers *d*, all arranged and operating substantially as herein shown and described.

91,012.—HENRY HAVEKORST, Leavenworth City, Kans.—*Toilet and Nursery Table.*—June 8, 1869.

Claim.—The combination of the base D, having the fixed post B, with the box-shaped or otherwise constructed table-top A, which is provided with the rack E, or its equivalent, and the hinged post C, all arranged and operating substantially as herein shown and described.

91,013.—JOSEPH HAWSE, Wolcott, Vt.—*Feed Box.*—June 8, 1869.

Claim.—The box A, provided with receptacles *t t*, and pivoted feed-box B, arranged to operate substantially in the manner and for the purpose described.

91,014.—R. D. HAY and J. M. HILL, Crooked Creek, N. C.—*Gun-Lock.*—June 8, 1869.

Claim.—1. The combination, with the lock of a fire-arm, of a nipple-guard, arranged and operating substantially as specified.

2. The combination of the lever F, bell-crank G, and link H, and guard A, all substantially as specified.

91,015.—BENJAMIN W. HEALEY, Providence, R. I.—*Center-Bearing for Locomotives.*—June 8, 1869.

Claim.—The ball and socket center-bearing for locomotives, consisting of the concave part A, convex part C, and the center-pin D, the center apertures of the parts A B being of conical form, as herein described, for the purpose specified.

91,016.—EATON HITCHCOCK, Sturbridge, Mass.—*Churn.*—June 8, 1869.

Claim.—The arrangement of the butter-sink E and table D, with reference to the churn-body A, as and for the purpose specified.

91,017.—J. B. HOLMES, Lawrence, Kans.—*Water-Wheel.*—June 8, 1869.

Claim.—1. The buckets B, supported on the chains D, and connected by the rods F, arranged as and for the purpose specified.

2. The shafts C of the buckets, provided with the

roller G, and connected to the chains D, the ways H, and the guide-wheels E, when all arranged as and for the purpose specified.

91,018.—WILLIAM F. HOLSKE and B. T BABBITT, New York, N. Y.—*Velocipede.*—June 8, 1869.

Claim.—1. The application of reversible friction-clutches, working against the edges of disks or wheels, as described, to propel a velocipede, or other vehicle, as specified.

2. The pivoted plates G, carrying the friction-rollers *c c'*, in eccentric slots, as described, and so arranged as to be adjustable on the driving-axle, to reverse the motion, as specified.

3. The levers H H, when arranged to adjust the plates G on the axle A, substantially as herein shown and described, for the purpose of reversing the motion of the vehicle, as specified.

91,019.—BENJAMIN W. HOPPER, Astoria, N. Y.—*Bell-Lever Box.*—June 8, 1869.

Claim.—1. The close bell-lever box A, constructed with sockets, to receive the spout B and pipe C, either or both, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the plate F and block or back G with the box A and with the socket or seat D, substantially as herein shown and described, and for the purpose set forth.

91,020.—JOHN HORTON, New York, N. Y.—*Shade for Gas and Lamp Burners.*—June 8, 1869.

Claim.—A transparent or semi-transparent shade, A, for gas or lamp burners, constructed with a bottom, B, the shade and bottom being made entire, substantially as and for the purposes herein set forth.

91,021.—DAVID HOWARTH, Portland, Me.—*Refrigerator.*—June 8, 1869.

Claim.—A refrigerator, composed of the described arrangement of the cylinder *a*, the ice-receptacle A, with its shelf *h*, the hooks *d*, and perforated cover *j*, the said cylinder to be placed in an ordinary barrel, and there held by the lip or flange on said cylinder, for the purposes specified.

91,022.—CHARLES N. HOYT, Providence, R. I.—*Apparatus for Parlor Games.*—June 8, 1869.

Claim.—The apparatus, as described, composed of one or more wheels, and a brake or stop, constructed for operating as and for the uses and purposes specified.

91,023.—DAVID JONES, Machen, Newport, Wales:—*Water-Elevator.*—June 8, 1869.

Claim.—1 In a device for raising water by a vacuum formed by the condensation of steam, the expansible bag C, in combination with the air and water tight chamber B, substantially as described, for the purpose specified.

2. The steam-measuring vessel H, in combination with an arrangement of devices for raising water by a vacuum formed by the condensation of steam, or by the discharge of steam, substantially as described, for the purpose specified.

91,024.—SAMUEL G. JONES, Niantic, Ill.—*Harrow.*—June 8, 1869.

Claim.—The forward link C, adjustable link E, and the central bar B, formed in two parts, hinged together, in combination with the pivoted toothed arms A D, hinged together at their outer ends, all arranged as described, for the purpose specified.

91,025.—JOHN M. D. KEATING and THOMAS V. WAYMOUTH, New York, N. Y.—*Machine for Making Paper Boxes.*—June 8, 1869.

Claim.—1. The combination, with the plunger I, of the double die T, constructed with grooves and inclines at both sides, as shown, so as to double-lap and unite the previously cut and gummed blanks as they are forced through the die by the plunger, substantially as described and specified.

2. The employment and use of the receiving-boxes upon the endless belt, so constructed as to receive, hold, and convey the paper boxes for the successive operations of gumming and sanding the ends of the same, substantially as described and specified.

3. The combination, with the receiving-boxes and endless belt, the gum-fountain, and sand-box, of the lifter for forcing the sand into contact with the end of each box, substantially as described and specified.

4 Constructing the sand-box of flexible material, substantially as described and specified.

5. The combination, with the receiving-boxes and endless belt, of the plunger, for automatically discharging the paper boxes from the receiving-boxes, substantially as described and specified.

91,026.—DANIEL KIDDER, Franklin, N. H.—*Shutter-Worker.*—June 8, 1869.

Claim.—The combination and arrangement of the shaft J, arm L, and pivoted bar M, with the blind C, substantially as herein shown and described, and for the purpose set forth.

91,027.—JOHN CHR. KLEIN, Birmingham, Pa.—*Rake.*—June 8, 1869.

Claim.—1. A divided socket, in combination with a rake, for securing the latter to its handle, when the socket is formed in two divisions, each consisting of a strap-plate, *b*, carrying a curved or semi-cylindrical socket-piece, *a*, when the former is so widened as to partially embrace the latter, and is provided with a curved or corrugated rim or bead, *i*, along its upper edges on either side of the socket, to brace and strengthen the same, all substantially as herein set forth.

2. Rivets *e e*, securing a rake-bar, A, to the metallic socket receiving and securing its handle, when said rivets are so extended as to constitute appropriate central teeth in the rake, substantially as herein set forth.

91,028.—CHARLES LAYTON, Matawan, N. J.—*Car-Coupling.*—June 8, 1869.

Claim.—1. The combination of the lever D, rigid arm F, block G, connecting-bar K, and bent lever L, with each other, and with the coupling-pin C, and bumper-head A, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the pivoted arm H, friction-wheel I, and coiled or equivalent spring J, with the arm F, substantially as herein shown and described, and for the purpose set forth.

91,029.—JACOB LENHARD, New York, N. Y.—*Violin.*—June 8, 1869.

Claim.—1. The cross-bar D, arranged within the box of a bow instrument, to serve as a guide for the sound-post, which partly supports the bridge, substantially as herein shown and described.

2. The bridge A and post B, in combination with the cross-bar D, substantially as described, for the purpose specified.

91,030.—B. M. LEROY and ALBERT STRASSER, Montgomery, Ala.—*Mosquito-Net Support.*—June 8, 1869.

Claim.—1. The combination of the folding-net ring N *n'*, straps O, pivoted button M, and supporting-arm A *a'*, arranged as herein described, for the purpose specified.

2. In combination with the above, the socket-staff D, hook-link F, key H, slotted adjustable arm J, socket I, and adjustable clasp L, arranged as described, for the purpose specified.

91,031.—ALFRED JOHN LEWIS, Pittsburgh, Pa.—*Cultivator-Plow.*—June 8, 1869.

Claim.—1. The slides D, in combination with the shovels D^1 and D^2, substantially as described.

2. The slides D, with the rods E and F, pins G and H, in combination with the stilts B and B^1, substantially as set forth.

3. The knife B^3, rod B^4, in combination with the beam A, substantially as described.

4. The shovel C, when attached to the beam A, by means of clamps C^2 and C^3, substantially as set forth.

5. The combination of the above-named devices in the construction of a shovel-plow, whereby the shovels can be set at any position, by means of the slides and rods, substantially as described and set forth.

91,032.—JOB G. LUSCOMB, Taunton, Mass.—*Fly-Frame.*—June 8, 1869.

Claim.—1. The combination of the horizontal shaft G and gear-wheels *d*, *e*, *h*, *i*, and *k*, for connecting the shafts F and H, the wheel K being removable, to change the motion, as specified.

2. The combination of the weighted lever L, the clutch-gear I, and the retaining-bar N, when connected together, substantially as herein shown and described, and operating as specified.

3. The rack-bar B, provided with a pin, *r*, for the purpose of automatically raising the bar N and clutch I, as set forth.

91,033.—Andrew Matson, Elizabeth, N. J.—*Ironing-Board.*—June 8, 1869.

Claim.—An improved ironing-board, formed by the combination of the board A, pivoted supporting-frame C, pivoted brace-bar or arm D, and pivoted table or platform E, provided with the pivoted legs F, with each other; said parts being constructed and arranged substantially as herein shown and described, and for the purpose set forth.

91,034.—Green B. McDonald, Louisville, Ky.—*Cotton-Bale Tie.*—June 8, 1869.

Claim.—The link H, for cotton-bale ties, when its parallel side-bars G are enlarged to form convex inner bearing surfaces for the hoop, and their outer edges hollowed out parallel to each other at F F, to form projecting angles, over which the hoop is bent by the expansion of the bale, as herein shown and described.

91,035.—James W. McMillan, Greenville, Ala.—*Velocipede.*—June 8, 1869.

Claim.—The combination, with the two axles of a velocipede, carrying the ratchet-wheels F, of the herein-described spring-clicks, arms *a a'*, rods *b b*, levers H, and handles I, all arranged and operating substantially as herein shown and described.

91,036.—F. A. Morley, Syracuse, N. Y.—*Potato-Digger.*—June 8, 1869.

Claim.—1. The side-boards B B and cross-bars *b*, as shown in Fig. 1, in connection with plow A, as herein shown and described, and for the purpose set forth.

2. In connection with a screen, B *b*, and plow A, the standing platforms *f f*, substantially as and for the purpose set forth.

3. Attaching the screen B *b* to the plow A, by means of pin *d* and slot *e*, as shown and described, for the purpose set forth.

91,037.—Frederick E. Nearing, Brookfield, assignor to himself and William H. Hubbell, Danbury, Conn.—*Combined Horse-Rake and Hay-Spreader.*—June 8, 1869.

Claim.—1. The rake-head E, consisting of several pieces, that are so connected that the teeth G will be in line for a rake, or at suitable angles for a tedder, as specified.

2. The combination of the rake-head E, which is made to revolve on the tedder, with the rod *e*, lever F, and slotted bar *g*, all arranged and operating substantially as herein shown and described.

3. The pivoted supporting-arms H, adjustable in the arms *b b*, by means of the curved racks *o* and pins *n*, to prevent the revolving teeth from being injured by contact with the ground, as herein shown and described.

91,038.—Philip O'Reilly, Hartford, Conn.—*Black Pigment from Mineral Carbon.*—June 8, 1869.

Claim.—A compound, formed of anthracite and bituminous coals, treated with mineral acid, substantially as and for the purposes herein described.

91,039.—William G. Philips, Newport, Del.—*Step-Ladder.*—June 8, 1869.

Claim.—1. The step *c*, bolt D, and sliding-sleeves *d*, when combined with each other and with the sections of a ladder, substantially as described, for the purpose specified.

2. The splice-bars F, having the steps *i*, when combined with the sliding-sleeve *j* and with the sections of a ladder, substantially as described, for the purpose specified.

91,040.—A. P. Plant, Plantsville, Conn.—*Tool for Trimming Bolt-Heads.*—June 8, 1869.

Claim.—The combination of the set-screws *k k*, or their equivalents, guides B B, with their rebates *l l*, knives *m m*, set-screws *n n*, and punch A, with its parts *c* and *d*, the whole combined and arranged substantially as described, and for the purposes set forth.

91,041.—S. D. Rader, Williamsport, Pa.—*Brick and Sand Drier.*—June 8, 1869.

Claim.—The drier A, provided with chambers B B B, furnace F F, ventilating-holes d^2 d^2, double tracks *b b*, and chimneys E E, when used in combination with molds D D, and sand-boards C C, all constructed and arranged in the manner and for the purpose herein described.

91,042.—P. H. Raiford, Houston, Texas.—*Anchor for Animals.*—June 8, 1869.

Claim.—1. The combination of the swiveled loop C and pivoted loop B with each other, and with the pin A, or its equivalent, substantially as herein shown and described, and for the purpose set forth.

2. An improved anchor for animals, formed by the combination of the pin A a^1 a^2 a^3, pivoted loop B, and swiveled loop C, with each other, substantially as herein shown and described, and for the purpose set forth.

91,043.—Thomas Reese and William L. Reese, St. Louis, Mo.—*Fastening for Fire-Proof Shutters.*—June 8, 1869.

Claim.—1. The combination of the pivoted bars D, spring-catch E, and plate e^2, with each other, and with the shutters A, substantially as herein shown and described, and for the purpose set forth.

2. Connecting the bars B, when more than one is used, with a bar or link, C, so that the said bars may all move together, substantially as herein shown and described.

91,044.—Nicholas Repp, Waterloo, Iowa.—*Nail-Clincher for Horseshoes.*—June 8, 1869.

Claim.—The improved implement, consisting of the handles A B, provided with the side-cutters *d d*, notched eccentric clincher *c*, formed in continuation of the handle B, the file C, and either with or without the hook *b f*, all arranged as described, for the purposes specified.

91,045.—Almon Roff, Southport, Conn.—*Operating Ships' Pumps.*—June 8, 1869.

Claim.—1. An automatic pump-attachment to vessels, consisting of the removable paddle-wheel, or its equivalent, arranged on the side of the vessel, to operate the pump or pumps, substantially as herein shown and described.

2. The sliding-shaft B, when arranged in a vessel, so that it can receive a paddle-wheel, E, or its equivalent, for the purpose of automatically operating the pump or pumps, as specified.

3. The grooved ∪-shaped plate D, when arranged at the side of a vessel, opposite an aperture through the same, substantially as herein shown and described, for the purpose of supporting the hollow shaft of the removable wheel E, or its equivalent, substantially as herein shown and described.

4. The spring-plug *h*, to be placed into the grooves of the ∪-shaped plate D, for the purpose of closing the aperture through the side of the ship, substantially as herein shown and described.

5. The vertical shaft F, having the crank *j* and cross-head *k*, when arranged in combination with the sliding-shaft B, countersunk box G, and cover I, all arranged and operating substantially as herein shown and described.

6. The sliding-shaft B, carrying the wheel E, or its equivalent, and fitted through the box *d*, when arranged to operate the pump shaft or shafts A, substantially as herein shown and described.

91,046.—Jacob Schermerhorn, Daysville, N. Y.—*Vegetable-Gatherer.*—June 8, 1869.

Claim.—The vegetable-gatherer, consisting of the arms C D, supported upon the axle and wheels, and provided with the curved rake A, the riddle, and the box, having a discharge-opening in its bottom,

all arranged and operating as described, for the purpose specified.

91,047.—JAMES A. SEVEY. Boston, Mass.—*Tool for Splitting Whalebone.*—June 8, 1869.

Claim.—1. The arrangement and combination of the springs B D, and the screw E, with the stock F and the knife A.

2. The combination of the rotary bearings C C, and their sockets *a a*, with the knife and its clamp-screws, applied to the stock F, and to operate with the springs B D, the whole being as set forth.

91,048.—HENRY SHUTTS. Oregon, Mo.—*Mechanical Movement.*—June 8, 1869.

Claim.—The combination of the cam-wheel B, cams C D and E F, slide G, when all combined and arranged substantially as specified.

91,049.—WILLIAM SMITH, Pine Hill, Wis.—*Stump-Extractor.*—June 8. 1869.

Claim.—The arrangement upon the stump-extractor frame, attached to the wagon-wheels, of the winding-shaft *a*, wheel J, pinion *l*, ratchet-wheel *g*, and pawl *h*, the lever and the hook-pawl *f e*, as herein set forth and shown, for the purpose specified.

91,050.—JOHN J. SWITZER, Chelsea, assignor to himself and EDWIN H. FITTS, Northborough, Mass.—*Mechanism for Stopping the Loom when a Warp Breaks.*—June 8, 1869.

Claim.—1. The batten C, when connected by means of the crank G with the slide H, and by the crank M with the slotted frame N, so as to impart reciprocating motion to the same, as specified.

2. The slotted frame N, when connected with the spring *i* and with the batten C, substantially as herein shown and described, and for the purpose specified.

3. The frame O, arm *j*, lever *k*, and rod *l*, combined with a rock-shaft *m*, which has the arm *n*, substantially as described, so that by the motion of the frame O the arm *n* will be moved toward and against the hook *o*, substantially as herein shown and described.

91,051.—ALOIS THOMA, New York, N. Y., assignor to the AMERICAN ZINC COMPANY, same place.—*Furnace for Extracting Zinc from its Ores.*—June 8, 1869.

Claim.—1. Producing zinc from ores that are spread within a gas-burning furnace, substantially as herein shown and described.

2. The furnace B, when constructed as described, for the purpose of producing zinc from ore by means of the burning gases that are the products of combustion of suitable fuel, as set forth.

3. Providing the openings *q q* in the sides of the furnace B, for the purpose of allowing the zinc ore to be turned over to facilitate the process, as specified.

4. Arranging the blast-heating apparatus E as one well of the furnace B, substantially as described, so that the air is heated by the ascending gases, as set forth.

5. The application, to the air-heating apparatus, of the slides *m* and *n*, for the purpose of at once regulating the quantity and the pressure of the air conducted to the gases, substantially as herein shown and described.

6. The dust detaining chamber *h*, when arranged between the grate *a* and the furnace B, substantially as and for the purpose herein shown and described.

7. The condenser C, when provided with a series of shelves, *t t*, which are perforated and provided with inclined upper surfaces, substantially as herein shown and described, for the purpose of allowing free passage for the gases, and of conducting the zinc to a certain receptable, as specified.

8. The perforated plates I I, when inserted within the condenser, for the purpose of facilitating the process of condensation, as set forth.

9. So constructing the zinc-receptacle *u* that lead may be collected at its bottom and separately removed, as set forth.

10. A zinc furnace, consisting of the grate-chamber A, for burning the fuel; of the furnace B, for evaporating the zinc; and of the condenser C, for separating the zinc from the gases, all arranged and operating substantially as herein shown and described.

91,052.—ALOIS THOMA, New York, N. Y., assignor to the AMERICAN ZINC COMPANY, same place.—*Zinc-Furnace.*—June 8, 1869.

Claim.—1. The combination, with the zinc gas-furnace B, of an isolated gas-generator, for the production of zinc in muffles, substantially as herein shown and described.

2. The arrangement of the plates *f''*, *g''*, *n''*, and box *l'*, to serve for putting the fuel into the gas-generator, substantially as herein shown and described.

3. The openings *n*, for conducting the gases into the muffle-furnace, when such openings are combined with the channels for admitting the blast, substantially in the manner herein shown and described, to operate as set forth.

4. The muffles *t*, when constructed as herein set forth, with perforated horizontal partition, substantially as specified, for the purpose described.

5. The arrangement of the channels *k' l'*, for so conducting the gases away from the chamber S that they will serve to heat the side-chambers *w'*, substantially as herein shown and described.

6. The chambers X', under the muffles, when arranged to receive the burnt matter from the same, without injury to the attendants, substantially as herein shown and described.

7. The herein-described means of and mechanism for evenly heating and independently regulating the draught in each part or half of the furnace, to obtain even action of all parts, substantially as herein specified.

8. Utilizing the escaping flame of the zinc-furnace for the production of steam, to operate the blast mechanism and other appendages of the furnace, substantially as herein shown and described.

91,053.—P. W. THOMAS, Waterbury, Vt.—*Sad-Iron Heater.*—June 8, 1869.

Claim.—1. The notched sides *b b*, in combination with the top B, provided at its edges with notches *a a a' a'*, substantially in the manner and for the purpose set forth.

2. In combination with the above, the sliding-doors C C, substantially as described.

91,054.—FRIEND THRALL, Oshkosh, Wis., assignor to himself and A. B. Thrall, same place.—*Dough-Kneader.*—June 8, 1869.

Claim.—1. A reversible sliding mold-board and table-top, B, as described, arranged relatively to either kneading or reducing rollers, the latter having bearings in the supports A' A', and provided with adjusting-screws *q q*, traverse-bearings *k k*, and hinged box-caps *i i*, substantially as described, for the purposes set forth.

2. The roller C, Fig. 6, provided with a crank, C', and constructed substantially as described, when arranged, relatively to the supports A' A' and sliding mold-board B, as and for the purposes set forth.

3. The dredge-box D, arranged relatively to roller C and mold-board B, as and for the purposes set forth.

4. Box D, provided with button *d'* and arm *f*, arranged relatively to a roller beneath, substantially as and for the purposes set forth.

91,055.—ARCHIBALD TROLAN, Norwich, Conn.—*Machine for Double-Seaming Sheet-Metal.*—June 8, 1869.

Claim.—1. The clamping-plate F, when used in combination with the folder C and frame A, substantially as and for the purpose specified.

2. The projecting guide-part H, of frame A, when used as a guide for folder C and clamping-plate F, substantially as described.

3. The removable plate I, when used in combination with frame A, folder C, and clamp-plate F, for the purpose specified.

91,056.—JAMES W. TRUMAN, Macon, Ga.—*Pen.*—June 8, 1869.

Claim.—A writing-pen, consisting of the split

or unsplit plate A, and of the adjustable wire or rod C, substantially as described, to operate as specified.

91,057.—Stephen W. Adwen, Rochester, N. Y.—*Baling Short-Cut Hay and Straw.*—June 8, 1869.

Claim.—As a new article of manufacture, a bale of short-cut feed inclosed in paper B, and retained in a compressed state by means of slats C and binders D, substantially as described.

91,058.—Frank H. Aiken, Franklin, N. H.—*Cartridge-Case Cleaner.*—June 8, 1869.

Claim.—1. The plunger, as made with the discharging-point and the circumscribing chamber, arranged with respect to the adjacent end of the plunger, in manner substantially as specified.

2. In combination with the plunger so made, the guide and cleansing-tube, applied to it in manner and so as to operate with it, substantially as described.

91,059.—Thomas C. Aldridge, St. Louis, Mo.—*Fire-Place.*—June 8, 1869.

Claim.—1. The grate A, back B, perforations *b* passages B^1, perforations b^1 and b^2, and chimney E, all arranged and acting substantially as set forth.

2. The back B^1 B^2, flue-mouth C, and flue C′, when arranged in the grate-frame D, and combined with the chimney E, substantially as set forth.

3. The flue C C′, frame D, and back-plate D′, combined with the back B^1 B^2, substantially as set forth.

91,060.—Arthur M. Allen, New York, N. Y.—*Valve-Gear.*—June 8, 1869.

Claim.—The carriage *e*, guide *h*, and slide-bar *i*, in combination with the pin *d*, sliding in the link A, and transmitting its motion to the valve, substantially as herein shown and described.

91,061.—Arthur M. Allen, New York, N. Y.—*Velocipede.*—June 8, 1869.

Claim.—The shaft *a*, provided with the cranks *b b*, wheel A, and bracket C, in combination with the toggles F G, and sloping foot-rests E E, all constructed, arranged, and operated in the manner and for the purpose set forth.

91,062.—George B. Ambler, Bridgeport, Conn.—*Velocipede-Saddle.*—June 8, 1869.

Claim.—As a new article of manufacture, a velocipede-seat, or saddle-tree, substantially as herein described, consisting of the seat A and means of attachment, all as shown and specified.

91,063.—Israel Amies, Philadelphia, Pa.—*Hatchway for Buildings.*—June 8, 1869.

Claim.—In combination with the hatch E, provided with the slot *e′* and guide ways *e″ e‴*, as described, the traversing-slide F, provided with the hinged blocks *f″ f‴* and the grooved friction-rollers *f′ f′*, as described, the said parts being arranged to operate together in the manner and for the purpose described.

91,064.—Edgar John Amor, New York, N. Y., assignor to himself and H. E. Donor, same place.—*Tool-Handle.*—June 8, 1869.

Claim.—The arrangement of the stop *b* and collar *a*, on the interior of the hollow metal handle, for retaining the plug B, in the manner substantially as shown and described.

91,065.—Alban G. Andrén, Gottenburg, Sweden.—*Vise.*—June 8, 1869.

Claim.—The arrangement, with the deeply recessed stationary jaw A and screw-shaft C, of the flange protecting and sliding support D, substantially as shown and described.

91,066.—Avery Babbett and W. W. Binney, Auburn, N. Y.—*Gas-Works for Making Coal-Gas.*—June 8, 1869.

Claim.—1. The charger and charging-rod, in combination with the retort, as set forth.

2. The gas-tight coal-magazine, when constructed with valves, and operated substantially in the manner and for the purpose described, in combination with the retort.

3. The air-tight coke-magazine, when used as above set forth, in combination with the retort.

4. So arranging the fire-brick case, inclosing the retort, that a portion of the same may be opened in such manner that the retort may be repaired or removed without relaying the fire-brick inclosing the fire-chamber, substantially as above described.

5. Depositing the spent coal or coke into an air-tight chamber, directly from the retort, said chamber being so connected with the stand-pipe as to allow the gas evolving therefrom to pass off through that channel, for the purpose specified.

6. The receiver, when connected with the retort, coke-magazine, and stand-pipe, substantially in the manner and when used for the purpose set forth.

7. The condenser, when constructed as above described, that is to say, with open pipes, so arranged that the gas, in its passage through it, shall move in a thin current, impinging upon the surfaces of said open pipes, substantially in the manner and for the purpose set forth.

8. The charging-rod L, slide M, non-conducting chambers Q and P, when all are arranged and used for the purpose above set forth.

91,067.—C. F. Babcock, Chicago, Ill.—*Grain-Separator.*—June 8, 1869.

Claim.—1. The triangular screen H, placed in front of the blast and under the upper screens, substantially as and for the purpose set forth.

2. The arrangement, on the screen J, of the round-headed screw *n*, placed on the under side, at the front end, in a countersink, and resting on the thumb-screw *o*, which passes through a curved slot in the frame A, substantially as and for the purposes herein set forth.

3. The perforated lever *d*, in combination with the shaft *e*, arm *f*, rod *g*, cross-bar *h*, and shoe F, when arranged in the manner and operating for the purpose set forth.

4. In combination with the triangular screen H, the under screen J, rods *h* and *k*, corrugated bars *i*, and arm *m*, when arranged and operated in the manner and for the purpose set forth.

91,068.—Quimby S. Backus, Winchendon, Mass.—*Vise.*—June 8, 1869.

Claim.—1. The combination of the hollow screw-shaft K, with a disk, B, upon its top, screw-rod M, flanged head N, clamping-screw L, and screw O, with the grooved cylinder D, all substantially as and for the purposes specified.

2. The jaws E and C, screw-shaft F, tubes H and I, dog G, screw-rods K and M, disk B, nuts L, and thumb-screw O, when all are combined to form a vise, substantially in the manner and for the purpose specified.

3. In combination with the stationary jaw C, the cylinder D, with a rounded upper surface, and with an oblong slot in the bottom, leading into a semi-circular recess, within which slides the head N, which is prevented from being disengaged by the shoulder formed near the outer end of said cylinder, substantially as set forth.

91,069.—L. F. Bancroft, Worcester, Mass.—*Combined Steam-Generator and Stove.*—June 8, 1869.

Claim.—1. The combination, with the rear part of the upper plate of the cooking-stove, of a steam-generator, D, and draught-flues G F, substantially as set forth.

2. The combination, with the stove A and boiler D, of water-chamber I, pipes H J, drum E, and smoke or draught flues G and F, provided with dampers *a b*, said parts being arranged, in relation to each other, substantially as set forth.

91,070.—J. W. Bates, St. Paul, Minn.—*Polishing and Cleansing Powder.*—June 8, 1869.

Claim.—1. The above-described process for obtaining a cleaning-powder from peat, substantially as herein set forth.

2. Preparing peat in such a manner as to produce a powder suitable for cleaning teeth, or any article

needing a fine polish, substantially as herein set forth.

3. A cleaning-powder made from peat, substantially as herein set forth.

91,071.—A. Ely Beach, Stratford, Conn.—*Shield for Tunneling.*—June 8, 1869.

Claim.—1. The shield A, made and operating substantially as herein shown and described.

2. The arrangement of the pushing-devices to withdraw into the shield, as herein shown and described.

3. Arming the front of the shield with a cutting-shoe, substantially as herein shown and described.

4. The combination of the ring, shoe, and staves, substantially as shown and described.

5. The hood C, employed substantially as shown and described.

6. Providing the shield with sliding-staves, substantially as and for the purposes herein shown and described.

7. The arrangement of the pushing-devices, so that they will be carried by and supported upon the shield, substantially as and for the purposes herein described.

91,072.—A. B. Bean, New Haven, Conn.—*Ratchet-Feed.*—June 8, 1869.

Claim.—The arrangement of the fixed cam I within the double pawl E and F, and combined with the head N, so as to operate substantially in the manner set forth.

91,073.—Henry E. Blemker, Evansville, Ind.—*Stove-Drum.*—June 8, 1869.

Claim.—As a new article of manufacture, the removable attachment to heating-stoves, above described, consisting essentially of the drums A B, pipes C C D, opening *a*, flange a^1, and cover a^2, all constructed, arranged, and adapted for use in connection with the stove, substantially as herein set forth, and for the purposes specified.

91,074.—Albert Booth, Springfield, Ill.—*Machine for Turning Wagon-Axles.*—June 8, 1869.

Claim.—1. The hollow mandrel for turning the ends of axle-trees, when provided with the cutters *a a* and *b*, adjustable gauge *d*, and screws *c c c*, substantially as and for the purpose herein shown and described.

2. The carriage B, provided with the adjustable clamps G G, claw-wedge I, and vertically adjustable screws *k k*, substantially as described, and for the purpose set forth.

91,075.—Fred. C. Borst and Philander Wonsey, Spencerport, N. Y.—*Mail-Bag.*—June 8, 1869.

Claim.—The arrangement of the elliptic springs *a a c*, hinged together as described, when combined with the mouth of bag A, in the manner and for the purpose specified.

91,076.—George S. Bosworth, Troy, N. Y.—*Cooking-Stove.*—June 8, 1869.

Claim.—1. The diving-flue E of the air-heating chamber, having its receiving-opening I in front, and its discharge-opening E′ beneath the rear side of the grate, and communicating with the ash-pit, substantially as described.

2. The air-heating chamber E, having perforations *a* above the chamber B of combustion, and a discharge-opening, E′, of greater discharging area, beneath the grate, substantially as described.

3. The air-heating chamber E, communicating with the chambers above and beneath the grate, and with the hot-air flue C, above the oven, in the manner herein described.

4. The air-heating chamber E, having a front receiving-opening, I, above the grate, and a rear discharge-opening, E′, beneath the grate, in combination with the single damper J, for regulating the admission of air above and beneath the grate, as described.

91,077.—Thomas W. Bracher, New York, N. Y.—*Cutting Hat-Tips.*—June 8, 1869; antedated May 28, 1869.

Claim.—1. The mode of preparing fabric, adapting it for being cut into tips for hats and caps, by folding said fabric in continuous layers, with the interposed perforated plates *c*, then removing said plates, excepting the upper one, and through the perforations thereof uniting the entire series of folds, and thereby form a completed pile, to be subjected to the knives, as herein described.

2. For the purpose of the above mode of preparing fabric as stated, the open-end box A, and the elevated slotted arm C, combined and operating as represented and described.

91,078.—Joseph Bradley, Racine, Wis.—*Horse Hay-Fork.*—June 8, 1869.

Claim.—The arrangement of the slotted and extended spear-bar A, hooked bars B B, arm C, extended lever D, and cord E, passing over the pulley, all constructed and operating as shown and specified.

91,079.—Henry L. Brevoort, Brooklyn, N. Y.—*Device for Operating Throttle-Valves.*—June 8, 1869.

Claim.—The combination of the screw-rod D and lever B, provided with a locking-device, E, with the valve-stem C, or other analogous device, substantially as set forth.

91,080.—Leverett Brown, New York, N. Y.—*Fastening for Topmasts and Top-gallant-Masts.*—June 8, 1869.

Claim.—The method of fitting and securing the topmasts and top-gallant-masts of vessels, in the manner herein described, so that the mast above shall rest upon and be directly supported by the mast immediately below, instead of the trestle-trees of such masts, as and for the purposes set forth.

91,081.—George Burch, Newark, N. J.—*Manufacture of Bracelets.*—June 8, 1869.

Claim.—1. The construction of bracelets, rings, or similar forms from a single strip of metal, with edges rounded inwardly, substantially in the manner set forth.

2. The combination of the dies, constructed as described, with a case, A, or its equivalent, for the purposes set forth.

91,082.—Francis Caffrey and John L. Nettleton, West Cheshire, Conn.—*Machine for Milling the Body of Keys.*—June 8, 1869.

Claim.—The combination of the two mandrels B and C, revolving together, and constructed so as to receive and hold the key, with the mills I I, the whole constructed and operating substantially in the manner set forth.

91,083.—George J. Capewell, West Cheshire, Conn., assignor to "Porter Brothers," New York City.—*Securing Buttons to Fabrics.*—June 8, 1869.

Claim.—Closing inwardly the outer open end of the tubular eyelet, heading the same, and corrugating the said head at one and the same time, and operating substantially as and for the purposes specified and set forth.

91,084.—David F. Carr, East Union Township, Ohio.—*Cultivator.*—June 8, 1869.

Claim.—1. The combination, with the axle B, of the beams C, loops E, braces G, and shovels F, when adjusted and arranged substantially as and for the purpose specified.

2. The lever M and link M^1, in combination with the axle B, and parts above claimed, as and for the purpose set forth.

91,085.—Thomas Carr, Bristol, Great Britain.—*Machine for Disintegrating Fertilizers and other Articles of Manufacture.*—June 8, 1869; patented in England October 2, 1868.

Claim.—1. The mounting of both the solid and hollow shafts of "disintegrator"-machines in separate bearings a^1 and b^1, as herein set forth.

2. The mode of fixing a knife, *d*, in "disintegrator"-machines, by means of an additional short standard, e^2, from the base-plate or frame *e*, as herein set forth.

3. The making of the cover *c* for the cages in

"disintegrator"-machines, so as to commence only at the outer edges of the outer cage, as herein set forth.

91,086.—Stephen Chandler, New York, N.Y. —*Furniture-Caster.*—June 8, 1869.

Claim.—The spherical caster-roller A, in combination with the spring-arms G, and the anti-friction wheels F, when the latter are arranged in pairs, with their axes above the center of the caster-roller, substantially as described.

91,087.—S. G. Cheever, Boston, Mass.—*Harness.*—June 8, 1869.

Claim.—1. A girth made with the devices shown, or their equivalents, at each end of the girth, to receive the saddle and shaft straps, substantially as and for the purpose described.

2. A girth made as above claimed, and with the soft edge or roll, for the purpose set forth.

91,088.—Peter Christiansen, Rochester, Minn. —*Sash-Balance.*—June 8, 1869.

Claim.—The combination of the pulley-block F, toothed sheave E, spring-lever G, and cords or chains D and I, all constructed and arranged, with relation to the frame and sashes, substantially as described and shown.

91,089.— William B. Coates, Philadelphia, Pa., assignor to Edwin Clinton and W. Harrison Eisenbrey, same place, for three-fourths of the invention.—*Hair-Dyeing Brush.*—June 8, 1869.

Claim.—The combination of the brush A with the bottle C, all constructed and arranged as and for the purpose specified.

91,090.—William Compton, New York, N. Y. —*Composition Crayon.*—June 8, 1869.

Claim.—1. The composition for crayons formed of the materials, and as herein set forth.

2. To the crayon formed by rolling the plastic mass between two surfaces, to consolidate the same, as set forth.

91,091.—Joseph Crookes, St. Louis, Mo., assignor to himself and Joseph W. Branch, same place.—*Cotton Bale Tie.*—June 8, 1869.

Claim.—The locking-piece B, arranged with car-pieces B^2, and riveted to the end A', when combined with the joint rivet C and the end A, substantially as herein set forth.

91,092.—John G. Cullmann, Cincinnati, Ohio.— *Device to Prevent Injury to Liquor on Tap.*—June 8, 1869.

Claim.—1. The mode of preserving liquor on tap from souring, by causing the entering air to traverse a purifying liquid or material, substantially as set forth.

2. The cup or ventilator D, having the valve-guarded neck C, stand-pipe E, inverted cup F, and faucet H, or their equivalents, for the purposes explained.

91,093.—Joseph Delaney, Ashland, Pa.—*Apparatus for Raising and Dumping Coal.*—June 8, 1869.

Claim.—In combination with the slope-track B and with rails *c c*, arranged outside of and forming a continuation of the same, a car, H, the wheels of which are so arranged, with respect to the said track and rail *c*, that, after reaching the top of the slope, the said car shall rest both on the rails B and C, and shall be automatically tilted, and its load discharged, all substantially as herein set forth.

91,094.—John Donavan Dennis, Gilroy, Cal. —*Composition for Destroying Ants.*—June 8, 1869.

Claim.—The use of the above-mentioned composition of crystallized corrosive sublimate, pulverized red Cayenne pepper, and pulverized gum-camphor, in about the above-mentioned proportions, for the purpose of perfectly and effectually poisoning, killing, and banishing ants, preventing their harboring, dwelling, or remaining in or about houses, cupboards, and pantries, or any other places or articles whatsoever.

91,095.—Frank A. Desloge, St. Louis, Mo.— *Clothes-Mangle.*—June 8, 1869.

Claim.—1. The roller C, its orifices *e*, and sleeve-journals F, when combined with the shaft D and its perforations E, substantially as set forth.

2. The smoothing-roller C, when combined with the composite roller C', substantially as and for the purpose set forth.

91,096.—H. A. Devendorf, Port Jackson, N. Y.—*Paper Box.*—June 8, 1869.

Claim.—As a new article of manufacture, a paper box, constructed by means of the strips A B, slit at *e e*, and bent up and attached together, substantially in the manner specified.

91,097.—Jonathan D. Devol, Parkersburgh, W. Va.— *Combined Saw-Set, Gummer, Punch, and Wire-Cutter.*—June 8, 1869.

Claim.—1. The jaw A, constructed as shown and arranged, to receive the dies or plates D E F and guide C, in combination with the jaw B, substantially as and for the purpose specified.

2. The combination and arrangement of the jaws A and B, set-punch G, gumming-plate H, round punch I, cutting-punch K, guide C, and plates or dies D, E, and F, substantially as shown, and for the purposes specified.

91,098.—Dexter Dill, New Haven, Conn.— *Peanut-Oven.*—June 8, 1869.

Claim.—The herein-described oven, consisting of the two cylinders C and D, with the space E between them, the central tube F and top G, provided with a door, H, the whole constructed and arranged so as to operate substantially in the manner and for the purpose set forth.

91,099.—Jacob Dourson, Columbus, Ohio.— *Extension-Table.*—June 8, 1869.

Claim.—The arrangement of the slides F F, which are connected with the table-legs on opposite sides of the blocks E, when the latter are attached to the table-top A, and are connected with the parts F F by means of the metallic slides *i i*, all constructed and arranged to operate substantially as described, and for the purpose specified.

91,100.—Nancy A. Downer, Canandaigua, assignor to herself and David C. Chase, Clayton, Mich.—*Process of Reducing the Size of Plaster Molds.*—June 8, 1869.

Claim.—The mode or process herein described for taking wax figures in *alto relievo*, from nature, down to any desirable size or age, and retaining throughout every feature of the original object.

91,101.—William Duchemin, Boston, Mass., assignor to George B. Bigelow, trustee, same place.—*Sewing-Machine for Sewing Turned Shoes.*— June 8, 1869.

Claim.—1. The needle-guard J^6, constructed as described, in combination of the needle K^5, when operating together as described, and for the purpose set forth.

2. The wedge Q Q^1, in combination with the standard P^4, and the arm P P^1, arranged and working substantially as described, and for the purpose set forth.

3. The fingers F^4 F^5, or their equivalents, when operated substantially as described, to seize the loop and give it a quarter turn, substantially as described, and for the purpose set forth.

4. The thread-carrier L^5, arranged and working, in combination with the fingers F^4 and F^5, substantially as described, and for the purpose set forth.

91,102.—G. L. Du Laney, Mechanicsburgh, Pa. —*Harvester Cutter.*—June 8, 1869.

Claim.—1. The sickle-bar D, as shown and described, and for the purpose specified.

2. The stay-loop V, as shown and described, and for the purpose set forth.

3. The beveled shot B, draw-nut C, and stay-pin I, when used in combination with the sickle-bar D and stay-loop V, as shown and described, and for the purpose specified.

91,103.—W. W. DUNGAN, Baltimore, Md., assignor to Mary D. DUNGAN, same place.—*Steam-Generator Smoke-Stack.*—June 8, 1869.

Claim.—1. A smoke-pipe, consisting of sections, arranged to slide one within the other, said sections being provided with sheaves or pulleys, for operating the same, substantially as shown and described.

2. The arrangement of the pulleys or sheaves B B and ropes or chains E E and F F, whereby to raise the sections A^1 and A^2 of the pipe, substantially as shown and described.

3. The arrangement of the shafts D D with their drums, for the reception of the ropes or chains, and the ropes or chains F F, with reference to the stationary section A of the pipe, substantially as shown and described.

91,104.—JOHN E. EARLE, New Haven, Conn.—*Tea and Coffee Pot.*—June 8, 1869.

Claim.—In combination with the perforated cylinder B, within the body A, the arrangement of the material packing *a* between the cover and vessel, substantially in the manner and for the purpose set forth.

91,105.—ZEBINA EASTMAN, Chicago, Ill.—*Street-Car.*—June 8, 1869.

Claim.—A car composed of two or more vertical cylinders, the axles of which are coincident with the centers, around which the wheels oscillate in turning curves, and arranged to embrace said wheels, substantially as shown and described, and for the purpose set forth.

91,106.—JOHN H. ERNEST, Millerstown, Pa.—*Corn-Planter.*—June 8, 1869.

Claim.—1. The lever M, chain *g*, and hook *h*, when arranged and operating substantially as and for the purposes described.

2. In combination with a planter having all the parts herein described, the marker S, when constructed and operating as set forth.

91,107.—F. FISCHBECK, Chicago, Ill.—*Traveling-Bag Frame.*—June 8, 1869.

Claim.—1. A traveling-bag frame, having the rim A of the outer jaw, the protectors B, and the cross-strip E, constructed and arranged substantially as herein described and for the purpose set forth.

2. Hinging the inner jaw E to the ends of the strip D, bent as herein shown and described, or to the protectors B, substantially as set forth.

91,108.—ADDISON C. FLETCHER, New York, N. Y.—*Postage-Stamp, &c.*—June 8, 1869.

Claim.—A postage or revenue stamp, having a portion of its surface composed of thin or fragile paper, or other suitable material, loosely attached, and on which a portion of the design or other matter is printed, substantially as and for the purpose or purposes set forth.

91,109.—FRANCIS M. FRANKLIN, Springfield, Ohio, assignor to himself and EDWARD M. DOTY, same place.—*Plow.*—June 8, 1869; antedated May 24, 1869.

Claim.—1. The bent sheath C, constructed and used substantially as and for the purposes as herein set forth.

2. The arrangement of the beam A, sheath C, bent draught-rod F, eye-bolt H, upright I, and handle B, all substantially as shown and described.

3. The arrangement of the handle B, upright I, round L, forked brace J, thimbles *d d*, washers *e e*, and nuts *c* and *f f*, all substantially as herein set forth.

91,110.—WILLIAM D. FREEMAN, Tomales, Cal.—*Machine for Cleaning Oats.*—June 8, 1869.

Claim.—A riddle, as shown and described, and to be used as an oats-cleaner, and its operation in thrashers and separators, for the purposes specified.

91,111.—SAMUEL N. FRENCH, Fitchburgh, Mass.—*Carpet-Fastener.*—June 8, 1869.

Claim.—The carpet-fastener described, consisting of the base A, having the projections *a a*, and spur *a'*, and swinging-button B, the whole being combined and operated in the manner and for the purpose set forth.

91,112.—MAGGIE E. FRENTZ, New Albany, Ind.—*Corset-Fastening.*—June 8, 1869.

Claim.—The device for fastening corsets, consisting of the male and female clips *a b*, provided with lips to clasp the busk over its outer edge, and with perforated tongues to pass through slots in the busk, being secured in position by means of a key-pin or split ring, substantially as described, and for the purpose set forth.

91,113.—SIGMOND GOGE, Brooklyn, N. Y.—*Glove.*—June 8, 1869.

Claim.—The glove, formed with the seams of the second and third finger pieces converging to the part *6* in the palm, substantially as and for the purposes set forth.

91,114.—OLE CHRISTIAN GREEN, Copenhagen, Denmark.—*Compound for Making Friction-Matches.*—June 8, 1869.

Claim.—The compound formed of the ingredients herein described, substantially as and for the purpose set forth.

91,115.—FREDERICK GRINNELL, Meadville, Pa., assignor to N. C. MILLER and S. R. DUMMER, New York City.—*Axle-Box Cover.*—June 8, 1869; antedated December 8, 1869.

Claim.—1. The arrangement of the oblong slot *b* in one end of the cover A, in combination with the open slot *a* in the opposite end, and with the screw-bolts *c c'*, substantially as and for the purpose described.

2. The projecting lip *e*, on the open slot *a*, in combination with the angular slot *b* in the cover A, and with the screw-bolts *c c'*, substantially as and for the purpose set forth.

91,116.—WILLIAM W. GUILD, Walpole, N. H., administrator of the estate of JAMES W. MELLISH, deceased.—*Guard for Door-Knobs.*—June 8, 1869.

Claim.—1. Cutting a notch or recess in the knob-spindle, to receive a portion of the metal of the sliding-gripe F, and to prevent any movement of the knob-spindle endwise, substantially as herein set forth.

2. In combination with a knob-spindle cut with a notch or recess, as described, the sliding-gripe F, the movable cam-plate G, and the main plate E, all constructed and arranged to operate substantially in the manner and for the purposes set forth.

91,117.—NICHOLAS B. HADLAY, Providence, R. I.—*Machine for Threading Screws.*—June 8, 1869.

Claim.—1. The combination of the notched arbor B, spring-catch D, pulley C^1, tripping-wedge F, tappets G^1 G^2, and retracting spring *f*, all arranged as and for the purposes set forth.

2. The described arrangement of the tripping-piece F, pulley C^1, and spring-catch D, substantially as set forth.

3. The cams G^5 G^6, constructed as described, and arranged as shown, upon the shaft G, in combination with the projection K' of wedge K, and the tool-carrier H and spring J', whereby said wedge is moved back and forth, by a positive motion, under all conditions, as set forth.

4. The relative arrangement of the wedge K, wedge-bar L L', bearing-block H', and tool-carrier H, substantially as herein set forth.

5. The shaft N, in combination with the cams O^1 O^2 O^3, wedge-bar L L', and wedge K, the parts L' N being connected by means of a pin working in a slot, whereby said wedge-bar L' is operated, both longitudinally and laterally, and the said motions are rendered independent of each other, substantially as herein described.

91,118.—ROBERT D. HAINES, Cambridge, assignor to the "BOSTON SILVER-GLASS COMPANY," Boston, Mass.—*Sectional Mold for Glass-Ware.*—June 8, 1869.

Claim.—1. In combination with the hinged or clamping jaws, the sliding-mold blocks, diverging

radially from the axis of the mold, substantially as described.

2. In combination with the hinged jaws and the sectional sliding mold-blocks, the vertically sliding pin *u*, substantially as described.

3. In combination with means for raising the pressed article, the stationary cap-ring *x*, substantially as described.

91,119.—Robert D. Haines, Cambridge, assignor to the "Boston Silver-Glass Company," Boston, Mass.—*Solid Glass-Ware Mold.*—June 8, 1869.

Claim.—1. A solid glass-ware mold, having a series of peripheral matrices, substantially as described.

2. In combination with such mold, the means for bringing each matrix successively into position, and for preventing movement of the mold during the action of the plunger, substantially as described.

91,120.—A. H. Hall and H. T. Lee, Marysville, Cal.—*Steam-Packing.*—June 8, 1869.

Claim.—The construction of the malleable metal strips, substantially as described, and for the purpose set forth.

91,121.—E. R. Hall, Syracuse, N. Y., assignor to himself, William H. Town, and Charles E. Candee, same place.—*Sawing-Machine.*—June 8, 1869.

Claim.—1. The chains *c*, rollers *g* and *m*, shaft *n*, lever *p*, and pinions on the working-shaft, and shaft *u*, as described, when constructed and arranged substantially as and for the purpose specified.

2. The arms *s*, *t*, and *w*, shaft *u*, rods *y* and *a'*, and guide *b*, when all the parts are constructed, arranged, and operating substantially as and for the purposes specified.

3. The arms *c'* and *e*, spring *d'*, and hinged block *f*, when constructed, arranged, and operating substantially as and for the purposes herein specified.

91,122.—William H. Hall, New Gloucester, Me., assignor to himself and John R. Clifford, Chelsea, Mass.—*Elastic Heel-Guard for Horses.*—June 8, 1869.

Claim.—As an article of manufacture, a heel-guard of India rubber, formed as described; that is to say, with the interior projections and rolls lined with kersey, all as herein shown and described.

91,123.—William Smith Hall, Quincy, Mass. —*Homomotive.*—June 8, 1869.

Claim.—1. A carriage constructed and arranged to be driven by hand or foot, or hand and foot, by means of a system of ratchet and pawl clutch mechanism and gearing, substantially as shown and described.

2. The organization of mechanism for changing the direction of rotation of the shaft of the actuated carriage-wheels, substantially as shown and described.

3. The organization of mechanism for steering or changing the direction of movement of the front wheels, substantially as shown and described.

4. In combination with a carriage, which may be driven by hand or foot, or both, removable pedals, substantially as described.

5. In combination with a carriage, which may be driven by hand or foot, or both, hand-operated arms or levers, which may be thrown into position to be operated, or out of such position, substantially as described.

91,124.—George Halstead, Buffalo, N. Y.—*Iron Truss-Bridge.*—June 8, 1869.

Claim.—1. The truss-block J, with its projections K, when arranged and combined with the chords, tie-rods, and columns, as and for the purpose set forth.

2. The bolts H, when combined with the separating-blocks G or G^1 and floor-beams I, in the manner and for the purpose set forth.

91,125.—George Halstead, Buffalo, N. Y.—*Manufacture of Wrought-Iron Columns.*—June 8, 1869.

Claim.—The improved column or shaft herein described and shown, composed of the beaded and rebated segmental plates A and bead-like battens *d*, joined one to the other, and united by rivets or bolts, in the manner set forth.

91,126.—C. C. Hare, Kansas City, Mo.—*Current Changing Apparatus.*—June 8, 1869.

Claim.—1. The sliding-pipe B, in combination with the outer pipe A and the tube H, constructed substantially as and for the purpose described.

2. The hinged and pivoted lip C, in combination with the sliding-pipe B, case A, and tube H, constructed and arranged substantially as and for the purpose described.

91,127.—John K. Harris, Springfield, Ohio.—*Harness.*—June 8, 1869.

Claim.—1. The arrangement of the springs H, thongs *c c*, and plate M, as described, the spring and thongs extending from the end of the plate, so as not to add to the lateral space required for it, substantially as and for the purposes specified.

2. The combination of the side loop or hook *m* or *n* with the plate M, when the latter is employed in connection with the springs H and thongs *c*, substantially as and for the purposes set forth.

3. Arranging the elastic apparatus M H *c h* within the body of the holdback, substantially as and for the purposes specified.

4. The combination of a thill-supporting hook or eye with an elastic holdback, substantially as and for the purposes set forth.

5. Attaching the thills to the harness by means of thill-hooks *f f* and harness-eyes *m m*, constructed and arranged so as to prevent disengaging by an upward pressure upon the thills, substantially as and for the purposes set forth.

91,128.—William Hawkins, Brooklyn, N. Y., assignor to himself and F. W. Barnhart, same place.—*Separator for Meal, &c.*—June 8, 1869.

Claim.—The shaft *a*, with the agitators *o* and inclined conveyers *p*, arranged as set forth, in combination with the adjustable bearings *e f*, case *k l*, screen *m*, hopper *n*, and delivery-spout *r*, as and for the purposes set forth.

91,129.—Jacob Heckendorn, Reading, Pa.—*Plow.*—June 8, 1869.

Claim.—1. The oblique landside A, provided with coulter *a*, shoulder *b*, and round edge *e*, in combination with coulters *d* and mold-board H, substantially as described.

2. Standard B, curved so as to form a continuation of the curve of the mold-board, the head being inclined over the mold-board, substantially as described.

3. The double point C, with coulters *d d d d*, the noses *f f* being made and chilled in a curved line, as arranged, and held in position by lug *i*, in combination with the oblique round-edged landside, substantially as described.

4. The bolt or stem E, so arranged as to be adjustable laterally without changing the position of beam in relation to the standard, substantially as and for the purpose set forth.

5. The standard bolt or stem E, with dovetail head, tongued washer O, and screw-nut, corrugated plate *n*, with transverse slot and transverse corrugated groove *m*, constructed and operating substantially as described.

6. The adjustable cutter F, having a curved shank, constructed substantially in the manner as described.

91,130.—A. B. Hendryx, Ansonia, Conn.—*Lamp-Shade.*—June 8, 1869.

Claim.—A lamp-shade formed from a segment, pivoted at the lower edge, and the upper edge constructed so as to slide, one part upon the other, and provided with the spring *f*, for the purpose of adjusting the shade, substantially in the manner set forth.

91,131.—J. Herr, Carbondale, Ill.—*Animal-Trap.*—June 8, 1869.

Claim.—The combination of the box A, wire-reel

B, and pulley-cord C, spring D, pivoted bottom G, trough H, spring-rod I, trigger K, guide L, and ratchet E, all constructed and operated as herein set forth.

91,132.—Charles H. Hersey and Walter E. Hawes, Boston, Mass., assignors to themselves and F. C. Hersey, same place. — *Glass-Ware Press.*—June 8, 1869.

Claim.—In a glass-ware press, the combination, with the cross-head, to which the platen is connected, of the links *e*, cross-tail *d*, toggles *f g*, links *i*, and the rocker-lever, shaft, and arm, arranged and operating as herein described.

91,133.—James Howard, West Manchester, Pa.—*Paper for Roofing.*—June 8, 1869.

Claim.—The method, hereinbefore described, for preparing paper for roofing purposes, to wit, by passing the paper through liquid asphaltum heated to that degree which will cause the paper and the asphalthum on it to dry as fast as it is drawn from the reservoir of liquid asphaltum.

91,134.—George H. Hurd, Memphis, Tenn.—*Regulator for Vulcanizing-Apparatus.*—June 8, 1869.

Claim.—The application of steam, when used in regulating the flow of gas or heat, in the vulcanizing of rubber, as herein described, using for that purpose the aforesaid apparatus, or any other substantially the same, and which will produce the intended effect.

91,135.—Charles F. Jacobsen, New York, N. Y.—*Chandelier.*—June 8, 1869.

Claim.—1. The combination of two or more burner-rings, B B′, placed, the one above the other, with the pipe or rod A and reflector D E G, substantially as herein shown and described, and for the purpose set forth.

2. The rings B B′, when provided with the flanges O O, to receive and support the glass pendants, as herein shown and described, for the purpose set forth.

3. Forming raised or sunken panels in the foundation, or outer part D, of the reflector D E, substantially as herein shown and described, and for the purpose set forth.

4. Covering the silver coating of the glass E with a water and heat proof cement, when used in reflectors, substantially as herein shown and described, and for the purpose set forth.

5. The combination of the two canopies I and J, provided with borders K and pendants L, with the rod or pipe A and double-cone reflector D E G, substantially as herein shown and described, and for the purpose set forth.

6. The combination and arrangement of the rod or pipe A, rings B B′, provided with burners, double-cone reflector D E G, chains F, canopies I J, provided with raised borders K and pendants L, and pendants N P Q, with each other, substantially in the manner herein shown and described, and for the purpose set forth.

91,136.—Joseph L. Joyce, New Haven, Conn.—*Machine for Cutting Down Heels of Boots and Shoes.*—June 8, 1869.

Claim.—The combination of the adjustable holder B, with the cutter *f* and guide L, arranged upon an adjustable carriage, C, so as to operate in the manner and for the purpose substantially as set forth.

91,137.—Joseph Kay, New Haven, Conn.—*Tuyere.*—June 8, 1869.

Claim.—The arrangement, in the tuyere-plate A, of the swinging-plate B, combined with the two plates *b* and *c*, each constructed with corresponding openings, and so as to operate substantially in the manner herein described.

91,138.—John J. Kenna, San Francisco, Cal.—*Machine for Polishing Shirt-Bosoms.*—June 8, 1869.

Claim.—The roll A, provided with the recess B, substantially as and for the purpose set forth.

91,139.—L. W. Langdon, Northampton, assignor to himself and J. G. Clark, Springfield, Mass.—*Permutation-Lock.*—June 8, 1869.

Claim.—1. In combination with the locking-bolt of a permutation-lock, having studs set on the cylindrical part thereof, a series of revolving ferrules, having annular and longitudinal channels and dogs upon the adjacent ends thereof, when said ferrules revolve on the locking-bolt, are arranged and inclosed within a casing, and are operated by means of power applied to one of the ferrules, substantially as herein described.

2. The combination and arrangement of the bolt E, having projecting studs, the series of channeled and revolving ferrules F, with projecting dogs *f* at the adjacent ends thereof, beveled gears G G′, driving-spindle H, dial M, and graduated knob K, having a projecting pin, *o*, the whole applied to the lock-body, and operating substantially as described.

91,140.—A. Z. Long, Scranton, Pa., assignor to himself and W. G. Dowd, same place.—*Car-Coupling.*—June 8, 1869.

Claim.—1. In connection with the hook B, jointed to the car H, the curved plate E, provided with the notches $e\ e^1\ e^2$, as and for the purpose specified.

2. As a whole, the automatic car-coupling device, consisting essentially of the jointed hook B, plate E, having three or more notches, $e\ e^1\ e^2$, and casting C, having the slot c^1; the oblique curved walls $c^2\ c^2$, and the inclined bottom *c*, substantially as and for the purpose described.

91,141.—John C. Love, Philadelphia, Pa.—*Lamp-Burner.*—June 8, 1869.

Claim.—1. The flange *p*, with its notches, at the upper end of the perforated casing *n*, in combination with the outer cone A and its slot *d*, all as described.

2. The combination of the springs *f*, their fingers *i*, and the set-screws *h*, all arranged on a burner, operating as set forth.

91,142.—Obadiah Marland, Boston, Mass.—*Hardening Steel.*—June 8, 1869.

Claim.—1. The process for hardening steel, consisting in subjecting the heated steel to the action of a cooling current, which is maintained under pressure in a receptacle for the heated steel, through which receptacle the cooling current flows, by the action of a head or pressure against a contracted outlet, substantially as described.

2. A receptacle for the heated steel article, arranged with an inlet and outlet for the cooling current, when shaped to correspond to the form of the piece to be hardened, and to permit a substantially uniform flow of the cooling-current past all the surfaces of said piece, substantially as described.

3. A receptacle for the piece to be hardened, when provided with adjustable studs, arranged to clamp and hold said piece in position for the action thereon of the cooling current.

4. A receptacle for the piece to be hardened, when provided with an inlet valve or gate, and a grid or series of bars, *c*, arranged to allow deposit or drainage or leakage of the cooling medium, and to admit the contact of the cooling current with the lower surface of said piece.

5. The combination of the check bars *k* with the receptacle for the heated steel, substantially as and for the purpose specified.

6. The combination, with the receptacle for the hot steel, of a cover or door, provided with the means for locking it when closed, substantially as described.

7. The combination, with the receptacle for the hot steel, of adjustable plates, arranged to contract the area of the passage of the cooling-current, as it passes from the inlet to the outlet, substantially as and for the purpose specified.

91,143.—E. G. Matthews, Newton, assignor to F. F. Holbrook, Dorchester, Mass.—*Seed-Planter.*—June 8, 1869.

Claim.—1. The combination, with the markers J and arms I I, of the pins *e* and *f*, substantially as and for the purposes set forth.

2. The conductor or opening-plow K, made substantially as and for the purposes set forth.

3. The combination, with the hopper and conduc-

tor, of the seed-dial plate, substantially as and for the purposes set forth.

4. A seed-dial plate, constructed in the particular manner above described, in combination with the hopper, substantially as and for the purposes set forth.

5. The stirrer D, substantially as and for the purposes set forth.

6. The combination with the pieces A A and handles R R, of the curved joint-pieces S S, as shown and described.

91,144.—E. G. Matthews, Newton, Mass.—*Hand-Cultivator.*—June 8, 1869.

Claim.—1. The arrangement, with the slotted frame A and adjustable wing-frames D D, of the central wheel B, substantially as described.

2. The combination, with frames A and D, of the wheels B and F, substantially as and for the purposes set forth.

3. The arrangement of the teeth E, as respects the wheels B and F, and each other, as shown and described.

4. The plant-lifting arms J J, substantially as and for the purposes set forth.

91,145.—Ives W. McGaffey, Chicago, Ill.—*Sweeping-Machine.*—June 8, 1869.

Claim.—1. A machine, substantially such as is herein described, having a rotating fan, arranged to draw or suck a current of air, and with it the dust or dirt from the floor, up into the machine, as set forth.

2. The combination of the case A with its fan, the conductor B, and mouth-piece C, when arranged to operate as and for the purpose set forth.

3. The combination of a fan for drawing or sucking up the dirt, by a current of air, and a porous receptacle, which serves to retain the particles of dirt, while permitting the air to escape.

91,146.—R. A. McKanna, Young America, Ill.—*Swivel Cock-Eye.*—June 8, 1869.

Claim.—The grooved metal plate A, securing the sides and ends of the leather B, and provided at its end with a swivel cock-eye, D, all connected together by bolts C, substantially as set forth.

91,147.—A. J. McKee and S. D. McKee, Beaver Dam, Ohio.—*Hay-Loader.*—June 8, 1869.

Claim.—1. A hay-gatherer, consisting of the frame A, mounted on wheels, and having teeth E, arranged to slide therein longitudinally, and also to have their front ends elevated and lowered by the cords *k*, windlass *g*, with ratchets G, and levers H, provided with pawls *h*, all constructed and arranged to operate substantially as herein described.

2. The combination of the teeth E with the bail K, provided with the arms L, for operating it, when constructed and arranged substantially as described, and for the purpose set forth.

3. The hook F, provided with the lever *e*, in combination with the teeth E, when constructed and arranged to operate substantially as herein described, and for the purpose set forth.

91,148.—William S. McNeil, Springfield, Mass., assignor to American Car-Heating Company, New York City.—*Car Heater and Ventilator.*—June 8, 1869.

Claim.—1. The employment, with the conduit for conducting air from the exterior of the car to the heating-apparatus, of a slanting or inclined partition within such conduit, for receiving and deflecting the cinders and other impurities entering with the air, and a discharge orifice, located at or near the lowest point of the partition, for the escape of the cinders and other matter thus collected, substantially as herein set forth.

2. The combination with the air-induction pipe and slanting partition, as above described, of a second pipe or conduit, leading to the heating-apparatus, and extending up through the said partition, so as to receive air from the air-induction pipe, and provided with a conical or tapering screen, for deflecting upon the partition the impurities which enter with the air, substantially as and for the purposes described.

3. The combination, with the elements named in the preceding clause, of the water-cylinder or chamber, within which the inclined partition and the pipe passing through the same are arranged, as hereinbefore shown and specified.

4. The air-purifying apparatus, constructed as herein specified, in combination with the heating-apparatus, substantially as shown and set forth.

5. The arrangement, in an apparatus such as described, of the fire-box, the feed-hopper or magazine, the upper heating-space, the two receiving and heating chambers, and the dome surmounting said parts, substantially in the manner shown and specified.

6. The employment, in connection with the dome and the hopper or feed-tube opening into the fire-box, as described, of a sliding screen-plate, covering the hopper, and adapted to be locked or held in place by the door carried by the dome, as and for the purposes shown and set forth.

91,149.—Stephen W. Miller, Dundee, N. Y.—*Sewing-Machine.*—June 8, 1869.

Claim.—The combination, with belts G G, and rollers E F, of the rotating disk I, arranged between the belts to raise the cloth from the pins in the belt, as described.

91,150.—S. G. Monce, Bristol, Conn.—*Tool for Cutting Glass.*—June 8, 1869.

Claim.—1. The cutter A, constructed substantially as shown and described, and for the purposes set forth.

2. The combination of the cutter A, frame B, and handle C, substantially as and for the purposes described.

91,151.—James A. Morrell, New York, N. Y.—*Pump.*—June 8, 1869.

Claim.—The combination of the piston-rod C, cross-head D D, rods C′ C′, and cylinder A, all arranged substantially as and for the purpose specified.

91,152.—Andrew J. Morse, Boston, Mass.—*Syrup-Cock.*—June 8, 1869.

Claim.—The cylindrical elastic valve, the curved surface of which impinges against the inner side of the faucet-tube, and covers and uncovers the eduction orifice, the elasticity of the valve permitting its expansion, and enabling it to be suitably expanded, at will, when worn, and the valve, when operated, having an endwise and rotative movement, substantially as described.

91,153.—Porter C. Moulton, New Haven, Conn.—*Neck-Tie Retainer.*—June 8, 1869.

Claim.—In combination with a neck-tie, the retainer, consisting of a supporting-plate, B, and a spring, C, between the outer ends of which the edges of the collar are clasped, and the neck-tie held in position, substantially as shown and described.

91,154.—Thomas H. Neal, Allegheny, Pa.—*Attaching Handles to Picks.*—June 8, 1869.

Claim.—The pick-holder B and clamping-screw C, when constructed and arranged substantially as herein described, and for the purpose set forth.

91,155.—Isaac E. Newton, Waterbury, Conn.—*Stone Cutting and Dressing Saw.*—June 8, 1869.

Claim.—The herein-described method of setting diamonds in stone cutting or dressing instruments, consisting of the two blocks B B, constructed and arranged substantially as set forth.

91,156.—O. R. Nitsch, New York, N. Y.—*Fan.*—June 8, 1869.

Claim.—As a new article of manufacture, a fan, whose leaves are attached together and opened by a spiral spring, attached to the outer leaf, substantially as described.

91,157.—William O'Neill, Pine Level, Ala.—*Plow.*—June 8, 1869; antedated May 28, 1859.

Claim.—The additional improvement to my patent of September 13, 1859, viz, the mode of adjusting the land-side J by the wedge K, as herein described, and for the purpose set forth.

91,158.—Joseph F. Paul, Boston, Mass.—*Wood Pavement.*—June 8, 1869.

Claim.—A pavement composed of a series of oblong blocks of wood, united together by grooves and a tongue, extending entirely across the foundation, when the tongue and grooves, by which they are united, are of such nature as to admit of a single block being driven directly upon the tongue, at any point in its entire length, when each alternate row of blocks thus connected is supported by a longitudinal strip of plank, of such width as to form a support for the entire base of one row, and ledges for the support of the two contiguous rows of blocks, the same being substantially as before explained.

91,159.—Charles Peck, New Haven, Conn.—*Lifting-Device for Drop-Presses and Hammers.*—June 8, 1869.

Claim.—1. The lock-bars D and E, in combination with the springs *b* and *c*, bolts *e* and *f*, and frame A, substantially as herein described.

2. The slotted bolt F, in combination with the sweep C, spring G, pawl *a*, and ratchet-wheel, arranged and operated in the manner substantially as herein described.

91,160.—George C. Perry, Ortonville, Mich.—*Horse Hay-Fork.*—June 8, 1869.

Claim.—1. The straight tine B, when used in the manner and for the purpose specified.

2. The tines A and B, levers C, braces D and E, and jaw F, when all are combined and operated substantially in the manner and for the purpose set forth.

91,161.—O. M. Pond, Independence, Iowa.—*Combined Seeder and Cultivator.*—June 8, 1869.

Claim.—A seeder and cultivator, consisting of seed-box C. plates *b b'*, screws *a a*^{1}, plates *a*^{1} *a*^{1}, levers *d* and *k*, chain *j*, cultivators *h' h' h'*, and bars *i i'*, all combined, arranged, and operating substantially in the manner and for the purpose described.

91,162.—Josiah M. Read, Boston, Mass.—*Boot-Crimper.*—June 8. 1869.

Claim.—1. The mode of attaching the auxiliary jaws D to or suspending them from the clasp B, by means of the overlapping ears *a a*, or their equivalents, which, while supporting said jaws, enables them to be instantly removed from or applied to the clasp, substantially as described.

2. The peculiar formation of spreader J, and its combination and arrangement with the auxiliary jaws, so as to allow the jaws and the clasp to be supported upon said spreader in the manner shown and described, and for the purpose set forth.

91,163.—John Reiser, Trenton, N. J.—*Door-Pulley.*—June 8, 1869.

Claim.—The thumb or set screw B, applied to the weight A, when arranged, constructed, and combined as herein shown and represented, for the purposes set forth.

91,164.—Sanford Riley, Northcutt's Store, Ky.—*Shovel-Plow.*—June 8, 1869.

Claim.—The combined arrangement of the reversible shovel, having diverse ends F F^1, and a working-face, concave in its length from point to point, and convex in its width from side to side, with a plurality of bolts E E, for securing it to its standard, B, as and for the purpose described.

91,165.—William D. Rinehart, Pittsburgh, Pa.—*Machine for Making Horseshoes.*—June 8, 1869.

Claim.—1. The lever *c*, having its upper end resting in a recess in the lower part of the die *e*, and arranged to be operated by the cam-wheel N, on the shaft D, substantially as described.

2. The holder *l*, constructed substantially as described, and arranged to be operated by the lever *h* and cam *h'*, as set forth.

3. The arrangement of the inclined die *e*, located below the former T, to receive the blank as it is dropped from the former, in combination with the correspondingly inclined swage *t*, operated by the knuckle-levers I I' and cam M, on the shaft D, substantially as described.

91,166.—C. A. Roberts, West Meriden, Conn.—*Attaching Pen-Racks to Inkstands.*—June 8, 1869; antedated April 27, 1869.

Claim.—A pen-rack, having the base constructed with the projection *a* and set-screw *d*, so as to be arranged upon and secured to the inkstand, in the manner and as herein set forth.

91,167.—Ira J. Ryerson, Piercetoh, Ind.—*Gate-Hinge.*—June 8, 1869.

Claim.—The adjustable wing E, pivoted to the plate D, and made to turn on the guide G, in combination with the adjustable stop *d*, substantially as specified and shown.

91,168.—Moritz Saulson, Troy, N. Y.—*Dinner-Pail.*—June 8, 1869.

Claim.—1. The combination, with the pail A, of the inner vessel B, provided with hinged bail E, as herein shown and described.

2. The combination with the pail A, of the canteen F, provided with the flange *b* and ring I, and removable standards or legs L, as herein shown and described, and for the purpose set forth.

91,169.—Friedrich Schmitt, Springfield, Ill.—*Velocipede.*—June 8, 1869.

Claim.—1. The within-described velocipede, constructed and arranged substantially as set forth, with the revolving-axle A, rear-wheels B B, guide-wheel G, and guide F, and operated by means of the pinion *b*, driving-wheel *c*, axle *d*, ratchet-wheel *e*, upright vibrating-lever *f*, connecting-bar *h*, seat-support and seat *q*, cross-piece *i*, jointed levers *k k*, and snappers *l l*, substantially as and for the purpose shown.

2. In combination with the above, the collar-band *p*, and catch *n*, substantially as and for the purpose shown and described.

91,170.—Charles H. Scholle, Cincinnati, Ohio.—*Coffee-Boiler.*—June 8, 1869.

Claim.—The arrangement of pot A, annular diaphragm B, removable percolator D, covered discharging-spout E G, and curved injectors F F', for the purpose set forth.

91,171.—Francis Schweizer, Green Point, N. Y.—*Bolt-Heading Machine.*—June 8, 1869.

Claim.—1. The arrangement of cam-slides L L D and slides I K K B B' on the upper surface of the bed A, cam-slide Q, and slide P on the under surface of said bed, in combination with cams E, R, N N, H, on the main shaft F, all as shown and described.

2. The mechanism for adjusting the header-gauge, in combination with the device for adjusting the retracting-mechanism, arranged and operating as described.

91,172.—John F. Seiberling, Akron, Ohio.—*Harvester.*—June 8, 1869.

Claim.—1. In a tilting double platform, the front edge of which rises from the finger-beam, arranging the hinges which unite the two sections of the platform and the hinges or pivots upon which the platform tilts in or nearly in the same vertical plane, substantially in the manner and for the purposes set forth.

2. So pivoting and operating a dropping platform, the front edge of which rises from the finger-beam, that the forward edge of the same, as it rises, will move forward in relation to the finger-beam, and, as it descends, will move backward, substantially as set forth.

3. Making the double platform extensible, by moving the rear section backward and forward on the hinges that unite the two sections, substantially as described.

4. In combination with the tilting platform, dividing-boards, and cut-off rod or bail, the hook *l*, Fig. 5, forming a hinge, on which the bail is raised from the front of the platform, when the latter is tilted, substantially as described.

5. The slotted adjustable support *p*, or the equivalent thereof, for adjusting the rear end of the double platform to the height required, for the purposes set forth.

6. So constructing and arranging a harvester that

the rear section of the platform may be folded up, and the finger-beam then swung horizontally backward, substantially in the manner and for the purposes set forth.

7. The combination and arrangement of the dropping or tilting platform, main frame, and raker's stand, substantially in the manner and for the purposes specified.

8. The combination of the crooked brace-bar H R, the piece Y, and the shoe, substantially as described

91,173.—E. B. SINTZENICH, Rochester, N. Y.—*Steam-Generator.*—June 8, 1869.

Claim.—1. The combination and arrangement of the water-tubes *a b c d* with reference to each other, and to the steam and water spaces of upright boilers, substantially as described.

2. The steam-chamber C, with its corresponding water-chamber C′, communicating with the annular steam and water spaces of upright boilers at opposite sides, in combination with the water-tubes *a b c d*, substantially as set forth.

91,174.—THOMAS SLAIGHT, Newark, N. J.—*Knob-Latch.*—June 8, 1869.

Claim.—The spring F, and levers C E, in combination with the latch D, provided with the oblong slot *b*, all arranged to operate in the manner substantially as and for the purpose set forth.

91,175.—DAVID MCCONNELL SMYTH, Orange, N. J., assignor to HENRY G. THOMPSON, New York City, and REUNE MARTIN, Orange, N. J.—*Machinery for Sewing Books.*—June 8, 1869.

Claim.—1. The series of needles, all of them provided with an eye, near the upper end, for holding the bands, and without hooks at their upper ends, substantially as described, in combination with the traveling-hook or the equivalent thereof, for carrying the thread in front of the needles, as described.

2. The combination of the following: The series of needles, the hook, or equivalent, for laying the thread in front of the needles, and the lifters, having mode of operation substantially such as described, for lifting the sheet over the needles and forming the fold.

3. The combination of the series of needles and the hook, or equivalent thereof, for laying the thread in front of the needles, the lifters for forming the fold, and the assistant folder, substantially as and for the purpose specified.

4. The combination of the series of needles, the hooks, or equivalent, for laying the thread in front of the needles, the lifters for folding the sheets, and the arms for operating the binding threads, substantially as and for the purpose described

5. The combination of the receiving-table with the series of needles, the hook for laying the thread, and the folder, substantially as and for the purpose specified.

91,176.—BENJAMIN F. STEPHENS, Brooklyn, N. Y.—*Method of Preparing Beef, &c.*—June 8, 1869.

Claim.—The preparation of animal substances by grinding the same up into small pieces previous to drying, so as to render the drying more uniform and rapid, and then grinding the same into a flour, as and for the purposes set forth.

91,177.—ORRIN STONE, Ionia, Mich.—*Combined Seeder and Sower.*—June 8, 1869.

Claim.—In combination with a cultivator-frame, carried by and adjustable on an axle and wheels, by means of the rack G, cogged segment H, lever *c*, and dog or pawl *d*, arranged near the driver's seat, as herein described, a seed-box for carrying, and the appliances for distributing and sowing the seed therein, said seed-box being arranged with regard to the cultivator and tongue, as herein represented, and for the purpose set forth.

91,178.—JOSEPH STONE, Keeseville, N. Y., assignor to himself, C. S. BAUM, M. T. CONRO, E. W. REYNOLDS, and G. T. THOMAS, same place.—*Machine for Welding and Cutting Railroad-Rails.*—June 8, 1869.

Claim.—The arrangement above described, consisting substantially of the cross-head c^4, with attachments, eccentrics *c* c^1, d^2 d^3, cross-head d^4, rocking-lever E^2, connecting-rod E, and dies e^1 e^2, as and for the purpose set forth.

91,179.—THOMAS B. STOUT, Keyport, N. J.—*Carpet-Stretcher.*—June 8, 1869.

Claim.—1. The fulcrum B, arranged and operating, in combination with the claw C of a carpet-stretcher, substantially as and for the purpose herein specified.

2. The dog D, attached to the handle A, and operating in combination with the claw C, pivoted upon the fulcrum B, substantially as and for the purpose herein set forth.

91,180.—LEVI B. SWARTZ and JAMES M. OPDYCKE, Lumberville, Pa.—*Door-Bolt.*—June 8, 1869.

Claim.—1. The hollow frame A, divided into two apartments, and slotted as described, in combination with the two slides C and I, and pin B, when used in the manner and for the purpose set forth.

2. The drum D, grooved as set forth, in combination with the notched bolt F, cam H, and spring G, when used in the manner specified.

3. The arrangement of the frame A, slides C and I, spring G, pin B, cam H, and notched bolt F, when all are combined for the purpose set forth.

91,181.—BENJAMIN TATHAM and JOSEPH STEGER, New York, N. Y.—*Railway-Car Brake.*—June 8, 1869.

Claim.—1. Giving to the friction plate or bar H a double-wedge shape from the center toward its ends, substantially as shown and described.

2. The friction plate or bar H, when the same is arranged, in combination with levers to be pushed and pulled, substantially as and for the purpose set forth.

3. The automatic take-up M, in combination with the buffer or coupling N, and brake rope or chain G, substantially as and for the purpose set forth.

91,182.—DE WITT C. THOMAS, Easton, N. Y.—*Potato-Digger.*—June 8, 1869.

Claim.—The separator D, in combination with a shovel, and the operating parts of a potato-digger, constructed substantially in the manner and for the purposes above described.

91,183.—J. L. W. TOWNSEND, Mount Blanco, Ohio.—*Yoke.*—June 8, 1869.

Claim.—The key *a*, constructed as described, when combined with the yoke A, in the manner and for the purpose set forth.

91,184.—JOHN L. TUCKER, Laconia, N. H.—*Door-Spring.*—June 8, 1869.

Claim.—The adjustable door-stop, for holding the door open in any desired position, arranged and operating substantially as and for the purpose herein specified.

91,185.—WILLIAM P. UHLINGER, Philadelphia, Pa.—*Sawing-Machine.*—June 8, 1869.

Claim.—The radial levers *y*, in connection with a crank or crank-pin, and segmental pinion or roller, and the jaws *s* and *v*, either toothed or smooth, to give a reciprocating motion, in a right or straight line, to bands, for the purpose of working saws, substantially as specified.

91,186.—ROBERT B. VARDEN, Uniontown, Md.—*Coal-Stove.*—June 8, 1869.

Claim.—1. The arrangement and construction of the air-heating chambers in such manner that while A acts as a fire-box and air-heater, B shall be enveloped by flame and products of combustion through its axis and on its outer periphery, substantially in the manner and for the purpose set forth.

2. The arrangement and construction of drawers *c′ c′*, as described.

91,187.—CHARLES WETTERHAN, Fond Du Lac, Wis.—*Rocker for Chairs and Cradles.*—June 8, 1869.

Claim.—A rocking-chair, consisting of the rockers E, frame C, rods D, and locking-device F, all constructed and arranged to operate substantially as herein described.

91,188.—R. WHITE, Mechanicsburgh, Pa.—*Lock-Nut.*—June 8, 1869.

Claim.—1. The single or double cap D, placed over a nut or nuts, upon the end of a bolt, substantially as shown and described.

2. The groove cut in the side of the nut B, in the manner and for the purpose specified.

3. The pin E, when used to lock the safe D and grooved nut B together, substantially as described.

4. The combination of the grooved nut B, bolt C, safe D, and pin E, when all are used in the manner and for the purpose set forth.

91,189.—DAVID WILCOX, Boston, Mass., assignor to himself, W. H. SLOCUM, and W. A. BROWN, same place.—*Hat.*—June 8, 1869.

Claim.—A hat, whose body is shaped into folds H I C D, substantially as described, and for the purpose set forth,

91,190.—ALFRED WILKIN, Lucas County, Ohio.—*Fire-Place.*—June 8, 1869.

Claim.—The plate D, with its curve G and perforations H H and C C, in combination with the grate B, and when constructed with reference to the back of an ordinary fire-place, substantially as and for the purpose described.

91,191.—JOHN K. WRIGHT, Philadelphia, Pa.—*Printing-Press.*—June 8, 1869.

Claim.—1. The combination of a series of two or more printing-cylinders, the surface of each of which is equally divided into equal alternate sections or divisions of type space or spaces and blanket space or spaces, or the combination of two or more such cylinders, with two or more plain blanket-cylinders, for the purpose of printing both sides of a sheet of paper at one operation, substantially as set forth.

2. The device, consisting of the endless flexible or jointed frisket *h*, with its projecting sharp points *n*, or any mechanism for holding the paper thereon, in combination with the endless flexible side-belts *k l*, attached to said frisket, for propelling it, substantially as set forth.

3. A removable sliding surface-plate, m^2, in combination with any printing-cylinder, to facilitate the placing of the type-forms on such cylinder.

4. The rollers *p q s t u*, endless belts or belt or blanket *v*, roller *r*, with its springs or weights, in combination with the paper-roller *o*, in the manner and for the purpose substantially as shown and described.

5. Giving the fly or flies of a printing-press a revolving motion, by attaching it or them at one of its or their ends to a rotary or movable base, to effect rapidity of discharge, substantially as set forth.

6. The fly v' w', with its serrated knife y', the auxiliary fly z', c^2, and the following-fly f^4 g^4, in combination with the cylinder p^1, projecting points s', cams x', h^2, and cams d^2, by means whereof the continuous strip of printed paper is cut into sheets of the desired size, and discharged, substantially as set forth.

91,192.—HENRY C. YERBY, Leslie, Mich.—*Lantern.*—June 8, 1869.

Claim.—1. The cylinder b', constructed with two rows of holes, c' c', d' d', and provided with slide *d*, in combination with the inner cylinder *e*, all arranged to operate substantially as and for the purpose set forth.

2. The cylinder b', constructed as described, perforated slide *d*, and cylinder *e*, in combination with cylinders *f* and *g*, and slide g^2, all constructed, arranged, and operating substantially as and for the purpose set forth.

91,193.—JAMES YOST, White Deer Township, Pa.—*Elevator.*—June 8, 1869.

Claim.—1. The dumper *f g*, with crossed braces *h h*, all constructed, arranged, and operated as herein described.

2. The pawls N N, arranged as described, and operated simultaneously, in combination with the drums I, on the sectional shafts G G′, for the purpose set forth.

3. The removable sectional shafts G G, G′ G′, joined together substantially in the manner described, and provided with the detachable drums I, all constructed, arranged, and operating substantially as described.

4. The combination and arrangement of the sectional removable shafting, detachable drums, pawls N N, and movable shaft K, with drum J, and lever M, all operating substantially as herein set forth.

91,194.—JAMES C. YOUNG, Bloomington, Ind.—*Car-Coupling.*—June 8, 1869.

Claim.—The coupling described, consisting of the central pivoted bearing C, when combined with the jaws B B and spring D, and operated, as described, by means of the lever H, for the purpose set forth.

91,195.—CHARLES ZAISER, Newark, N. J.—*Lamp.*—June 8, 1869.

Claim.—The outer shell, when so constructed as to inclose the entire oil-chamber, the space between the two being filled with absorbent material, and so made as to be partially opened when desired, substantially as herein described.

91,196.—ANTHONY ZINK, Lancaster, Ohio.—*Propelling-Apparatus.*—June 8, 1869.

Claim.—The adjustable arms D D, that protect the paddle on each side, as herein described, and for the purposes set forth.

91,197.—SAMUEL C. ADAMS, Buffalo, N. Y.—*Nut-Lock.*—June 15, 1869.

Claim.—The spring-metal plate C, slitted at *c*, and sprung up at *b*, and perforated to allow the bolt B to pass through it, when said plate constitutes in itself a stop-pawl, and the stop-pawl *b* yields to the pressure of the nut at the time the nut is screwed upon the bolt D, and afterward springs outside of the nut, and prevents it from turning, all in the manner herein described and shown.

91,198.—ALBERT B. AUER, Chicago, Ill.—*Check-Book Clip.*—June 15, 1869.

Claim.—The cutter B, with a suitable spring-fastening, for fastening the same to the check-book, when constructed and operating substantially as and for the purposes specified.

91,199.—NOYES BALDWIN, Buffalo, N. Y.—*Vise.*—June 15, 1869.

Claim.—1. The manner of inserting the nut N in the part E, as or substantially as set forth.

2. The chill C, as and for the purpose set forth.

91,200.—ASHBEL P. PARLOW, Kalamazoo, Mich.—*Slide-Block for Muley-Saw Mills.*—June 15, 1869.

Claim.—The slide-block for saw-mills above described, when made of raw-hide, in the manner and for the purposes substantially as described.

91,201.—WILLIAM BARRY, Chicago, Ill.—*Compound Tool for Reaming and Squaring Pipes.*—June 15, 1869.

Claim.—The bit B, provided with the reamer *n*, and cutting-edges C C, in combination with the stock A, bit E, and keys D J, the whole being constructed to operate as and for the purpose set forth.

91,202.—CHARLES L. BEAMER, Cambria, N. Y.—*Grain-Binder.*—June 15, 1869.

Claim.—1. The shell formed in two parts, A and B, the grooved cog-wheel C, having cam *k* on its outside, and cogs 3, 4, 5, &c., on a segment of its inner side, in combination with the compressers E E′, arms *g g′*, shaft *h*, spring *i*, and frame *j*, constructed and operating as herein set forth.

2. Three disks or twisters, *t u v*, beveled gear G, and spur-gear H, in combination with the shell A B, and cog-wheel C, arranged and operating as herein described.

3. The nipper and cutter F, in combination with the cog-wheel C, cam L, and brace M, as herein set forth.

4. The construction of the machine as a whole, consisting of shell A B, braces *a a b b*, arms E E′ *g g*, cog-wheel C, provided with groove *d*, the twist-

ers *t u v*, beveled and spur gears G H, and nipper and cutter F, all arranged and operating in the manner and for the purpose herein specified.

91,203.—Henry Berix, Petersburgh, Ohio.—*Bee-Hive.*—June 15, 1869.

Claim.—1. The frame or box F, provided with the rollers *f*, and hinged support H, substantially as and for the purpose shown.

2. The comb frames G G, &c., when provided with the horizontal wooden cross-piece *g''*, and vertical wires *g''*, substantially as herein set forth, and for the purpose specified.

3. The insect-traps L L, when constructed and attached to the hive, substantially as and for the purpose shown.

4. The arrangement of the ledges K and O O, for the purpose specified.

91,204.—Charles W. Bierbach, Milwaukee, Wis.—*Wagon-Wheel.*—June 15, 1869.

Claim.—The screw-clamps C, bolts B, and jam-nuts D, in connection with a recessed tire, when arranged and operating substantially as described, and for the purposes specified.

91,205.—Albert J. Blakslee and Garner C. Williams, Du Quoin, Ill.—*Injector.*—June 15, 1869.

Claim.—The injector, consisting of the sockets A A', the suction pipe B, the steam-pipes C C', opening into the chambers *a a*, the pipe D D', with contracted openings *d d'*, the outlet-pipe E, the stand pipe F, and the caps G G', when constructed and arranged as above set forth.

91,206.—A. W. Brian, Ouachita County, Ark.—*Cotton-Seed Planter.*—June 15, 1869.

Claim.—The combination of the plow F F' F'', when provided with the scraper wings or blades G G', with a cylindrical seed recipient and planter, K, and covering-drag W, when all these parts are constructed and arranged relatively to each other, and operate substantially as herein described, for the purpose set forth.

91,207.—Leonard C. Briggs and Albert Howard, Boston, Mass.—*Let-Off Mechanism for Looms.*—June 15, 1869.

Claim.—The combination and arrangement of the beam D, wheel W, frame *f f'* F, levers L L', and springs S S', as described, and for the purpose set forth.

91,208.—Authur W. Browne, Brooklyn, N.Y. assignor to Mary A. Van Alen, same place.—*Lamp-Burner.*—June 15, 1869.

Claim.—The lamp-burner, constructed with the wick-tube *b*, air-tube *g*, and wick-raisers, in the manner specified, so that the flat wick passes in a folded condition through the wick-tube and wick-raisers, and is then spread into a round form at the argand flame, as specified.

91,209.—Bradford Buckland, Plantsville, Conn., assignor to S. Stow Manufacturing Company, same place.—*Tinsmiths' Machine.*—June 15, 1869.

Claim.—The combination of the spring *s*, rocker-bearing or shaft K, and the shaft C, substantially as described, and for the purposes set forth.

91,210.—C. I. Carter, Union City, Ind.—*Cider-Mill.*—June 15, 1869.

Claim.—The combination of two tiers of vertical rollers, as described, with the belts E F and triangular slots *e e*, the whole being constructed to operate substantially in the manner set forth.

91,211.—Plumer Cheswell, Manchester, N. H.—*Feed-Pump for Locomotive-Engines.*—June 15, 1869.

Claim.—The construction and arrangement of the valve-seat B, substantially as described, and for the purpose set forth.

91,212.—B. M. Close, West Camden, N. Y.—*Cultivator.*—June 15, 1869.

Claim.—1. The combination, with the cultivator-frame, of the thills, pivoted to the same, substantially in the manner described, so as to be capable of swinging or turning upon their pivot from side to side, independently of the cultivator, for the purposes set forth.

2. The combination, with the pivoted thills and cultivator-frame, of the segment and its loop or guide, attached respectively to said thills and frame, and arranged to operate in connection therewith, substantially as and for the purposes shown and set forth.

3. The combination, with the frame of the cultivator, of the thills, the hinged pivot or rod, on which the same turns, and the segment, and its loop or guide, under such an arrangement that the said thill may be capable both of rocking and of being turned or swung from side to side, substantially as shown and set forth.

91,213.—W. H. Covel, New York, N. Y.—*Carbureter.*—June 15, 1869.

Claim.—1. The combination of a case, C, filled (or flowing through) with water or other desirable fluid, with tank A and space B, with their appropriate connections.

2. Restoring the latent heat to a carbureting fluid, by means of a stream of water, operating substantially as set forth.

91,214.—Thomas Crane, Fort Atkinson, Wis.—*Knitting-Machine.*—June 15, 1869.

Claim.—1. The bar C, arranged across the machine in a plane parallel to the needle-bed, and constructed as described, so that it may be turned or moved back from the work, to allow access to the work, and also, when in working position, will prevent the needle-latches from casually falling forward upon the hooks of the needles as the latter advance to receive yarn from a distributer, G, substantially as described.

2. The latch-holder C and the work-holder B, so connected that they will both move together, substantially as described.

3. A latch-holder, C, so arranged that it will serve as an auxiliary support for the arm F^1 of the yarn-carrier, substantially as described.

4. The work-holder B, having teeth or guides *s s* rising from its upper surface, said teeth being beveled or curved on their under front edges, and formed directly upon the bed, by grooving the same in such a manner that the bases of the teeth are on a plane with the bases of the needle-grooves, all substantially as described.

5. The device *g*, for the purpose described.

6. Adjustable nut G^3, applied to the vibrating arm G^2 of the carriage G, and arranged within a flaring opening, r^1, made in said carriage, or their respective equivalents, for regulating the throw of needles, substantially as described.

7. The slide F of the yarn-carrier, constructed with an opening in the one side, with the hooks *j j*, for receiving a tongue, *p*, on the cam-carriage, substantially as described.

8. The auxiliary tension-spring, applied to a bow-spring, I, substantially as described.

9. The perforated, curved, and angular yarn-distributer, wholly arranged above the plane of the hooked ends of the needles, and so arranged as to allow the needle-latches to close gradually upon the hooks during the act of distributing the yarn, substantially as described.

10. An upwardly acting tension-device, in combination with a yarn-distributer, G, which is constructed substantially as described, to guide the latches of the needles, as set forth.

11. The pawl *t* and cam-lever *t'* on the cam-carriage G, in combination with a cam, S, on the needle bed or frame A, said parts being adapted for communicating an intermittent rotary motion to the counting-plate O, substantially as described.

12. The vibrating arm G^2, fixed rod H', and turning-sections H, combined with the cam-carrying slide, substantially as described.

13. A vibrating cam, k^1, in combination with a cam, *k*, which is rigidly fixed to the cam-carriage, the cams being constructed and operating substantially as described.

14. The conical spool N, having a flange, N^3, a

eross-bar, N^1, and a thimble, N^2, in eombination with the pin J, all eonstructed as and for the purpose described.

15. The spurred seetional roller D^1, eonstructed and applied so as to operate upon narrow knit work in the same manner as it operates upon wide work, substantially as deseribed.

16. The arrangement of a swinging-temple beneath knitting deviees, substantially as deseribed.

17. The knittting-machine needle-mover R, eonstructed with a guide, *w*, and teeth *w'*, as and for the purpose set forth.

91,215.—Thomas Crane, Fort Atkinson, Wis.—*Knitting-Maehine and Knitted Fabrie.*—June 15, 1869.

Claim.—1. A fabrie, eonsisting of two separate yarns or threads, knit together, in the manner substantially as described.

2. The movable needles of different lengths, applied to a knitting-machine, and operated substantially as deseribed.

3. The combination of the two eam earriages F M, carrying eams whieh are adapted for operating knitting-needles of different lengths, substantially as described

91,216.—Ferdinand Dickenson, Jr., Hartford, Conn., assignor to himself and James E. Coleman, same place.—*Composition to be Used in the Manufacture of Paints, Cements, Hard and Soft Rubber, and the Like.*—June 15, 1869; antedated June 4, 1869.

Claim.—A mineral substanee, substantially as deseribed, with oil or oily material, or with gum-caoutchoue, or other gums, as a new componnd for rubber goods, paint. putty, and other articles to whieh it may be applicable.

91,217.—William Dixon, Boston, Mass.—*Theater-Chair.*—June 15. 1869.

Claim —1. The combination of the back B, hinge C, seat A, stop *d*, and shell F. eonstructed as deseribed, for the purpose speeified.

2. The arrangement and eombination of the spring D, rod or cord *k*. stand *b*, and hook *a*, with the rear slotted end of the seat, and with the column, in the manner and for the purpose set forth.

3. The arrangement and combination of the removable spittoon E with the base and shaft of the column, in the manner, by the means, and for the purpose herein shown and deseribed.

4. A theater-chair as deseribed, all the parts of whieh are constructed, eombined, and arranged in the manner and for the ourpose specified.

91,218.—Edward Douglass, Gorham, Me.—*Composition to Destroy the Appetite for Tobacco.*—June 15, 1869.

Claim.—A medical eompound, eomposed of the ingredients herein mentioned. combined substantially in the manner and proportions herein set forth.

91,219.—Peter Farrell, Albany, N. Y.—*Machine for Finishing Leather, Paper, &e.*—June 15, 1869.

Claim.—Breaking instantaneously the eontaet of the roller *s*, or its equivalent tool. with the hinged spring-bed *n*, by means of the hinged tumbler *o*. acting in eonnection with the stop *p*, or its equivalent, substantially as deseribed, for the purpose set forth.

91,220.—W. E. Farrell, Philadelphia, Pa.—*Paper for the Manufaeture of Paper Bags.*—June 15, 1869; antedated June 4, 1869.

Claim.—Paper, in sheets or rolls, of unequal widths, alternately fluted and calendered smooth, to be used in the manufacture of funnel-mouthed bags.

91,221.—Addison C. Fletcher, New York, N. Y.—*Paddle-Wheel.*—June 15, 1869.

Claim.—The combination of the floats or buekets D and E, the latter of a double or reverse parabolic curvature, the former of a single curvature, with its upper edge arranged to eonverge toward the mid-depth of the former, substantially as speeified.

91,222.—O. V. Flora, Madison, Ind., assignor to A. Balding and J. C. Moore, same plaee.—*Door-Spring.*—June 15, 1869.

Claim.—The projeeting fulerum E and frietion-wheel D, when arranged to operate in eombination with the spring and case B, and forked rod C, to form a door-spring, substantially in the manner and for the purposes as set forth.

91,223.—John Fullagar and Miles Byrne, New York, N. Y.—*Composition Cement for Setting Slates, Making Gutters, &e.*—June 15, 1869.

Claim.—The use of fine sand, lime, coal-tar, in combination with fine coke-dust, earbon-dust, or sweepings of furnaees and retort-benches, to form a cement.

91,224.—William Fuzzard, Chelsea, Mass.—*Steam-Engine.*—June 15, 1869.

Claim.—1. The eonstruetion and arrangement of the exhaust-steam ports of an engine, whereby to be enabled to admit the exhaust steam to one or both sides of the piston, substantially as herein set forth.

2. The arrangement of the exhaust-passages *b b'* stop-valves *e e'*, passages *f f'*, and openings *g g*, with referenee to the eylinder A, substantially as set forth.

91,225.—A. J. Gibson, Cineinnati, Ohio, assignor to W. C. Davis and J. W. Garrison, same plaee.—*Bung-Cutter.*—June 15, 1869; antedated June 8, 1869.

Claim.—The eutter-head A and eutters F, herein deseribed, eonstructed, and arranged to operate substantially as and for the purpose set forth.

91,226.—Robert E. Gleason, Libertyville, Ill., assignor to himself and Edwin W. Parkhurst, same place.—*Oar.*—June 15, 1869.

Claim.—1. The oar A B, when made in two parts, and provided with the irons *a b*, substantially as speeified.

2. The oar A B, shaft and pivoting-pin H *h*. rod C. slide D. and rods E F, combined and arranged substantially as and for the purposes speeified.

91,227.—Aaron Guinzburg, Boston, Mass.—*Household-Implement.*—June 15, 1869.

Claim.—The metallie implement as herein deseribed. with its wedge-formed points B B B B, slots C C, and holes A A A A, as shown, for the purpose deseribed.

91,228.—John Gunn, Salem Township, Ill.—*Mode of Attaching Hubs to Axles.*—June 15, 1869.

Claim.—The eombination of the ehamber Z. in the hub S, with the burr A, the plate B, the eollar C on plate B, and the screw D on the axle. Fig. 4, substantially as and for the purpose speeified.

91,229.—Charles F. Hadley, Chieopee, Mass., and Elisha Johnson, Wethersfield. Conn.—*Feeding-Device for Machines for Combing Cotton, &e.*—June 15, 1869.

Claim.—1. The independent lap-carrying sliding-table F, operated substantially as deseribed, and carrying the roll of lapping to be fed to the jaws of a jaw eombing-machine, in the manner and for the purposes set forth.

2. In combination with the lap-carrying sliding-table F, the feeding-rollers C C, the gill-eomb D, and compresser-bars E, substantially as before set forth.

91,230.—John A. Hammon, Franeonia, Minn.—*Whiffletree-Hook.*—June 15, 1869.

Claim.—The whiffletree-hook C, provided with the vertical, lozenge-shaped knob or guard *e*, substantially as shown and deseribed.

91,231.—W. P. Hepburn and William Reiner, Clarinda, Iowa.—*Stove-Drum.*—June 15, 1869.

Claim.—A stove, having arranged within its fire-ehamber, and between the fire-bed and the escape-pipe for the produets of eombustion, a number of hollow angular sections, B', united to vertical sections B B, and adapted to operate substantially as deseribed.

91,232.—Sullivan Hill, Spencer, Mass., assignor to himself and E. A. Hill, same place.—*Settee.*—June 15, 1869.

Claim.—A settee, made of separate chairs, united securely by proper connecting-rails, or strips, the end chairs being provided with single arms, C, as shown and described.

91,233.—John W. Hyatt, Jr., Albany, N. Y.—*Checker-Men.*—June 15, 1869.

Claim.—A wooden medallion-checker, as a new article of manufacture, produced substantially as described.

91,234.—John W. Hyatt, Jr., Albany, N. Y.—*Domino.*—June 15, 1869.

Claim.—A domino, with the perforated plates H and the embossed wooden back G, constructed substantially as described.

91,235.—John W. Hyatt, Jr., Albany, N. Y.—*Manufacture of Dominos.*—June 15, 1869.

Claim.—The embossed wooden domino, with the enameled cavities B and C, and center-pin A, substantially as described.

91,236.—Jasper Newton Jackson, Brookhaven, Miss.—*Machine for Loading Locomotive-Tenders.*—June 15, 1869.

Claim.—1. The supporting-frame A B C D and the carrying turning-frame E G J, in combination with the hinged dumping-boxes L M N, constructed, arranged, and operating substantially as before described.

2. The vertically pivoted turning-frame E G J, constructed with platforms Q, in combination with hinged dumping-boxes, arranged substantially as described.

91,237.—Joseph Jorey, North Manchester, Conn.—*Horseshoe-Calks.*—June 15, 1869.

Claim.—The herein-described horseshoe-calk, with steel point and core, constructed from the blank *a*, in the manner and for the purpose set forth.

91,238.—Charles Lehman, Hartford, Conn.—*Machine for Peeling Fruit.*—June 15, 1869.

Claim.—The rough-surface cylinder *a*, with the diaphragm *m* and operating-mechanism, constructed and arranged substantially as described, and for the purpose set forth.

91,239.—Wilhelm Lehmann, Nuremberg, Germany, assignor to himself and Stehn & Wulfing, New York City.—*Hot-Air Engine.*—June 15, 1869.

Claim.—The air-heating cylinder or "hat" D, the cylinder A, with water-jacket W, in combination with the displacement-cylinder G, piston K, and connections to the fly-wheel shaft, substantially in the manner set forth.

91,240.—George Little, Hudson City, N. J., assignor to himself and Marshall Lefferts, New York City.—*Apparatus for Perforating Paper for Telegraphing.*—June 15, 1869.

Claim.—1. The segment *d* and lever e^2, constructed and applied substantially as specified, to give the electrical pulsations for the respective characters by the movement of the one lever, substantially as set forth.

2. The lever e^2, fitted to swing on the shaft *b* and provided with a friction-clamp, to move the shaft *b*, and effect the feed of the paper, when the lever e^2 is depressed to close the circuit, substantially as set forth.

3. The punch *i*, set in the yoke *n*, upon the arms l', in combination with the vertical standard *k*, carrying the die 7, substantially as set forth.

4. The feeding-disks *q*, arranged to act on each side of the punch *i*, against the standard *k*, substantially as set forth.

5. The standard *k*, sustained in the tube k', and fitted so that a slight end-movement can be given to the same, in combination with the feeding-disks *q*, for the purposes set forth.

6. The magnets *u* and loose or self-adjusting extension-poles, forming a brake or stop, substantially as set forth.

7. The magnets *u*, and extension-poles *v*, in combination with the feeding-mechanism, punch, and circuit-closer *w*, substantially as and for the purposes set forth.

8. A single punch, for perforating and embossing paper for telegraphic communication, actuated by the direct action of an electro-magnet, in combination with mechanism for giving motion to the paper between the various perforations forming the letters or characters, substantially as set forth.

91,241.—George Little, Hudson City, N. J., assignor to Marshall Lefferts, New York City, and Marshall Lefferts, assignor to himself and George Little.—*Apparatus for Perforating Paper for Automatic Transmitters.*—June 15, 1869.

Claim.—1. The method herein specified of perforating or indenting paper, to be used in transmitting a telegraphic message, by a magnet acting upon a lever and punch, combined with a die, substantially as set forth.

2. The aforesaid magnet, lever, punch, and die, in combination with conducting and non-conducting surfaces acting to give the pulsations of electricity through the magnet, for composing a telegraphic message, substantially as set forth.

3. The lever *k*, actuated by the armature and magnet, in combination with the punch and feeding-mechanism, substantially as set forth, whereby the movement of the paper is checked when the punch is operating, substantially as specified.

4. The wheel *d* and roller h^1, in combination with the lever *k* and punch *n*, substantially as set forth, for stopping the motion of the paper while being punched or embossed, and bringing the feeding-motion into operation as the punch is released.

5. The non-conducting surface *s* and its pins or conductors t', in combination with the clamp *g*, lever or key *f*, and spring *t*, substantially as and for the purposes specified.

6. The lever or key *f*, jointed near one end of the divided ring-clamp *g*, and provided with a roller, 3, to act against the projection 24 upon the other end of the clamp, for closing the same around the cylinder or disk, in combination with the adjusting-screws 4 and 5, substantially as and for the purposes set forth.

7. The punching-mechanism and the means for moving the paper, in combination with the key *f*, or its equivalent, that simultaneously controls the action of the punch and the movement of the paper.

91,242.—Abraham W. Lozier, New York, N. Y.—*Hay-Loader.*—June 15, 1869.

Claim.—1. The combination, with the inclined detachable derrick, of the perforated drum-wheel G and actuating-lever K, for raising and lowering the load upon the carriage, the whole constructed and operating substantially as described.

2. The arrangement and combination of the inclined shaft B, the crane C, and link D, attached to the spindle *a*, and the tripping-lever E, the whole constructed and operating substantially as described and specified.

3. The combination, with the drum-wheel G, of a brake-lever, K, and stop *o*, for controlling the machine, substantially as described, and for the purposes specified.

4. The combination, with the brake K, of the swivel P, whereby the brake-rope is always kept at the center of the wheel, substantially as described, and for the purposes specified.

5. The combination and arrangement of the piece Q, hoist-rope L, ring *w*, and tripping-rope N, constructed and operated substantially as described, and for the purposes specified.

91,243.—Abraham W. Lozier, New York, N. Y.—*Hay Raker and Loader.*—June 15, 1869.

Claim.—1. The construction and arrangement of the upright E, the beam F, and the shears D D, in combination with the carriage, substantially as described and for the purposes specified.

2. The combination, with the rake or sweep W, of the sweep-ropes *w*, for collecting the hay in bundles, substantially as described and specified.

3. The combination, with the frame D E F, of the

rake or sweep, and sweep-lines, substantially as described and specified.

4. The open-eyed needle Y, for thrusting the baling ropes or sling under the hay, constructed and operating substantially as described and specified.

91,244.—SEBEUS C. MAINE, Boston, Mass.—*Cabinet-Bedstead.*—June 15, 1869.

Claim.—1. A folding or cabinet bedstead, operating automatically as to the easing, so constructed that when the bedstead is extended, no upright ease remains, substantially as described.

2. The wings D, operating in combination with the arms F, substantially as set forth.

3. The combination of the spring S, ease *h*, and strap or cord *m*, as and for the purpose herein described.

4. The combination of the spring-mechanism above mentioned, with shaft or roller G, and bed frame or bottom A A′, as set forth.

5. The combination of automatically operating shelf *a* and door *b*, with the bed-frame A A′, as described.

6. The combination of cord *c*, bed-frame A, and finish L, having supports L′, substantially as described.

7. The combination of all the above-named parts in an automatically or otherwise operating cabinet-bedstead, in which the ease is removed when the bedstead is extended.

91,245.—H. MALLORY, Milwaukee, Wis.—*Stove-Damper.*—June 15, 1869.

Claim.—A damper, constructed substantially as described.

91,246.—JOHN P. MANNY, Rockford, Ill.—*Harvester.*—June 15, 1869.

Claim.—1. The lifting-lever, constructed and arranged as described, so as to be adjustable to be operated from either the driver's or raker's seat.

2. The combination of the rock-shaft, the locking-plate, and the lifting-lever, substantially as set forth.

3. The combination of the lifting-lever, the rock-shaft and its pinion, a sector-rack and vibrating-arm, all mounted on the main frame, with a finger-beam, suspended by flexible connections from said frame, substantially as set forth.

4. The combination of the tumbling-shaft, the stationary shaft on the rake-standard, and the interposed sliding-shaft and its clutch-coupling, arranged and operating substantially as set forth.

5. The combination, substantially as set forth, of rake and reel arms, revolving with a hub having its gearing in different vertical planes, with driving-pinions arranged eccentrically on their shaft, to produce a slow motion of the rake and reel while the gavel is being swept from the platform.

6. The combination of a continuously rotating rake, with bevel segment-gears, on a revolving hub, at different distances from the center, with driving-pinions likewise arranged at different distances from the center, substantially as described.

7. The combination of the stationary disk, carrying the pinion-shaft, with the projecting rib or flange overhanging the segment-gear, as set forth.

8. The combination of the rotating hub, the rake-shaft turning axially in its socket on the hub, and the fixed cam-way inside the hub, with the guide traversing in the cam-way to oscillate the rake; all these parts being constructed for joint operation, substantially as set forth.

9. The combination of the continuously rotating rake, having an intermittent oscillating movement with its rake-head, reciprocated longitudinally by link-connections mounted on the rake-arm, and connected with the reel-axle, substantially as set forth.

10. The combination of the radially adjustable reel-arms, and the longitudinally adjustable beaters, with the oscillating socket S, substantially as set forth.

91,247.—CARLILE MASON, Chicago, Ill.—*Steam-Generator.*—June 15, 1869.

Claim.—The plates A A, located within the boiler, substantially as specified.

91,248.—JOHN MAYS and ELIPHALET W. BLISS, Brooklyn, N. Y.—*Machine for Manufacturing Metal Cans.*—June 15, 1869.

Claim.—1. The construction and arrangement of the sliding-cap E F, supported on the oblique standard C, in combination with the lever D, rod H, and treadle G, substantially as set forth.

2. The swinging-jaws J, made in the same piece with the levers K, or firmly attached thereto by a fixed joint, substantially as described.

3. The toggle-joint M, in combination with the central piece or slide N, the levers K, and swinging-jaws J, substantially as specified.

91,249.—JOHN R. MCGINNIS, Washington, D. C.—*Cartridge-Box.*—June 15, 1869; antedated June 2, 1869.

Claim.—The combination, as set forth, of the reversible pivoted cartridge-receptacle with the restraining-ledge, for the purposes specified.

91,250.—ANDREW MCMULLIN, Paterson, N. J.—*Piston-Packing.*—June 15, 1869.

Claim.—The piston-head C, the rings G, and holders L, the channels F and K, and rod A, all constructed and arranged substantially as described.

91,251.—HENRY MERRIMAN, Bloomington, Ill.—*Mechanical Movement.*—June 15, 1869.

Claim.—1. The construction and arrangement of the clutches A and B, in the manner and for the purpose herein described.

2. The combination of the clutches A B with the rods *a b* and treadle *c*, in the manner and for the purpose herein described.

3. The means herein shown and described, by which the clutches are adjusted to the shaft or axle, for the purposes herein set forth.

91,252.—JOHN METZGAR, Rancho Gap, Pa.—*Apparatus for Bending Tire.*—June 15, 1869.

Claim.—1. The arrangement of the adjustable frames D, D and E E, rollers F F, and screws H H, substantially as and for the purpose shown and described.

2. The combination of the lower rollers F F, movable frames D D and E E, adjusting-screws H H, upper rollers J, ratchet-wheel L, pivoted pawl M, and lever N, the slotted housings C C, and ways B B, all operating substantially as herein shown, and arranged upon a bed, A, for the purpose set forth.

91,253.—GEORGE H. MILLER and JOHN JAGELER, Binghamton, N. Y.—*Ice-Velocipede.*—June 15, 1869.

Claim.—The adjustable spring E and adjusting-screw G, in combination with the box D, shaft and pinion C, driving-wheel F, toothed wheel B, and directing-runner K, all being constructed and operating as herein described and represented, for the purpose set forth.

91,254.—ROBERT B. MITCHELL, Chicago, Ill.—*Steam-Generator.*—June 15, 1869.

Claim.—The steam-generator C, air-tight water-reservoir A, connecting-pipe B, and air-vent tube F, when constructed and arranged substantially as specified.

91,255.—DAVID M. NICHOLS, New York, N. Y.—*Steam-Generator.*—June 15, 1869.

Claim.—1. The combination of the steam-jet with a separator, for separating the steam from the water which is mixed with it, substantially as before set forth.

2. The combination of the steam-jet and separator with a valve, to contract the passage for the escape of the current of gases, substantially as before set forth.

91,256.—THOMAS NUTTING, Georgiaville, R. I.—*Fruit-Picker.*—June 15, 1869.

Claim.—The improved fruit-picker, as made, with the brace-wires *d d*, connected, at their upper ends, with the lateral hooked wires *b b*, and arranged and combined with the annulus A and the remaining hooked wires, in manner substantially as described.

91,257. — GEORGE OERLEIN, Utica, Minn.—*Thrashing-Machine.*—June 15, 1869.

Claim.—1. Straw-carriers D, in combination with the straw-whippers C, constructed and arranged substantially as described.

2. Sieve I, in combination with the sliding-board K, substantially as and for the purpose described.

3. Hinged board L, in combination with sieve I and sliding-board K, substantially as and for the purpose described.

91,258.—GEORGE PADDINGTON and WALTER F. CREW, Waubeck, Iowa.—*Hames-Strap.*—June 15, 1869.

Claim.—The arrangement of the plates A and C, guides D, spring B, and cam-latch E, when combined and operating substantially as and for the purposes herein set forth.

91,259.—THOMAS PAYNE, Grand Rapids, Mich., assignor to WALTER WILKINS and ADELMER D. PLUMB, same place.—*Bed-Bottom.*—June 15, 1869.

Claim.—The combination of the end-springs C and side-springs E with the cross-slats A and D, and with the longitudinal slats B and F, substantially as herein shown and described, and for the purpose set forth.

91,260.—JOHN S. PERRY, Albany, N. Y.—*Magazine Cooking-Stove.*—June 15, 1869.

Claim.—A fuel-magazine and water-reservoir combined, substantially as described.

91,261.—CHARLES F. PIERCE, Providence, R. I. —*Safety-Attachment for Breast-Pins.*—June 15, 1869.

Claim.—The combination of the hinged shield *d* with its slotted stud, and the tongue of a breast-pin, or like article, operating substantially as described, for the purposes specified.

91,262.—PETER PLAMANDAN and NATHAN A. MAHER, Atchison, Kans.—*Grain-Sieve.*—June 15, 1869.

Claim.—A sieve-plate, perforated in the manner described.

91,263.— GEORGE PUGH, Cleveland, Ohio.—*Lamp.*—June 15, 1869.

Claim.—The combination of the single-wick tube D, enlarged at its lower end, with the gas-tubes E E, when constructed in the manner and arranged with relation to the cap C, and to operate substantially as set forth.

91,264.—JOHN EDWIN RACE and HIRAM WHITNEY, Chicago, Ill.—*Machine for Measuring and Winding Cloth, &c.*—June 15, 1869.

Claim.—The combination, with the frame A B C, provided with the ribs D, the adjustable smoothing-board E, and guides G, of the measuring-wheel N, the feed-wheel O, the arm J, the index-wheel Q, and the roller V, with the hollow studs S and W, and disk A′, when constructed and operating as and for the purpose above described.

91,265.—J. S. RANKIN, Pittsburgh, Pa.—*Uterine-Supporter.*—June 15, 1869.

Claim.—The construction of the pessary, as herein described, that shall, when inflated, entirely fill the cavity of the vagina, holding the uterus in its normal position, and furnishing a soft cushion to it and all the adjoining parts, and having an opening through it, of sufficient size to allow of the free passage of all uterine discharges, as herein described.

91,266.—EDMUND B. REDFIELD, White's Corners, and E. C. HUBBARD, Water Valley, N. Y.—*Bee-Hive.*—June 15, 1869.

Claim.—1. The front board B and side board or braces *b*, permanently attached to the bottom board of the hive, and forming a frame, in which the comb-frames are arranged and secured by wedges, or equivalent, substantially as set forth.

2. The outer case C, with open front, combined and arranged with the board B, as set forth.

3. The corner-spaces *j′*, formed by cutting off the beads *j*, so as to have a passage from one comb to the other, substantially as shown and described.

4. The inner lining Q, in combination with the honey-boxes O, made so as to be readily taken apart, substantially as and for the purpose set forth.

5. The mat R, applied in the manner and for the purpose specified.

91,267.—JOSEPH REPETTI, Philadelphia, Pa.—*Machine for Making Lead Shavings.*—June 15, 1869.

Claim.—1. The combination of the knife-box *s*, rods *r r*, cross-head *q*, cord or chain *o*, and weight *p*, with the head *m*, sheave-pulleys *n n*, and column *h*, substantially as and for the purpose specified.

2. The combination of the compartments s^1 s^1, recesses and knives *u u u u*, with the knife-box *s*, substantially as and for the purpose specified.

3. The combination of the stands *t t t t*, cones t^1 t^1 t^1, adjusting-screws *w*, and fastening-screws w^1, with the knife-box *s*, substantially as and for the purpose specified.

4. The cylindrical lead ingot c^1, Fig. 1, with the axial hole and screw-thread *d*, substantially as and for the purpose specified.

5. The use of shaved metallic lead, for the manufacture of white lead, and other useful purposes, when the same has been produced by the machine, and in the manner substantially as described in this specification.

91,268.—A. S. RICHARDS, Montgomery County, Md.—*Paper-File.*—June 15, 1869.

Claim.—1. The within-described paper file and binder, consisting of the binding-strips A A′, cords B B, needles *b b*, hooks *c c*, and rubber band *d*, constructed and arranged to operate substantially as and for the purpose shown.

2. The application of the rubber band *d* to the cords B B, substantially as shown and for the purpose specified.

3. The needles *b b*, constructed, as described, with an additional eye, in combination with the hooks *c c* and rubber band *d*, or its equivalent, substantially as and for the purpose shown.

91,269.— CHARLES RICHARDS and WILLARD CURTISS, Cleveland, Ohio.—*Cutter-Head.*—June 15, 1869.

Claim.—The herein-described cutter-head, consisting of the sections A and B, substantially in the manner set forth, and for the purpose specified.

91,270.—HENRY RICHMANN, Cincinnati, Ohio.—*Grain-Separator.*—June 15, 1869.

Claim.—1. The combination of the concave brush G and convex perforated wire gauze H, when placed in a horizontal or nearly horizontal position, substantially as and for the purpose described.

2. The mechanism set forth, for the purpose of forming a passage-way, L, for the dust after it has passed through the wire gauze, which passage-way is independent of and has no connection with the clean grain, substantially as and for the purpose described.

3. The mechanism set forth, for the purpose of forming the independent chamber J, substantially as and for the purpose described.

4. The mechanism described, for the purpose of equally and accurately adjusting the brushes G to the wire gauze on the cloth-wheel H, substantially as and for the purpose described.

5. The slide or door Y, substantially as and for the purpose described.

6. The combination of the fan S and chambers J and L.

7. The sliding curb U and stationary curb X combined, substantially as and for the purpose described.

8. The combination of the sliding curb U, stationary curb X, and chamber J, substantially as and for the purpose described.

9. The combination of the sliding curb U, stationary curb X, brushes G, and wire gauze on cloth-wheel H, all substantially as shown and described.

10. The combination of the scouring-apparatus, composed of brushes G and wire gauze, with the winnowing-chambers O and M, substantially as shown and described.

91,271.—XISTE ROBERT, Worcester, Mass.—*Process for Recutting Files.*—June 15, 1869.

Claim.—The process of renewing or recutting files, by sifting over the layer of files placed in the bath, as described, a compound of pulverized or crushed blue vitriol and borax, and then running oil of vitriol over the surface of the files thus coated, substantially in the manner set forth.

91,272.—ANTONIO ROBIRA, Galveston, Texas.—*Syringe for Destroying Cotton-Plant Worms.*—June 15, 1869.

Claim.—The instrument for destroying the cotton-worm, consisting of the cylinder D, piston A, valve *h*, passage *g*, and perforated plate A′, all operating substantially as and for the purpose herein set forth.

91,273.—M. E. RUSSELL, China, Me.—*Meat-Chopper.*—June 15, 1869.

Claim.—The arrangement of crank *h*, shaft *m*, gear *i*, gear *k*, shaft *o*, eccentrically attached link *f*, adjustable beam *c*, rod *d*, and knives *t*, substantially as herein described.

91,274.—SILAS T. SAVAGE, Greenbush, N. Y., assignor to himself and JOHN S. PERRY, executor and trustee.—*Coffee-Pot.*—June 15, 1869.

Claim.—1. The removable vessel A, constructed with a flanged bottom, D, a pipe, E, rising from the bottom, and perforations *b* through its side, in combination with an external casing, B, substantially as described.

2. The vessel A, provided with a cover, A′, and otherwise constructed substantially as set forth, in combination with a chamber, P^2, formed as described.

91,275.—AUGUSTE SCHWANKE, La Prairie, Ill.—*Cooking-Stove.*—June 15, 1869.

Claim.—The fire-box A, separated into two parts by means of the flue-chamber I, when constructed and arranged as described.

91,276.—FREDERICK J. SEYMOUR and ORSON N. PERKINS, Meriden, Conn.—*Percussion-Cap Holder.*—June 15, 1869.

Claim.—1. A percussion-cap holder, in which the space between the inside of the cap or cover is adjustable, for the purposes and substantially as set forth.

2. The lever *f*, with a cavity near the end, in combination with the cap-holder, the parts being constructed and applied as set forth.

91,277.—C. LATHAM SHOLES, Milwaukee, Wis.—*Paging-Machine.*—June 15, 1869; antedated June 4, 1869.

Claim.—1. Cam U, in combination with moving dogs O and P, which, turning the unit-disks K, as they rise from the bed-piece, after having printed, so as to print other figures, substantially as described.

2. Stationary cam N, between the disks, for carrying and operating the dogs L and M, substantially as described.

3. The dogs L and M, setting loosely in radial slots in the disks, in combination with cam N, to properly move the disks.

4. Unit-disks K, divided so as to contain, one the even, the other the odd figures of the ten units, these even and odd figures being repeated on the respective disks, and being moved by any suitable device, and controlled by the dogs L and M, or any other suitable arrangement for moving the other disks, substantially as and for the purpose described.

91,278.—DEXTER SMITH, Springfield, Mass.—*Metallic Cartridge.*—June 15, 1869.

Claim.—The arrangement of the cavity A, with flange C around it, in the rear central surface of the shell-head, and small holes, *a*, extending through, and the manner of holding the fulminate in place by the means of the flange C being turned over, substantially as herein shown and described.

91,279.—W. BELL SMITH, Charleston, S. C.—*Portable Furnace for Shrinking on and Removing Tires.*—June 15, 1869.

Claim.—The furnace F, adapted to be applied circumferentially of the tire, and to remain attached thereto during the entire operation of adjusting in place or removing, substantially as and for the purposes set forth.

91,280.—WILLIAM C. SPALDING and CAROLUS P. SOUTHWELL, Watertown, Wis.—*Thill-Coupling.*—June 15, 1869.

Claim.—The head A, clip B, with ears *b b′*, and side-piece C, having the lip c^2, with or without the spring D, when constructed and arranged as described, for the purpose set forth.

91,281.—E. M. STEVENS, Chelsea, Mass.—*Machine for Rounding up Boot and Shoe Soles.*—June 15, 1869.

Claim.—1. For use in the stock *a* of a "rounding-up" machine, the knife made with a cylindrical pivot, *b*, grooved across, substantially as and for the purpose described.

2. The combination of the edge-cutting knife with the stock *a*, by means of the groove in the knife-pivot *b* and the cross-pin *c*, substantially as and for the purpose described.

91,282.—OLE O. STORLE, Norway, assignor to himself, J. G. FLINT, Jr., and MARY M. MASON, Milwaukee, Wis.—*Grain-Binder.*—June 15, 1869.

Claim.—1. Wheel O, pinions P and Q, head Y, knife R, and wheel *l*, substantially as and for the purpose described.

2. Head Y, wheel *l*, and knife R, operating substantially as described.

3. Head Y and wheel *l*, for the purpose of holding and twisting the wire, substantially as described.

4. Yoke W, platform B, arm L, and pin *e*, operating together, substantially as and for the purpose described.

5. Rake K, arms L L, handle E, wheels U U, chain V, trucks D D, and pin *d*, all in combination, substantially as described.

91,283.—HENRY D. STOVER, New York, N. Y.—*Hoisting-Apparatus.*—June 15, 1869; antedated June 2, 1869.

Claim.—The combination, with a boring-machine, B, or other machine having a rest-bed for heavy bodies, of the vertical screw A, hand-wheel E, and lifting and swinging nut D, when constructed, arranged, and operated substantially in the manner as shown and described, and for the purpose set forth.

91,284.—HENRY P. STRAUB, Cincinnati, Ohio.—*Millstone-Pick.*—June 15, 1869.

Claim.—1. In millstone-picks, having divided and clamping heads for holding the bits, points, or cutters, the projecting ends of one part over the other part, so as to avail of the leverage of the projecting one for binding on said bits, substantially as and for the purpose described.

2. In combination with sectional or divided clamping heads, for holding bits, points, or cutters, a series of recesses, *i*, on different planes, for the heels of said bits, points, or cutters to take into, when griped between said heads, substantially as described.

3. In combination with a socket on one of the parts of the head, to receive the handle, a headed screw, dropped into and through said socket, to receive and hold the other part of said head to its mate or fellow, and to the handle, substantially as described.

91,285.—JOSEPH B. SULGROVE, Indianapolis, Ind.—*Corder for Sewing-Machines.*—June 15, 1869.

Claim.—The corder, furnished with the curved longitudinal grooves G and H, and guides B, C, D, and E, constructed and arranged substantially as and for the purpose set forth.

91,286.—JOHN TEMPLE, Van Buren, Ohio.—*Instrument for Paring Horses' Hoofs.*—June 15, 1869.

Claim.—An instrument for paring horses' hoofs, constructed and operating substantially as shown and described.

91,287.—JOHN M. THATCHER, Bergen, N. J.—*Fire-Place Heater.*—June 15, 1869.

Claim.—In combination with the fire-pot and feeder, the slicer, for holding up the coal, and a suitable opening, to introduce the slicer, substantially as described.

91,288.—ANDREW S. UPSON, Unionville, Conn.—*Machine for Making Metallic Nuts.*—June 15, 1869.

Claim.—1. The combination of the edge-swages, crown-swage, punch, and shears, when so arranged, substantially as described, in relation to each other, as to act upon the blank lying in the same spot, while all the necessary operations upon it are performed.

2. In combination with the edge-swages, punch, crown-swages, and shears, arranged as described, the aperture in the bed-plate or table, and the cam, to give additional motion to one of the edge-swages, so that it acts as a transferrer to discharge the nut.

91,289.—FREDERICK WALTON, Staines, England.—*Mode of Constructing Houses.*—June 15, 1869; patented in England December 11, 1868.

Claim.—The combination of the planks or pieces *e*, blocks *d*, and bolts *e*, substantially as herein described.

91,290.—ISAIAH WEBSTER, Bucksport, Me., assignor to JAMES F. MOSES, same place.—*Jaw for Booms.*—June 15, 1869.

Claim.—1. In combination with a metallic jaw of a boom or gaff, constructed substantially as described, a series of friction-rollers, arranged and secured therein, substantially as set forth.

2. The metallic jaw, constructed substantially as described, when connected with the spar by its shank *k*, tongue *f*, and slotted block *e*, substantially as set forth.

91,291.—FRANZ RUDOLPH WEGMAN, Hartford, Conn., assignor to himself and FREDERICK C. HYDEL, same place.—*Pipe-Coupling.*—June 15, 1869.

Claim.—A pipe-coupling of hard metal, having one end or portion of it straight, and interiorly screw-threaded, and the other end or portion somewhat conical or flaring, and interiorly screw-threaded in an opposite direction.

91,292.—G. W. WELLS, Washington, D. C.—*Guide for Sewing-Machine.*—June 15, 1869.

Claim.—The combination of the guiding presser or holder B, and the spring A, when constructed and operating substantially as herein described.

91,293.—J. BURNS, West Geneseo, N. Y.—*Machine for Cutting Rasps.*—June 15, 1869

Claim.—1. The combination of the automatic feed-mechanism with the vibrating burring-tool, all the parts being constructed for joint operation, as set forth.

2. The combination of the automatic feed-mechanism, vibrating cutters, and oscillating shaft, the whole constructed for joint operation, substantially as set forth.

3. The combination of the vibrating cutters with the retracting springs and stops, the whole constructed for joint operation, as set forth.

91,294.—ISAAC N. WILFONG, Philadelphia, Pa.—*Steam-Generator.*—June 15, 1869.

Claim.—1. The arrangement of a series of curvilinear tubes, connecting to parallel cylinder boilers, substantially as described.

2. The passages *g g'*, formed by the partitions *h h h*, substantially as set forth.

3. The combination of the partitions *h h h*, passages *g g'*, and flues *f* and *f'* with the cylindrical boilers *a* and *a'*, substantially as specified.

4. The arrangement of the heater *m*, pipe *r*, "three-way cock" *n*, branch *s*, and boilers *a* and *a'*, substantially as specified.

91,295.—ALEXANDER W. WINALL, Cincinnati, Ohio.—*Hanging Millstones.*—June 15, 1869.

Claim.—Laterally adjusting journal-blocks H, inclosed by elastic blocks F, and fitted into a cavity in the hopper-stool, and limited in their movement, substantially in the manner and for the purposes described.

91,296.—FRANCIS M. WOODBURY, New York, N. Y., assignor to himself and JOHN P. BONNELL, same place.—*Compound for Cleaning and Scouring Wood, Metal, &c.*—June 15, 1869; antedated June 8, 1869.

Claim.—The combination of the refuse material from the sawing and grinding of marble, known as marble-dust, in combination with crude guano and soap of any kind, as before described, and for the purpose specified.

91,297.—DAVID AARON, San Francisco, Cal.—*Automatic Fan.*—June 15, 1869.

Claim.—Giving the fan E, pivoted at *b*, a quick return-motion by means of the slotted bar G, wrist-pin *a*, and disk D, driven by a spring and gears, or other moving power, substantially as set forth.

91,298.—LAUREN B. ARNOLD, Lansing, N. Y.—*Mode of Preparing Rennet for Use in Making Cheese.*—June 15, 1869.

Claim.—1. The use of charcoal filters, made as described, in combination with layers of charcoal, prepared substantially as and for the purposes set forth, in clarifying rennet for use.

2. The purified and salted rennet, made and fitted for use, substantially in the manner and for the purposes set forth.

91,299.—THOMAS F. BAKER, Cincinnati, Ohio.—*Fire-Place.*—June 15, 1869.

Claim.—1. A fire-place, whose back has the convex middle and the oblique side portions surmounted by an arched crown, as set forth.

2. Such a fire-back, when the crown projects forward so as to contract the throat at its central portion, as and for the purpose designated.

91,300.—FREDERICK BARNETT, Paris, France.—*Swimming-Apparatus.*—June 15, 1869.

Claim.—1. The combination of the webbing, the distending-strips, the finger-loops, and the wrist-band for the hands, substantially as described.

2. The distensible sack, the strips, and the ankle-strap, combined substantially as described, for supporting the feet.

91,301.—STEPHEN M. BAYARD, Ionia, Mich.—*Heating-Drum.*—June 15, 1869.

Claim.—1. The diamond-shaped grates B, having a diaphragm separating them into two triangular-shaped chambers, as and for the purposes herein represented.

2. The arrangement of the air-supply pipe *b*, with relation to the smoke-pipe I' and stove, so that the air shall pass through the flue G' in the opposite direction to that in which the products of combustion pass around it, through the flue I', and thus be more thoroughly heated, as and for the purpose set forth.

91,302.—H. V. BELDING, Oppenheim, N. Y.—*Carriage-Hub.*—June 15, 1869.

Claim.—The cases A, shaped as described, the wood hub C, and the axle-boxes D, combined and arranged substantially as specified.

91,303.—I. A. BENEDICT, West Springfield, Pa.—*Cultivator.*—June 15, 1869.

Claim.—The combination, with the cultivator-plow A, of the plates D, when arranged as specified.

91,304.—JOHN F. BOYNTON, Syracuse, N. Y.—*Apparatus for Extinguishing Fires.*—June 15, 1869.

Claim.—1. In combination with the generator of a fire-extinguisher, constructed to operate as described, the hermetically sealed or securely closed acid-bottle or capsule, arranged therein, substantially as herein described.

2. In combination with the acid-bottle or capsule, the tube D, for holding the same, substantially as described.

3. The method of liberating the acid, by breaking or piercing the acid-bottle or capsule, substantially as described.

4. The employment of rubber bands, or equivalent elastic substance and spring, in combination with

the acid-bottle or capsule, for the purpose herein described.

5. As a new article of manufacture, the hermetically sealed capsule, containing acid, as herein described.

91,305.—PETER BROOKS, New Haven, Conn., assignor to himself and C. O. CROSBY, same place.—*Loom for Weaving Hats.*—June 15, 1869.

Claim.—1. The wheel N, constructed with the recesses *t*, and combined with the cam-wheel M and thread-guides *c*, so as to operate as specified.

2. The combination of the two wheels N and P, each constructed with recesses *t*, and cam-wheel M, with the thread-guides *a* and *c*, so as to operate substantially as specified.

3. In combination with the cam-wheels N and P, the pattern-wheel R, so as, at the proper time, to turn either or both the said wheels, for the purpose of introducing new warp-threads.

4. In combination with the thread-guides *a* and *c*, the tension-bars *m*, operating as described.

5. In combination with the shuttles and warp-thread carriers, operated as described, the follower S^1, all arranged so as to operate together substantially as and for the purpose set forth.

91,306.—THOMAS S. BROWN, Boston, Mass., and GEORGE W. GOULD, Camden, Me.—*Tire-Cooler.*—June 15, 1869; antedated June 9, 1869.

Claim.—1. The combination and arrangement of a wheel-supporter or platform, A, a tub, C, and mechanism by which the tub is moved so as to immerse the platform, and a wheel, when laid on it, in water, when contained in the tub, the whole being substantially as and for the purpose specified.

2. The arrangement and combination of levers, slider *f*, and guide *g*, as described, applied to the tub and the platform-supporting frame, and for effecting the movements of the tub, and for guiding it vertically, as described.

3. The arrangement and combination of the series of arms, or the open hinges, with the frame B, the platform, and the tub, provided with mechanism for operating the latter, as set forth.

91,307.—LOREN D. CARPENTER, Buffalo Grove, Iowa.—*Grain-Sieve.*—June 15, 1869.

Claim.—1. Grain-sieves, composed of the angle-plates B, plain plates C, and frames A, arranged substantially as specified.

2. Suspending the said sieves, by links E, from the case C and shafts F, for operation, substantially as specified.

3. The combination, with cases D, adapted for application to the shaking-shoes of fanning-mills, of sieves, constructed substantially as specified.

91,308.—LUCIUS C. CHASE, Boston, Mass.—*Fastening for Hand-Rein.*—June 15, 1869.

Claim.—1. The within-described stud, when used as a substitute for a buckle in fastening reins and other parts of saddlery or harness, substantially as set forth.

2. The stud C, in combination with the reins A B, when constructed substantially as described.

91,309.—OTIS DEAN, Richmond, Va.—*Vise and Drill Combined.*—June 15, 1869.

Claim.—1. The jaw-support A, connected to the fixed bracket I, by means of the adjustable vertical spindle H, and ball and socket joint, substantially as specified.

2. The arrangement, in either the fixed or movable jaw of a vise, of a drill-mandrel, substantially as specified.

91,310.—DANIEL I. DE GROAT, Newburgh, N. Y.—*Iron Fence.*—June 15, 1869.

Claim.—The combination, with iron-fence sections, constructed with slotted openings at their intersections, of the bolt B, provided with a head upon one end and a cross-head upon the other, as set forth.

91,311.—G. W. DICKERSON, Prairieton, Ind.—*Water-Elevator.*—June 15, 1869.

Claim.—1. The band or strap L, in combination with the fixed wheel J, and the crank K, substantially as herein shown and described, and for the purpose set forth.

2. The crank K, in combination with the band or strap L, shaft B, and loose wheel H, substantially in the manner herein shown and described, and for the purpose set forth.

3. Connecting the bail d^1 to the bucket D, by means of the angular eyes d^2, and angular pivots d^3, substantially as herein shown and described, and for the purposes set forth.

4. The combination and arrangement of the pawl I, ratchet-wheel *h*, loose wheel H, shaft B, fixed wheel J, band or strap L, crank K, and spring M, with each other, substantially as herein shown and described, and for the purpose set forth.

91,312.—JOHN DICKINSON, Bay Ridge, N. Y.—*Tool for Holding Diamonds for Dressing Stone.*—June 15, 1869.

Claim.—An adjustable diamond or mineral-carbon holder, consisting of the metallic block A, provided with fixed jaws B, and reversible jaws C, suitably notched at their ends, and held in place by screws D D, or their equivalents, all constructed as described, and for the purpose set forth.

91,313.—SILAS R. DIVINE, New York, N. Y.—*Mode of Treating the Spent Oxide of Iron used for Purifying Gas.*—June 15, 1869.

Claim.—1. Volatilization or sublimation of sulphur by means of superheated steam.

2. The revivification of hydrated peroxide of iron, which has been used for the decomposition of sulphide of hydrogen, by means of superheated steam.

3. The recovery of the sulphur, by delivery into water, or by condensing the steam and sulphur, by any of the known methods.

91,314.—W. U. DUDLEY, Port Richmond, N. Y.—*Back for Brushes.*—June 15, 1869.

Claim.—As a new article of manufacture, the toilet-brush, having the back B and the body A, carrying the bristles *a'*, secured together by means of the struck-up metallic band C, hinged together at one end, and with its tangs *c'* adapted to screw into the handle F at the opposite end, as herein shown and described, for the purpose specified.

91,315.—JOHN C. DURBOROW, Ellicott's City, Md.—*Harvester-Rake.*—June 15, 1869.

Claim.—1. The inclined plate J, provided with the flange *e* and curved bar *f*, in combination with the movable gears A A and fixed segment C, when constructed and operating substantially in the manner and for the purpose as herein described.

2. The movable gears, provided with the pins *k k*, in combination with the guide L, substantially as and for the purpose set forth.

3. The rake-arms, provided with forked heads *g*, when pivoted or hinged to the backs of the gears, in combination with the flange and curved bar, substantially as set forth.

91,316.—JAMES EATON, Bridgeport, Ill.—*Steam-Generator.*—June 15, 1869.

Claim.—1. The combination with steam-boilers of an elevated water-chamber and an internal steam-chamber, substantially as specified.

2. The combination, with the elevated water-chamber, of the perforated plates, substantially as specified.

3. The combination, with the water-chamber F and steam-chamber D, of the pipe H, substantially as specified.

4. The combination with the steam-boiler and the elevated water-chamber of the steam-pipe K, substantially as specified.

5. The combination, with the steam-chamber D, inclosed within the shell of the boiler, of the pipe L, substantially as specified.

6. The combination, with a steam-chamber adapted for delivering the steam from near the bottom of a delivery-pipe, M, arranged for receiving the steam therefrom, substantially as specified.

91,317.—AUGUSTIN ELLIS and OLIVER ALBERTSON, Salem, Ind.—*Hoe and Rake.*—June 15, 1869.

Claim.—The hoe or rake head, when provided with the curved tang C and the metal socket E, secured to the handle D, when provided with the curved mortise *b*, corresponding to the curvature of the tang, and with the end set-screw F, adapted to engage with the outer convex side of the tang, by means of the recesses formed therein, as herein shown and described, for the purpose specified.

91,318.—Myron J. Ferren, Stoneham, Mass., assignor to himself and William J. Battles, same place.—*Sewing-Machine.*—June 15, 1869.

Claim.—The oscillating lever *d*, and rock-shaft *e*, in combination with the needle *b*, and shuttle-race *c*, arranged and operating as described, for the purpose specified.

91,319.—James J. Fifield, East Boston, Mass. —*Pipe-Coupling.*—June 15, 1869.

Claim.—The combination and arrangement of the two screw-nuts, and the two wedge-rings, with the duplex bell-mouthed coupling-pipe C, applied or to be applied to the two pipes A B, the same being substantially as and for the purpose of effecting the coupling of such pipes A B, as set forth.

91,320.—Joseph H. Finch, Rochester, N. Y.—*Tea and Coffee Pot.*—June 15, 1869.

Claim.—The inwardly curved top of the pot A, having notches *d*, when employed in connection with the partly-inclosed and projecting receptacle B, having bead *g* and lug *f*, whereby, when the parts are locked, the bead rests on the upper edge of the curved top, with the lugs *f* beneath it, for the purpose and in the manner described.

91,321.—John E. Finley, Enon, Ohio.—*Bee-Hive.*—June 15, 1869.

Claim.—1. The removable comb-frame B, constructed with the sharpened edges *g g g*, as shown and specified.

2. In combination with said frames when they are constructed as set forth, the hive herein described, with ventilator, entrances, and honey-boxes.

91,322.—Daniel P. Flint, Nueces County, Texas.—*Velocipede.*—June 15, 1869.

Claim.—1. The treadle-levers E, when the same are connected with the cranks *a a'* by means of the slots *c c'*, and are provided with adjustable vibrating-fulcra F, substantially as herein described, for the purposes set forth.

2. The combination of a steering or guiding rod, N, and its pinion *g*, with a circle, I, when the latter connects with pinion *g*, by a cog-periphery, and is secured to and rests on a spring, K, that is fixed on the axle B, in the manner and by the means substantially as herein described and for the purposes set forth.

3. The above combination, in combination with a rider's seat, P, when all the parts are constructed and arranged substantially as herein described, for the purpose set forth.

91,323.—Daniel P. Flint, Nueces County, Texas.—*Velocipede.*—June 15, 1869.

Claim.—The combination of crank-arms *a a'*, provided with slots *c c'*, with a pitman or link, *h*, and a lever-treadle, *j*, when the latter is provided with an adjustable fulcrum, by means of a slotted pendent arm, *m*, and the several parts are constructed, arranged, and operated substantially as herein described, for the purpose set forth.

91,324.—J. Lee Floyd, Philadelphia, Pa.—*Manufacture of Iron and Steel.*—June 15, 1869.

Claim.—The use of fluor-spar and horse-manure, or their respective chemical equivalents, and wood and carbon, in the manner, and in the quantities, and in the combinations, and for the purposes substantially as above set forth, for the smelting of iron, gold, silver, and copper ores, and other ores, and in the manufacture of iron, steel, and brass.

91,325.—Jim B. Fuller, Norwich, Conn.—*Lamp.*—June 15, 1869.

Claim.—The tubes *c*, *d*, *e*, and *f*, the projections *g* and *e'*, the chimney-holder *h*, with the arms *h'*, and collar *x*, the deflector *i*, the cheek-plate *f'*, the annular spaces 2 and 4, the reservoir *a*, the plug *m*, and the stand *j*, or its equivalent, the whole being constructed, arranged, and operated substantially as shown and described, and for the purposes specified.

91,326.—John G. Gabel, Lebanon, Pa.—*Sash-Cord Fastening.*—June 15, 1869.

Claim.—The above-described fastening for sash-cords, the same being a recess made in the wood or sash itself, so as to receive and hold the cord, by seizing the knot, substantially in the manner set forth.

91,327.—Caroline Garcin and U. Adam, Colmar, France.—*Mechanism for Driving Sewing-Machines.*—June 15, 1869.

Claim.—The arrangement, as herein described, of the shafts *a b e*, with their barrels C, springs *g*, cog-wheels and pinions, the shaft *d*, with its pulley *l* and worm-wheel *m*, the worm-shaft *n*, and lever I, for the purpose set forth.

91,328.—S. T. Godfrey, Seaville, N. J.—*Plow.* —June 15, 1869.

Claim.—1. The combination of the pivoted knife I, connecting-rod G, lever F, and wheel E, having pins, *e'*, projecting from its side, with the plow A B C D, substantially in the manner herein shown and described, and for the purpose set forth.

2. The combination of the spring-guide K with the plow A B C D, substantially as herein shown and described, and for the purposes set forth.

91,329.—Benjamin J. Greely, Boston, Mass.—*Ash-Sifter.*—June 15, 1869.

Claim.—The ash-sifter herein described, composed of the box A, removable sieve B, and piece C, when constructed and arranged together substantially as described.

91,330.—Arthur Greenman, East Kendall, N. Y.—*Fruit-Stand.*—June 15, 1869.

Claim.—The improved stand, composed of the parts A B C, constructed and arranged as described, and operating in the manner and for the purpose specified.

91,331.—G. P. Hachenberg, Hudson, N. Y.—*Envelope.*—June 15, 1869.

Claim.—As a new article of manufacture, the envelope herein described, provided with the fold A, substantially as set forth, for the purpose specified.

91,332.—Floyd Hamblin, Madrid Springs, N. Y.—*Extension-Table.*—June 15, 1869.

Claim.—The combination, with the table A, having hinged leaves B C, of the extension-arms F and legs G, carrying hinged leaves H, provided with the braces K, and all arranged substantially as specified.

91,333.—Gregor Heiss and Martin Schmidt, Houston, Tex.—*Coffee and Tea Pot.*—June 15, 1869.

Claim.—1. A coffee or tea pot, consisting of the cylinder A, internal permanent strainer C, and discharge-pipe J, all combined and operating substantially as herein shown and described.

2. The spiral stirrer-plate F, when suspended from the tube E, that is, swiveled in the cover of the pot, so that it can be freely revolved, substantially as herein shown and described.

3. The sliding-cap H, when arranged in connection with the permanent strainer C, so that it can be let down to close the perforations of the same, substantially as herein shown and described.

4. The tubular shank I, of the adjustable cap H, when arranged to serve as a handle and steam-escape pipe, substantially as herein shown and described.

5. The double perforated cover D G, having the rim *h*, and supporting the swivel-tube E, substantially as herein shown and described.

6. The combination of the vessel A, strainer C, pipe J, and double perforated cover D G, with the spiral stirrer F, swivel-tube E, handle *f*, adjustable cap H, and tubular handle I, all arranged and operating substantially as herein shown and described.

91,334.—J. C. HEMPEL, Baltimore, Md.—*Diaper.*—June 15, 1869.

Claim.—As a new article of manufacture, the diaper, formed of the main piece *a* and gore *b*, the latter being sewed to the flaps *e e*, whereby edges *e e* are formed, to which the inclosing-flaps *d d* are adapted to be buttoned, substantially as described and for the purposes specified.

91,335.—THOMAS HOLMES, Williamsburgh, N. Y.—*Revolving Dough-Mixer.*—June 15, 1869.

Claim.—1. The revolving cylindrical vessel B, made in two unequal parts, and provided with knives J K L, and operating substantially as herein shown and described, and for the purpose set forth.

2. The combination of the bar G, keepers H, and catches or brackets I, with the cylindrical vessel B and frame A, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the adjustable transverse partition N, constructed with the lateral arms, with the cylindrical vessel B, substantially as herein shown and described, and for the purpose set forth.

91,336.—ERASTUS W. HOPKINS, Oneonta, N. Y.—*Milking-Stool.*—June 15, 1869.

Claim.—The combination, with the seat arranged to balance on the legs B, of the sliding-leg C and arm D, when arranged substantially as specified.

91,337.—WILLIAM H. HOWLAND, San Francisco, Cal.—*Steam-Engine Stop-Valve.*—June 15, 1869.

Claim.—1. The construction and arrangement of the above-described valve, with reference to the case A, provided with the recess E, and the ports K and J, substantially as specified.

2. The soft-metal packing *e*, when arranged longitudinally through the face of the arms F, substantially as described.

91,338.—RODNEY HUNT, Orange, Mass., assignor to himself, JAMES B. WAITE, and DAVID B. FLINT, same place.—*Water-Wheel.*—June 15, 1869.

Claim.—1. The wheel, made as described, viz, with the direct and reaction sets of buckets, arranged and communicating together, as set forth, and with the inner and outer rims of the lower set of buckets, and with inner vents to the upper set, and an internal chamber, as explained.

2. The arrangement of the gate and its cap with the wheel, made as specified, and with the series of inducts, provided with a draught-box, as described.

91,339.—JOHN S. HUNTER, Lowellville, Ohio.—*Manufacture of Railway Rails.*—June 15, 1869.

Claim.—The improved forms or shapes herein described and illustrated of the iron portion of the rail and of the steel cap-piece, said parts producing, when welded together, in the main, as described, a finished rail, of the character substantially as illustrated in Fig. 3 of the drawings.

91,340.—CARLOS S. HUTCHINS, Canton, Conn.—*Line-Holder.*—June 15, 1869.

Claim.—The combination of the holder *a* with the pad *b* and plate *c*, having openings *d*, for a line-holder, substantially as shown and described.

91,341.—JOHN W. HYATT, Jr., Albany, N. Y., and ISAIAH S. HYATT, Rockford, Ill.—*Method of Making Solid Collodian.*—June 15, 1869.

Claim.—1. Dissolving pyroxyline under pressure, substantially as described.

2. Dissolving pyroxyline under pressure, when combined with ivory-dust or other material, substantially as described.

91,342.—GEORGE H. IRELAND, Somerville, Mass.—*Burglar-Proof Safe.*—June 15, 1869.

Claim.—1. The filling for walls, consisting of the tubes A A, that are arranged in layers, and combined with the plates B, substantially as herein shown and described.

2. The rods C, having the springs *a*, when arranged within the tubes of a wall-filling, substantially as herein shown and described.

91,343.—ANDREW P. JACKSON, Memphis, Ind.—*Hominy-Mill Burr.*—June 15, 1869.

Claim.—The shaft A, in combination with the screws *c c e*, knives *d d d*, and fans *g g g*, all arranged to operate substantially in the manner and for the purpose described.

91,344.—DANIEL W. KEEFER, Leechburgh, Pa.—*Field-Fence.*—June 15, 1869.
